Supplements and Reports Published During 1954

References are to issues of Television Digest with articles pertaining to documents

Directories

Semi-Annual TV Factbooks of Jan. 15 and July 15; with weekly Addenda reporting current FCC grants, applications, new stations on air, etc.

Annual AM-FM Directory of Jan. 1; with weekly Addenda reporting current FCC decisions, applications, etc. Listing of all AM-FM stations by states and frequencies, all applications by states and frequencies, call letter lists, etc. (Includes other National stations.)

Special Supplements and Reports

Proposed Schedule of License Fees. Charges to be made to stations for modifications and licenses, issued by FCC as notice of rule-making. (Vol. 10:13)

TV Set Ownership by Counties. Total families and receivers, by geographic areas, states and counties, including sh!t of all off air, prepared for CBS-TV by A. C. Nielsen Co.

Proposed Restrictions on Spurious Radiations. Full text of FCC's rule-making specifying limits for various services and providing for system of equipment certification. (Vol. 10:16)

Color TV Stations Covered by Network Presidents. Full texts of speeches by network station managers. L. Weaver Jr., president on present status and immediate prospects of color delivery. (Vol. 10:22)

Where the TV Sets Are. J. Walter Thompson Co. records TV stations with TV since Jan. 1, 1954, covering the top 340 top markets, giving figures on number of homes and receivers, percentage of homes tuned to TV. (Vol. 10:23)

Color Status of Network Affiliates. Stations-by-station report on capabilities of NBC-TV and CBS-TV affiliates to carry network color or originate local slide, film and live color, derived from information supplied by networks. (Vol. 10:43)

Govt. Action Against RCA Patent Pool. Full text of complaint filed in civil action by Justice Dept. in U.S. Court, District of New York, Nov. 19, 1954, charging RCA with operating patent pool in restraint of trade. (Vol. 10:47)

Govt. Civil Action Against Philco Corp. Full text of complaint alleging civil action by Justice Dept. in U.S. District Court, Eastern Dist. of Pennsylvania, Dec. 15, 1954, charging Philco with illegal restrictive agreements and dealers. (Vol. 10:51)

Bound Copies Available

Complete sets of the 1954 Television Digest Newsletters, along with the two 1954 TV Factbooks, Addenda, and all Supplements, can be permanently bound between embossed hard covers and be made available on order at $25 per volume.

QUICKENING PACE OF COLOR TV ACTIVITY: Commercial availability of tri-color tubes was announced by RCA Dec. 30 when it disclosed that in Nov. it had converted entire black-and-white facilities and personnel of huge Lancaster, Pa. plant to color tubes. First tube is 15-in. planar-mask type (model 15GP22) which RCA has been sampling to its customers for some time. Larger sizes probably aren’t too far off.

Price wasn’t announced, though it may be given out next week -- and thereon will depend to large extent the price of color receivers. Nor did RCA indicate rate of production -- though it’s fair to assume it’s well ahead of the 2000-a-month RCA said it would produce 6-9 months after FCC decision (Vol. 9:26).

Tube prices historically have always been high on developmental models, then come down as commercial production starts. Hence it’s reasonable to assume price will be lower than the $200 RCA has charged for samples supplied its customers up to now, but higher than the $125 recently announced by CBS-Hytron (Vol. 9:47). Good guess is about half-way between. Big cost factor is high rejection rate at factory -- about 50%, as compared with 10-15% for mass-produced black-and-white.

All RCA black-and-white tubes are now made at its Marion, Ind. plant. Widely published newphotos of Lancaster assembly line this week tend to lend credence to trade scuttlebutt that RCA began stockpiling color tubes even before FCC decision, which indicates it may be looking forward to market for even more than the 200,000 outside figure "guesstimated" by industry leaders for all of this year.

RCA announcement climaxed preparations of manufacturers for winter marts in Chicago Jan. 4-15, where apparently every set maker who can will show what he has.

To feed color sets at marts, RCA and some others are aiming to bring programs from New York via microwave. Motorola will give first public demonstration of its flying-spot scanner for 16mm color film, feeding color and black-and-white receivers. Hazeltine has set up flying-spot scanner in its Chicago labs, will deliver pictures of slides to Admiral, perhaps others, via AT&T circuits. DuMont has shipped color equipment from its New York experimental uhf station, will use its new "Colorvision" scanner to display slides on 2 color sets in Chicago.

After seeing color sets at marts, dealers will get together with the manufacturers at NARDA convention Jan. 12 at Chicago's Conrad Hilton for panel discussion on what comes next. For subjects and panelists, see p. 13.

Manufacturers are using all media, meanwhile, to inform public about costs, availability, etc. of color sets. A natural, of course, is TV itself. After FCC decision, RCA and CBS took to air immediately, putting top executives before the cameras. This week, more joined in, including Westinghouse and Motorola -- both of which had excellent presentations. On Jan. 14, DuMont will use "What's the Story" program for purpose, with panel comprising Kenneth B. Willson, pres. of National Better Business Bureau, Dr. Allen B. DuMont, Dr. T.T. Goldsmith.

COPYRIGHT 1954 BY RADIO NEWS BUREAU
Admiral was first major manufacturer to set price on color set -- $1175. Its pres. Ross Siragusa reiterated expectations of producing 30,000 of the 200,000 he estimates industry will build in 1954. He predicted that the industry will produce 21-24-in. color sets to sell for $600 within 5-6 years.

Sylvania announced start of pilot production at Buffalo plant, and TV-radio gen. mgr. John K. McDonough said he hopes to have saleable quantities of sets in hands of distributors by March 1. First color service school for Sylvania's 18 district service managers will be conducted in Buffalo, starting Jan. 8.

More manufacturers announced color shipments to distributors in time for the Jan. 1 Tournament of Roses parade colorcast. There's no change in the city-station lineup from list published here last week (Vol. 9:52).

New circuits for use with Lawrence tube were demonstrated to patent licensees by Hazeltine last week, sessions continuing this week and next. Method of "processing" signal, says research v.p. Arthur V. Loughren, permits Lawrence tube itself to act as decoder -- offering potentially simpler and cheaper production.

New method doesn't produce quite as good a picture as mask-type tube with conventional circuits, Loughren says, but he believes more work will bring results just as good. Advantages in cost, he adds, should be particularly evident in pictures of same size -- because cost of set with larger mask-type tube is likely to rise sharply. But, he adds, it's up to set makers to judge value of new techniques.

* * * *

Summing up job of color production, while fending off impatient distributors clamoring for sets, a leading tycoon told us this:

"Color is still in the engineering stage and won't reach the production line for at least 6 months. We're making a few hundred sets for loan and demonstration, but that's all. By mid-July, our tooling should be complete, and by end of 1954 we will have 21-in. color sets, with tubes available not only from RCA but a lot of other companies." Sets recently built, he said, "are already outmoded."

COMMISSION'S 1953 RECORD--346 GRANTS:  
FCC closed old year with 2 TV CPs and one initial decision, for total of 346 TV grants in 1953 -- about double the 175 in 1952.

This week's grants: Alexandria, La., KALB, Ch. 5; Erie, Pa., Commodore Perry Bcstg. Service, Ch. 66, final decision. Initial decision favored WKDN, Camden, N.J., for Ch. 17 (allocated to Philadelphia) after competing applicant WJMJ dropped out.

Alexandria grantee's owners interlock with grantees KPLC-TV, Lake Charles, La. (Ch. 7); WSLI-TV, Jackson, Miss. (Ch. 12), and applicant KRMD, Shreveport, La., one of 3 applicants now temporarily combined in operation of interim KSLA (Ch. 12). Grant resulted when KALB agreed to let competing KSYL buy 49% of grantee.

Other mergers and dropouts this week, paving way for early grants: Perkins Bros. dismissed application for Sioux City's Ch. 4, leaving KCOM as sole applicant, in return for option to buy 50% of grant. KXOB, Stockton, Cal. petitioned to withdraw from Ch. 13 hearing with Radio Diablo (TV maker H.L. Hoffman) under option permitting owners Theodore & Joseph Gamble to purchase part of grantee. Also dropping out was Lorain (O.) Journal, leaving WEOL, Elyria only applicant for Ch. 31.

Attacking Commission's haste in scheduling Jan. 8 hearing to sniff out a possible "strike" application in connection with merger of applicants for Buffalo's Ch. 2 (Vol. 9:50), Buffalo's sole uhf station WBUF-TV (since WRES-UV went off air, Vol. 9:51) this week petitioned to intervene in proceedings. WBUF-TV didn't say it would file for Ch. 2, but said the combined applicants, if granted, would provide stiffer competition than a non-AM non-newspaper grantee might -- and added that it had relied on FCC policies which led it to expect longer time to get uhf established before more uhf competition opened up.

In other petitions, Engineer Frank K. Spain, Tupelo, Miss. asked addition of Ch. 9 to Tupelo by substituting 11 for 9 in Jackson, Miss.; KALE, Richland, Wash. asked FCC to shift Ch. 3 from Lewiston, Ida. to Richland.

FCC called another grantee on carpet this week, told KAGR-TV, Yuba City, Cal. (Ch. 52) it isn't convinced it deserves additional time to build.
ON-AIR TOTAL 356, CLOSE TO ONE-A-DAY: Only 3 new starters to report as we went to press Thu. afternoon, Dec. 31 -- with remote chance a few more might get going before week is out. For example, Michigan State College's WKAR-TV, Lansing (Ch. 60) was striving desperately to be ready to carry Rose Bowl game Jan. 1, but prospect at this writing seemed dim. And WBTM-TV, Danville, Va. (Ch. 24) was still hoping for New Year's Eve debut, with possibly better chance of making it.

Year thus ends with 356 stations on air commercially or with test patterns, 234 of them vhf, 122 uhf. In other words, 231 starters this year. Of these, 145 got on air in the 153 days since Aug. 1 when we predicted one-a-day for rest of year.

WFBC-TV, Greenville, S.C. (Ch. 4), call letters changed from originally assigned WGCT, began testing 25-kw RCA transmitter (100-kw ERP) on Dec. 26, second station in city -- other being WGVL (Ch. 23) which started last July 15. Telegram from gen. mgr. B.T. (Bevo) Whitmore reports "beautiful coverage of Carolinas and parts of Georgia and Virginia." Tower and 6-bay antenna on Paris Mt. give radiation from 1204 ft. above average terrain. Station is result of 3-way merger, whereby radio WMRC is sold to WAKE. Robert A. Jolley's Textile Bcostg. Co. holds 39% of new operating firm, Roger Peace's Greenville News-Piedmont (WFBC), 39%; Alester G. Furman Jr.'s Carolina Television Inc., 22%. WFBC-TV goes commercial Jan. 1 as NBC primary and with $325 base rate. Rep is Weed.

KHOL-TV, Kearney, Neb. (Ch. 13), about 125 mi. west of Lincoln and opening up new TV area, began testing Xmas eve with 5-kw GE transmitter and 500-ft. Stainless tower. It's owned by local group headed by Dr. F. Wayne Brewster, has Duane Watts, ex-KHAS, Hastings, Neb. as gen. mgr.; Jack Gilbert, ex-WTTV, Bloomington, Ind., program mgr.; Jack Lewis, ex-KGFW, Kearney, chief engineer. It expects AT&T interconnection for CBS & DuMont service by Feb. 1. Base rate is $200. Rep is Meeker.

WCOC-TV, Meridian, Miss. (Ch. 30), on the coaxial route between Birmingham and Jackson, Miss. but planning no network interconnection, has begun interim test patterns, reports owner-mgr. Withers Gavin, and will begin testing with full 252-kw ERP from 12-kw GE transmitter shortly. It starts just 3 months after vhf WTKO-TV (Ch. 11) got under way in same community (Vol. 9:40). Mr. Gavin also owns radio WQJS, Jackson, and AMs in Macon, Miss. & Columbus, Miss.; he also publishes religious weekly Clarke County Tribune, Quitman, Miss. TV rate is $150, no rep.

Note: Canadian Broadcasting Corp.'s second Montreal station CBMT (Ch. 6) did not make it last weekend, as expected (Vol. 9:52), is still waiting for antenna.

DuMONT TAKES OVER KANSAS CITY UHF: DuMont became first network to go into uhf when it acquired Kansas City's KCTY (Ch. 25) from uhf pioneer Herbert Mayer's Empire Coil Co. at 12:01 a.m. New Year's Day. DuMont already owns 3 vhf.

Transaction came suddenly, was first broached on Dec. 29, approved by FCC at special meeting Dec. 31. DuMont took over all equipment, full 5-year lease on real estate as well as station's obligations, for nominal cash payment of $1. Station is well-equipped, even to remote unit, has specialized in local origination, cost its owners some $750,000 to date in equipment, property and operating losses.

DuMont immediately dispatched Donald McGannon, its asst. director of broadcasting, to supervise the changeover, announced acquisition will put "DuMont network, research & manufacturing divisions in a position to study at firsthand the problems, both financial and commercial, faced by [uhf] station owners." KCTY staff will be retained intact, at least for time being.

Network will funnel 21 of its shows to station weekly, plans to begin large-scale campaign to add to the claimed 60-70,000 uhf-equipped sets in area. It's also understood the station will get first 15-kw DuMont uhf transmitter, when available (it now has RCA 1-kw).

Coincidental with transfer, Empire Coil dropped its CPs for uhf KDEN, Denver (Ch. 26) and WNES, Indianapolis (Ch. 67), telling FCC that building them "would be fraught with virtually insurmountable conversion problems and heavy monetary losses."

Empire Coil Co., a major TV-radio component manufacturer, pioneered both vhf & uhf. A newcomer to broadcasting, its pres. Herbert Mayer first applied for several TV station in 1947, while many old-line radio broadcasters eyed it askance. He
began operation of WXEL, Cleveland (Ch. 9) late in 1949, and has been consistently very successful. Then, in Sept. 1952, he opened world's first commercial uhf outlet, Ch. 27 KPTV in TV-less Portland, Ore., having purchased RCA's prototype Bridgeport experimental uhf equipment. This also has been highly profitable operation -- in fact, is regarded by many as showcase of what uhf can do if it's first in its area.

Kansas City was his second uhf venture, his first under the gun of vhf competition. When KCTY went on air last June, only other station there was pre-freeze WDAF-TV, and other uhf applicants appeared to be headed for endless FCC hearings. But mergers and dropouts quickly resulted in 3 more vhf rivals -- shared-time WHB-TV and KMBC-TV and KCMO-TV -- who were able to grab off most of local business because of vhf's greater coverage in heavily vhf-saturated Kansas City.

Vast efforts and funds were poured into uhf station in attempt to gain foothold, but within a month it was evident public wasn't willing to convert fast enough when it could get programs of 3 networks on vhf (KCTY had DuMont). KCTY went on the market, first at $750,000, then $400,000, finally $300,000. There were no takers at any price -- nobody even willing to name his own figure.

Mayer considered going off air and salvaging what he could from sale of his equipment and property -- which would have been better deal financially than DuMont transaction -- but decided such a move would have depressing effect on uhf.

Another uhf CP was dropped this week -- KLCU, Salinas, Cal. (Ch. 28), making 38 grants surrendered during 1953. In letter to the FCC, half owner Grant Wrathall blamed "network disinterest" (in capital letters). He added: "Until TV programs on magnetic tape are available at moderate cost and free from the throttling monopoly of networks and strategic vhf stations, [uhf] is virtually doomed in small cities." He also blamed "superpower grants" to San Francisco stations (75 mi. away) and high cost of interconnection, which he said was $5400 a month from San Francisco.

Wrather also has interests in KOPR-TV, Butte, Mont. (Ch. 6) and in uhf grants in Salt Lake City and Boise, Pocatello & Idaho Falls, Ida.

1953 YEAR OF NEW-STATION PUSH—WHAT NEXT? Year just ended saw 230 new stations going, bringing U.S. total to 355 -- nearly triple number on air as of Jan. 1, 1953. That fantastic growth, plus adoption of compatible color standards, highlighted TV's most exciting year. Now, we venture our own forecasts for the industry's New Year -- but first some comment on what we said here, rightly and wrongly, just year ago:

Wrong: We forecast only 75-100 new stations would start during 1953, which began with 125. We were way off, though by April we raised our sights to 200 and on Aug. 1 we predicted one-a-day for rest of year -- and hit it very close. We forecast 10-12 educational TV stations on air by end of 1953; actually, only 2 made it. We figured diminishing radio broadcasting revenues in 1953; at this writing, happy to relate, it looks like radio as whole will do slightly better than record 1952.

We thought pay-as-you-look TV would get hearing during 1953; it didn't, even though it made a lot of noise and pulled off persuasive inauguration in Palm Springs in Nov. (Vol. 9:49). We thought new FCC appointees (succeeding Walker and Merrill) would be businessmen; instead, Eisenhower chose govt. careerists (Doerfer and Lee).

Right: We predicted not less than 6,000,000, probably as many as 7,500,000 TV sets would be made and marketed in 1953, same as in 1952; output actually went to 7,500,000, sales ran about 6,400,000. We said business of telecasting might go as high as $500,000,000; present estimates come pretty close to that (Vol. 9:52).

We were right, of course, in predicting NPA would lift ban on manufacture of color TV sets and that compatible color would win FCC approval. And we said FCC would prove more cooperative with industry, not only as regards color but in speeding new stations on air and otherwise treating the business less suspiciously. We said Congress would vote more funds to FCC to hasten TV hearings (it did) and also that perennial Congressional investigations wouldn't amount to much (they didn't).

We forecast most new stations would be brought within reach of networks via expanding coaxial-microwave links, as they have. We said community antenna systems would continue to expand -- and they did, as we'll report more fully later.
But enough of the past. What's in store for 1954? Here are summaries of best thinking of the entire editorial staff of Television Digest, as we begin our 10th volume in the 9th year since publication of Vol. 1:1 on Sept. 1, 1945:

TELECASTING: Possibly 200 more stations, more likely fewer, even though 226 CPs are now outstanding and FCC continues to authorize more each week. Quite a few more CP holders will drop out, as did 38 during 1953. There may be more mortalities among stations already on the air (3 quit last year -- in Roanoke, Buffalo & Nampa, Ida.). FCC may force some long-time and obvious stalkers to hand in their permits. Telecasting as a business (network & station revenues) will soar far above the $500,000,000 figure, and will easily forge well ahead of radio broadcasting which may hit that figure when 1953 tallies are done. Several rep firms will surge to the top levels, as a few old-line radio reps continue to loom less important.

SET OUTPUT & TRADE TRENDS: Some 5,000,000 black-&-white sets should be made and marketed this year -- more or less depending on impact of color. And if industry made and sold 15,000,000 radios (heavily table models and including auto sets) in a TV boom year like 1953, we see no reason why it shouldn't do just as well in 1954. TV output will be comedown from 1953's 7,300,000, of course, and competition will be keener, prices are already lowering under the influence of color, reduced tube costs, softer markets, high inventories. Concentration will be on 17 & 21-in. models, for most part table, size & price appealing to most families until ready and able to buy color sets. Replacement market is good, but not as strong as it might be if people weren't inclined to patch up old sets (particularly the costly models) and wait for color. Service business should reach all-time high. Military procurement will drop a bit -- but production, research & development will stay close to 1953's $3 billion.

COLOR: Some 200,000 sets will be made, mostly with 15-in. mask-type tubes (11½-in. picture), a few with 17-in. Lawrence type -- and pilot production of larger tubes of all types should start after midyear. There will be steady reduction in number of circuit tubes required, and more and more "packaged" subassemblies will cut cost and servicing. Price of early small-screen sets will seldom go under $1000 at outset, gradually reducing as tubes and sets are easier to make -- same evolution that saw first 10-in. at $425 in 1946 come down to today's 21-in. at $200 and less. Most interconnected stations will be equipped to rebroadcast network color, a few ready to handle slides, not many able to originate either live or film which will come mostly from network origination points. AT&T will be able to bring color to almost all stations equipped to rebroadcast it, including some on coaxial. And there will be many notable "firsts": views from ships, planes & helicopters, sports, the Mardi Gras, Atlantic City beauty contest, pet shows, circuses, rodeos, etc. etc.

UHF: Programming and conversion will continue as biggest problems for uhf stations in markets also well-served by vhf, with virtually every angle tried out -- including experimentation with off-air pickups or "quasi-satellite" operation. Uhf will continue to be a study in contrasts, with some stations dominating their areas (as in California's San Joaquin Valley) or so well established (as in Portland, Ore. & Duluth, Minn.) that they show good profit. But others will continue to operate at a loss. Big networks may acquire own uhf stations, may affiliate with more, but by and large they and sponsors will continue to favor vhf whenever there's any choice. Uhf-equipped sets will account for increasing proportion of black-&-white sales, and speed of conversion in uhf areas will continue to depend almost entirely on uhf programming and number of stations available in area. Uhf may be standard in color sets.

That's the larger picture. Considering some of the other important problems of telecasting and related fields, these are the prospects as we see them:

Educational TV: Protagonists aren't bragging about their record of mere 2 stations on air, 27 CPs still to be built, 17 applications outstanding at year's end. Biggest blow last year was rejection by N.Y. State Temporary Commission on Educational TV of plan for state-financed 10-station network (Vol. 9:9-10); hope had been it would be beacon for skeptical legislatures elsewhere. Despite publicity promises, we see at best only a half dozen more educational stations taking the air in 1954.

Pay-as-You-Look TV: Congress and the FCC to play ring-around-the-rosy, both
probably holding hearings under pressure of interested parties -- with fair chance of a "yes" or "no" decision by year's end. FCC might pass buck on to Congress, asking legislation delineating whether airwaves must be "free".

Boosters & Satellites: FCC hearings likely, with Commission inclined to approve them for towns too small to support conventional stations.

Community Antenna Systems: Steady growth to continue, very likely getting impetus as more operators experiment with pay-as-you-look and local originations.

Theatre TV: To continue service via AT&T, not by its own frequencies. Maybe one application for specialized theatre-TV common carrier service, backed by group of movie exhibitors and possibly Western Union; decision on such petition unlikely within year due to AT&T opposition. As exhibitors lose interest in 3-D, etc., more theatre-TV programming can be expected, possibly regular weekly theatre-TV shows in few theatres by end of year.

Sports: Another year of college football TV controls by NCAA, but some further relaxations in prospect this year -- including more televising of sellout games, more games of regional interest. Little noticeable change in number of pro football and baseball telecasts despite court's decision in football case (Vol. 9:46).

Film: Ratio of film-to-live network programming to show little significant change this year, but over-all amount of film programming to increase due to needs of greater number of independent stations. Shakedown period among TV film producers and distributors to continue, with some large companies striving to dominate just as the "majors" now dominate movie business. Trickle of more recent feature films to TV to continue, though major break into the vaults unlikely in 1954.

Congress: Will dabble in a few subjects, such as pay-as-you-look and maybe the economics of telecasting (as red-ink stations complain). Plenty of complaints and recriminations about political telecasts -- for it's an election year.

POST-FREEZE ECONOMICS—FCC's SURVEY: Commission this week filled in details of its first study of post-freeze TV stations, highlights of which were revealed in recent address by Comr. John C. Doerfer (Vol. 9:52).

Figures must be handled with care, as FCC pointed out in releasing analysis of its careful survey, prepared by its economic div. under chief H.H. Goldin. Very few conclusions can be drawn from report, since it includes only those post-freeze stations on air as of Aug. 1. At that time, average station had been operating just 3 months, most were the only stations in their community -- and only 2 of the uhf outlets measured were in markets with pre-freeze stations.

It's the only definitive post-freeze financial data available, nevertheless, and therefore deserves close scrutiny -- particularly by prospective telecasters. Copies are available from FCC (Notice 53-1744) or we'll get one for you if you wish.

Two clear-cut trends do show up: (1) Uhf outlets seem to do as well as vhf -- at least in the early days -- where they're only stations in community. Within scope of study, figures for vhf & uhf stations are remarkably similar, as to profitability, revenues from networks, losses, etc. (2) Distance from nearest vhf is an extremely important factor in early success of uhf stations. The 8 profitable uhf outlets were all more than 50 mi. from nearest vhf, and 9 out of 10 of heaviest uhf losers were within 50 mi. of at least 2 vhf stations.

Principal points of FCC report, which was compiled on basis of questionnaires to 101 post-freeze stations, the 4 networks and TV equipment manufacturers:

Over-all profit in operations to date was reported by 8 vhf & 8 uhf stations of the 83 (42 vhf, 41 uhf) responding. Another 20 stations (12 vhf, 8 uhf) reported at least one profitable month, despite over-all loss for period; 15 more (7 vhf, 8 uhf) were approaching break-even point on a monthly basis; the remaining 32 (15 vhf, 17 uhf) showed "continued substantial losses in each month of operation."

The 8 profitable vhf stations reported average monthly revenues of $26,000, average monthly expenses of $20,000, average monthly profit of $6200. The 8 uhf money-makers had $26,400 monthly revenues, $20,300 expenses, $6100 profit.
Among unprofitable stations, those in the black at least one month showed an average monthly loss of $3900 for 12 vhf stations, $2600 for 8 uhf stations. Average monthly loss of 7 vhf stations approaching monthly break-even point was $2100, of 8 uhf $4700. For stations with continuing substantial losses, average monthly loss was $12,700 for 15 vhf, $14,700 for 7 uhf.

Age of average profitable station was 8.6 months for vhf, 6.8 months for uhf. Average age of stations in other profit groups was 3.5 to 5.8 months, disclosing no discernible trend as between vhf & uhf.

Stations in larger markets generally fared better than those in smaller ones. All 8 profitable uhf stations were in markets over 100,000, while 4 of the 8 profitable vhf stations were in similar situations. Of the 14 stations in markets of over 300,000, five (or 36%) were profitable. In markets of 100,000-300,000, seven of 37 (19%) reported profit; below 100,000, only 4 of 32 (12.5%) were in the black. Some 30% of uhf stations reporting, and 43% of vhf, were in markets over 100,000.

Network commercial programs (one or more) had been carried by 35 of the 42 vhf stations, and by 34 of the 41 uhf. Of stations in operation less than 6 months, average compensation from networks totaled $3700 for vhf, $8200 for uhf; of those operating more than 6 months, it was $40,000 for vhf, $30,000 for uhf. Average station got 13% of its total revenue from networks; average vhf 10%, average uhf 15%.

Set saturation in majority of uhf markets was below 25% as of Oct. 1953, and no uhf market had more than 50%. Of the 8 profitable uhf stations, 4 had 25-50% saturation, 2 had less than 25%, and information on remaining 2 was unavailable.

* * * * * 
About 2,400,000 uhf-equipped sets & converters had been produced to Aug. 31, according to RETMA estimate included in survey. The breakdown: 1,000,000 receivers with uhf tuners built-in at factory and shipped to distributors & dealers; 700,000 uhf tuners and converters shipped for field conversion; 700,000 uhf sets, tuners and converters in factory inventory. RETMA statistics also revealed that 35% of TV sets produced in Nov. were equipped for uhf, up 5% from Oct. (Vol. 9:50).

As for transmitters, FCC reported "the major transmitter manufacturers indicated that uhf transmitters of 50-kw rated power are not expected to be in commercial production until late 1955 or early 1956." RETMA told Commission 124 vhf & 108 uhf transmitters had been produced between Jan. 1, 1952 and Aug. 31, 1953.

MORE AM STATIONS—2584 AT YEAR'S END: TV notwithstanding, there was an increase of 68 in total radio stations authorized by FCC during 1953. This surprising fact is disclosed in our 1954 AM-FM Directory, which will be ready in about 2 weeks. Oft-predicted decline of AMs simply hasn't happened, but there were 47 fewer FMs.

Actual figures are these: Total AMs authorized at end of 1953 was 2584, of which 2451 were licensed and on air and 133 CFS. On same 1952 date, total was 2516, of which 2377 were licensed and on air and 139 were CFS. At end of 1951, total was 2410; 1950, 2351; 1949, 2246; 1948, 2131; 1947, 1961; 1946, 1579; 1945, 1056.

FM grantees totaled 602 at end of 1953, of which 550 were on air. Year ago total was 648, with 612 on air. During last year, 69 FM licenses and 7 CFS were dropped. At end of year only 6 applications for new FM stations were pending at FCC.

The 1954 AM-FM Directory (cost per extra copy, $7.50) also lists all applications for new AM stations pending as of Dec. 31. They totaled 207, as against 232 year before. Dropped during 1953 were 7 AM licenses, 15 CFS.

Canada's radio stations increased to 191 from 190 during year, Mexico's to 420 from 315, Cuba's to 121 from 106 -- all listed with addresses, facilities, etc.

Roman Catholic Church has set up first "TV office" in Rome to provide weekly "moral evaluations" of programs on the Italian TV network and to develop religious programs. It's headed by Ildefonso Cardinal Schuster, Archbishop of Rome.

Council of Bishops of the Methodist Church, meeting recently at St. Simons Island, Ga., approved $296,000 fund-raising drive for production of TV programs.

Closed-circuit theatre-TV business meeting for personnel of National Dairy Products Corp. (Sealtest) will be piped to theatres in 16 cities Jan. 21 by Theatre Network TV Inc. A feature of the meeting will be a 2-hour "large-scale TV entertainment program."

Ford Motor Co. holds theatre-TV sales meeting Jan. 28 for personnel in 31 cities, arranged by Box Office TV Inc. thru J. Walter Thompson agency.
Personal Notes: Edward R. Murrow, who is v.p. of CBS and a director, is subject of "profile" by Charles Wertenhaker in Dec. 26 New Yorker. Edward Codel, since 1947 TV director of Katz Agency, station reps, and asst. treas. H. J. Grenthot elected to firm's board of directors. D. S. (Tony) Provost, gen. mgr. of Hearst Radio, elected to board of Hearst Corp. Floydie E. (Bud) Beasont appointed sales mgr. of WNBJQ, Chicago, reporting to WNBJQ-WMAQ sales director Charles Dresser; John McPartlin assigned to special WNBJQ sales development projects... Carl T. Jones, ex-chief, radio branch, Federal Civil Defense Administration, and ex-FCC, joins consulting engineer George Gautney; firm name changes to Gautney & Jones... Norman Nelson resigns Feb. 1 as managing director, So. California Broadcasters Assn. Ewald Kockritz, WGBS, Miami, and ex-WLW & WSAI, Cincinnati, named director of programming for all Storer stations, headquarters at new Miami offices... Howard Meyers, western sales mgr., O. L. Taylor Co., resigns Jan. 1; he's second major official to quit, Lloyd George Venard having resigned as pres. and understood to be planning to start own rep firm... Robt. W. Standart shifted from gen. mgr. to sales v.p., WITV, Ft. Lauderdale, sharing Miami offices with Wallace E. Stone, national sales mgr... Fred Griffiths, ex-traf chief, promoted to TV operations coordinator WJAR-TV, Providence... Fred Henry resigns as program director, KLAC-TV, Los Angeles (now owned by Copley Press, changing calls to KCOO); he joins ex-mgr. Don Pederson's new TV packaging firm... Mark Raskovich, WBTW, Charlotte, wins first annual Jefferson Award given by Jefferson Standard Bestco. for most outstanding suggestion for operation improvement... Ralph Kanna, ex-Goldman, Walter & Kanna ad agency, Albany, named program director, WKNB-TV, New Britain, Conn.; Peter A. Stoner named news director... Jack Black promoted to sales mgr. of WTAR-TV, Norfolk... Wm. Kotera promoted to director of engineering, Glenn Flynn succeeding him as chief engineer, WOW-TV & WOW, Omaha... John Bone named mgr. of upcoming WNEM-TV, Bay City, Mich. (Ch. 5), due to start Jan. 24; Lee Stevens is acting chief engineer... Robt. J. Sullivan, ex-CBS Radio Sales, named sales promotion mgr., WOR-TV & WOR, N. Y.; Annette Francis, ex-Ziv, named asst. Virginia Renaud succeeds Barbara Tobin as director of education WBBM-TV & WBBM, Chicago... Glenn D. Gillett, ex-Washington radio consulting engineer, moves Jan. 1 to Los Angeles, where he will join a cousin in operation of Ulrey & Gillett, Maywood, Cal. (electric motors)... Quinn Ryan, one-time mgr. of WGN, Chicago, has returned to Chicago from California to join radio WJFL... Edward L. Koenig Jr., ex-BBDO and Young & Rubicam, promoted to v.p. in charge of sales & adv., Vitapix Corp. Tom Keady, ex-TV-radio director of Pilkul Adv., San Antonio, named mgr. of Houston office of Ruthrauff & Ryan... Leslie Duniar, ex-Worth Stores, named TV-radio timebuyer, Emil Mogul Co. Maury Long, business mgr. of Broadcasting-Telecasting, promoted to v.p. & gen. mgr.; Edward L. Sellers, ex-NARTB, recently with Carl Byoir, named southern sales mgr... Reed Rollo as of Jan. 1 became managing resident partner, Washington office, Kirkland, Fleming, Green, Martin & Ellis; R. Russell Eagan promoted to partner... Si Steinhauser, veteran TV-radio editor, Pittsburgh Press, has resigned to make home in Miami Beach... Wm. Hedgphet named director of administration, program dept., WTOP-TV & WTOP, Washington.

1954 AM-FM Station Directory

All subscribers to the full TV-AM-FM services of Television Digest will, in mid-January, receive copies of our 1954 AM-FM Station Directory, revised to Jan. 1, loose-leaf, printed on single sheets so that changes and corrections may be added on opposite blank pages as they're reported in our weekly AM-FM Addenda. New directory lists not only all North American AM-FM stations by states and cities (with company names, addresses, frequencies, powers, FM antenna heights, network affiliations) but also includes lists of AM & FM stations by frequencies, AM & FM applications by states & frequencies pending as of Jan. 1, AM & FM stations alphabetically by call letters. It's only handy volume of its kind, and carries no advertising. Extra copies, if pre-print orders for 10 or more are placed by Jan. 8, cost $5.00 each; single copies $7.50.

Telecasting Notes: Top dozen TV-radio agencies in 1953, as ranked in Dec. 28 Broadcasting-Telecasting: 1. BBDO, $35,000,000 TV billings, $14,500,000 radio (comprising 40% of agency's overall billings in all media)... 2. Young & Rubicam, $34,000,000 & $15,000,000 (35%)... 3. J. Walter Thompson, $21,500,000 & $13,500,000 (24%)... 4. Benton & Bowles, $20,200,000 & $11,800,000 (60%)... 5. Biow, $24,000,000 & $8,000,000 (60%)... 6. Wm. Esty, $21,000,000 & $8,000,000 (50%). 7. Dancer-Fitzgerald-Sample, $9,000,000 & $18,000,000 (55%). 8. McCann-Erickson, $17,500,000 & $8,000,000 (40%). 9. Ted Bates, $18,000,000 & $6,000,000 (60%). 10. Leo Burnett, $16,-$9,000,000 & $7,200,000 (50%). 11. Foote, Cone & Belding, $10,000,000 & $8,000,000 (36%). 12. Lennen & Newell, $14,000,000 & $4,000,000 (55%)... 32 ad agencies, in all, are listed by the trade journal, which reports their combined TV-radio billings increased about 25% over 1952—totalling $563,600,000 (TV $372,200,000, radio $191,400,000)...

New on 1953 list of top 32 are Kudner, ranking 14th, with $10,200,000 TV & $4,800,000 AM (35%); Geoffrey Wade, 22nd, with $3,500,000 & $6,500,000 (90%); Doherty, Clifford, Steers & Shenfield, 28th, with $4,500,000 & $1,500,000 (55%); MacManus, John & Adams, 30th, with $4,000,000 & $2,000,000 (50%); Weiss & Geller, 32nd, with $4,000,000 & $2,000,000 (50%)... On 1952 list, but not on 1953, were Harry B. Cohen, Wm. Weintraub and Erwin, Wasey & Co., then ranking 27th, 28th & 29th, respectively... U. S. ad agencies with London branches soon to be staffed by American experts on commercial TV as Britain begins sponsored service; Erwin, Wasey already has transferred Charles L. Hutchings from Los Angeles to head need TV-radio dept. in London office... John Guedel, who produces the Groucho Marx and Art Linkletter shows, will star Ginger Rogers in new half-hour film series, each budgeted at $37,000; new wrinkle is that Little Theatre groups throughout the country will be flown to Hollywood to showcase their best, with Miss Rogers as star... As in N. Y. during newspaper strike, the 4 TV and 11 radio stations reapped windfall in Minneapolis during last week's truck drivers' strike that stopped publication of big Minneapolis Star & Tribune (Cowles)... Statistical intelligence from CBS-TV research dept.; The CBS "eye," seen about 10,000,000 times daily on TV, has been seen collectively more than 75 billion times since introduced as network's station-break trademark 2 years ago.

Vick Knight, head of Los Angeles ad agency bearing his name, is closing it down as of Jan. 1; its 27 accounts, including Kaye-Halbert TV, are not being transferred as group to any other agency.
Station Accounts: New twist in "commercial educational" programming: Between halves of Duquesne U basketball games, sponsored by Pittsburgh zone Chevrolet dealers, WENS viewers get career guidance courses on such subjects as college requirements & aptitudes, career possibilities in various fields of study, extra-curricular activities, etc., under supervision of university's Dr. Clarence Walton . . . "Double exposure" plan of KHJ-TV, Los Angeles offers sponsors 26 weeks of second-run films free, with option to buy other 26 weeks at 50% of regular rate, provided program is cut by 1 min.—permitting sale of spot adjacencies to other sponsors . . . King Peach Advisory Board will co-sponsor California Peach Fiesta starting Jan. 18 and running to end of Feb., along with General Mills, Kraft Foods, Hormel Co., using TV-radio with other media, thru BBDO, San Francisco . . . Ellerman Mfg. Co. (Trix cloth) buys 2 weekly 5-min. local news cut-ins on Today on WNBQ, Chicago, thru Roberts, MacAvinne & Senne; WNBQ also reports National Tea Co. sponsoring 30-min. variety show Mon.-thru-Fri. at 5:30 p.m., thru Schwimmer & Scott . . . Adam Scheidt Co. (Valley Forge beer, Rams Head ale) for third year sponsored WCAU-TV telecast of Philadelphia's famed Mummers' Parade Jan. 1, thru Ward Wheelock Co. . . . So. California Plasters Institute, thru Latta & Co., and Van Nuys Federal Savings & Loan Co., sponsored Rose Bowl Parade Jan. 1 on KNXT, Hollywood . . . Acousticon Div., Dictograph Corp., has purchased twice weekly Drew Pearson film series from Motion Pictures for TV, to be placed on WABD, N.Y., thru Buchanan & Co. . . . Among other advertisers reported using or preparing to use TV: Carti-Aire Corp. (Carti-Aire air conditioner), thru Products Services Inc., N.Y.; Comfi-Coil Inc. Taunton, Mass. (Inner-spring hussocks), thru Hammer Co., Hartford, Conn.; Pennsylvania Range Boiler Co. (Pennsylvania water heaters), thru Feigenbaum & Werman Adv. Agency, Philadelphia; Morrell-Foster Co. (Pony soft drink), thru Abner J. Galula & Assoc., Philadelphia; W. E. Bassett Co., Derby, Conn. (Trim nail clippers), thru Lawrence G. Gumbinner Adv. Agency, N.Y.; Mangels, Herold Co., Baltimore (King syrup, stadium & bleach), thru Buddemeier Co., Baltimore; Landers, Frary & Clark, New Britain, Conn. (Universal household appliances), thru Good & Tierney, N.Y.; Piedmont Airlines, Winston-Salem, thru Lillier, Neal & Battle Adv., Atlanta; Luca Ravioli Factory, San Francisco (frozen Italian specialties), thru J. Walter Thompson Co., San Francisco.

BIG ADVERTISERS are enthusiastic about color TV, although many of them have reservations—particularly about the cost. That's what Tide Magazine found in first definitive survey published, reported in Jan. 2 issue on basis of 28% response to poll of some 300 major national advertisers. Tide's conclusions:

(1) "Most early color TV buyers will be current [TV] users, but if the price is right, color will lure new industries, like travel firms, photographic equipment makers, soft goods manufacturers, floor covering firms, even industrial companies."

(2) Half of respondents said they'd pay up to 10% more for color than current black-&-white costs—CBS pres. Frank Stanton has said color would cost 8-10% more than monochrome, although average premium for 4-color magazine ads is about 40% more than black-&-white. Some 25% aren't willing to pay any more for color.

(3) Where will color TV money come from? Some 50% said it won't come from higher over-all ad appropriations; 12% said they'd be willing to raise the advertising ante for color. Some 20% said they'd probably cut magazine advertising to pay extra costs of color. Virtually all other media, including radio, were mentioned as candidates for cuts.

(4) Most advertisers indicated they'd buy color when saturation reaches 30-40%, although they started using monochrome when black-&-white saturation was 20-30%.

(5) Half thought color would increase sales; but even those who didn't thought it would be worth buying.

(6) About 65% said they're not interested in using color in daytime, if it's not available at night at first; 20% would use daytime. Half the advertisers "are carefully considering color right now"—and 60% said they don't plan to change product packages for color TV. Over 60% have seen colorcasts, and majority of reactions were enthusiastic.

Among advertisers and company officials quoted directly, O. L. Westgate, v.p. of Atlantis Sales Corp. (French products, Good Luck puddings) is quoted as calling color TV "the most nearly ideal advertising medium ever" and "would be worth at least as much extra money as we pay for 4-color magazine ads." Esso adv. mgr. R. M. Gray says his firm will probably appropriate new money for the color TV premium, is carefully considering color right now. Armstrong Cork adv. director Max Banzhaf says his firm probably would spend 10% extra for color, most likely at expense of magazine advertising, but doesn't plan to begin until there's 50% saturation. American Safety Razor, too, would pay extra 10% at expense of other media.

Borrowing from the movies "continuous performance." WACH-TV, Norfolk-Newport News (Ch. 33) Jan. 1 began entirely new type of programming format which station manager Frederic F. Clair enthusiastically proclaims "solves every problem of the small uhf station." Using feature film, news, cartoons, short subjects, station set up 2-hour schedule, runs it 3 times an evening—at 6, 8 & 10 p.m.—the same complete show for each performance, but a different bill each day. Only spots are sold, minimum being 3—at same point in each of the 3 showings. Clair lists these advantages for his programming scheme: (1) Only one-third of the material is used per night, permitting station to buy better films. (2) Viewer can see complete show during times when his favorite network shows aren't on competing stations; "we can nearly assure an advertiser that all the audience will see our whole show every evening." (3) "Because of group-selling and repetition, the selling and servicing load is reduced to one-third. So are traffic, continuity, production and program work-loads."
DES MOINES’ first uhf, which will be WHO-TV (Ch. 13), authorized last Sept. after competing KIOA agreed to pull out on payment of $25,000 for out-of-pocket expense with option to buy 40% of TV, apparently is going to hasten construction—for RCA on Dec. 31 shipped it an interim 10-kw transmitter. Day before, RCA also shipped new transmitter to WNET, Providence (Ch. 16), and on Dec. 31 a 1-kw went to U of Wisconsin’s projected new WHA-TV, Madison (Ch. 21). During last week, other RCA shipments were new 50-kw driver to now-operating WJAR-TV, Providence (Ch. 10), and 25-kw to WBRC-TV, Birmingham (Ch. 6).

Also pushing for completion is WGAN-TV, Portland, Me. (Ch. 13), which got its GE transmitter Nov. 21, and on Jan. 2 gets 20-kw amplifier for Feb. 1 target. Same day, GE is shipping 1-kw uhf transmitter to KSAN-TV, San Francisco (Ch. 32), as well as 6-bay antenna for upcoming CHSJ-TV, St. John, N. B. (Ch. 4), due on air in Feb. On Jan. 4, another 6-bay antenna is due to go out to WTVJ, Miami (Ch. 4).

KSTM-TV, St. Louis (Ch. 36), puts 12-kw GE transmitter into operation “within a few days after Jan. 1,” claiming 275-kw ERP, non-directional.

In our continuing survey of upcoming new stations, these were the reports received this week:

KFBC-TV, Cheyenne, Wyo. (Ch. 5), which had hoped for early start despite delay forced when high winds Dec. 8 blew down its tower, built to 100 ft. of projected 500 ft. atop 7000-ft. mountain, now doesn’t expect to be able to test already installed DuMont plant before end of Jan., reports mgr. Wm. C. Grove. It’s controlled by Tracy S. McCraken newspaper interests (Cheyenne State Tribune and Wyoming Eagle, among others), has published $150 base rate, will be represented by Hollingbery.

WLAC-TV, Nashville, Tenn. (Ch. 5), authorized last Aug., has been working on problems of tower height so won’t start until “late spring of 1954,” reports T. B. Baker Jr., 50% owner of WKDA, which has option to acquire half interest in TV outlet. Equipment hasn’t yet been ordered, nor has rep been chosen.

KRGV-TV, Weslaco, Tex. (Ch. 5), now has its GE antenna for 750-ft. Phillips tower, aims for Feb. 1 start with 5-kw GE transmitter, reports TV director Millman (Henock dissenting) proposed the following and invited comments by Feb. 15:

(1) Reduction of minimum hours of operation, for regular programs intended for general public, from 42 to 36 hours.

(2) Authorization of subsidiary licenses (Subsidiary Communications Authorizations) permitting the special services.

(3) Permitting special services outside the minimum of 36 hours of regular programs.

(4) Permitting special services multiplexed in with regular programs any time.

To test and demonstrate sets before uhf stations are on air, Industrial Television Inc. is producing generator which uses signal from any uhf channel and translates it to uhf signal on any channel. Priced at $149.50, manufacturer says it will aid dealers and servicemen, can be used to demonstrate uhf sets in stores and to “convert” uhf test equipment to uhf.

Uhf air monitor receiver-converter is now being offered to telecasters by Federal Telecommunication Laboratories (IT&T). It permits conversion of any single uhf channel to a pre-designated uhf channel, is specifically designed for monitoring on-air TV transmissions.
MORE PRICE CUTS AS INDUSTRY PONDS '54: Trend to lower TV set prices, evident last week when Philco and RCA announced low-end models at $200 and under (Vol. 9:52), was accented when Admiral, Emerson, GE, Westinghouse also came out this week with lower lists. At Chicago distributors convention, Admiral introduced 5 new 21-in. sets -- besides announcing $1175 list price for its first color set. Admiral's new models:

Ebony table $180 (compared with $200 as lowest 21-in. model in current line); mahogany table $230 (compared with $270); open-face mahogany console $250 ($300); full-door mahogany console $370 ($430); mahogany combination $300 ($400).

Emerson led its line with 17-in. wood table at $150 & 21-in. wood table at $180. Westinghouse showed 17-in. mahogany plastic table at $180 and 21-in. mahogany veneer table at $200. GE introduced no new models but reduced prices by $10 to $40 on five 17 & 21-in. receivers in 24-model line. (For details of lines, see p. 14.)

Even lower prices may be forthcoming from other companies, big and small, as they show at Chicago marts next week and hold distributor meetings during January.

* * * *

What does 1954 hold in store? TV leaders were inclined to more optimism than nation's high-level economists, who generally foresee recession in national economy in 1954. For example, consensus of a group of economists of govt. agencies, educational institutions and private corporations participating this week in forum sponsored by National Industrial Conference Board was that 5-7% decline in the nation's gross national product (the value of all goods and services produced) looms in 1954.

At annual forecasting session of American Statistical Assn. in Washington, majority of several hundred economists opined national economy is already in downturn and faces "orthodox recession" in 1954, reported Dec. 29 New York Times. They predicted downturn may last through first half of 1954, then continue at slower rate for next year or 18 months.

Authoritative U.S. News & World Report (Jan. 1) foresaw business trend down in 1954, up in 1955. It summarized outlook like this: "1953 has seen the end of the boom. 1954 will see the downturn running its course. Resurgence is not expected before 1955. For many, business news will not be so good -- smaller pay, fewer jobs, scarcer orders, lower profits, unwieldy inventories. Some good news also is in store, however. Prices of many things are sure to drop. There will be more good buys in houses, cars, appliances. Living costs may ease. People with fixed incomes will have less of a struggle. Value of their dollars is not likely to be clipped on inflation. Federal taxes will be reduced."

* * * *

As for industry leaders' opinions, RCA's Frank Folsom said merchandising trend changed in 1953 to a buyers' market that augurs well for business in 1954. "The new trend in merchandising represents a closer approach to normal business operations," he said. "The 14-year sellers' market is gone. Many industries are now adjusting their operations to meet the demands of a buyers' market. Careful planning and hard work are needed to maintain the sales volume that developed during the years that business enjoyed a sellers' market."

He said RCA in 1953 prepared for transition to buyers' market by increasing efficiency of production, streamlining sales operations and establishing closer relationship with all levels of trade. He said, too, that TV-radio-electronics is a prime example of an expanding industry. Its annual going rate of nearly $8 billion in 1953, with continued growth, could forestall national recession, he said.

Admiral's Ross Siragusa foresees relatively good year for industry & nation. He told his distributors TV-radio-appliance industry offers great opportunities for sales and profits "if all of us put in more work and more sweat...We can get a bigger
share than we ever had if we go after it hammer and tongs." Of the nation's general economic outlook for 1954, Siragus commented:

"The consensus among economists is that 1954 will show a 5-10% decline from 1953. A decline in that range seems probable to us, but we think it will be closer to 5 than 10%. The general economic adjustment has been in progress for some time, and we believe it is already further advanced than many people realize. When you look behind the conversational pessimism, the actual economic facts are quite favorable." He listed 62,000,000 employed persons, 1,000,000 new homes slated for construction next year, 10% average reduction in personal income taxes, and easing of credit restrictions as factors in the nation's economic favor next year.

Philco's Wm. Balderston said we could talk ourselves into a recession and called on industrialists, economists and "all thinking people" to place more confidence in our economic system, which he said demonstrated its vitality in 1953 "by turning a year of transition into the most prosperous period in history." He added:

"Our population is growing at a rate of over 2,500,000 persons a year...The average income of our wage earners is a third higher than it was before the Korean war, and employment continues at a record high. 1954 will see a reduction in the tax burden. So-called disposable income is at a peak of about $250 billion. There are a number of new and fast-growing industries to give more and more employment to our people -- among them electronics, air conditioning, plastics and chemicals."

* * * *

TV production totaled 120,430 week ended Dec. 18, reports RETMA, one week behind in its count because of holidays. It brought year's output as of that date to about 7,150,000 -- and with 2 holiday weeks yet to be reported, year's production should be between 7,300,000 & 7,350,000, second only to 1950's record 7,463,800.

Radios totaled 267,053, bringing year's output to date to about 12,750,000 -- with likelihood that about 13,000,000 radios, including auto, will be produced in 1953.

NEW DIRECTORIES OF TV SET & TUBE MAKERS: There are now exactly 76 entities manufacturing and/or assembling TV receivers in the U.S., and 27 TV-radio manufacturers in Canada, according to survey we've just finished for the directory in our TV Factbook No. 18 due off the presses in mid-Jan. At peak, total was just over 100 during TV's biggest year, 1950, as listed in the semi-annual edition (No. 11) of July 1950.

There are 59 companies making vacuum tubes of all kinds, about two-thirds of them in cathode ray production and 16 making receiving tubes -- a mounting number.

Absent from the TV set manufacturers' list of 6 months ago are such names as Automatic, Freed, Mitchell, National, Snaider, Pathé -- primarily because they're in other electronics fields now, do not make sets. There were also some bankruptcies, but far fewer than many anticipated in view of intense nature of the competition.

Though still operating, these were the Chapter XI casualties of the year, not one of them a major factor in the business and all still operating: Gotham (taken over by Harold Shevers Inc., which dropped own name); Jackson Industries (now known as Jackson Electronics & Television Inc. and operating subsidiary Trans-Vue Corp. in lieu of its now defunct National Electronics Mfg. Co., Los Angeles); Jewel (casualty along with parent Fidelity Tube Co.); Regal (filing in bankruptcy only last week; Vol. 9:52); Video Products (interlocking with Sheraton); Transvision Inc.

There were only 2 tube makers who went bankrupt -- the aforesaid Fidelity and Zetka.

Only major change in Canada: Transvision-TV Canada now Arcan Corp. Ltd.

Creditors of Regal Electronics Corp., whose Chapter XI petition proposing 75% settlement (Vol. 9:52) is due to be heard in N. Y. Jan. 5, include these with accounts in excess of $10,000: W. Spiegel, $70,000; GE, $52,644; RCA, $35,000; RCA Victor, $19,115; Sylvania, $22,913; Hazeltine, $24,700; Tech Art Plastics Co., $18,059; Tele-o-Tube Sales Corp., $15,680; Standard Coil Products, $15,388; Guardian Electric Co., $14,278; Cosmic Radio Corp., $12,075.

Jewel Radio's creditors, shown in schedules filed in Federal court in Newark in connection with Chapter XI proceedings listing $1,114,880 liabilities and $537,962 assets (Vol. 9:48), include these with claims exceeding $10,000: Fred M. Link, $69,953; GE, $30,645; D'Arcy Printing, $19,711; Carbonneau Industries, $15,213; Westinghouse, $14,836; Centralab, $11,613; Berglund & Swenson Co., $10,639; Sessions Clock Co., $10,456.

Nearly one in every 7 sets in use will need new picture tubes in 1954, GE tube dept. gen. mgr. J. Milton Lang predicts—for total of over 4,000,000, about 50% higher than 1953. Based on GE market research, he forecast 1954 industry output of 5,200,000 picture tubes for new black-&-white sets, with color tubes about 2% of total production. He said electronic tube industry should do about $700,000,000 worth of business, some 5% over 1953.
ARGUMENT over color — who did what — advanced another round this week following last week’s RCA-Philco exchange (Vol. 9:52). To paraphrase an old question, “Who killed cock robin?” the question now is, “Who hatched the peacock?”

Zenith pres. E. F. McDonald led off with letter to FCC, sending copies to other leading manufacturers. He said he was “shocked” at RCA’s “misleading” ads and TV announcements claiming major credit for development of compatible system. “I have the feeling,” McDonald wrote, “that this RCA campaign of misinformation is in some way associated with the fact that the current RCA license agreements expire in 1954 along with some of the cross-license agreements of 1932 and that RCA has freed its opening salvo in another bitter battle to convince the industry that it is necessary to have an RCA license in order to stay in business.”

RCA shot back with a scathing statement reiterating that it “has consistently been first in every major color TV development.” As for McDonald, RCA said, “We know of no significant contribution of Zenith to the creation and development of compatible color TV.” RCA went on to recall McDonald’s famous 1946 Collier’s article in which he stated that TV is doomed unless it has a pay-as-you-look foundation and announced that Zenith wouldn’t make TV sets because they’d become obsolete. Then, RCA stated, “Although [Zenith] was the last major company to enter this new business, it has since that time made millions of dollars from it, using the inventions that RCA developed and made available to the entire industry.”

Others joined Philco and Zenith. Admiral pres. Ross Siragusa told meeting of his distributors in Chicago: “The fact is, the so-called RCA system was flatly rejected as unsatisfactory by the FCC in the fall of 1950. At that time, the Commission authorized the non-compatible Columbia system. The industry, which, except for CBS, was unanimously agreed that any color system adopted would have to be compatible, then stepped forward and developed the system the FCC has just approved.” He also said that RCA’s claims were aimed at strengthening its patent position.

In Los Angeles, Hoffman Radio Corp. placed full-page ads headed “A Salute to the Entire Television Industry,” describing development of compatible color as an all-industry effort.

Another substantial manufacturer told us he considers protests of others to be based primarily on fear that RCA may gain a merchandising advantage, secondarily on plans of some to dispute RCA patents.

And we have an interesting comment from Wayne Coy, who was chairman of FCC when it approved CBS system. Now pres. and 50% owner (with Time Inc.) of NBC-affiliated KOB-TV & KOB. Albuquerque, he wrote in response to our query:

“The color TV decision by the FCC marks another era of progress for this great communications industry. It reflects great credit on the unified efforts of the industry under the leadership of Dr. W. R. G. Baker. Color is important to TV; it will make TV an even more vital advertising and public service medium.”

RETMA publishes 1953-54 membership directory (132-p.), listing personnel of board, depts. & committees: names, addresses, telephone numbers & top personnel of member companies; trade names, etc. It's edited by Peter H. Cousins, information director.

National Assn. of Music Merchants holds midyear board meeting at Ponte Verde Beach Club, Ponte Verde, Fla., Feb. 24-25.
**Topics & Trends of TV Trade:** Exuberant about color, convinced it’s going to come fast, the 2 newsmen who have color sets on loan in their homes have some pertinent suggestions for the trade as result of their observations. New York Times' Jack Gould, after watching colorcast of NBC-TV's Season's Greetings Dec. 22 on Emerson set, commented that “gorgeous color TV, incredibly rich in texture and gay in brilliance, truly came into existence last week,” then gave this advice: “For the TV manufacturers, the show presents a great lesson. They had better forget about leisurely transition to color. The switch to color TV very easily could assume stampede proportions.”

Martin Rosenblum, Retailing Daily, with a Westinghouse pilot model, cautions that careful tuning of set by retailers can make a world of different in proper presentation of color to public. He says dealer who tunes set well can show “all the richness and vibration, all the added dimension that color provides, plus the feeling of excitement of a new electronic triumph.” But if the dealer neglects to tune set properly, he says, “color TV could be initially exposed to the consumer as a ghastly hodge-podge of hues, much like the result of a young child let loose with an artist’s palette.” Rosenblum sees possibility some dealers will purposely choose latter course to show color at its worst, in effort to build black-&-white sales. He said it was very easy to mistune a color set; he listed manufacturer’s instructions on how to tune one properly.

Illustrating zeal of retailers to get going on color, Sears, Roebuck says it will demonstrate its Silvertone color sets in its retail stores in all color telecasting areas by Feb. 1. And big Davega chain took ad in N. Y. newspapers Dec. 27 announcing it would start taking orders for color sets on “first-come-first-served-basis,” requiring $25 deposit to get on the list. Ad pointed out immediate limitations of color, urged public to buy monochrome now.

---

Philco introduced 10 new models this week, 2 of them on Philco TV Playhouse Dec. 27—and spokesman indicated 7 more would be introduced soon. The models, all 21-in.: No. 4001E, mahogany plastic table $280, maroon $230, blonde $250; No. 4003, mahogany table $260; No. 4005, mahogany table $280, blonde $300; No. 4007, mahogany table $300, blonde $320; No. 4009, mahogany table $330; No. 4103, mahogany open-face console $280, blonde $300; No. 4105, mahogany open-face console $300, blonde $320; No. 4107, mahogany open-face console $330, blonde $350; No. 4112, mahogany open-face console $360, blonde $380; No. 4110, mahogany open-face console $400, blonde $420.

Westinghouse's new models: Ridgetown, 17-in. mahogany plastic table $180; Rosemont, 17-in. ebony plastic table $190; Elmont, 21-in. mahogany veneer table $200; Dejas, 21-in. metal table $240; Catalon and Sorrento, both 21-in. metal tables at $260; Engleton, 21-in. mahogany open-face console $300, frosted oak $310; Pemberton, 27-in. frosted oak table $500; Westfort, 21-in. mahogany or walnut combination $600. Optional uhf equipment is $40 extra on all models.

Emerson’s new models, all tables: No. 1012, 17-in. mahogany wood $150; No. 1000, 21-in. mahogany wood $180; No. 1002, 21-in. mahogany wood $200; No. 1004, 21-in. walnut $220; No. 1006, 21-in. maple $230; No. 1008, 21-in. blonde $240; No. 1010, 21-in. limed oak $230. Optional uhf equipment is $30 extra on 17-in. set, $50 on all others.

GE’s price reductions on 5 models in current line: 17-in. mahogany plastic table $180 (reduced from $190); 21-in. ebony plastic table $200 ($240); 21-in. mahogany plastic table $220 ($260); 21-in. mahogany plastic table with aluminized tube $250 ($290); 21-in. mahogany plastic open-face console $280 ($300).

Sylvania will appeal initial decision by Federal Trade Commission examiner last week ordering it to halt “discriminatory pricing practices” in sale of radio receiving tubes (Vol. 9:52). Arthur L. B. Richardson, Sylvania gen. counsel, said appeal will contend Robinson-Patman amendment to Clayton Anti-Trust Act permits varying prices to different customers “where differences are justified by differences in cost of manufacturing, sale or delivery.” Case was outgrowth of complaint that Sylvania in 1949 sold radio tubes to Philco at 7-9¢ less than to its own distributors.

TV set sales by Canadian factories totaled 313,633 in first 11 months, at average price of $410, compared to production of 362,570, reports Canadian RTMA. Projected production estimate is that 154,901 more sets will be turned out next 3 months. For Nov. alone, sales were 55,188, inventory 55,291 at month’s end. Quebec led in sales with 19,270; Toronto second, 12,938; other Ontario, 6514; Ottawa & eastern Ontario, 6109; Hamilton-Niagara, 5073; Windsor, 3062; British Columbia, 1929; Maritime Provinces, 203; Prairies, 90.

TV-radio dealers don’t like proposal of Washington (D. C.) supt. of licenses to classify and regulate all retailers who accept trade-ins as second-hand dealers. Under proposal, all merchants who accept trade-ins as partial payment on new merchandise would be required to pay yearly $50 second-hand license fee, be fingerprinted by police, report all details of trade-in to police and hold merchandise for 15 days without altering or reconditioning it.

Channel Master Corp. has opened new $1,500,000 TV antenna plant in Ellenville, N. Y. With 115,000 sq. ft. of floor space, it has 6 assembly lines to supplement the 2 in old Ellenville plant, as well as complete aluminum extrusion and tube mill, claimed to be only one of its kind in antenna industry. Company now has nearly 1000 employees, having started with 6 in 1947.

Mexico has raised import duties on TV & radio receivers, effective Dec. 15: TVs & radios with cabinet, new rate 5 pesos per legal kilogram, 30% ad valorem, up from 2 & 20%; without cabinet, TVs 2 & 20% from 1.20 & 10%, radios 2 & 20% from 1.20 & 15%; TV combinations, 5 & 30% from 2 & 25%.

Freed Electronics & Controls Corp., new out of TV production, is entering high fidelity market with line of Freed-Eisemann AM-PM tuners, pre-amplifiers and other components.

**Next TV Factbook—Pre-Print Orders**

Our semi-annual TV Factbook No. 18 will be off the presses shortly after Jan. 15, 1954—containing basic data on all U. S., Canadian and Mexican border stations & networks (including rates); complete tabulation of applications for new stations, detailing principals involved, facilities requested, etc. (and starting new series of weekly Addenda); list of all new-station grantees (with reported starting dates); directories of station representatives and major advertising agencies; directories of TV set & tube manufacturers, transmitter & studio equipment makers, film & live program suppliers, community antenna systems, theatres equipped for TV, FCC personnel, legal & engineering consultants, electronics laboratories; plus many other reference features. One copy goes to each full-service subscriber. Extra copies, if pre-print orders for 20 or more are placed by Jan. 17, cost $1.50 each; single copies, $3.
Electronics Reports: Vital statistics of TV-radio-electronics in 1953 as sized up by Dr. O. H. Caldwell in January issue of Tele-Tech. Total output of industry was worth well over $5 billion, with more than $3 billion for military production. America’s “annual bill” for TV-radio came to $5.55 billion, including $900,000,000 in broadcasters’ time sales, $140,000,000 in talent costs, $550,000,000 in electricity & batteries to operate TV-radio sets (including $250,000,000 to power home TV receivers alone). Dr. Caldwell estimates $1.67 billion as retail cost of TVs sold during year, $836,000,000 for radios at retail, $250,000,000 for phonograph; $1.3 billion for TV-radio repairs and costs. TV & radio sets in world are estimated at 263,000,000.

Color TV will dominate TV-radio papers at AIEEE winter convention Jan. 18-22 at New York’s Statler Hotel. Program includes papers on differential gain & phase measurements in color TV systems, by Bell Labs’ H. Kelly; photo-electric colorimeter for color TV, by Philco’s J. B. Chatten; transmission of color over intercity networks, by AT&T’s J. A. Rae; camera equipment, by RCA’s F. W. Millsbaugh; color broadcast equipment, by Telechrome’s J. R. Popkin-Clurman; color studio design, by NBC’s R. Montford; color broadcast equipment, by O. W. B. Reed Jr. of Jansky & Bailey; high-gain side-firing uhf broadcast antennas, by Cornell’s H. G. Smith; wavestack uhf broadcast antennas, by Canadian RCA’s G. B. MacKimmie; klstron uhf transmitter, by DuMont’s W. H. Sayer; TV satellites, by WSM-TV’s L. E. Rawls; community TV systems, by M. F. Malarkey, Pottsville Trans-Video Corp.

“TV-Eye,” RCA’s new closed-circuit industrial TV system, now is in full production and on display by electronic parts distributors throughout country. Sampling of all outlets has been completed, reports RCA. Suggested retail price for TV Eye system is $995. Available as accessories are 4 new lenses priced from $8.95 to $130. New York parts distributor Terminal Radio Corp., one of first to list TV Eye equipment in its catalog, quotes these prices: Camera & control unit, less vidicon tube, $635; vidicon tube $345.

Westinghouse has appointed Latham E. Osborne as v.p. in charge of all company divisions and member of board. Leslie E. Lynde, v.p. in charge of aviation gas turbine div., succeeds him as v.p. in charge of defense products, including output of Baltimore electronics div. Both will headquarters in Pittsburgh.

Sightmaster Corp. has acquired General Fuse Co., South River, N. J., will begin in Jan. to manufacture its line of electronic, automotive, industrial and household fuses at New Rochelle plant.

RCA Victor Co. Ltd. will open new 50,000-sq. ft. record-pressing plant about Jan. 31 at Smith Falls, Ont. L. I. DelMotte will be mgr. Recording studios remain in Montreal.

Dr. James L. Thomas, former chief of resistance measurement section, National Bureau of Standards, named chief of new resistance & reactance section of Bureau’s electricity div.

Sylvania issues revised TV picture tube comparison wall chart, listing over 160 types and diagrams; it’s available free from adv. distribution dept., 1100 Main St., Buffalo.

Webster-Chicago leases new city-built 35,000-sq. ft. branch assembly plant in New Ulm, Minn., starting in spring, for motor assembly, tape recorders & phonographs.

Financial & Trade Notes: It’s estimated about 300,000 tape recorders will have been sold in 1953, as against some 200,000 in 1952 and 175,000 in 1951. This evidence of growing demand, plus RCA’s recent demonstration of both black-&-white and color TV via magnetic tape (Vol. 9:49), leads United Business Service, Boston, to comment, “This is an industry to watch.” It states:

“Beneficiaries of the development of magnetic tape fall into several groups. Among the few companies which produce the tape, Minnesota Mining & Mfg. has a dominant position and should do well as demand grows. In the field of tape recorders, Webster-Chicago leads. This company also produces complete photographs and record changers for installation in cabinets. Radio Corp. has entered the business with a big promotion of its portable model. Federal Mfg. & Engineering is another company which has entered this promising field. Other growing ‘tape’ participants are Audio Devices, Audio & Video Recording and Magnecord. Altogether, there are about 40 companies which manufacture machines, produce tape, or engage in other phases of the business.”

Admiral’s 1953 sales will set all-time record of about $250,000,000, said pres. Ross Siragusa at distributors convention in Chicago this week, adding that appliance sales for first 11 months this year were 37% above all of 1952. Admiral’s previous high was 1950, when sales were $230,397,661, earnings $18,767,554 ($0.73 a share). Sales last year were $190,724,356 vs. 1951’s $185,025,058; earnings last year were $8,711,133 ($4.43) vs. 1951’s $9,586,833 ($4.88). Admiral’s last financial report this year showed 9-month earnings of $5,654,848 ($3.34) on record sales of $189,856,035 (Vol. 9:44).

Sylvania’s 1953 sales hit all-time high of about $295,000,000, some 25% over 1952’s $235,000,000, said pres. H. Ward Zimmer in year-end statement. Each of company’s 7 operating divisions’ sales exceeded 1952. Defense business in 1953 was 22% of total, against 30% in 1952, backlog of unfilled defense orders totaling $90,000,000 vs. $85,000,000 at end of 1952. Sales of Sylvania receiving tubes reached all-time high, nearly 30% over 1952, while picture tube sales were 40% higher.

Philo finalized stock exchange plan this week, whereby it acquires Dexter Co., Fairfield, Ia., washing machine manufacturer (Vol. 9:50). It exchanges 70,000 shares of authorized but unissued Philo stock for 200,000 shares of Dexter stock outstanding, paying 5% stock dividend to Dexter stockholders. Transfer is expected to be completed by Feb. 15.

DuMont sales for first 11 months of 1953 were 20% higher than comparable 1952 period, and “it is anticipated that profits for the full year will exceed those of 1952,” said Dr. Allen B. DuMont in year-end statement.

Cornell-Dubillier reports record sales of $43,630,816 for fiscal year ended Sept. 30, some 23% over preceding year’s $35,496,041. Net income was $1,666,696 ($3.12 a share), compared with $1,539,831 ($2.86) for 1952.

Oak Mfg. Co. reports sales of $15,602,236, net income of $907,168 ($1.85 a share) for first 9 months of 1953, compared with $11,013,071 & $745,117 ($1.42) same 1952 period.

High-fidelity boom is getting under way in Latin America and market comparable to U. S. should be fully developed there in 2 or 3 years. That’s observation of R. L. Romeyn, Philo International v.p., on return from tour in which he heard “hi-fi” concerts in Puerto Rico, Colombia, Venezuela, Chile, Argentina, Peru, Panama, Cuba.
Network TV-Radio Billings

November 1953 and January-November 1953
(For October report see Television Digest, Vol. 9:48)

Both November and 11-month leads in network TV billings were taken by CBS-TV in Publishers Information Bureau tabulations released this week, and as usual CBS maintained its far-away lead in network radio billings. CBS went to Nov. TV record of $9,778,028, leading for 6th time this year, and shows total of $87,106,365 for 11 months. NBC dipped from its $10,275,480 record of Oct. to $9,655,678 in Nov. to bring its 11-month total to $86,615,046. Both ABC and DuMont went to new highs in Nov., when total for all networks reached record $23,630,290 to bring 11-month cumulative total to $202,983,531.

Radio billings held firm, aggregating $13,670,115 in Nov. vs. $14,477,570 in Nov. 1952, or $146,328,032 for the 11 months vs. $145,528,367 for same 11 month period. The complete PIB report:

Combined AM-FM broadcasting income in 1952 was $60,100,000 before Federal income taxes, up 4.5% over 1951, says FCC in final financial report issued Dec. 31 (Public Notice 9091). Total revenues were $492,700,000, up 4.3%, and total expenses $409,600,000, up 4.5%. Preliminary report last May (Vol. 9:18) had given total broadcasting revenues as $473,100,000, income before Federal taxes of $62,600,000. Report shows the 4 national and 3 largest regional networks accounted for $100,600,000 of the 1952 total. It breaks down revenue-expense figures by cities, community sizes, classes of stations, etc., shows 61 FM stations accounted for $2,000,000 in revenues. Comparisons with previously-announced TV figures are also provided—TV in 1952 totaling $324,200,000 revenues, up 37.5% from 1951, and $55,500,000 income before Federal taxes, up 33.5%. (For breakdowns of both the TV & radio figures by years, see p. 351, TV Factbook No. 17.)

J. Walter Thompson Co. has updated its Sept. 1, 1953 its report on Where the TV Sets Are, tabulating households and TV ownership in the first 312 markets of the U. S. (Census Bureau divisions). Last report, dated April 1, 1953, was published in full in our TV Factbook No. 17 of July 1953 (pp. 341-449). The Sept. 1 figures are interim, prepared largely to meet intra-company and client requests, and will be updated to Jan. 1, 1954 sometime in Feb. We are not publishing the Sept. 1 report, preferring to wait for the Jan. 1, but limited supply of mimeographed copies will be made available to subscribers on request.

Intensity of popular interest in color is also manifested in 1/4- p. color layout in current Life Magazine, captioned "Upheaval, Markets to Come for a Still Infant Industry, Color Television" and showing diagramatically how the RCA and CBS color TV camera methods work. "Because color will bring confusion, too-quick obsolence of black-and-white sets and financial hardships," states Life, "sections of the TV industry have been revolutionaries. The introduction of color, nevertheless, is another step in the way U. S. industry finds—or is thrust into—new, profitable fields even before old ones are played out."

Two applications for new TV stations were filed with FCC this week. With 4 dismissals, pending applications were reduced to 347 (71 uhf). Week's applications were for Paducah, Ky., Ch. 6, by Paducah Newspapers Inc. (Paducah Sun-Democrat); for Selma, Ala., Ch. 8, by Dallas Bester Inc. (Oscar P. Covington, pres.), whose principals own WCOV-TV & WCOV, Montgomery, and WGWD (AM), Gadsden, Ala. [For further details about these applications, see TV Addenda 17-Z herewith; for complete listings of all grants, new stations, applications, dismissals, hearings, etc., see TV Factbook No. 17 & Addenda to date.]

Year ended with 261 interconnected stations in 161 cities, AT&T having added these stations between Xmas week end and New Year's Eve: KOA-TV, Denver; WROL-TV & WTSK-TV, Knoxville, Tenn.; WOSH-TV, Oshkosh, Wis.; WSTV-TV, Steubenville, O.; WLBT, Jackson, Miss.; WAFB-TV, Baton Rouge, La.; KCOC-TV, Texarkana, Tex.; WNCT, Greenville, N. C. Slated for interconnection New Year's Day were WKVN-TV, Saginaw, Mich.; KSLA, Shreveport, La.; WAYS-TV, Charlotte, N. C.; KFAZ, Monroe, La.; WLBC-TV, Muncie, Ind.

Sale of radio WGAR, Cleveland, to Peoples Broadcasting Corp., subsidiary of Farm Bureau Mutual Insurance Co., Columbus (Vol. 9:30), was approved by FCC this week. Sellers were Mrs. Francis S. Parker, widow of late George A. Richards, and 13 others. Purchase price was $1,750,000, which included about $750,000 in quick assets. WGAR pres. John F. Patt, who sold his 35% interest, becomes head of WJR, Detroit.
19 & 21-in. COLOR TUBES NOT FAR OFF: A vital purpose is being served by 15-in. round color tube -- that of giving set production a start -- but it is expected to survive very little longer than it takes to get into production of larger tubes.

That's the definite consensus of tube and set makers as we talked to them this week in our continuing survey of color tube prospects. Relying heavily on black-&-white experience, manufacturers say there's no doubt that the 15-in. (giving 11½-in. picture) is too small and that the industry will bend every effort to reach goal of the 21-in. rectangular for which public has shown heavy preference.

It's conceivable color may not parallel monochrome. Public may be satisfied with smaller picture in color -- but we doubt it, after seeing 17-in. & 19-in. color pictures. Obviously, there's no way of knowing until customers have opportunity to compare sizes, quality and prices.

At least one interim step is currently in prospect before 21-in. is built -- the 19-in. round, giving about 17-in. picture. This step may be reached quite soon. After announcing that price of recently-commercialized 15-in. (Vol. 10:1) will be $175 to manufacturers, RCA this week invited tube licensees to see the 19-in. at RCA Labs in Princeton Jan. 21. This is taken to mean design of 19-in. is frozen.

The 19-in. won't be in mass production until fall, RCA says, but speculation is that pilot production is already under way.

* * * *

Further indication of tube trends comes from bulb maker Corning Glass. Its pres. Wm. C. Decker tells us Corning is working on 3 sizes for the RCA-type tube: 15-in. & 19-in. round and 21-in. rectangular. He said Corning is now building up inventory of 15-in., can step up current pilot production of either 15-in. or 19-in. and "make as many as anyone wants whenever we get orders for them."

The 21-in. bulb is still in laboratory stage but may be put into pilot production during first half of this year, says Decker, pointing out that it's hard to pin down production estimates while tube is still in process of development.

CBS-Hytron chairman Lloyd Coffin said he believes 19-in. will be next step, "and that will be determined by when we can get the bulbs." Hytron has set $125 price on its 15-in. round, is slated to begin pilot production late this month, and regular production in February.

Dr. Allen B. DuMont, pioneer of large black-&-white tubes, who has hitherto been silent on plans for color tubes and sets, says he'll produce no 15-in. sets except for demonstration. "We're developing our own type of color tube," he said, adding that he's shooting for "something in the neighborhood of 21-in.," hopes to have it by mid-year. "Unquestionably," he said, "it's the only satisfactory size."

While set makers showed only 15-in. at this week's mid-winter marts in Chicago (see p. 9), it's evident that some of them plan little more than token production of that size -- they're all shooting for big screens.
Chromatic TV Labs, developer of Lawrence tube, has always plumped for big tubes. Chromatic licensees currently are waiting for rectangular glass envelopes, as well as tube grids. Pres. Richard Hodgson says that so far blanks for Chromatic sample tubes have been round metal, 21-in. and 24-in., with cones supplied by I-T-E Circuit Breaker and United Specialties Co. He expects that rectangular glass bulbs will pose no big problems for Chromatic one-gun tubes because they’re similar to those used for black-&-white, except for addition of metal flange.

Chromatic announced this week it has set up grid-producing facilities at Emeryville, Cal. -- "to get our licensees off the ground." Company has been making grids in pilot plant at Oakland, but new plant, employing 200, is aiming to be in production by end of March with initial annual rate of 25,000 grids for as many tubes. (Parenthetically, we’d say that rate appears incredibly small.)

* * * *

We visited Hazeltine Labs this week, to observe its results with Lawrence tube. Hazeltine has devised technique whereby tube itself acts as signal decoder, a process it believes has distinct advantages.

Results are a definitely marketable picture. Tube was displayed alongside 15-in. RCA-type tube produced by Zenith subsidiary Rauland; latter differed from RCA tube in that it contains 1,200,000 phosphor dots, compared with RCA’s 600,000.

Demonstration was conducted for Hazeltine licensees by research v.p. Arthur V. Loughren, who gave frank appraisal of Lawrence tube’s advantages and drawbacks. He stated these to be the advantages: (1) Larger picture, with no complications expected with still bigger tubes. (2) No registration or convergence problems. (3) Simplicity of production and low rejection rate. (4) Ruggedness in handling and in continuous use. (5) Good black-&-white reception.

Loughren noted 2 disadvantages, both of which he believes are temporary: (1) Less color fidelity and overall resolution. (2) Excessive radiation -- "it’s a 50-watt transmitter."

Cause of poorer color fidelity, Loughren explained, is that the tube has 350 lines of green phosphor, 175 of red, 175 of blue. Thus, when solid red or blue object is shown, it has far less resolution than solid green object. Result is that red or blue objects look coarser and paler. Solution to this, Loughren said, is to put more lines in picture. Chromatic’s Hodgson claims that tubes now under development will give all the resolution transmitted.

Radiation problem is on way to elimination, Loughren stated. He said Hazeltine engineers have worked on disassembled tube, devised very promising techniques for reducing radiation to reasonable limits. He added that complete tube incorporating new techniques is still to be produced.

Our own observation is that lack of misregistration is certainly a plus for Lawrence tube, compared with Rauland tube which had bad fringing at top and bottom. We must note, however, that we’ve seen no misregistration on RCA tubes in recent months. Black-&-white reception on Lawrence tube was excellent -- a fact not to be dismissed lightly until most telecasting is in color, if it will be. Rauland tube was marred by fringing during black-&-white reception.

Westinghouse appears quite sold on Lawrence tube, is reported further along towards production than anyone else. Engineer for one small manufacturer, attending Hazeltine session, said Westinghouse told him production "yield" of Lawrence tubes is 30-to-1 greater than RCA type -- difference in rejection rate being that great.

One drawback of tube isn’t technical; it’s fact there’s no big source of supply in sight. Chromatic Labs doesn’t make tubes. Of Chromatic’s 2 licensees, Crosby intends to use all its own output and Thomas Electronics is a small producer. Westinghouse hasn’t been a big factor in tube production. However, there is persistent rumor that GE is working fiercely on Lawrence tube or a grid-type tube of some sort. If GE commits its massive productive facilities to the tube, large-scale production can be expected eventually.

Regarding Rauland tube, incidentally, it’s worth noting that its 1,200,000 dots, compared with RCA’s 600,000, give picture exceptionally fine texture. We sat
within 3 ft. of set, detected no dots at all. If the production of such screens is practical, it's certainly worth doing.

Evaluating whole color tube situation, one executive said: "The jump from radio to black-&-white TV was a much greater revolution in our business than will be the jump from black-&-white to color."

He sees no need for the intermediate steps taken by monochrome -- no such evolution as the progression through 7, 8½, 10, 12, 12½, 14, 15, 16, 17, 19, 20, 21, 24, 27 & 30-in. sizes. However, the more conservative industry sources expect it will be some 2 years before mass production of rectangular 21-in. -- the "ideal".

Though there have been some pilot model metal-coned color tubes, virtually everyone is talking glass now. Interesting sidelight is that RCA, pioneer of metal tubes for black-&-white, gave them up about 6 months ago, and except for replacement is now making only glass black-&-white (as well as color).

**STORER BUYS EMPIRE COIL CO. FOR $10,000,000:** Biggest deal since the ABC-UPT merger -- topping any of the 20 major station sales of 1953 -- is Storer Broadcasting Co.'s projected purchase of Herbert Mayer's Empire Coil Co. for approximately $10,000,000.

Announced purchase price is $8,500,000, same sum Westinghouse paid Philco for WPTZ in Philadelphia last year (Vol. 9:8,22); but Storer assumes liabilities of about $1,000,000 and Mayer will get about $500,000 more in adjustments.

Deal embraces acquisition of big electronic parts manufacturer, major vendor of transformers & coils to many of the large TV-radio manufacturers, plus its TV stations WXEL, Cleveland (Ch. 8) and KPTV, Portland, Ore. (Ch. 27). It was closed at 4:16 a.m. Jan. 8, when Storer counsel John Poole and Mayer counsel Morton Wilner completed the agreement papers, and $350,000 cash deposit was paid.

Agreement calls for $6,000,000 cash on FCC approval of transfers, balance in cash or notes -- most likely cash. Broker Howard Stark, who engineered deal, is paid by Storer. No new stock sales are contemplated to raise funds.

Mr. Mayer gave ill health as one of reasons for finally agreeing to sell after having rejected numerous offers, particularly for Cleveland station. Package deal offered certain tax advantages. Letter to staffs of WXEL & KPTV told them Storer has assured him he anticipates making no changes in personnel and that operation of the stations will continue substantially as before.

* * * *

There was no breakdown in values placed on the 3 properties, all of which are known to be substantial money makers, together last year grossing very nearly the amount of the announced purchase price. Cleveland station has been particularly profitable; Mayer has rejected offers of up to $8,000,000 for it.

Portland uhf station, which he also founded, was first commercial uhf outlet to go on the air, has NBC basic affiliation, has been good earner from start, is probably the most profitable uhf station of all the 122 that have since started.

Already owner of 5 stations, the hitherto allowable limit, Storer will have to dispose of at least one of them. Presumably it will be KGBS-TV, San Antonio (Ch. 5), recently known as KEYL, which he purchased in 1951 for $1,050,000 (Vol. 7:30,41) and which son George B. Storer Jr. now manages. Or it might be WAGA-TV, Atlanta (Ch. 5).

Because FCC is waiving 5-limit rule to permit ownership of 2 uhf in addition to 5 vhf (Vol. 9:51), it's expected there will be no obstacle to ownership of Portland outlet which is often cited as the "showcase" of what uhf can accomplish, both technically and financially, if it gets a good head start. FCC is deeply committed to success of uhf, which many think requires network and other big-interest backing over long haul. That was why it authorized, within 48 hours of application, the transfer to DuMont Network Jan. 1 of Empire Coil's uhf KCTY, Kansas City (Vol. 9:52).

* * * *

Now 46 years old, Herbert Mayer quit his New York law practice in 1944 to set up Empire Coil Co. with an investment of only $5000 and an assembly line in a loft in New Rochelle, N.Y., where it now has a modern building. He wanted to get into electronics somehow, so boned up on what was most needed -- deciding on components.

Before the TV station freeze, he decided he wanted to go into telecasting,
and in Dec. 1949 he founded WXEL while local interests were still dubious about TV. In Sept. 1952, he astounded the industry by getting KPTV on the air in TV-less Portland as the first commercial uhf in the U.S., buying the RCA-NBC experimental transmitter at Bridgeport, Conn. and getting it going in record time (Vol. 8:38).

He started KCTV, Kansas City (Ch. 25) last June, anticipating that uhf would be tied up in competitive hearings and its addition to the city's one uhf outlet thus slowed down. But merger agreements approved by FCC brought 2 more uhf into being in short order, they grabbed off CBS and ABC, and his station did poorly. He reported investment and losses of $750,000 in the 7 months of operation before KCTV was sold to DuMont for a nominal $1 as of Jan. 1, 1954 (Vol. 10:1).

Mayer's uhf grants for Denver and Indianapolis were also surrendered -- in Denver because 4 uhf got going first and in Indianapolis because of likelihood new uhf will get on the air, too, before uhf could get a good start.

Agreement with Storer precludes return to same fields in same cities, but Mayer hopes to enter the theatrical side of the business -- may become a producer or syndicator of programs and may back a Broadway play. His long-cherished ambition has been playwriting and play producing.

*   *   *

Storer may set up a separate industrial operating unit, for it also owns Standard Tube Co., Detroit (sheet metal tubes). It was from that business that Mr. Storer ventured forth into radio broadcasting about 20 years ago, building slowly to ownership (by founding or purchasing) 5 TV stations, each with an AM adjunct, plus AM stations in his base city of Miami and in Wheeling, W.Va. He also owns a TV in Havana, which does not fall within FCC jurisdiction, and publishes the Miami Beach Florida Sun, a 5-days-a-week newspaper (Vol. 9:45).

Storer Broadcasting Co. is now partly owned publicly as result of the recent offering of 200,000 shares of common (at 14) which was quickly oversubscribed (Vol. 9:45,47). All 15,000 shares of 7% cumulative preferred stock, except for 50,000 worth held by v.p. J. Harold Ryan, a brother-in-law, was purchased by the Jefferson Standard Life Insurance Co. for $1,450,000.

Prospectus filed with SEC last Nov. 17 showed funded debt of $5,133,000, with 1,010,000 shares of common outstanding, of which 843,250 were designated as "B" common. Storer's personal holdings of 640,125 shares of the "B", even without the large block held in trust for his family, give him voting control. For the recent stock issue, Mrs. Ryan sold 102,500 shares, Mr. Ryan 63,125 and Mr. Storer 34,375. The Ryan's still hold 50,000 shares each.

*  *  *

Note: There were 20 major TV station transfers authorized in 1953 (see TV Factbook No. 18). Storer was involved in only one of them -- $2,400,000 purchase of WBRC-TV & WBRC, Birmingham, Ala. (Vol. 9:13,21). Storer also bought radio KABC, San Antonio (now KGBS) for $700,000 in order to have an AM counterpart for TV there.

There were rumors this week that the Washington Post is about to buy out CBS's 45% interest in WTOP-TV & WTOP, having jointly acquired the TV station in 1950 from Macy interests for $1,400,000. Though denied, it's believed only matter of time before CBS sells so as to free itself to acquire 100% ownership elsewhere. The Post owns outright WMBR-TV & WMBR, Jacksonville, purchased in 1952 for $2,470,000.

ONE NEW STARTER, ONE CP IN SLOW WEEK: New year's first week brought only one new station on air and one TV grant by FCC. Newt is WBTM-TV, Danville, Va. (Ch. 24); CP went to Coastal Bend TV Co. for Corpus Christi, Tex., Ch. 22.

Danville station started Jan. 6, is 42 mi. northeast of uhf-served Greensboro, N.C., 59 mi. south of uhf-served Lynchburg, Va. RCA-equipped, it's owned by local group headed by broadcaster L. M. Dibrell, managed by Edward Gardner, hopes to interconnect with ABC by April, has $200 base rate, is represented by Hollingbery.

Several other stations were reported poised for possible week-end starts. Second klystron and RCA antenna got to WMGT, Adams, Mass. (Ch. 74) on Jan. 6, so it should start momentarily with its GE transmitter. Also possibilities over week end are WKAR-TV, E. Lansing, Mich. (Ch. 60), GE-equipped, and WEAR-TV, Pensacola (Ch. 3),
RCA-equipped. And from CBC came word that CBMT, Montreal (Ch. 6) definitely would get started Jan. 10 -- becoming 2nd station in Montreal, 7th in Dominion.

On-the-air total is 357 at this writing, of which 123 are uhf.

Corpus Christi grant was final decision, after competing H.L. Hunt amended to new channel. It's owned by group of local businessmen and public officials.

Commission's hearing in Buffalo Ch. 2 case -- where it suspects there was a "strike" application (Vol. 9:50) -- opened Jan. 8, but was continued to Jan. 15 pending attempts to narrow down issues through stipulations. FCC hasn't yet acted on petition of Buffalo's uhf WBUF-TV to intervene (Vol. 10:1).

FCC this week scheduled Feb. 5 hearings for Jacksonville, Ch. 12; Muskogee, Okla., Ch. 8; Tulsa, Ch. 2 & 17; Biloxi, Miss., Ch. 13.

NEWSPAPER & THEATRE FOLK LEAD OWNERSHIP: No longer eyed askance, newspaper ownership of TV stations appears to be as firmly entrenched as in radio -- and scrutiny reveals 105 of the 356 operating stations (roughly 30%) are owned in whole or part by newspaper publishing interests. Proportion is about same as for radio stations. You'd expect theatrical interests to be represented in more than the mere 35 stations shown in the study, completed this week to show breakdowns of ownership by categories for listing in our upcoming TV Factbook. Electronic manufacturers now own 22 stations, networks 19, universities & colleges 6 (only 2 non-commercial).

Multiple ownership tabulation has expanded considerably, but only 4 entities have allowable limit of 5 -- ABC, CBS, NBC, Storer. DuMont & Crosley have 4 each. Among newspaper interests, Scripps-Howard, Gannett, Newhouse and Steinmans have 3 each; quite a few newspaper entities own 2 stations each, in whole or part.

The newspaper list embraces all from outright ownership (like Chicago Tribune's pioneer WGN-TV and its interlocking ownership with New York News' WPIX) to partial ownership (like Wichita Beacon's mere 5% interest in KEDD) to such identical ownership as WCOC-TV, Meridian, Miss. with weekly Clark County Tribune.

The count of 105 does not, however, include the 4 stations owned by Meredith Publishing Co. (Better Homes & Gardens); the 2 partially owned by Time Inc. (Time-Life-Fortune); and the one owned by same interests as the Prairie Farmer, Chicago.

Theatrical interests range from the American Broadcasting- Paramount Theatre group of 5 to the single stations owned by such entities as Paramount Pictures and the Walter Reade chain; also the holdings of actors Bob Hope, Bing Crosby, James Stewart and Mary Pickford Rogers.

TV Factbook No. 18 of Jan. 15, 1954 will also carry a complete record of all major station transfer deals since 1949. It's a 378-p. volume that lists all TV Stations in the U.S., Canada, Mexico & Cuba, with facilities, personnel, rates, etc.; has new log of TV stations throughout the world; complete vhf-uhf channel allocation tables; directories of TV set and tube manufacturers, with executives; directories of major advertising agencies, program producers, station sales reps, etc. And each Factbook includes a 43x29-in. Map of TV Cities and Network Routes, suitable for framing, in color, revised to Jan. 1, 1954.

Note: Extra copies of the Factbook will be available Jan. 18 at $3 each.

NEARLY 300 COMMUNITY ANTENNA SYSTEMS: Growth and durability of community antenna systems continues to be a quiet phenomenon -- they're sprouting and flourishing very nicely despite tripling of TV stations on the air during the last year.

Number of homes served by systems is insignificant, frankly, when compared with the 27,000,000 served directly by stations. That isn't the point. What is significant is that the systems represent several hundred going businesses -- many of them returning a very handsome profit.

Combing through up-to-date directory of systems compiled for our upcoming TV Factbook No. 18, we have derived some extremely interesting figures:

(1) 299 systems are now operating, against 240 six months ago (Vol. 9:28), 149 year ago (Vol. 9:4). 94 eighteen months ago (Vol. 8:27). In addition, 29 are now under construction or in planning stage.

(2) 120 of the 299 reported number of subscribers, for total of 64,189 vs.
39,796 for the 92 reporting 6 months ago, 13,750 for the 69 reporting 18 months ago.

(3) Average system has 535 subscribers, compared with 432 for the 92 reporting 6 months ago, 199 for the 69 reporting 18 months ago.

(4) 115 estimated they have total potential of 211,025 subscribers, for an average of 1,835 each, against total of 167,710 for the 96 estimating 6 months ago (average 1,741), 144,356 for the 74 estimating 18 months ago (average 1,950).

(5) Largest system reports "over 4000"; this is the Whitney-Jerrold operation in Williamsport, Pa. Largest claimed 6 months ago was 2500. Currently, next largest are: 3600, 3300, 3000, 2500, 2500, 2200, 1950, 1781, 1505. Including these, 19 operators claim 1000 or more.

Lacking reports from all 299 operators, we can't give a reliable figure for total homes served, but we'd guess it at about 100,000. Since start of pay-as-you-look operations on Telemeter's system in Palm Springs, Cal. (Vol. 9:49), interest in the total has become very keen -- because it's an index to possible boxoffice -- but there's a tendency in some quarters to exaggerate the potential.

Personal Notes: Edward L. Saxe appointed v.p. & asst. to CBS-TV pres. Jack Van Volkenburg; formerly controller, he will handle financial matters mainly... Norman Siegel resigns as CBS-TV west coast director of publicity & exploitation... Harold L. Morgan Jr., ABC v.p. in charge of TV production services dept., named v.p. & comptroller; Jason Rabinovitz, asst. comptroller; W. C. Tupper, chief accountant; Edward Graessel Jr., asst. chief accountant; Robert L. Stone, director of TV production services dept... A. G. Flanagan, commercial mgr., XETV, Tijuana (San Diego), named asst. gen. mgr. of KCOP, Los Angeles (changed from KLAC-TV) under new owner Copley Press Inc.'s TV-radio v.p. & gen. mgr. Jack Heintz; Wilson Edwards succeeds Heintz as mgr. of radio KSJO, San Diego... Robert M. Baird, Dallas mgr. of John E. Pearson rep firm, named TV v.p. ... Elmer W. Lower promoted to director of news & public affairs, CBS-TV, Washington; Wm. Corrigan, newsmilk mgr.; Donald W. Richardson, syndication mgr. ... Neal J. Edwards, ex-WTTG, named sales mgr. of WMAI-TV, Washington, succeeding Harvey Glasscock, resigned; no replacement yet at WTTG... Paul H. Chapman, ex-WFBC, Greenville, S.C. (WFM-TV) has opened own TV-radio brokerage office to serve the South; address is 84 Peachtree St. NW, Atlanta, phone Lamar 2936... Mitchell DeGroot, named ABC-TV director of adv. & promotion in separation of depts., Eugene Arcas handling radio; Andrew Ross named ABC art director... Glen Shaw, recently with KLX, Oakland, named asst. mgr., KCCC-TV, Sacramento, Cal., under gen. mgr. Ashley Robison; John J. Kehoe, ex-CKRA, Sacramento, named sales mgr.... Herbert Pangborn, CBS-TV technical operations mgr., Hollywood, elected pres., Society of TV Engineers of So. Calif.; Edward Benham, KTTV chief engineer, secy.-treas... Wm. L. Clark, ex-asst. sales mgr., WPIX, N.Y., named Hollywood mgr., ABC film syndication... Howard Anderson, ex-film director, WFAA-TV, Dallas, joins Dallas office of Motion Pictures for TV... Halsey V. Barrett resigns as eastern sales mgr., Consolidated TV sales... John W. Owen, ex-Petry, joins Avery-Knodel as coordinator of promotion, research & sales... Wm. T. Romaine named director of public affairs, WSAZ-TV, Huntington... Ben Starr, ex-v.p., elected pres. of western region of TV Writers of America, succeeding Hugh Wedlock, resigned; Nate Monaster replaces Starr... Walter Francis transferred from AT&T New York headquarters to become information supervisor of Kansas City offices... Wm. M. Kohlenzer promoted to eastern sales mgr., DuMont Network ... Branch L. Remendo named south western district supervisor, NBC merchandising dept. ... Stanley S. Simpson, ex-San Francisco radio sales executive, appointed mgr. of KCOK-TV, Tulare, Cal.

ABC Los Angeles commentator Chet Huntley got $10,000 and public apology this week from one Mrs. Rae Suchmen, who accused him to his sponsors of being a communist, in out-of-court settlement of his $200,000 suit. Apology published as paid ad in Herald & Express read: "I have no evidence that Mr. Huntley is other than a patriotic, loyal American for] which links him with any subversive organization or undertaking."

Rev. S. Franklin Mack, Bound Brook, N.J., elected executive director of Broadcasting & Film Commission, National Council of Churches of Christ in U. S. A., under Dr. Clayton T. Griswold. He succeeds Dr. Ronald Bridges, retiring Feb. 1 to become visiting professor at Bowdoin College, Lewiston, Me.

Edwin Moss Williams, ex-UP business mgr. who has been publishing the Elizabeth City (N. J.) Daily Advance, has sold the newspaper to Dear Publications & Radio Corp., of Jersey City, onetime publisher of Jersey Journal.

Vic Diehm, operator of WAZL, Hazleton, Pa., named principal speaker of U of Georgia's 9th annual Radio & Television Institute, Jan. 27-30.

Ninth annual Michigan State Radio & Television Conference of commercial and educational broadcasters has been scheduled for March 5 at East Lansing.

Edward C. Hartung, 66, FCC accountant since 1935, died Jan. 3 in Washington. He is survived by his widow, 2 married daughters, 3 grandchildren.

Mrs. Lilian Paley, 62, wife of Jay Paley, retired turfman and one of founders of CBS, died Jan. 2 at her Los Angeles home. She was an aunt of Wm. S. Paley, CBS chairman.
Station Accounts: TV-radio advertising is expected to be used by grocers more often this year than in the past as they increase adv. & promotion budgets to meet rising competition, according to Vincent L. Browner, pres. of National Assn. of Retail Grocers, Chicago ... Ford Motor Co.'s current campaign for its 1954 cars and trucks is using 270 TV stations (as against 107 last year) plus 1418 radio stations, thru J. Walter Thompson; dealer newspaper advertising on introduction was hiked 30%, magazine 22% ... Renuzit Home Products Co., to promote Odorless Renuzit, rug and upholsterly cleaner, tested TV-radio in Pittsburgh for 13 weeks, now plans 17-market TV campaign which may be expanded later, thru Feigenbaum & Wermern, Philadelphia ... Wildroot Cream Oil has bought rights to Al Capp's Fearless Fosdick cartoon for central theme of 1954 ad campaign, which will include TV-radio, thru EBD ... CBS-Columbia Inc., seeking bigger place as a TV set maker, will spend more than $1,000,000 on adv. & promotion first 6 months of this year, including TV-radio spot, thru Ted Bates & Co. ... Sears Roebuck, Los Angeles, sponsoring Duke Martin Show on KTTV for last 30 months, on Jan. 18 starts 2 half-hour dramatic films daily each weekday, featuring name stars and produced specially for TV both will be shown within 12:45 p.m. period bought by big chain, with Duke Martin service retained ... Among other advertisers reported using or preparing to use TV: Orleans Canning Co., Chicago (All-Meat dog food), thru Presba-Fellers & Presba, Chicago; Adams Corp., Korn Kurls Div., Beloit, Wis. (Korn Kurls), direct; National Association of Engine & Boat Mfrs. (motorboat show), thru Lewis A. King, N.Y.; Quaker Oats Co. ( Aunt Jemima cake mix), thru J. Walter Thompson, Chicago; Modlin Co. Inc., Los Angeles (plastic brooms & brushes), thru Roy S. Durstine Co., Los Angeles; Norwich Pharmaceutical Co. (Flavettes anti-smoking pills), thru Benton & Bowles, N. Y.; Glamorene Inc. (rug cleaner), thru Hicks & Greist, N. Y.; C. A. Durr Packing Co., Utica, N. Y. ( Durr's First Quality hams & bacon), thru Farquhar & Co., Utica; Laurel Products Inc., Cleveland (Nusoft fabric rinse), thru McCann-Erickson, Cleveland; Beto Corp., Dallas (Koracin medicinal), thru Frank J. Miller Adv., Hollywood, Cal.

Network Accounts: Arthur Godfrey quickly picked up General Motors as alt. sponsor (with Pillsbury flour) of Arthur Godfrey and His Friends on CBS-TV Wed. 8-9 p.m., within day after Chesterfields dropped out in move which network insisted was based solely on financial considerations and wasn't related to recent furor over firing of singer Julius La Rosa. Chesterfields also bowed out of Mon. & Wed. 11:15-11:30 a.m. segment of Arthur Godfrey Show on CBS simulcast—but network spokesman anticipates no trouble in lining up sponsor ... Emerol Mfg. Co. (Marvel Mystery oil) sponsors Tommy Henrich Sports Show on ABC-TV starting Jan. 16, Sat. 6-6:15 p.m., thru Hilton & Riggi ... Hazel Bishop (lipstick) sponsors Dr. LQ on ABC-TV starting Jan. 18, Mon. 8:30-9 p.m., thru Raymond Specter Co. ... Post Cereals buys Portia Faces Life on CBS starting in April, Mon.-thru-Fri. 1:15-1:30 p.m., thru Young & Rubicam ... Whittemble Pharmaceutical Co. (drugs) and Boyle-Midway Inc. (Plastic Wood) sponsor Mon.-Wed.-Fri. segments of The Bright Star on CBS-TV starting Feb. 1, Mon.-thru-Fri. 4:15-4:30 p.m., former thru Biew, latter thru Geyer Adv. ... Mutual of Omaha buys Mon. & Wed. segments of John Daly and the Show on ABC-TV starting Feb. 4, Mon.-thru-Fri. 7:15-7:30 p.m., thru Rozell & Jacobs, Omaha, ... American Chicle Co. & DuMont Labs shift Colonel Humphrey Flack from Wed. 9-9:30 p.m. to Sat. 10-10:30 p.m. on DuMont starting Jan. 9 ... DuMont brings back Author Meets the Critics as sustaining program starting Jan. 17, Sun. 7-7:30 p.m.; Big Issue goes off DuMont Jan. 18 after year as sustainer.

Take your choice—the $7.7 billion estimated by N. Y. Herald Tribune's Joseph Kaselov or the $7.8 billion by N. Y. Times' James J. Nagle as total expenditures by all advertisers on all media during 1953. That's 10% above 1952, and better. What's more, says Kaselov, it looks as if the pattern will continue in 1954, when some advertising authorities see total advertising "hitting the $8 billion mark as the battle of the sales curves is joined." For perspective, adds Kaselov, it should be noted that in 1939 the figure was $2 billion. Newspapers, magazines, TV, radio, direct mail, industrial advertising all hit new highs, according to their surveys. Nagle says 1953 TV expenditures will go well above the $650,000,000 of 1952 (time & talent), quoting McCann-Erickson, which does annual Printers' Ink survey. Kaselov puts TV figure at $448,000,000 (network & station revenues alone), quoting NARTB's Richard P. Doherty. Latter also guesses radio up 3% to about $490,000,000. Notably, says Nagle, some industries are still shifting from radio to TV—cigarettes, cosmetics, insurance and beer, for example; but other important companies are now using radio for first time or have returned to it. Note: Our own guesstimate is still between $450-475,000,000 as total revenues of TV's 4 networks and 350-odd stations in 1953 (Vol. 9:52).

Most of O. L. Taylor Co.'s TV & AM station lists left over after recent consolidation with Raymer, are being acquired by newly formed Venard Inc., organized by Lloyd George Venard, ex-Taylor N. Y. mgr., with main offices at 444 Madison Ave., N. Y. Venard Inc. also has ex-Taylor Chicago chief Howard Meyers in charge of Chicago office, 35 E. Wacker Dr., and Duncan A. Scott as rep for San Francisco & Los Angeles. Besides 28 AMs, Venard Inc. will represent these 8 TVs: WTV, Ft. Lauderdale-Miami; WKLO-TV, Louisville; WFIE, Evansville; KCMC-TV, Texarkana, Tex.; WCOV-TV, Montgomery, Ala.; WILS-TV, Lansing, Mich.; KTXL-TV, San Angelo, Tex.; KMD-TV, Midland, Tex. Only others on Taylor list are CP holders WERE-TV, Cleveland; WJTN-TV, Jamestown, N. Y.; KTRR-TV, Lufkin, Tex.

Pioneer uhf KPTV received permission from Portland, Ore. city council to construct new 500-ft. antenna tower on city-owned Council Crest. City also extended to 20 years KPTV's permit to maintain broadcast facilities at the site. Station, which was sold this week to Storer Broadcasting Co. along with WXEL, Cleveland, by Herbert Mayer (see p. 3), will dismantle and install old WXEL tower atop Council Crest, give old 210-ft. tower to city for civil defense use. Station officials predicted higher tower "will eliminate completely 3 of the current close-in shadow areas and show 60% improvement in remaining shadow areas."

New "Chromalyzer," now in production by Telechrome Inc., is designed to provide all necessary color signals for adjusting color monitors, transmitters and receivers. Selling for $1650, it's aimed at stations, manufacturers, distributors, servicemen—for use when other color signal source isn't available. Introducing device, Telechrome Pres. Ray Clurman noted that if FCC approves his suggestion that stations transmit continuous color signals (Vol. 9:51), market for product will be drastically reduced.

Rather than wait for color equipment, chief engineer John T. Wilner and staff, WBAL-TV, Baltimore, are equipping station for network rebroadcasts and slide colorcasts at estimated $25,000, compared with some $75,000 for same equipment from manufacturer.

Mutual Broadcasting System reports $23,000,242 billings in 1953, up 10% from 1952 and its second best year, comparing with $26,000,000 in 1946. Big radio chain had 80 advertisers, including 17 of radio's top 25.

H. B. LeQuatte Inc. has been dissolved, and Mr. LeQuatte, ex-pres. of Advertising Club of N. Y., has joined Abbott Kimball Co. as v.p. & chairman of plans board.
SLOWER PACE of new-station starters in ensuing months is indicated by paucity of shipments from the major transmitter manufacturers in recent weeks. Neither DuMont nor RCA reported any new-station shipments or orders this week, and GE reported only that the 1-kw previously said to have gone to KSAN-TV, San Francisco (Ch. 32), did not get off last week but that a 100-watt driver was due for shipment this week, to be followed shortly by the 1-kw. RCA on Jan. 4 shipped 25-kw amplifier to new WLBT, Jackson, Miss. (Ch. 3), which began testing its 10-kw Dec. 20, and on Jan. 7 shipped 25-kw amplifier to WHAM-TV, Rochester (Ch. 6). GE this week shipped 20-kw amplifier to KATV, Pine Bluff, Ark (Ch. 7), which began testing Dec. 18 with 5-kw.

Upcoming stations were also slow in reporting plans. This week’s crop of reports is highlighted by apparent race of 2 new vhf granted in Duluth-Superior area, which now has one vhf in operation, to get going in March despite difficulty of construction due to weather (see below).

* * * *

In our continuing survey of upcoming new stations, these were the reports received this week:

KDAL-TV, Duluth (Ch. 3), has RCA equipment on order, is expanding AM studios for TV, expects to have transmitter building ready in 30 days and equipment installed by end of Feb., plans March tests with low power and interim single-bay bat-wing antenna, reports pres.-gen. mgr. Dalton LeMasurier. Cocoon superstructure is being built first over transmitter site to negate weather delays. Mr. LeMasurier also owns 10% of WIRL, TV applicant for Peoria, and controls WQUA, Moline, Ill. Avery-Knode will be rep.

WDSM-TV, Duluth (Ch. 6), with 5-kw GE transmitter on tap for delivery by Feb. 15, when new studio-transmitter bldg. will be ready, plans early Feb. tests, programming March 1, reports gen.-mgr. Rodney A. Quick. WDSM-TV is controlled by Northwest Publications Inc., publisher of Duluth Herald and News Tribune (Ridder) which also controls WCCO-TV, Minneapolis. Free & Peters will be rep.

WJNO-TV, West Palm Beach, Fla. (Ch. 5), has ordered RCA equipment for April 1 delivery, hasn’t begun construction, but hopes to test by June 1 and begin programming July 1, reports pres. William H. Cook. Theodore Granik (American Forum of the Air) owns 24%. Rep not yet chosen.

CKLW-TV, Windsor-Detroit (Ch. 9), will begin next July, during Windsor Centennial, with 4–11 p.m. programming, according to pres.-gen. mgr. J. E. Campeau speaking at recent ground-breaking ceremonies for $1,- 250,000 studio-tower construction project. New AM-TV studios & offices and 670-ft. TV tower will be at Sandwich & Crawford Sts. on Detroit River waterfront. It will be first Canadian station to start with maximum 325-kw visual, 220-kw aural powers, says Mr. Campeau. Reps will be Adam Young (for U. S.) & All-Canada Television.

WTOC-TV, Savannah, Ga. (Ch. 11), didn’t meet Jan. 1 test target because of antenna difficulties, now hasn’t specific date, although construction will be completed by end of Jan., reports production mgr. Dwight J. Bruce. Rep will be Katz.

WNAT, Providence, R. I. (Ch. 16), with 1-kw RCA transmitter on hand and studio-transmitter building 80% complete, plans Feb. 1 tests from 420-ft. Stainless tower, with programming to start Feb. 15, reports gen. mgr. John B. Porterfield. It will be first local competition for pre-freeze WJAR-TV (Ch. 10). WPRO-TV (Ch. 12), other grantee there, has been delayed by protest. Rep will be Raymer.

WJPB-TV, Fairmont, W. Va. (Ch. 35) has just completed transmitter house, now plans Feb. 1 tests with Continental 1-kw transmitter, reports pres. J. Patrick Beacom. Ralph Forbes, ex-WPIX, named TV director; Sheldon Loner, engineering director; Bruce McGlinnis, commercial manager; Jack Tennant, film & camera head. Hour rate will be $200. Rep will be Headley-Reed.

WMGT, Adams, Mass. (Ch. 74), had antenna difficulties, didn’t make Dec. 25 target, now hopes to start about mid-Jan. with 12-kw GE transmitter, according to pres. Leon Podolsky (Sprague Electric Co.). Hour rate will be $250. Rep will be Walker.

Wm. E. Robinson, exec. v.p. & publisher of N. Y. Herald Tribune and member of RCA & NBC boards, has resigned from the newspaper to become chairman and chief executive officer of Steve Hannonan Associates Inc., public relations counsel; he remains on companies’ boards, though their public relations counsel is Carl Byoir Associates.
ESTIMATED 1953 PRODUCTION—7,261,109: Remember those TV cutbacks planned by set makers last fall for first quarter of 1954 (Vol. 9:44)? Now comes news they won't be as sharp as first thought, thanks to business upswing in November and December, which has inspired some set makers to revise upward their first-quarter output.

RCA, Motorola and Hallicrafters say they're increasing TV production over and above proposed curtailment. As Motorola v.p. E.R. Taylor explained, "we won't be going full tilt, or anywhere near first quarter of last year, but good volume in the last 2 months, with resulting lower inventories, has given us the chance to take a second look and we are increasing our output as a result." Admiral and Philco spokesmen say they didn't cut back production in last quarter 1953, nor had they planned to in first quarter of 1954—hence their plans are unchanged.

Zenith v.p. H.C. Bonfig, without referring to Zenith's plans, commented that industry estimates for 1953 have been upped recently from 5,000,000 to 5,500,000.

* * * *

TV industry produced 7,261,109 sets in 1953, according to preliminary RETMA estimate released this week. This is based on official 11-month production count of 6,765,000—plus estimated 496,109 turned out in 5-week Dec. 2 of them short holiday weeks which produced only 70,936 & 46,407, respectively. It was the industry's second best year, surpassed only by the 7,463,800 produced in 1950, and way above the 6,996,279 turned out in 1952.

It was a good year for retail sales as well as production. Sales were about 6,500,000, thanks once again to pickup in last 2 months. And as result, inventory stood at about 1,900,000 in all pipelines at year's end—not considered dangerous, even when compared with the 1,200,000 with which industry entered 1953.

Radios had a whopping year, too, output totaling 13,361,505 (heavily auto & table sets). Sales are estimated at nearly 13,000,000—though RETMA keeps no official tabulation of auto set sales. Radio production in 1952 was 10,934,872.

Note: Month-by-month figures on 1950-53 production of TVs by types of sets will be carried in our TV Factbook No. 18, due shortly. Book will also carry tables on factory sales, factory inventories, distributor purchases, distributor inventories, shipments to dealers & retail sales of TVs, plus factory, distributor & retail sales of radios by months, 1950-53; shipments of TVs to dealers by states, 1950-53.

DEALERS CONFIDENT AFTER SEEING COLOR: Lots of dealers got their first look at color this week at Chicago's furniture marts. Generally, they liked it—but almost to a man they felt that in its present status (few sets, small screens, high costs) and in the immediate future it won't put much of a dent in black-&-white sales.

How to merchandise it in coming months is next on many trade agendas. Big event next week is NARDA convention Jan. 11-12 at Chicago's Conrad Hilton Hotel where, as at marts, color is expected to be dominant. Central event of convention is color panel Jan. 12 set up by RETMA on plans for production, programming, etc. (Vol. 10:1)—but color is certain to touch on such other subjects as sales training, servicing, promotion campaigns, etc.

Retailers got advice on color from one of their number in advance of parley. Writing in Jan. 5 Retailing Daily, ex-NARDA pres. Mort Farr declared:

"We should inform our customers that even if they have $1000 or more with which to buy a color set that they should have a large-screen black-&-white set to see the 90% or more programs that will be broadcast in black-&-white during 1954. We must learn how to sell our black-&-white sets now and still not hurt our future sales of color. Many people still shy from a 21-in. TV because of the propaganda put out by dealers and salesmen when we had and could get 12-in. sets and could not
get enough 17-in. ones. Let's not so sell against color that we have to start all over again educating our customers when we have plenty to deliver."

All levels of trade seemed glad color was out of rumor and whisper stage. Whatever its problems, color is certainly easier to cope with once it's out in open where sets can be seen, its assets & weaknesses evaluated, & solutions formulated.

Dealers we spoke to at marts felt color would be excellent traffic-builder. Said one: "My customers won't buy any $1000 set -- but they'll be plenty curious to see the set and once I get it on my floor I'm going to push black-&-white to beat the band." Another commented: "It's wonderful, but too small."

There was one school of thought which anticipated that, as in early days of TV, substantial orders would come from bars and taverns for first color sets.

Set makers made modest pitch to dealers on color. No commitments were made on quantity, dates of deliveries, sizes of screens -- undoubtedly with eye to advances in laboratories toward larger tubes (see p. 1). Only one to speak publicly was RCA v.p. J.B. Elliott, who told press conference first color shipments should be made in March, when industry will probably ship about 1000 sets. He estimated this year's production at about 100,000, with public getting about 70,000. Output in 1955 will "possibly reach the half-million mark," he added.

Nobody has color tubes or sets in quantity as yet -- even RCA admitting to mere 150 sets, all out on loan within the company and to its distributors.

* * * *

Color receivers were shown by many, priced by few. These set makers showed pilot models: Admiral, Arvin, Bendix, Capehart-Farnsworth, CBS-Columbia, Crosley, DuMont, GE, Hallicrafters, Majestic, Motorola, Olympic, Philharmonic, RCA, Raytheon, Sentinel, Sparten, Stewart-Warner, Westinghouse, Zenith. Notable exception: Philco, whose v.p. Fred Ogilby told us company wanted to wait until its receiver was "in a further stage of development." He didn't amplify.

Only ones with price tags as yet announced are Admiral $1175, Bendix $1200, CBS-Columbia $975 & $1200, Motorola $1150, Philharmonic $800, Sentinel $995.

To give mart visitors glimpses of color, RCA and DuMont demonstrated their flying-spot scanners for showing of color slides. Motorola fed 16mm color film from its scanner to both color and black-&-white for contrast effect. All others were fed slides from Hazeltine Chicago labs, via AT&T circuits.

Opinions varied as to quality of pictures, though many expressed preference for DuMont and RCA. Pictures on Hazeltine feed appeared faded at times, an opinion shared by many experienced color hands, though some smaller companies complained they hadn't had a chance to set up and tune their sets to best advantage. Several sets arrived in Chicago only night before showing.

* * * *

In wake of lower price pattern set by leaders in last month (Vol. 9:50-10:1), price reductions on current monochrome lines were evident on all sides, as expected (for details, see p. 12). Many companies vied for lowest possible lists, with some 17-in. sets as low as $150 -- and there was lots of "shopping" in competitors' booths.

With lower prices came less costly cabinets. Metal & plastic cabinets were found in the lines of nearly all companies seeking to salvage some profit from the drastically lower lists. Said one major manufacturer:

"I didn't want to lower my prices now but I had to when my competition did. We're not doing the dealers any favor by lowering prices because in nearly all cases we've had to shave the dealer discounts to make ends meet."

Asked whether set prices would go even lower, he shuddered and said: "My God, I don't see how they can, without avoiding a suicidal price war!"

COLOR GAINS IMPETUS ON ALL FRONTS: A lot of "milestones" will be passed in color TV, and a lot of "firsts" will be hailed, but we suspect that Jan. 1 Tournament of Roses Parade will stand as one of most significant -- for several reasons.

It brought color to 22 cities, most of them for first time (Vol. 9:52). It gave maybe 50-100,000 influential people their initial glimpse of color. It gave
the industry's most important merchandisers a chance to judge the probable reactions
of their customers -- and they generally concluded that they have little to worry
about for the moment, that cost-size-quality of the sets will have minor effect on
sales of black & white receivers at today's prices (see pp. 9 & 12).

But long-range impact of program cannot be underestimated. Industry has done
effective job of conditioning public so that the transition should be smooth, but
people who saw a good presentation of the show will never forget it.

We've been deluged with reports of reactions across the country, but merely
one comment, picked at random, typifies the impact. Omaha's Mayor Glenn Cunningham,
after watching show over WOW-TV, said: "Most amazing thing I've ever witnessed."

Multiply that several thousand-fold, then amplify by newspaper reports. And
add such things as feat of Minneapolis Star, which shot picture off KSTP-TV moni-
tor, ran it on front page next day in full color. Cumulative effect is enormous.

Counter-balancing such "pro" factors to some degree were comments such as
those of columnist John Crosby, who obtained only so-so results with set in his home
on loan. He wrote: "The colors, which I had been boasting were truer than Techni-
color, ran all over the place; when I got the reds to look red, the green looked
almost black; when I turned up the greens, the reds went wild and everyone turned
red." However, he said, engineers told him transmission was at fault. He did end
up by concluding: "Black & white is no competition to color TV -- even bad color TV
-- and this was about as bad as it ever gets."

We saw program in Washington on Hoffman, Philco and RCA sets -- and results
ranged from superb to rather poor. On best set, it was breath-taking. We'd guess
that Crosby's set wasn't quite aligned in the first place -- and he probably should
have resisted impulse to try to straighten it out.

NBC is continuing to schedule more "commercial premieres" of all its regular
programs, next being Original Amateur Hour Jan. 9. On Jan. 12, it is conducting a
closed-circuit demonstration of use of color in spot and local advertising.

* * * *

Origination of color programs has stabilized, in our opinion, so that one
can almost always count on the networks to supply a high-quality picture. Stations
are coming along well, too, so that they generally rebroadcast network feeds with
stability. Local originations will suffer many vagaries for some time, and it will
be months before any except network stations originate live programs.

RCA won't ship any cameras until late spring; only ones extant are NBC's in
New York and in the mobile unit used in Pasadena (which is returning to New York)
plus the one CBS has. But at least one telecaster, Walter Damm, WTMJ-TV, Milwau-
kee, is already working to make camera pay for itself when it arrives, expected in
May or June -- by signing Blatz Brewery for station's first live show.

The really great turmoil is in set manufacturing industry. Extremely criti-
cal and expensive decisions are being made daily -- above all in picture tubes. For
roundup of the knowns and unknowns of color tubes and receivers, see pp. 1 & 9-10.

Battle of "who contributed what" to color continues.

Attacked by many of its competitors recently for claiming lion's share of color development (Vol. 9:52,
10:1), RCA this week garnered support of Sen. Johnson, once its most vigorous critic, and Hallicrafters' pres. Wm.
J. Halligan. In letter to RCA chairman David Sarnoff Dec. 31, Sen. Johnson wrote:
"I must not let 1953 pass into history without commending you heartily for the great victory you have
won for the American people in getting for them a compatible system of color TV. You spent money like water
in the laboratory to develop this system and you pressed for its adoption relentlessly.

"The scoffers said it could not be done but you were not influenced by their pessimism. The demands for delay
only made you press the harder for prompt and forthright action. You faced the identical obstacles thrown in the
paths of all men who have really gotten things done.

Columbus for instance. Please accept my congratulations for a mighty important achievement in the art of com-
munications."

In letter to FCC, Halligan said: "Let's give credit where credit is due ... Percentage-wise, you could say
75% of the system was contributed by RCA and 25% by the rest of the industry, notably Hazeltine, Bell Labs,
GE and others ... With various manufacturers making conflicting claims, the public is bound to be confused ...
It would seem to me that our mission is to close ranks and work together to give the public even greater bene-
fits from the wonderful world of electronics."

Volume of cross-claims has attracted considerable inter-

test outside industry. Time Magazine, for one, is working
up article on the controversy.

NBC plans to convert 2 Burbank, Cal. studios to color,
hopes to be originating color from West Coast by fall.
Topics & Trends of TV Trade: Philco's convention in Atlantic City Jan. 6-8, passed up some of the usual glamour this year in favor of more solid financial trimmings. Pres. Wm. Balderston told distributors that Philco's 1953 sales were at all-time high of $249,000,000, up 15% from the $266,963,850 in 1952 (Vol. 9:10). And he said 1953 was Philco's best year for TV sales, even better than industry's top year of 1950, though as usual he gave no breakdown by products.

Philco's over-all earnings last year were reported as approximately $13,000,000 after taxes, or $3.40 per share of common stock after allowing for 5% stock dividend paid in Dec. It also had non-recurring income from the sale of WPTZ and prior years' adjustments of about $5,300,000 after taxes, or $1.44 per share. In 1952, Philco's net profit was $11,491,207 ($3.15).

Pres. Balderston said Philco invested approximately $6,060,000 in plants and equipment during 1953, including expansion of tube plant at Lansdale, Pa., purchase of new refrigeration plant at Connersville, Ind. (increasing refrigeration production capacity by more than 50%), and acquisition of laundry equipment manufacturer Dexter Co. (Vol. 9:50).

* * * *

Philco followed up its action last week of introducing new 21-in. sets at lower prices (Vol. 10:1) by reducing 9 of the table models still further this week: No. 4001E, mahogany plastic, from $200 to $180; No. 4001M, mahogany $220 to $200; No. 4001L, blonde $240 to $230; No. 4003, mahogany $260 to $240; No. 4005, mahogany $280 to $250; No. 4005L, blonde $300 to $290; No. 4007, mahogany $300 to $290; No. 4007L, blonde $290 to $300; No. 4009A, mahogany $300 to $300. It will also introduce aluminized 21-in. picture tube on 10 open-face consoles ranging from $290 to $430. It was one of several companies which introduced lower-priced sets or reduced current models—most of them at Chicago furniture marts this week. Details:

Arvin's 4 new models: 21-in. mahogany plastic table $200; 21-in. mahogany wood table $260; 21-in. open-face mahogany console $280; 21-in. open-face mahogany console $350. Optional uhf tuner is $40 extra.

Capehart-Farnsworth's new model: 21-in. mahogany full-door combination $845, blonde $895, fruitwood $915.

CBS-Columbia reduced price of Anniversary, 17-in. ebony metal table, from $180 to $160, and Spotlight-Raleigh, 21-in. open-face mahogany wood console, from $290 to $280, and introduced 4 new models: Capri, 17-in. cherry-grained table $180; Suburban, 17-in. blonde-grained table $190; Sutton, 21-in. metal table $180; Embassy, 21-in. blonde wood table $270. Optional uhf tuner is $40 extra.

Hoffman Radio's 5 new models, introduced at distributor conference in Los Angeles, Dec. 29-30: 17-in. mahogany wood table $180, blonde $190; 21-in. mahogany wood table $200; 21-in. mahogany open-face console $290, blonde $270; 21-in. mahogany de luxe table $280, blonde $290; 21-in. mahogany open-face console $320, blonde $330. Hoffman also introduced first radios company has produced since 1948: plastic table at $30; mahogany, blonde or ebony wood table $50; clock $40. It will soon introduce chairside high-fidelity console, with mahogany cabinet, at $170.

Motorola's 3 new models: 21-in. ebony plastic table $100; 21-in. metal maroon table $200; 21-in. open-face mahogany console $270.

Sylvania's price reductions: 17-in. mahogany wood table $180 (from $190); 17-in. mahogany table $200 ($280); 21-in. metal table $230 ($250); 21-in. mahogany table $260 ($300); 21-in. mahogany table $270 ($350); 21-in. mahogany table $340 ($360); 21-in. mahogany open-face console $400 ($450); 21-in. mahogany full-door console $440 ($500); 21-in. mahogany full-door console $460 ($480); 24-in. mahogany open-face console $460 ($500); 24-in. mahogany full-door console $500 ($550); 27-in. mahogany open-face console $550 ($600); 27-in. mahogany open-face console $600 ($650); 27-in. mahogany full-door console $680 ($750); 21-in. mahogany combination $600 ($680).

Trav-Ler Radio reduced price of 17-in. mahogany wood table from $180 to $150 at distributors meeting in French Lick, Ind. and introduced following: 21-in. mahogany wood table $180, blonde $200; 21-in. open-face mahogany console $200, blonde $220; 21-in. open-face mahogany console, with aluminized tube $230, blonde $250; 21-in. full-door mahogany console $280, maple $300; 24-in. open-face mahogany wood console $280, blonde $300. Optional uhf tuner is $30-$60 extra.

Regal's 4 new models: 21-in. mahogany wood table $260; 21-in. half-door mahogany console $320; 21-in. open-face mahogany console $280, oak or blonde $290; 21-in. full-door mahogany console $140.

Zenith reduced prices of 21-in. mahogany table from $250 to $200 and 17-in. mahogany console from $270 to $250, introduced no new sets.

* * * *

Big nation-wide retail appliance sale on more than $10,000,000 worth of electric refrigerators, automatic washers & dryers, ranges and home freezers—with retail price reductions of $30-$140—was launched this week by Avco for its Bendix & Crosley products. "Consolidation sale" was made possible by reduction in duplicate warehousing, sales & service facilities in consolidation of Bendix & Crosley distributing organizations last July (Vol. 9:30), according to v.p.-gen. mgr. Parker H. Ericksen. Price cuts are $30-70 on electric ranges, $70-140 on refrigerators, $40-70 on washers, dryers & freezers.

Fidelity Tube Corp. and its affiliated Gem Radio and Jewel Radio, list $1,163,293 liabilities and $943,570 assets in schedules filed in connection with Chapter XI hearings due to be held Jan. 19 in Newark. Schedules include these creditors with accounts in excess of $5000: Kimble Glass Co., $216,286; Corning Glass, $185,725; E. Newark Realty Co., $22,938; Edler Moving & Storage Co., $16,478; Chemstron Labs, $15,414; Arthur Block, $8120. The Jewel Radio bankruptcy, previously reported (Vol. 9:48, 10:1), involves $1,114,880 liabilities and $357,882 assets.

Edward Lamb Enterprises Inc., headed by the Toledo attorney who also owns WICU and the Erie Dispatch and who recently expanded into industrial fields, has reorganized recently acquired White Products Corp., Middleville, Mich. (gas & electric water heaters) and is making it a division of C. L. Bryant Corp., Cleveland (Sphinx hot air, gas & oil furnaces). Bryant will issue one share of its common for each $100 of White Products' net worth as of last Oct. 31, estimated at $700,000.

REMTA starts second service training course early next month at N.Y. Trade School, 304 East 67th St., for TV servicemen with at least one year of fulltime service experience. Its first pilot course took only TV servicemen with 3 years of experience.

Unique TV set carrying 2 shows at once was shown to press this week by DuMont. Dubbed the “Duo-Scope,” basically a promotional item for display by dealers, it got big play in press, especially pictorial. It uses 2 complete TV circuits, has 2 picture tubes, superimposing pictures from any 2 channels on the same screen by means of mirrors. Viewers use polaroid glasses and individual earphones to see and hear the program of their choice, permitting 2 groups of viewers to watch separate programs on same set in same room. DuMont plans to produce 30-40 of the sets (which will carry list of about $2000) for display throughout country. “If there’s enough demand,” said Dr. Allen B. DuMont, “we’ll make regular production models.” These would retail at about $600.

More than 35% of TV sets produced in Nov. were equipped with built-in uhf tuners, reports RETMA, marking continued increase in rate of uhf set production. Of 560,197 receivers made in Nov., 197,911 had uhf tuners. For first 11 months of 1953, sets built to receive uhf totaled 1,319,818, out of total of 6,785,000 sets produced. This does not include sets converted in field with converters, strips, etc. For first 7 months of 1953, uhf-equipped sets were about 15% of total industry output; in August they accounted for 15.6%, Sept. 25%, Oct. 30%.

Blasting TV dealers who charge “Cadillac prices” for uhf conversions, theatre owner Walter Reade Jr., pres. of Asbury Park’s new WRTV (Ch. 58) called overcharges “shortsighted business and detrimental to the entire TV industry.” He said station has received complaints that some dealers are asking $75 or more and pointed out that several local firms are offering guaranteed conversions at $21.50-$29.50, including strip or converter, antenna, lead-in and labor charges. Some in Asbury Park area are advertising “no money down” and easy payments on conversion.

Standard Coil Products Co. consolidates midwest operations for greater efficiency, equipping West Rocko plant in Chicago to manufacture coils and motors for civilian and govt. use, closing down oldest Chicago plant. Melrose Park, Ill., plant, now being enlarged, and Aurora, Ill., plant will handle TV tuner production.

Hoffman Radio’s “Ice Maiden” floral float, depicting scene from Hans Christian Andersen fable, won first prize in commercial division of Jan. 1 Tournament of Roses Parade.

Financial & Trade Notes: Among officers’ and directors’ stock transactions reported by SEC for Nov.: Wm. I. Myers bought 200 Aveo, holds 400; Benjamin Abrams trust bought 800 Emerson, he holds 297,239 directly and through trusts and foundations; Max Abrams trust bought 200 Emerson, he holds 153,000 directly and through trusts and foundations; Edward J. Kelly bought 500 Emerson (Oct.), holds 500; Harvey Tulo bought 500 Emerson, holds 3178; Y. Frank Freeman sold 100 Paramount, holds 1700; George D. Kasten and wife sold 300 Standard Coil Products (Oct.), holds 50; Don G. Mitchell sold 250 Sylvan- vania, holds 3231; Paul J. Hemsooth bought 100 Tung-Sol, holds 400; Milton R. Schulte bought 100 Tung-Sol, holds 2145; Jean E. Witbeck bought 100 Tung-Sol, holds 3051.

C. Russell Feldman, pioneer radio company organizer and financier, has engineered sale of Eureka-Williams Corp., Bloomington, Ill. (vacuum cleaners, oil burners, etc.) to Henney Motor Co., Freeport, Ill., of which he is pres. & chief stockholder. Deal is said to involve $400,000 cash, plus assumption of various obligations. B. C. Milner has been appointed executive assist. to Mr. Feld- man, as pres. of Henney, and Eureka’s ex-pres. H. W. Burritt continues on consulting basis. Feldman founded old Simplex Radio Corp., Sandusky, O., later acquired by Philco; founded old Detrola Corp.; is board chairman of National Union Radio Corp.; chairman & pres., Strong, Carlisle & Hamilton Co., Cleveland; chairman of Oneida Products Corp., Canastota, N. Y.; director of Textileather Corp., Toledo, and Merchandise National Bank, Chicago.

Raytheon sales increased to $81,177,000 in 6 months ended Nov. 30 from $78,786,927 in same 1952 period, but net profit dropped to $1,659,000 (71¢ a share) from $1,912,- 800 (83¢). Pres. Charles F. Adams Jr. said backlog of orders totaled about $185,000,000, with govt. billings continuing to average about 70% of total volume. Current production volume, he added, has eliminated most overtime operations.

Magnavox sales for the 6 months ended Dec. 31 exceeded $25,500,000, up 37% from same period year ago, reports pres. Frank Freimann. TV shipments in Dec. were actually greater than Nov., normally year’s peak, he stated, forecasting continued high level into 1954.

Muler Co. and subsidiaries report for 10 months ended Oct. 31 sales of $12,831,269, net income of $375,978 (57¢ a share). No direct comparison is available, but for 9 months ended Sept. 30, 1952, sales were $8,691,609, profit $283,555 (39¢).

RCA board promoted 4 executives this week — 3 of them moving from Camden to N. Y. They’re v.p. Joseph B. Elliott, elected exec. v.p. of new consumer products div. of parent company; v.p. W. Walter Watts, now exec. v.p., new electronic products div.; v.p. Charles M. Odorizzi, now exec. v.p. in charge of newly consolidated corporate staff serving all units and subsidiaries of RCA. In addition, Dr. E. W. Engstrom was appointed exec. v.p. in charge of RCA Laboratories div., headquarters in Princeton. Concomitant shifts and changes at Camden will be announced later.

Rear Adm. Frederick R. Furth, Navy ex-asst. chief of Bureau for Electronics, named chief of Naval Research, succeeding Rear Adm. Calvin M. Bolster, retired. Capt. T. W. Rogers, ex-asst. director for electronics, takes over Adm. Furth’s former post until Feb., when Capt. Rawson Bennett becomes asst. chief of Bureau for Electronics. Dr. Ernst Henry Krause named associate research director, Naval Research Laboratory, Washington, succeeding Dr. F. N. D. Kurie, now superintendent of Naval Electronics Laboratory, San Diego.
Telecasting Notes: The TV gratuity racket, subject of strongly worded editorial in Nov. 30 Advertising Age (Vol. 9:49), drew another attack this week in form of letter to that trade journal commending it for “excellent reporting of a very bad situation [which] can prove ruinous for everyone in the industry.” Max Banzhof, adv. mgr. of Armstrong Cork Co., sponsoring Armstrong Circle Theatre, on NBC-TV, sent copies to Paul B. West, ANA pres., to BBDO pres. Ben Duffy and to heads of all 4 networks . . . “There is no more reason,” he states, “to extend gratuities to production personnel than there is to extend them to network salesmen who also do an excellent job in behalf of their clients. Yet I am sure any salesman accepting a weekly gratuity from a client would be dismissed from the network payroll. The gratuity practice also contributes substantially to the generally prevailing attitude that any advertiser who can afford to use TV has an almost boundless storehouse of funds to pay for not only necessities but an endless variety of frivolities . . .” Network chiefs were reluctant to comment, though Advertising Age does quote ABC v.p. Alexander Stronach as saying, “It is a vicious practice carried over from the infancy of radio.” Another top network executive, asking not to be quoted by name “because I can’t blast the advertiser in my job,” said: “The plain fact of the matter is that the sponsor makes this situation. The networks take a dim view of gratuities. The situation breeds discontent, arrogance on the part of a few, and makes the crew distinctly difficult to live with.” . . . As examples of the throwback to radio, Advertising Age states that General Foods used to pay the CBS production man and engineer “to give a little extra something” on the old Kate Smith show, and Bristol-Myers gave Fred Allen’s engineer $50 every week it sponsored his radio show . . . Recent newspaper strike in New York boosted TV-radio news audiences significantly, according to Pulse report for first week in Dec., which shows 23% gain in TV news audiences nationally, according to FCC applications pending to 344 (70 uhf). [For further details about these applications, see TV Addenda 1951 for 1953 permit applications.] Transfer of KXLY-TV, Spokane (Ch. 4), along with radio KXLY, to new ownership headed by chairman Joseph Harris, one of backers of film syndicator Motion Pictures for Television Inc., was approved by FCC Jan. 6, finalizing $1,723,500 sale deal (Vol. 9:49). Sellers are E. B. Crane, Bing Crosby, Mrs. Burton K. Wheeler, John L. Wheeler, et al. Comr. Hyde, Hennoch & Bartley dissented, favoring letter of inquiry with respect to transferees’ plans relating to prior contract. Richard E. Jones, ex-WJBK-TV, Detroit, recently mgr. of WABD, New York, takes over from Wm. Craney as gen. mgr.; he owns 10% of new license company.

Power boosts & channel shifts: WRGB, Schenectady, changed over all equipment from Ch. 4 to Ch. 6, upper power from 16 to 93 kw ERP in 7 hours between midnight signoff Jan. 3 and start of day’s programming Jan. 4. WTVI, Richmond (Ch. 6), this week upped power from 17.2 to 100 kw. WJBK-TV, Detroit (Ch. 2), Jan. 12 begins telecasting from 1057 ft. antenna on 9-mile & South 100 kw. KSTM-TV, St. Louis, Ch. 36, Jan. 7 went to 275-kw ERP.

Index to 1953 Newsletters
Included herewith, to all subscribers, is the annual Index to contents of all 1953 Newsletters, Supplements, Special Reports, etc. — providing handy device for locating major events, trends, dates, etc. Bound volumes of all these publications can be made available on order at $25 per copy.
NEW TV FACTBOOK, MAP AND AM-FM LOG: We send our subscribers this week TV Factbook No. 18, latest of the semi-annual reference series often called the "bible of the industry." With it goes our 1954 TV Map, 43x29-in., in color, showing all TV cities, all existing and projected AT&T & private network facilities, all cities peculiar to the TV allocation plan, all other cities over 10,000 pop.

Also in the mails to our TV-AM-FM subscribers is the 1954 AM-FM Directory, logging all U.S. stations and applications, plus all Canadian, Mexican, Cuban & other North American radio stations -- by states & cities, and separately by frequencies.

Highlights of 374-p. Factbook are the data on all TV stations -- facilities, personnel, rates, etc. (some 150 more stations than in last edition); on TV networks, with personnel and rate cards; on TV stations in foreign countries; the directories of advertising agencies, national sales reps, TV program sources; the lists of CPs outstanding for new stations and all applications pending as of Jan. 1, 1954; ownership of stations by categories (multiple, network, newspaper, etc.); and directories of TV receiver, tube, antenna, tuner, converter and station equipment manufacturers.

There are also directories of FCC, attorneys, consulting engineers & other consulting services, major electronic labs, community antenna systems, theatre-TV installations and firms, market research organizations, trade associations, labor unions; and bibliographies of the literature and periodicals in the TV-radio fields.

Brought up-to-date are statistical tables summarizing 1953 and preceding years' FCC, PIB and other reports on network & station revenues, expenses, etc.; set & tube production, sales & shipments; financial data on leading TV-radio-electronic manufacturers -- all handily available for quick and easy reference.

Every full-service subscriber gets one copy of TV Factbook with one map in next week's mails; extra Factbooks cost $3, maps $1. AM-FM Directory goes only to full TV-AM-FM subscribers; extra copies, $7.50. Our weekly Addenda services are designed to keep these directories up-to-the-minute for those who subscribe to them.

MORE CHANGING OWNERSHIPS & AFFILIATIONS: You will be hearing about more big TV station deals in ensuing months -- sparked to new impetus and high prices by Storer's $10,000,000 purchase last week of Empire Coil Co. and its Cleveland and Portland stations (Vol. 10:2). You also will read in the trade press about more and more AM station transfers, big and little, many of them forced by TV acquisitions.

Then there will be the continued jockeying of networks for favorable local positions in TV, as happened in AM, with CBS & NBC the prime competitors while everybody in the industry roots for ABC & DuMont to come along (as they are now doing).

Fortunately for the business of telecasting, buyers of TV stations up to now for the most part have been "professional" broadcasters or telecasters about whose good operating records, as in the case of Storer, the FCC knows a lot.

There's plenty of pure investment money also seeking outlets in fabulous TV,
and the disposition at FCC is to look twice at them -- especially if it suspects quick purchase-and-sale intentions. Chairman Hyde puts it this way: "We like to think of TV and radio as services in their own rights, as professions of those who operate them. The record shows we have invariably favored that kind of operation, especially by local interests and by integrated ownership and management."

It's significant, however, that the FCC seldom has turned down any transfer. Hyde joined with Cours. Bartley & Hennock in dissenting to last week's approved sale of Spokane's KXLY-TV & KXLY (Vol. 10:2), proposing further inquiry, but so far as we can recall the only outright denial of transfer was in 1949 when FCC refused to allow Crosley to buy out Louisville Courier-Journal's WHAS-TV & WHAS for $1,975,000 (Vol. 5:10:39) -- and that was decided on grounds of overlapping AM coverage.

Only major deal still pending that has been publicly disclosed is proposed acquisition of 49% or more of KPIX, San Francisco by Westinghouse (Vol. 9:45), still in negotiation stage. But more are coming along, for it's an open secret that such entities as CBS, Westinghouse, DuMont, Crosley, Time Inc., Hubert Taft Jr., Scripps-Howard, Wrathere-Alvarez and others are eager to own allowable 5 vhf, if not 2 uhf.

Only revealable sale definitely in offing is one Storer will have to make in order to justify his acquisition of Cleveland's WXEL (vhf); already owning 5 vhf, he will sell either his Atlanta or Birmingham properties. San Antonio outlets are likely to be retained, because son George B. Storer Jr. is resident manager.

It's reasonable to assume, too, that in line with his policy of having AM counterparts with TV, Storer will acquire a radio station in Cleveland. Logically, that would be WGAR, CBS affiliate there, which recently was sold for $1,000,000 to Farm Bureau Mutual Insurance Co. (Vol. 9:50, 10:1). It can be assumed also on basis of past he will seek CBS-TV affiliation in Cleveland, now WENS (Scripsh-Howard).

* * *

Combinations and mergers to get into TV have forced disposition of many AM properties to prevent local duopolies, and the station brokers have enjoyed a harvest since freeze was lifted -- usually finding ready buyers for AM properties. In some cases, AM owners have been willing to sell simply out of fear of TV's encroachments.

Latest big AM sale is KPOA, Honolulu (5 kw on 630 kc, MBS), sold by broker Howard Stark for J. Elroy McCaw & John D. Keating this week: price is $400,000 and the buyer is Radio Hawaii Inc., subsidiary of Tele-Trip Inc., N.Y. aviation insurance specialists, headed by John M. Shaheen and including Eugene duPont III as a director. Exec. v.p. is Finley Hollinger, now gen. mgr. of the station. McCaw and Keating had to sell in order to justify their half ownership of KONA (TV) there (Vol. 9:13, 23).

* * *

Things have been quiet along the network affiliation battlefront since CBS's last foray, resulting in taking Buffalo's WBEN-TV & WBEN away from NBC (Vol. 9:42) and the defection a few months earlier of Norfolk's WTAR-TV & WTAR (Vol. 9:20-22, 27). This week, NBC signed upcoming KDAL-TV, Duluth, Minn. (Ch. 3), due on air in March. Its AM has long been a CBS affiliate, presumably will eventually also go to NBC. The move was dictated mainly by fact that CBS is 47% owner (with Ridder newspapers) of WCCO-TV & WCCO, Minneapolis -- and the Ridders hold CP for WDSM-TV, Duluth-Superior (Ch. 6), also due on air in March.

New and changing ownerships will often mean changing network affiliations, as they have in the past -- that and the prospect of color: which network offers most. From where we sit, it looks like the "color revolution" will mean far more changes in station values in future than anything we've seen yet.

**PENSACOLA & EAST LANSING STARTERS:** Only 2 new stations took the air this week -- the first vhf in Pensacola, Fla. and Michigan State College's educational uhf in East Lansing, Mich. Several more are due to begin testing momentarily, but weather and other delays are being encountered by many. Expected to start any day now are WNEM-TV, Bay City, Mich. (Ch. 5) and KCEB, Tulsa, Okla. (Ch. 23), among others; new KRGV-TV, Weslaco, Tex. (Ch. 5) ran into delays, now has Jan. 25 test target.

There are now 359 stations on air, of which 124 are uhf -- which means that only 3 new stations have started thus far this year. This week's starters:
WEAR-TV, Pensacola, Fla. (Ch. 3) began operation Jan. 13, using 10-kw RCA transmitter with 6-section superturnstile. It's first vhf in city, nearest other being in Mobile, 53 mi. to northwest. City's WPFA-TV (Ch. 15) began operating last Oct. 9. Station's owners are Charles W. Smith, 51%, v.p. & gen. mgr. Mel Wheeler holding 25%. Commercial mgr. is Tom Bloski, program mgr. Jerry Williams, chief engineer Jim Smith -- virtually same personnel that operates WJDM, Panama City, Fla. (Ch. 7), which is 96 mi. due eastward and which began Dec. 1 but is owned by other interests. WEAR-TV went commercial Jan. 14 with $300 base rate. Rep is Hollingsbery.

WKAR-TV, East Lansing, Mich. (Ch. 60), which will operate as a non-commercial educational station though it occupies a commercially allocated channel, began test patterns Jan. 13 with 12-kw GE transmitter, started regular programming Jan. 15. It is operated by Michigan State College under direction of Dr. Armand L. Hunter, with J.D. Davis as operations mgr.; J. Kenneth Richards, program mgr.; James B. Tintera, production mgr.; Linn F. Towsley, chief engineer. It's first uhf in pre-freeze vhf area, was dedicated in the presence of many notables, including FCC Comr. Doerfer, Ford Foundation's C. Scott Fletcher, Penn State College pres. Milton Eisenhower. Pioneer in educational TV, Michigan State since 1951 has produced TV shows on closed circuit from studios atop its Electrical Engineering Bldg.; it has turned out 750 shows, furnished more than 500 kines to Michigan's commercial stations.

Note: CBC's oft-deferred second Montreal station CBMT (Ch. 6) got test signal on air Jan. 10, but equipment developed bugs and it's still awaiting official start.

VHF GRANTS DOMINATE WEEK'S OUTPUT: Two CPs and 3 initial decisions were issued by FCC this week -- all of them vhf, all except one resulting from mergers or dropouts of competition. One CP was given up -- WGCC-TV, Gulfport, Miss. (Ch. 56). The CPs:

Albany, Ga., WABD, Ch. 10; Hibbing, Minn., North Star TV Co., Ch. 10. The initial decisions lined up following for CPs: Sioux City, Ia., KCOM, Ch. 4; Houston, Houston TV Co. Inc., Ch. 13; Durham, N.C., WTIK, Ch. 11.

Albany CP came after competitor James Rivers dismissed. Hibbing application was uncontested; new grantee is owned by several stockholders, including some with minor holdings in WTCN-TV, Minneapolis, and WSPT(AM), Stevens Point, Wis.; they're headed by St. Paul ad agency owner Q.J. David.

Initial decision favored KCOM, Sioux City, after KSCJ dropped out under an agreement allowing it to buy 50%; KCOM must be sold. WTIK, Durham, was set up for CP after merger agreement with WDNC; WTIK will be disposed of. In big Houston deal, there's agreement among KTRH, KTHT, Houston Area TV Co., Houston TV Co., to share ownership 32%, 16%, 32% & 20%, respectively, with Mayor Roy Hofheinz to sell his ownership in KTHT. Another application was primed for initial decision when Capital TV Inc., Charleston, W.Va., dismissed, leaving WCSH free for grant; Capital is enabled to acquire 40% of CP when issued.

FCC's multiple ownership proposal, which would permit owners of 5 vhf stations to acquire 2 uhf (Vol. 9:52), came under loud attack from Sen. Edwin Johnson (D-Colo.), who flailed away with his old-time vigor.

"This brazen monopoly proposal," he charged, must be due to the "pressure of selfish groups." He said Commission based its proposal on no facts, least of all on its study of post-freeze stations which, in itself, gave no indication that uhf is in need of kind of help offered by new multiple ownership proposal (Vol.10:1).

Johnson wondered how proposal could help such things as the "shocking situation" in Monroe, La. He said city has 2 TV assignments, one vhf, one uhf. Uhf station got on air first, he said, yet all 4 networks affiliated with the vhf.

This "illogical turncoat proposal" should be suspended, he said, until FCC has explored fully all problems that directly affect the operation of uhf." The situation, the Senator warned, "would be an interesting subject for Congressional inquiry." No one else has filed comments yet; they're due Feb. 1.

FCC also got crack on knuckles from Court of Appeals, which issued stay order restraining Commission from holding 4-way competitive hearing for St. Louis' Ch. 11,
pending appeal by KSTM-TV, St. Louis (Ch. 36), seeking to be considered for the vhf channel. Court said FCC could vacate the stay order by either letting KSTM-TV into hearing or by giving it a hearing to determine its right to enter hearing. Waiting out court actions and subsequent appeals could cause endless delays, so in future it's likely FCC will at least hold oral argument on similar petitions, to show that petitioner got chance to be heard.

Commission probably invited another appeal this week when it turned down the petition of WBUF-TV, Buffalo (Ch. 17) to intervene in Ch. 2 "strike" filing case (Vol. 10:2). FCC said petition was "fatally defective in not sufficiently stating the nature of facts it proposes to develop at hearing" and that station was more concerned with delaying new vhf station than in protecting the public interest.

In several allocations actions, the FCC: (1) Turned down the petition of KIT, Yakima, for addition of Ch. 2 or 3 on grounds of substandard spacing with Canadian channels. (2) Dismissed petition of John H. Phipps, Tallahassee, for shift of Ch. 9 from Dothan, Ala., to Tallahassee, because it was contingent on proposed "5-mile" rule which has been discarded (Vol. 9:52). Received this week was petition from Clair L. Taylor, Michigan Supt. of Public Instruction, asking educational channels for Kalamazoo, Alpena, Marquette, Houghton, Escanaba -- channels unspecified.

MORE PRIVATE NETWORK FACILITIES USED: Stations providing their own network service, via microwave or direct off-air pickups, have increased substantially in the last 6 months. Considering tremendous increase in stations, scattered all over the country, it's a tribute to AT&T's planning and performance that more stations aren't providing their own interconnecting facilities.

Many stations would just as soon take care of themselves, feeling they can provide service more cheaply. On other hand, some stations have been relieved when phone company came along and took a lot of headaches off their hands.

Stations don't have free rein, of course, in providing own facilities. FCC rules permit stations to do so only when AT&T can't; furthermore, stations must give up facilities within "reasonable" time when AT&T indicates ability to come through.

Comparing our previous TV map of July 15, 1953 with the one accompanying TV Factbook 18 (latter now in the mails), we find more private connections added than dropped in the 6 months period. As of Jan. 1, stations in 23 cities had own links. Latest CP for private microwave, issued this week, went to WEAU-TV, Eau Claire, Wis., which plans to relay signals from Minneapolis and Rochester, Minn.

Most common type of link comprises a single receiving-transmitting point somewhere between originating and receiving stations. It picks a good vhf or uhf signal out of the air, converts it to microwave, beams it to destination where it is rebroadcast. In some cases, AT&T itself provides the microwave station, making system half private and half common carrier.

Another type is the several-link full-fledged system employed by WSM-TV, Nashville, from Louisville, and by WSAZ-TV, Huntington, from Columbus. Yet another is the simple direct out-of-the-air pickup -- no microwave.

In some cities, one station may be served by AT&T, another by own facilities -- as in Bakersfield and Nashville. But FCC says all must go to Bell System eventually. In last few months, for example, WKZO-TV, Kalamazoo, and WOOD-TV, Grand Rapids, switched to AT&T; latter obtained service just in time for Jan. 1 Tournament of Roses Parade. On other hand, WICC-TV, Bridgeport, dropped AT&T service to rely on direct pickup of New York stations.

That FCC regards private links as temporary is emphasized by fact that stations seeking them must show that AT&T is unable to supply service. Commission provides no special frequencies for the service, merely permits stations to use bands ordinarily employed for studio-transmitter links and remotes. AT&T has own exclusive frequencies for intercity relays. When stations must switch to AT&T is determined on case-to-case basis; some have been given 2 years to amortize equipment.

No FCC license is required for off-air pickups which involve no microwave, though Commission requires that pickup station obtain permission of originating station and notify FCC of arrangement. However, there have been some cases of "bootlegging" -- rebroadcasts of signals without permission. But no originating station
has kicked about it to FCC, so far, probably because it's usually a well-established big-city station and the "pirate" is generally a hard-up small-town newcomer.

Quality of private service varies considerably. Some stations say their systems give them all they need; others concede AT&T superiority. A disadvantage of some types of private links, particularly off-air, is that they don't provide the flexibility phone company can assure.

Personal Notes: Charles H. Phillips, director of sales of WNBK, Cleveland, Feb. 1 becomes sales mgr. of WOR-TV, N.Y.; Wm. P. Dix Jr., sales mgr. of WTAM, Cleveland, takes same post at WOR. They replace Robt. C. Mayo, director of sales of WOR-TV & WOR, and John F. Sloan & Wm. Crawford, respective TV-radio sales mgrs., resigned... Donald A. Stewart, ex-DuMont receiver sales and onetime mgr. of WDTV, Pittsburgh, appointed gen. mgr. of DuMont's recently acquired KCTV, Kansas City... Dick Campbell, program director, promoted to station mgr. of KOTV, Tulsa... Klaus Landsberg, gen. mgr. of KTLA, Los Angeles, awarded citation at reception Jan. 14 by National Vocational Guidance Assn. at U of So. California "for pioneer production of public information programs"... Wm. W. Bryan, Detroit mgr., elected v.p. of Free & Peters... Wm. Balaban, director of sports & special events, assumes duties of asst. program mgr. under program director Arden B. Rodner, WABC-TV, N.Y. ... Malcolm B. Laing, ABC-TV sales dept. business mgr., appointed N.Y.-New England-Chicago regional mgr., ABC-TV station relations dept. ... Robt. P. Canavan, ex-KROD, El Paso, recently with MCA, joins ABC-TV as specialist in market coverage... Samuel Goldwyn Jr. resigned as TV producer with CBS to form own TV film producing concern in Hollywood, with offices now at 1270 Sixth Ave., N.Y. ... Miss Duncan MacDonald resigns Jan. 18 as DuMont women's program supervisor to handle part of NBC-TV's new Home partic. show... Warren Park, ex-WJAR-TV, Providence, appointed program mgr., WFKJ-TV, Youngstown... William Ramble, ex-national sales mgr., KLAC-TV, Los Angeles (now KOP), named western sales mgr., Vitapix Corp.; Darrell Ross, ex-ABC-TV production mgr., named production director of KOP... Richard Fichthorn, ex-v.p., WHUM-TV, Reading, Pa., joins Ted Black Agency, Reading... Deuel Richardson, TV-radio director of New England Council, named managing editor of its monthly magazine The New Englander... Frank F. Rathbun, ex-Westinghouse, named personnel mgr., Storer Best, Co., Miami headquarters... Paul Albert, WSYR-AM engineer, promoted to technical supervisor of WTRI, Schenectady (Ch. 35), due on air in Feb.; Fred D. Shaver, ex-WOIT, Ames, Ia., named program & production mgr. ... Leo E. Penselein, ex-WOIT, named program director of WBAY-TV, Young, Wis. ... Robert B. Hudson, U of Illinois director of broadcasting, has resigned to become program coordinator of new TV-radio center financed by Ford Foundation's fund for adult education at U of Michigan... Wm. H. Brown Jr., ex-Young & Rubicam production supervisor, joins CBS-TV to direct Life With Father... Robert Tucker, ex-Biow, named TV-radio director, Calkins & Holden, Carlock, McClintock & Smith... Ted J. Grunewald, ex-Wm. Esty & Co., named TV-radio business mgr., Hicks & Greist... Frederick O. Eckert upped to head traffic section of N. W. Ayer radio-TV dept. ... Jerome B. Harrison promoted to eastern sales mgr., ABC-TV, succeeding Stanley Smith, now on special sales... Jack Denninger named eastern sales mgr., Blair-TV Inc.

Confirmation of Comr. Robert E. Lee as FCC member appeared certain at week's end, as Senate Commerce Committee scheduled hearing on appointment Mon., Jan. 18. His nomination was sent to Senate by President Eisenhower Jan. 11, and he is only witness scheduled to appear, with prospect of stiff cross-questioning by Democratic committee members. Pres. Joseph A. Bieme of Communications Workers of America, as well as several CWA locals, wrote committee asking open hearing, but didn't ask to appear. Committee staff members said very few letters on the subject had been received, and up to Friday evening no one had requested to appear before committee.

Changes in Republican membership of Senate Interstate & Foreign Commerce Committee, which has charge of TV radio legislation, under chairman Bricker (R-O): Sen. Capehart (Ind.) and Sen. Cooper (Ky.) this week left committee for assignments to Foreign Relations and Labor Committees, respectively. To fill these vacancies and that caused by death of Sen. Teybor (N. H.), these GOP Senators were added: James H. Duff (Pa.), Wm. A. Furtell (Conn.). Frederick G. Payne (Me.). Democratic membership remains same as last session, composition remaining at 8 Republicans, 7 Democrats.

Three principals of new KSLA, Shreveport, La. (Ch. 12) were among the 12 killed in crash of United Gas Co.'s private plane near Shreveport Jan. 10 while returning from a duck-hunting trip—the accident in which Braniff Airlines pres. T. E. Braniff was also killed. The 3, part owners of KCIJ, one of 3 applicants for Ch. 12, now temporarily combined in operation of KSLA pending FCC final decision (Vol. 9:202): Justin R. Queubes, insurance man, who with family owns 14.5%; Randolph A. Queubes, utilities man, 14.5%; R. H. Hargrove, pipeline magnate, 3.6%.

Martha Rountree's mansion at Warrenton, Va., was destroyed by fire Jan. 12, and with it the 10,000-volume library she had purchased only a few days previously from estate of Louis G. Caldwell, onetime Washington radio attorney whose Washington home she leased until Jan. 1. Miss Rountree (Mrs. Oliver Presbrey) recently acquired the Colonial mansion and planned to move into it shortly.

Split in Television Writers of America broadened this week when east coast reps. Irve Tunick of the union resigned because its western region didn't fire exec. secrey. Joan LaCour for refusing to answer questions of House Un-American Activities subcommittee in Los Angeles hearing last month. Tunick said large majority of eastern 15-member governing council will also quit.

FCC Comr. George E. Sterling will address broadcast chapter of Boston IRE section at MIT Faculty Club Jan. 28, speaking on "The Current Status of UHF TV Broadcasting—With Some Color."

President Eisenhower has accepted an invitation to Radio & Television Correspondents Assn. annual dinner in Hotel Statler, Washington, Feb. 6.

Don Carney, 58, the Uncle Don of radio's early juvenile shows, died in his sleep at Miami home Jan. 14. He had heart trouble, but the day before had conducted a show on WKTU. His real name was Howard Rice; he started in radio on KDKA in 1924, then went to WMAC in 1925 and WOR shortly thereafter, remaining in N. Y. until 1948.
COLOR MOMENTUM appears to be growing faster than commonly predicted. It becomes more and more clear that, once the color tube and receiver bottleneck is broken, the snowball will develop into an avalanche.

Though FCC's color decision was cautious, almost pessimistic, about ability of networks and stations to equip themselves for color, majority of viewers now live in range of stations so equipped. Some 25-30 stations, in biggest cities, are already able to rebroadcast network color; 50 more will be in next couple months. True, this doesn't mean local color originsations, except in a few cities, but it does mean that the most important segment of programming—network shows—can now be delivered in color to antennas of most viewers.

Even local slide, film and live originations are likely to come along faster than expected. There are several manufacturers of slide and film equipment, and some stations are doing quite a lot of ingenious construction themselves.

RCA is only source of live cameras, so far. This week it announced that it is now accepting orders for regular commercially-produced cameras, and that within mere 30 days it would begin shipments of previously-ordered custom-built cameras to: WKY-TV, Oklahoma City; WBAP-TV, Ft. Worth; WBTN-TV, Buffalo; WTMJ-TV, Milwaukee; WCDO-TV, Minneapolis; KTTL, Los Angeles—plus several for NBC.

On top of that, RCA will ship 12 complete camera chains and associated equipment to CBS. CBS spokesman says this doesn't mean it has dropped plans for type of camera equipment developed by v.p. Dr. Peter Goldmark. This employs field-sequential camera and an "encoding" unit which converts signal to NTSC specifications (Vol. 9:4). Reason for placing the near-$1,000,000 order with RCA, CBS says, is that it can't get delivery of other equipment soon enough. GE is reportedly making 4 of the CBS-type for CBS.

RCA is also stepping up its color indoctrination seminars, scheduling next one in Camden Jan. 25-26 for 10 Western Electric engineers, 15 CBS, 19 NBC and 40 other engineers from individual stations.

Engineering effort and money going into production of RCA's color transmitting equipment is greater than generally realized—transcending in many ways its most feverish work in black & white in previous years.

DuMont will hold color TV symposium, along with transmitter clinic, for its district managers and regional sales representatives at Clifton, N. J. Jan. 18-22. Visitors will get glimpse at DuMont research div.'s developmental telecasting gear, will study and discuss new Colorvision slide scanner and Multi-Scanner film equipment.

Color-interconnected stations will get a constantly growing supply of color programs, network spokesmen told this week's meeting of National Appliance & Radio-TV Dealers Assn. in Chicago. NBC color coordinator Barry Wood gave this report on NBC's color equipment: New York's Colonial Theatre has 4 cameras, a slide scanner; Rockefeller Center's Studio 3-H has 2 cameras and a scanner; NBC stations in Los Angeles, Chicago & Washington are being equipped for origination; one mobile unit is now in use, more under construction.

Reiterating that all NBC sponsors will see their programs in color at least once this year, Wood said those currently scheduled are Your Hit Parade Jan. 16, Dinah Shore Show Jan. 19 & 21, Zoo Parade Jan. 31, Arm-

TOTAL BILLINGS of $8,000,000 are anticipated this year from NBC-TV's 7-9 a.m. Today—the same that drew such sharp barbs from the critics when first launched by Pat Weaver (now NBC pres.) just 2 years ago Jan. 14. Dave Garaway and his troupe celebrated second birthday this week by putting on James Bray, promotion mgr. of first sponsor, Kiplinger's Changing Times Magazine, who first bought 13 spots offering free sample copies of the magazine, then renewed in fall of 1951, currently is using 13 more. Mr. Bray recounted how the samples resulted in 20% conversions into subscriptions.

It was a costly show that even had the RCA-NBC hierarchy and station owners skeptical, as we discerned in our own survey of reactions when it started and afterward (Vol. 8:1,3,4,5,7,13,19,40)—for they had hard time at first selling national sponsors on the early-morning idea, let alone local adjacencies. No such difficulty exists now on the 51 stations carrying network TV's biggest money show, which grossed $5,000,000 its second year and used $800,000 worth of talent.

Today, Today has a potential of $15,000,000—maybe more, depending on added sponsors, outlets and rates—and its success has led NBC to launch a noonday participating counterpart, due to start in March, titled Home Of Today. Of Today's 16 saleable segments a day (80 a week), 39 were sold this week, a seasonal dip from the nearly 100% before Xmas. In Jan.-March quarter, 58% of time has been sold, and for rest of year anticipated average of 55%.

Ninety accounts used Today for 83 individual campaigns in 1953, placed by 30 adv. agencies. Renewal rate is particular point of pride with its entrepreneurs, Nov.-Dec. being marked by renewals of 16 out of 17, including such major sponsors as General Motors, General Mills, GE, U. S. Rubber, Squibb, Smith Bros., Dow Chemical, Capital Airlines. They also cite latest Nielsen rating of 5.7-8 for 2 weeks ended Dec. 12, claim 13-14,000,000 persons daily in 6,000,000 homes watch Today.
strong Circle Theatre Feb. 23—others possibly sandwiched between some of these.

CBS executive color producer Richard Lewine gave this schedule: First quarter, continue Fri. 5:30-6 "laboratory" program now carried in New York & Baltimore, augment it by another regular half-hour show, both to be fed to more cities; second quarter, new color-equipped studio at 81st & Broadway will be in operation, originating color premières of such programs as Toast of the Town, Studio One, Arthur Godfrey, etc., with color film and remote to begin; third quarter, start of West Coast origination, including remotes. Demonstrations for agencies and sponsors will continue throughout.

ABC's Frank Marx was more cautious, stating that "much color equipment must still be invented" and that he was reserving recommendation on purchase until equipment has shaken down further. He said that present color film projectors will be obsolete; that there's no satisfactory film projector available; that color tape is at least 2 years off. He also anticipated cost of AT&T facilities for color would be much greater than for black-and-white.

DuMont Network gen. mgr. Jack Bachem said: "Nobody can speak for the public and advertisers who will determine growth of color. We'll make color programs available in accordance with advertisers' willingness to pay." He reported that one complete New York studio has been set aside for color. He also echoed Dr. DuMont's statements that color awaits production of sets with larger screens.

Those who are bearish about color TV often note that movies haven't converted heavily to color even though introduced years ago. There's a tendency to overlook one huge difference— commercials. Advertisers are going to demand color, as color audience grows, as long as extra cost isn't exorbitant—and it's not likely to be.

Most convincing demonstration of color commercials' impact was given this week by NBC Spot Sales in closed-circuit program fed to 10 cities and shown to select audiences of sponsors, agencies and newsmen.

Extremely clever program showed, thanks to compatibility, how color slide, film and live commercials can be integrated with black-and-white programs with no loss of black-and-white audience—and a startling impact for every color set in use.

Obviously aimed primarily at dept. stores, particularly Gimbel's and Macy's, program was emceed by Ed Herlihy, featured Jinx Falkenburg, Faye Emerson, models, ballet dancer, etc. It included finest color film we've ever seen colorcast. Programs and commercials were shown in black-and-white then color was added, bringing exclamations from audience.

Stations receiving program were WBNY, New York; WNBV, Washington; WNBK, Cleveland; WNEQ, Chicago; KSDK-TV, St. Louis; KBNH, Los Angeles; KRON-TV, San Francisco; WWJ-TV, Detroit; WTMJ-TV, Milwaukee; KDFL-TV, Salt Lake City—the list represented by NBC Spot Sales.

Further evidence that color can't help a poor show but can do wonders for commercials was adduced by TV critics John Crosby, Herald Tribune Syndicate, and Jack Gould, New York Times. Both found Amateur Hour terrible, regardless of color. But cherry pie commercial, Crosby wrote, was "just plain terrific." Gould wrote: "The crust was golden brown and the fruit a deep red. It was the only thing on the show that had been left in the oven long enough."

Both Crosby and Gould now have RCA color sets. Crosby first had a Westinghouse, Gould an Emerson. Latter has turned Emerson over to his publisher Arthur Hays Sulzberger. Others with newly-installed RCA sets are Broadcasting-Telecasting magazine, and ourselves.

Though color programming is still slim, some exciting events are in prospect. Besides putting regular programs on in color, NBC and CBS plan many special telecasts. NBC has mentioned possibility of New Orleans Mardi Gras, Washington Cherry Blossom Festival, Columbia River salmon run. At the moment, there's some doubt about March 1 Mardi Gras, because part of route is coaxial cable which requires frequency conversion technique for which AT&T isn't fully prepared.

CBS hasn't been specific, merely saying it plans special events, sports, etc. DuMont hasn't indicated definite plans yet, though it's considering color hookup of its stations in New York, Pittsburgh & Washington. ABC, as Marx reported, is biding its time, though it's bound to get into swim before long.

Slow development of color, continued high value of black-and-white. That was theme of DuMont Network's What's The Story Jan. 14, featuring Dr. Allen B. DuMont, research v.p. Dr. T. T. Goldsmith and Kenneth B. Willson, pres. of National Better Business Bureau. Dr. DuMont stated that system produces excellent pictures but that large-size screens in sets of reasonable cost won't come for 2-3 years; that no single company developed system; that color programs will be few at first; that color sets are priced at $1000-$1200. Yet manufacturers "aren't making any money" because sets cost $2000 to build. Dr. Goldsmith stated that conversion of black-and-white sets isn't practical; that not even by 1960 will majority of programs be in color; that color film, particularly of news events, will always be difficult; that color actually detracts from some types of programs. Mr. Willson wound up by stating that public's investment in black-and-white is protected by compatibility; that public can buy black-and-white now with confidence, needn't delay purchase for fear of obsolescence.

Network Accounts: Rybutil (vitamins) sponsors On Your Way, new quiz show featuring Arthur Godfrey's sister Kathy, on ABC-TV starting Jan. 23, Sat. 7:7-30 p.m., thru BBDO; it replaces Up for Adoption, which was scheduled to start on that date ... Campbell Soup Co. to sponsor Grand Central Station on ABC-TV starting Jan. 18, Mon.-thru-Fri. 11-11:25 a.m., thru Ward Wheelock Co., Philadelphia ... Nestle's to be alt. sponsor (with Ralston Purina) of Space Patrol on ABC-TV starting Jan. 16, Sat. 11-11:30 a.m., thru Cecil & Presbrey ... Dodge cars to be alt. sponsor (with Lucky Strikes) of Danny Thomas Show on ABC-TV starting Feb. 26, Tue. 8:30-9 p.m., thru Grant Adv. ... Associated Products Inc. (5-Day Deodorant Pads) to be alt. sponsor (with Consolidated Royal Chemical Corp.) of Arthur Murray Party on NBC-TV starting Jan. 18, Mon. 7:30-7:45 p.m., thru Grey Adv. ... Ipana buys Tue. 2-2:15 p.m. portion of Garry Moore Show on CBS-TV starting Feb. 2 thru Doherty, Clifford, Steers & Shenfield.

Annual TV program-talent awards of Radio-TV Daily, based on poll of 500 TV-radio editors: Man of the Year, Jack Webb, for Dragnet (NBC-TV); Woman of the Year, Lucille Ball, for I Love Lucy (CBS-TV); comedy, The Colgate Comedy Hour (NBC-TV); variety, Toast of the Town (CBS-TV); drama, U. S. Steel Hour (ABC-TV); musical, Voice of Firestone (NBC-TV); documentary, You Are There (CBS-TV); quiz, What's My Line? (CBS-TV); children's, Ding Dong School, (NBC-TV); commentator, Edward R. Murrow (CBS-TV); sportscaster, Mel Allen (NBC-TV); disc jockey, Peter Potter (ABC-TV).
FEDERAL's first 12-ku uhf transmitter, utilizing new Elmac klystron, is now slated for delivery in April to WNAO-TV, Raleigh, N. C. (Ch. 28), using Federal 1-ku transmitter since it began operating last July. Introductory date for DuMont's 12-ku unit isn't yet known, but first one reportedly will go to DuMont Network's own newly-acquired KCTV, Kansas City (Ch. 25).

Only transmitter shipments to upcoming new stations reported this week were 5-ku GE, which went out Jan. 11, to be followed by 20-ku amplifier Jan. 25, to WSLI-TV, Jackson, Miss. (Ch. 12), due on air in March; and 5-ku RCA to KDAL-TV, Duluth, Minn. (Ch. 3), also due in March. GE this week also shipped 20-ku amplifier to share-time WHEC-TV & WVET-TV, Rochester (Ch. 10).

In our continuing survey of upcoming new stations, these were the reports received this week:

KGGO-TV, Enid, Okla. (Ch. 5), hasn't begun construction, but has ordered RCA equipment, plans start in May or June, reports pres. George Streets, local appliance dealer. Rep not yet chosen.

KDRN-TV, Sedalia, Mo. (Ch. 6), now plans Feb. 15 start with 5-ku GE transmitter, reports gen. mgr. Herb Brandes. Rep will be Porjoe.

WSLI-TV, Jackson, Miss. (Ch. 12), now expects to have new TV building ready about Feb. 1 and equipment installed by March 15. It plans tests after that, going commercial April 1, reports TV operations mgr. Owens F. Alexander. L. M. Sepaha will be gen. mgr. of WSLI-TV & WSLI; Evan Hughes, TV commercial mgr.; C. A. Perkins, chief engineer. It's owned by Standard Life, and will be second vhf owned by insurance firm (Lamar Life's WLBT began last Dec. 20) to compete with newspaper-owned WJTV (Ch. 25) which began Jan. 20, 1953. Rep will be Weed.

WHO-TV, Des Moines (Ch. 13), has its 10-ku RCA transmitter, plans early March start, according to exec. v.p. Ralph Evans. It's owned by Palmer interests, which also operate WOC-TV & AM, Davenport, and owns 25% of KMTV, Omaha. Rep not yet chosen.

EUROPEAN TV took a big stride Jan. 3 when Italy began regular 36-hourly schedule on government-controlled stations in Milan, Rome and Turin. Italy has had TV on intermittent basis since 1951, and 5 more stations are scheduled for formal opening next few months.

On occasion of beginning of regular programming in Italy, Pope Pius called TV "both a precious and dangerous instrument" in statement addressed to Italian bishops. He said "television can serve to bring the family together again in the home and keep them from the dangers of unhealthy places" and can be beneficial to popular culture and education, but he warned "it is also not without dangers because of the abuses and profanations for which it can be used." He noted that TV is made up heavily of films and theatrical spectacles, "and the number that fully satisfy Christian morality is too small.'"

Italy is one of 9 nations studying idea of European network, which will be inaugurated next June with telecast of European soccer championships from Switzerland. Exploring possibilities of hooking into microwave and off-the-air circuit are Belgium, Denmark, France, West Germany, Britain, Holland and Sweden.

Big electrical manufacturer Philips of Eindhoven, Holland, has announced new universal TV set for European areas where telecasts can be received from countries using 4 different transmission standards. Incorporating 12-channel tuner and 4-standard switch, receiver can pick up the standard European transmissions of 625 lines, negative picture carrier modulation, FM sound; Belgian 625-line, positive modulation, AM sound, and French 815-line positive AM system. With 17-in. tube, set retails for $355; regular single-system 17-in. 10-channel set sells for $288.

Our new TV Factbook No. 18 features most complete information available on foreign TV, with lists of the 60 stations now regularly and experimentally on air in 41 countries, including location, operator, frequency, power and starting date of each, and foreign stations planned in future. Foreign countries with greatest number of stations are: Cuba 10, Britain 8, Canada & W. Germany 7 each, Mexico 6.

"Multicon" camera chain, designed especially for low-budget stations, was shown for first time this week in Washington by Standard Electronics Corp., subsidiary of Claude Neon Inc. It's first U. S. equipment to incorporate image iconoscope tube developed by Dutch Philips (Vol. 9:17) and widely used by European TV stations. Camera chain, designed for live, film and slide use, is slated to be available in March at $12,000, Multicon tube at $825. Standard guarantees 600-line resolution, claims 40% lower initial cost than image orthicon, 80% lower operating cost, high sensitivity, light weight (72 lbs. with view-finder), quick warm-up time (60 sec.) Life of developmental Multicon tube was more than 1500 hours. Tube will be made in U. S. by Amperex Electronic Corp., Hicksville, L. I., and Standard will offer new chain as part of complete station package, including transmitter, tower, etc.

DuMont expands into mobile radio communications equipment, with formation this week of communication products div., which also absorbs TV transmitter div. (transmitters & studio equipment). Herbert E. Taylor Jr., mgr. of former transmitter div., heads new division.

WARM-TV, Scranton, Pa. (Ch. 16), pushing for early completion of combined TV-AM studio building, has tower and antenna ready, is now installing RCA transmitting equipment, plans Feb. 9 commercial debut, reports gen. mgr. William M. Dawson. Hour rate will be $225. Rep will be Hollingbery.

WEOK-TV, Poughkeepsie, N. Y. (Ch. 21), given extension to May after being cited by FCC, hasn't ordered equipment as yet or begun construction, but plans start next June, according to pres. Arthur J. Barry Jr. Everett-McKinney will be rep.

WTRI, Schenectady, N. Y. (Ch. 35), delayed in tower and antenna deliveries, now plans tests about Feb. 15 with 12-ku GE transmitter, reports WTRY gen. mgr. W. W. Carter Jr. Owners are Fabian theatre interests (Stanley Warner Corp.) and Col. Harry C. Wilder, founder and cx-owner of WSYR-TV, Syracuse, who operates WTRY, Troy. TV mgr. will be Richard B. Wheeler. Hour rate will be $200. Headley-Red will be rep.

WCOG-TV, Greensboro, N. C. (Ch. 57), earlier planning Jan-Feb. start, won't get 5-ku DuMont transmitter until next Aug., so hopes now for target around Dec. 1, reports gen. mgr. Gilbert M. Hutchinson. Ownership interlocks with WAYS-TV, Charlotte (Ch. 98), which began Dec. 7. Bolling will be rep.

WKNY-TV, Kingston, N. Y. (Ch. 66), construction delayed by cold weather, now plans late Feb. start with RCA equipment and 600-ft. Stainless tower at Port Ewen, 3 mi. from Kingston and 10 mi. from Poughkeepsie, according to TV operations mgr. Robert L. Sabin. Owner Joseph K. Close also has CP for Keene, N. H., which hasn't set target date. Hour rate will be $100. Rep will be Meeker.

CHSJ-TV, St. John, N. B. (Ch. 4), has transmitter building ready on Mt. Champlain for GE transmitter due Jan. 29, plans Feb. tests using 40-ft. Ajax tower, starts programming March 15, reports gen. mgr. G. A. Cromwell. Hour rate will be $165. Canadian rep will be All-Canada TV; U. S. rep not yet chosen.
THIS WAS RETAILERS' WEEK IN TV TRADE: Anxious dealers asked how to sell color this week at 2 big conventions -- and got this as answer: sell black-&-white. At NARDA's parley in Chicago and at National Retail Dry Goods Assn. convention in New York, big question was how to merchandise color in 1954. Although answers weren't as specific as many retailers would have liked, essence was: play up the virtues of black-&-white and low prices and, above all, stress compatibility of sets.

Compatibility will be rallying point for sales messages next few months -- tell folks they won't miss this year's relatively few color programs and that black-&-white sets won't be obsoleted. Wrong way to handle color is to play it down, they were told. That way, neither black-&-white nor color will be sold.

Speakers were necessarily wary of specifics, what with advances currently toward larger color tubes and better colorcasting equipment. In message to NRDGA, J.B. Elliott, RCA Victor exec. v.p. for consumer products, bore down on theme that color will supplement black-&-white, not oppose it. He stressed that at $800-$1000, color was strictly big-ticket merchandise, didn't belong in same league with under-$200 black-&-white. He predicted steady growth of color production until by 1958 more than 10,000,000 sets will be in use. (For Elliott's other remarks, see p. 11.)

NARDA got the same pitch, only more so. In absence of much specific data on when and in what quantity color sets will be available, dealers were told (1) to learn as much as possible about color fundamentals and (2) to attend the servicing clinics offered by set makers and to be prepared for much more complex problems.

NARDA color panels hit hard at both angles, with side excursion into program plans of networks (see p. 6). W.T. Wintringham, engineer in charge of research for Bell Labs, led off with painstaking description of what goes into a color picture. Speaking like a high school coach lecturing fundamentals, Wintringham explained with commendable simplicity how color picture is composed of brightness, hue, saturation.

Hazeltine chief engineer W.O. Swinyard carried ball from there. He went into equally basic analysis of circuitry in color set and some of the problems of mass production. He estimated that within 5-10 years list price of color set will be only 25-50% higher than comparable black-&-white. As to output, he estimated 1955 production will double 1954's estimated 50-200,000, and 1956 will double 1955.

DuMont service mgr. H.J. Schulman said color sets will require 6-10 service calls a year, double those of black-&-white, because of more components, new parts, repetition of operating instructions to consumers, inexperienced servicemen and anticipated difficulties in color transmission.

Tell consumer color will require lots of service, he warned dealers, and all color sets sold this year at least should have one-year service contract. He didn't estimate cost of service contract but RCA Service Co. previously had stated service contract would cost minimum of $180 vs. $60 for black-&-white (Vol. 9:52). He said too that color set requires 30-60 minutes to set up properly and warned that built-in antennas may not work too well on color.

Indicative of intensity of interest color has generated, it seemed to us the dealers hung on every word, plying speakers with requests for elaborations. After color session, which closed convention, several told us they planned to attend set makers' service clinics, or send servicemen. NARDA committee itself proposed to speed up distribution of literature on problems of color service.

Dealers were split in appraising current TV market. Retailers in older areas told us they were none too happy about Xmas business and didn't look forward to much improvement in first quarter. Dealers in newer markets were more optimistic, but
Amersham's nothing but a joke in many markets. The set makers don't make prices. For that matter, neither do dealers. Consumers do. It's like this: A customer comes into the store, looks at a set and says 'I don't want to buy a TV set for $180. If you cut it to $140 I may buy it. If you don't, I'll go across the street to another dealer.' So you either cut the price and knock out your small markup, or let her go."

Bearing out statements of production cutbacks, TV output got off to limping start in RETMA's first statistical week of 1954, totaling 106,525 week ended Jan. 8 vs. 155,892 first week of 1953. Radios totaled 225,481, up from 209,057 year ago.

OPERATING techniques of some 400 TV-radio-appliance dealers were described this week by one of their leaders—chairman Mort Farr, reporting to NARDA convention in Chicago on results of survey he conducted. He summarized findings as follows:

- 54% reported they are open one night a week, 18% two nights, 8% three nights, 2% four nights, 12% five nights, 4% six nights; 80% sell sets on their own floors; 22% have 2 salesmen, 12% have three, 32% have four, 15% have five, 10% more than ten; 50% pay salary & commission, 12% pay salary only, 36% straight commission; 50% have saleswomen on their floors, but in two-thirds of the cases this proved unsuccessful.

Farr singled out night closing as most serious deficiency. His advice: stay open more evenings, even if it means closing in the morning. As a successful dealer in Upper Darby, Pa., Farr said he'd lose 20% of his volume by closing evenings. Though color was feature of NARDA convention (see p. 9), these were among other highlights:

Service firm representatives urged establishment of 2-unit service div., one unit for TV-radio, the other for appliances. NARDA now has single service committee. Proposal must be submitted to NARDA board for approval. Service committee also suggested establishment of national schedule of service charges to avoid regional differences in prices charged consumers.

NARDA treas. Ken Stucky, Stucky Bros., Ft. Wayne, urged standardized system of accounting be adopted throughout appliance industry. He pointed to accomplishment of automobile industry in this regard and drew parallel between needs of auto dealers in 1915 and appliance dealers today. He said small-volume dealers should allow 20% of operating costs to cover salesmen; 20% for necessary staff to support salesmen; 20% for advertising, deliveries & administrative expense; 20% for occupancy, insurance, bad debts, etc.; 20% for taxes, interest and reinvestments. Large-volume dealers must make additional allowance for freight, lost goods, etc., consequently figure 16% 1/2 for each of the items.

E. C. Rankin, gen. mgr., National Appliance Trade-In Guide Co., Madison, Wis., also drew parallel with automobile industry in urging greater use of NARDA Blue Book for TV trade-ins in move to offset price-cutting. He said: "First the automobile industry was confronted with the problem of price-cutting] and they did something about it. They devised new merchandising methods at the retail level, to make the trade-in sale less painful to everyone concerned. Among other things, they devised the Blue Book, which has gained an almost universal acceptance among customers and dealers alike; it has standardized trade-in values on cars to such an extent that the majority of dealers will all offer you the same for your old car."

NARDA director Emerson Dole, Appliance Center, Wichita, stressed importance of demonstrations, both in store and in home. "When we give the customer a demonstration we sell the end use of the product, what it will actually do for the customer," he said. "Demonstrations create prospects out in the field, often before they were ready to come into the store on their own. And when a customer's interest is awakened that early, it's much easier to close the sale without having price become a factor in the sale."

J. A. Broadhurst, Jenkins Music Co., Wichita, sharply attacked 'deceptive' ads by TV-radio dealers, said manufacturers and distributors should shut off co-op advertising support of ads which make any reference to specific dollar value of trade-ins, free goods, combination deals, or do not sell product features. He said manufacturers have in some instances paid up to 100% of the cost of such ads. "Let's get our business out of the Better Business Bureau files," he concluded.

Phonograph record boom will continue for next 5 years, with annual sales of $300,000,000 by 1960, predicts Emanuel Sacks, v.p. & gen. mgr. of RCA Victor Records. He added that in 5 years impact of vastly increased teenage population—as result of high birth rate during World War II—will bring huge new market for records. Sales this year will exceed $250,000,000, up about 12% from the $220,000,000 of 1953, he estimated, adding RCA showed 20% boost in record sales last year over 1952. He cited widespread acceptance of multi-speed turntables and popularity of 45rpm records as main reasons for current boom.

Canadian TV market in 1954 looks good to Vincent Barreca, pres., Canadian Admiral Corp. Speaking to some 800 dealers in Toronto, he estimated more than 500,000 sets, valued at $200,000,000, would be sold in Canada this year, up 40% from the estimated 360,000 sold in 1953. He also foresaw sales of 350,000 new refrigerators, including 50,000 replacements—or about same number as in 1953. He said Admiral's $1175 color set would cost about $1600 in Canada—if available at all. He added Canadian Admiral engineers are now working on color set.

Guaranteed annual wage is goal of CIO Electrical Workers union, pres. James Carey revealed in releasing basic demands to be made upon Westinghouse in negotiations slated to begin April 1. He said electrical manufacturing companies are best able to guarantee yearly pay, added his union will make same demand on GE and smaller companies in the field.

Western Electronic Show & Convention has been planned in Pan Pacific Auditorium, Los Angeles, Aug. 25-27. Business mgr. is Mal Moble Jr., 341 N. LaBrea Ave.
Topics & Trends of TV Trade: TV dealers got loads of advice this week on how to run their business. In addition to several panels and speeches at NARD's Chicago convention (see pp. 9 & 10), 43rd annual parley of National Retail Dry Goods Assn. in New York heard these "6 commandments" for improving sales from J. B. Elliott, RCA Victor exec. v.p. for consumer products: (1) Limit number of TV lines to between 2 and 4 nationally-advertised brands. (2) Make prescribed number of home calls daily to consumers with small-screen sets in effort to build trade-ins or replacements. (3) Conduct home demonstrations. (4) Follow up phone contacts with personal calls every day. (5) Emphasize quality, performance and entertainment of TV, not merely price. (6) Make sure servicing is best obtainable, to keep customers satisfied.

Elliott said retailers of home entertainment instruments have "sound and solid reasons" for optimism, adding: "With high-fidelity holding out the promise of widespread consumer acceptance, with radio and phonograph proving perennially good business producers, with black-and-white TV sales continuing, and with color TV as a future potential, how can we lose?" For Elliott's comments on color, see p. 9.

* * * * *

Picture tube sales in first 11 months of 1953 totaled 9,341,427 valued at $228,671,345, compared to 5,937,647 worth $130,709,088 in same 1952 period, reports RETMA. Rectangular 20-in. and larger represented 79% of sales. Nov. sales were 693,396 worth $16,794,812, compared to 948,593 at $23,904,184 in Oct. and $876,712 at $21,472,381 in Nov. 1952.

Receiving tube sales in first 11 months totaled 413,-
687,529 valued at $285,842,926, compared to 324,512,611 worth $229,872,337 in same 1952 period. Of sales, 278,-
986,843 went for new sets, 106,541,848 renewal, 18,870,213 export, 4,988,625 Govt. For Nov., sales totaled 31,606,971 worth $22,514,227, compared to 34,928,108 at $25,393,879 in Oct. and 36,942,664 at $24,554,156 in Nov. 1952.

* * * * *

Stromberg-Carlson introduced 5 new 21-in. models at distributors conference in Chicago Jan. 11. All are substantially lower in price than comparable models in current line, leader being plexitone finish table at $230, down from $280 on comparable model. Distributors were also shown new 11½-in. color receiver, which will be priced later. C. J. Hunt, TV-radio gen. mgr., said present plans were to build sample color sets during spring for loan to distributors. Pres. Robert C. Tait said 1953 was biggest sales year in company history and predicted 1954 would be even better. New models: plexitone table $230 & $260; open-face mahogany veneer console, $350 & $380; open-face bleached mahogany veneer console, $360 & $390; full-door mahogany veneer console, $485 & $515; full-door limed oak veneer console, $495 & $525. Also introduced was high fidelity portable phonograph at $100.

Five-alarm fire which razed block-long warehouse used by CBS-Columbia on Erie Basin waterfront in Brooklyn injured 18 fireman and 3 policemen Jan. 15 and destroyed 3800-4000 black-&white TV sets and some 8000 cabinets. CBS-Columbia pres David H. Cogan estimated loss would set production schedule back 12 weeks.

Columbia Records Inc., CBS subsidiary, announces $1,000,000 expansion program, including new recording factory in Terre Haute, Ind. that will use injection molding presses and installation of similar presses in Bridgeport & Hollywood plants.

Hallcrafters has introduced 21-in. mahogany table at $200, plus 4 table radios from $40-130. Two of radios are short wave-equipped.

Distributor Notes: RCA Victor appoints new Fidelity Electric Co., Seattle, replacing Harper Meggée Inc.; exec. v.p. is J. E. Gollihur, who held same title at Harper Meggée . . . Philco appoints new Chemung Appliance Distributors Co., 103 E. Woodlawn Ave., Elmira, N. Y., headed by John Wolfe Sr., ex-Gross Distributors, N. Y. (Stromberg-Carlson); new outlet replaces Valley McCleod Co. . . . Halli-
crafters appoints F. M. Brown Co., Portland, Me. (Henry Norrington, gen. mgr.), replacing Appliance Wholesalers Inc. . . . Arvin names Tarbell-Watters Co., 144 Chestnut St., Springfield, Mass. (John S. Leven, v.p. & gen. mgr.) . . . DuMont appoints Skofel Italiana, SRL, Via Fratelni Gabba, 1, Milan, Italy (Dr. Renzo Di Piramo, pres.) in expansion of foreign distribution . . . Bi-State Distributing Corp., Omaha (Admiral) promotes R. J. Harrison from sales mgr. to gen. mgr., succeeding Lloyd W. Sieweer, re-
signed . . . Gross Distributors Inc., N. Y. (Stromberg-
Carlson) appoints John Manzi, ex-Olympic Radio, as distric

St. Louis Better Business Bureau, declaring TV set advertising is "anything but desirable," issued following informal standards for guidance of local retailers: (1) Monthly or weekly payments should not be quoted without reference to down payment. (2) Descriptions of cabinets should be accurate, stating if they are wood or plastic. (3) Size of picture should be differentiated from size of tube. (4) Terms of warranty or guarantee should be explained fully. (5) Ads should state if later model than set pictured is for sale and if advertised model has been dis-
continued. (6) UHF tuning should not be included if tuner is not built-in. (7) Pictures of sets should be closely juxtaposed to prices of each in ad.

First 82-channel 21-in. table at $200 was introduced this week by Philco, which broke with lower-priced line few weeks ago (Vol. 10:1). Combination vhf-uhf set is Model 4001-E in ebony finish; as vhf-only, it sells for $180. Two other all-channel 21-in. tables were priced at $220 in mahogany, blonde $250.

Admiral reduced prices by $20-30 on 4 plastic tables in current line, having introduced 5 lower-priced 21-in. models only last month (Vol. 10:1). Latest reductions: TA1811, 17-in. ebony $180 (down from $200); TA1812, 17-in. mahogany $200 ($290); TA2211, 21-in. ebony $200 ($220); TA2212, 21-in. mahogany $220 ($250).

Cap Rachart Argentina S.I.A.C., newly formed to manu-
facture TV-radio receivers, radio-phonograph combinations and CR picture tubes, was announced by IT&T Jan. 14; it's half-owned by IT&T, capitalized at 20,000,000 Argen-
tine pesos, will begin making 1500 TVs monthly by next April.

Color can be relayed by its community antenna equip-
ment, Jerrold Electronics Corp. reports after tests at WMAR-TV, Baltimore. Pres. Milton Shapp says that equivalent of 5-mi. system was fed with color signal, pro-
ducing excellent results, and that no trouble is anticipated with community system of any size.

Sylvania disclosed color plans this week, joining other set makers (Vol. 9:51-10:2), announced it would place sample color sets in home of distributors by March. They're being produced at Buffalo plant and price will be about $1150, said gen. sales mgr. Bernard O. Holsinger.

Shaw Television Corp., Brooklyn, making own TV line, is now limiting its distribution to N.Y.-N.J. area, with Olympic handling national sales.
Electronics Reports: Development of silicon transistor, capable of operating at temperatures up to 700°, was announced this week by Philco. “We believe this is the first time anyone has succeeded in producing a transistor using silicon as the semiconductor,” said research v.p. David B. Smith. He added that germanium transistors fail at 212°, but heat-resistant properties of silicon make it suitable for use in guided missiles, jet aircraft and other applications where much heat is generated. He emphasized that production of silicon transistors still is far off, depends on ability to isolate sufficient amounts of the extremely pure silicon required. Developmental silicon transistor is made by Philco’s new “surface-barrier” technique (Vol. 9:49).

Closed-circuit TV will speed up racing during March-April season at Florida’s Gulfstream Park. Industrial TV camera and sound intercom will be installed in film patrol lab, with receivers in stewards’ stand. Says Gulfstream pres. James Donn: “In the past [when a foul was claimed] it was necessary for our stewards to travel downstairs to the administration building to interview the riders, after which they consulted the filmed running of the race. [With TV] these operations can now be completed in a few minutes.” Jockey wishing to claim a foul now proceeds to small room under grandstand, stands before TV camera and consults with stewards via 2-way inter-com. Films of race are then projected before TV camera, viewed in stand and an immediate decision made.

TV camera used as “eye” of simple computer is heart of Sanguinometer, speedy and accurate device for counting human blood cells, developed by RCA engineers in cooperation with Sloan-Kettering Institute, research unit of Memorial Center for Cancer & Allied Diseases. Using vidicon closed-circuit industrial TV system and optical microscope, Sanguinometer employs computer which can count particles in a given field by means of circuit developed by RCA Labs’ L. E. Fiory and W. S. Pike. Equipment, developed to provide quick and simple mass method of taking blood counts of persons exposed to atomic attack, is said to perform almost instantaneously and with minimum of error a process that has long been laborious, time-consuming and often inaccurate. Similar circuits can be adapted to count such other microscopic items as bacterial cultures or grains of photographic emulsion.

Textron Inc., Providence, R. I. textile firm, has acquired all stock of Dalmo Victor Co., San Carlos, Cal., manufacturer of airborne radar antennas, which will be operated as wholly owned subsidiary with no management changes. Dalmo Victor sales totaled more than $24,000,000 in fiscal year ended Sept. 30, 1955, defense work accounting for entire output. Acquisition by Textron will permit Dalmo Victor to expand into other related fields, said Textron chairman Royal Little.

Burroughs Corp., Detroit, has set up its electronics instruments div. as separate manufacturing-marketing div. in Philadelphia because, as pres. John S. Coleman states, its electronics business “have become such an important part of the company’s business.” Division produces pulse control units, scientific computers, vacuum tubes, etc.

H. H. Robertson Co., Pittsburgh producer of building products, synthetic resins and commercial asphalts, enters electronics field with purchase of controlling stock of International Research & Development Corp., Columbus, O. (electronics & research).

International Resistance Co. has started new branch plant in Boone, N. C., with John S. Kane as mgr.; Sterling Graydon, chief engineer; James Winkler Jr., quality engineer; Tom Wright, product engineer.

G. L. Ohlstrom Associates, N. Y., has acquired working assets of Inet Inc., Los Angeles manufacturer of electronic, mechanical & magnetic equipment.

RCA’s RIGHT to grant or continue sublicenses under certain GE & Westinghouse patents after Dec. 31, 1954 was upheld by Federal Judge Albert B. Maris in Wilmington court Jan. 11 when he denied June 11 motion by GE asking “construction and enforcement” in line with the court’s 1932 consent decree involving patent licensing relations (Vol. 9:24). In filing the motion, GE electronics v.p. Dr. W. R. G. Baker stated the proceeding was not a suit against RCA but simply a request for the court to declare that the decree provides “the sublicensing rights of RCA expired in all respects on Dec. 31, 1954.”

Judge Maris ruled that both licensing and sublicensing rights survive the Dec. 31, 1954 termination date, asserting the consent decree’s language “clearly and unambiguously includes sublicensing rights within the scope of the licenses which RCA receives under Section 3 of Article 5 of the agreement from GE and Westinghouse.”

On another patent front, Zenith Radio and its tube-making subsidiary Rauland filed motion in Federal district court in Chicago Jan. 10 for an amended counterclaim in suit brought in 1948 against them by RCA, charging patent infringement. They demand $16,000,000 in triple damages under anti-trust act. Zenith claims losses of $4,450,000, as result of alleged illegal patent monopoly, coerced royalty demands under illegal and unenforceable patent claims, and attorney fees caused by various patent infringement claims brought by RCA. Zenith asks triple damages of $13,300,000, Rauland $2,700,000.

Plaintiff in other patent infringement suits filed this week was Edwin H. Armstrong, who filed in U. S. district Court in Chicago against Motorola, Wells-Gardner, Radio Craftsmen & Sentinel, and in Federal district court in Los Angeles against Gilfillan Bros., Hoffman Radio & Packard-Bell. Prof. Armstrong’s counsel are the N. Y. law firms of Cravath, Swaine & Moore and Byerly, Townsend & Watson; Chicago firm of Davis, Lindsey, Hibben & Noyes; Los Angeles, Herbert A. Huebner.

“Plus” audience provided by community systems is small but welcome addition to TV stations’ coverage. E. P. H. (Jimmy) James, ex-NBC & MBS v.p., now in Tucson for family’s health and serving as public relations director of KVOA-TV, reports that several systems are receiving station consistently at distances up to 188 mi. Prescott (183 mi.) and Ajo (115 mi.) have been receiving KVOA-TV and others for some time. System in Bisbee (85 mi.) has just started, with spur to Warren, planning microwave to serve Douglas. In Nogales (60 mi.), community operator is now stringing cable, hopes to get going soon. James points out not only that many of these “plus” viewers trade in Tucson but that “it is clear that since the entertainment facilities of these remote places are very limited, TV becomes a very important part of their life.”

Community antenna in Casper, Wyo., getting Denver signals via 5-hop $250,000 Philco microwave operated by phone company, began operations Jan. 8, signed up 300 subscribers first day. System in Reno, Nev., receiving San Francisco signals through one-hop phone company microwave, started Jan. 10.

Army’s electronic proving ground is being moved from Ft. Monmouth to Ft. Huachuca, Ariz. New commander, taking over early next month, will be Brig. Gen. Emil Lenzner, now chief of plans & operations div., Office of Chief Signal Officer.

Trade Personal: Frank Freimann, Magnavox pres., first manufacturer to win an "Oscar of Retailing," annual silver plaque awarded by National Retail Dry Goods Assn., which for last 50 years has always gone to a retailer; he won it for "effort in the interests of good retailer-manufac-
turer relationships, which has won for him admiration and
good will of the nation's retailers" . . . Dr. Allen B. Du-
Mont awarded American Power Boat Ass'n Herbert L. 
Stone national power cruiser championship trophy for pre-
dicted log racing . . . A. Brewer Hunt, Canadian RTMA 
pres. and gen. mgr. of communications equipment div. of
Northern Electric Co., heads Canada's $100,000,000 elec-
tronics defense program, serving as $1-a-year man . . . Dr.
Alfred N. Goldsmith, electronics engineering consultant,
one time RCA chief engineer, elected chairman of National
Television Film Council . . . Wm. J. Helt resigns as gen.
sales mgr. of Raytheon TV-radio div. to become pres. of
Appliance Distributors Inc., Raytheon Indianapolis 
div. . . . George M. Hakim has resigned as director of adv.
& sales promotion, Raytheon TV-radio div., Chicago . . .
Murray Epstein resigns as Kaye-Halbert purchasing agent,
his duties to be assumed by Paul Ewing and Roy Thomp-
son . . . Joseph Davis, ex-Kaye-Halbert, named production
v.p. of new Caltech Electronics Co., Culver City, Calif. (high
fidelity equipment) . . . Albert F. Wild named sales mgr.
in expansion of GE broadcast equipment staff, reporting to
Frank Barnes, marketing mgr.; Charles J. Simon appointed 
mgr. of product planning, C. Wesley Michaels mgr. of mar-
teting research & administration, M. Roy Duncan mgr. of
product service, Ray D. Jordan mgr. of adv. & sales promo-
tion . . . Alfred Y. Bentley, chief of DuMont TV receiver
mfg. div., placed in charge of advanced planning . . . R. K.
White resigns as adv. mgr., Crosley TV-radio-appliance 
div. . . . George Cohen, ex-astt. sales director, named Em-
erson eastern sales mgr. . . . Tex Barrett resigns as Tele
King Los Angeles regional sales mgr. to join Horn & Cox 
Inc., Raytheon Los Angeles distributor . . . M. J. McNich-
olas, Andrea special apparatus div. mgr., promoted to di-
rector, electronic div. . . . Morgan Greenwood promoted to
new post of Philo gen. adv. mgr., reporting to adv. v.p.
John Gilligan . . . Joe Chapman Lane Jr. promoted to adv.
mgr., Westinghouse tube div., El mira, N. Y. . . . Henry 
Czech, Westinghouse regional mgr., elected pres., Chicago 
Electrical Assn., succeeding John M. Price, Allen-Bradley
. . . Joseph H. Quick, ex-RCW, Phileo & Schwartz, recently
partner in Work-Factor Co., management service, named 
res., National Co., succeeding Charles C. Hornbostel, re-
signed . . . Sidney A. Schneider named Stewart-Warner
Electric's resident field engineer covering midwest . . . 
Joseph Schlig, asst. to sales mgr. of Westinghouse elec-
tronic tube div., El mira, chosen one of 15 to take 16-month
management course at Harvard School of Business . . 
R. K. Gilbert has resigned as chief of production, Standard 
Coil Products Chicago plants . . . Robt. Middleton, ex-RCW 
and Precision Apparatus, joins Simpson Electric Co., Chi-
cago, to lecture to service technicians . . . E. B. Conley
named v.p. & gen. mgr. of electronic equipment factory of
Allied International Inc., So. Norwalk, Conn., due for com-
pletion in Feb. . . . Frank X. Lamb, chief engineer, named
v.p., and Roswell W. Gilbert, research director, named asst.
to pres. Earl R. Mellen, Weston Electrical Instrument 
Corp. . . . Ralph E. Walker, Walker-Jamieson Inc., elected
chairman of Chicago chapter, National Electronics Distribu-
tors Assn.; Howard Larson, Attronic Corp., treas.; John 
G. Bowman, J. G. Bowman & Co., secy. . . . John K. Koepf,
ex-REMTA, recently in Treasury savings bond div., ap-
pointed special asst. to Lothair Teeter, asst. Secy. of Com-
merce for Domestic Affairs . . . Rudolf Feldt, mgr. of
instrument plant and ex-DuMont research engineer, named
mgr. of newly created instrument div., Federal Telecommu-
nication Labs . . . Robt. A. Seidel, RCA v.p., ap-
pointed v.p. of parent company's new sales & service sub-
sidaries div., headquarters in N. Y. and in charge of 
RCA Service Co., RCA Victor Distributing Co. and RCA
Institutes.

Financial & Trade Notes: Emerson Radio reports rec-
ord sales of $75,926,546 for its fiscal year ended Oct. 31,
1953, some 51% over fiscal 1952's sales of $37,644,200. Net
income for period was $2,988,432 ($1.54 a share) vs. $2,326,-
355 ($1.17) in 1952. In report to stockholders, pres. Benja-
min Abrams said Emerson's net worth reached all-time high
of $19,718,033, compared to previous high of $17,697,215 in
1952. He stated company's gov't. sales volume in 1953 was
20% over 1952 with present undelivered backlog of defense
contracts about $40,000,000. As for TV, he forecast black-
& white receivers will be predominant for a long time and
predicted bulk of sales will be lower priced table models,
now comprising more than 70% of Emerson's production.

General Instrument Co., currently reported negoti-
ating to absorb or merge with another electronics compo-
ents manufacturer, but maintaining a discreet silence.
This week reported sales for 9 months ended last Nov. had
reached new high of $27,159,000, up 30% from the $20,-
600,100 of same 1952 period. Net income after taxes was
$871,600 ($1.41 per share on 617,973 shares) compared with
$885,900 ($1.13 on 608,673); before taxes, it was
$1,815,000 vs. $885,900.

George B. Storer is disclosed as purchaser of 5000
shares of common stock of Storer Broadcasting Co., out of
recent public offering of 200,000 shares (Vol. 9: 45, 47). He
did not personally sell any of his own common stock hold-
ings, now in excess of 640,000 shares, when Mr. & Mrs. J.
Harold Ryan disposed of 165,625 shares for the public
offering. We inadvertently stated last week (Vol. 10:2)
that Mr. Storer had also sold 34,375; it was Detroit Trust 
Co., as trustee, which sold those shares.

Unidentified purchaser reportedly is seeking up to
115,000 shares of Weston Electrical Instrument Corp. stock
(of the 428,221 shares outstanding) through First Invest-
ment Co., Los Angeles, which has asked for tenders at $25
F. G. Hawthorne said so far as he knew no officer or di-
rector of the company had been asked to tender shares. First
Investment Co. officials said they are "acting for a com-
pany whose stock is listed on the N.Y. Stock Exchange and
with whom Weston officials have met."

Vergal Bourland, Bourland Home Appliances, Ft.
Worth, elected pres. of NARDA, succeeding Wallace John-
ston, Wallace Johnston Appliances, Memphis. Vice-presi-
dents: Harry B. Price, Price's Inc., Norfolk (reelected);
Carl Hagstrom, General Appliance, San Francisco; Don
Gabbert, Gabbert's, Minneapolis. Mort Farr, Upper Darby,
Pa., was elected chairman and following directors were elected for 3-year terms: Harold Rice, Good Housekeeping
Shop, Dayton; Steve Weinstein, Magee Distributors Inc.,
Boston; Al Robertson, Westinghouse Appliance Stores,
Oklahoma City.

Named to new Communications Div. of Defense Dept.
Office of Transportation & Communications: Col. Wm.
Hamlin, ex-chief, Army Communications Service Div.;
Capt. Clifford Grange, ex-administrative asst., security
branch, Directorate of Naval Communications; Col. Ster-
ling Briggs, ex-chief, program & standards branch, Plans

Edward F. Callahan, 68, who retired in 1950 as v.p. of
International GE after 45 years with the company, died
Jan. 13 in Greenwich, Conn. after long illness.
Teletacing Notes: How dependent many stations are on film programming is sharply highlighted in first annual TV Station Film Manual (44-p.) released by NARTB this week to TV members. Divided into 3 parts—programming hours & costs, case histories, station comments—manual reports that of some 60-odd stations responding to questionnaire last summer, all reported that hours of local film programs exceeded local live shows. In Group 1 (stations with up to 50,000 TV families) average was 26.54 hours of film programs a week vs. 10.37 live, while in Group 5 (stations with 1,000,000 or more TV families) ratio was 42.20 film vs. 32.50 live ... Cost of programming facilities to stations in all groups was reported as $126 per hour for live shows, $85 for film ... Detailed case histories of film programming were reported for 6 stations (KNCY-TV, Amarillo; KKTV, Colorado Springs; KRON-TV, San Francisco; WAAM, Baltimore; WBTV, Charlotte; WCAU-TV, Philadelphia)—with reports on their film purchasing, programming hours and costs, personnel, film equipment, operational procedures, film ID specifications & engineering, plus diagrammed floor plans and reproductions of forms used in scheduling, routing & filing of film. TV film is mighty important to Hollywood, too—Jan. 13 Variety predicting production will amount to record $40,000,000 this year, with fewer companies producing more films; it points out that telefilm pattern is beginning to follow that of motion pictures, as a few large companies take over smaller outfits and get into mass production of films ... Recent Politz study, Importance of Radio in TV Areas Today, available free from NARTB, which has mailed it to AM & FM members, all Congressmen, commissioners and staff of FCC and to civic, educational & religious leaders, etc. ... Another film index: Directory of Non-Royalty Films for TV, compiled by WOL-TV, Ames, and published this week by Iowa State College Press; it gives alphabetical listing of all available films, private & govt., is available for $6 from publishers or bookstores ... Cleveland's WEWS is spending $50-60,000 buying space in 31 Ohio dailies and 4 in Pennsylvania, consisting of five 160-line ads per week for 3 weeks, then three 160-line ads for next 3 weeks, promoting its new higher tower & power; McCann-Erickson, Cleveland, places the space ... Smart publicity: Zenith Radio to award statuettes to lady TV commentators who "achieve the most for public service programming in 1953?"; judges: Fred Sammis. McFadden Publications; George Rosen, Variety; Frank Burke, Radio Daily ... KCOP, Los Angeles (formerly KLAC-TV), as one of first steps under new Copley Press ownership, has reduced base Class A hour rate from $1250 to $900, half hour from $750 to $540; Class B, $800 to $600 & $480 to $360; Class C, $600 to $500 & $360 to $300 ... WTOP-TV, Washington, adding 73 ft. to its 300-ft. tower, increases RCA batwings from 6 to 12, says it will double ERP ... Big WOR-TV studios on 67th St., New York, leased for 3 years to NBC-TV is now being prepared for new daytime Home show ... WOAI-TV, San Antonio, now starts program day at 7 a.m. with NBC-TV's Today.

Publisher J. R. Knowland, Oakland Tribune (KLX), father of the U. S. Senator from California and GOP floor leader, this week purchased 5% interest in application of Channel Two Inc., seeking Ch. 2 allocated San Francisco bay area, for which 3 others will also compete at hearings yet to be set. Knowland interests dropped own application last Nov. Simultaneously, Channel Two Inc. pres. Stoddard P. Johnston, stepson of John A. Kennedy, who said San Diego's KFMB-TV & KFMB last year for $315,000 (Vol. 9:5, 9:13), announced that Howard L. Cheroff, recently resigned mgr. of the San Diego stations, has been retained as executive director; he will also hold about 5% of stock. Johnston will hold 55% of stock and Kinco Enterprises, owned by his mother, will hold 10%. Other stockholders are area business men. Robert Purcell, ex-operations mgr., KTTV, Hollywood, has been retained as consultant and Stanley Sievers as chief engineer. Contract has been signed with RCA for $650,000 worth of equipment, including color apparatus. The other competitors for Ch. 2: KROW Inc., Oakland (Sheldon & Sackett); General Teleradio Inc. (KFRC, San Francisco); Television California (Edwin W. Pauley & C. L. McCarthy).

Sen. Ed Johnson's bill to restrict telecasting and broadcasting of pro baseball games (S. 1396) was blocked in Senate third time Jan. 11 when attempt to get it passed by unanimous consent drew objection from Sen. Smathers (D-Fla.). Bitterly opposed by NARTB, measure would specifically permit major league teams to bar TV-radio from games within 50 mi. of their home cities (Vol. 9:12, 19, 22, 24-25, 28). Also passed over because of objections were 3 bills requested by FCC and already passed by House (Vol. 9:16): (1) To give FCC 30 days instead of 15 to act on protests (H. R. 4558), blocked by Smathers. (2) Easing penalties for some violations of Communications Act. (H. R. 4559), blocked by Sen. Gore (D-Tenn.). (3) Discontinuing requirement for CP for govt., amateur and mobile stations (H. R. 4557), blocked by Sen. Langer (R-N. D.).

Educators were offered use of WOR-TV's 810-ft. tower in North Bergen, N. J., built at cost of $250,000 and unused since station moved transmitter to Empire State Bldg. General Teleradio v.p. Gordon Gray said tower has been offered to state educational depts. of both N. Y. & N. J. for joint use. In obvious rebuttal to North Bergen officials who have threatened legal action to tear down tower (Vol. 9:52), Gray said: "The concentration of TV transmission facilities in the Empire State Bldg. by all stations serving metropolitan New York makes it impractical to destroy the only available emergency facilities." He added de-icing equipment would be installed to eliminate icicle hazard which has brought complaints from some local residents. 

FCC abolished filing of annual ownership reports by TV & radio stations. In order this week (FCC 54-52), it ruled that hereafter stations will file same information at time of making applications for renewal of licenses (every 3 years). Ruling is effective immediately and provides that ownership form must be filled with renewal applications beginning Feb. 1.

United Artists will shortly announce sale of its pioneering TV film service to Joseph Harris and son James, who will finance, produce and distribute films for TV; they're among founders of Motion Pictures for Television Inc. and in group recently acquiring KXLY-TV, Spokane (Vol. 10:21).

Power increases: WJBK-TV, Detroit (Ch. 2) Jan. 11 began telecasting from new 1057-ft. antenna with 100-kw power. WSLS-TV, Roanoke (Ch. 10) Jan. 10 boosted power to 236 kw. WSTV-TV, Steubenville, O. (Ch. 9) Jan. 9 went to 230 kw.
A WEEK’S EXPERIENCE WITH COLOR SET: Operating a color TV set under home conditions for a week now, we have a lot of reactions to report — from ourselves and from laymen who had never seen a color picture. These observations may help you anticipate problems and questions rising as sets become available and colorcasting increases.

In weighing our observations, it should be borne in mind that they’re based on one week’s viewing (though we’ve seen scores of industry demonstrations) and that receiver employed is a pre-production model which doesn’t necessarily perform precisely the way production models will.

Here’s the setup: Receiver is RCA model with newest type of tri-color tube — 15-in round glass, giving 11%-by-8%-in. picture with round sides. It’s a console 39-in. high, 27%-in. wide, 29-in. deep. It has 36 receiving tubes, 2 selenium rectifiers. Standing beside it for comparison is 20-in. black-&-white Philco Model 51-T2133 which is 39-in. high, 25-in. wide, 25%-in. deep.

Separate antennas feed the sets. This is because WMAR-TV, Baltimore (about 30 mi. away) has occasional colorcast and needs antenna directed toward it for best reception. Color antenna, a dipole with reflector, is aimed at Baltimore. WNBW, Washington, though picked up on rear of this antenna, has plenty of signal.

First colorcast observed was the Dinah Shore program Jan. 19. Producer Alan Handley chose to open it with minimum of color, add more as program progressed, thus experimenting with pastels. We thought it excellent; some viewers said they would have preferred more striking colors. Color fidelity generally appeared quite accurate — except for some too-pink flesh tones. Transparency of a Chevrolet came through with faithful robin’s egg blue.

Second Dinah Shore colorcast Jan. 21 was designed as "a blaze of colors," as Handley put it. It was all of that — extremely vivid costumes, reproductions of famous paintings, jewelry, etc. Polling viewers, we found a definite preference for the splash of color. For their first viewing, at least, they want to be overwhelmed with great variety of hues, highly saturated.

Third color program we saw was series of test slides from WMAR-TV, which came through quite well except that reds weren’t sufficiently saturated. Chief engineer Carl Nopper confirmed that transmitted reds were down a bit for this test. There was some ignition interference at the time — disturbing both black-&-white and color sets to same degree.

Black-&-white reception on color set — so called "reverse compatibility" — was very good. Compared with black-&-white set, brightness is lower, though we’ve seen many monochrome sets with no greater brightness. Taken by itself, picture is completely acceptable. Registration is good. Up to 5-6 times picture height, a slight misregistration can sometimes be seen. Beyond that distance, none can be de-
tected. There's excellent resolution and complete freedom from any such disturbances as crawl, twinkle, etc.

But it seems like using a Cadillac to pull a plow to watch black-&-white on a color set -- feasible but wasteful.

Set is extremely easy to tune -- scarcely anything to it. Once the few dials are set right, they're right not only for color but usually for monochrome. If the dials are turned to wrong positions, accidentally or otherwise, a slight twist puts them where they belong. Furthermore, there's considerable latitude in tuning that will still produce satisfactory picture. Even skin tones can be varied and still look right at several different settings.

Dials are as follows: Large 2-control dial at left is for on-off-volume and brightness. At right are channel switch and fine tuning. Behind plate in center are small dials for contrast, hue, saturation and audio tone. In recess at side of set are 2 controls, for focus and convergence. Most can actually be ignored.

Whether set will get more ticklish as it gets older is hard to say. But RCA Service Co. technicians report very little trouble with receivers after they're installed. Furthermore, they're quite rugged in handling. James Cravens, supervisor of field color engineering, has followed sets all over country -- when they were air-expressed to Pasadena, etc. -- finding them in good shape on arrival.

* * * *

One reaction of laymen, somewhat amusing but quite real, is that they assume color set will reproduce all programs in color, right now. And there's a definite desire for larger screen, particularly when picture can be compared simultaneously with larger black-&-white picture beside it.

One of our reactions, a very natural one, is that we get impatient waiting for the next scheduled color program. A color set without color programs is a most frustrating device indeed.

But schedule of color programs is picking up. Following is NBC-TV color schedule through Feb., all originating in New York:

Zoo Parade Jan. 31, 4:30-5; Howdy Doody Feb. 1-5 (every day), 5:30-6; Judge for Yourself (Fred Allen) Feb. 9, 10-10:30; Meet the Press Feb. 14, 6-6:30; Your Hit Parade Feb. 20, 10:30-11; Armstrong Theatre Feb. 23, 9:30-10; Excursion Feb. 28, 4-4:30. No regular color test signals are scheduled as yet.

CBS-TV has weekly New Revue 5:30-6 Fridays, carried only in New York & Baltimore. It will add weekly program Tuesdays in March, feed both to more cities.

3 GRANTED, 5 DROPPED; COURT FAVORS ZENITH: Considerable action in grants this week, with 3 issued and 5 turned back, while FCC batted .500 in courts in 2 cases, but the recent bad weather prevented any station from getting on air -- unless WNEM-TV, Bay City, Mich. (Ch. 5) manages to get antenna up and operating by Sun. Jan. 24. There was also an owner-employe blowup at WTVP, Decatur, Ill. (Ch. 17) this week, followed by firings and/or quitting, and station went off air briefly.

The CPs: Hot Springs, Ark., Southern Newspapers, Ch. 9; Sioux City, Ia., KCOM, Ch. 4; Durham, N.C., WTIK, Ch. 11. Initial decisions favored: Radio Diablo, Stockton, Cal., Ch. 13; WDEF, Chattanooga, Tenn., Ch. 12.

The 5 CPs surrendered were most for any week to date: WMRI-TV, Marion, Ind. (Ch. 29); WCOW-TV, St. Paul (Ch. 17); KMON-TV, Great Falls, Mont. (Ch. 3); WPAG-TV, Mt. Airy, N.C. (Ch. 55); WCHV-TV, Charlottesville, Va. (Ch. 64). All gave up because they foresaw insufficient economic support.

* * * *

FCC won handily in Court of Appeals when court rejected efforts of WCAN-TV, Milwaukee, to enjoin allocation of Ch. 6 to suburban Whitefish Bay pending court hearing on station's contention that allocation shouldn't be made. Thus, competitive hearing for Ch. 6 can go ahead, though WCAN-TV isn't precluded from later asking court to stop winner of hearing from going on air before court decides case.

But FCC got sharpest reversal yet on any litigation growing out of end-offreeze decision, when court ruled that Commission must give Zenith comparative hear-
ing with CBS to determine which can operate on Ch. 2 in Chicago. Court rejected FCC argument that Zenith had waived right to such hearing by not participating in rule-making on city's allocations. CBS now operates WBBM-TV on Ch. 2, having purchased WBKB from United Paramount Theatres for $6,000,000, then changing call letters from WBKB and shifting from Ch. 4 under FCC order.

Among other actions, FCC scheduled Feb. 19 for start of hearings for Ch. 7 in Miami, Ch. 2 in Charleston, S.C., Ch. 5 in Raleigh, Ch. 13 in Huntington. Commission also finalized the allocation of Ch. 10 to Parma-Onondaga, Mich., making it available for Jackson, where CF for WIBM-TV (Ch. 48) was recently cancelled.

FCC is now so up-to-date in its TV processing that all currently contested applicants will have received McFarland Letters by Feb. 1.

* * * *

In the fight at WTVP, Decatur, key employees and pres. W.L. Shellabarger, operator of grain milling business, got into argument Jan. 20. The 3 top staff members quit or were fired, whereupon many others walked off and station went off air. It got back on next day with help of engineers loaned by stations in nearby cities.

According to owner Shellabarger, station was mismanaged, overstaffed, and losing money at rate up to $25,000 monthly. He said that top staff objected to his efforts to take active role in management. "They told me to go to Florida for 6 months," he said. "They also told me they had a buyer -- for 25¢ on the dollar."

He said station had about 50 employees, compared with 15-20 for similar nearby stations, and that employees refused to double up as at other stations. After resignation of mgr. Harold Cowgill, program director Paul Taff and chief engineer James Wulliman, Shellabarger said, about two-fifths of the other employees walked off. He added that he's prepared to stand another year or so of losses if "by doing so I can protect my half-million dollar investment."

Other side of story comes from Cowgill, former Washington radio lawyer who still holds 5% of stock. He said disagreement was over programming policy -- that staff believed in long schedule with considerable live programming, in anticipation of stiff competition from nearby stations. WTVP has been running 10 hours daily, getting some programs from ABC, CBS & DuMont.

Station was in black by Dec., Cowgill said, though it had started in August. It employed 42, he said, and 30 quit after he, Taff and Wulliman were fired.

**TRANSMITTER POWER AND UHF COVERAGE:** Maximum-power uhf transmitters are on the way -- from all major manufacturers. And the long-awaited RCA 12.5-kw uhf transmitter was announced this week, deliveries to begin in latter May or early June.

Telecasting plants which can radiate FCC's maximum 1-megawatt (1000-kw) power are still 1-2 years from production stage, and many stations are already adequately served by lower powers. There's still tendency to forget transmitter power isn't everything in uhf -- any more than it is in vhf.

There are plenty of "substitutes" for top power -- measures that can be taken and are being taken right now to achieve same results, and at lower cost. Perhaps the most important of these is improvement at TV receiver end; stations which have conducted technical education campaigns are increasing quality and range of their service by insuring good receiver installations.

At transmitter end, higher towers often achieve results which can't be obtained through brute power; directionalized antennas can concentrate signal toward heavily populated areas. And without discoursing on economics, let us again point out most important factor in uhf success is the amount of high quality programming which doesn't duplicate any other TV service to the community.

* * * *

Tubes for top-powered uhf stations -- rated at 50-75 kw and capable of delivering 1 megawatt from high-gain antenna -- are under development by RCA, by Varian Associates, Palo Alto, Cal., by Eitel-McCullough Inc. (Eimac), San Bruno, Cal., and probably by others. Varian and Eimac are working on higher-powered versions of the klystrons they now make for uhf, and hope to have samples some time this year.

RCA is aiming for commercial 50-75 kw transmitters by 1956. Says a high RCA
source: "Our tube dept. has 2 separate engineering groups assigned to the development of a tube for this power. One group has been working with a high-power uhf tube of essentially standard design; the other is working with a tube of less conventional type. Both groups have had considerable success, and successful tubes of both types have been built. We are presently evaluating the comparative advantages of the 2 types and will shortly make a decision on which we will use."

As for Eimac -- "With a little luck we should have a sample 50-kw klystron by midyear," pres. W.W. Eitel tells us. "There are no formidable hurdles now," he adds -- "it just requires a little doing."

Eitel sees little problem of building transmitter around tube. "The application will be no different from current [klystron-powered] models. It's mainly a matter of building a big enough power supply." Tube will require "much less than 1 kw to drive it," might conceivably be driven by same unit which now drives 12-kw transmitters. As to tubes of more than 50-kw power, "there should be no insurmountable problems -- but we'll wait and see what the industry wants."

Varian's tube will be rated somewhere in 60-75 kw range, and prototype model "probably isn't a year off," says pres. Russell Varian, pioneer in klystrons. "But we can't tell what problems we'll run into in the laboratory." He, too, agrees that there'll be no particular problems in building transmitter around new tube -- "it just needs bigger equipment." High-powered klystron, he says, will cost more than 12-kw tube, "but not enormously more."

After sample tubes are available, it may well take transmitter makers 6 months to a year or more to begin production of the powerful new transmitters, on basis of past practices. Most transmitter makers themselves say the uhf "big Berthas" are at least a year away, probably more.

What about costs? None of the major transmitter makers would be pinned down on the bill for a complete 1-megawatt power plant. RCA offers "guess" that it will be "on the order of $250,000"; a GE official says "maybe 50-100% more than our 12-kw" -- or in $200,000-$275,000 range. Another manufacturer estimates it may be $400,000. Power to run 50-75 kw transmitter won't be important expense, probably will be about double that needed for 12-kw, or in neighborhood of $10 an hour.

There will be no intermediate steps between 12-kw transmitters and 50-75 kw ones, manufacturers agree -- next stop is maximum power.

Week's big transmitter news is RCA's 12.5-kw uhf plant which replaces its proposed 10-kw unit, ordered by many stations now using interim 1-kw transmitters. To date, only GE, using Varian-developed klystron, is delivering 12-kw unit; driven by 100-watt driver, it's priced at $133,000 less klystrons, which are rented.

RCA transmitter is powered by new tetrode tube Type 6448, will be priced at about $150,000, including crystals, tubes and filterplexer, or about $100,000 for amplifier only. It will be driven by RCA 1-kw transmitter, which company says will "allow for best possible transmitter adjustment for color."

New transmitter's power rating is 12.5 kw at low end of band, decreasing gradually to 10.25 kw at Ch. 83, measured at output of filterplexer "when all the adjustments have been made for wide frequency response and low phase shift required for color TV transmission." Since 10% has been allowed for loss in filterplexer, RCA engineers say usable output actually may be "close to 14 kw" on some channels.

Two other manufacturers are coming out soon with 12-kw units, both using the Eimac klystron -- DuMont, which now offers klystron-powered 5-kw, and Federal, which has scheduled first 12-kw for April delivery (Vol. 10:3).

With prospect of competition in 12-kw field and slowdown in all uhf orders, GE can be expected to offer attractive price deal on its transmitters to telecasters using lower-powered units of other makes -- as well as incentive of quick delivery.

When top-powered uhf transmitters are available, their use probably will be confined to big metropolitan areas, for some time at least. While highest power is one solution to some uhf coverage problems, there are other more immediately feasible ways to achieve similar results, industry's leading engineers point out.
Propagation is far better in low uhf channels than in higher ones. Channel 83 (884-890 mc) is nearly twice as high in the spectrum as Ch. 14 (470-476), which is only a little more than twice as high as vhf Ch. 13 (210-216). Naturally, it is advisable to get as low a channel as possible, to start with. At request of one uhf station -- WHIZ-TV, Zanesville, O. (Ch. 50) -- FCC has proposed to assign Ch. 18 to Zanesville, and presumably station plans to apply for new channel (Vol. 9:50).

But the average uhf station on air must stick to its channel, high or low. And instead of dreaming of the 1-megawatt pie in the sky, which few will be able to afford, there are several ways they can "effectively increase their power."

One such solution, applicable only in certain cases, is the directionized transmitting antenna. Using 12-kw GE transmitter and tailor-made GE antenna, a few uhf stations now are sending out the equivalent of about 500 kw in direction of the heavily populated parts of their coverage areas.

Another solution is the high tower. Particularly in hilly terrain, tower height is as important as power, or even more important in obliterating shadow areas and nulls. This is a step that can be taken right now by many stations, without waiting for 1000-kw power plants -- and which can measurably increase coverage.

* * * *

But the area in which greatest increase in coverage can be realized doesn't involve transmitters, towers or transmitting antennas. It's the receiving end.

The top engineer of one large transmitter-receiver manufacturer lists these 3 steps to increase coverage of uhf stations -- in order of their importance:

1. Good receiver installation practices. (2) More sensitive uhf tuners and receivers. (3) Increase in transmitter power.

In uhf's early days, receiver installations were incredibly sloppy. Service-men hadn't yet learned that what will pass in vhf is intolerable in uhf. Even today the really good uhf installation is the exception to the rule, although big strides have been made in training servicemen during uhf's first year.

A poor installation which is improved so as to deliver twice as much signal to the TV set is equivalent to a fourfold boost in transmitter power. And there's still so much room for improvement in installation techniques that it's certain that a station's time and money used to educate servicemen and even supervise sample installations would be well spent.

Question of receiver sensitivity is all-important, by same token, but there's little the station operator can do about this. Set manufacturers are gradually but steadily improving tuners -- but today's, by and large, are still pretty "noisy" as compared to vhf tuners.

The goal is to develop ideal tubes and circuits for uhf tuning -- items which aren't yet available at marketable prices. A good vhf tuner develops average of about 7 db of internal "noise" which must be overcome by incoming TV signal. Good modern uhf tuners have noise factors as low as 16-18 db, far cry from the 30-db level of early ones. In the laboratory, manufacturers have reduced noise figure to as little as 10 db, and by 1955, production tuners may develop only about 12 db.

As more sensitive receivers are introduced, vhf history will repeat itself, and "fringes" will be pushed farther out. As with improved installation techniques, any improvement in receiver sensitivity is equivalent to its own square in transmitter power. For example, making a receiver 3 times as sensitive would give same results as ninefold power boost.

---

Dropping TV-radio program logs, Nashville's two newspapers, jointly-owned Nashville Tennessean and Nashville Banner announced in front-page statement in Jan. 16 Nashville Tennessean that "broadcasters [who] use the air on exclusive licensed channels [should] share the cost of publication of the schedule of their commercial program." Chico (Cal.) Enterprise-Record also recently discontinued program listings, complaining they were no longer a public service because stations repeatedly failed to supply corrected logs, resulting in "loss of prestige and brunt of public ill feeling" borne by the newspaper.

"TV City" for Chicago: CBS this week bought 75,000-sq. ft. Chicago Arena for $1,500,000, will spend another $1,500,000 to remodel it into "largest enclosed TV studio center outside Hollywood" after taking possession April 1; on city's near north side, building will house WBBM-TV studios, origins due to begin there in late fall.

Exhaustive treatment of color, in scores of articles, comprises 566-page Proceedings of IRE for January. Incredible array of technical talent has written scores of papers on every conceivable phase of color—with something for every engineer and technician in the business.
CONFIRMATION of FCC Comr. Robert E. Lee is expected Mon., Jan. 25 with no organized opposition, following his approval Jan. 19 by Senate Commerce Committee. Though Democratic committee members questioned him closely for more than two hours at Jan. 18 hearing—particularly on his associations with Sen. McCarthy and Texas oil millionaire H. L. Hunt — only dissenting vote was cast by Sen. Monroney (D-Okl.), who felt Lee's qualifications weren't sufficient for job. FCC appointment, said Monroney, was "obviously a consolation prize, as Lee had been endorsed by House members for the job of Asst. Comptroller General."

Sen. McCarthy sat in audience for part of hearing while Lee stoutly denied he was "behind" to the Wisconsin Senator. "I like him," said Lee, "I think he's a great guy," but he was "very distressed" at implication friendship might influence him. The Senator had nothing to do with his appointment, he added. All Democratic committee members, except Magnuson (Wash.) who was absent, questioned him at length, but most critical questioning came from Monroney, Pastore (R.I.) and Smathers (Fla.). Lee said he had helped start Hunt's Facts Forum filmed TV program and had moderated first 3 sessions for which he received $400 in expense money and returned $100. He said program was fair and unbiased; Monroney disagreed, calling it "rather heavily loaded on the side of the moderator." Questioned by Pastore on Hunt's Ch. 43 grant in Corpus Christi, Lee replied he "had no idea Hunt was even an applicant till he came up on the agenda."

MULTIPLE OWNERSHIP proposal by FCC, which would allow owners of 5 vhf stations to acquire 2 uhf (Vol.9:52), appears certain to get Congressional airing. Last week's attack by Sen. Edwin Johnson (D-Colo.), ranking minority member of Senate Commerce Committee (Vol.10:3), was seconded this week by committee colleague Sen. Smathers (Fla.). In letter to Chairman Bricker (R-O.), he urged committee to study proposed ruling to determine "whether or not it should be the national policy to further allow this concentration of communications medium in the hands of so few persons."

Smathers expressed view that present ownership restrictions should be "maintained or even strengthened"—at any rate shouldn't be changed "without thorough study by the representatives of the people." Bricker has announced committee will soon call up FCC for general "orientation" meeting, and multiple ownership proposal probably will be hottest issue discussed. Also due for discussion then is possible legislation to regulate political broadcasts.

Counter-attacking in the courts, Storer Bestg. Co. on Jan. 22 challenged legality of FCC's new multiple ownership rules in D. C. Federal Court of Appeals. Storer argued that Commission has no statutory support for limiting any entity to ownership of specific number of stations, that it must make determinations on case-to-case basis. Appeal also questions FCC's rule providing that 1% ownership in stations counts as much as 100%.

If FCC approves purchase of Empire Coi's 2 stations (Vol.19:2), Storer would be required to sell one vhf—leaving it owning 5 vhf, the maximum permitted, and one uhf. If FCC finalizes its uhf proposal, Storer could acquire another uhf station.

Another controversial subject awaiting discussion on Capitol Hill is subscription TV—specifically the bill to classify pay-as-you-look as "common carrier," introduced last July by Rep. Hinshaw (Vol.9:31). House Commerce Committee under Rep. W wolverton (R-N.J.) will be tied up rest of month in public health hearings, hasn't scheduled any consideration yet on Hinshaw bill or other TV-radio matters.

Monroney didn't doubt Lee's sincerity, but expressed concern lest his presence on Commission might exert "indirect influence on broadcasters, bringing an atmosphere of fear of pressure" on stations which refuse to give free time to programs such as Facts Forum. Lee's comments on other topics covered in hearing:

Multiple ownership rule—Answering a question by Chairman Bricker (R-O.), Lee said he voted for rule-making on proposal to raise ownership limit to 7 TV stations, while "not necessarily in favor of it, so that he may hear pros & cons, then make up mind. Discussion preceding vote, he said, indicated Commissioners' "concern for the future of uhf."

Political broadcasts—"The whole problem will be the subject of consideration [by the FCC] in the next few months because of the imminence of the election campaign."

"Strike" applications—Commission is concerned about some provisions of McFarland Act, particularly those relating to "protests," which can hold up construction of stations. FCC has investigated 3 or 4 suspected strike applications, "and we still have no solid evidence—but perhaps we will."

Educational TV—Replying to Sen. Smathers, he said he favors educational reservations and would be "reluctant to turn reserved channels over to commercial interests for many years," added he wasn't sure he agreed that educational TV should be completely non-commercial but that he has open mind on the matter.

In other Congressional activity, House Ways & Means Committee inserted in new tax bill a provision specifically defining TV-radio show giveaway prizes as taxable—previously subject to conflicting court decisions. And Rep. Keating (R-N.Y.) reintroduced perennial bill to ban TV-radio broadcasting of horse race information.

TV advertising increased 35.2% to total of $688,700,000 in 1953, when total advertising expenditures went up 9.1% to record $7.8 billion, according to preliminary estimate by McCann-Erickson Inc. for authoritative Printers' Ink advertising index, appearing in Jan. 22 issue. Figures show more money is now spent for TV than for magazine advertising. While all media shared in gain, TV's increase was by far the greatest. TV's share of national advertising budget increased from 7.1% in 1952 to 8.8% in 1953; TV-radio advertising now accounts for 17.8% of total U. S. advertising, up from 16.6% in 1953. National TV advertising was estimated at $529,700,000 in 1953, up 30.5% from $405,800,000 in 1952; local went up 53% to $159,000,000 from $103,600,000. Radio advertising increased 4.3% to $707,900,000 from $676,800,000; it now represents 9.1% of total advertising, down from 9.5% last year. Breaking down radio ad expenditures, national is $375,900,000, up 2.5% from $369,500,000; local $328,000,000, up 6.1% from $309,100,000. Total expenditures for other ad media in 1953 & 1952, followed by percentage of increase: Newspapers $2,656 billion & $2,473 billion (7.4%) magazines $663,100,000 & $615,800,000 (7.7%); farm papers $30,800,000 & $29,400,000 (4.8%); direct mail &$1,076 billion & $1,024 billion (5%); business papers $398,000,000 & $365,200,000 (9.2%); outdoor $174,700,000 & $163,100,000 (7.3%); miscellaneous $1,408 billion & $1,292 billion (9%). For breakdown of Printers' Ink advertising figures, 1946-1952, see p. 370, TV Factbook No. 18.

Reducing hour rates but raising min. are WABI-TV, Bangor & KAFFY-TV, Bakersfield, former cutting Class A hour from $200 to $150, increasing min. from $40 to $50; latter $250 to $235 and $40 to $47. KERO-TV, Bakersfield, increases Class A hour from $200 to $250, min. from $40 to $50 in new rate card.
TRANSMITTER SHIPMENTS reported this week:

RCA Jan. 19 shipped 10-kw to WRDW, Augusta, Ga. (Ch. 12), due on air next month. GE reported Jan. 8 shipment of 5-kw to WDSM-TV, Duluth-Superior (Ch. 6), which gets temporary single-bay antenna Feb. 1 and is due on air in February. Slated to be shipped by GE Jan. 23 is 20-kw amplifier to WSLI-TV, Jackson, Miss. (Ch. 12), which got 5-kw Jan. 12 and has latter March target.

For existing stations, Standard Electronics Jan. 18 shipped 50-kw transmitter to Crosley's WLWA, Atlanta (Ch. 11), and GE scheduled Jan. 23 shipment of 6-bay antennas for KABC-TV (Ch. 7) & KTTV (Ch. 11), Los Angeles, both due to get GE 50-kw amplifiers this year.

In our continuing survey of upcoming new stations, these were the reports received this week:

KARK-TV, Little Rock, Ark. (Ch. 4), has its 25-kw RCA transmitter, but won't finish construction for 3-10 weeks, now plans early April tests, mid-April programming, according to v.p.-gen. mgr. T. K. Barton. It will begin with 58-kw ERP with antenna 340-ft. above ground; later goes to 100-kw with 1175-ft. antenna. Rep will be Petry.

WMPD-TV, Wilmington, N. C. (Ch. 6), has ordered RCA equipment, plans March 1 tests from 358-ft. Truscon tower, goes commercial March 15, reports gen. mgr. R. A. Dunlea. Hour rate will be $200. Rep will be Weed.

WPDV, Florence, S. C. (Ch. 8), will build $500,000 studio-transmitter building and 750-ft. tower near Black Swamp School, plans to get going by Sept., reports exec. v.p. Charles H. Crutchfield. Owner Jefferson Standard Bstg. Co. also operates WBTV, Charlotte and owns 16.5% of WFMY-TV, Greensboro, N. C. Florence attorney Melvin Purvis is manager, plans 10 a.m.-midnight programming daily. Station is signed as basic CBS affiliate, also will carry programs originated by WBTV. Make of equipment & rep not reported.

Personal Notes: John K. Herbert, who resigned Jan. 1 as NBC-TV sales v.p., returns to Hearst organization as exec. publisher of New York Journal-American; he is one-time gen. sales mgr. of Hearst magazines... Wm. H. Davidson, national mgr. of NBC Radio spot sales, named asst. gen. mgr. & sales director of WNBK & WTAM, Cleveland; at WNBK, he replaces Charles H. Phillips, now sales mgr. of WOR-TV, N. Y. and at WTAM, he succeeds Wm. P. Dix Jr., who takes same post with WOR... Julian M. Kaufman resigns as asst. mgr. of KPHO-TV, Phoenix, to be mgr. of XETV, Tijuana, succeeding A. G. Flanagan, now asst. mgr. of KCOP, Los Angeles... A. H. Constant, ex-KON, Honolulu and KRON-TV, San Francisco, named mgr. of KAFY-TV & KAFY, Bakersfield, Cal... Fred Hohen, pres. of Meredith Pub. Co. (WHEN, Syracuse; WOW-TV, Omaha; KPHO-TV, Phoenix; KCMO-TV, Kansas City) named to top-level business advisory council, Dept. of Commerce... James Lobb, ex-WSPD-TV, Toledo, named production mgr., Earl Henton program director of upcoming KDAL-TV, Duluth-Superior (Ch. 3), due in March... Bob Lunquist promoted to program director of WICU, Erie, replacing Don lick, now managing director of North American Film Corp.; Dick Johnson promoted to production supervisor... Norwood Patterson named gen. mgr., Ralph Sacks sales mgr. of grantee KSAN-TV, San Francisco (Ch. 32)... Rodney Ford appointed news director, WAVE-TV, Louisville, succeeding Hugh Sutton, retired due to ill health... Warren Wade resigns as exec. producer, WOR-TV, N. Y.... Mavor Moore, chief producer of Canadian Bstg. Corp. and one of its programming pioneers, resigns to resume acting career with Shakespeare Festival in England... Gordon E. Morehouse, ex-KOIL (AM), Omaha, named regional sales mgr. of new KHOL-TV, Kearney, Neb.... Roger Pryor, TV-radio v.p., Foote, Cone & Belding, and J. James Neale, v.p. Dancer-Fitzgerald-Sample, awarded bronze medallions for TV-radio work in behalf of American Heart Assn.... Stanley B. Cohen, ex-FCC hearing div., joins Leo Resnick in Washington TV-radio law practice... Fritz Jacobi promoted to press mgr. of NBC film div., reporting to new director Edgar G. (Ted) Sisson... Addison Armor named director of program sales, ABC Radio... Edward E. Hewitt, ex-ABC, named San Francisco sales mgr., Motion Pictures for TV Inc.; Bruce Collier, ex-WMAL-TV, Washington, named Dallas sales mgr.... Alexander H. Anderson named TV v.p., Guild, Bascom & Bonfigli, San Francisco... Chet Brouwer resigns as TV director, N. W. Ayer & Son, Hollywood, to join Harry Owens TV Enterprises Inc., Hollywood... Samuel L. Northcross named TV v.p., Wm. Esty Co., replacing Kendall Foster, resigned... Charles Garland, gen. mgr. of KOOL-TV, Phoenix, elected pres. of Arizona Broadcasters Assn.

Wm. Cole Esty III, 59, founder and chairman of advertising agency which bears his name, died Jan. 21 at his home in New Canaan, Conn. after long illness.
Telecasting Notes: "Laugh tracks" on filmed TV shows are pet peeve of Washington Star's TV-radio critic Harry MacArthur, who wrote Jan. 10 that "seismographs from Madison Ave. to Hollywood & Vine will shake" when producers count the people who refuse to watch such shows; he blames agency men for dubbing in recorded guffaws on telefilm sound-tracks in order to sell prospective clients.

"A guffaw doesn't make an unfunny line funny," he says — and he opines that Bing Crosby's current TV debut is remembered only for "those horrible canned laughs". Another illustration of changing pattern of network affiliations being wrought by TV (Vol. 10:3:3): ABC-TV pulls away from CBS-affiliated KPHO-TV, Phoenix, to become basic on share-time KONY-TV & KOOL-TV; yet KPHO (AM) remains ABC and KOOL (AM) remains CBS.

"TV is the current pushover for pic plugs," says Jan. 20 Variety, commenting on TV's apparent softness for free blurs for movies and pointing to actress Pat Crowley's 16 network appearances in 2-week period and Ava Gardner's 4 guest spots within 5 days, both plugging current films. On-the-spot films and tape recordings made during American Alpine Club's unsuccessful attempt to scale Kazakoram, or "K-2" in northwestern Pakistan, world's second highest peak, will be presented on NBC-TV Jan. 31. 2:30-3:30 p.m., titled K-2, the Savage Mountain. First live show on 3-station Massachusetts uhf "network" (Vol. 9:49:50) was Jan. 22 forum, This Is the Issue, discussing proposed state budget, originating in studio of WTAO-TV, Cambridge-Boston and rebroadcast off-the-air by WWOR-TV, Worcester & WHYN-TV, Holyoke.

"TV Guide" now being published in 19 local editions, latest added in last two weeks being Kansas City, Houston & Miami. Ft. Monmouth basketball to be carried by new WRTV, Asbury Park, N. J. (Ch. 58), which began programming Jan. 22, first game scheduled Jan. 26; station begins weekly series, The Mayor Reports to the People Jan. 24, featuring mayors of various communities in WRTV coverage area. Prizes totaling $75,000 in cash to be awarded in promotional contest slated by WABC-TV, New York, involving pictures flashed on screen at various times of day for viewers to identify. TV-radio stations and disc jockeys being asked by Louis Braille Music Institute of America, 140 W. 58th St., N. Y. (Albert G. Gorson, exec. director), to seek contributions for new American Record Club for the Blind, making available for first time records with braille labels and jackets. KGUL-TV, Galveston (Ch. 11) to open Houston studios in April in new Prudential Insurance Blag.

Flushed by success of Today (Vol. 10:3), NBC-TV launches new morning programming experiment March 1 when Home goes on air Mon.-thru-Fri. 11 a.m.-noon with partic. sponsorships in format similar to Dave Garroway's 7-9 a.m. show. Details of new program were disclosed Jan. 21 by NBC pres. Pat Weaver in closed-circuit telecast to affiliates. Show is aimed primarily at women, will feature fashion and beauty tips, cooking, child care & training, leisure time activities, shopping news, gardens, etc. It will originate from $200,000 permanent set now under construction at 101 W. 67th St. studios and will be among first network programs to include color inserts on regular basis. Sales policy will be highly flexible to permit partic. sponsorships. It's planned to have eight 1-min. commercials, plus maximum of six 20-sec. spots per hour. And under "charter client plan," any advertiser who contracts for 52 commercials before March 1 will receive one day of free sponsorship for entire hour during year. Two sponsors have already been signed, identities undisclosed. Exec. producer will be Richard A. R. Pinkham, who'll continue in same capacity with Today; Jack Rayel will be producer and Richard L. Linkrum assoc. producer.

ALARMED by 3 fatal air crashes involving TV-radio towers —2 of them resulting from collisions with guy wires in bad weather—CAA next week will begin exploring new ways to make high tower guy wires plainly visible in fog and darkness. Meanwhile, CABS this week completed probe of recent crash in which Michigan's ex-Gov. Kim Sigler and 3 companions were killed after hitting guy wire of 550-ft. tower of WBCK-TV, Battle Creek, Mich.; staff analysis blamed pilot Sigler's use of "visual flight rules" in weather which called for instrument flying (Vol. 9:49). Earlier report blamed pilot for collision of private plane and WHUM-TV guy wire near Reading, in which 2 were killed last August (Vol. 9:33, 49).

Proposal to study guy wire marking and lighting possibilities will be discussed Jan. 27 in Washington at meeting of CAA's airdromes, air routes & ground aids subcommittee of the Air Coordinating Committee. Group is expected to ask development of joint industry-Govt. research project to attempt to solve guy wire problems. Broadcasters as well as tower manufacturers will probably be asked to cooperate. Problem is tough one, previous proposals on marking and lighting of guy wires having been discarded as impractical (Vol. 8:46; 9:9). "The problem is no nearer solution today than in the last 5 years," subcommittee chairman Joseph Blatt told us.

CAB report on Michigan crash gave ceiling as 400 ft., visibility three-fourths of a mile, with light rain and fog at time of accident. Plane, flying at low altitude, collided with top guy wire of tower, sheared off its right wing and toppled the tower, causing about $40,000 damage to tower. Staff analysis attributed crash to "pilot's continuing visual flight rules (VFR) flight into unfavorable weather." Analysis noted that tower was new but was marked on charts available to Sigler, and that 2 American Airlines flights same day had bypassed Battle Creek because of weather.

More realistic depreciation rates for telecasting equipment are asked by DuMont in proposal filed with Bureau of Internal Revenue. To bolster its argument, DuMont this week sent questionnaires to all TV stations asking their estimates of normal useful life and obsolescence factors for various telecasting components, to help Revenue Bureau set up final depreciation rates for tax purposes. DuMont objects to interim schedule of depreciation rates now being used as general guide by Revenue Bureau as not giving sufficient emphasis to obsolescence due to technological progress. DuMont proposes that composite overall life of TV station equipment, excluding buildings and towers, be set at 6 years for vhf, 5 for uhf, as opposed to bureau's interim rate of 15 years for audio, 10 years for video equipment. Other DuMont proposals (followed in parentheses by bureau's interim rate): TV transmitters & associated equipment, vhf 5-7 years, uhf 4-6 years (audio years, video 10 years); towers 6-18 (15); antennas, vhf 7-9, uhf 3-5 (12); fixed studio equipment 4-6 (studio equipment, audio 10, video 8-10); mobile studio equipment 3-5; mobile field equipment 2-4 (mobile equipment 7). Copies of proposal and questionnaires are available from DuMont controller B. L. Graham, Clifton, N. J.

"The big news in Canadian TV is that improved programming in recent months has caused a growing percentage of the audience looking at U. S. border stations to swing to Canadian stations," writes James Montagnes in Jan. 17 New York Times, adding that more live shows are now produced in Toronto than in any other North American cities except N. Y. & Hollywood, with Montreal perhaps the continent's fourth biggest production center. Greater emphasis on "lighter program fare" together with imported U. S. shows have brought Canadian TV ratings up, he says.
Network Accounts: New merchandising plan to tie in advertisers with nation's food store chains will be launched in few weeks by NBC-TV under title of "Star Value Parade." NBC-TV will distribute pictorial displays featuring its stars to 20,000 food stores selling products of network advertisers. Displays will have room for inserts for local station designations. NBC-TV client pays proportional share of cost of display material, for which both he and participating store can tie their product more closely to stars; network affiliates can establish closer liaison with retail food outlets and district sales offices of NBC clients. Promotion is divided into 4 separate 13-week campaigns, with each region getting one-quarter of year on exclusive basis... Ford Motor Co. claims 164 markets, nation's biggest audience, for its Ford Theatre film series on NBC-TV Thu. 9-30:10 p.m.; it's on 63 NBC outlets, then is sold to 101 additional stations within 48 hours, with regional Ford dealer organizations picking up the tab... CBS-TV continues to audition talent for its 7-9 a.m. show but maintains silence on details, won't even release air-target date; program is tentatively titled Eyeful, has newsmen Walter Cronkite and Charles Collingwood in key roles... Chesterfield's dropping of Arthur Godfrey causes some realignments of sponsorships, Toni (shampoo) buying weekly 8-3:30 p.m. portion of Arthur Godfrey and His Friends on CBS-TV Wed. 8-9 p.m. thru Weiss & Geller, and Minnesota Mining & Mfg. Co. buying Mon. & Wed. 10:10:15 a.m. segment of Arthur Godfrey Time simulcast starting Feb. 8 thru BBD... Gillette signs 3-year contract for TV-radio sponsorship of Kentucky Derby on CBS, thru Maxon Inc. Dodge cars sponsors Break the Bank, returning to ABC-TV Jan. 31 Sun. 10-10:30 p.m., thru Grant Adv... Old radio favorite, Don McNeill's Breakfast Club, becomes simulcast on ABC starting Feb. 22, Mon.-thru-Fri. 9-10 a.m.; radio sponsors Quaker Oats, Toni, Swift & Co., Philco get first option on TV sponsorship... Carter Products (Rise shaving cream) drops This Is Show Business, substitutes Meet Millie on CBS-TV starting Jan. 26, Tue. 9-10:30 p.m., thru Sullivan, Stauffer, Colwell & Bayles... Jacques Kreisler Co. (watch bands) buys 11 partic. on NBC-TV's 7-9 a.m. Today starting March 30, thru Foote, Cone & Belding; M&R Dietetics Laboratories (Pream) adds 79 partic. to 41 it already sponsors, thru Benton & Bowles... Beltone Hearing Aid Co. buys Fri. portion of John Daly Views the News on ABC-TV starting Jan. 29, Mon.-thru-Fri. 7:15-7:30 p.m., thru Olian & Bronner, Chicago.

All-night operation by NBC's 4 owned- operated clear-channel AM stations begins Feb. 1 on coordinated basis. Each using local disc jockey and programming separately "with music most popular in its area," stations are New York's WNBC (already on all-night operation). San Francisco's KNBC (which recently began all-night programming), Cleveland's WTM, Chicago's WMAQ. NBC's 5th o-o, Washington's WRC, is not clear-channel. Half the commercials on each all-night program will be sold locally, other half offered to national advertisers by NBC Spot Sales—advertisers being required to buy all 4 stations. NBC also announced this week it will reduce sustaining network service by 10\(\frac{1}{3}\) hours weekly beginning Feb. 1, signing off at 11:30 p.m. instead of 1 a.m. and eliminating its dance band pickups during those hours.

Station Accounts: "Multiple impact plan" designed to attain "multiple audiences and ratings at substantially reduced cost to sponsors" was disclosed this week by WOR-TV following move to one-studio operation atop Empire State Bldg. Under plan, effective Feb. 1, 3 different series of live programs will be repeated Mon.-thru-Fri. 7-9 p.m. in which sponsor may buy, at comparatively low cost, program itself or on partis. basis. To cut costs in single- studio operation, sets, props, technicians & rehearsals will be kept at minimum... Answering criticism that beer ads dominate TV, soft drink manufacturers and their bottling companies used spot TV in 67 markets in July-Sept. 1953, according to survey of 161 soft drink companies by Edward Petry & Co.; 40% of commercials were on children's shows or westerns... Scudder Food Products, for its potato chips and mayonnaise, sponsors Annie Oakley series on KMJ-TV, Fresno; KCCV-TV, Sacramento & KBTV, Denver, thru BBD... Wage Earner's Insurance Co. buys Bress Pearson Reports for WNAC-TV, Boston, Wed. 6:30-6:45 p.m., thru Silton Bros., Boston... Union Oil Dealers of Las Vegas sponsors Range Rider film series for 52 weeks on local KLAS-TV Wed. 7:30-8 p.m. thru CBS-TV TV Film Sales; series is now in 105 markets... Birdseye Foods adds 10 partic. a week to 6 it already sponsors, to boost chicken pies, on Chef Milani Show on KTTV, Los Angeles, Mon.-thru-Fri. 9:30-10:30 a.m. Salada Tea allocates $1,000,000 for 52-week spot campaign in more than 100 markets, thru Hermon W. Stevens Adv., Boston... Carling Brewing Co. buys all 77 road games of Cleveland Indians on WXEL; no home games will be televised... Chuck Full O'Nuts drops Jerry Lester's Late Date on WNB, N. Y., Sat. 11:30-midnight, will sponsor new variety show featuring singer Jean Martin in its place... Hartz Mountain Products (bird food) shifts Adventures of Captain Hartz from WABC-TV to WABI effective Jan. 23, Sat. 4:45-5 p.m. Among other advertisers reported using or preparing to use TV: Morton Packing Co., Louisville (Morton frozen pies), thru Ted Bates, N. Y.; General Foods Corp., Franklin Baker Div. (LaFrance bluing), thru Foote, Cone & Belding, N. Y.; American Sta-Dri Co., Brentwood, Md. (Sta-Dri masonry paint), thru Gordon Manchester Adv., Washington; Branchell Mfg. Co., St. Louis (Color-Flye dishes), thru Calvin & Co., St. Louis.

TV film will be $60,000,000 business in 1954, predicts Jan. 25 Sponsor Magazine in lead article of information-packed TV film section, featuring survey treatments of these aspects of telefilm field: (1) Color—more than 60% of TV film producers replying to survey reported they had one or more series now being filmed in color. (2) Run-vals are often as high as first run, sometimes higher. (3) Costs—$27,000 is average for half-hour drama. (4) Tips on film buying. (5) 14-p. directory of available TV films. (6) Directory of syndicated film sources.

Cost of service to subscribers of new community antenna in Casper, Wyo. (Vol. 10:3), served with signals delivered from Denver via 5-hop microwave, is $150 for installation, $7.50 monthly, compared with average system's $135 and $3.50-$3.75.

National theatre-TV sales meeting, the first to be held during early evening hours, introduced 1954 advertising and sales program to more than 15,000 Dodge dealers Jan. 22 in theatres and hotels in 30 major cities, through Theatre Network TV Inc.

1953 TV OUTPUT WORTH ABOUT $2.375 BILLION: At average factory value of $170 a set, output of about 7,275,000 TVs in 1953 meant factory billings of some $1.235 billion. When markups, antennas, servicing and other costs are added, year's TV production represented approximately $2.375 billion to trade, compared to about $2 billion last year, when production was 6,096,279.

It's proper to add about 60% as markup between factory and consumer, somewhat higher than year ago, say trade statisticians, who thus place retail value of TV production at about $2 billion. With addition of value of antennas, parts and cost of servicing, total comes to about $2.375 billion. Only item which showed substantial reduction in 1953 was servicing, amounting to average of about $20 a year per set, compared to approximately $40 in 1952.

Radios also had banner year, dollar-wise. Taking preliminary production estimate of 13,361,505, total dollar value is placed roughly at $800,000,000, up about 50% from the $400,000,000 of 1952. Factory cost of radio was about $23 per set, roundly same as last year -- but output was about 50% greater than 1952's 9,711,236.

Combined TV-radio volume of almost $3 billion, therefore, was achieved by the industry last year, compared with about $2.4 billion in 1952.

* * * *

TV production and sales moved sluggishly through January, which seems to be following normal pattern of post-Xmas slump month. TV production totaled 95,915 week ended Jan. 15, second week of RETMA's statistical year, compared to 106,525 in preceding week. They were way down from the 329,240 TVs turned out in first 2 weeks of 1953 but set makers, holding tight rein on production, said comparison with year ago was unfair. Industry overproduced badly first quarter year ago, they agreed, and output this year is far more realistic and in tune with lowered demand.

Radio production held up well -- far better, in fact, than year ago. Output week ended Jan. 15 was 221,372 which, compared with 225,481 preceding week, gave 2-week total of 446,853, way up from the 267,480 produced in first 2 weeks of 1953.

Bad weather over much of nation aggravated normal January TV slump. As one set maker told us, "people in the northern areas are snowbound and wouldn't go out in this weather to get TV sets if we gave them away."

It was still too early to judge effect of lower-priced sets on retail sales but manufacturers seemed confident that, given a break in weather, low prices would send sales up. Philco and Admiral now have all-channel 21-in. table models at $200 (Vol.10:3) and though no new price reductions were disclosed this week, rest of industry is expected to lower price of all-channel receivers still further.

* * * *

While RCA showed new 19-in. color tube this week (see p. 11), Admiral announced it would ship first color sets to dealers in second quarter of 1954, added first color service training clinic would start Feb. 8 in Chicago, with 30-35 Admiral distributors already enrolled. Priority is given to distributors in cities which will be equipped for color programs by June.

More support for belief color won't deter black- &-white sales in immediate future came this week in scattered but consistent reports from distributors and dealers. Few dept. stores which have put color set on floor (see p. 12) report that prospective consumers gasped when informed of over-$1000 price for 11½-in. screens. Despite widespread publicity, consumers still cling to idea that color sets will be almost comparable to black- &-white models in price.

Meanwhile, industry continued to press its "truth campaign" on color, emphasizing in local newspaper advertisements, distributor and dealer meetings what color
holds in future and what black-&-white can do now. As example, Hoffman Radio Kansas City factory branch invited the sales and service staffs of local dealers for color demonstrations. Gen. mgr. Dave Doss told them:

"The best way to knock down the sales resistance of the customer who won't buy black-&-white now because he's waiting for color is to show him this set with a 12½-in. screen and a $1200 price tag. After that, a 21-in. black-&-white set for $200 looks pretty attractive, especially when color programming in this part of the country is still something in the indefinite future."

RCA'S PLANS FOR LARGER COLOR TV TUBES: Long-awaited details of 19-in. RCA color tube (Vol. 10:2) were disclosed to symposium of RCA tube licensees at Princeton Labs on Jan. 21, and it was announced that limited quantity would be available commercially in last half of this year. RCA officials also told licensees there are high hopes for producing, next year, the extremely bright focus-mask (grid) type of tube shown only once last year (Vol. 9:16); rectangular 21-in. version is planned.

Salient features of 19-in. tube: (1) Area of 162 sq. in., nearly double that of 15-in. now in production, but with same brightness and length. (2) All-glass, round construction. (3) Newly-designed gun, phosphors and shadow mask.

Gun differs from 15-in., in that it has magnetic controls inside tube, eliminating need for external convergence controls. Improved phosphors are so balanced that there's no difference in decay time among the 3 colors; principal change is new red phosphor -- zinc selenide. Holes in new shadow mask are largest in center, smaller toward edges -- yet with no appreciable loss in brightness. To achieve larger size with no increase in length, deflection has been increased to 59 degrees.

Discussing 19-in. tube, v.p. Ewen C. Anderson told group that it uses "many of the parts, materials, processing equipment and associated components of 15-in."

Regarding the focus-mask type, Anderson said: "We are pleased with the progress we are making and we hope that [it] will be brought by us to a commercial production stage next year. [It] will produce a very much brighter picture than any presently known color tube." When tube was demonstrated last year, its brightness was estimated at 60 ft. lamberts, compared with about 20 for current shadow-mask types.

Engineers at Jan. 21 symposium were shown two 15-in. and two 19-in. sets; program was dress rehearsal of Dinah Shore show microwaved from New York. Samples of 19-in. will be shipped to set makers in second quarter. As with 15-in., production will take place at Lancaster plant.

* * *

Pushing on other color fronts, RCA announced that it would offer critical color-set components to other set makers, on mass production basis, within 30-60 days. According to Douglas Y. Smith, gen. marketing mgr. of tube dept.: "Production schedules will be geared to meet the needs of manufacturers who are expected to produce an estimated 100,000 color receivers this year."

The seven components to be offered initially include deflection yoke, high-voltage transformer, several types of focus and convergence transformers.

And on the station front, RCA is distributing new booklet: "Station Planning for RCA Color Equipment," describing equipment for various stages of programming -- network, slide, film, live -- with details of function and price.

GE is expected to disclose details next week on its station equipment plans which contemplate delivery of network rebroadcast equipment in Feb., slide scanners in June, film projectors in July, cameras in fall.

DuMont has licensed A. G. Healing Ltd., Melbourne, to manufacture and sell TV sets in Australia under Healing brand name. Healing now makes and distributes radios, appliances, bicycles and auto parts. Australian telecasting is slated to begin in 1956.

Emerson entered high-fidelity field this week with introduction of table model phonographs at $100 & $120, each with three 6-in. speakers, 4-tube amplifier and range of 50-12,000 cycles.

Shipments of TVs to dealers totaled 6,000,380 in first 11 months of 1953, when production was 6,765,000, according to RETMA's state-by-state and county-by-county tables released this week and available on request. They represented 15% gain over first 11 months of 1952, when shipments were 5,208,614, as against production of 5,175,193. New York led with 549,478, Pennsylvania second with 569,378, California third with 477,036. For Nov. alone, shipments were 695,308, compared to 690,711 in Oct. and 856,855 in Nov. 1952.
Topics & Trends of TV Trade: Philco took the lead this week in setting up subsidiary to finance inventories and extend credit of its distributors in program which may well be duplicated by other manufacturers shortly. It invested $5,000,000 in common stock in Philco Finance Corp. to go subsidiary for financing of distributor inventories on “all-year-round basis,” promises more details later.

Other major set makers admitted they were considering similar programs but wouldn’t elaborate. All said extension of credit was one of major problems confronting distributors. Neither Admiral, Motorola nor RCA has a distributor finance plan, though all use Commercial Credit Corp. for dealers.

The year-round feature of the liberalized credit plan was regarded as one of most significant features of Philco plan. It enables Philco to spread the production more evenly during year, with knowledge that its distributors will be able to carry more merchandise in stock. Distributors meanwhile won’t be pressed for cash since they’ll be given longer time to pay for merchandise, perhaps up to 6 months.

Philco announcement said only that plan will enable its distributors to “release their own capital to finance increased sales of Philco products, particularly the rapidly growing Philco air conditioning business, and home laundry equipment, which the company is offering for the first time.” Financing plan was worked out with Pennsylvania Co. for Banking & Trusts, Philadelphia.

Officers of Philco Finance Corp.: pres., Wm. H. Crawford, ex-Commercial Credit Corp.; v.p-treas., Edward W. Mayhew, ex-Philco credit mgr.; secy.-operations mgr., Bradley Young, ex-Deearborn Motors Credit Corp.

More TV layoffs: CBS-Hyatron furloughed 400 employees at tube plants in Newburyport and Salem, Mass., announced senior employees would work longer hours as result. Albert S. Nelson, personnel director, said no production cutbacks would be made. GE will lay off 1800 workers at Syracuse plants and 350 at Auburn, N. Y. parts factory for week beginning Feb. 1 because TV set sales so far this year had “failed to live up to industry expectations.” Also this week, Local 101 of International Union of Electrical Machine Workers reported Philco had laid off 500 employees in TV-radio div. in last 2 weeks—but company spokesman wouldn’t confirm or deny it.

More color sets went to dept. stores this week, with others announcing they’d have sets on floors shortly. Hale’s, San Francisco, showed Admiral set and colorcast of Your Hit Parade drew more than 1000 spectators, all enthusiastic until informed of $1175 price. Abraham & Straus, big Brooklyn store, demonstrated color slides on a $995 Philharmonic set. Macy’s and Wanamaker’s advertised they’d have sets on hand for demonstration next month. Ray B. Denham Co., Fresno dealer, also showed Admiral set and Polk Bros., Chicago, displayed Hallcrafters and DuMont set, latter store guaranteeing black- & white buyers full purchase price as trade-in on color.

Expanded tube replacement market is anticipated in 1954 by GE, which announced industry-wide replacement picture tube needs are expected to be up 50% over 1953, receiving tube needs 10%. To meet demand, GE plans increases in headquarters and field personnel, plus boost in adv. & sales promotion activities, highlighted by announcement this week that it would buy min. live & filmed spots on Dave Garroway’s Today on NBC-TV starting March 2 for 18 weeks to plug its aluminized picture tubes, with provision for service dealers in 51 areas served by program to run local sales message immediately following commercials.

Grand daddy of all sales contests is Hallcrafters’ plan to take 3 top distributor salesmen and their wives on an around-the-world all-expense-paid 28-day trip starting May 24. Next 36 distributor salesmen and wives will get week’s vacation in Bermuda or Mexico. Contest involves accumulation of points for sales of TVs, radio & high-fidelity components, runs from Jan. 18 to April 17. Canadian Admiral’s running contest, too, with $500,000 sales incentive contest offering 150 Packards, mink stoles, fiesta trips to Mexico and week-end at New York’s Waldorf-Astoria to dealers buying specified amounts of Admiral TVs and appliances in first 3 months of 1954. Not to be outdone, Sylvania this week took some 650 distributors and dealers on 7-day cruise to Bermuda and Nassau on $400,000 junket.

Ten-point sales planning program was advocated this week by CBS-Columbia sales v.p. Harry Schecter as prerequisite to “TV industry’s return to hard selling.” His points: (1) Establishment of clearly-defined current and long-range sales targets. (2) Fullest use of business statistics & economic forecasts. (3) Sound sales dept. program featuring impartial incentive compensation and adequate product & sales training. (4) Up-to-date record-keeping, with close watch on costs. (5) Advertising carefully planned for maximum results. (6) Year-round promotions at distributor and dealer levels. (7) Active pursuit of replacement business. (8) Fullest use of all outside selling techniques. (9) Concentration on sales power rather than sales territory. (10) Selling products and its benefits instead of merely price.

General Instrument Corp. plans public offering of 200,000 shares of additional stock within next few weeks, through Palco, Webber, Jackson & Curtis and Hirsch & Co., the additional capital possibly to be used to take advantage of any electronic “bargains” which might become available, according to chairman Abraham Blumenkrantz, who confirmed this week that company is negotiating for acquisition of other unnamed electronic parts manufacturers (Vol. 10:3).
Trade Personals: Larry F. Hardy, Philco v.p. and pres. of its TV-radio div. since 1949, named to new post of v.p. in charge of product development, responsible for expediting new products from research to sale; John M. Otter, v.p. & gen. mgr. of refrigeration div., appointed v.p. in charge of consumer products divs., with responsibility for coordinating merchandising of all consumer products, including TV-radio ... Michael F. Callahan, plant mgr. at Newburyport, Mass., promoted to manufacturing v.p., CBS-Hytron, succeeding Charles F. Stromeyer, upped to exec. v.p.; Edgar K. Wimp named to new post of director of gen. engineering, Dr. Russell R. Law director of research & development, Clifford Hughes mgr. of Newburyport plant, Elwood W. Schafer mgr. of color planning, J. Farley director of quality control ... Humbert P. Pacini promoted to mgr. of engineering dept., DuMont receiver div., replacing Alfred Y. Bentley, now in charge of advanced planning ... Robert Bach resigns as asst. mgr. of TV operations, Federal Telecommunication Labs., to join Fairchild Recording Equipment Co., N. Y. ... Dr. Ivan A. Getting, Raytheon engineering & research v.p., reappointed chairman of electronics & communications panel of Air Force’s scientific advisory board ... Fred Gregg shifted from promotion director of Crosley Bestg. Corp. to adv. & sales promotion director of Crosley TV-radio div. ... James T. Buckley, Philco chairman, re-elected pres. of Goodwill Industries of Philadelphia ... Dr. W. R. G. Baker, GE v.p.; Dr. Marvin J. Kelly, pres. of Bell Labs, and Dr. Reinhold Rudenberg, Gordon McKay professor of electrical engineering at Harvard, initiated into “Eminent Membership” ofEta Kappa Nu Assn., electrical engineering honor society. ... Dr. Wm. Oshorn, ex-U. S. naval ordnance research lab, named project engineer for development of new antenna types, Channel Master; Dr. Miao Yung-Miao, ex-International Harvester and graduate of Peking U., placed in charge of mechanical test equipment for antennas ... W. Walter Jablon, ex-David Bogen (sound equipment), named sales mgr. of new home instruments div., Freed Electronics & Controls Corp., N. Y. ... Sid Block, ex-RCA, named midwestern sales mgr., Olympic Radio, replacing Morton Schwartz, now assigned to Chicago factory branch ... Edwin R. Wright, ex-Majestic Radio, named administrative exec. of Pioneer Electronics Corp., Los Angeles (tubes) ... Arnold Hender- son promoted to asst. to Emerson sales v.p. Sol W. Gross ... Edwin Cornfield appointed sales mgr., Pilot Radio, replacing James L. Benjamin, resigned ... George H. Melinger appointed Westinghouse sales mgr. for major appliances, Mansfield, O. ... Sidney A. Schneider resigns as Stewart-Warner Electric’s midwestern resident field engineer.

Arcan Corp. Ltd., Hamilton, Ont. (R. A. Armstrong, pres.), formerly Transvision Ltd., has signed contract to manufacture Tele King TVAs. Until month ago, when contract expired, it had manufactured Emerson TVAs & radios for distribution in Canada by Canadian Fairbanks-Morse Co. Ltd., Montreal.

Excise tax collections on TV-radio-phonographs totaled $55,749,000 for July-Nov. 1953, up 14% from the $48,929,000 collected in same 1952 period.

Electronics Reports: Defense electronics spending will continue close to current high levels in fiscal 1955, despite over-all cuts in President Eisenhower’s military budget. In some phases of military electronics—notably within categories of guided missiles, aircraft systems, atomic energy, research & development—there will be increases. It’s impossible to break down electronics-communications into dollar values in President’s budget requests, because these items are included as parts of many different categories of military spending.

President asked total of $37.6 billion in defense expenditures, including carry-over in unspent obligatory authority from fiscal 1954—nearly $4 billion below the $41.6 estimated for current fiscal year. Major procurement expenditures will come to $14.5 billion, some 15% below current year’s $17.3 billion—but electronics-communications procurement is expected to account for bigger proportion of this amount than in fiscal 1954, when govt. electronics-communications purchases were $2.7-$3 billion. President explained military procurement policy this way in his Jan. 21 budget message:

“The reduction in the total Defense Dept. expenditures will be effected despite the fact that expenditures for aircraft, shipbuilding, electronics, guided missiles, construction, research & development and many other defense programs will continue at close to record peacetime levels. I am also recommending some increased expenditures [for] the mutual military program and for atomic energy which will bring expenditures for these 2 programs to record levels ... The number of guided-missile antiaircraft battalions will be increased substantially ... The emphasis on airpower is reflected in the objective of increasing the active aircraft inventory to more than 40,000 during the next 3 years, with more than half of these aircraft to be jets.”

* * *

Controlling interest in Weston Electrical Instrument Corp. has been acquired by Daystrom Inc., Elizabeth, N. J. Although deal probably won’t be formally announced for several weeks, it was consummated this week with purchase of 115,000 of Weston’s 428,221 shares (Vol. 10:3), putting Daystrom more deeply into electronics business. Daystrom is owner of American Type Founders, big manufacturers of type and printing equipment, and Daystrom Furniture Corp., which makes kitchen furniture, etc.—but it also is already heavily in electronics, more than 50% of its current output being electronic equipment, even before buying into Weston. Other electronics acquisitions by Daystrom may be in the works, company reportedly aiming to become “the Borg-Warner of the electronic parts business.” Weston’s latest financial statement shows sales of $23,779,742, profit of $825,395 ($1.93 a share) for 39 weeks ended Oct. 2, 1953. In 1952 annual statement Day- strom reported sales of $46,200,000, profit of $1,410,000 ($2.25 on 624,911 shares).

IRE 1954 convention in New York March 22-25 will have exhibits at Kingsbridge Armory, Bronx, instead of Grand Central Palace; latter has been leased by U. S. Govt. Technical sessions will be conducted at Waldorf-Astoria and the Armory, and buses will run to Armory where all exhibits will be on one floor—the largest unobstructed floor in U. S. Dr. Alfred N. Goldsmith, editor emeritus and co-founder of IRE, will receive Founders Award and deliver major address at March 24 banquet. Included in technical meetings will be sessions on color TV receivers and color telecasting, symposiums on TV broadcast transmission systems and “UHF TV—Boom or Bust,” latter featuring papers by FCC chief engineer Edward W. Allen Jr., National Bureau of Standards’ J. W. Herbstreit and MIT’s T. J. Carroll.
“Time has come when NARTB code needs to be tightened,” reported NARTB code review board chairman John Fetzter (WJKO-TV, Kalamazoo) at TV board meeting at Phoenix January 21—and board quickly reacted by adopting 9 amendments as major changes to be made in the 2-year-old voluntary program standards. They add up to intensive industry consciousness of “the problem of family programming.” Changes will shortly be published by NARTB in revised edition of the code, which Fetzter said is “now really working.” Major change finalizes commercial time standards, until now presented only as “suggestions” for the guidance of telecasters. These now become definitive, binding on the 200-odd stations subscribing to the code. Good example of tightened, though self-imposed, restrictions is the new so-called multiple-spotting amendment relating to commercial announcements made between programs. It reads: “Even though the commercial time limitations of the code do not specifically prohibit back-to-back announcements, such a practice is not recommended for more than two announcements either at the station break or within the framework of a single program.”

FCC budget of $7,664,400 for fiscal 1955, starting July 1, 1954, is requested in budget sent to Congress this week by President Eisenhower. This compares with $7,400,000 authorized by Congress last year. Because of reduced backlog of applications, budget seeks $705,600 less than last year for FCC’s “regular continuing activities,” but an additional $950,000 is sought for a new activity—“frequency usage monitoring.” Purpose of latter is to monitor 10 kc-27.5 mc to gain data to aid in 4 areas: (1) Assignment of frequencies and management of the radio spectrum. (2) International negotiations. (3) Location of clandestine stations. (4) “Other national security purposes.” FCC reports 1342 employees in current year (average 1200), to be reduced to 1254 (average 1137) in fiscal 1955. Average salary is $5640. Commission processed 92 TV applications in fiscal 1952, 936 in 1953, estimates 691 in 1954 and 385 in 1955. For AM, respective figures are 276, 441, 555, 299; for FM, 135, 160, 161, 160.

Christopher Awards for TV for 4th quarter 1953 went to producer John Haggart, director Alex Segal; writer David Davidson for Oct. 27 U. S. Steel Hour production of “POW” on ABC-TV; producer Mort Abrahams, director Don Medford and writer Ben Zavin for Medallion Theater’s “A Day in Town,” Dec. 12 on CBS-TV; to producer Lynn Poole, directors Kennard Calfee and Herbert B. Cahen for “The Christmas Star” Dec. 16 on DuMont’s John Hopkins Science Review; and to producer Felix Jackson, director Paul Mickell and writer Michael Dyne for “Master of the Rose” on Studio One, Dec. 28 on CBS-TV.

Conversion from AM to FM within 10 years, at cost of $9,800,000, is aim of BBC which this week announced decision to build 51 stations in 41-68 mc and 87.5-100 mc bands. Move into aural vhf broadcasting has long been planned, but there has been bitter argument over virtues of AM vs. FM in vhf. European AM service has deteriorated severely because of indiscriminate establishment of stations by several nations, particularly Russia. Germany already has extensive FM broadcast system.

Two applications for new stations were filed this week with FCC; for Dothan, Ala., Ch. 9, by principals of WOOF; for Oak Hill, W. Va., Ch. 4, by Robert R. Thomas Jr., owner of WOAY. Three applications were dismissed this week, bringing total pending to 329 (56 vhf). [For further details about these applications, see TV Addenda 18-C herewith; for complete listings of all grants, new applications, dismissions, hearings, etc., see TV Factbook No. 18 and Addenda to date.]

Regular industry audits of TV set ownership look like they’re as far away as ever, as NARTB television board this week passed bill to still another committee yet to be appointed by pres. Harold Fellows. It’s supposed to attempt to raise $75,000 for “pilot study,” along lines suggested in the still hush-hush proposal of New York researcher Dr. Frank Cawil, which envisioned a sort of Audit Bureau of Circulation for TV akin to newspapers’ ABC—one designed to show sets-in-use in specific station coverage areas and thus presumably do away with some audience rating services. Meanwhile, crying need for authentic county-by-county set census on monthly, quarterly or semiannual basis, which some networks and RETMA have indicated they would support, apparently won’t be met soon under NARTB auspices. Some board members clearly expressed skepticism about ability to raise money for the test study proposed to be made in an undetermined market. Last county-by-county estimates came from NBC and CBS, dated last April 1 (see TV Factbook No. 17); next one, dated Dec. 1, 1953, is now being completed for CBS by Neilson for release in Feb. (Vol. 9:46), but there’s no assurance that either network will undertake to continue this extensive study on periodic basis henceforth.

Condemning “invasion of uhf markets” by vhf stations, Ultra High Frequency TV Assn. Jan. 22 wrote FCC urging “immediate investigation of the advisability of restricting the location of transmitters in the vicinity of the community to which the frequency is allocated.” Letter by general counsel Wm. A. Roberts specifically objected to application of WORD-TV, Spartanburg, S. C. (Ch. 7), to move antenna site to mountain 23 mi. from Greenville, 25 mi. from Spartanburg. “We cannot concede that the Commission can avoid responsibility for the destruction of great investments” in uhf stations, wrote Roberts, requesting “action favoring uhf operation in all respects...now.” Copies were sent to all members of Senate & House Commerce Committees.

NBC-TV has signed full 2-year affiliation contract with WVEC-TV, Hampton-Norfolk, Va. (Ch. 15), scrapping old one-year pact signed last June (Vol. 9:25). NBC affiliated the uhf station after Norfolk’s WTAR-TV (Ch. 4) bolted to CBS (Vol. 9:20-21). New contract runs to Jan. 10, 1956, and NBC station relations v.p. Harry Bannister hailed it as “reaffirmation of our original and fundamental belief in the ability of uhf TV to provide a valuable and complete program service to communities wherever it is established.” WVEC-TV expects to occupy new Norfolk studios this summer. NBC-TV last May signed 2-year agreement with pioneer uhf KPTV, Portland, Ore. (Vol. 9:21).

Meredith Publishing Co. this week purchased WAGE (AM), Syracuse ABC affiliate, 5 kw on 620 kc (1 kw night) for $200,000, subject to FCC approval—as radio companion to its WHEN (TV) there. Publisher of Better Homes & Gardens and Successful Farming now has an AM in each of the 4 cities where it has TV, other 3 being WOW-TV, & WOW, Omaha; KPHO-TV & KPHO, Phoenix; KCMO-TV & KCMO, Kansas City.

Transmission of color test signals along with color or black-&-white programs, as suggested to FCC by Telechrome Inc. (Vol. 9:51) is perfectly permissible, Commission wrote to pres. J. R. Popkin-Clurman this week. It did suggest, however, that usefulness of technique may be limited. Clurman’s idea is that such transmission would make available to everyone—from stations to viewers—a reliable test signal for alignment purposes.

Power increases: WSTV-TV, Steubenville, O. (Ch. 9), now radiating 230-kw from interim antenna tower, moves to 881-ft. tower in mid-March. Share-time WHEC-TV & WVET-TV, Rochester (Ch. 10) Jan. 15 increased from 40 to 125-kw ERP.

COMMERCIAL ABUSES & SELF-REGULATION: Even as NARTB telecasters' board was brushing up its Code of Practices at Phoenix last week to cut down on over-long commercials (Vol. 10:4), a group of distinguished Americans came out with the sharpest wallops yet at advertising practices on TV.

"Opening gun in a movement to improve the quality and effectiveness of TV commercials," is the way public relations counsel Edward L. Bernays termed survey he released this week, containing essence of 111 replies to 575 questionnaires he circulated among leaders in education, business, religion and labor -- whose opinions, he feels, might stimulate public to demand changes in TV commercial practices.

The release got warm reception from the publishing fraternity, who gave story big play -- and there's no doubt it aroused sympathetic reaction in large segment of general public. Though identified in past with educational TV, Bernays states categorically he's in this crusade on his own initiative -- pro bono publico -- with the hope it will give rise to stricter self-regulation by telecasters themselves.

Telecasters won't like it -- but, unlike the broadcasters of early years who either looked the other way or ranted and raved when programming and advertising standards were criticized, most of the men who run today's TV stations are inclined to listen, search their souls, and regulate themselves. Anyone who reads the telecasters' self-imposed Code of TV Practices (now binding on 203 of the 360 stations now on the air) knows the resolution of the industry to put its own house in order.

Principal change in TV Code approved by NARTB in Phoenix puts teeth in the formerly voluntary restrictions on multiple-spotting, cow-catchers, trailers, length of commercials, etc. (For text of changes, see p. 7). But most replies to the Bernays survey criticized not length but content of commercials.

The pitchmen, the hucksters, the phony doctors, the shouters -- telecasters aren't proud of them, but they exist. And an enlightened industry knows that pretending they're not there doesn't make them go away but encourages them to stay.

* * *

Do present-day TV commercials meet "the public interest, convenience and necessity" criteria of FCC? To this question by Bernays, most but not all respondents replied negatively. Many said commercials now are defeating their own purpose.

Criticism came not just from longhairs -- though educators were predominant -- but from business, church and union leaders as well (Who's Who people, mostly). Responses have been too widely reprinted in the press to necessitate quotation here, but these words and phrases cropped up again and again to describe TV commercials:

Irritating, dishonest, misleading, phony, boring, repetitious, trite, antisocial, juvenile, insulting to intelligence, lacking in taste & dignity, etc.
Suggestions for improvement by respondents to survey: Fewer and shorter commercials; elimination of poorly timed interruptions; strengthening of aesthetic and intellectual appeal; reasonable and informative ad copy; establishment of industry-controlled panels or boards of censorship to pass directly on all commercials.

It's noteworthy that no one plumped for govt. ownership or elimination of commercials -- or even for Federal censorship.

Yet, the industry can't stand too much of this -- and it's to the credit of its leaders, particularly its Code Review Board under John E. Fetzer, that it's moving to do something about it. At least, the 203 dues-paying subscribers are -- but it's ironical that some of the leading stations in the country, including some whose pictures are watched by FCC itself, are non-subscribers and/or egregious offenders.

SCRANTON AREA'S 5th UHF—TOTAL NOW 360: Only handful actually made it out of score or more CP holders who had reported they would start in January -- whether due to weather or the now-prevalent disposition to make haste slowly and get started right. Up to this writing, only 4 new starters can be chronicled so far this year, latest being this week's WARM-TV, Scranton, Pa. (Ch. 16). None opened up a new market.

That makes an even 360 on the air to date, 125 of them uhf. Quite a few more are imminent -- but it's extremely doubtful, as things look now, that this year's crop of new starters will anywhere near equal last year's 231.

WARM-TV gives Scranton-Wilkes-Barre area, regarded as prime "uhf country," its 5th uhf outlet -- nearest vhf being in Binghamton, N.Y., across mountains 50-mi. north of Scranton. Wilkes-Barre's WBRE-TV (Ch. 28), one of first to get on air post-freeze (Jan. 1, 1953), got uhf off to good start in Scranton too, only 16 mi. away.

WARM-TV began regular test patterns Jan. 27 after preliminary tests Jan. 19, will go commercial Feb. 9 with ABC network off-air from N.Y., via one relay over 95-mi. span. Station goes into own new studio building same day, with 40x60-ft. main studio and latest GPL equipment. It has RCA transmitter & antenna and Wind Turbine tower rising 347 ft. above 1220-ft. Mt. Dewey. It's owned largely by Martin Memolo, managed by Wm. M. Dawson, starts with $225 base rate. Rep is Hollingbery.

* * *

CKCO-TV, Kitchener, Ont. (Ch. 13), Canada's 3rd privately owned TV and 8th station in the Dominion, is revealed to have been testing since Jan. 1, plans Feb. 20 commercial debut, joins CBC for network service Feb. 21. It uses 5-kw DuMont transmitter, 500-ft. Ajax tower. City is 35 mi. from Hamilton's CHCH-TV (Ch. 11), due to start in April; area hitherto has been served from Toronto, Buffalo & Erie. Dominion Electrohome Co. pres. Carl A. Pollock is 25% owner; radio CKOR, 25%; Famous Players Canadian Corp., 50% -- latter also 25% owner of CFCM-TV, Quebec City (Ch. 4) due in April. W.D. McGregor is operations mgr. Base rate is $200. Weed is U.S. rep.

STEP-UP IN FCC GRANTS AND DECISIONS: With mergers and other deals in full swing, the FCC managed to grant 6 CPs, issue 3 initial decisions -- some of them substantial. Week brought surrender of one CP -- KSHM, Sherman, Tex. (Ch. 46). Week's grants:

Indianapolis, Ind., WISH, Ch. 8; Baton Rouge, La., WJBO, Ch. 2; Camden, N.J., WKDN, Ch. 17; Sharon, Pa., Leonard J. Shafitz, Ch. 39; Chattanooga, Tenn., WDEF, Ch. 12; Tyler, Tex., KGBK, Ch. 7. Initial decisions favored: Elyria, O., WEOI, Ch. 31; Tulsa, Okla., Arthur R. Olson, Ch. 17; Charleston, W.Va., WCHS, Ch. 8.

* * *

Some hearings just aren't precluded or dissolved by mergers, faint hearts or what-have-you -- and some are getting quite frantic. For example:

(1) In Buffalo "strike" case (Vol. 10:2), Niagara Frontier counsel Thomas Dowd related how, after 13 hours of negotiating, he managed merger of 4 applicants only to find Enterprise Transmission Co. filing competing bid at last minute. In an agitated state, he and Niagara principal offered Enterprise counsel Philip Baker $25,000 to dismiss. Baker said he hadn't authority to accept; offer was withdrawn next day, though Enterprise subsequently did drop out, arousing FCC suspicions.

(2) In Seattle Ch. 7 case, KVI counsel George Smith alleged that KIRO chairman Hardgrove had once suggested that KVI attempt to block KOMO Ch. 4 application and get bought off. KOMO-TV has since been authorized, is now on air.
(3) In Mansfield, 0. Ch. 36 hearing, Mansfield Journal charged FCC counsel David Krausshar with exhibiting an "antagonistic, biased and prejudiced attitude" toward it while favoring Pergum Theatres, asked he be removed from case. FCC Broadcast Bureau shot back with long defense of Krausshar, saying: "In the face of unjustifiable provocation, he exhibited the highest degree of self-restraint." It asked that Journal's petition be dismissed as "sham, frivolous and scandalous."

(4) In Des Moines Ch. 8 fight, KSO counsel Benito Gaguine related that James Malloy of Cowles interests (KRNT) told KSO principal Kingsley H. Murphy Jr. that politics would decide case and that "Ike won't let the Cowles get hurt." Examiner French ruled the charge immaterial.

Final court decision in long struggle of WSAL, Logansport, Ind., to get FCC to allocate Ch. 10 to city was ruling Jan. 28 that FCC has complete and unmistakable authority to establish an allocation plan, and that WSAL's efforts to get the channel were given ample consideration. Decision was written by Judge George T. Washington, U.S. Court of Appeals for the District of Columbia.

First industry comments were filed this week in multiple ownership proposal to permit owners of 5 vhf stations to acquire 2 uhf (Vol. 10:4). DuMont favors the proposal, but suggests owner of 5 stations be prevented from getting a uhf in uhf-only cities. Uhf Assn., getting responses from 31 stations of 115 queried, favored idea and volunteered that "more important monopoly factors" in uhf need attention.

Among other actions, the FCC this week: (1) Ended bitter WGAL-WLAN fight in Lancaster, Pa. after WLAN dismissed objections, by granting WGAL-TV change of site, power and height increases. (2) Finalized addition of Ch. 18 to Zanesville, O.; proposed adding Ch. 3 to Rapid City, S.D.; ordered rule-making on requests to shift Ch. 9 from Jackson, Tenn. to Tupelo, Miss. and Ch. 7 from University to Monford, Ala. (3) Set Feb. 26 for start of hearings for Ch. 11, Ft. Worth, Tex.; Ch. 6, Paducah, Ky.; Ch. 3, Phoenix, Ariz.; Ch. 5, Bristol, Tenn.-Va. (4) Approved transfer of CP for KFXD-TV, Nampa, Ida. (Ch. 6) to Idaho Bestg. & TV Co., Boise. KFXD-TV had gone on air last June 18 but folded in 8 weeks (Vol. 9:39). Boise group gave up CP for Ch. 9 in favor of KFXD-TV's Ch. 6 facilities.

THE VALUE OF TV NETWORK FRANCHISES: There could be a trend to lower valuations on a good many TV stations -- what with more competition here or imminent and, most important right now, the enormous value of network affiliations and the strong bargaining position of the networks, especially the big billing leaders CBS & NBC (see PIB 1953 figures, p. 16). Incidentally, there's also the factor of big capital outlays soon to be required for colorcasting equipment.

[For Stop-Press story on reported sale of WHBQ-TV, Memphis, see p. 16.]

Effect of network affiliations on a station's value is strikingly pointed up in deal whereby Carl Haymond's 6-month-old KMO-TV, Tacoma, Wash. (Ch. 13) has been sold, along with radio KMO (5 kw on 1360 kc, independent), for only $350,000 plus the assumption of $150,000 debt owed on equipment.

Here's a significant case of "economic retreat" -- too much competition and loss of network affiliation. It's a case example of the key importance of a basic network affiliation for a TV station, especially in a major market.

Price is lowest ever quoted on a TV station, let alone with an AM counterpart, unless you count recent sale for nominal $1 of KCTV, Kansas City (Ch. 25) to DuMont which was also forced by too much vhf competition (Vol. 10:1); and the 1949 sale of KRSC-TV, Seattle, now the highly successful KING-TV (Ch. 5), for $375,000 because its then owner couldn't take $1000-a-month losses and preferred to keep his radio.

Proposed purchasers of KMO-TV are Miss Jessica Longston, Miss C.V. Zaser and Robert E. Pollock, owners of KAYO. Seattle (5 kw day, 1 kw night on 1150 kc, independent); they with Mrs. A. T. Brownley own other radio stations in small towns in Washington & Idaho. Oddly, KAYO formerly was KRSC, profitable counterpart of old KRSC-TV.

Carl Haymond wants to take things easier at his Palm Springs home. An old-time broadcaster, he also sold his radio KITO, San Bernardino, Cal.; KOOL, Phoenix (latter now enjoying halftime TV); retains only radio KIT, Yakima. He dropped CP
for KIT-TV (Ch. 23) recently, pleading uhf unsuitable for Yakima area (Vol. 9:49).

Actually, Tacoma's KMO-TV became an independent when KOMO-TV, Seattle (Ch. 4) went on the air recently and took away its NBC affiliation. With Tacoma's KTNT-TV (Ch. 11) on CBS & DuMont and Seattle's KING-TV on ABC, Haymond's KMO-TV was left without any network, and it's obvious he doesn't relish running it as an independent. (There's also every likelihood that when Ch. 7 goes into Seattle, KTNT-TV will lose its CBS affiliation, especially if victor in competitive hearing is Saul Haas' 50-kw KIRO, a longtime CBS affiliate.)

That means 5 uhf stations in Seattle-Tacoma area, which for all practical purposes is one TV market -- to say nothing of one Ch. 9 educational grant and 4 uhf channels allocated, for which only one application has yet been made.

So without a network, and even in such a major market area, can any independent station survive, whether uhf or uhf? Some think not, pointing to troubles of some non-network TVs even in New York & Los Angeles. As station broker Howard Stark puts it: "TV is different from radio. Not only are you playing with blue chips in a TV station investment and operation but, whereas in radio the trend is to local independent operation, you cannot compete in TV without national programs. Look at the big effort even the network-owned radio stations are now making with localized programming. But in the present state of TV, only the networks offer full-rounded national program services, which is what the public demands most."

GE-CBS COLOR CAMERA PATENT TIEUP: Long-expected license agreement between GE & CBS (Vol. 9:41), whereby GE is to make CBS-type color cameras, was finally announced this week. Though the two fought bitterly over compatible vs. incompatible color systems in past, they now seek mutual advantage to combat RCA, which so far has been only company capable of producing the vital color cameras.

Sales of cameras will eventually tell the story, of course, determining which company is on right technical track -- in performance and cost.

Announcement confirmed that GE will ship four of the new cameras to CBS by March 1 (Vol. 10:3), whereupon RCA promptly issued statement reminding that CBS has purchased 12 RCA camera chains for about $1,000,000 (Vol. 10:3), 2 for delivery in February and the rest by June.

Principal claim for CBS camera is less expense. Essentially, it's a monochrome camera modified with rotating disc to produce field-sequential picture, with vertical scanning. Signal is then fed to a "Chromacoder" unit which rescans picture horizontally and converts it to NTSC specifications. Currently, 3 image orthicons are employed in coder; other tubes are being tested, including vidicons.

GE estimates it will cost $6000 to modify standard black- &-white camera for color and that coder will run about $40,000. CBS points out that one coder can be used with several cameras at a station. CBS has built its own coder; the 4-camera order with GE didn't include coder.

If station orders camera already prepared for color, GE will adapt a new black- &-white camera -- whole thing to sell for $21-22,000 -- in addition to the coder. RCA color camera chain is $67,124, of which $39,500 is for camera.

* * * * *

GE hasn't offered new camera equipment for sale yet, expects to have it for delivery second half of 1964. More definite information will be available after GE seminar for its field men in Syracuse, Feb. 22.

License with GE is non-exclusive, so CBS can license other manufacturers if they're interested. Royalty rate wasn't disclosed, though Paul Chamberlain, mgr. of broadcast equipment, said it's about same as RCA rate.

GE had said it would make both CBS and RCA types of cameras, but Chamberlain now says: "We're not at all sure we'll offer the 3-tube camera."

Concerning performance of new camera-coder setup, marketing manager Frank Barnes says that analysis shows it can exceed capacity of NTSC specifications.

It will take time to discern just how successful GE will be in effort to catch up with RCA's head start in cameras -- for stations aren't breaking their necks to buy equipment right now. Six very substantial stations, plus CBS and NBC,
have purchased RCA cameras (Vol. 10:3), but most others see no sense in signing contracts until equipment has shaken down more and there's a color audience to be reached with costly local live originations.

That's opinion of at least 2 of best-informed station officials in the business, both engineers and NTSC members -- ex-FCC Comr. E.K. Jett, mgr. of WMAR-TV, Baltimore, and Ralph Harmon, engineering mgr. of Westinghouse Broadcasting Co.

RCA was quick not only to note CBS $1,000,000 order but to report progress in development of its single-tube camera (Vol. 9:16). Said research v.p. E.W. Engstrom: "We have sought to create a color camera that will enable direct pickup with a single tube that does not require coding and decoding from an incompatible system. Our new single pickup tube achieves this result. Also, it is simple, flexible and rugged. While the new tube is still undergoing development, the progress already made assures its ultimate availability for commercial use."

Continually improving performance of 3-tube camera, Dr. Engstrom pointed out, has made demand for one-tube camera less insistent. Nevertheless, he said, the one-tube camera still offers many ultimate advantages.

GE also reported on plans for other phases of colorcasting. It is now producing equipment for adapting transmitters to rebroadcast color, will start work to modify stations next month -- giving priority to those in cities getting color service from network facilities equipped for color. GE flying-spot scanners and slide projectors will be ready in June-July.

Then GE disclosed its plans for a film scanner for first time. It will be continuous-motion type, working with flying-spot scanner, with mechanism produced by Eastman Kodak. Delivery is "end of year," price not estimated.

Note: News of color has developed in such abundance that we've inaugurated a new department, "Color Trends and Briefs," to give even greater attention to the more significant details (see p. 11).

COMR. STERLING'S PROPOSALS FOR UHF: How can the FCC help uhf? Engineer Commissioner George E. Sterling this week outlined 3 fields in which Commission may be amenable to relaxing or changing its rules to help uhf stations get off to better start.

He also had plenty to say about how uhf telecasters might help themselves. Using Jan. 28 meeting of Boston IRE as sounding-board, he made these suggestions as to what the Commission might do if there's sufficient interest by grantees:

(1) License boosters and satellites. "While present experimental grants do not permit commercialization, I would be in favor of waiving this restriction in the interest of uhf broadcasters who want to go to the expense of installing a booster. In order not to waste spectrum space, extension of service by one or more low-power transmitters should be accomplished on the same channel from which the programs originate, if possible."

(2) Relax or lift limitations on directional antennas. "The Commission is open-minded on this subject and would welcome suggestions. To the extent that the Commission might relax its directionalizing rules to aid uhf stations in obtaining better coverage because of their power limitations, consideration must be given to the number of people that would gain service compared to those who would lose service or have it degraded, as well as the possibility of co-channel interference."

(3) Be more lenient toward requests for extension of time to complete construction where grantee can show sincere desire to actually go into telecasting but hesitates to proceed on low power.

Some low-power operations have given uhf a "black eye," said Sterling -- but he placed part of the blame on "a few overzealous broadcasters who were hell-bent on getting on the air before the 'bugs' were out of their transmitting installations" and who ignored problems of receivers, installation and cooperation with the trade.

"I do believe that we should look favorably on applications for extension of time to construct uhf stations where equipment and land have been purchased and construction commenced but the permittee desires to wait for a transmitter of power
greater than 1-kw before he begins programming. I am not sure but what the FCC would be doing uhf a favor if it suspended authorizing any more 1-kw transmitters."

He also proposed FCC require proof of transmitting antenna performance — because of the haste with which such installations have been made in past, and some "discrepancies" which have been discovered in performance of some uhf antennas.

* * *

Uhf telecasters can help themselves, he said, by: (1) Urging manufacturers to improve sensitivity of receivers and converters — "some could be improved by at least 10 db by appropriate attention to design." (2) Educating dealers, servicemen and public to necessity of proper placement of receiving antennas. (3) Locating transmitting antennas as high as possible to minimize "shadow" areas.

Sterling made big pitch for local programming as "key to success for many uhf stations." He compared local uhf station to local newspaper, pointing out everyone likes to see his own family, friends and neighbors on TV.

Color originating equipment, though costly, eventually will help uhf telecasters, he predicted. He cited local dept. stores as particularly good prospects for color sponsorship, and added: "Since vhf stations may have network commitments, local stores will be knocking on the door of the uhf color broadcaster."

CONVERSION FIGURES TELL STORY OF UHF: Thirty-three TV markets can now be considered "completely converted" to uhf. Though many of them are regarded as "uhf-only" markets, 6 can also receive vhf signals of "local" calibre.

Fourth quarterly survey of vhf-uhf cities by American Research Bureau, completed this week, shows tremendous variation in uhf penetration among the 73 markets measured. And once more it confirms the conclusions drawn from previous ARB vhf-uhf surveys (Vol. 9:24,28,41) — that the main stimulus to uhf conversion is the amount of good network programming offered on uhf which doesn't duplicate available vhf fare.

Other factors involved in buildup of uhf audience, as indicated by the 4 ARB surveys: (1) Length of time uhf station has been on air. (2) Amount and quality of local programming. (3) Number of uhf stations receivable in area. (4) Size of city; all other factors being equal, the larger the city the slower the increase in percentage of conversion to uhf.

Power, antenna height and terrain are important, too, but it's difficult to correlate them with ARB statistics because of number of variables involved. Because survey was conducted privately for ARB clients, we can't disclose city or station identities, but here are some conclusions we drew from studying survey as a whole:

In 70 of the 73 cities, uhf stations carry network programming, though many aren't primary affiliates of any network. The 20 cities where programs of all 4 networks are carried by uhf stations, had average uhf conversion of 74%. In the 10 cities where only one network's programs were on uhf, conversion averaged 45%.

All 73 cities measured are "vhf-uhf markets"; that is, there are vhf stations within 100 mi., with only one or 2 exceptions. Another 10 markets, not measured by ARB, can be considered "100% uhf." Breaking down all 83 markets:

Of the 33 markets with 80% conversion or more, 27 are beyond "easy reception range" of any vhf stations; the other 6 have one vhf station each.

Nineteen markets have 50-80% conversion. Of these, 7 are beyond range of good vhf reception, 11 have one easily received vhf station.

Six markets have 30-50% conversion, and only one of these is beyond range of good vhf pictures; three have one vhf each, and two have 2 or more.

Another 25 cities have 1-30% conversion. In only one can no vhf station be easily received; 11 cities get good picture from one vhf; 8 cities can get 2 vhf; 5 can get 3 or more.

Conversion increased 15 percentage points in average uhf city between Oct. & Jan. surveys — not including those cities which had 80% conversion or greater last Oct.; these were considered "fully converted" and weren't remeasured. Rise in percentage of uhf-equipped sets varied from zero (in 2 markets with heavy penetration of good vhf signals) to 36.5% over the 3-month period.
Some more valuable statistics on economics of new TV stations -- vhf & uhf -- will be collected by FCC in second financial survey of post-freeze stations, covering Aug. 1, 1953-March 31, 1954 and augmenting its first survey (Vol. 9:51; 10:1). New study will be particularly important because it will contain first profit-and-loss tabulation for uhf stations in pre-freeze TV markets.

TV Industry produced 1,459,475 sets with built-in uhf tuners last year, or just 20% of total TV output, new RETMA figures show. Some 31% of sets built in Dec. were uhf-equipped at factory, or 139,687 out of 449,787 -- down from 35% in Nov.

Most TV manufacturers believe uhf set production has entered leveling-off period, will constitute 30-40% of industry's total black-and-white output for next 6 months or so, having risen from less than 16% in Aug. to 35% in Nov.

There seems to be general belief that advent of color will give uhf big shot in arm. This is probably a fallacy because: (1) It will be several years before color production will be numerically great enough to give uhf much lift via new set purchases. (2) Most colorcasting stations at outset will be well-heeled vhf outlets in larger cities. (3) The big set makers -- with only one exception that we know of -- say they'll follow same practice as in black-and-white, equipping color sets with uhf tuners as standard equipment, charging extra for uhf tuners or strips.

We think uhf will get much greater boost from current price-cutting spree in black-and-white. Both Admiral and Philco now offer 21-in. all-channel sets at $200 -- differential of only $20 for uhf continuous tuner, normally $40-60 extra. Motorola and some other major set makers can be expected to follow pattern.

TIGHTENED-UP TV CODE, as approved by NARTB board last week in Phoenix (see p. 1 & Vol. 10:4), contains 8 changes—most significant being in section on advertising which finalizes the formerly “suggested” time standards for advertising copy and restrictions on cow-catchers and trailers, and includes new paragraph discouraging more than 2 back-to-back announcements. Full text of Code, before amendments, is printed on pp. 362-367, TV Factbook No. 18. NARTB is preparing, and will distribute to members in few weeks, new edition as amended. The amendments (newly added material in italics, deleted material in brackets):

Acceptability of Program Material—new numbered paragraph between (a)(i) & (a)(ii): “Words (especially slang) derivative of any race, color, creed, nationality or national derivation, except wherein such usage would be for the specific purpose of effective dramatization such as combatting prejudice, are forbidden, even when likely to be understood only by part of the audience. From time to time, words which have been acceptable, acquire undesirable meanings, and telecasters should be alert to eliminate such words.”

Subparagraph (p) revised: Excessive or unfair exploitation of others [for personal gain] or of their physical or mental afflictions shall not be presented as praiseworthy.

Presentation of Advertising — subparagraph 1(b) changed to read: “A sponsor's advertising messages should be confined within the framework of the sponsor's program structure. A TV broadcaster should [seek to] avoid the use of commercial announcements which are divorced from the program either by preceding the introduction of the program (as in the case of so-called 'cow-catcher' announcements) or by following the apparent sign-off of the program (as in the case of so-called 'trailer' announcements). To this end, the program itself should be announced and clearly identified both audio and video before the sponsor's advertising material is first used, and should be signed off both audio and video after the sponsor's advertising material is last used.”

Time Standards for Advertising Copy—Paragraph 1, preceding table: “In accordance with good telecast advertising practices, the time standards for advertising copy are as follows:” New paragraph between 1 & 2: “Reasonable and limited identification of prize and statement of the donor's name within formats wherein the presentation of contest awards or prizes is a necessary and integral part of program content shall not be included as commercial time within the meaning of paragraph 1 above; however, any aural or visual presentation concerning the product or its donor, over and above such identification and statement, shall be included as commercial time within the meaning of paragraph 1 above.”

New paragraph between 4 & 5: “Even though the commercial time limitations of the Code do not specifically prohibit back-to-back announcements, such a practice is not recommended for more than 2 announcements, either at station break or within the framework of a single program.” Last sentence of paragraph 4 is deleted. Paragraph 5 revised: “Any casual reference by talent in a program to another’s product or service under any trade name or language sufficiently descriptive to identify it should, except for normal guest identifications, be condemned and discouraged.”

Regulations and procedures, V Section 3 (b), changed to read: “The TV Code Review Board shall meet regularly once each quarter of the calendar year, on a date to be determined by the chairman. The chairman of the Review Board may, at any time, on at least 5 days’ written notice, call a special meeting of the Board.”

J. Walter Thompson Co. has supplied us with several dozen more copies of its Sept. 1, 1953 mimeo report on Where the Sets Are (Vol. 10:3), tabulating households and TV ownership in the first 312 markets of U. S. (Census Bureau divisions). They’re available to our subscribers as long as supply lasts.

Big-circulating This Week, Sunday magazine supplement of New York Herald-Tribune and many other newspapers throughout country, names Leslie Lieber TV editor in move to increase coverage of the medium.
Two more TV tower mishaps this week took toll in life and property. Steeplejack James Jones, of Jackson-ville, fell 400 ft. to his death Jan. 26 when 29-ft. section of new 1000-ft. Lehigh tower for WTVJ, Miami, slipped and crashed to ground as he was swinging it into place. Station's promotion mgr. Burt Toppan suffered neck burn as piece of broken cable whipped by him. In Westlaco, Tex., $35,000 GE Ch. 5 antenna for upcoming KRGV-TV dropped 660-ft. Jan. 27 and planted itself 25 ft. in ground before 3000 spectators who came to watch steeplejacks for J. J. Phillips Corp. raise it onto 700-ft. tower. No one was seriously injured. Station had planned Feb. 1 start, probably won't be delayed too long because GE had another antenna on hand, shipped it out at week's end. Two top sections of tower also had to be replaced. There was silver lining, though, and promotion-wise station, taking advantage of accident's news value, offered $200 in prizes for best amateur photographs of crash.

Ad hoc committee to study tower lighting & marking problems as they relate to aircraft will be named by airdomes, air routes & ground aids (AGA) subcommittee of CAA's Air Coordinating Committee at next meeting, probably Feb. 10. At Jan. 27 meeting, subcommittee began preliminary discussions aimed at deciding whether methods should be devised to mark and light guy wires of high towers (Vol. 10:4). Committee will be composed of representatives of gov't. and private agencies concerned with aviation, FCC, tower manufacturers, RETMA, NARTB. At this week's subcommittee meeting, Bureau of Standards representative reported on preliminary study made for Navy of possibility of using flashing beacons on ground near base of tower to warn pilots when visibility is limited.

"Round robin" microwave route encircling north-eastern quarter of nation will be completed this week by AT&T when new New York-Albany and Buffalo-Cleveland sections will be ready for use. System follows 2400- mi. circular route, connects New York, Albany, Buffalo, Chicago, St. Louis, Columbus, Pittsburgh, Washington with cities in between—and then back to New York. It will be arranged so that any interconnected station can originate program and transmit it to all others on system. Actual operation of full loop is expected late this summer. System ultimately will have 4 channels. N. Y.-Albany route has 3 channels, Buffalo-Cleveland 2. First network service for Albuquerque, only pre-freeze city non-interconnected, has been ordered for KGGM-TV by CBS. AT&T is expected to provide service by fall, probably by microwave from Amarillo. Tentative Feb. 1 date is set for these AT&T network interconnections: WRDW-TV, Augusta, Ga.; WCSC-TV, Charleston, S. C.; KOMU-TV, Columbia, Mo.; KOHL, Kearney, Neb.; WTOC-TV, Savannah; KFPT-TV & KFDX-TV, Wichita Falls, Tex.; WNEW-TV, Bay City, Mich.

Pacific broadcaster J. Elroy McIvor acquired 75% and Jack Keating 25% ownership of WINS, New York (50 kw on 1010 kc, independent) this week in $450,000 purchase deal recently approved by FCC (Vol. 9:32, 52). Seller was Crosley, which originally paid more than $1,000,000 for station. Theatreman Charles Skouras, originally announced as prospective 50% purchaser, pulled out of deal and the McIvor-Keating combination was banked by Bankers Trust Co., N. Y. Broker Howard Stark handled deal. McIvor is required by FCC to divest himself by Feb. 16 of his interests in AMs KFOA, Honolulu; KILO, Hilo; KORC, Mineral Wells, Tex.
TRANSMITTER shipments have trickled down to small flow, with no more waiting lists for equipment and manufacturers saying they can fill new orders promptly now. This week, RCA shipped 10-kw transmitter to WMUR-TV, Manchester, N. H. (Ch. 9), which should get on air in Feb., and on Feb. 1 DuMont ships 5-kw by boat to KULA-TV, Honolulu (Ch. 4), due in March.

GE reported no new-station shipments, but on Jan. 25 it sent 20-kw amplifier to 5-kw KVTV, Sioux City, Ia. (Ch. 9), and this week its engineers were testing new 12-kw transmitter for KJEO, Fresno, Cal. (Ch. 47), and were checking out new 35-kw of WOI-TV, Ames, Ia. (Ch. 5). DuMont also sent new 5-kw to WNHC-TV, New Haven, Conn. (Ch. 8).

* * *

In our continuing survey of upcoming new stations, these were the reports received this week:

KUTV, Salt Lake City (Ch. 2), owned by Frank C. Carman-Grant Wrathall group, will have transmitter house ready by June when it’s due to get composite transmitter being custom-built in own Salt Lake City workshops. It plans Aug. tests with 150-ft. Blaw-Knox tower, will go commercial Aug. 15, affiliated with ABC, reports pres. Frank C. Carman. Rep will be Hollingbery, who will offer it under “group market plan” along with 4 other stations with interlocking ownership—KOPR-TV, Butte, Mont. (Ch. 4), which began last Aug.; KWI- TV, Pocatello, Ida. (Ch. 10), and KLI- TV, Twin Falls, Ida. (Ch. 11), both due this spring; KIFT, Idaho Falls (Ch. 8), due next fall.

WMTW, Poland, Me. (Ch. 8 assigned to Lewiston), designed to be super-cover-all outlet atop 6288-ft. Mt. Washington, N. H., this week named John H. Norton Jr., ex-ABC Central Div. v.p., as gen. mgr., effective Feb. 1. Last announced target date was end of summer 1954, but it’s expected station, jointly owned by New England radio interests headed by ex-Washington radio attorney John H. Guider, will go into operation before that. Studio construction is already underway at Poland, where the Ricker Inn, on grounds of famed Poland Spring House, is being renovated for purpose. Harrington, Righter & Parsons will be rep.

WDXI-TV, Jackson, Tenn. (Ch. 9), has ordered DuMont equipment for April delivery when construction is scheduled for completion, plans July tests, goes commercial in Aug., reports pres.-gen. mgr. Aaron B. Robinson, who also publishes Corinth (Miss.) Corinthian and operates radio WCMA, Corinth; WDXI, Jackson; WENK, Union City—all in Tenn. Rep will be Burn-Smith.

WTIK-TV, Durham, N. C. (Ch. 11), hasn’t begun construction yet, but has DuMont equipment on order, plans start next Sept., according to pres. Harmon L. Duncan. Rep not yet chosen.

WRDW-TV, Augusta, Ga. (Ch. 12), has its 10-kw RCA transmitter, plans Feb. 1 tests using 425-ft. Emmco tower topped by 74-ft. 12-bay RCA antenna, goes commercial Feb. 8 with CBS-TV affiliation, according to gen. mgr. W. Ray Ringson. Exec. v.p. Allen M. Woodall also owns 50% of WDAK-TV, Columbus, and has interest in WETV, Macon. Hour rate will be $200. Headley-Reed will be rep.

WGANTV, Portland, Me. (Ch. 13), has rescheduled target from Feb. 1 to May 1, goes commercial May 16, reports gen. mgr. C. E. Gatchell. Its 20-kw GE transmitter and 240-ft. Truscon tower surmounted by 74-ft. 12-bay superturnstile antenna, 626-ft. above av. terrain, will be atop Blackstrap Hill in W. Falmouth, Me. Owner Gannett Co. Inc. publishes Portland Press-Herald and Express and other Maine newspapers. Hour rate will be $250. Avery-Knode will be rep.

WQED, Pittsburgh (Ch. 13, educational), now plans Feb. 15 tests with 5-kw DuMont transmitter being installed on Herron Hill, overlooking Pitt Stadium. It will use Westinghouse’s KDKA-FM tower. Studios at 4337 Fifth Ave. are in historic building donated to U of Pittsburgh by Pittsburgh Plate Glass Co. Grants totaling $550,000 to get started came from the Arbuckle-Jamison Foundation, Ford Foundation and A. W. Mellon Trust. Operating funds depend on allocations by schools, public subscriptions and gifts. Schools in 10-county area around city have been asked to contribute 30¢ a year for each child. Families with TV are asked to subscribe $2 for monthly WQED Program Previews. To boost subscribers and to get “to the grass roots for program sources,” WQED is organizing neighborhood Subscribers Television Guilds. For each block of 500 subscriptions from a Guild, WQED will place a TV set in a school or other institution designated by the group. William A. Wood, ex-CBS-TV Washington director of public affairs, is gen. mgr.; Edward C. Horstman, ex-ABC Chicago, chief engineer.

WJPB-TV, Fairmont, W. Va. (Ch. 35), which originally expected to get under way with only $117,565 investment in equipment (Vol. 9:50), has revised original estimate to “under $123,000” which pres. J. Patrick Beacom regards as record low for any station with complete camera chain. He’s seeking CP modification to tilt beam, now plans Feb. 15 start with 1-kw Continental transmitter, will use 230-ft. Blaw-Knox tower from which FM antenna has been moved to another location. Hour rate will be $200. Rep will be Headley-Reed.

Life Magazine again takes full-page ads in N. Y. newspapers Jan. 29 to show how “business ranks national advertising media”—with itself in first place with 1953 revenues of $108,708,905. Next ranking (all PIB gross figures): (2) CBS-TV, $97,466,809; (3) NBC-TV, $86,658,551; (4) Saturday Evening Post, $80,885,877; (5) CBS-Radio, $62,381,207; (6) NBC-Radio, $45,151,077; (7) Time, $35,391,178; (8) ABC-Radio, $25,826,125; (9) Better Homes & Gardens, $27,240,924; (10) This Week, $28,922,980; (11) MBS-Radio, $23,158,000; (12) Look, $22,971,144; (13) ABC-TV, $21,110,680; (14) Ladies’ Home Journal, $19,060,379; (15) Good Housekeeping, $13,324,132; (16) Collier’s, $16,310,942; (17) American Weekly, $15,004,772; (18) Newsweek, $15,205,490; (19) McCull’s, $13,165,666; (20) Business Week, $13,150,555.

“Traffic cop” concept of FCC’s functions — mere arbiter of electrical interference problems — was deplored by Comr. Robert T. Bartley in Jan. 29 address at Radio & TV Institute at U of Georgia, Athens. Citing Supreme Court decisions and Congressional actions, he said it was FCC’s duty to “inquire not only into the technical feasibility of the proposed operation, but also into the more important aspects affecting the service to the public which will result from the grant of a broadcast license.” He also focused on those entering broadcasting for a “fast buck” and on absentee ownership. Discussing monopoly, he endorsed policy of multiple ownership, saying it permits networks to provide better service.

DuMont reorganized broadcast equipment setup this week, abolishing TV transmitter div. and creating transmitter dept. under new communication products div. (Herbert E. Taylor Jr., mgr.) in move which will “greatly enlarge production, sales and distribution” of broadcast equipment. It said sales of such equipment in 1953 were 80% greater than in 1952 and 167% over 1951. New dept. is headed by James B. Thayer, national sales mgr. of old transmitter div. Charles E. Spicer is sales operations mgr., with these district mgrs.: Lewis C. Radford, eastern; Herbert Bloomberg, central; Robert J. Myers, western; Thomas B. Moseley, southern.
Telecasting Notes: Another big radio station boldly hikes daytime rates—CBS's KNX, Hollywood, which this week released Rate Card No. 13 upping rates Jan. 31 by 15.4%, first rise since March 1946; it's based on 38.8% increase in radio homes and claim of 108.2% increase in delivered daytime audience. Radio's thriving 1953 reflected in newly issued 1954 Broadcasting Yearbook guesstimate of aggregate AM times sales of $498,428,000, up $25,000,000 from 1952, with only network down (see also PIB report, p. 16) but with spot & local up; figure is broken down thus: local $257,254,000, spot $144,505,000, non-network $80,328,000, regional network $7,051,000—all net time sales after discount. Before commissions to agencés & reps ... Best TV guesstimate for 1953 is still $450-475,000,000, up from official FCC figure of $324,000,000 in 1952 (Vol. 9:52)—but true figures won't be available until reported by FCC auditors in spring; Printers' Ink places time-&-talent expenditures by advertisers at $888,700,000, up 35.2%, in its McCann-Erickson survey Jan. 22 (Vol. 10:4) ... TV rate trends continue upward (see TV Factbook No. 18) and these are latest to raise tariffs: KGMB-TV, Honolulu, Class A hour from $200 to $300, min. $40 to $60; WTVI, St. Louis, hour remains $400 but 1-min. up from $40 to $60; WVTN, Columbus, hour remains $500, min. up from $80 to $100; WKST-TV, New Castle, Pa., hour remains $200, min. up from $30 to $40. . . Wm. F. Broidy in deal with Robert L. Lippert whereby he will produce 12 features for Lippert release and will take over all Lippert TV sales, to be handled thru Official Films Inc. . . . Another TV hit to become feature film: Warner Bros. signs Jack Webb (thru Mark VII Ltg.) to make full-length movie out of Dragnet ... Warner Bros. sets up new TV-radio unit in adv.-publicity dept., headed by Frank Hobbs, to concentrate on buying time to promote its pictures; Mort Blumenstock is v.p. in charge, with Hobbs reporting to Gill Golden, adv. mgr., and Larry Golob, eastern publicity director . . . Rabeo Inc. is new TV film production company organized by ABC, producer Hal Roach Jr. and Wm. Morris Agency; new firm reportedly will go into large-scale production of TV films to be distributed through ABC Syndication . . . 1200 theatres closed their doors in 1953, compared to 973 in 1952 & 886 in 1951, reports Hollywood Daily Variety in preview of testimony to be presented to Congress by exhibitors seeking elimination of 20% admission tax; President Eisenhower vetoed similar bill last year. . . Who views reruns of TV film? Audience isn't all new, A. C. Neilsen Co. found out in special survey of audiences of 13 shows for ABC, CBS & NBC; study indicated 34% of original audience watched same shows again on second run . . . Phonograph record producers are now gearing "tele shots" to coincide with release date of their new waxings, reports Variety, which observes TV is "developing into the top medium for giving new platter releases off the ground," citing case examples . . . First 4 documentaries of series titled The Animal Fair, produced by Pathoscope Productions for American Cyanamid Co.'s Lederle Laboratories Div., being released to TV stations by Movies U.S.A. Inc., N. Y.; 27-min. films cover various livestock expositions, are offered free for showing as public service features . . . New TV farm programs: RFD 6, daily at 12:30 p.m. on KOIN-TV, Portland, Ore., aimed at Oregon & Southwest Washington farmers, conducted by Wm. E. Drips, onetime NBC director of farm programs; Farm Program Sat. on WTMJ-TV, Milwaukee, with stockyards traffic chief Hig Murray as m.c. Both shows will be partic. . . National Assn. of Manufacturers weekly Industry on Parade film, handled by veteran G. W. (Johnny) Johnstone now being carried on 182 stations on exclusive-in-your-market basis . . . Charlotte's WBTV & WBT, owned by Jefferson Standard Life, broke ground Jan. 25 for new $1,000,000 home on 6-acre tract, containing 47,000 sq. ft. of floor space, including 40x60 and 40x40 studios with 27-ft. ceilings . . . Students of 4 high schools and Rutgers U taking over complete operation of Walter Reade's new WRTV, Ashbury Park, N. J. (Ch. 58) for full day each as part of community promotion . . . KMTV, Omaha, offers week's all-expense vacation in Sun Valley for 2 in slogan contest based on its call letters . . . KDRD-TV, Sedalia, Mo. (Ch. 6), due on air in Feb., switches rep to Pearson.

FCC will come under closer surveillance of Congress this session as result of 2-hour Senate debate and unexpectedly heavy opposition vote Jan. 25 when ex-FBI man Robert E. Lee was confirmed as commissioner. Though he received comfortable margin of 58-25, opposition vote was biggest yet tallied against an Eisenhower nominee. Sen. Monroney (D-Okla.), who cast sole ballot against Senate Commerce Committee approval (12-1) of nomination (Vol. 10:4), led opposition to confirmation. While praising Lee's integrity and ability in other fields, he insisted nominee wasn't qualified for FCC and that his endorsement by Sen. McCarthy and association with Texas oilman H. L. Hunt's Facts Forum Foundation would create atmosphere of fear not only among broadcasters but among newspapers affiliated with TV-radio stations. Monroney intimated that President Eisenhower hadn't appointed "a practical broadcaster" to the post. Voting for confirmation were 40 Republicans, 18 Democrats; against were 22 Democrats, Republicans Aiken (Vt.) and Smith (Me.) and Independent Morse (Ore.) Minority leader Lyndon Johnson (Tex.), whose wife owns KTBC-TV & KTBC, Austin, was absent during most of debate and vote; later he said he would have voted for Lee nomination.

Amendment of "protest" section of Communications Act was requested by FCC in letter this week to House Speaker Martin. Commission asks that language be changed so that filing of protest doesn't automatically stop effectiveness of CPs. Present law, Commission said, makes possible "delaying tactics on the part of existing licensees or permittees attempting to forestall competition."

Metropolitan Opera opening nights go on TV again beginning this year—but this time it's theatre TV. Metropolitan Opera Assn. and Theatre Network TV this week announced 3-year contract to televise annual opening night—the celebrities and fashions as well as the operas—on closed-circuit theatre hookup as a new Opera Assn. and a local charity in each city where telecast is shown. TNT pres. Nathan L. Halpern has set goal of 100 theatres for the 1954 telecast in Nov. TNT televised Carmen from Metropolitan to 31 theatres in 21 cities last year, drawing audience of about 60,000. Theatre telecasts are expected to substantially cut down Met's annual deficit. Officials of Opera Assn. and TNT credited cooperation of unions with making the plan possible. Opening nights of 1948-50 were presented on home TV, sponsored by Texaco on ABC-TV, but were discontinued because of high costs.

National Football League rewrote its TV-radio restrictions this week to conform with last November's anti-trust decision (Vol. 9:46) after club owners voted unanimously not to appeal. Amendment to Article 10 of NFL constitution now specifically permits local TV-radio broadcasts within city where a game is being played provided part of broadcasting receipts are added to gross receipts of game. When club is away from home, any other club may telecast into its territory. Also added to constitution was new section binding each club to court decision. TV network representatives attended club meeting in Philadelphia to start working out plans for next season.

FCC's "functional music" proposals for FM (Vol. 10:1) were endorsed by NARTB board at Phoenix meeting.
Color Trends & Briefs: Each color program is still an event, because there is average of only 2-3 live shows a week, anywhere. NBC feeds its color premieres to whole network, of which 20-30 stations rebroadcast them in color, rest in monochrome. CBS has one program weekly, carried only in New York and Baltimore. Only other stations able to originate color are: WABD, New York, slides & film; WPTZ, Philadelphia, slides & film; WMAR-TV, Baltimore, slides. Many others have origination equipment on order, expect it to start coming through in next month or two. For benefit of those who have the 2-200 color “sets-in-use,” here are known color schedules:

NBC-TV—Zoo Parade Jan. 31, 4:30-5; Howdy Doody Feb. 1-5 (daily), 5:30-6; Judge for Yourself (Fred Allen) Feb. 9, 10-10:30; Meet the Press Feb. 14, 6-6:30; Camel News Caravan Feb. 16, 7:45-8; Your Hit Parade Feb. 20, 10:30-11; Armstrong Circle Theatre Feb. 23, 9:30-10; Excursion Feb. 28, 4:45-5; Ding Dong School March 8, 10-10:30 a.m.; Eddie Fisher March 10, 7:30-7:45; Name That Tune March 15, 8-8:30; On Your Account March 19, 4:30-5.

CBS-TV—New Revue, every Friday, 5:30-6, New York and Baltimore only. Paul Tripp is tentatively scheduled for 5:30-6 Paul Tripp’s Party Tuesdays, starting March 2.

In NBC’s schedule are many “firsts.” Beside network programs, it had first commercial local origination schedule for WNBT, New York, Jan. 29, with Jinx Falkenburg show 1:45-2:30, featuring guests Ethel Waters, Dennis Day and Beatrice Kraft and fashion show.

Another milestone will be first non-closed-circuit film-and-live program on Feb. 16 sixth anniversary of Camel News Caravan. Films will be Far Eastern documentary shot by famed photographer twins Gene and Charles Jones, plus fashion shots from Florida and California. Zoo Parade is built around theme of “animal adaptation,” featuring, among other animals, a crow, white cockatoo, golden pheasant, green frogs.

Beside color programs for network, NBC is conducting closed-circuit demonstrations for various groups, such as Feb. 25 session for Folding Box Assn., makers of packages, and ink manufacturers. In addition, it feeds color signals to WPIX, New York, which broadcasts them 11 a.m.-12:30 p.m. weekdays. CBS is still reticent about color plans. A third once-a-week program is to be added during first quarter, so as to provide a program near beginning, middle and end of each week. All will be offered to whole network, though number that will take them is still unknown. WCB-S- TV also offers color test signals weekdays, 6:30-7 a.m.

Analyzing success of NBC Spot Sales’ closed-circuit demonstration of how to integrate color commercials into black-white schedule (Vol. 10:3), Jan. 30 Tide Magazine quotes reaction of a couple influential advertisers, not now heavy in TV. Wn. Gorman, controller of Gimbel’s, said: “Having seen the demonstration, I personally feel color TV will be a far more useful medium to stores such as ours than black-white now is.” A. F. Guckenberger, adv. mgr. of Ward Baking Co., commented: “Cake really looks like cake in color.”

Still hope for color converters? Quote from FCC Comr. George Sterling’s Jan. 28 address to Boston IRE: “While I had thought that the point of no return had been passed in converting black-white receivers, I now have a notion that some gimmick not too costly in price will be devised which will enable a monochrome receiver to receive color programs—in color. It would surely meet public acceptance by those who cannot afford a color receiver until they are available at reasonable cost.”

Network Accounts: Million-dollar promotion campaign, biggest ever for any network program, is being launched Feb. 1 by NBC-TV for upcoming women’s-angle daily series, Home, which debuts March 1, weekdays 11 a.m.-noon (Vol. 10:4). Campaign breaks with full-page ads in metropolitan newspapers, will run at least until April 1, features on-air plugs, 1-min. promotional films, letters to adv. agencies, etc. Four sponsors have already been signed, but NBC prefers to wait until larger group has signed before releasing any names... International Minerals & Chemicals Corp. (Ac’cent food flavoring) buys 26 partic. on Garroway’s 7-9 a.m. Today on NBC-TV thru BBDO; Polaroid Corp. buys 60 partic., thru BBDO; Magic Chef (ranges) 12 partic., thru Krunnick & Assoc., St. Louis; Jacques Kreisler Mfg. Co. (watch bands) 11 partic., thru Foote, Cone & Belding... Borden’s drops Treasury Men in Action from NBC-TV, Thu. 8:30-9 p.m., effective in late April, when it goes to unstaed time on ABC-TV... American Home Products Corp. sponsors Secret Storm on CBS-TV starting Feb. 1, Mon.-Wed.-Fri. 4:15-4:30 p.m., thru Blow... Quaker Oats sponsors Contest Carnival on CBS-TV starting Feb. 7, Sun. 12:30-1 p.m., thru Sherman & Marquette... Helene Curtis Co. (hair preparation) expands sponsorship from alt.-week to weekly of Down You Go on DuMont starting Feb. 5, Fri. 10:30-11 p.m., thru Ruthrauff & Ryan... Thor Corp. (appliances) drops Quick as a Flash on ABC-TV, effective Feb. 25, Thu. 8-8:30 p.m. With regional sponsors, Jane Pickens Show debuts on ABC-TV Jan. 31, Sun. 9:15-9:30 p.m.... Old Gold sponsors Truth or Consequences on NBC-TV starting May 18, Tue. 10-10:30 p.m., as summer replacement for Fred Allen’s Judge for Yourself, thru Lennen & Newell.

Army Signal Corps’ film Atrocities in Korea, barred from TV until Jan. 28, now being released to 261 stations.

Colorcasting Misceallany: CBS-TV plans to convert to color its Studio 43 at Hollywood TV City... KMTV, Omaha, doesn’t expect to originate color until late 1955, but it has appointed as color consultants Eugene Kingman, director of Joslyn Memorial Art Museum, and Kendrick Wilson, director of Omaha Community Playhouse... Katz rep firm has published 39-p. Focus on Color TV, a status report on color covering networking, slides, film, local origination, tape, receivers, etc. NBC’s mobile unit, back from Pasadena, is now being remodeled, will get a third camera before use on next remote... DuMont reports sale of a “Colorision” slide scanner to Eitel-McCullough; previous units went to Motorola & CBS.

First RCA receiving tubes, made specially for color, announced this week: 6AN8, triode-pentode for low-frequency oscillator, sync-separator and phase-splitter circuits; 6BD4, beam triode for voltage regulation of high-voltage, low-current DC power supplies; 3A3, half-wave vacuum rectifier for rectifying high-voltage pulses; 6BY6, pentagrid amplifier for use as gated amplifier, also as a combined sync separator and sync clipper; 6A4-GT, half-wave rectifier for damper-diode service in color sets and for monochrome sets with 90-degree deflection tubes.

Preparing for color shipments, GE TV-radio dept. this week announced division of responsibility between monochrome and color for 3 functions: receiver sales, advertising, engineering. In first appointments, Paul H. Leslie, ex-TV sales mgr., is named sales mgr. for monochrome sets and Joseph F. Ellinger, ex-Cincinnati district sales mgr., is appointed sales mgr. for color receivers.

Transmission of color test signals simultaneously with regular black-white or color programs would be so useful, says NBC engineering v.p. O. B. Hanson, that NBC has been studying techniques for months. Among methods considered is one suggested by Telechrome Inc. (Vol. 10:4).
TV SALES GO UP AS PROFITS COME DOWN: TV business apparently picked up generally in recent weeks after sluggish start in early Jan., giving trade much-needed boost and raising hopes month's sales showing at all levels won't be as bad as first feared.

Local conditions vary, of course, but even RETMA lent statistical support to widespread bullish reports in disclosing distributor sales to dealers went up to 190,000 week ended Jan. 22 from about 150,000 in each of 2 preceding weeks. And while official RETMA statistics on retail sales won't be available for a few weeks, reports from field point consistently to recent pickup.

Major set makers, who set the industry pace, say their business is holding up well in face of normally slow post-Xmas tendency, bad weather over much of nation, advent of color, etc. They said they had no definitive explanation to offer.

Motorola v.p. E.R. Taylor said his company, while not cranking up full tilt, had increased output considerably over last 2 weeks to meet increased demand. And accenting trend to low-priced merchandise, he also disclosed Motorola had discontinued production of all 24 & 27-in. sets, now makes only three types: 17 & 21-in. tables and 21-in. open consoles. Other manufacturers have sharply curtailed production of larger sizes, probably have quietly eliminated some types, too.

Admiral's Joe Marty said sales so far were ahead of last Jan., with sizable pickup last 2 weeks. RCA and Philco spokesmen said much the same thing. Philco confirmed reports that 700 TV-radio workers had been laid off in last 4 weeks, but said they were hired on temporary basis last summer when new factory was opened and were retained rest of 1953 as long as production remained high.

Though volume was improving, profits weren't. Said Taylor: "Nobody's making money with 17-in. sets selling for $150 & $160, and 21-in. all-channel sets at $200. Labor hasn't gone down, components have gone down only slightly. The only thing that's really gone down is the profit -- and that hurts!"

The few color sets got wider distribution on dealer floors this week, permitting fuller evaluation of public reaction. Differing with locale, consumers usually showed keen interest, liked pictures but not the $1000-plus price tags and small screens. The few dealers who had color set used it as traffic-builder, reporting they drummed up some black-&-white business as a result. Big Abraham & Straus dept. store in Brooklyn became perhaps first retail outlet to sell a color set. It took order from unidentified woman for $995 set assembled by Philharmonic, using tube and other components from RCA and merchandised under store's AMC label.

Manufacturers show no inclination to sell current small-screen sets. Even RCA, stating it possessed only 150 sets, would not sell any -- merely has them out on loan -- and no other major manufacturer could be found with a set he would sell and immediately deliver. Admiral has 25-30 on loan, hasn't told of selling plans.

When larger color screens will be marketed, is still anybody's guess. Zenith v.p. H.C. Bonfig, speaking this week to Chicago Federated Advertising Clubs, said he could not escape the feeling that current 15-in. color set is "already obsolete, or if not obsolete, it will be before the year is out." He added: "The industry's race for development of an inexpensive color picture tube makes the race-for-obsolescence factor stare right out of that tube face in 3 primary colors."

TV production advanced to 111,188 week ended Jan. 22, up from 95,915 preceding week and 106,525 week of Jan. 8, bringing 3-week production for year to date to about 313,000, compared to about 520,000 for first 3 weeks of 1953. Jan. 22 week's radio production totaled 215,976, compared to 221,372 week ended Jan. 15 and 225,481 week before. It brought 3-week output to about 462,000 vs. 746,000 in 1953.
RETMA also reported official 1953 production of 7,214,787 TVs & 13,368,556 radios, including auto sets. TV output was second only to 1950's 7,463,800, was well up from 1951's 5,384,798 and 1952's 6,096,279 (for month-by-month tabulations of TV sets by types, 1947-53, see p. 334, TV Factbook No. 18). Radios were up from 1952's 10,934,872 but far from 1947's record 20,000,000. Here's monthly breakdown of TV and radio production for 1953:

**WORLD'S FASTEST GROWING MAJOR INDUSTRY**: Electronic industry's Mr. Statistics had some fabulous figures for N.Y. Society of Security Analysts this week. Sylvania's sales research director Frank Mansfield, who also heads RETMA statistical committee, called electronics "world's fastest growing major industry", estimated sales and revenue volume at about $5 billion a year at present, foresaw more than $13 billion annually in sales and revenue within next 8 years.

An accurate prophet in the past, Frank Mansfield's figures are usually taken quite seriously by the industry. So it will sit up and take notice when he says that by 1960-62 color will amount to 80% of all TV set sales. Here's a summary of what he foresees, with some amazingly precise figures which could some day rise to plague him, even though he allows himself a 3-year leeway for their achievement:

**Television**: Receiver sales at retail in 1953 totaled 6,600,000 units, at factory value of $1.1 billion. In 1957-59, they'll average 5,300,000-to-6,900,000, valued at $1.9-to-$2.5 billion, with about 46% of them in color; in 1960-62, between 5,400,000-to-8,100,000 annually, valued at $1.65-to-$2.47 billion, about 80% of them in color. By end of 1955, entire country except for "very fringe territory" will be covered by good TV signals, hedeclared, noting that half of the homes of U.S. are now 85% saturated, while another 36% of nation's homes have 40% TV saturation.

**Radios**: About 7,000,000 home radios, at $13,000,000 factory value, were sold at retail in 1953, plus 5,200,000 auto sets at $150,000,000. In 1954, about 6,000,000 home set values at $100,000,000 plus 4,100,000 auto sets at $123,000,000 will be sold. For 1957-59, he foresaw home set sales of 7,800,000 a year at annual value of $126,000,000 and auto set sales of 3,600,000-5,000,000 at $108-150,000,000.

**Phonograph players**: Should maintain fairly level volume of sales between $120,000,000 & $130,000,000 a year in next decade -- though increasing popularity of high-fidelity systems may well increase this total considerably. (RCA v.p. Mannie Sacks predicted phonograph record sales of $300,000,000 a year by 1960; Vol. 10:3.)

**Tubes and components for repair**: Totalled about $600,000,000 in 1953, will be about $850,000,000 in 1954, $1.4 billion in 1957-59, $2.2 billion in 1960-62.

**Defense purchases of electronics products** totaled $2.8 billion in 1953, may go up to $2.9 billion this year, to $3.1 billion a year in 1957-59 and $3.8 billion in 1960-62. He said this estimate was based on assumption of "no shooting war". Though Govt. will remain biggest customer of industry and bulk of production will continue to go for defense and entertainment, electronics equipment for industry and
commerce will make steady advances, totaling some $274,000,000 in 1954, $520,000,000 by 1957-59 and $985,000,000 by 1960-62.

Markups on all electronics items from factory to consumer will account for another $1.4 billion in 1954, he figures, and should reach $2.5 billion in 1960-62.

* * * * *

Dumping revenues from TV-radio broadcasting with radiotelegraph & commercial cables, Mansfield arrives at a total of $1.285 billion in 1953, says these should go up to $1.4 billion in 1954, $1.5 billion in 1957-59, $1.8 billion in 1960-62.

RCA v.p. Dr. C.B. Jolliffe, at same meeting, said he agreed with Mansfield's over-all statistical forecasts, though differing on some individual items. Philco v.p. Courtney Pitt predicted factory value of all electronics items sold in 1954 would be $5.1 billion -- got this total from estimated $3.5 billion for defense purchases, $1.2 billion for TVs, $300,000,000 radios, $100,000,000 industrial items.

Pitching for RCA account which quits J. Walter Thompson June 1, William H. Weintrub & Co. placed full-page ad in Jan. 28 New York Times, strikingly captioned with letters RCA in Morse code and addressed to executives of RCA-NBC, listing top 28 by name, then followed this up with presentation. New adv. agency will be chosen in month or two.

Westinghouse cut prices by $20 this week on 4 more vhf-only sets: 17-in. black plastic table, from $180 to $160; 21-in. mahogany masonic table, $200 to $180; 21-in. open-face mahogany console, $300 to $280; 21-in. open-face frosted oak console, $320 to $300. Optional uhf tuners are $40 extra. Westinghouse also announced construction had started on 150,000-sq. ft. warehouse adjoining TV-radio plant at Metuchen, N. J.

General Foods Corp. has set up new post of "director of electronic applications," assigning Harold H. Cauvet to job; he's ex-mgr. of staff operations for sales div.

PROPOSED SCHEDULE OF LICENSE FEES

Charges to Be Made for Handling of Applications, Modifications, Licenses
Of All Broadcast Stations, Safety & Special Services, Experimental Services, Equipment Type Acceptance & Approval, Operator Licenses, Ship Inspections, Common Carrier Services

Comments Due by April 1, 1954 (see Television Digest, Vol. 10:5)

In the Matter of
Establishment of Fees for the Commission's Licensing and Similar Activities

Docket No. 10869

NOTICE OF PROPOSED RULE MAKING

1. Notice is hereby given of rule making in the above entitled matter.

2. Pursuant to the provisions of the Independent Offices Appropriation Act of 1952 (5 U.S.C., Sec. 140), set out in Appendix A hereto, Congress has stated that work performed by Government agencies in connection with the issuance of franchises, licenses, permits, certificates, registrations and the like for any person, except those engaged in the transaction of official business of the Government should, to the full extent possible, be self-sustaining. In order to bring about the accomplishment of this objective, Section 140 of Title 5 authorizes the head of each agency to prescribe by regulation such fees and charges as he shall determine to be fair and equitable “taking into consideration direct and indirect costs to the Government, value to the recipient, public policy or interest served, and other pertinent facts.”

3. The enabling legislation referred to above also provides that the fees and charges shall be as uniform as practicable throughout the Government and shall be subject to such policies as the President may prescribe. In view of this provision, the Commission refrained from taking any action looking toward the establishment of a schedule of fees, pending consideration of the matter on an over-all Government basis by the Bureau of the Budget operating in behalf of the President. Such a study has now been completed, and the Bureau of the Budget has issued Circular No. A-25 relating to “Fees for licensing, registration, and related activities” which sets out, in some detail, uniform standards to be applied by the various departments and agencies of the Government in implementing the provisions of Section 140, Title 5 of the United States Code.

4. The attached proposed schedule of fees for the various Commission licensing activities has been drafted in compliance with the provisions of the Budget Bureau Circular. In order that interested parties may be advised as to the basis upon which the proposed schedule of fees has been prepared, the following information is provided:

(a) The Commission has determined that all of its activities including the issuance, renewal, modification, transfer, or termination of any license or certificate must be characterized by licensing activities for which appropriate fees shall be charged with the exception of the enforcement activities of the Field Engineering and Monitoring Bureau and, to a limited extent, in the Broadcast and Safety & Special Radio Services Bureaus as well, and with the exception of the non-certification common carrier regulatory activities performed by the Common Carrier Bureau. And, in accordance with the policy of both the Congress and the over-all government program, the Commission’s licensing activities for which reimbursement charges are to be levied include both the direct and indirect costs of such activities. It has been determined that during the Fiscal Year 1953 approximately 45% of the Commission’s entire expenditures were in fact directly or indirectly related to licensing activities. This percentage of the Commission’s budget has been utilized as the full cost recovery base from which the fees set forth in the attached schedule have been derived.

(b) In determining the proper groups or categories of licensing fees the Commission has made use of the primary functional divisions into which the Commission has been organized and has calculated separate fees for the licensing activities of each of the 4 functional bureaus as well as for the special licensing activities in the Office of the Chief Engineer. By such a segregation it has been possible to avoid any subsidization of one type of licensing activity by another. At the same time, where personnel of one of the Commission’s bureaus have performed services which are related to the licensing functions for which another bureau bears primary responsibility, the expenditures for such activities have, for purposes of the attached schedule, been allocated to the licensing functions of the latter bureau. Thus, the antenna survey and initial inspection activities of the Field Engineering and Monitoring Bureau, which are directly related to the licensing of broadcast stations, have been included in calculating the expenses of processing broadcast applications. Similarly, the expenses of such separate offices of the Commission, as the Office of Opinions and Review and Office of Hearing Examiners, have been allocated among the various functional bureaus at a ratio approximating our budget estimates as to the relative amount of time spent by such offices on the several types of licensing activities.

(c) Within each bureau the Commission has endeavored to avoid any undue multiplicity of separate charge. It has done this both upon the belief that such general grouping of related and similar licensing activities will aid both the Commission and the affected parties in complying with the new provisions with a minimum amount of additional time and effort and because of our recognition that no accurate allocation of exact costs between the various subcategories of the Commission’s licensing activities is possible. Accordingly, and in conformity with the provisions of the Budget Bureau’s Circular, fees for different services within each particular bureau have been limited to a few broad comparable classes of actions.

(d) In the attached schedule no direct fees are proposed with respect to the institution of rule making proceedings; the cost of such proceedings has been considered as a portion of the normal costs of license processing in the areas covered by such rules. Moreover, no fees are proposed to be charged with respect to revocations or modifications of station licenses or suspension of operators’ licenses initiated by the Commission. Finally, it is proposed to exempt from the category of applications for which a fee
will be charged for processing, applications having as their sole objective the modification of existing licenses to conform with the requirements of the EARC program. This latter exception was made because the Commission believes it would manifestly be in the public interest to penalize persons who voluntarily cooperate with the Commission in carrying out the EARC program, or similar programs, when no fees would be assessed against those persons who refuse such voluntary cooperation and are required to modify their licenses on the basis of action initiated by the Commission itself.

(e) With the exceptions indicated in the paragraph above it is proposed to charge a fee in connection with all licensing activities of the Commission. In all cases the fees have been calculated upon the basis of recovering approximately the full costs involved in carrying out the particular licensing activity in question.

5. Proposed Schedule for Broadcast Services—It is proposed to divide all applications for authorizations in the broadcast services into two categories. For the first of these categories, involving major analysis and action by the Commission a fee of three hundred twenty-five dollars ($325) would be charged. For all other applications in the broadcast services a fee of fifty dollars ($50) would be charged.

A. Major Broadcast Applications Fee $325
(1) AM, FM, and Television Facilities—applications for:
   (a) Construction permits for new stations
   (b) Modification of construction permits or modification of licenses involving any of the following types of action:
      i. Change in station power
      ii. Change in station frequency
      iii. Change in station location
      iv. Change in mode of operation (including any change in the antenna pattern or hours of operation)
   (c) Licenses to cover new stations or modifications of construction permits listed under (b) above
   (d) Renewals of licenses
   (e) Assignment or transfer of permits or licenses
   (f) Special Service Authorizations covered by Section 1.325 of the Commission’s Rules

(2) International broadcast stations—applications for:
   (a) Construction permits for new stations

B. Minor Broadcast Applications Fee $50
(1) All applications relating to auxiliary broadcast stations (Part 4 of the Commission’s rules)
(2) All applications with respect to international broadcast stations, except applications for construction permits for new stations
(3) All applications for construction permits, or for modification of construction permits, or licenses for AM, FM, and Television stations other than those listed in “A” above
(4) Applications under Section 325 (b) of the Communications Act of 1934, as amended

6. Proposed Schedule of Fees for Safety and Special Radio Services—It is proposed that a fee of ten dollars ($10) be charged for the processing of all types of applications in these services including original applications, renewals, modifications, etc., with the exception of applications in the Amateur, Disaster, and RACES Services, for which a charge of three dollars ($3) will be assessed. The three dollar charge with respect to the amateur service is for each application filed whether for station license, operator license, change of address, renewal, etc., or any combination thereof. The lesser fee for the processing of applications in the Amateur, Disaster, and RACES services is because the Commission believes that it would be contrary to the public interest, to require applicants therefor to pay the full amount that would be required if applications in such services were grouped, for purposes of this notice, with the other services coming within the jurisdiction of the Safety & Special Radio Services Bureau.

7. Proposed Schedule of Fees for Experimental Services—It is proposed that a fee of twenty dollars ($20) be charged for the processing of all applications, both formal and informal, filed for this service in accordance with the provisions of Part 5 of the Commission’s rules.

8. Proposed Schedule of Fees for Type Acceptance and Approval—It is proposed that a fee of one hundred dollars ($100) be charged for each application for type acceptance of equipment; that a fee of six hundred dollars ($600) be charged for all applications for type approval filed in accordance with Part 18 of the rules, and that a fee of fifteen hundred dollars ($1500) be charged for the processing of any application for type approval covered by Parts 3, 8, or 10 of the Commission’s rules.

9. Proposed Schedule of Fees for Operator Licenses—It is proposed that a fee of three dollars ($3) be charged in connection with the processing of all applications for commercial operator licenses regardless of class, including original applications, applications for renewal either by examination or by service under waiver of Section 13.28 of the rules, requests for duplicate licenses, endorsement on all outstanding licenses, and verification cards requested at any time other than upon the issuance of a license or a renewal thereof. It is also proposed that a fee of three dollars ($3) be charged for processing an application for a restricted radio telephone operator’s license.

10. Proposed Schedule of Fees for Ship Inspections—It is proposed to charge a fee of thirty dollars ($30) for each application filed for the following ship inspections even though an inspector may be required to visit a ship more than once before a certificate is issued:
   (a) U. S. Compulsory Ocean-going Telegraph.
   (b) U. S. Compulsory Ocean-going Telephone.
   (c) U. S. Compulsory Great Lakes Telephone.
   (d) Foreign Compulsory Ocean-going Telegraph and Telephone.

   (This does not change in any way the existing requirement under Section 4 (f) (3) of the Communications Act, as Amended, that the U. S. Government be reimbursed for extra compensation resulting from overtime services in connection with ship inspections.)

11. Proposed Schedule of Fees for Common Carrier Services—It is proposed to charge the following fees in the Common Carrier services:
   (a) Applications filed by telephone companies under Section 221 of the Act for acquisitions, consolidations, etc.—$350.
   (b) Formal applications filed by telephone companies under Section 214 of the Act for the construction or extension of a line—$150.
   (c) Applications for exemptions from Commission jurisdiction under Title II of the Act—$150.
   (d) All other applications filed by common carriers under Titles II and III of the Act, except applications filed by carriers under Parts 7, 8, 10 and 14 of the Commission’s Rules and Regulations which are covered by the fees set forth in the schedule of fees for the Safety and Special Radio Services—$30.

12. It is contemplated that this schedule be reviewed biennially, and adjustments made where necessary to conform the fees charged to actual experience in the light of new or changed circumstances.

13. Each application for which a fee is prescribed must be accompanied by a remittance in the full amount of the fee. In no case will an application be accepted for filing or processed prior to payment of the full amount specified. Applications for which no remittance is received, or for which an insufficient amount is received, may be returned to the applicant.

14. Provision will be made for a Cashier’s Office to be located in the Commission’s Offices in Washington, D. C., for the purpose of accepting application fees presented in
person or submitted through the mail. Applications received in Washington will be processed through the cashier's office and stamped with the amount received prior to being forwarded to the appropriate bureau or staff office for further handling. Such payments may be made in United States legal tender, Domestic or International Postal Money Orders, or checks payable to the Federal Communications Commission. All fees collected will be paid into the United States Treasury as miscellaneous receipts in accordance with the provisions of Section 140 of Title 5 of the U. S. Code.

15. For the convenience of applicants presenting applications at field offices in person or by mail, arrangements will also be made for the acceptance of money orders and checks at such field offices, and in payment for such types of applications, as provided for in the Commission's Rules.

16. Receipts will not be issued for payments sent through the mails. The money order procedure provides a receipt and cancelled checks constitute a receipt for payments made in this manner. Receipts will be furnished upon request only in the case of payments made in person. The sending of cash through the mails is done entirely at the risk of the sender.

17. No refunds of fees will be made except in the case of payments in excess of the fee prescribed in the Commission's Rules.

18. No radio operator examinations will be given prior to filing of an application and payment of the proper fee at an appropriate Commission office. Such applications and fees will only be accepted at District and Sub-District offices. They will be accepted at quarterly, semiannual or annual examination points in cities other than those in which District and Sub-District offices are located.

19. The proposed amendments to the rules are issued pursuant to Section 4(i) of the Communications Act, Section 140 of Title 5 of the U. S. Code, and Budget Bureau Circular A-25.

20. Any interested party who is of the opinion that the proposed amendments should not be adopted in the form set forth herein and any person desiring to support this proposal may file with the Commission on or before April 1, 1954, a written statement or brief setting forth his comments; replies to such comments may be filed within 10 days from the last date for filing original comments. The Commission will consider all comments and briefs presented before taking final action in this matter.

21. In accordance with the provisions of Section 1.764 of the Commission's rules, an original and 14 copies of all statements, briefs, or comments filed shall be furnished the Commission.

APPENDIX A—5 U.S.C., Sec. 140

"It is the sense of the Congress that any work, service, publication, report, document, benefit, privilege, authority, use, franchise, license, permit, certificate, registration, or similar thing of value or utility performed, furnished, provided, granted, prepared, or issued by any Federal agency (including wholly owned Government corporations as defined in the Government Corporation Control Act of 1945) to or for any person (including groups, associations, organizations, partnerships, corporations, or businesses), except those engaged in the transaction of official business or under contract, shall be self-supporting to the full extent possible, and the head of each Federal agency is authorized by regulation (which, in the case of agencies in the executive branch, shall be as uniform as practicable and subject to such policies as the President may prescribe) to prescribe therefor such fee, charge, or price, if any, as he shall determine, in case none exists, or redetermine, in case of an existing one, to be fair and equitable taking into consideration direct and indirect cost to the Government, value to the recipient, public policy or interest served, and other pertinent facts, and any amount so determined or redetermined shall be collected and paid into the Treasury as miscellaneous receipts: Provided, that nothing contained in this Title shall repeal or modify existing statutes prohibiting the collection, fixing the amount, or directing the disposition of any fee, charge or price; Provided further, that nothing contained in this title shall repeal or modify existing statutes prescribing bases for calculation of any fee, charge or price, but this proviso shall not restrict the redetermination of fees, charges, and payments in accordance with the prescribed bases of the amount of any such fee, charge or price."

SEPARATE VIEWS OF COMMISSIONER HENNOCK

The Commission has today adopted a notice of proposed rule making to charge fees to applicants for licenses for the first time in its history. The notice lists a schedule of fees, classifying them for various activities, including a $325 fee for AM, FM and TV applications.* In my opinion, this proposal is of such vital importance that it should have a full hearing to determine whether fees should be charged at all, and if so, their amount and the method of apportioning them among the various categories of applicants.

The principal consideration in determining the level of the proposed fees appears to be the cost to the government of administering the services involved. The objective is to recover this cost. The enabling legislation (5 USC 140) and controlling governmental policy recognize that the recovery of the costs to the government is but one of several considerations in determining the charges for applications. The other considerations include "value to the recipient" and "public policy or interest served."

In my opinion, a hearing on this subject would help decide which of these considerations or a combination of them should become the touchstone in determining the amount of fees.

For example, in the broadcast field, the "public policy or interest served" might be shown to far outweigh all other factors and justify no fee, or, at the most, only a nominal application fee to emphasize the overwhelming public interest considerations and to impress upon the applicants the importance of the public responsibility that goes with a broadcast license.

Moreover, the value of a broadcast license and the public policy and interest served might require a graduated scale of fees rather than a uniform fee determined on the basis of a formula which does not seem to take into account either the size, type or location of a station, or the relative importance of the applications. For the fee here proposed would be the same for every broadcast applicant and for many different types of applications; an applicant for a Class IV standard broadcast station and an applicant for a VHF television station in a large metropolitan area; a struggling FM operator seeking a change in location or renewal or modification of his license as well as a prosperous licensee of a television station.

Similarly, in the safety and special services where a fee of $10 is proposed, a graduated scale of fees, ranging from a nominal to a substantial level, based on the type of service and the purpose for which radio is used, might be shown to be more equitable and better adapted to accomplish the objective of the law and policy.

In no event, however, do I think that this basic change in the Commission's licensing policy should be adopted without a hearing in which all the considerations involved would be fully developed.

CONCERNING STATEMENT OF COMR. BARTLEY

Since, as set forth in the notice, we must issue a proposal for some system of fees, I have no alternative but to concur. I believe, however, that the Commission's proposal with respect to broadcasting should give more weight to the criterion of relating the amount to be collected to value to the recipient. I believe that spreading the fees over the full license period and basing such fees on the card rates established by the licensee, would be more in line with the Budget Bureau directive.

* It should be noted that this substantial fee will have to be paid not only with the initial application but also with requests for renewals of licenses and the modifications listed above, with the result that there may be instances of multiple payments of $325 during one license term.
Electronics Reports: Wedding of atomic energy and transistors produced a giant's step toward realization of scientists' half-century dream of converting radioactivity directly into electricity, as RCA demonstrated an "atomic battery" at chairman David Sarnoff's New York offices Jan. 25. Though output of battery is miniscule—1/5 volt, 5 microamperes, 1 microwatt—the principle is the thing. As Gen. Sarnoff stated:

"When Michael Faraday first produced an electric current it was with a relatively simple device—a copper disk rotated between the ends of a magnet. Faraday, 120 years ago, did not visualize the future of his invention, yet, today, the huge power generators at Niagara and the Hoover Dam operate on the same basic principle of Faraday's discovery."

First possible uses of battery visualized by Gen. Sarnoff—though he didn't attempt to predict when—would be to power portable and pocket-size radio receivers, hearing aids, signal controls, etc. Beyond these, he foresaw atomic batteries powering home electrical appliances, replacing car batteries, perhaps becoming a major source of electricity for all except heaviest duty purposes.

Gen. Sarnoff estimated that 10 of units demonstrated could now power a small portable radio and that 1 or 2 could run a hearing aid.

Basic significance of development is that it forshadows production of device capable of providing almost inexhaustible source of electricity—since it would lose only half of its power in 20 years of continuous use.

Importance of RCA's contribution is the enormous increase in efficiency—200,000 times as great as former efforts. Previous techniques could derive only one electron of electricity for each radioactive particle. RCA gets 200,000-for-1, yet this still represents only 1% utilization of radioactive energy released. RCA scientists say new process has theoretical limit of 10% efficiency.

Device works by placing radioactive material, strontium-90 in this case, against transistor-like wafer of silicon; latter is bonded to antimony to form junction. Beta particles from strontium bombard wafer, producing current. Strontium-90 is now a waste product of atomic energy plants such as Oak Ridge & Hanford, but it cost $25 to refine amount in RCA battery (50 millicuries). RCA says mass production of strontium-90 might bring price down to 10¢ for same amount. Output of battery could be increased by making larger units or stacking small ones.

Though device itself is about size of cigarette tip, presence of some alpha and gamma particles requires lead shielding, making whole unit about half size of cigarette package. With purer strontium-90, it's expected shielding can be eliminated.

Hailing development, Atomic Energy Commission chairman Lewis L. Strauss, former RCA board member, noted: "If a press release of the sort that you are making had been issued 120 years ago at the time of Faraday's discovery of the electric motor, it would have been received with considerable disbelief."

Said RCA consultant David Lilienthal, ex-chairman of AEC: "The results achieved reflect great credit on the scientific imagination of RCA scientists in applying RCA's extensive experience with electrons and semi-conductors to the efficient direct conversion of atomic radiation to electricity."

Scientists credited with development at Princeton Labs—under way since end of World War II, with Air Force backing since 1951—are Paul Rappaport, 31 (Carnegie Tech, '48-49) and Dr. Ernest G. Linder, 51 (U of Iowa '25-27 and Cornell Ph.D. '31).

Microphone with built-in transistor pre-amplifier is now in production and being offered commercially by Remler Co. Ltd., San Francisco. It's designed to improve quality of radio voice communication between pilots and airport control towers, and Remler claims it also clarifies announcements to travelers in airport terminals, aboard planes, etc. Telephone headset with transistor pre-amplifier, coil cord and 3-circuit plug is priced at about $95, hand-held type $80.

Midget radio receiver the size of cigarette pack is now being manufactured by Lehigh Valley Electronics Engineering & Mfg. Co., Allentown, Pa., for use by subscribers to radio paging systems, police, firemen, etc. Set has range of 20 mi., will run continuously for 80 hours on single set of miniature batteries, uses 3 subminiature tubes. Company says it can produce 1000 a month, selling at $75 apiece, or $40 each in lots of 50 or more.

Muntz TV reports net loss of $1,457,288 for 5 months, ended Aug. 31, 1953, after giving effect to $746,740 tax adjustment credit. Sales for period were $17,420,528. No comparison is available as company changed its fiscal year to end Aug. 31 instead of March 31. This was done, according to pres. Earl W. Muntz, to give better impression by reporting summer months at end of year rather than beginning. "We've always lost money in the summer, and last summer was worse than previous years," he is quoted in Retailing Daily, which reports Muntz may not open Chicago branch, closed 2 weeks ago because union salesmen rejected proposed cuts in commissions.

Cornell-Dubilier, for quarter ended Dec. 31, reports sales of $11,434,918, profit of $528,900 ($1.15 on 512,390 shares), compared with $10,574,073 & $404,533 (75¢ on 465,534 shares) for same 1952 quarter.

Packard-Bell reports fourth quarter 1953 sales of $6,333,923, net income of $269,575 (39¢ on 688,000 shares), compared with $10,479,295 & $577,949 (98¢ on 588,000) same 1952 period.

Olympic Radio is merchandising its own standard and custom TV lines this year, buying custom cabinets from Shaw Television Corp., Brooklyn, among other suppliers. We erred in reporting that Olympic would handle national sales for Shaw's own TV line (Vol. 10:3).

**Note:** These figures do not represent actual revenues to the networks, which do not divvy their actual net dollar revenues. They are compiled by the PIB on basis of one-time network rates, or before frequency or cash discounts. Therefore, in terms of dollars actually paid to networks, they may be inflated by increases in ratings. Figures are accepted by networks themselves, however, and by the industry generally, as satisfactory index for comparisons and trends.

**Under mandate of Congress, FCC this week issued proposal showing how it intends to raise about $3,000,000 annually from fees levied on those whom it regulates, to defray part of its $7,000,000-plus annual budget. Since proposal would treat all TV-AM-FM broadcasters equally, regardless of type or size, it's certain to bring howls from smaller broadcasters, perhaps undergo considerable modification before final adoption. Comments on the proposal—full text of which is included as Special Report herewith to all subscribers—are due April 1. Minimum for any applicant is $325 when he applies, plus $325 when he gets license, plus $325 every 3 years when he gets license renewed. If he has to get modification of power, frequency, location, antenna pattern, or hours of operation, he would have to pay additional $325 for each application for such change. Largest single charge for any activity would be $1,500—for type approval of equipment such as transmitters or monitors. Smallest would be $9—for operators and amateurs. Proposal is deliberately silent on charging for existing licenses and pending applications; Commission wants reactions first. FCC is first of govt. licensing agencies to make proposal, required by Budget Bureau.

First Mexican border station to aim for American TV audience, XELD-TV, Matamoros (Ch. 7), just across Rio Grande from Brownsville, Tex., has been authorized to move to either Guadalajara or Monterrey, reports Billboard’s Sam Chase from Mexico City. Efforts to obtain confirmation were unavailing up to our press time, but move wouldn’t be surprising because XELD-TV, owned equally by Mexican TV-radio tycoons Romulo O’Farrill Sr. and Emilio Azcarraga and directed by Monte Kieban, got first competition last Sept. from KGBT-TV, Harlingen, Tex. (Ch. 4), and shortly will get another competitor in Weslaco’s KRGV-TV (Ch. 5)—former with CBS & ABC service, latter NBC. It went on air during freeze, was reputed to be big ear. While other border allocations have been made and stations authorized by Mexican Ministry of Communications (see pp. 117 & 225, TV Factbook No. 18), only one other actually built is XETV, Tijuana (Ch. 6), serving also San Diego area, owned by George I. Rivera and Mr. Azcarraga.

Three applications for TV stations were filed this week with FCC, 4 were dismissed, leaving 322 pending (64 uhf). Week’s applications: for Great Bend, Kan., Ch. 2, by group of local business men headed by appliance dealer E. C. Wedell; for San Antonio, Ch. 12, by KMAC; for E. St. Louis, Ill., Ch. 11, by KSTM-TV, currently operating on St. Louis Ch. 36, which resubmitted application following court order staying up hearing on Ch. 11 unless FCC acts to hear KSTM-TV’s arguments. [For further details about these applications, see TV Addenda 18-D herewith; for complete listings of all grants, new applications, dismissals, hearings, etc., see TV Factbook No. 18 and Addenda to date.]

Memphis’ WHBQ-TV (Ch. 13), which began operating last Sept. 27 as CBS outlet, was reported sold to General Teleradio, General Tire & Rubber subsidiary, as we went to press Jan. 30. Details were unavailable, but deal is understood to involve $500,000 cash payment and $1,900,000 leasehold payments to licensee Harding College over 10 years. With the CBS-affiliated TV outlet goes radio WHBQ (5-kw day, 1-kw night on 560 kc, MBS). Harding College, located in Searcy, Ark., was represented in deal by W. O. Beaman, secy.; General Teleradio, by Wm. O’Neil, pres.; with Richard C. Crisler, broker. Outlet will be 4th TV owned by General Teleradio—others being WOR-TV, New York; WNAC-TV, Boston; KJH-TV, Los Angeles. It also holds CP for WGHT-TV, Hartford (Ch. 18), under agreement whereby Hartford Times (Gannett) is to acquire 45%. 

- **Total TV sets in U. S. went up to 26,573,000 as of Dec. 1, 1953, reports NBC research chief Hugh M. Beville Jr. This was addition of 6,534,000 since Dec. 1, 1952. In Nov., more than 600,000 were added. NBC-TV network had 137 affiliates as of Dec. 1, of which 107 were inter-
  connected, latter serving 26,057,600 sets (96.4% of total).**
FCC LIKELY TO FINALIZE 'TWO UHF' RULE: Proposed change in multiple ownership rules, to permit owners of 5 vhf stations to acquire 2 uhf (Vol. 10:4), received the overwhelming support of industry in comments filed with FCC this week. Matter of fact, some urged that uhf would benefit even more if restrictions were further relaxed.

These comments leave Sen. Johnson (D-Colo.) the sole objector, except for WSYT, Rochester, inveterate network-baiter. Sen. Johnson says he plans no further comments on proposal and stands on his original statement (Vol. 10:3). One reason for his objections was that he felt FCC had too few facts on which to make the proposal. Presumably, Commission now has more data to back action.

All networks gave proposal hearty support, CBS and NBC stating flatly that they would acquire uhf stations if the rule-making goes through. Said CBS:

"Insofar as networks are concerned, it is only natural that their economic interests should impel them at the present time to seek vhf affiliates in markets having both vhf and uhf stations. On the other hand, if a network is the licensee of a uhf station in a combination uhf and vhf market its economic interest would impel it to make its own station the network outlet in that city." CBS then went on to urge that owners of 5 vhf be permitted 5 uhf, stating that it is "eager and willing" to operate uhf outlets.

"If the Commission permits," NBC stated, "NBC will proceed to acquire, by purchase or by grant, 2 uhf stations in markets where there are presently existing vhf stations. NBC will expend every effort to make these stations successful through use of its network programs, talent, promotion, technical skill and operating know-how." This would undoubtedly be paralleled by other networks, NBC said.

ABC stated it hasn't decided whether it would seek uhf stations, but it supported proposal vigorously. "Even a handful of successful uhf stations in major competitive markets," it said, "would tend to eliminate the doubts that now surround the uhf in the minds of the public, advertisers, broadcasters and manufacturers. If such doubts could be eliminated, the vicious circle of not enough stations -- not enough listeners -- not enough all-channel receivers -- not enough programs -- not enough advertisers -- not enough stations, etc., would be broken."

DuMont said there's need for final action so that plans can be made with assurance. "Insofar as the proposed rule is intended to aid in the development of uhf stations," it said, "it is fully expected that it will have efficacy."

Storer also supported proposal, saying it would obtain uhf station "in a market where its judgment indicates uhf operation ultimately can be successful."

* * * * * Individual stations commenting were KACY, Festus-St. Louis (Ch. 14) and WENS, Pittsburgh (Ch. 15). Former suggested that single entity be permitted to own majority interest in 5 vhf or uhf stations plus minority interests in 5 uhf. WENS commented: "Even a relatively slight delay in the development of uhf tends to make its eventual development even more difficult. Conversely, any increased impetus to
uhf given at this time will snowball and produce an effect far greater than could be achieved by any encouragement given at a later date."

Virtually all supporters pointed out that: (1) Seven stations comprise far smaller fraction of total stations now than 5 did when limit of 5 was adopted. At one time, ABC and NBC together owned more than 10% of all stations. (2) Networks and other large organizations have the "programs, talent, promotion, technical skill and operating know-how." (3) Successful uhfs in big cities, regardless by whom controlled, will increase confidence in uhf generally. (4) FCC still has authority, regardless of new rule, to consider applications on case-to-case basis, refuse licenses when it feels monopoly may be fostered.

With most of the commissioners apparently in favor of letting the "big boys" give uhf a needed hypo, with even the uhf operators supporting the proposal through their UHF Assn. (Vol. 10:5), there's every indication rule will go through -- with all proponents hopeful it will be reasonably soon. As things stand now, it looks as though it will take month to 6 weeks to get subject on Commission's agenda.

As predicted in these columns (Vol. 10:3), quite a few more station sale deals are in the making -- only major one we're able to divulge yet being General Teleradio purchase of WHBQ- TV, Memphis (Ch. 13), as reported last week (Vol. 10:5). Most of big deals now cooking involve vhf outlets, but it won't be surprising if a few uhf change hands too in event the multiple ownership rule is changed. Networks may elect to buy already-established stations in major markets, and a Miami report even has George Storer dickering for uhf in that area; he will soon be deep in uhf by reason of acquiring pioneer -- and highly successful -- KPTV, Portland, Ore. as part of his $10,000,000 Empire Coil Co. package purchase (Vol. 10:2).

ONE CP ISSUED, 2 DROPPED, ZONE CHANGED: Tally of new-station grants showed net loss this week as FCC granted only one, cancelled 2 at request of grantees. Other actions included first change in allocation zone boundaries and one initial decision.

Week's sole CP was for Tulsa, Ch. 17, granted local industrialist Arthur R. Olson; it came, by coincidence, just as Tulsa's first uhf station was beginning to test (see p. 3). An initial decision favored WEAT-TV Inc. for West Palm Beach, Fla. (James Meacham, pres.) after competing WWPG had dropped out under agreement whereby WEAT-TV reimburses it for $6000 expenses.

Dropping CPs were 2 uhf holders -- KEYC, Cedar Rapids, la. (Ch. 20) and KSPJ, Alexandria, La. (Ch. 62). Since freeze, 47 CP holders have quit before building.

FCC examiner proposed denial of Ch. 9 grant to KVOG, Ogden, Utah, which failed to show up for hearing after competitor KLO dropped application.

In week's major allocation change, the Commission adopted a proposal it once rejected -- redefining Zone I boundary to include all of West Virginia in that zone, permitting closer station separation minimums in the 4700-sq. mi. tip of state formerly in Zone II. Move made possible the allocation of Ch. 6 to Bluefield, W.Va., requested by WHIS, Bluefield. This necessitated substituting Ch. 4 for 6 in Beckley and rescinding last October's allocation of Ch. 4 to Fayetteville, W.Va.

This action shouldn't precipitate flood of demands for other zone changes, Commission hopes and believes. It's considered special case, doesn't have "chain-reaction" effect on allocations. Sterling & Henrock dissented; Webster abstained.

Bowing to court order, Commission allowed KSTM-TV, St. Louis (Ch. 36) into hearing for St. Louis' Ch. 11 (Vol. 10:3), but advised it that hearing would inquire into (1) KSTM-TV's legal right to be in hearing, since it already is on the air on another channel; (2) whether it has authority to do business in E. St. Louis, Ill., where it seeks grant; (3) its financial ability to operate station on Ch. 11.

Among other actions, FCC this week: (1) Finalized substitution of Ch. 72 for Ch. 60 in Baltimore (Vol. 9:52) and permitted grantees WITH-TV to switch to the new channel to get better site without violating spacing requirements. (2) Rejected a petition by Puerto Rico Dept. of Education to reserve San Juan's Ch. 4 for non-commercial operation in lieu of Ch. 6. (3) Set March 5 for start of hearings for Fort Smith, Ark., Ch. 5; Las Vegas, Nev., Ch. 15; Lexington, Ky., Ch. 18.
SAVANNAH'S FIRST, TULSA'S UHF TESTING: First brand-new TV market to be opened up so far this year is Savannah, Ga., where WTOC-TV (Ch. 11) began test patterns this week. Also due on air shortly, possibly this week end, is WRDW-TV, Augusta, Ga. (Ch. 12), which would give that city its second vhf. Only other new starter to add to on-air list is KCEB, Tulsa, Okla. (Ch. 13) -- making just 6 new stations since Jan. 1 and exactly 362 on the air at this writing, 126 of them uhf.

Several more are in completion stages, including WNEM-TV, Bay City, Mich. (Ch. 5), reported just about ready to test. But fact is that pace of new starters, to say nothing of equipment deliveries, has slowed down considerably from recent one-a-day -- and, as noted earlier in these pages, it will be surprising indeed if as many as 200 more start this year as against the 231 of 1953. Latest starters:

KCEB, Tulsa (Ch. 23), first local competitor to Helen Alvarez's pre-freeze vhf KOTV (Ch. 6), began oft-delayed tests of RCA transmitter Jan. 28, has not yet announced commercial debut date. Owned by oil millionaire Elfred Beck, it's housed in magnificent new building of own, one of the industry's showplaces, located on 120-acre tract embracing crest of nearby 1400-ft. Lookout Mt. N. Ray Kelly, ex-NBC executive, is gen. mgr., returning to his hometown to take charge; John Howley, commercial mgr.; Richard Pickard, chief engineer. Base rate is $200. Rep is Bolling.

WTOC-TV, Savannah (Ch. 11) began test patterns Feb. 2, is slated for Feb. 14 commercial debut with CBS affiliation. It opens up new market, nearest other service being Ch. 5 in Charleston, S.C., just 83 mi. up the coast. Station uses 5-kw GE transmitter with 430-ft. Ideco tower, is controlled and managed by Wm. T. Knight Jr., veteran broadcaster, with Ben B. Williams, commercial mgr.; Dwight J. Bruce, program mgr.; Kyle E. Goodman, chief engineer. Base rate is $200. Rep is Katz.

FCC CLICKS WELL IN GETTING TV STARTED: Something of a milestone was passed Feb. 1 when FCC sent "McFarland letters" to the last of the competitive applications filed since post-freeze processing of applications began July 1, 1952. Significance of this is that it has processed -- i.e., granted, dismissed, heard or started toward hearing -- 1200 applications since end of freeze.

Results of this processing are impressive: 527 grants, of which 254 went on the air to add to the 108 pre-freeze stations. As of today, only 320 applications are pending, almost all of which are tied up competitively. Incidentally, U.S. still has about 750 stations in prospect -- counting those on air, CPs, channels sought.

Only shadow on Commission's exemplary performance in getting TV going, once freeze was lifted, is the paucity of final decisions in strongly contested cases. Commission realizes this, intends to do something about it.

Much credit for this record belongs to chairman Rosel H. Hyde, career man who succeeded to chairmanship last April under one-year appointment. Though his tenure as a Republican commissioner doesn't expire until 1959, the appointment as chairman was for one year only, or until April 18. But he's being strongly supported for continuance as chairman despite Eisenhower Administration's apparent predilection for rotating chairmanships at the independent agencies. Two of the other 3 Republican members, Doerfer & Lee, are relatively new at their jobs, while the veteran engineer Comr. George Sterling has never evinced any particular desire for the chairmanship.

Hyde has been importuned incessantly to wander off into labyrinths of other projects, but he has doggedly insisted that the Commission's first order of business is to get TV stations granted and built. Thus Commission has been tough, almost ruthless, in cutting red tape and changing procedures in its objective of getting stations built -- but it has brought TV to people who should have had it 6 years ago.

Where Commission is admittedly weak is in finalizing decisions. Decision-writing arm, the Office of Opinions & Review, has always been understaffed. Several of its ablest lawyers have resigned to enter private practice, and Commission has yet to assign to it additional experienced personnel. However, now that basic processing is done, the matter is getting more attention.

So far FCC has rendered only 2 true final decisions -- i.e., those fought out in hearing to the end. They were the Ch. 7 case in Denver & Ch. 2 in Portland, Ore.
Vancouver, Wash. All other so-called final decisions came after competition dropped out, leaving no tough job in choosing winner. About a half-dozen initial decisions await Commission action -- and some have been dangling for months.

There are always some political blandishments, of course, but as far as we can tell they're not particularly effective. For one thing, hearing examiners can't be fired by Commission and they generally try to be judicial -- though a few really aren't very bright. For another thing, there are 7 commissioners, all fairly independent, and it's a mighty tough job to "influence" a majority consistently.

Commission gets agitated when a Senator pops off, especially if he's on the powerful Interstate Commerce Committee. Occasionally, it's evident that a commissioner is doing some Senator's bidding, but he seldom manages to swing a majority against its best judgment. When constituents complain or seek favors, Senators and Congressmen are usually relieved to pass the buck to FCC. However, several Congressmen are chronic pressurers and they give FCC a lot of headaches.

**Personal Notes:** Richard P. Doherty, NARTR v.p. in charge of employee-employer relations and one of the TV-radio industry's foremost economic authorities, resigns March 1 to form own management consultant firm in Washington: his aide Charles H. Tower will carry on temporarily ... J. Roger Wollenberg, FCC asst. gen. counsel in charge of litigation, resigned as of Feb. 5 to join law firm of Haley, Doty & Schellenberg ... Earl Pettis, in charge of production & business affairs for NBC-TV network programs div., elected v.p. ... David C. Adams, NBC administrative v.p., seriously ill in Grasslands Hospital, Valhalla, N.Y. ... Blayne Butcher, veteran N. Y. agency executive, named gen. mgr. of WITV, Ft. Lauderdale, Fla. ... Seymour M. Chase, ex-FCC law staff, and Edwin S. Niel, ex-clerk to chief judge of municipal court of District of Columbia, join law firm of Segal, Smith & Hennessey ... C. R. Dods- worth, Jr. promoted to sales director of WLWD, Dayton, succeeding Wm. J. Williamson, resigned ... Wm. T. Lane, ex-gen. mgr. of WLTW, Atlanta (now WNW), onetime gen. mgr. of WAGE, Syracuse, has opened Wm. T. Lane Co., adv. & public relations, Wilson Bldg., Syracuse ... Herbert W. Holber, ex-CBS-TV, son of Atherton W. Holber, exec. chairman of Benton & Bowles, named gen. sales mgr. of Teleprompter ... Art Sprinkle, ex-KPHO-TV, Phoenix, now asst. gen. mgr., KULA, Honolulu, and upcoming KULA-TV (Ch. 4), due on air in March ... John J. Dunn appointed asst. to CPC program organizer; he's replaced as chief producer of CBOT, Ottawa, by Bruce McPherson, ex-CBTL, Toronto ... Paul E. Peltason, treas. & major stockholder, named pres-gen. mgr. of WTVI, St. Louis-Belleville, Ill., replacing Bernard T. Wilson, resigned ... Ray A. Furr, ex-asst. to pres., elected v.p. and director of program development of WABT & WAPI, Birmingham; Maury Farrell named special events director ... Karel Pearson promoted to radio program mgr. of NBC western div., replacing Harry Bubeck, resigned ... Harry Folts resigns as gen. mgr. of WINS, New York, recently sold by Crosley to J. Elroy McCaw interests (Vol. 10:5); McCaw is temporarily in charge ... George L. Grieshauer, ex-Paul H. Raymer Co. & WMAL-TV, Washington, named sales mgr. of WGTG, Washington, succeeding Neil J. Edwards, now WMAL-TV gen. sales mgr ... Walter Dennis, ex-commercial mgr., named gen. mgr. of WLBV-TV, Lansing, Mich.; Walter Braeger, ex-promotion & merchandising mgr., named production director; Charles L. Brady, ex-McIntosh & Inglis, Washington consulting engineers, director of technical operations ... Steve Pozgay, ex-gen. mgr. of WNAM-TV, Neenah, Wis., appointed gen. mgr. of WTVQ, Decatur, Ill., succeeding Harold Cowgill ... Herman Liveright, onetime ABC-TV, promoted to executive producer-director, WDSU-TV, New Orleans ... Ned R. Brooke, ex-film director, named production mgr., Micky Roth appointed asst. production mgr. of WSAZ-TV, Huntington, W. Va.; Bert Shimp named director of educational programs ... Edwin J. Lasko, ex-WBKZ-TV, Battle Creek, named program mgr. of WSJV, Elkhart, Ind. (Ch. 52), due late this month: Lester W. Zellmer is chief engineer, and Donald R. McFall, WTRC (AM) mgr., also will be WSJV administrative mgr. ... Chester T. Behrman, ex-program director, promoted to operations director of WEHT, Henderson, Ky.-Evansville, Ind., replacing Don F. Moloney, now v.p. of new WTSK-TV, Knoxville ... Raymond Brown Jr., ex-WBBA-TV, York, Pa., appointed sales mgr. of upcoming WTRI, Schenectady (Ch. 35) ... Robt. Gardner promoted from commercial mgr. to gen. mgr. of KLAS-TV, Las Vegas, Nev., succeeding Fred Stoye, who has sold his minority interest ... J. Allen Mitchell, ex-Benton & Bowles, named group head of TV copy, Wm. H. Weintraub & Co. ... Cope Collins promoted to MBS mgr. of public relations. ... Rodney Chipp, DuMont Network engineering chief, leaving Feb. 18 with Mrs. Chipp on 5-week business trip to South America ... J. Wm. Quinn, program supervisor of WBTI, Charlotte, named managing director of upstairs WPBV, Florence, S. C. (Ch. 8), due on air next summer and also owned by Jefferson Standard Bestg. Co.; Melvin Purvis, Florence attorney and ex-FBI agent, will be station mgr. and Robt. Kierson, ex-WBT, program director ... Edward P. Wegener resigns as program director of WOL-TV, Ames, la., for same post at upcoming educational WQED, Pitts- burg ... Melvin A. Goldberg resigns as exec. director, Ultra High Frequency TV Assn.

Mary Jane Morris is new FCC secretary, succeeding Democrat Thomas Slowie who resigned in Dec. A vigorous party worker with many powerful Republican friends, Miss Morris started career in 1943 with New York law firm of Willkie, Owen, Otis, Farr & Gallagher, went to work for Republican National Committee in 1944, later joined Washington law firm of Hogan & Hartson, and in 1948 moved to FCC general counsel's office where she has been ever since. She's 33, native of Midland, Mich., starts new job Feb. 8 at $10,000 a year. After 1952 Republican victory, she was ardent candidate for commissionship.

Ted R. Gamble, ex-ass't. to Secy. of Treasury in charge of war bond drive, who disposed of theatrical interests to go into TV-radio and who is part owner of KLZ-TV & KLZ, Denver, and KOIN-TV & KONI, Portland, Ore., elected a director of Transamerica Corp. He has been a director of its largest subsidiary, First National Bank of Portland.

Henry Souvaine, 59, musician, composer and radio producer, who was in charge of Metropolitan Opera broadcasts, died Jan. 27 in New York.
**Station Accounts:** More pre-Lenten TV-radio campaigns include saltation promotion by combined California Cling Peach Advisory Board, American Dairy Assn. &Ralston Purina (Ry-Krisp), whose respective agencies are BBBDO, Campbell-Mithun & Gardner Adv.; also Comet Rice Mills, thru Tracy-Locke Co., Dallas. Combination popcorn premium promotion of American Popcorn Co. and Kraft (Jolly Time popcorn unit) has been started in newspapers in 221 cities, plus TV-radio; respective agencies are Buchanan-Thomas and Needham, Louis & Broby... Waffles-syrup will be promoted in combined campaign via TV-radio in Feb.-March campaign by Waffle Corp. of America (Frozen Downyflake Waffles), thru J. M. Korn & Co., Philadelphia, with General Foods (Log Cabin Syrup), thru Benton & Bowles... Toy Guidance Council plans 13-half-hour shows in more than 40 markets, up to Xmas; Ralph Danziger, ex-Norman D. Waters Adv., appointed adv. director for account, to be placed thru Friend, Reiss, McGlone Inc., N. Y.; Chesterfield sponsoring Giants home games on WPIX for 7th year, Ballantine sponsoring Yankees except for 3rd & 7th innings, when White Owl is sponsor; respective agencies are Cunningham & Walsh, J. Walter Thompson, Young & Rubicam... Schaefer Beer & Lucky Strike again to co-sponsor all Brooklyn Dodger home games on WOR-TV, Andre Baruch succeeding Red Barber as commentator... National Brewing Co. to sponsor Baltimore Orioles' and Washington Senators' games on WAAM, Baltimore, thru Kenyon & Eckhardt, New York... Among other advertisers reported using or preparing to use TV: Globe Pharmaceutical Corp., San Francisco (Restall capsules), thru Jim Diamond Adv., San Francisco; MacArthur Products Inc., Indian Orchard, Mass. (Portable Porter strap-on luggage wheels), thru Fred Gardner Co., N. Y.; Roma Wine Co. (Roma wine in dripless bottle), thru Foote, Cone & Belding, San Francisco; Gorham Co., Providence, R. I. (sterling & plated silverware), thru Kenyon & Eckhardt, N. Y.; Coty Inc. (cosmetics), thru Franklin Bruck Adv. Corp., N. Y.; Meridian Co., Beverly Hills, Cal. (unfinished hardwood furniture), thru Beaumont & Hohman, Los Angeles; Colter Corp. (Jekyll Island shrimp), thru Geyer Adv., N. Y.; Economics Labs., Minneapolis (Solax cleanser), thru Scheideler, Beck & Werner, N. Y.; Morrison Milling Co., Fort Worth (Little Lu Lu corn meal), thru Jack T. Holmes & Assoc., Fort Worth; International Harvester Co. (IH refrigeration products), thru Leo Burnett Co., N. Y.; Alum-inum Import Corp. (aluminum in primary & fabricated forms, bauxite, chemicals), thru J. Walter Thompson Co., N. Y.; Safeco Insurance Co. of America, Seattle (auto insurance), thru MacWilkins, Cole & Weber; M & R Mfg. Co., Pontiac, Mich. (Sno-Bol bathroom cleaner), thru Ewell & Thurbur, Chicago; National Carbon Co. (Eveready batteries), thru Wm. Esty, N. Y.; Eberhard Faber Pencil Co. (Paint with Pencil sets), thru Hicks & Greist, N. Y.; Better Living TV Enterprises Inc., N. Y. (household aids), thru Wolf, Dorleg & Wolf, N. Y.; St. Mary's Packing Co., Sidney, O. (Duncan Hines macaroni products), thru Ralph W. Jones Co., Cincinnati; H. Daroff & Son Inc., Philadelphia (Botany "500" Clothes), thru Alfred J. Silberstein-Bert Goldsmith, N. Y.

**Network Accounts:** Program plum of the fall season, new weekly 30-min. show produced and emceed by Richard Rodgers & Oscar Hammerstein, is being readied by NBC-TV, reports Feb. 6 Billboard—but network won't confirm or deny. Program would be original dramatizations of songs written by Rodgers & Hammerstein and others. Also from authoritative sources, but unconfirmed by NBC-TV, is that Show of Shows (Sat. 9-10:30 p.m.) will go off air in fall because of high costs, with co-stars Sid Caesar and Imogene Coca each going into own new half-hour shows... No sponsors announced yet, but NBC-TV this week appointed Arlene Francis as editor-in-chief of its much-publicized Home show starting March 1, Mon.-thru-Fri. 11 a.m.-noon; assisting will be several home economics experts... GE, for sets & tubes, buys 21 partic. on Dave Garroway's 7-9 a.m. Today on NBC-TV thru Maxon Inc.; Mutual Benefit Health & Accident Assn. of Omaha 39 partic. thru Bozell & Jacobs Inc., Omaha; Bissell Carpet Sweeper Co. 11 partic. thru N. W. Ayer & Son; C. F. Church Co. (wall tile) 4 partic. thru Wm. B. Remington Inc., Springfield, Mass.; Brown & Haley Candy Co., Tacoma, Wash., 1 partic. thru Honig-Cooper Co., Seattle... Economics Laboratory Inc. (Solax compound) buys Tue. 2:15-2:30 portion of Garry Moore Show on CBS-TV starting March 11 thru Scheidelber, Beck & Werner... Philip Morris drops Philip Morris Playhouse, will substitute filmed Public Defender on CBS-TV starting March 11, Thu. 10-10:30 p.m., thru Blow... Bishop Sheen's Life Is Worth Living, sponsored by Admiral on DuMont Tue. 8-8:30 p.m., now on 169 stations.

Hollywood's Academy Awards will be televised again this year, sponsored by Oldsmobile div. General Motors, which is paying total of $275,000 for NBC simulcast March 25 on some 75 TV and 200 radio stations. Of this amount, $115,000 will go to Academy of Motion Picture Arts & Sciences which presents awards. Agency is D. P. Brother & Co., Detroit.

**Giveaway Shows** were front-page news this week as action flared on 2 legal fronts aimed at blocking at least part of the big payoff.

Some observers felt that U. S. Supreme Court justices' critical questioning of FCC asst. gen. counsel J. Roger Wollenberg's case against giveaways, argued Feb. 1, was a dead giveaway that they would uphold lower court ruling which threw out Commission's ban against certain types of something-for-nothing TV-radio shows—adopted nearly 5 years ago (Vol. 5:34-39; 9/8). Wollenberg told highest court all programs based principally on chance are lotteries, that shows in which people are called on telephone at home represent "worst type of lottery lure," but FCC has no objection to shows where studio audience gets prizes.

Attorneys Alfred McCormack for ABC, Paul W. Williams for NBC and Max Freund for CBS argued that giveaways don't come under legal definition of a lottery.

New York City this week cracked down on another type of giveaway show, when Welfare Commissioner McCarthy ruled Colgate-Palmolive's daily Strike It Rich (CBS-TV, NBC-AM) solicited funds for allegedly needy persons and therefore requires city license. He said—and newspapers played story up big—that at least 55 families have landed on city relief rolls after coming from all over country seeking show's "easy money." But producer Walter Framer denied show solicits funds, said all contributions were voluntary—and show continued as scheduled. Actually, Framer will be notified officially Mon., Feb. 8, and if he refuses to apply for license, city could take matter to court.

Call them lotteries, charity, contests of skill, or just plain entertainment—nevertheless, TV-radio giveaways are big business. One of the larger giveaway agencies, Richard S. Robbins Co., 163 Bleecker St., New York, said this week that it had arranged giveaways for merchandise worth more than $2,000,000 last year via 12 network and 400 local TV & radio shows it services. Merchandise is contributed free by manufacturers in exchange for on-air plugs—and show packagers, networks or stations pay the giveaway agency.
ULUTH-SUPERIOR area's 2 new vhf stations apparently are racing to get on air, with WDSM-TV (Ch. 6) reporting this week that it expects to begin testing with 5-kw GE transmitter by Feb. 20, using 90-ft. tower, and to go commercial March 1. When weather permits, construction will begin on 500-ft. tower to be topped by GE 5-bay superturnstile. It will be CBS outlet, represented by Free & Peters. KDAL-TV (Ch. 3), which got 5-kw RCA transmitter in Dec. and which will be NBC outlet, has reported March tests (Vol. 10:2). Its rep is Avery-Knodel. Stations will bring first vhf competition to WFTV (Ch. 38), on the air since last May.

Only new-station shipment reported this week was 5-kw RCA transmitter which went out Feb. 3 to WMFD-TV, Wilmington, N. C. (Ch. 6), due on air around March 1. DuMont reported 25-kw amplifier shipped Feb. 1 to WJBF-TV, Augusta, Ga. (Ch. 6) which has been operating since Sept.

GE reported new order, due for shipment by end of month, for 12-kw transmitter and associated equipment for WGTH-TV, Hartford (Ch. 18), granted to subsidiary of General Tire General Teleradio, with Hartford Times holding option to acquire 45%. GE also reported 12-kw amplifier ordered by KCCC-TV, Sacramento (Ch. 40) to hike power of present 1-kw RCA. GE also noted that its 5-kw at CKOC-TV, Kitchener, Ont. (Ch. 13) was still in test for preparation for Feb. 20 commercial debut.

In our continuing survey of upcoming new stations, these were the reports received this week:

KSAN-TV, San Francisco (Ch. 32), has 1-kw GE transmitter, plans Feb. 15 tests, goes commercial April 6, according to owner Rev. S. H. Patterson who also owns radio KSAN and radio KJAY, Toppeka, Kan. Roger Skelton, ex-KPIX, is asst. mgr.; Ralph Sacks, sales mgr. Hour rate will be $500. Rep not yet chosen.

WHA-TV, Madison, Wis. (Ch. 21, educational) has its 1-kw RCA transmitter, but awaits delivery of Workshop Associates antenna, now has tentative mid-March target, reports exec. director H. B. McCarty.

PROBLEMS OF UHF stations may eventually come under Congressional scrutiny. Some lawmakers say they've received quite a few requests for investigations or legislation to "protect" uhf operators in vhf areas.

Sen. Johnson (D-Colo.) this week shot letter to FCC Chairman Hyde in effect asking Commission to justify recent grant of STA to WORD-TV, Spartanburg, S. C., to move antenna site to Paris Mt., 23 mi. from Greenville and 25 mi. from Spartanburg (Vol. 10:4). Said the Senator: "It is my understanding, that if that be done, 2 uhf stations already operating and 2 uhf stations which have been granted permits but are not yet on the air, may be forced to abandon operation. [FCC] should not put on technical 'blinders' and overlook the adverse effect this temporary authorization will have on the current and proposed uhf operations in the Anderson, Greenville, Spartanburg and Greenwood area."

Indicative of the pressures now being put on lawmakers, is this excerpt from letter to us by AM operator who recently gave up uhf CP because he couldn't get network affiliation: "I think personally the ultimate answer is a Congressional directive to the FCC clearly authorizing that body to regulate network affiliation arrangements and rates, and it can all be done simply by just requiring that in multi-station towns no station, vhf or uhf, can affiliate with more than one or two networks. I have written to our Congressmen and Senators to urge their consideration of such legislation...."

"TV Troubles: UHF Stations Flounder in Sea of Hardships," reads headline in Feb. 4 Wall Street Journal. Long article describes some of uhf's problems in "mixed" cities, quotes v.p. Harry Tenenbaum of WTVI, Belleville-St. Louis (Ch. 54) as saying that his station is now operating in the black. Local programming is big aid to conversion, Journal quotes Stewart Spencer, director of WCOS-TV, Columbia, S. C. (Ch. 25): "We televised as talent, under one guise or another, 1500-2000 Columbians during our first 6 months on the air."

Uhf distress stories tend to detract from fact that large number of uhf stations are operating successfully. One such operation is described in forthcoming issue of RCA's Broadcast News. Under title "Uhf Success Story," it details how Tom Gibbens' WAFB-TV, Baton Rouge, La. (Ch. 28) was operating in black after less than 30 days on air, gives impressive list of local and network programs, lists station's 101 spot accounts, contains pictures and diagrams of studio layout, personnel, equipment, etc.

RCA will give technical details of new 12.5-kw uhf transmitter (Vol. 10:4) and other telecasting equipment, as well as status report on color gear, at seminar for consulting engineers Feb. 11 in Washington's Statler Hotel.
Color Trends & Briefs:  An ingenious 24-year-old engineer without formal engineering education wanted to watch color, couldn't get or afford a tri-color tube, so he built himself a converter which he believes can be marketed for $50-$100. Conceivably, it could achieve a brief flurry of sales before regular color sets are plentiful and less costly.

Device employs old field-sequential rotating disc, and principle is simple. Whether public will buy it, is anyone's guess. Colors are quite faithful, but brightness is extremely low and flicker is very bad even at low brightness —yet it's a color picture.

Developer is Robert P. Benjamin, employe of Airtronics Research Inc., 5522 Dorsey Lane, Bethesda, Md. Company is engaged primarily in development of classified electronic ordnance equipment.

Converter is what FCC Comr. George E. Sterling hinted at in recent Boston speech (Vol. 10:5). Young Benjamin was high school classmate of one of Sterling's daughters, is married, has two children.

We observed converter in operation during Feb. 4 Howdy Doody program when it was used with old 15-in. DuMont set. We can vouch for fidelity of colors because we had watched Howdy Doody the 3 previous days on RCA tri-color tube set.

But the flicker-brightness problem is serious, and company officials recognize it—though they feel it can be minimized sufficiently to produce a marketable device. Pres. J. E. Butler and chief engineer Wm. Whelan, with refreshing candor, state that they regard converter solely as an interim device until industry picks up speed in producing conventional color sets.

Here's how converter works: A disc about 30-in. in diameter, with 6 color segments, is rotated at 600rpm in front of black-&-white tube. Incoming color signal is decoded into its 3 colors. The 3 color signals are then keyed so that only red is fed to picture tube when red segment of disc is in front of tube; process is repeated for other 2 colors. Only 60 fields per second are produced. This gives the high flicker rate, also produces considerable breakup—both much more serious than in CBS's old 144-field system.

Airtronics principals claim that increasing number of segments in disc and judicious balancing of green can improve flicker-brightness performance.

Device is not new. CBS's Dr. Peter Goldmark, developer of the field sequential system, tells us he's had one for about 6 months, finds it a valuable tool for checking performance of "Chromacorder" camera equipment because it has no possibility of misregistration.

"We call it our 'flickerscope,'" Dr. Goldmark said, "and I'm afraid that flicker would kill it as a device for the market." He said he's wondered whether amateurs and hobbyists would pick up idea.

RCA Labs' George Brown says his engineers have had some fun with same thing, building one quite some time ago. He said they made one in a few minutes, didn't have motor for it at first, so they drove disc by directing compressed air at periphery. He speculates that there may be some market for device as a novelty.

Hazeltine research v.p. Arthur Loughren also says he believes the flicker problem inescapable. As for market-ability, he thought it conceivable someone might try to make a quick killing on it. He also recalled 1940-50 talk of cheap conversion to field-sequential color which disappeared as engineers really got down to figuring costs. This makes him wonder whether the $50-$100 estimate is realistic.

Airtronics officials believe 16-in. is largest practical picture with disc. Sets with larger tubes could be converted by reducing size of raster. Circuitry with disc doesn't look very complicated; Benjamin says present 10 tubes can be reduced to 5. It's estimated 1/50th horse-power motor would be adequate. Set to be converted must be able to pass 3.6-me subcarrier. Many sets don't, but Benjamin believes most can be adjusted to do so. Breadboard setup was quite crude, with components exposed, old riveted disc, big clumsy electric fan motor, etc.

Pres. Butler says his patent attorney has made search, finding no previous record of technique. Industry experts are dubious that outfit can claim originality. They also believe that market for device would probably vanish before patent is issued, even if technique is unique.

Butler says next step awaits industry reaction. Company is small (200 employees), so that he doesn't contemplate manufacture himself, would prefer licensing or having others make converters for him. Converter is to be demonstrated at N. Y. IRE convention next month.

Young Benjamin, himself is, one of most interesting aspects of whole affair. A slight, modest fellow, he's almost entirely self-taught, is a whiz at such things as calculus. He built monochrome set in 1946 when commercial receivers were unavailable. He converted it to CBS color by changing circuits and holding motor-&-disc in front of tube. He has never seen a picture on tri-color tube. He became a ham, made contacts all over the world in matter of weeks. He's learned how to fly, Comr. Sterling, also self-taught, says he's "mighty fond of the boy."

Emerging from White House, where he presented NBC pres. Sylvester (Pat) Weaver and exec. v.p. Robert Sarnoff to President Eisenhower Feb. 6, RCA chairman David Sarnoff told newsmen they discussed color TV and the new atomic battery, among other things, with the President.

CBS-Columbia's first color seminar of a series for distributor personnel will be conducted Feb. 8-12 at Long Island plant.

communications subcommittee of Senate Commerce Committee, named Feb. 5, is headed by Sen. Potter (R-Mich.) with Schoeppel (R-Kan.), Griswold (R-Neb.), Hunt (D-Wyo.) and Pastore (D-R.I.). Subcommittee or full Committee is expected to hold hearings on FCC's requested legislation to amend "protest" section of Communications Act so that filing protest doesn't automatically halt effectiveness of CP (Vol. 10:5). Measure (S-2853) was introduced by Committee Chairman Bricker (R-O.). Some Senators feel it would effectively nullify entire McFarland Act provision on protests.

Nationwide series of clinics on color set installation and maintenance, conducted by RCA for TV servicemen, will begin Feb. 15 with 2-day seminars to be held simultaneously in 15 cities. They will be held in other major cities later. Cities with seminars Feb. 15-16: New York, New Haven, Newark, Philadelphia, Pittsburgh, Washington, Cleveland, Cincinnati, Detroit, Chicago, St. Louis, Des Moines, Denver, San Francisco, Los Angeles.

CBS-Hytron closed one plant in Newburyport, Mass. this week to convert it to production of Colortron tubes. Pres. Charles F. Stromeyer said about 250 workers were furloughed, but all will be rehired when plant is reopened in about a month.

End of a color era came this week with dissolution of National Television System Committee (NTSC) formed by RETMA at height of color controversy to get industry agreement on compatible standards acceptable to FCC.

Monthly color production figures will be released by RETMA as soon as current plans for reporting data are arranged with all manufacturers. No date has been set for first report.
HIGHER-PRICED SETS ARE SELLING, TOO: In an industry spotlighting the cheaper models, is there a place in today's TV market for custom-type lines which feature quality styling and special engineering at correspondingly higher cost?

We put that question this week to several so-called middle-bracket set makers who haven't and apparently can't go along with bigger companies in bringing prices down as low as $160 for 17-in. and $200 for 21-in. Answers were quite affirmative. We found all quite pleased with current market, very optimistic about future sales -- consequently none was disposed to get into a cat-and-dog fight with those better equipped to produce lowest-priced sets.

Stromberg-Carlson's lowest sets are a 21-in. table at $230 & 21-in. console at $350. Said TV-radio gen. mgr. C.J. Hunt: "We think there'll always be a market for quality sets. The public will always be price-conscious but there will always be a certain segment which will be interested more in quality than in price. Right now, it's a tough competitive market but we have no reason to believe people have gone completely nuts over low-priced sets.

"Our January sales this year were 30% over last year. As for production, we are operating in the first quarter only 6% below the first quarter of 1953. We had planned it that way and our business so far has led me to believe we hit it right on the button. Full-door consoles are still selling in limited quantities. Our inventory position on all sets is good now and I believe it'll stay that way."

Magnavox's pres. Frank Freimann stressed impracticability of trying to get down as low as leaders. "Every manufacturer must recognize his own niche," he said. "We've built a reputation for quality and we intend to maintain it. We try to keep our sets within reach of the average consumer but we're not sacrificing quality."

DuMont's Dan Halpin, with a 17-in. table leader at $200, said wood quality was all-important. He said DuMont won't make sets in plastic or metal just to bring down the price. Compare wood for wood and DuMont is competitive with leaders, he said, citing DuMont 21-in. walnut table at $260 as against one leader's $270.

"We think there's a market under $300, not just under $200," he said. "We find that new markets are especially strong for sets selling between $250 and $300. How long it will last is anybody's guess, but I believe any manufacturer will do all right as long as he adjusts his production and inventory with a common sense recognition of the laws of supply and demand. We've instituted a planning program which keeps much closer tabs on our inventories and those of the distributors and dealers and we're constantly revising it to make sure it's up-to-date."

Spokesman for Raytheon, whose prices are not quite as low as majors but considerably under Stromberg-Carlson and Magnavox down the line, said it was "reasonable to assume we can sell TV sets without dumping them at rock-bottom prices." He said Raytheon was "getting about as much of the current market as we anticipated."

That was gist of respondents who believe they can continue to sell higher-priced sets. But contrary view was taken by one set maker, who asked us not to identify him. His comment: "The TV market has definitely shifted to the middle and low-priced brackets, and we are in that category to stay. We have priced our sets competitively with the industry leaders and we expect to keep pace with them pricewise in the next 6 months. At least we're going to try."

* * * *

TV business by and large continues to rebound nicely from slow Jan. start, though regional differences continue to exist, of course. Augmenting our findings (Vol. 10:5), RETMA spokesman this week said reports from all levels of trade indicated business "as good as, if not better than, a year ago." Trade entered Feb. with about 1,700,000 sets in all pipelines, reduction of about 150,000 since first of year, down from 2,300,000 peak last October.
Another indication of pickup was Crosley's recall of some 300 workers laid off last year at Cincinnati TV plant, with almost 500 workers due to be recalled by mid-Feb. to meet increased production schedules. Leonard F. Cramer, v.p.-gen. mgr., said current output rate is 12% over first quarter year ago and 18% over the final quarter of 1953. Philco spokesman indicated that many of the 700 workers furloughed recently (Vol. 10:5) may be recalled shortly.

But GE was one company having TV troubles. It cited impact of color publicity on trade as one reason why 2150 workers at Syracuse & Auburn, N.Y. were laid off for this week only. Another factor was retooling for new models.

* * *

TV production totaled 110,156 week ended Jan. 29, compared to 111,188 the preceding week and 95,915 week ended Jan. 15. It brought Jan. production to about 420,000, compared to 719,234 Jan. 1953. Radio output totaled 202,837 Jan. 29 week, compared to 215,976 Jan. 22 and 221,372 week before, bringing Jan. production to approximately 863,000 vs. 1,093,142 year ago.

Trade Personals: Dr. Peter C. Goldmark, prime developer of CBS field-sequential color system and long-playing "microgroove" records, promoted from v.p. to pres. of CBS Laboratories... W. F. Hoeppner promoted from Capehart-Parnsworth controller to asst. to pres. Fred D. Wilson; treas. Paul H. Hartmann takes on Hoeppner's duties. Jack Krieger resigns as exec. v.p. of Starrett, his duties assumed by office mgr. Wm. Jacobson... Albert Lederman promoted to head new mechanized circuits dept. of Sylvania parts div., Long Island, N.Y. ... Robert W. Conner promoted to mgr. of new installation & customer service section of RCA broadcasting div., taking over field installation, service & warranty problems formerly handled by broadcast operations section. ... Henry A. Browe, ex-Admiral, named Sylvania Chicago district sales mgr., replacing Tom Ryan, now mid-west region mgr. ... Bert Rice, ex-CBS-Columbia Distributors, N.Y., named mid-Atlantic district mgr. for parent company; A. Phil Stone, ex-Philco, named district mgr. of Denver ... Richard W. Strauss promoted to controller of Stewart-Warner Electric; Roy E. Duvall named asst. controller ... Varley P. Young has resigned as Aveco director of public relations, Cincinnati. ... Robert Tauber promoted to chief of Kaye-Halbert electronics section, succeeding Fred Miller, resigned ... Joseph Resnick, 29-year-old Channel Master chairman, subject of 4-page article in Feb. Popular Science Monthly, crediting him with building $12,000,000 antenna business in 6 years ... John B. Schuman promoted to adv. director of Borg-Warner's Norge div., replacing David Kutner, who becomes Motorola adv. director March 1, succeeding Ellis Redden, resigned ... Merle Cain, ex-Hallcrafters, joins V-M Corp., Benton Harbor, Mich., as distributor sales mgr. ... Wm. A. Ready, ex-pres. of National Co., elected to board of Browning Labs ... J. A. Zuvich, ex-National Electronic Research Corp., named sales mgr. of Reon Tube Corp., Yonkers, N.Y. ... Robert A. Hoagland named sales mgr. of new Aerovox-New Bedford div. ... M. Robert Wilson, ex-Hallcrafters sales v.p., joins C. Robt. Steltenkamp, ex-pres. of Chicago Sales Engineering Co., to form Steltenkamp, Wilson & Assoc., management consultants, 1 No. LaGrange Rd., LaGrange, Ill. ... Harold O. Wood, since 1951 in charge of Philco TV receiver design, appointed chief engineer of TV div.; Wilson P. Boothroyd promoted to chief engineer of Philco advance development lab. ... W. C. Lederer promoted to Bendix sales promotion mgr., working with Herman S. Sacks, adv. mgr. ... Capt. John N. Boland, USN ret., appointed Raytheon Washington mgr.

Distributor Notes: Emerson sets up factory branch to replace Emerson-New York Inc. in move which pres. Benjamin Abrams says will result in more economical operation in highly competitive N.Y. market. Emerson-New York was owned by members of Abrams family (Lou Abrams, pres.) and they will be transferred to key positions in factory branch, which will be known as N.Y. div. of Jefferson-Travis Inc. Latter is Emerson cabinet manufacturing subsidiary. Emerson also acquired 50% interest in Emerson-New England, Boston, remainder held by pres. Morris Rosenfeld... Admiral establishes factory branch at 2205 McKinley Ave., Houston, managed by Michael J. Nicolin, ex-gen. mgr. of San Diego branch ... Pacific Mercury establishes factory branch for San Francisco & Fresno, replacing N. C. Teakle Co. ... Bendix Radio appoints Standard Electric Supply Co., Milwaukee (Leonard H. Siegel, v.p.) ... Sentinel appoints James Kerwin Co., ex-Raytheon Los Angeles outlet, replacing Sentinel factory branch ... DuMont appoints Charles H. Coombe, ex-Motorola eastern regional sales mgr., as gen. mgr. of factory branches in Miami, Tampa & Jacksonville; G. M. Nutter Inc., Cleveland (DuMont) elects H. F. Klova, ex-asst. mgr., as pres., succeeding late founder G. M. Nutter... Canadian Admiral appoints Edwin Whittaker supervisor of distributor branches in Toronto, Windsor, Montreal, Vancouver, London & Sudbury ... Olympic Radio names Jack Haizen, Chicago factory branch mgr., as pres. of subsidiary Olympic Appliances Inc., N.Y.; Morton Schwartz named pres. of Olympic of Chicago Inc. ... Covington Distributing Co., Houston (Hoffman Radio) appoints Charles S. Ely v.p.-gen. mgr. ... Robert L. Rice Co., Portland, Ore. (Crosley-Bendix) appoints Ralph Sachs TV-radio sales mgr. ... Emerson-New Jersey Inc. promotes Murray Golden from gen. mgr. to v.p. ... Ray Thomas Co., Los Angeles (CBS-Columbia) appoints John Lyons TV sales mgr., replacing Wm. Tiner, now field sales mgr. ... Leo J. Meyberg Co., San Francisco (RCA Victor) announces resignation of gen. mgr. Richard Sanford, who becomes merchandise mgr. of Hale's, northern California dept. store chain.

Shakeup at CBS-Hytron boosted Charles F. Stromeyer to presidency this week after only 2 weeks as exec. v.p. He succeeds Bruce A. Coffin, founder & pres. of company since formation in 1921 as Hytron Radio & Electronics Corp. At same time, retirement of Lloyd Coffin as treas. was also announced. The brothers Coffin will retain their membership on board and stockholdings in parent CBS, in which Lloyd holds 10,090 shares of Class A common & 16,000 B, Bruce 10,880 Class A & 17,600 B. They obtained their stock in 1951 with acquisition of Hytron by CBS.
Topics & Trends of TV Trade: Curious parallel between TV and automobile production, which have followed strikingly similar curves in past (Vols. 8:45; 9:9, 45), bobs up again in comparison of 1953 output of each industry. Official TV production was placed by RETMA last week at 7,214,787 sets; 1953 auto-truck output was 7,328,040 units, according to Automobile Manufacturers Assn. Consider these other similarities:

Both industries had retail sales of approximately 6,500,000 units; both production totals were second highest on record for each industry; both set their records in 1950 (7,463,800 TVs, 8,003,056 autos); both suffered through periods of high inventories last year; both expect lower production this year (TV predictions range from 5-6,000,000, autos from 6-7,000,000).

Comparisons with 1951 and 1952 aren’t quite fair to automobile industry, whose production was limited by govt. mandate for those years and part of 1950 in effort to channel scarce supplies into defense production. Nevertheless, both industries kept pace for first 9 months of 1952, with TVs at 3,670,591, autos at 3,878,734. TV industry pulled away in last 3 months, totaling 6,096,279 for year, as against 4,336,477 auto-truck units. Auto industry quota for 1952 was 4,500,000.

Month-by-month comparison of output last year points up even sharper parallel. TV production rose steadily first 3 months of year; auto output rose through April. Both fell off in May, both picked up in June. Both maintained almost equal pace for rest of year, though differing curves. Here’s month-by-month comparison:

Standard parts tag for use on all components returned to manufacturer for replacement under set warranty was approved this week by RETMA at request of TV-radio service technicians. Standardized tag includes all information participating manufacturers feel is necessary to replace parts promptly and eliminates need for technicians to carry tags from each manufacturer.

NARDA Blue Book on major appliances trade-ins will be available March 1 from NARDA office in Merchandise Mart, Chicago. One copy is free to NARDA members; extra copies are $3.50 each or $2.50 each for 3 copies, $2 for 5 or more. Non-members may order directly from publisher, National Appliance Trade-In Guide Co., Madison, Wis.

Zenith Radio will introduce new TV & radio models at distributors meeting in Chicago’s Drake Hotel, Feb. 11. It introduced no new sets at recent Chicago Furniture Mart but lowered price of 21-in. mahogany table from $250 to $200, and 17-in. mahogany console from $270 to $200.

As Feb. promotion only, Hoffman Radio cut retail price of 21-in. full-door mahogany console (Model 718) from $380 to $300, blonde version $390 to $300. It’s part of month-long birthday celebration.

Raytheon adds 2 models to 1954 line: Shelby, 21-in. mahogany leatherette table at $200, and Wilshire, 21-in. open-face mahogany console at $300, blonde $320. Optional uhf tuner is $30 extra.

Record industry went topsy-turvy this week with series of headline-producing price slashes on classical records that even had trade press predicting king-sized price war would follow. Columbia Records touched it off with a “one-and-a-half” sale for Feb. only, in which 12-in. long-playing classical record normally selling at $5.95 would be sold for $4.46 if 2 were purchased. RCA Victor, which rivals Columbia for top place in the record industry, immediately reduced all classical records straight one-third, cutting 12-in. from $5.72 to $3.99 and 10-in. from $4.67 to $3.25. Mercury Records and Westminster Records then proposed deals similar to Columbia’s. Capital Records said it was holding price line at present but might have to reconsider. Decca and M-G-M Records said they had no plans to cut. Consumers were reported eager to snap up records but dealers, who had loaded up at old price, weren’t as enthused. Classical records accounted for about $60,000,000 at retail last year, or roughly 25% of all record sales.

TV set sales by Canadian factories totaled 365,400 last year, at average price of $406, compared to production of 422,951, reports Canadian RTMA. They compared with 1952 sales of 137,236, at average price of $442, production of 146,373. Quebec led with 120,176 sets sold; Toronto second, 101,193; Hamilton-Niagara, 42,178; Ottawa & eastern Ontario, 34,514; other Ontario, 23,334; Windsor, 22,711; British Columbia, 19,097; Prairies, 1319; Maritime Provinces, 878. For Dec. alone, sales were 51,767, inventory 63,905 at month’s end. Projected production estimate is that 139,624 sets will be turned out first 3 months of 1954. Vincent Barreca, pres. of Canadian Admiral Corp., recently predicted more than 500,000 sets, valued at $200,000,000, would be sold in all of 1954, thanks to new stations and new markets opening up.

Dividends: P. R. Mallory, 50¢ payable March 10 to stockholders of record Feb. 18; Westinghouse, 50¢ March 4 to holders Feb. 8; Stewart-Warner, 35¢ extra and 40¢ regular quarterly March 6 to holders Feb. 12; Aircraft Radio, 10¢ Feb. 15 to holders Feb. 5; Standard Coil Products, 25¢ Feb. 14 to holders Feb. 5; Weston Electrical Instrument, 25¢ March 10 to holders Feb. 29; Magnavox, 37¼¢ March 15 to holders Feb. 25; American Phenolic, 25¢ Jan. 29 to holders Jan. 15; Zenith, 50¢ March 31 to holders March 10; In Roosevelt, 20¢ March 15 to holders March 6; Tung-Sol, 25¢ March 2 to holders Feb. 15; International Resistance, 5¢ March 5 to holders Feb. 15; Standard Radio Ltd. “A”, 20¢ April 9 to holders March 19.

Hoffman Radio enjoyed biggest sales year in its 12-year history during 1953, totaling more than $50,000,000 as against $34,769,201 in 1952, reports pres. H. Leslie Hoffman. He said he expected further gain in 1954 due to new TV-radio-phono plant in Kansas City and larger share of markets being gained in Southwest, Midwest & East. Net profits for first 3 quarters of 1953 were $1,115,533 ($1.94 per share) compared with $994,282 ($1.73) in same 1952 months. Final 1953 figures have not yet been compiled.

Television-Electronics Fund Inc. reports net assets of $28,835,374 ($13.58 per share on 2,124,072 shares outstanding) as of Dec. 31, 1953 vs. $24,786,839 ($14.37 on 1,725,440 shares) one year earlier.

W. W. Ring, 48, asst. to Westinghouse v.p. in charge of consumer products, died in Pittsburgh Jan. 20 after a heart attack.
Electronics Reports: RCA's recent demonstration of "atomic battery" (Vol. 10:8) has sparked several rival claims of earlier development of similar devices. In response, RCA spokesman reiterates point made at demonstration—that RCA contribution isn't simply that it managed to derive electricity from radioactive materials but that its technique is 200,000 times as efficient as previously known methods.

Ohmart Corp., Cincinnati, is one organization challenging RCA's claims, stating that since 1951 it has been marketing devices producing electricity from radioactivity. RCA official says that Ohmart device is a "one-for-one" unit—producing one electron of electricity for each radioactive electron—whereas RCA's unit produces 200,000 for one. Another organization making related devices is Radiation Research Corp., West Palm Beach, Fla., marketing them for radiation detection instruments.

TV set using "Tinkertoy" construction has been built by Sanders Associates Inc., Nashua, N. H., to show manufacturers how automatic production techniques can be adapted to production of commercial products. Project Tinkertoy was developed jointly by Navy, Bureau of Standards and several private firms to produce electronic assemblies automatically (Vol. 9:38). Based on "modular" design, system employs series of small wafers as building-blocks for subassemblies. Sanders' TV set uses 13 modular units (sets of wafers) on 3 plug-in printed circuit chassis, eliminates almost 600 hand-soldering operations. Specifications for tools required to set up pilot runs of Tinkertoy are available at Office of Technical Services, Commerce Dept. (Report PB 111277).

Silicon transistors have been made by Raytheon and tested at temperatures up to 350°. Company announced that its research div., working on Defense Dept. contract, tested silicon junction transistors at temperatures higher than the failing point for germanium transistors, but emphasized that silicon transistors are still long way from actual production. Philco last month announced development of silicon transistor using "surface-barrier" technique (Vol. 10:3).

"Manufacturers Radio Service," sought by NAM's Committee on Manufacturers Radio Use (Vol. 9:47:50), was turned down by FCC this week. It said proposal, which would use 460-462 & 468-470 mc, now assigned to Citizens Radio Service, is "premature" and request for such service should be part of a future reallocations proceeding.

Western Electric has licensed 40 U.S. firms to manufacture transistors, Bell Telephone's Albert Barnes told Philadelphia's Poor Richard Club this week. He added that Bell now is producing 40 different types of transistors.

Lewyt Corp. being reorganized into 2 companies: Lewyt Mfg. Corp., to manufacture electronic and precision mechanical equipment on contract basis for Govt. and industry; Lewyt Corp., to manufacture and market vacuum cleaners.

Waldom Electronics Inc., Chicago, enters TV equipment field with distribution amplifier to couple 2 sets to one antenna and serve as booster for both, at $95.00 list.

Greatest off-year use of TV is planned by Republican Party for this year's Congressional election campaign, and included in $5,800,000 budget approved by GOP National Committee Feb. 6 in Washington. Committee didn't break down figure to show amounts to be appropriated to TV & radio.

Minor league baseball is in bad shape—and it's TV-radio's fault. So minor league czar George Trautman told special joint meeting of both major leagues this week in New York. "In 5 years since 1949 there has been a combined drop in attendance, major and minor, of 26,000,000," he said. "The total number of leagues during that period has dropped from 50 to 37 [and] there is now no baseball in 172 cities and towns which had it 5 years ago." He put principal blame on broadcasts and telecasts of major league games, which he said not only cut into attendance at minor league games but have virtually wiped out revenues the minors formerly got from radio broadcasts of their games. Commenting editorially on Trautman's plea for more TV controls, Scripps-Howard newspapers said Feb. 1: "It is, we agree, a deplorable situation. But, even as ardent baseball fans, we can offer Mr. Trautman no sage advice. Probably nothing can be done either about cycling, canals, silent movies, nickel beer, wood-burning locomotives, peg-leg trousers, gas lights, stereopticons, derby hats or side whiskers."

Strict limits on televisual or broadcasting of its hearings were imposed by House Govt. Operations Committee Feb. 4 in 18-2 vote. Decision apparently wasn't intended as slap at TV-radio but at Chairman Hoffman (R-Mich.), who has been accused of trying to "create a circus" of committee hearings and of "wiring the room" for recordings so he could use members' own remarks against them politically. Rule was recommended by subcommittee headed by Rep. Bender (R-O.), requires unanimous consent of all subcommittee members to televise, broadcast, film or record any subcommittee meeting, and approval of majority of 30-man committee for televising or broadcasting full committee sessions. Voting against rule were Reps. Hoffman and Meader (R-Mich.). Meanwhile, Ohio Supreme Court unanimously adopted "rule of judicial ethics" barring photographing, broadcasting or televisual of proceedings of any state court.

Attorney General Brownell soft-pedaled much-headlined reports of "anti-trust investigation" of ad agency practices, particularly standard contract forms and 15% agency discount fees, telling news conference Feb. 4 that study was preliminary only and "does not mean any action will follow." He added it was one of a series of studies conducted periodically by Justice Dept. to enforce anti-trust laws. He said ad study stemmed from anti-trust investigation several years ago of uniform commission rates charged by some real estate brokers. It was dropped when no violations were uncovered. FBI agents checked files of NARTB, AAAA and leading agencies this week, NARTB chief attorney Vincent Wasielewski saying he was certain his organization had violated no laws but willingly turning his files over. Heading study is Asst. Attorney General Stanley Barnes.

Educational TV proponents were heartened this week by N. Y. Gov. Dewey's message to legislature proposing state's 10 non-commercial stations be operated by "responsible" non-profit groups under general supervision of State Board of Regents. Latter group, at odds politically with Dewey, immediately replied it still favored state-financed network which was rejected last year by N. Y. State Temporary Commission on Educational TV (Vol. 9:9-10) but said they would go along with Dewey's proposal in effort to get educational TV going. Non-profit groups have already been organized in New York, Buffalo and Albany-Schenectady-Troy. Joint Committee on Educational TV congratulated Dewey and asked permission to circulate copies of his message to educational groups around the country.
Telecasting Notes: National TV spot users jumped from 1546 in 4th quarter 1952 to 2153 in 4th quarter 1953 when they used 44,559 schedules on 195 stations (average, 71.5 per station), according to latest quarterly Rorabaugh Report on Spot TV Advertising which details how, when, where and to what extent all national & regional advertisers used medium during the quarter. With 360-odd stations now on air, Rorabaugh states that 32 more have already signed up to start reporting their accounts, which are listed by stations, beginning this quarter . . . New "Videotown," reportedly in Ohio, has been chosen by Cuningham & Walsh, which has decided that TV in New Brunswick, N. J. has stabilized so the town no longer serves to depict TV growth . . . Daytime viewing rose 9% between April-Dec. 1953, reports Advertiser, some 60% of those sampled in N. Y. metropolitan area survey stating they were regular daytime viewers, some 25% saying they'd watch more if shows were better; most popular hours are 10-11 a.m., 3-5 p.m. . . . More rate increases: KABC-TV, Los Angeles, raises Class A hour from $1200 to $1500, one-min. from $220 to $275, adds new Class AA one-min. rate of $350 for 8-10 p.m. segments daily; WOKY-TV, Milwaukee, Class A from $300 to $400, one-min. $60 to $70 . . . Lowered rates: WILS-TV, Lansing, cuts base hour rate from $200 to $150; WJHP-TV, Jackson- ville, lowers one-min. from $40 to $30 . . . Dorothy Dix material and name rights for TV-radio acquired from Bell Syndicate by Roland Israel, Philadelphia adman, who plans to syndicate film Dear Dorothy Dix thru Helen Greer-Israel Enterprises Inc. . . . Ziv acquires TV-radio rights to Mr. District Attorney for $250,000 from Phillips Lord; David Brian to play title role in new series being filmed in Hollywood . . . ABC-TV Manual No. 3, covering charges for facilities, personnel and production services for network programs from its 5 originating centers, released this week . . . Success of K-2 mountain-climbing expedition film underwritten by NBC-TV has led network to negotiate similar exclusive deal with Lowell Thomas Jr. covering expedition into Australia . . . WCBS-TV this week end completes moving of offices into Look Bldg., across street at 488 Madison Ave., adjacent to new CBS-TV Spot Sales offices.

J. O. Willett acquires 98% ownership of KFAZ, Monroe, La. (Ch. 45) by reason of FCC decision this week authorizing transfer of Howard E. Griffiths' 49% for $25,500 and other considerations. Mr. Willett, motor carrier and pipeline operator, went into the venture last year in association with Mr. Griffiths, an industrial communications consultant, who apparently is pulling out because, as transfer application stated, "Operation of KFAZ to date has been unprofitable principally due to its inability to obtain a network affiliation. [It] competes with vhf station KNOE-TV [Ch. 8, owned by ex-Lt. Gov. James A. Noe and affiliated with all 4 networks] which commenced operation after KFAZ went on the air." KFAZ started last Aug. 11, KNOE-TV Sept. 26. Population (1950 census) of Monroe, La.: 38,572.

Authorization to strike against 4 networks "if necessary" was voted Feb. 3 by membership of New York Local 802, American Federation of Musicians. Union "suspended" talks with ABC, CBS, NBC & MBS for contract renewals; it's asking that networks use live music on all TV-radio shows where music is played, in addition to 15% pay boost.

Application advertising and 30-day cutoff rule, proposed by FCC last July to speed processing (Vol. 9:27,33) was found to be neither necessary nor popular and Commission dropped the proposal this week.

Stuart Sherman has resigned as an officer & director of Sherman & Marquette, and his partnership acquired by company.

Maj. Edwin H. Armstrong, 63, inventor of FM, the superheterodyne, the regenerative and the super-regenerative circuits, died Feb. 1 after plunge from window of his luxurious 13th floor apartment in River House, New York. That he had jumped was apparent from notes he left his wife and sole survivor, Marion, who was away visiting her sister in Conn. at the time; the notes indicated strained relations between them, for he expressed regret that he had hurt her and stated it was "heartbreaking" that he could not see her again. He also stated his estate was solvent, making mention of his litigation with RCA and "the telephone company." In recent years, Dr. Armstrong has spent most of his time in infringement litigation, largely against those companies, recently filing suits also against other manufacturers (Vol. 10:3). One of radio's greatest inventors, he was a boy prodigy, became a protege of famed Michael P. Pupin, to whose Columbia U chair as professor of engineering he succeeded in 1934. He was, as The New York Times stated editorially Feb. 2, "one of the most brilliant, complex and controversial figures in the realm of radio engineering." His large fortune derived largely from the sale of certain of his patent rights, in exchange for stock, during the early days of RCA. He sold the stock at peak. His wife was onetime secretary to RCA's David Sarnoff when latter was executive v.p. of the company.

Wires Romulo O'Farrell Feb. 1 in belated reply to our Jan. 27 telegram to Mexico City: "At present not contemplating moving XEEL-TV." He thus answers the widely published reports that XEEL-TV, Matamoros (Ch. 7), across border from Brownsville, Tex., has been authorized to move to another city in Mexico (Vol. 10:5). No such authorization has been given by Mexican Ministry of Communications, said a spokesman, nor are there any plans to quit the area simply because there's now competition from KGBT-TV, Harlingen (Ch. 4) and shortly will be more from upcoming KRGV-TV, Weslaco (Ch. 5). Harlingen station acquired CBS, Weslaco will be NBC, but Mexican-operated station, while admitting tougher competitive situation, maintains it can continue in business by virtue of excellent signal, favorable rate structure and good record of service to audience and sponsors.

Three new applications for TV stations were filed with FCC this week, 4 were dismissed, leaving 320 pending (61 uht). Week's applications: for Dothan, Ala., Ch. 9, by local group headed by builder Charles Woods; for El Paso, Tex., Ch. 13 by KELP (Texas broadcasters Barton & Gordon McLendon, former principals in Liberty network); for Buffalo, Ch. 7, by WKBW, replacing same group's present application, but with new minority stockholders. [For further details about these applications, see TV Addenda 18-8 herewith; for complete listings of all grants, new applications, dismissals, hearings, etc., see TV Factbook No. 18 and Addenda to date.]

Network interconnections this week: WCSC-TV, Charleston, S. C.; KOMU-TV, Columbia, Mo.; KWFT-TV & KFDX-TV, Wichita Falls, Tex.; KHOL-TV, Kearney, Neb. AT&T long lines dept. this week applied with FCC to construct 2 westbound TV channels from Amarillo to Albuquerque, to be completed by late summer. Eventually it intends to build eastbound channel from Los Angeles to Las Vegas, thence to Albuquerque, providing new west-to-east route. KOB-TV, Albuquerque, has signed interconnection contract with NBC.

There were 6,432,000 TV installations during 1953, reports NBC research director Hugh M. Beville Jr., bringing total in U.S. to 27,668,000. It was best year since 1950 when 6,600,000 were installed. Beville estimates post-freeze markets accounted for 2,626,000 new sets or nearly 41% of the 1953 increase.
FILLING THE 'HOLES' IN STATION COVERAGE: Concept of satellite and booster stations keeps cropping up, and time is getting closer when FCC will give matter serious consideration. Commission still regards establishment of regular stations as its prime occupation, but it believes that this main vein will be sufficiently worked out to permit delving into supplementary services before end of year.

As Comr. George Sterling indicated in recent Boston speech (Vol. 10:5), the problems of uhf coverage with present transmitters and receivers causes Commission to view satellites and boosters more favorably than it would otherwise. Sylvania has already asked FCC to establish satellites on a regular basis (Vol. 9:38), and WSM-TV, Nashville, has petitioned for authorization of boosters (Vol. 9:45). Commission considers these quite helpful but wants more comment. Chairman Rosel Hyde says he regards Sterling's speech as a trial balloon, hopes it brings more ideas.

So eager is Commission to aid uhf that one top staff member says he believes FCC may be willing to issue special temporary authority now to stations willing to build small repeaters to fill "holes" within their coverage areas -- say up to 60 mi.

In issuing such authorizations, Commission would probably require proof that new little stations would indeed make the difference between service and no service. It would also require that they wouldn't disturb spacings of its allocation plan.

Definitions of boosters and satellites should be made clear, to show the different problems involved in each. A booster is small station which picks up and rebroadcasts programs from an originating station, using same channel as originating station. Satellite employs channel different from that of originating station.

Commission seems particularly impressed with satellite plan of Sylvania because it would safeguard allocation plan and give satellites opportunity to grow into regular independent stations capable of providing local expression. On other hand, it likes principle of boosters because they don't use up extra channels, but it's leery of the possibility that originating station could use boosters to extend coverage at expense of co-channel and adjacent-channel stations.

There's not too much interest in granting satellites and/or boosters to vhf stations with good coverage. Says one commissioner: "They're not suffering." On other hand, FCC is bound to consider any method of bringing service to communities which would not otherwise get it.

* * * *

Approach to satellite status, at least as far as FCC rules allow, has been made by a few broadcasters. W.D. Rogers, KDUB-TV, Lubbock, Tex., came to Commission with idea that he build stations in Big Spring and Sweetwater, feed them from Lubbock, operating with absolute minimum -- in local programming, equipment, personnel. He now has CP for KPAR-TV, Sweetwater (Ch. 12), with 2.95-kw ERP, estimated
construction cost of $93,213, yearly operating cost of $90,000. His application for Big Spring is being contested by another applicant.

Another approach is that of Frank Hoy, operator of WPMT, Portland, Me. (Ch. 53) and WLAM-TV, Lewiston (Ch. 17). He feeds Lewiston with direct off-air pickup from Portland. Though the Class A hour rate for Portland is $200, sponsor can add Lewiston for mere $25 more -- for combination rate of $225.

One of most ambitious projects was proposed just this week by parts manufacturer Sarkes Tarzian, who operates WTTV, Bloomington, Ind. Aiming to build 3 uhf "almost satellites," he petitioned FCC to reschedule allocation so as to put low-band Ch. 21 in Huntington, Ch. 23 in Anderson, Ch. 25 in Logansport. He plans to apply in those towns, program as much as FCC will allow by microwave feeds from the Bloomington "mother" station.

Tarzian will build own uhf transmitters, has filed for experimental uhf station in Bloomington to test equipment and coverage.

What the satellite and booster proponents would like is to extend these concepts much further -- to 100-watt transmitters, 100-ft. towers, remote operation, no local origination, part-time engineers, etc. Sylvania estimates satellites can be built for $15-$20,000 each.

Until day comes that TV stations can be built and programmed as cheaply as AM, relative to income, Commission is likely to look with more and more favor on these supplementary stations to expand TV. What it doesn't want to do, however, is to bollix up its allocation plan in the process or to preclude the growth of these "fillers" into full-fledged community media.

5 NEW STARTERS; DuMONT'S KCTY QUITS: Biggest week so far this year for new stations saw 5 more go on air, including Puerto Rico's first -- for total of 367 now in operation, of which 128 are uhf. Eleven stations have started since Jan. 1.

DuMont this week decided to abandon its uhf experiment in Kansas City in the interest of "sound business judgment." Sudden announcement at week's end told of decision to close down KCTY (Ch. 25), which it acquired just 6 weeks ago from Empire Coil Co. for $1 (Vol. 10:1). Network said it had studied situation carefully and concluded Kansas City viewers were adequately served by their 3 vhf outlets. Statement by Dr. Allen B. DuMont stressed that the problems were "peculiar to Kansas City and not necessarily fundamental limitations of uhf broadcasting in general."

KCTY will turn off juice Feb. 28 to become 3rd uhf station to go off air -- out of total of 130 uhf starters. Other two were Roanoke's WROV-TV and Buffalo's WBES-TV. Two post-freeze vhf outlets also went dark pending changes in ownership. The new stations which began operation this week:

WKAQ-TV, San Juan, P.R. (Ch. 2) is now testing 5-kw GE transmitter, aiming at commercial start Feb. 14 with telecast of Caribbean baseball series next week as its first big event. It began with intermission power of 4.9-kw ERP from temporary antenna 75-ft. above ground on 1973-ft. Marquessa Mt., 12 mi. from downtown, later plans to go to maximum 100-kw from 300-ft. tower. It's CBS affiliate, plans both Spanish and English language programs. Owner Angel Ramos is publisher of El Mundo. R. Delgado Marquez is gen. mgr.; David Polinger, commercial mgr.; Fernando Cortes Jr., program mgr.; Angel del Valle, chief engineer. Base hour rate is $200. Inter-American Publications is rep. San Juan's second station, WAPA-TV (Ch. 4), is due soon.

WNEM-TV, Bay City-Saginaw, Mich. (Ch. 5) started test patterns Feb. 11 after series of bad-weather delays, plans NBC & DuMont programming soon via AT&T relay from Detroit. It's first local competition for WKNX-TV, Saginaw (Ch.57), which began last April. WNEM-TV has 5-kw DuMont transmitter, with 400-ft. Stainless tower 4 mi. NE of Saginaw. Station resulted from merger of local WGRO & WSAM. President is James Gerity Jr. (WGRO); Milton L. Greenebaum (WSAM) is v.p.; John H. Bone, ex-WLWT, Cincinnati, is gen. mgr.; Harvey M. West Jr., commercial mgr.; Lee Stevens, acting chief engineer. Base hour rate is $350. Headley-Reed is rep.

WRDW-TV, Augusta, Ga. (Ch. 12) beamed first test pattern Feb. 9 from 10-kw RCA transmitter and 12-bay antenna on 425-ft. Emsco tower, plans Feb. 14 commercial debut with CBS programs. It's city's 2nd vhf, WJBF-TV (Ch. 6) having begun last
fall. WRDW-TV calls its downtown TV Center "one of most modern in the south." Its principals are pres. Grover C. Maxwell; v.p. Harry W. Jernigan; exec. v.p. Allen M. Woodall (who also is part owner of WDAK-TV, Columbus and WETV, Macon); gen. mgr. W. Ray Kingston. Roger J. LaReau is station mgr. and Sammy Barton is production mgr. Base Class A hour rate is $200. Rep is Headley-Read.

KIBD-TV, Fresno (Ch. 53), third in that all-uhf city, sent out first test pattern Feb. 8, began programming Feb. 13 with 15-hour telethon for Fresno County Heart Assn. It's first of 3 California stations being built by John Poole, wealthy pioneer uhf enthusiast, shares site and tower with KMJ-TV on Bear Mtn., 2254 feet above average terrain, has 12-kw GE transmitter with directional antenna designed to beam equivalent of 470-kw ERP into Fresno. Unaffiliated station plans both live and film programming, including 3-hour live Spanish language show Saturday nights. Gen. mgr. is Robert H. Wesson, ex-KHQ-TV, Spokane; chief engineer, Ralph E. Smith, ex-KFMB-TV, San Diego; program director, Hal Davis. Base rate is $225. Meeker is rep.

WMGT, Adams-Pittsfield, Mass. (Ch. 74), first local station for area, began tests Feb. 5 with 12-kw GE transmitter and RCA antenna atop Mt. Greylock, 2060-ft. above average terrain. Nearest other TV stations are in Schenectady, 43 mi. from Adams, and Holyoke, 38 mi. Leon Podolsky of Sprague Electric Co. heads grantee. John T. Parsons is gen. mgr.; Leon Levando, chief engineer; Don Selby, production mgr. It's DuMont affiliate, also plans to rebroadcast sports events from WPIX, New York. Base hour rate is $250. Walker is rep.

RCA's NEW UHF STATION EQUIPMENT PLANS: Details on price and availability of its new 12½-kw uhf transmitter were released this week by RCA -- along with slash of $10,000 in the price of its 1-kw unit.

RCA aims to catch up with competition in higher-powered uhf field with its newly announced 12½-kw tetrode transmitter (Vol. 10:4). It gave out specifications to consulting engineers at Washington seminar Feb. 11, and announced these prices:

Complete 12½-kw transmitter, including all tubes, crystals and filterplexer -- $144,500. Amplifier to convert existing 1-kw unit to 12½-kw -- $99,500. Since the new transmitter (type TTU-12A) replaces originally announced 10-kw (TTU-10A), those stations with orders for 10-kw get price break. Latter units were ordered in advance at guaranteed maximum price, and as result RCA will sell its 12½-kw amplifiers to those customers at $86,900 instead of $99,500.

Deliveries begin in June, first ones going to customers with long-standing orders -- such uhf pioneers as Wilkes-Barre's WBRE-TV and South Bend's WSBT-TV and others in first batch of uhf starters of late 1952 and early 1953. After producing 2 or 3 in June, RCA plans to step up output to 5-6 a month -- more if there's steady stream of new orders. Company says it has 30-40 back orders for the new unit, could catch up with these by Oct. or earlier.

In 1-kw field, price reduction from $57,500 to $47,500 was made possible by cost decreases and production economies such as elimination of overtime, says RCA. And it continues to hammer away at its favorite theme -- color -- stressing that all transmitters delivered will be equipped to handle it from start (see p. 4).

Another innovation announced by RCA: All uhf antennas will be measured for complete vertical and horizontal patterns before leaving factory. Previously they were spot checked. Also, RCA will make "ground check" of antenna at station to make sure no adjustments were harmed during shipment. Such antenna pre-measurement was urged by FCC Comr. George Sterling in recent speech before Boston IRE (Vol. 10:5).

BRISK PICKUP IN ACTION BRINGS 6 CPs: It has been decidedly slow year in terms of CPs but this week was an exception -- producing 6 grants and an initial decision. There was nice crop of 5 new stations on air, though week also brought sudden announcement from DuMont that it is shutting down its newly-acquired uhf KCTY, Kansas City (Ch. 25), deciding market can't support it along with 3 vhf's (see p. 2). And another uhf CP was turned in -- WMEV-TV, Marion, Va. (Ch. 50). The week's grants:

El Centro, Cal., Valley Empire Telecasters, Ch. 16; Stockton, Cal., KSBR, Ch. 13; Chicago, Ill., WOPA, Ch. 44; Elyria, O., WEOL, Ch. 31; Charleston, W.Va.,
Initial decision was one of the tough ones, with Mobile TV Corp. favored over WKRG for Ch. 6 in Mobile, Ala.

One of most interesting grants is that in Stockton. It's controlled by TV maker H.L. Hoffman and is his first venture into station ownership. He plans to utilize KSBR building and tower on 3849-ft. Mt. Diablo, has RCA transmitter on order, hopes to be radiating 25-kw ERP by May.

Mobile case was difficult to decide, Examiner H. Gifford Irion said, but he finally chose Mobile TV Corp. because of "decided superiority in its studio design, production equipment, staff training, care in preparation, potentiality for expansion and, above all, its capable leadership." Proposed winner is 24% owned by Edgar Stern Jr., 10% by Robert Swezey -- principals of WDSU-TV, New Orleans. Pres. and 15% owner is Dwight Martin, formerly v.p. of Crosley and General Teleradio.

Tackling one aspect of its multiple ownership rules, FCC handed Westinghouse some unwelcome news in answering latter's request for clarification of rule (Vol. 10:3). Westinghouse Broadcasting Co. had asked FCC to assure it that minority holdings of directors of parent Westinghouse Electric Co. wouldn't be counted in total stations permitted.

No indeed. Commission said, those holdings count. Thus, Westinghouse is now credited with 6 stations: WBZ-TV, Boston and WPTZ, Philadelphia, plus the 4 stations in which director John Schiff owns 15% -- WFTV, Duluth; KETV, Little Rock; KCTV, Sioux City; WICS, Springfield, Ill. Westinghouse also has applications pending for Pittsburgh and Portland, Ore.

Company hasn't indicated plans, presumably will ask for waiver permitting it to go ahead with hearings in Pittsburgh and Portland, decide what to dispose of later -- unless it wants to challenge FCC rules in courts as Storer Bcstg. Co. is doing (Vol. 10:4). Comrs. Sterling and Doerfer dissented, former saying he wanted to study similar cases first and wait for outcome of Storer appeal, latter saying "the interpretation extends a doubtful exercise of rule-making power beyond the pale of administrative law. [Rule's purpose] was to limit control but not influence."

Among other actions, FCC this week: (1) Received its Broadcast Bureau's recommendation that Niagara Frontier Amusement Corp. get CP for Ch. 2 in Buffalo and be absolved from blame in "strike" application to-do (see p. 10). (2) Appointed a new hearing examiner and made him chief of examiners -- something FCC hasn't had for years. He's Edward T. Stodola, now in charge of various CAB hearings. He's 45, a native of Wisconsin, has been CAB examiner since 1943. (3) Proposed to shift Ch. 3 from Lewiston, Ida. to Richland, Wash. (4) Set March 12 for start of Ch. 2 hearing for Bangor, Me. and Ch. 18 hearing for Fayetteville, N.C.

COLOR STATUS AT STATION & PROGRAM LEVEL: The race for station color equipment sales became a bit more feverish this week as RCA levelled two attacks at competition during uhf-color seminar for consulting engineers in Washington Feb. 11:

(1) Announced it would equip for rebroadcast of network color all stations using its transmitters -- without charge. Furthermore, the 30-odd stations already so equipped will not be billed. Since cost of modifying stations runs up to $25,000 or so, this means an RCA outlay of seven figures.

In addition to equipping existing stations for color, RCA will henceforth ship all new transmitter already modified for color or accompanied with kits.

(2) Talked down cost-performance claims for CBS-type field-sequential camera equipment being made by GE (Vol. 10:5).

About all RCA would concede CBS-GE camera setup is lighter weight -- 120 lbs. vs. 300 for RCA's 3-tube camera. Aside from that, RCA engineer Andrew Inglis told consultants, system has innumerable drawbacks.

It produces "a picture of a picture," he said, with all the possibilities of degradation that implies. He said that initial cost can favor either type of equipment, depending on number of cameras; that field-sequential type is likely to need
30-100% more light at studio; that station "has all its eggs in one basket" if it has one field-sequential coder serving several cameras.

Inglis also refuted common belief that the 3 tubes in RCA cameras must be perfectly matched. He said camera controls compensate for differences. He also made surprising statement that tubes last longer for color than for black-&#38;-white, because each gets less illumination. "Based on limited experience," he said, "we estimate image orthicon life in color cameras at about 750 hours." Customary life of tubes in monochrome use is about 500 hours.

These criticisms are pooh-poohed by GE v.p. Dr. W.R.G. Baker who reports "very encouraging" results to date, says GE already has station orders for cameras in addition to the 4 being built for CBS (Vol. 10:5).

* * * * *

Color programming continues to build up gradually, meanwhile. NBC's schedule (Vol. 10:5) still holds with these changes: Taming of the Shrew opera has been added for March 13; Eddie Fisher show has been shifted to March 31; mobile unit is due back in service next month, and plans are afoot for New York St. Patrick's parade March 17 and Easter parade April 18, plus Gillette fights starting in April.

There are still only 30-odd stations equipped to rebroadcast color, and AT&T has equipped no more routes for color than were employed Jan. 1 (Vol. 9:52). No coaxial segments are to be ready until April.

AT&T still hasn't filed rates for color. After compiling schedule, AT&T showed it to network officials who made it clear they thought proposed rates were so steep that they'd stifle growth of color. This week, AT&T indicated it would continue to hold rates in abeyance by filing with FCC a request for extension to May 15 of its present experimental rates for color.

CBS added WBKB-TV, Youngstown, to New York and Baltimore for Feb. 5 show, will shortly add WBBM-TV, Chicago -- others soon as they're equipped to rebroadcast.

* * * * *

There's bitter complaint from Los Angeles set manufacturer that NBC's color programs are rarely broadcast there, must be viewed on closed circuit at RCA Industry Service Labs in Hollywood. Since Jan. 1, only the Tournament of Roses and Zoo Parade have been transmitted by KNBH.

"It's the old time-difference problem," says NBC official, noting that "hot kines" suffice for delayed black-&#38;-white broadcasts but that comparable process for color isn't yet available. "However," he said, "we have a plan under study whereby we may put color programs on later so that KNBH can broadcast them."

'COLOR TV AGE' AWAITS BIGGER SCREENS: Will 15-in. color sets ever go "on sale" to the public in real quantities? Many important set and tube makers think not.

Promises of 19-in. tube production in latter half of this year -- added to today's healthy black-&#38;-white sales (see p. 11) -- seem to have dampened industry's urgency to get 15-in. sets on the market, and a number of top-name set manufacturers now say they don't plan to merchandise 15-in. sets at all.

These reports are authenticated by some tube makers, who say they're equipped to produce the small color tubes but have no quantity orders. RCA, one of the notable exceptions, reports it is "shipping 15-in. tubes as fast as we can make them."

The picture easily could change overnight. If RCA or some other leader makes big sales pitch for 15-in. and backs it up with saleable quantities of sets, many of the others are prepared to swing into production to keep competitive positions.

Here's the general pattern for many set makers with regard to 15-in. color receivers: They plan to turn out 50-500 sets each "just to get the feel of color." These aren't intended for sale, will wind up in homes of their top executives and at their biggest distributors for barnstorming tours of dealers.

There may be some surprises soon in color set field -- and officials of many companies are understandably reluctant to be quoted by name in this highly competitive situation. But the comments we were able to get from receiver and picture tube makers are indicative of feeling and atmosphere as of today:
"The 19-in. tube is coming the second half of this year," says an RCA spokesman, who adds that company will be equipped to shift emphasis easily between 15 & 19-in. tubes, according to demand from its set-making customers. "But if people will be willing to spend $1000 for the 15, they'll be willing to put up another $500 or whatever extra it will cost to get the 19."

The real answer will come when the public can see all makes, side by side, with pictures on the screen -- "and with price tags," he says. Might RCA be planning to cut the $175 price of its 15-in. tube (CBS's is due to sell for $125)? "That price can't last indefinitely," this spokesman says, "when the 21-in. black- &- white sells for about $20." As to what's coming in future, the RCA official tells us:

"Everyone has something in the back room -- RCA, GE, Philco, Sylvania." And it's obvious, no one intends to tell until the time is ripe.

Admiral doesn't believe 15-in. set is "merchandisable size". A company source says real color production awaits larger tube, but stands by pres. Ross Siragusa's prediction Admiral alone will turn out 30,000 color sets this year (Vol. 10:1).

Philco continues to be an enigma, but it's good guess that if it produces any 15-in. sets at all, they'll be mere trickle for exhibition only. Philco people quote tube makers as saying 19-in. color sets probably won't be available in good quantities till Nov. -- but this isn't necessarily tip-off on Philco plans.

DuMont marketing v.p. W.H. Kelley says 19-in. tube is in the offering, but can't say just when. It's not making 15-in., is buying them from another source for developmental purposes, but doesn't believe that size screen is commercially acceptable. Adds Kelley: "We would be perpetrating an injustice on the industry if we tried to produce and sell current-sized models."

A CBS topkick agrees with RCA that 19-in. will probably come along in last half of year. He adds that production rate toward end of year could reach astronomical proportions, and predicts the public will snap up whatever is produced this year. CBS-Hytrom's 19-in. tube, he says, will have 205 sq. in. picture compared to RCA's 162 (and RCA, of course, claims superior brightness, convergence, etc.).

GE is now turning out some RCA-type 15-in. tubes, electronics v.p. Dr. W.R.G. Baker tells us -- and says he'll reveal what else he's working on in month or two. Rumors persist that GE's secret weapon is 3-gun grid type tube.

Sylvania is producing some color tubes, presumably 15-in. RCA type. "What we can't tell you is whether the tube is what you ought to have in your TV set," board chairman Don G. Mitchell told advertising seminar in New York this week. His advice to public was to hold off buying color set until next year when 19-in. will cost less than today's 15-in. He predicted cool buyer reaction to $1000 receivers.

"Everyone is holding his breath on the 15- & 19-in. question," says another big set maker, requesting anonymity. "I wish I knew what to do. No one is going all-out on the 15-in. model."

"We are buying and producing very little color," states a set & tube maker. "A lot of work remains to be done on the 19-in., and production won't be as easy as we first thought it would be. We know the 15-in. won't last very long -- but the situation is very fluid, could change from day to day. We're caught in a squeeze between RCA & CBS, and what GE will do is anybody's guess. The set makers are checking their enthusiasm for quick color because black- &- white business has held up better than expected. They're digging in their heels and making haste more slowly."

* * *

"The 15-in. looks like it will die a-borning," observes Asher Cole, president of independent tube maker National Video Corp. He says he can begin production of 15-in. RCA-type tube on short notice, but has no requests for more than sample quantities. As for 19-in., he echoes some other tube makers in saying it's extremely complicated from standpoint of circuitry and manufacture, isn't just a "larger model of the 15-in." but a completely different design.

National Video is licensee of both RCA and Chromatic, and Cole says his engineers have worked out "entirely different approach" to latter's grid type tube, which has "practically licked radiation problems and improved resolution." But he
admits he doesn't know which type he'll end up producing — "the answer may well be something entirely different."

Whatever bottlenecks develop in larger color tubes, it looks as if glass won't be one of them. Corning is now producing bulbs for both 15- & 19-in. sizes, and says it can take care of any foreseeable demand for either size. Electronic dept. sales mgr. J.B. Muller tells us developmental samples of 21-in. rectangular bulb have also gone out to tube makers. It's "universal" type, can accommodate CBS, Chromatic, RCA or any other types, can be adapted to various deflection angles.

Pilot production of 21-in. rectangular bulb should begin about May 1, according to Muller. But he warns that this doesn't necessarily mean 19-in. round will quickly be obsoleted, as was the pattern in black-&-white. He points out rectangular tubes were made necessary by demand for big-screen table models — but color table sets are long way off, so there should be no particular rush for compact color tubes. And round tubes are easier to make, may be cheaper for some time.

**Station Accounts:** Oklahoma City's KWTV (Ch. 9), on the air only 2 months under gen. management of Edgar T. Bell, reports 35 national spot accounts currently advertising 47 different products—these in addition to 67 CBS network accounts. National spot list, thru Avery-Knodel, includes most of the 26 top spot users listed for 4th quarter 1953 in latest Rorbaugh Report on Spot TV Advertising...

Value of furniture ads on TV exemplified by big response to Woman's World, sponsored and coordinated by Northwest Furniture Mfrs. Assn. on KOMO-TV, Seattle, Wed. 3-3-20 p.m., and featuring furniture displays; and in Denver, local FURN Club sponsors similar weekly program, Home & Kitchen, on KOA-TV, but no individual products are advertised...

Norwegian Canners Assn. ties in Lenten TV-radio spot campaign with 4 major cracker companies—Premium, Salerno, Educator & Snow Flake—

**11-11:30 p.m.** Zeeman Clothing Co. buys 11:30-11:30 midnight segment of Jake Box Jury on 14-station CBS Pacific Network, thru Factor-Breyer Inc., Los Angeles ... Philco Distributors and dealer Mort Farr team up to sponsor 15-min. segment of 30-min. Fun and Fortune daily on WCAU-TV, Philadelphia; it's in addition to Man About Town, which Farr sponsors on WCAU-TV Sun. 11:15-11:30 p.m. ... Rybutol, old network account, moves into local operations with Best Movie of the Week on WABC-TV Sat. 11 p.m.-midnight, thru Kastor, Farrell, Chesley & Clifford, N. Y....

Proud of its record of processing TV applications, FCC this week released tabulation showing its disposition of applications since freeze, amplifying on our summary (Vol. 10:6). It points out that it has granted CPs for 75% of the channels sought and that of 321 pending applications all but 53 are competitive.

It also analyzed stations on air, CPs and applications in several ways. For example, it shows that 59.6% of stations are in 1-station communities, 29.2% in 2-station, 7.6% in 3-station, 3.6% in cities with 4 or more. If all existing CPs get on air, respective figures should be 58.1%, 24.9%, 10.2%, 7.7%. And assuming all channels applied for become stations, figures will be 53.6%, 24.2%, 10.8%, 11.4%. Treating markets as metropolitan areas defined by U. S. Census, analysis shows 120 vhf-only cities, 71 uhf-only, 32 vhf-uhf. FCC economists make it clear that figures don't represent signal availabilities from stations outside metropolitan areas, should be weighed accordingly. Among other breakdowns are figures on number of 1-vhf cities, 1-uhf cities, 2-vhf cities, 2-uhf cities, etc.—based on existing stations, on CPs and on pending applications.

Absence of Sen. Edwin Johnson (D-Colo.) from newly named communications subcommittee of Senate Commerce Committee (Vol. 10:6) doesn't mean the former committee chairman has lost any of his intense interest in TV-radio affairs. As ranking minority member, Johnson selected the Democratic members of subcommittee, wanted to give newer members opportunity to familiarize themselves with communications matters. He still will keep close tab on matters affecting TV-radio, and will of course be in on all important decisions—which will be made by full committee. Sen. Johnson's bill to restrict telecasting and broadcasting of pro baseball games (S. 1396) came up on Senate calendar again this week, but was passed over for 4th time. Also blocked along with many other bills were 3 House-passed measures requested by FCC, relating to protests (HR-4558), violations of Communications Act (HR-4559) and abolishing CPs for govt., amateur & mobile stations (HR-4557).

In the House, Rep. Wolverton (R-N.J.), chairman of Commerce Committee, introduced FCC-backed bill to amend Communications Act to keep protests from automatically halting effectiveness of CPs (HR-7795); it's identical to S-2853, introduced by Sen. Bricker (R-O.) in Senate (Vol. 10:6).

New community antenna organization, apparently with extensive plans, has been formed at Little Rock, Ark., as Midwest Video Corp. A member of group is C. Hamilton Moses, chairman of Arkansas Power & Light Co, who says 25-30 communities from Arkansas to Oregon are under study.

Communications Act, up-to-date as of Jan. 1, 1954, is now on sale at 55¢ by Govt. Printing Office, Washington.
GENERAL PRECISION LABORATORY reports "one of the largest purchases ever made in radio or TV by one individual"—the sale of 3 complete uhf station packages to Robert W. Rounsaville for his stations in Cincinnati, Louisville and Atlanta. Purchase includes 3 GPL-Continental 1-kw transmitters (made by Continental Electronics, Dallas), 3 antennas, 6 GPL-Pye camera chains, 3 vidicon film chains, six 16mm film projectors, and associated equipment. Installation has begun at WQXL-TV (formerly WLOU-TV), Louisville (Ch. 41), which has March target. WQXN-TV (formerly WCNV-TV), Cincinnati (Ch. 54) plans debut in early summer and WQXI-TV, Atlanta (Ch. 36) is due about Oct. Forjoe is rep for WQXL-TV & WQXN-TV; rep for WQXI-TV not announced.

RCA shipped its first 50-kw amplifier Feb. 13—to share-time stations WMIN-TV & WTCN-TV, Minneapolis-St. Paul (Ch. 11). Only other transmitter shipment reported this week was RCA 10-kw to KVAL-TV, Eugene, Ore. (Ch. 12) Feb. 11. The RCA transmitter shipped last week to WMFD-TV, Wilmington, N. C. (Ch. 6) was 10-kw, not 5-kw as erroneously reported.

In our continuing survey of upcoming new stations, these are the latest reports from grantees:

WBRZ, Baton Rouge, La. (Ch. 2), granted Jan. 28, has mid-Sept. target, according to pres. Douglas L. Man- ship, publisher of Baton Rouge Advocate and State Times. Make of equipment and name of rep not reported. It's first competition for WAFB-TV (Ch. 28) which began April, 1953.

KULA-TV, Honolulu (Ch. 4), with 5-kw DuMont transmitter on its way via ship, now has April 9 target, according to asst. gen. mgr. Art Sprinkle, ex-KPHO-TV, Phoenix. It will be 3d vhf outlet there. Rep will be Headley-Reed.

KFEC-TV, Cheyenne, Wyo. (Ch. 5) reports progress in rebuilding tower which was toppled last Dec. by windstorm (Vol. 9:60), but now has no specific target— it all depends on completion of tower, which could be delayed by bad weather, says mgr. Wm. C. Grove. It's equipped with 5-kw DuMont transmitter. D. E. Allen has been named TV sales mgr. Network will be CBS, base rate $150. Hollingbery will be rep.

KDRO-TV, Sedalia, Mo. (Ch. 6), delayed by bad weather, has studio nearly completed, but has only 50% of its GE equipment, now hopes for April 1 start with 5-kw GE transmitter, writes gen. mgr. Herb Brandes. Rep will be Pearson.

KGKB-TV, Tyler, Tex. (Ch. 7), granted on Jan. 27, hasn't ordered equipment or begun construction, hopes to get going next Aug., according to owner Lucille Ross Lansing. Rep not yet chosen.

WMWT, Poland, Me. (Ch. 8 assigned to Lewiston), designed to be super-coverage outlet atop 6288-ft. Mt. Washington, N. H., is negotiating for RCA studio-transmitter equipment, begins adding to existing space on Mt. Washington about May 1—weather permitting—and expects to get going July 1, according to pres. John W. Guider. It expects to utilize old Yankee Network's 50-ft. FM tower, may build another for second antenna. Remodeling for studios in Riccar Inn, Poland Springs, Me., is already underway. Network will be CBS. Rep will be Harrington, Righter & Parsons.

KPAR-TV, Sweetwater, Tex. (Ch. 12), has 500-watt DuMont transmitter and 400-ft. Andrews tower on order, but hasn't set target date yet, reports pres. W. D. (Dub) Rogers. Grantee Texas Telecasting Inc. operates KDUB-TV, Lubbock, and plans to operate KPAR-TV virtually as satellite of Lubbock outlet. Same firm also is applicant for Ch. 4 in Big Spring, Tex., which, if granted, would also get satellite role. Rep will be Avery-Knodel.

WALB-TV, Albany, Ga. (Ch. 10), granted Jan. 13, begins construction soon on TV-AM building, plans June 1 start, reports owner James H. Gray, publisher of Albany Herald. Make of equipment not reported. Burn-Smith will be rep.

WINK-TV, Fort Myers, Fla. (Ch. 11), off delayed, now plans March 15 programming with 2-kw RCA transmitter, according to gen. mgr. A. J. Bauer. Owner is United Garage & Service Corp., Yellow Cab operators of Cleveland (Daniel Sherby, pres.). It will be ABC affiliate. Hour rate will be $150. Weed will be rep.

KFVS-TV, Cape Girardeau, Mo. (Ch. 12), has studio building ready and footing & foundation in for transmitter house, now is negotiating for 808-ft. guyed tower, reports owner Oscar C. Hirsch. Target date not set, but "it will be later than April." Transmitter make not reported. Rep will be Pearson.

WHO-TV, Des Moines (Ch. 13) was delayed by anten- nna accident Feb. 10 when RCA 12-section superturn- stile was damaged. Antenna was only 4 ft. from ground when gin pole atop 700-ft. tower bent, causing estimated $40,000 damage and necessitating rebuilding of antenna. WHO-TV pres. Col. D. J. Palmer said mishap will post-pone debut "at least 3 weeks past the original March 15 expected starting date." No one was injured.

WLOS-TV, Asheville, N. C. (Ch. 13), hasn't ordered equipment yet, plans to start construction shortly, hopes to get on air in late spring or early summer using 300-ft. Lehigh tower atop Mt. Pisgah, reports commercial mgr. Bradley H. Roberts. Rep not yet chosen.

WINT, Waterloo, Ind. (Ch. 15), got FCC approval in Jan. to increase power to 240-kw visual and to build higher tower, 830-ft. above av. terrain, at new location 16 mi. north of Fort Wayne, now seeks network affiliation, plans to begin construction soon, reports pres. R. Morris Pierce, who operates radio WDOK, Cleveland. It has ordered 12-kw GE and 800-ft. Stainless tower. Target date not reported, but earlier plans were for March debut. Rep not yet chosen.

WKDN-TV, Camden, N. J. (Ch. 17, allocated to Philadelphi), granted on Jan. 28, is planning additional housing for TV studios and transmitter, but hasn't ordered equipment or set specific target, reports pres. Ranulf Compton. It's to be "community station built within financial confines that will make it possible for the local industrial, retail and service establishments to buy television advertising." Rep not yet chosen.

WOBS-TV, Jacksonville, Fla. (Ch. 30), has studios ready and GPL-Continental transmitter ordered for March delivery, plans April 15 tests, goes commercial May 1, reports gen. mgr. Jim Macri. Pres. & 50% owner is E. D. Rivers Sr., ex-Gov. of Georgia, who also owns WCTV, TV grantee for Thomasville, Ga.; 50% of WMIE-TV, grantee for Miami, Fla.; and radios WLBS, Birmingham, and WGAA, Cedar- town, Ga. Hour rate will be $150. Rep will be Stars National.

WIMA-TV, Lima, O. (Ch. 35) had planned start early this year, now has no fixed target, awaits delivery of 5-kw DuMont transmitter late next summer, reports gen. mgr. R. W. Mack. Weed will be rep.

CHCH-TV, Hamilton, Ont. (Ch. 11), planning April start with RCA equipment, has tentative April 15 programming date, reports asst. mgr. S. J. Bibby. Wave- stack antenna designed by RCA is being built by Domin- ion Bridge. Bill Jeynes, ex-Rediffusion, Montreal (com- munity antenna service), has been named chief engineer; David Southwood, ex-BBC, and Tom Sutton, ex-WWJ-TV, producer-directors. Reps will be Adam Young (for U.S.) & All-Canada Television.
Telecasting Notes: Enlightened plea for improvement of TV commercials comes from Feb. 13 Tide Magazine, which asks: “Are TV commercials as bad as they say?”— and then proceeds to imply answer is “yes” by quoting ad and research industry sources. Taking off from Bernays survey of leading citizens, which soundly berated TV commercial practices (Nov. 15), Tide confides that “certain influential people within advertising may themselves approach the FCC, as Bernays has privately indicated he may do,” to seek more Commission leadership on subject . . .

Fate of NBC's 2 big variety shows—Comedy Hour & Your Show of Shows—has drawn considerable speculation for last year or so, and Feb. 13 Billboard reports they've been given virtual ultimatum to change format to situation comedy or perish . . . But variety shows won't completely disappear, Billboard reporting both NBC & CBS have plans on books for supercolossal “spectaculars” with top Hollywood talent, to be aired probably on monthly basis—in color—with talent cost of $250,000 a show and up. ABC-TV, it says, already is negotiating for weekly 30-min. show which “would almost certainly be the most expensive such program on the air,” featuring Ringling circus acts direct from big top, probably sponsored by Wheaties . . . 2-hour all-star show on ABC, CBS & NBC TV networks next Oct. will climax observance of “Light's Diamond Jubilee Year,” 75th anniversary of Edison's invention of incandescent lamp; network show will be sponsored by electric companies and electrical manufacturing firms, will follow heavy spot TV-radio schedule through year by local utilities . . . “TV's first repertory theatre” is described as NBC's major project for 1954 in Feb. 10 Variety—which says it's still hush-hush but network, together with a major foundation and a top drama

Personal Notes: Murray B. Grabhorn, ex-WJZ-TV and onetime sales mgr. of ABC's o- & e stations, resigns as sales director of WATV & WAAT, Newark, will return to Los Angeles for undisclosed TV-radio sales connection . . .

Thomas C. McCray, ex-NBC western div., named gen. mgr. of KBNH, Los Angeles, succeeding Don Norman, now managing director of olympian Edwin Pauley's Television California, applicant for San Francisco's Ch. 2 . . . Wade S. Patterson named gen. mgr. of KCRI-TV, Cedar Rapids, replacing Frank D. Rubel . . . Charles Stone promoted to sales v.p. of WMBR-TV & WMBR, Jacksonville, Fla. . . .

Richard Krolik resigns as Life Magazine TV mgr. to be N. Y. mgr. of film packagers Nasht International Productions . . .

Robert Blake, named publicity manager, who has opened own public relations office in Empire State Bldg . . .

Harry E. Travis, ex-WBKB-TV, Battle Creek, named administrative asst. to John H. Bone, gen. mgr. of upcoming WNEM-TV, Bay City, Mich. . . . J. P. Gilmore promoted to chief TV coordinator of CBC . . .

Harry Tenenbaum elected v.p. of WTVI, St. Louis-Belleville, Ill., continuing as asst. secy.-treas . . .

Ahlgren promoted to sales mgr. of KPRC-TV, Houston . . . Frank Crane, mgr. of Los Angeles Ad Club, named managing director of Southern California Broadcasters Assn . . .

Charles L. Brady, ex-McIntosh & Inglis, Washington consulting engineers, named director of technical operations at WJIM-TV & WJIJ, Lansing, Mich., not WILS-TV, as we erroneously reported last week . . .

Derrick Dyatt, ex-WTOP-TV, Washington, sets up own TV management consultant office at 3811 Van Ness St. NW, Washington . . .

George Hart joins Bentley & Co., Chicago, specializing in electronics accounts . . .

Joseph R. Matthews, A. C. Nielsen Co., named eastern sales manager, named v.p. in charge of sales of Nielsen Station Index to stations, agencies & sponsors, moves from San Francisco to Chicago . . .

Robert Mandeville, ex-Chicago, named eastern sales v.p. of rep Everett-McKinney.

WSLS-TV, Roanoke, Va. (Ch. 10), breaks ground this month for $1,000,000 TV center in heart of city shopping district. Two-story structure will have glass wall permitting passersby to view directly into 2 downstairs studios. Novel feature of building will be 6 large merchandising show windows to promote sponsors' products. Building also will house complete art and photographic studios. Station recently increased power, now radiates 296 kw from mountain peak nearly 4000 ft. above sea level.

TV-Radio News Directors Assn. sponsors second annual national TV news seminar May 18-21 at Northwestern U, Evanston, Ill. Reservations for conference, restricted to 40 participants, may be made at Northwestern's Medill School of Journalism.
Network Accounts: Another program coup was pulled off by NBC this week with transfer of Lux Video Theatre and Lux Radio Theatre from CBS thru J. Walter Thompson in deal representing estimated $4,000,000 in gross annual revenue. TV version will be presented Thu. 10-11 p.m. starting Aug. 28, replacing Martin Kane and Foreign Intrigue, which will be shifted to other times; radio version will start in Sept., time and date not yet set.

These 7 sponsors reported signed deals for participation on upcoming women's series, Home, on NBC-TV starting March 1, Mon.-thru-Fri. 11 a.m.-noon: Lees Carpet Co., Helena Rubenstein, Sunbeam Corp. (appliances), Wear-Ever Baby Carriage Co., Dow Corning Corp., Con Products Refining Co., Sherwin-Williams Paint Co.; network had no comment but plans to disclose full sponsorship list next week . . . Procter & Gamble moves Three Steps to Heaven from 11:15-11:30 a.m. to 10:45-11 on NBC-TV, effective March 1, when Home moves into 11 a.m.-noon position . . . Chesterfields, in first major sponsorship since dropping Arthur Godfrey, buys Spyke Jones Show on NBC-TV starting Feb. 13. Sat. 8-8:30 p.m., thru Cunningham & Walsh . . . Borden's coffee to sponsor Justice, drama series based on files of National Legal Aid Assn., on NBC-TV starting April 8, Thu. 8:30-9 p.m., thru Doherty, Clifford, Steers & Shenfield . . . Gerber Products (baby foods) to sponsor Thu. 10:15-10:30 a.m. segment of Ding Dong School on NBC-TV starting March 4, Mon.-thru-Fri. 10-10:30 a.m., thru D'Arcy Adv. . . . Campbell Soup Co. to sponsor thru 5:45-6 p.m. segment of Howdy Doody on NBC-TV starting March 25, Mon.-thru-Fri. 5:30-6 p.m., thru Ward Wheelock, Philadelphia . . . General Mills (O-Cel-O sponge products) buys 13 partic. on Dave Garvarrow's 7-9 a.m. Today on NBC-TV, thru Comstock & Co., Buffalo; Maytag Co. buys 52 partic., thru McCann-Erickson; Tetley Tea Co. 13 partic., thru Geyer Adv.; Florida Citrus Commission 8 partic., thru J. Walter Thompson; Bourjois Inc. (perfumes) 12 partic., thru Foote, Cone & Belding; Merrill Lynch, Pierce, Fenner & Beane 1 partic., thru Albert Frank-Guenter Law Inc.; West Coast Lumbermen's Assoc. 1 partic., thru MacWilkins, Cole & Weber, Portland, Ore. . . . ABC starts simulcast of Don McNeill's Breakfast Club Feb. 22 9-10 a.m., with no TV sponsors signed as yet.

Buffalo Ch. 2 grant to Niagara Frontier Amusement Corp. appears assured, now that FCC's own broadcast bureau has told Commission that applicant had "no willful intent to thwart or circumvent Commission policy" in signing agreement whereby Enterprise Transmission Inc. competed against application (Vol. 10:5). Deal involved Niagara's payment of $491,833 for assets of WBES-TV, Buffalo (Ch. 59), principals of which were associated with Enterprise, and WBES-TV was to go off air. Broadcast bureau held that Niagara didn't violate "any clearly established Commission policy or rules," and that in previous cases "the Commission has not frowned upon payment by the remaining applicant to the withdrawing applicant in excess of 'out-of-pocket' expense or the value of assets received as an aspect of the resolution of conflict between the two applicants." Bureau also noted that Enterprise and its associates won't get paid anyway, because agreement was conditioned on grant to Niagara on or before Dec. 18.

Commercial TV is slated to begin in Morocco March 1 from station in Casablanca privately owned by Compagnie Marocaine de Radio-Television and using French 819-line system. The 4 hours of programming daily will be split into 2 hours French (live and kinescope from French stations), 1 Arabic, 1 English. English programming will be aimed at U.S. personnel in area, and reportedly will consist of ABC-TV films.

Color Trends & Briefs: Color TV experts still have a lot to learn about color transcriptions and color film, but problems are well on way to solution. That's conclusion reached by NTSC Panel 11-A which this week released 200-page report on subject compiled by its members after 10,000 man-hours of work over 2-year period.

Evaluating highly technical study, chairman Dr. Alfred N. Goldsmith commented:

(1) Acceptable color-film records and color release prints of live programs can now be produced by direct photography and be transmitted successfully.

(2) "Color kinescope-recording information now available is insufficient to enable firm conclusions to be drawn as to the commercial practicability of this process. However, progress in this field is rapid and the ultimate successful utilization of color kinescope-recording is a definite possibility."

(3) "The color transcription art is rapidly developing in all its branches, and should enable the successful recording, transmission and reception of transcribed programs in the foreseeable future."

Copies are available to everyone interested, from NTSC chairman Dr. W. R. G. Baker, Electronics Park, Syracuse, N. Y.

More color clinics for servicemen were disclosed this week. Raytheon announced following schedule: Fargo, N. D., Feb. 16; Minneapolis, Feb. 18; Lexington, Ky., Feb. 23; Ft. Wayne, Feb. 25; Wilkes-Barre, March 2; Pittsburgh, March 4; San Francisco, March 9; Fresno, March 10. GE began series of service clinics for midwestern dealers Feb. 8 at Iowa State College, Ames. Motorola next week inaugurates "color school" in Chicago for distributor service managers, to continue until all distributors have had their personnel complete 3-week course.

Disc-type color converter for compatible system, demonstrated last week by young engineer of Airtronics Research Inc., Bethesda, Md. (Vol. 10:6), has sparked a lot of queries, including some from manufacturers interested in evaluating possible market for device. Company is now making more refined model, aiming to reduce flicker, improve brightness. FCC has been invited to see device in action for Armstrong Circle Theatre Feb. 23.

Color TV Inc., one-time proponent of line-sequential system, pops up again, this time with a proposal for one tube color camera. Brochure is available from J. M. Carter, gen. mgr., 973 E. San Carlos Ave., San Carlos, Cal.

Latest DuMont color scanner shipments are one each to Crosley and Corning Glass.

One of last big share-time AM combinations—Prairie Farmer's WLS & ABC's WENR, Chicago—will be merged into one full-time operation, subject to FCC approval. Agreement provides for new corporation, WLS Inc., to operate using present WLS studios and personnel and WLS call letters, with ABC affiliation. Three directors will be named by old WLS ownership, 2 by WENR. Current WLS pres. James E. Edwards will head new firm. Complex tax-free financial agreement provides that each station assigns to new company its assets used in operation of station together with $100,000 in cash, with ABC contributing $40,000 additional because it is assigning less property to new company. Each of old companies will lend new firm $50,000. For 5 years, new WLS will hold 10,000 shares of Class A stock, ABC 8000 shares of Class B; after 5 years, Class B stock will be cancelled and each company will hold 10,000 shares of Class A. ABC's Chicago TV outlet, WBKB, isn't involved in transaction.
GOOD MONOCHROME SALES, COLOR EFFECT MINOR: Trade generally continued to hold up well this week -- and pre-Christmas fear of "color talk" depressing black-&-white sales hasn't amounted to much, largely due to industry planning, pricing and promoting.

A concomitant of current good market is that the once-anticipated headlong plunge into color race hasn't materialized and manufacturers are now holding off producing 15-in. color sets and preparing for 19-in. (see p. 5). It has been shown that public will buy black-&-white if price is right, thereby giving breathing spell to manufacturers to develop size of color set they believe public will want.

There were blind spots in bright trade picture, to be sure, particularly in highly-saturated older metropolitan markets. RETMA spokesman said business in Feb. was beginning to show "just a little wear and tear around the edges" as compared to Jan. but was still doing better than anticipated and could certainly be classified as good, as Februaries go. Doubtless very low prices were biggest single stimulant. Zenith, Motorola & Crosley this week introduced even lower-priced models (pp. 12-13).

Further indication of good business was Corning Glass Works' recall of some 500 workers at its tube plants in Corning, N.Y. and Albion, Mich. Corning said increased activity resulted from reduction of high inventories in TV customer plants.

Color hit big N.Y. dept. stores with a bang this week -- Macy's, Gimbel's and Wanamaker's all heralding demonstration of color receivers with big newspaper ads. For its 6th annual TV-Music Festival, Macy's took 6 pages in N.Y. Times. Ad told consumers precisely what salesmen later told them in stores -- "black-&-white is your best buy." This was the pitch:

Color sets now have 12¼-in. pictures, compared to up to 27-in. black-&-white; colorcasts average less than 2 hours a week, as against 7 channels telecasting all day and most of night; while black-&-white programs can be received on color sets, conversely the few color programs can be received in monochrome; color sets cost from $700 to $1200, compared to 21-in. monochrome under $200; delivery on color will be between 3-6 months, compared to immediate delivery on nearly all black-&-whites; service & warranty on color cost about 4 times black-&-white and only a few technicians are trained; only a few cabinet styles are available in color.

Result was foregone conclusion. Folks looked at color, bought black-&-white. John Mellon, mgr. of Wanamaker's TV-radio dept., tersely and aptly summarized public reaction for us thus: "Prices too high, pictures too small, deliveries too slow." He said black-&-white sales were excellent, took order for one color set, a Westinghouse. Much the same reaction came from Wm. Wexler, mgr. of Macy's TV-radio dept. Color sets at Macy's bore these price tags, which Wexler emphasized were estimates in some cases, and clearly labeled as such:

- CBS-Columbia $1200, Emerson $700, Hallicrafters $1200, Hyde Park (Macy's private brand assembled by Tele King) $989, RCA $1000, Sparton $1150, Stewart-Warner $1000, Westinghouse $1295. Service & warranty charges ranged from $200-300. Average delivery time was 3 months, though Westinghouse, which is channeling all its sets to N.Y. through distributor Times Appliance Co., announced it could make immediate deliveries to dealers of the comparatively few sets it has produced.

West coast dealers got another look at color this week at the Western Winter Home Goods Market in San Francisco, along with opinion of J.B. Elliott, RCA exec. v.p. for consumer products, that "fear of color inroads into black-&-white has died down much more rapidly than I expected it to." He predicted 100,000 color sets in use in 1954 and 10,000,000 in 5 years, when price will be around $500.

Color was big feature of mart, retailers evincing considerable enthusiasm over colorcast of Fred Allen's Judge For Yourself on KRON-TV. Consensus of dealers
was that color would sell when screen sizes reach 17-in. and prices drop sharply.

Actual buying at mart was comparatively light, though traffic was heavy. Set makers had lots of appointments with dealers, however, and were plied with queries, chiefly about color and chiefly unanswerable. Dealers seeking special promotional allowances on black-and-white abounded, trying to extend shrinking profits.

TV production continues to maintain steady pace, totaling 107,853 week ended Feb. 5, compared to 110,156 preceding week and 111,188 week ended Jan. 22. It was year's 5th week by RETMA calculations, brought production for year to date to about 530,000, as against 893,161 for first 5 weeks of 1953.

Radio production totaled 192,523 week of Feb. 5, compared to 202,837 units in Jan. 29 week and 215,976 week before. It brought 5-week production to approximately 1,060,000 vs. 1,390,114 year ago.

Continuing its 1953 recapitulations, RETMA this week reported 6,375,279 TVs were sold at retail last year, compared with 6,144,988 in 1952. Production last year was 7,214,787 and in 1952 it was 6,096,279. No official retail sales figures were tabulated for 1950, when TV output set record of 7,463,800.

Topics & Trends of TV Trade: Crosley made big pitch for second-set market this week with a "semi-portable" 17-in. table model with only 15 tubes and selling at new low of $140, as against the $180 set it replaces. Crosley then announced it would concentrate its entire production on this model, dubbed "Super V," through April in effort to make big penetration into second-set market. Company spokesman said production would be more than 2000 daily.

Gerald O. Kaye, Crosley New York distributor, ordered 10,000 of the sets immediately after introduction at Waldorf-Astoria. It was largest single distributor order on any one TV model, said Crosley v-p-gen. mgr. Leonard F. Cramer, who predicted new set "conceivably" could boost Crosley to 5th place among top TV makers "within a year."

Cramer added new receiver was designed to fit in with color set, which he said will be kept in living room in most cases because of its size. He emphasized set is "definitely not a loss leader" but will bring "modest profits" to manufacturer, distributor & dealer.

Receiver uses 17-in. rectangular picture tube and is housed in cabinet 14x18x19, has vertical chassis and side panel controls. It weighs 55 pounds (compared to 76 for average 17-in. table), sells for $140 in walnut, $150 in mahogany, $160 in blonde. Optional uhf tuner is $30 extra.

Picture and receiving tube sales in 1953 both broke records established in 1952, reports RETMA. Picture tube sales totaled 9,359,138 valued at $234,721,033, up from 7,635,666 worth $170,652,078 in 1952. Trend to larger tube sizes is reflected in compilation showing 75% were 19-in. and larger, as against 60% in 1952. For December, sales were 644,287 worth $14,798,364.

Receiving tube sales in 1953 totaled 437,091,555 valued at $305,675,315, compared with 1952's 368,519,243 units worth $250,116,089. Of sales, 293,601,162 went for new sets, 112,785,183 replacement, 20,614,975 export, 10,991,155 gov't. For December, sales were 29,404,026 worth $7,632,367.

TV helps piano sales, too, by interesting more persons in music and inducing them to play an instrument themselves, according to Charles Steinway, of big Steinway & Sons, N. Y.

Excise tax collections on TVs, radios & phonographs totaled $57,224,000 for July-Dec. 1953, down $10,331,000 from same period of 1952.

GE called special news conference this week to deny reports it was lagging badly in TV sales, arising from week's layoff of 2150 workers at Syracuse & Auburn, N. Y. (Vol. 10:6). George P. Park, mgr. of adv. & sales promotion services, said Jan. TV-radio sales had declined only slightly from Jan. 1953. He said that inventories were in much better position, however. He attributed "slight decline" in TV sales to "reluctance of the part of the public to invest in black-and-white TV sets because they are led to think color TV is coming sooner than it appears to be." Also this week, GE introduced 21-in. mahogany table model at $260, uhf $300.

RETMA boards and 21 committees will meet at New York's Roosevelt Hotel Feb. 16-18 to hear report by pres. Glen McDaniel on proposed amendments to tax and labor laws and recent administrative regulations on military electronics procurement. Another feature will be discussion by set div. exec. committee on possibilities of promoting uhf. Committees will meet first 2 days, with board meeting final day.

Zenith cut 17-in. sets below $200 as leaders of 19-set line introduced this week to distributors in Chicago. Details: Colby, 17-in. mahogany wood table $180; Stafford, 17-in. blonde wood table $190; Kensington, 21-in. mahogany table $200; Carlton, 21-in. blonde table $210; Amherst, 21-in. mahogany pyroxylin table $230; Bowdoin, 21-in. blonde pyroxylin table $240; Bradford, 21-in. mahogany table $240; Balfour, 21-in. blonde table $250; Buckingham, 21-in. mahogany table $300; Purdue, 21-in. blonde table $310; Westminster, 21-in. open-face mahogany console $280; Oberlin, 21-in. open console $300; Sheldon, 21-in. open mahogany $300; Fordham, 21-in. open blonde $320; Cornell, 21-in. open mahogany veneer $320; Knox, 21-in. open blonde veneer $320; Dartmouth, 21-in. open mahogany veneer $400; Tulane, 21-in. open mahogany $400; Lawrence, 24-in. open mahogany $400. Optional uhf tuner is $30-50 extra. Also introduced was portable automatic phonograph listing at $100.

Zenith's motion to file counter-claim for $16,055,549 triple damages against RCA in patent infringement suit brought against Zenith by RCA (Vol. 10:3), was granted Feb. 11 by Chicago Federal District Judge Michael L. Igoe. No date was set for hearing claim.

Financial & Trade Notes: CBS earnings set record in 1953, chairman Wm. S. Paley told directors meeting this week, but said audited figures won't be revealed until next month. He said earnings were about $3.75 a share, or $1 more than in calendar 1952, when earnings were $6,445,506 on gross revenues of $251,594,490. CBS earnings in 1951 were $6,360,097 ($3.10) on gross revenues of $192,384,608. Last available financial report from CBS, covering 9 months ended Sept. 30, 1953, listed profit of $5,661,343 ($2.42) on sales of $223,109,649. All CBS operating divs. are included. Charles F. Stromeyer, new pres. of tube div. CBS-Hytron, was elected to board, replacing Frederick L. Chapman, resigned. Stromeyer was also elected CBS corporate v.p., as was Dr. Peter C. Goldmark, new pres. of CBS Laboratories.

Sonotone Corp., makers of hearing aids, tubes and picture tube guns along with line of military electronics products, reported 1953 net income slightly in excess of 1952's $464,000 but pres. Irving A. Schachtel told N. Y. Society of Security Analysts that decline in TV components business and "disruption of market" following introduction of color TV kept earnings below Sonotone's earlier estimates. He said sales in 1953 set record; detailed figures will be released later.

Dividends: Philco, 40¢ payable March 12 to stockholders of record Feb. 28; Storer Broadcasting Co., additional 37½¢ March 15 to holders March 1, plus regular 64¢ Class B March 15 to holders March 1; CBS, 40¢ quarterly A&B March 5 to holders Feb. 19; Television-Electronics Fund, 7¢ Feb. 26 to holders Feb. 11; I-T-E Circuit Breaker Co., 31¼¢ March 5 to holders Feb. 18.

Tele King Corp., 601 West 26th St., N. Y., manufacturer of own and private label TV lines, this week filed petition under Chapter XI of N. Y. Bankruptcy Act, offering creditors 100% settlement in annual installments of 10%. Referee Herbert Lowenthal permitted Tel King to remain in business pending settlement after exec. v.p. Calvin E. Bell said net profit of $25,000 a month could be realized by continuance. He estimated sales at $750,000 a month, operating expenses of $110,000. Attorney Benjamin Weintraub said Tel King had $3,337,000 in inventory last July in anticipation of fall season that never fully developed, lost about $200,000 last year on its 18 distributing subsidiaries and lost all defense contracts last July. Though no schedules were filed, petition approximates assets at $4,439,000, liabilities at $4,050,000. Ten largest creditors, who will meet with Lowenthal Feb. 15, are: GE, $584,501; RCA, $375,000; Westinghouse, $93,198; Sylvania, $84,859; Thomas Electronics Inc., Passaic, N. J. (tubes), $81,727; Tung-Sol, $75,456; Waterbury Companies Inc., Waterbury, Conn. (plastics), $37,407; Foster Transformer Co., Cincinnati, $35,158; Red Lion Furniture Co., Red Lion, Pa. (TV cabinets), $31,721; Sessions Clock Co., Forestville, Conn., $30,036.

Don Ferraro's 3 companies—Fidelity Tube Corp., Gem Radio & Jewel Radio, all of 900 Passaic Ave., Newark—were adjudged bankrupt this week when they were unable to submit Chapter XI plans satisfactory to creditors. Referee Wm. T. Cahill ordered adjudication after Asst. U. S. Attorney James C. Pitney pressed tax claims of more than $1,000,000 against the 3 firms, which listed $1,114,880 liabilities and $537,962 assets in late Dec. hearing (Vol. 10:1).

Motorola cut prices further this week, introducing 17-in. ebony metal table model at $160 (uhf $180) and 21-in. ebony metal table at $180 (uhf $200), available for March delivery. It was competitive move, bringing Motorola into line with Admiral and Philco, which previously introduced uhf and all-channel sets at those prices.
COUNTY-BY-COUNTY survey of set ownership, conducted for CBS-TV by Nielsen and hailed by CBS-TV research director Oscar Katz as "most extensive" ever made, will be issued within next 2 weeks.

Claims appear justified because survey was compiled by sampling 100,000 families directly, covering every one of nation's 3070 counties. As a preliminary, CBS this week issued state-by-state tabulation (see below). Census is as of Nov. 1, 1953, showing 58% of nation's families—27,506,500 out of 47,191,500—had TV sets as of that date. Interesting angle is that NBC's estimate as of same date shows 26,304,000 sets in use (Vol. 9:5). CBS's uhf count was 1,774,690. Because uhf is so relatively new and percentage of uhf sales and conversions has accelerated since survey was made, uhf figures should be employed with caution.

Commenting on survey, CBS said: "Aside from the industry's evident need for up-to-date, accurate figures, the new survey was made because in the 6-month period between May, 1953 [when CBS last issued a projection, not a survey] and November, the number of station markets had doubled, TV counties had increased by almost 50%, and uhf had its real beginning." Following are the state-by-state figures:

FCC's license fee proposal has begun to draw comments already, though they're not due until April 1. (For full text of proposal, see Special Report, Jan. 30.) Right off the bat, Sen. Edwin Johnson (D-Colo.) told Commission he doesn't like idea, said it's Congress' job to determine fees to be charged, if any. He introduced bill calling for establishment of "nominal" fees, said he hopes for Senate hearings on it in near future, asked FCC to hold off meanwhile. He wants it made clear that stations shouldn't feel they have "proprietary interest" in wave-lengths because they pay fees, and he questioned fairness of levying same charge for all TV-AM-FM stations. Rep. Aspinall (D-Colo.) introduced same bill in House. West coast attorney Joseph Brenner, speaking for himself, told FCC that no fees should be charged but, if they are, some system should be devised whereby Commission can resume holding hearings outside Washington, with parties paying FCC costs incurred. He also suggested that fees be on sliding scale directly proportional to cost of station as estimated by applicant, e.g., $500 for $500,000, $200 for $200,000 station, $50 for $50,000.

"Emmy" awards for 1953 announced Feb. 12 by Academy of TV Arts & Sciences at Hollywood banquet: top stars, Eve Arden of Our Miss Brooks (CBS) & Donald O'Connor of Colgate Comedy Hour (NBC); outstanding personality, Edward R. Murrow (CBS); comedy show, I Love Lucy (CBS); variety, Omnibus (CBS); mystery, Dragnet (NBC); news or sports, See It Now (CBS); public affairs, Victory at Sea (NBC); new program, Make Room for Daddy (ABC) & U. S. Steel Hour (ABC), tie; children's, Kukla, Fran & Ollie (NBC); supporting actor, Art Carney of Jackie Gleason Show (CBS); supporting actress, Vivian Vance, I Love Lucy (CBS); drama, U. S. Steel Hour (ABC); quiz or panel, This Is Your Life (NBO) & What's My Line? (CBS).

Program logs in newspapers are paid for by 13% of TV & radio stations either by exchange of time for space or by direct payment at regular newspaper rates, reports NARTB on basis of survey. Of the 13%, one-fourth are newspaper-owned. Report said 27% of all stations had been requested to pay but that 14% refused, using direct mail, broadcasting program schedules, etc. Report pointed out that newspapers have substantially increased income from pages on which logs appear by selling small ads to stations and sponsors.

Long delays in getting CAA clearance for TV towers are inherent in proposal to be considered Feb. 16 by Washington Airspace Subcommittee. On agenda for next meeting is request by Air Force that all proposals for towers higher than 500 ft. be submitted to Washington Airspace Subcommittee for approval, in addition to regional subcommittees which now have jurisdiction. Measure is given little chance of passage, one similar proposal having been voted down in the past.

Channel shifts and power increases: WTTV, Bloomington, Ind. has moved from Ch. 10 to 4, now radiates 100-kw ERP from new 1000-ft. tower at new site 26 mi. from Indianapolis. WJBF-TV, Augusta, Ga. (Ch. 6) Feb. 12 raised power from 23.8 to 100 kw. WTOP-TV, Washington (Ch. 9) last week went from 27.3 to 55 kw with new antenna, extending tower from 300 to 373 ft.

Eight-channel community distribution system will be demonstrated March 12-13 at Buck Hill Falls, Pa., by Spencer-Kennedy Labs. System receives all New York channels plus WFIL-TV, Philadelphia, has been operating 9 months.

Radio now reaches 98.1% of all homes, reports A. C. Nielsen Co. on basis of new survey showing 46,646,000 radio homes in U. S. as of Jan. 1—increase of 1,890,000 in 1953.
FCC Considers Ban on Low-Power UHF: Several proposals to help insure future of uhf are in works at FCC -- all based on trial balloons hoisted by Comr. George Sterling at Boston IRE meeting last month (Vol. 10:5).

Plan which might ban use of 1-kw transmitters by future uhf starters is getting most serious consideration at the moment. It's subject of concentrated study at staff level -- and what will eventually come of it is still in guessing stage. Like castor oil, it's a for-your-own-good measure, for such a proposal is almost certain to arouse plenty of opposition from grantees and equipment makers. In his Boston speech, Sterling put it this way:

"I am not sure but what the FCC would be doing uhf a favor if it suspended authorizing any more 1-kw uhf transmitters."

FCC staff is now investigating the need for this action, and how it could be accomplished. Sterling says he hopes it will come up on the Commission agenda "within a couple of weeks."

Minimum permissible power under FCC rules is geared to tower height and the population of principal city served -- the same minimums applying to both vhf and uhf. For example: With a 400-ft. tower, station serving city of less than 50,000 population is permitted to radiate as little as 3-kw; for cities 250,000-1,000,000, about 16-kw (which can be accomplished with 1-kw transmitter); cities 1,000,000 and over, 80-kw. Minimum ERP decreases as antenna height increases. Commission has also been authorizing stations to start with less than these minimums if their signal strength is of certain level over principal service area.

These rules would have to be changed, probably by setting up separate minimums, or entirely different power-height curves, for uhf and for vhf.

Those at Commission who feel such a change is desirable argue that: (1) In many cases, signal from 1-kw transmitter doesn't seem to be "getting out" enough for easy reception by today's relatively insensitive uhf receivers. (2) Lower-powered transmitters may have been necessary at first, but equipment situation now is constantly improving -- GE has 12-kw transmitter, DuMont has 5-kw, and RCA, DuMont, Federal and others soon will be making 12-kw uhf transmitters.

Any proposals to increase minimum transmitter powers would have to go through rule-making procedures, giving interested parties time for comments, etc.

Another of Sterling's proposals -- relaxation of restrictions on directional transmitting antennas -- is due to get informal discussion at next FCC meeting, although no one has yet petitioned Commission to change or waive these rules.

Perhaps the most unusual plan suggested by the Commissioner is the licensing of satellites and/or boosters to expand service areas of uhf stations (Vol. 10:7). Sterling came out in favor of waiving restrictions against commercialization of experimental boosters "in the interest of uhf broadcasters who want to go to the ex-
pense." This week he told us the Commission may soon begin considering the pending petitions for boosters and satellites.

Commission is still getting plenty of complaints from uhf telecasters -- most of them aimed at affiliation policies of the networks. Comm. Sterling says he's particularly disturbed by some recent charges of "discrimination" against uhf by the networks -- and adds that these are causing him to "lose a little bit of interest in the multiple ownership proposal."

Chairman Hyde, on other hand, says multiple ownership plan could be aid to uhf, by giving networks bigger stake in uhf's success. He says complaints from uhf grantees to his office haven't increased in recent weeks.

Commissioners have received some requests to hold general conference on uhf problems. But they figure that their forthcoming second survey of post-freeze station's economics and network relations -- due some time this spring -- will tell the story better. Meanwhile, at the staff level, FCC is making "spot checks" of some vhf-uhf markets. Pittsburgh was first city visited; next is exploration of situation in Norfolk area, where there are 3 uhf stations and 1 vhf.

**MORE EXPERIENCE WITH COLOR RECEIVER:** We reported our initial reactions to color set in the home a month ago (Vol. 10:4), can now pass on to you benefits of our additional experience since that time.

In terms of hours of color viewing, our experience is still limited. However, we have had a fair variety of program types, more layman reactions, more opportunity to tune and detune receiver.

From technical standpoint, our original reactions still hold: The RCA set is remarkably stable, relatively simple to tune, requires minimum of servicing. The color fidelity has remained at generally high level, and black-&-white reception on receiver remains quite satisfactory.

Average viewer still hankers for larger screen. Though we'd like brighter picture for daytime shows, present brightness level is quite adequate for nighttime viewing. Quite a few observers say that black-&-white picture on color set is "easy on the eyes" -- but we'd prefer more light.

* * *

From subjective standpoint of what color adds to programs, we've learned quite a bit. We watched Howdy Doody 4 times, and we submit that no amount of color will ever make it comprehensible or palatable to an adult. Furthermore, we doubt that children's feverish enthusiasm for program could be increased by anything.

Panel programs don't gain much from color, either. Meet the Press was little enhanced; color didn't add great deal to interview parts of Fred Allen's Judge for Yourself, but song productions were at times strikingly beautiful.

But the importance of color to commercials can't be overemphasized, regardless whether program content itself benefits greatly from color. Impact on viewer is tremendous, many times greater than black-&-white for many products. This single factor is a major answer to those critics of color TV who point out that movies have not converted wholly to color in the years color film has been available. There's no question about it, sponsors will insist on color as color audience grows.

* * *

There was exceptional treat this week in Camel News Caravan Feb. 16, showing color news film for first time. There was excellent documentary on Chinese activity on Formosa, plus good fashion shots of models vacationing in Florida. Though latter was a bit washed out, colors were exactly right as described by fashion commentator.

Film employed was 16mm Kodachrome, combination of commercial and daylight types; prints were duplicates of original, accounting for the slight reduction in saturation. Projector was fast pull-down. NBC-TV color film specialist Stan Parlan said cardinal rule for making color TV film is simply this: "Get all the quality you can on the film, and the electronic equipment will reproduce it faithfully."

Women performers ought to be mighty happy with color; the arts of the beautician and the dressmaker finally come into their own in TV.

We haven't had opportunity to watch CBS-TV's Fri. evening programs, but the
Some engrossing color programs are in the works, particularly after NBC gets mobile unit back in service next month and after color-conscious Pres. Pat Weaver returns from Hawaiian vacation.

Plenty of sports are on tap at NBC, including big-league baseball. CBS is aiming as far ahead as next New Year's Day, planning on the Orange Bowl game from Miami. Meanwhile, here's current schedule, always subject to some change:

**NBC-TV** -- Armstrong Circle Theatre Feb. 23, 9:30-10; Excursion Feb. 28, 4-4:30; Ding Dong School March 8-9, 10-10:30 a.m.; Taming of the Shrew (opera) March 13, 4-5:30; Name That Tune March 15, 8-8:30; On Your Account March 19, 4:30-5; Three Steps to Heaven March 22-23, 10:45-11 a.m.; Eddie Fisher March 31, 7:30-7:45. Tentatively scheduled are St. Patrick's Day parade March 17, Easter parade and Frontiers of Faith April 18, plus Gillette fights sometime in April.

**CBS-TV** -- New Revue, 5:30-6 every Friday, up to now carried in New York and Baltimore only, was due to go to Chicago Feb. 19, to Los Angeles Feb. 26. A few other cities, such as Youngstown and Minneapolis, have been getting show recently on "unguaranteed" AT&T circuits -- meaning program may or may not come through in color, because unconverted coaxial is sometimes used and microwave isn't equipped and monitored for color. Paul Tripp's Party, due March 2, is for New York only.

AT&T now has 2 circuits to west coast equipped for color, thus can handle 2 programs simultaneously. There's still no word from ABC or DuMont on specific plans for start of color programming.

**WEEK'S GRANTS INCLUDE 3 VHF CPs, 1 UHF:** There were 4 new CPs and an initial decision this week, but no new stations on air -- though 6 are imminent, may begin testing next week. Following are week's grants:

- Modesto, Cal., KTRB, Ch. 14; W. Palm Beach, Fla., WEAT, Ch. 12; Wilmington (Carolina Beach), N.C., Wilmington TV Corp., Ch. 3; Clarksburg, W.Va., WBLK, Ch. 12. Initial decision favored Ch. 2 grant in Buffalo to Niagara Frontier Amusement Co., examiner Harold Shilz deciding applicant didn't try to subvert FCC policy in its efforts to get dismissal of competing applicants (Vol. 10:7).

- New stations due next week: Duluth, Minn., WDSM-TV, Ch. 6; Manchester, N.H., WMUR-TV, Ch. 9; Schenectady, N.Y., WTRI, Ch. 35; Wilmington, N.C., WMFD-TV, Ch. 6; Pittsburgh, Pa., WQED (educational), Ch. 13; San Juan, P.R., WAPA-TV, Ch. 4.

One hot uhf-vhf decision was reaffirmed by FCC this week, despite fiery opposition from Sen. Johnson. FCC had granted special temporary authorization to WORD-TV, Spartenburg, N.C., to operate at site 6 mi. from Greenville instead of site specified in CP, 24 mi. from Greenville (Vol. 10:6).

A protest of "economic injury" was filed by CP-holder WSCV, Spartenburg (Ch. 17). Commission rejected protest, saying that WSCV's main argument was that WORD-TV wanted new site in order to get CBS-TV affiliation which WSCV hadn't been able to get. WSCV didn't prove, Commission said, that WORD-TV's different site had any effect on WSCV's chances of getting the CBS-TV affiliation. It termed the allegations of economic injury "conjectural and speculative."

Another case had unusual twist this week. Grantee WPOR-TV, Providence, R.I. (Ch. 12), which was stopped from going on air by protest of CP-holder WVET (Ch. 16), asked Commission to stop WNET from going on, arguing that WNET hadn't been diligent in constructing until it stymied WPOR-TV.

Among other actions, FCC this week: (1) Rejected Westinghouse's request for reconsideration of rule that directors' minor holdings in stations be counted under multiple ownership rule (Vol. 10:7). (2) Rejected petitions requesting reversal of the recent allocation of Ch. 6 to Whitefish Bay, Wis. and Ch. 13 to Bemidji, Minn. (3) Asked grantees WWLA, Lancaster, Pa. (Ch. 21) and WERE-TV, Cleveland, O. (Ch. 65) to give better reasons for not having begun construction. (4) Set March 19 for the start of Ch. 7 hearing for Wausau, Wis. and Ch. 7 for Omaha, Neb.
DR. EISENHOWER’S HOPES FOR EDUCATIONAL TV: "Don't give up on educational television.
We're had a rough start but give us time. We're just now beginning to learn some
of the economic facts about the cost of construction and operation of the stations.
We're filling a real educational gap and to do it right we've got to have time to
finance the stations and time to fulfill our responsibility."

Thus did Dr. Milton Eisenhower reassert his faith in educational TV this week
in interview. Brother of the President and himself president of Penn State College,
Dr. Eisenhower was one of educational TV's staunch early backers, is co-chairman of
National Citizens Committee for Educational TV. He told us 15 months ago he thought
educators would do far better in TV than in radio (Vol. 8:46), now insists they're
making good progress despite slow start of 3 stations on air, 27 CPs, 17 applications.

It's only fair to give educators more time than commercial applicants, said
Dr. Eisenhower, because many of them must go to skeptical, economy-minded state
legislatures, others must raise funds through private foundations.

"I have no preference for one type of financing," he declared. "I believe we
should use any and all methods which allow us a completely free hand in the choice
of programs. I don't believe there's any danger in state-controlled TV just because
a legislature appropriates money for it. We accept money from the government for
research in medicine, agriculture and industry. So why should we fear dictation by
politicians because they're assisting us in this thrilling educational venture?"

There's no conflict between commercial and educational stations, he believes.
"There's a job to be done here which commercial TV cannot do, should not do and
could not be expected to do — and we would not want them to do it. Personally, I'm
enthusiastic about both commercial and educational TV," he said.

He believes educational station in small town can survive as well as station
in large city with vast cultural resources. But small-town educational applicants
have better chance if they're hooked to state network, as proposed in Wisconsin. To
illustrate, he pointed to his own State College, allocated Ch. 44 as one of 4 author-
ized for Pennsylvania, others being Philadelphia's Ch. 35, Pittsburgh's Ch. 13 and
Erie's Ch. 41. He said he hoped 2 more channels would be allocated in smaller towns
and all 6 be linked in network, giving smaller stations better programming.

* * * *

Joint Committee on Educational TV held stock-taking session this week at con-
vention of National Assn. of School Administrators in Atlantic City — and naturally
found itself thinking more of future than boasting of past.

Biggest event of future will be joint dedication of 5 stations May 16. They
are WQED, Pittsburgh (Ch. 13); WCET, Cincinnati (Ch. 48); KETC, St. Louis (Ch. 9);
WHA-TV, Madison, Wis. (Ch. 21); KQED, San Francisco (Ch. 9). WQED is scheduled to
run test patterns Tue. Feb. 23 to become nation's 4th educational outlet, joining
KUHT, Houston (Ch. 8), KTUE, Los Angeles (Ch. 28) and WKAR-TV, E. Lansing (Ch. 60),
latter operating non-commercially on commercial channel. Testing dates of other
four stations are still indefinite, though all say they'll meet dedication date.

JCET'S Ralph Steelet says he's encouraged by formation of local committees
in states which have submitted no educational application. Among them are North
Dakota, South Dakota, Nebraska, New Mexico, Arizona, Utah, Montana, Wyoming, Idaho
and Oregon. Both he and Robert Mullen, exec. director of Dr. Eisenhower's National
Citizens Committee for Educational TV, have been concentrating their promotional
fire in those areas recently and report encouraging progress.

Further encouragement came recently from New York, where Gov. Dewey asked
state legislature to authorize operation of state's 10 non-commercial stations by
"responsible" non-profit groups under general supervision of State Board of Regents
(Vol. 10:6). Leaders who date educational TV's lag from Dewey's rejection last year
of proposal for a state-financed network (Vol.9:9-10) are encouraged by latest action
but don't necessarily believe it represents basic shift in Dewey's attitude.

* * * *

Talk of the future to one side, educators' record to date isn't impressive.
KTUE and WKAR-TV, both uhf, are proceeding very slowly with programming. Former
faces extremely rough going, up against 7 vhf commercial stations, but licensee
Allan Hancock Foundation declares it's willing to spend a lot of time and oil money to make station go. It's too early to evaluate WKAR-TV, on air only a month.

**KUHT**, educational TV's "pioneer" station, programming since last May, is having its troubles, too, judging from reports. New York Times recently reported station was having trouble raising enough money to continue beyond current school year, and Houston Independent School District, though a joint licensee with U of Houston, has been reluctant to assist in presenting programs. Story further reported KUHT's program ratings were very low compared to educational programs on commercial KPRC-TV.

U of Houston has increased TV courses from 8 to 9, with psychology most popular. Yet school officials expressed disappointment that of the few thousand who view psychology program, only about 250 actually signed up for course or purchased teaching materials. Thus only small fraction of audience were "revenue" students.

**NOTABLE ACTIVITY** is reported by Canada's privately owned TV stations, anxious to get on air and, in most cases, provide first TV service to their areas. There are now 15 outstanding grants for Canadian stations, of which 13 are privately owned—in addition to the 8 stations now on air (5 CBC, 3 privately owned). Latest private station to go on air, CKCO-TV, Kitchener, Ont. (Ch. 13), Canadian GE equipped, has been transmitting test pattern and music since Dec. 24 (Vol. 10:5), gets CBC network interconnection Feb. 21, starts studio programming March 1. Next Canadian station due to start is privately owned CHSJ-TV, St. John, N. B. (Ch. 4), planning debut next month. RCA this week reported shipment of 10-kw transmitter to CHCH-TV, Hamilton, Ont. (Ch. 11), which has April target date.

These progress reports were received this week from grantees of Canadian stations:

**CFAC-TV**, Calgary, Alta. (Ch. 2), now negotiating for equipment, begins construction of studio-transmitter building and 670-ft. tower as soon as frost lifts in March or April, hopes to begin tests about Sept., goes commercial about Oct. 1, reports mgr. A. M. CaImrns. Rep will be All-Canada Television.

**CFCM-TV**, Quebec City (Ch. 4), delayed by severe winter, now plans May start with 500-watt DuMont transmitter in suburban Ste. Foye, according to gen. mgr. Henri Lepage. It's jointly owned by Famous Players Canadian Corp. and AM stations CHRC, CJCQ, CKC. Famous Players also owns 50% of CKCO-TV, Kitchener, which begins commercial operation Feb. 21. Reps are Weed (for U.S.) and Jos. A. Hardy & Co.

**CBWT**, Winnipeg, Man. (Ch. 4), CBC's outlet there, now plans test pattern in early May, programming later same month. It takes delivery on RCA 10-kw transmitter in March or April, will radiate 60 kw from 240-ft. tower. **CJCB-TV**, Sydney, N.S. (Ch. 4) has ordered 10-kw RCA transmitter for April-May delivery, plans July tests using 300-ft. RCA tower on 225-ft. elevation, goes commercial in Aug., according to pres. J. W. Nathanson. Reps will be Weed (for U.S.) & All-Canada Television.

**CFNC-TV**, Saskatoon, Sask. (Ch. 8), now negotiating for equipment & tower, has begun adding TV facilities to present radio studios, plans tests in Aug. or early Sept., goes commercial Oct. 1, reports mgr. V. Dallin. Tentative base rate is $200. Reps will be Adam Young (for U.S.) & Radio Representatives Ltd.

**CRLW-TV**, Windsor-Detroit (Ch. 9), planning July start, has ordered 24-kw RCA transmitter for May delivery, will be 1st Canadian station to start with maximum 325-kw visual power, according to pres. J. E. Campeau. Its 650-ft. RCA tower will be on Detroit River waterfront where $1,250,000 studio-tower construction project is already underway. Reps will be Adam Young (for U.S.) & All-Canada Television.

In contrast to bustling activity in the north, reports from U.S. grantees this week were sparse, and shipments of equipment to upcoming stations were sparser. Only one reported was GE 12-bay antenna to WSLL-TV, Jackson, Miss. (Ch. 12), due on air next month. GE also reports order for 5-kw transmitter and 12-bay antenna for KGVO-TV, Missoula, Mont. (Ch. 13) for delivery in 60 days. Station hopes to be on air in June. For stations already on air, GE shipped 12-kw amplifier to KCCC-TV, Sacramento, Cal. (Ch. 40) and 5-bay helical uhf antenna to WJMR-TV, New Orleans (Ch. 61).

These were the reports received this week from upcoming U.S. stations:

**WMUR-TV**, Manchester, N. H. (Ch. 9), delayed by severe winter weather, now plans March 14 programming using 10-kw RCA transmitter and former FM tower atop 1500-ft. Mt. Uncanoonuc, according to chief engineer Charles Halle. It will be 1st TV in state, is owned by ex-Gov. Francis P. Murphy. Base rate will be $250. Weed will be rep. WMTW (Ch. 8) super-coverage outlet with transmitter atop Mt. Washington, N. H., and studios in Poland, Me., is due next July. WKNV-TV, Keene (Ch. 45) state's other grantee, hasn't ordered equipment or announced plans.

**WNLC-TV**, New London, Conn. (Ch. 26), now has "late 1954" target, has ordered RCA equipment, 420-ft. Stainless tower, writes mgr. Gerald J. Morey. Class A hour will be $150. Headley-Reed will be rep.

**WLAP-TV**, Lexington, Ky. (Ch. 27), granted last Dec. to Gilmore & J. Lindsay Nunn, announces "indefinite postponement of construction" in printed brochure distributed to public. Brouchure notes station has already spent more than $100,000, that it had arranged for primary CBS-TV affiliation with AT&T interconnection but that it believes uhf today is unacceptable today as an "area-wide system." Booklet adds: "When and if, in the next few months, the uhf picture improves, or this area is granted a vhf channel, we will reactivate our plans and proceed in confidence [but] we would rather be a live casualty than a dead hero."

**WOPA-TV**, Chicago (Ch. 44), granted Feb. 10, hasn't ordered equipment or begun construction, but plans to start Jan. 1, 1955, according to gen. mgr. Egmont Sonderling. Rep not yet chosen.

**WKNV-TV**, Kingston, N. Y. (Ch. 66), has postponed late Feb. target date because of weather delays, according to TV operations mgr. Robert L. Sabin, is now indefinite as it stands. Outside construction of studio-transmitter building has been completed, installation of 1-kw RCA transmitter awaits some interior finishing. Its 600-ft. Stainless tower has now been built up past half-way mark at Port Ewen site, 3 mi. from Kingston and 10 mi. from Poughkeepsie. Owner Joseph K. Close also has CP for Keene, N. H., which hasn't ordered equipment or set target date. Hour rate will be $100. Rep will be Meeker.
Telecasting Notes: TV's cost-per-thousand continues to drop despite addition of new stations. Figures released by NBC research director Hugh M. Beville Jr., tell story in terms of cost-per-thousand TV homes on full NBC-TV network: from $12.39 in March 1948 to $2.92 in Jan. 1954. NBC-TV's gross hourly rate for full network was $2550 in March 1948 when there were 206,000 TV homes; had this increased in direct proportion to increase in number of TV homes, 1954 rate would have been $330,150 for nationwide coverage, instead of actual rate of $79,885, Beville points out. "Triple exposure" plan, to be inaugurated March 2 by ABC-TV, marks first network entry into repetitive programming; ABC-TV's top-talent live mystery drama, The Mask, Sun. 8-9 p.m., will also be offered Tue. & Wed., 8-9 p.m., on film, re-runs being programs originally presented live in previous weeks, substantially cutting talent & production costs and filling holes in ABC-TV evening schedules. Shift of Lux Video Theatre & Lux Radio Theatre from CBS to NBC (Vol. 10:7) may be "only the beginning" of big NBC offensive under pres. Pat Weaver, says Feb. 17 Variety, speculating that "the network will next train its guns and strategy on effecting the switchover of other names and properties from its major CBS competition" and quoting "reliable reports" that Toast of the Town's Ed Sullivan is "target No. 1 on the NBC agenda." Billy Rose, who bought TV time to plug his Broadway musical Kismet, tried new twist for his controversial play The Immoralist, which opened Feb. 8 before unenthusiastic newspaper critics; he bought midnight-12:15 a.m. segment on WNBTh for entire week to present panel discussions about the play by show business personalities, critics, psychologists, etc.; the telecasts got more acclaim from critics than did play itself...

The rights to complete literary works of Ring Lardner have been acquired by Eugene Solow & Brewster Morgan for Authors Playhouse, series of 39 filmed dramas slated for completion by Sept.; Solow & Brewster also have signed deals for some works by John Steinbeck, John Hersey, Lloyd C. Douglas and Ben Ames Williams, with $1,200,000 backing by Chemical National Bank of N. Y. ... 4 theatre-owned TV stations now booking TV films through Amalgamated Buying Service, N. Y. & New Haven theatrical film purchasing agency headed by Lew Ginsburg...

Educational telecasts, to be viewed in schools as part of regular classroom routine, will be initiated in Canada next Nov. by CBC on trial basis. Mardi Gras celebrations to be telecast from New Orleans by NBC-TV, 11:45-12:30 p.m. March 2 & midnight-1 a.m. March 3 ... KTEN, Ada, Okla. (Ch. 10), which asked aid of advertising agencies in setting its rates (Vol. 9:52), got response from 36 out of 100 queried, suggested rates averaging $261 for Class A hour, $50 for min.; because of prospective set circulation increase, KTEN, which plans to begin programming in May or June, set rates at $300 & $55 for hour & min. ... KOAT-TV, Albuquerque, cuts Class A hour from $250 to $160, min. from $45 to $29 ... KELO-TV, Sioux Falls, S. D. raises base hourly rate from $150 to $200, min. from $30 to $40 ... KCMO-TV, Kansas City, becomes primary affiliate of DuMont, replacing KCTV, which goes off air Feb. 28 (Vol. 10:7).

Personal Notes: Frederic W. Wile Jr., NBC-TV network program v.p. in Hollywood, takes on added responsibility for all west coast radio activities. ... James A. Stabile promoted to director of new ABC business affairs dept., in charge of negotiating contracts affecting all network TV & radio programs ... E. J. Rosenberg, exec. v.p. of packager Transamerician Broadcasting & Television Corp., named DuMont Network sales development director ... Mitchell F. Stanley, ex-WOUN (AM), Woonsocket, R. I., named mgr. of WFMT-TV & WFMJ, Youngstown, O. ... John H. Norton Jr., ex-ABC v.p. now gen. mgr. of upcoming WMTW, Poland, Me., elected v.p. of licensee Mt. Washington TV Inc. ... John Pival, TV mg., elected v.p. for TV, Harold S. Christian, radio commercial mg., elected radio v.p., WXYZ-TV & WXYZ, Detroit; Ralph Dawson promoted to TV sales director, Harold L. Neal to radio sales mgr. ... Dick Campbell, station mgr. of KOTV, Tulsa, takes over added duties of commercial mg. John B. Hill, resigned; Robert Freeland promoted to promotion & publicity director ... Brown Morris named station mgr. of upcoming KTEN, Ada, Okla. (Ch. 10), due in May or June; Nadine Mullinax named program mgr., Fred Smith chief engineer ... Wm. H. Hansher, ex-Graybar, named chief engineer of WTVN, Columbus, O. ... Nathan D. Golden, director of Commerce Dept.'s scientific, motion picture & photographic products div., receives Silver Medal Meritorious Service Award from Secy. Weeks for outstanding achievement ... Charles E. Jackson promoted to local sales mgr. of KFMB-TV, San Diego ... Gary Vorhees, ex-WTAR-TV, Norfolk, named production director of WTRF-TV, Wheeling, W. Va. ... James H. Butts, ex-KBTI, Denver, appointed operations supervisor of KOA-TV ... Wm. Anderson, ex-WOR-TV, named publicity mgr. of WNBTh & WBNC, reporting to newly publicity director Bob Blake ... Harvey Wick appointed director of film operations, WPTV, Duluth ... Vernon Webster named sales mgr. of WICA-TV, Ashtabula, O.; Donald Fassett, business mg. ... Frank Bernato, chief engineer ... Randall F. Larson, ex-KRON-TV, San Francisco, named program mgr. of Bakersfield's KBK-TV & KBK, formerly KAFY-TV & KAFY ... Del Leeson named mgr. of new promotion, planning & development dept., KDFY-TV & KDYL, Salt Lake City ... Everett Freedman, veteran top-flight movie scenarist, joins CBS-TV Hollywood in development of new properties ... George G. Huntington promoted to ABC Radio sales development mgr. ... Harold W. Waddell, ex-JWJ, named sales mgr. of NBC-owned WATM, Cleveland, reporting to Wm. N. Davidson, sales director of WNBK & WATM ... George Wolf, Geyer TV-radio adv. director, elected v.p. ... Robert C. Alexander promoted to TV-radio v.p., Ward Wheelock Co., Philadelphia ... Robert Kirschbaum, ex-Kenyon & Eckhardt, named Grey Adv. TV-radio copy head ... Robert W. Bloch named TV-radio director of Toy Guidance Council, planning big spot campaign ... Lloyd F. Christianson, pres. of Electronics Associates Inc., Long Branch, N. J., elected to board of WRTV, Asbury Park, N. J. ... Jerry Dunphy named news director of WTVH-TV, Peoria.

FCC's FM functional music proposal (Vol. 10:1) drew 30-odd comments this week, mostly from FM stations, mostly laudatory. Many liked FCC's objective—to give FM stations some revenue—but urged that proposal go even further and permit stations to provide functional music, storecasting, transcasting, etc. on simplex basis, thus eliminating need for purchasing multiplexing equipment. Some also proposed that FM stations be permitted to provide point-to-point service, too. Several comments brought up question of "piracy" of functional music signals, asked FCC to try to stop it. Among the few opponents were those who have opposed transcasting—CIO and the groups who took their opposition to Supreme Court and lost. A few mobile radio users argued that FM broadcasters weren't making adequate use of frequencies and that a relocation of 88-108 mcFM band be made. Sole broadcaster opponent was Storer Bestg. Co. which visualized proposal pushing AM and TV into a "subscription" basis.
Color Trends & Briefs: RCA's timetable for modifying TV stations' RCA post-war transmitters and sideband filters for color without charge (Vol. 10:7) will coincide with stations' plans for getting necessary additional studio terminal equipment and starting colorcasts. RCA aim is to coordinate station modification schedule with AT&T's program of equipping its facilities to bring color to stations.

Although RCA is shuddering cost of material and engineering supervision for modifying transmitters and sideband filters, stations must still stand cost of necessary additional equipment; our report of RCA's announcement last week erred by implying that RCA is assuming whole burden of preparing stations for network color rebroadcasts.

RCA has analyzed its post-war transmitters, found that all can be readily modified for color. By end of second quarter, it expects that all new transmitters will come off production line already prepared for color.

More color plans of manufacturers: GE plans to produce set with 15-in. tube in early summer for field testing and dealer demonstrations only, to sell "over $1000." By Dec. it hopes to have set with 15-in. tube, to sell between $800-$1000. CBS-Columbia announced it will begin production March 1 of 15-in. sets using tube made by CBS-Hytron. First sets will go to distributors after their servicemen complete 2-week factory color clinic. About 10 color sets a day will be produced after March 1, said company officials, adding they'll make 19-in. set "as soon as CBS-Hytron makes a tube." Arvin will start sampling distributors with 15-in. set in March-April. Andrea introduced 15-in. set to distributors this week, plans "production in limited quantities during second or third quarter of this year."

A 21-in. Lawrence color tube, rectangular and metal-faced, is being demonstrated at west coast plant by Chromatic TV Labs. Richard Hodgson, Chromatic Press, reports that it uses 18,000 volts, produces 30 ft. lamberts of brightness and 300 lines of vertical resolution. Hodgson says that experiments with all glass envelopes are planned and that order for bulbs has been placed with Corning. He hopes to show tube at forthcoming IRE convention in New York. Chromatic's 2 licensees, Thomas Electronics and Crosley, continue work on Lawrence tube, have distributed samples. National Video Corp., though experimenting with tube (Vol. 10:7), is not a Chromatic licensee.

Servicemen's interest in color is enormous, as exemplified by attendance of 850 at Feb. 15-16 RCA Service Co. course in Washington's Lisner Auditorium. Audience was extremely attentive, fearful of missing a word. Admiral this week started second color TV training school in Chicago for some 30 field engineers and distributor servicemen, under national service mgr. Max Schinke.

Network Accounts: CBS-TV's long-awaited response to NBC-TV's Today at 7-9 a.m. finally goes on air March 15, though no sponsors have been announced yet. Titled The Morning Show, it will feature Walter Cronkite as counterpart of Today's Dave Garroway, has newsmen Charles Collingwood and Bill & Cora Baird's famed puppets. To compete with Garroway's chimpanzee J. Fred Muggs, Morning Show will have "Humphrey, the Hound Dog," a Baird puppet, as "disc doggie." Originating from Studio 41 in Grand Central Terminal, show will be offered in 15-min. segments for national sponsorship, with 5-min. cutaways for local sponsors every half-hour... CBS-Columbia signed this week as interim sponsor of Arthur Godfrey & His Friends Wed. 8-9 p.m., alternating with Toni (home permanent) until summer, when latter takes over weekly; Nielsen ratings this week dropped Friends program from first 10 national programs first time in more than... Ford Foundation's Omnibus, sponsored by Kelvinator, Greyhound Bus Corp. & Scott Paper Co., goes off air as scheduled March 28 on CBS-TV Sun. 5-6:30 p.m.; to replace it, sustainer Adventure will be expanded from 4:30-5 to 5:30 and Eric Severeid's The American Week moves in from 5:30-6 as sustainer, remaining 6-6:30 p.m. open at present... Corn Products Refining Co. buys Mon. 1:45-2 p.m. segment of Garry Moore Show on CBS-TV starting March 1, thru C. L. Miller Co. ...GE planning to sponsor Ginger Rogers in dramatic series in place of Fred Waring Show and GE Theatre on CBS-TV starting in fall, Sun. 9-9:30 p.m., thru BBDO ... General Foods Corp. (Baker's coconut) buys 8 partic. on Dave Garroway's Today on NBC-TV 7-9 a.m.; thru Young & Rubicam; Reardon Co., St. Louis (Bondex cement paint) 17 partic., thru Krupnick & Assoc.; Murine Co. (eye drops) 5 partic., thru BBDO, Chicago; Hathaway Mfg. Co. (curtain fabrics) 8 partic., thru Fletcher D. Richards Inc. ... Toni (permanent) and Quaker Oats, radio sponsors of Don McNeill's Breakfast Club on ABC Mon.-thru-Fri. 9-10 a.m., relinquish options for TV sponsorship when it goes simulcast Feb. 22; other radio sponsors, Swift's & Philco, defer decision on TV... ABC-TV shifts 3 sustainers to Sundays: Answers for Americans, 1-1:30; Elmer Davis 3:30-3:45; Martin Agronsky's At Issue 3:45-4.

Station Accounts: Already heavily in TV, breweries took even bigger plunge into sponsorships this week with approach of spring. Budweiser Beer signs to sponsor all 77 road games of St. Louis Cardinals on WTVI, St. Louis-Belleville, Ill., thru D'Arcy Adv.; Krueger's Beer alternates with Carter Products on Cases of Eddie Drake on WCBS-TV starting Feb. 27, Sat. 7-7:30 p.m., thru Grey Adv.; G. Heileman's Brewing Co. (Old Style lager beer) sponsors Hollywood Showcase on Chicago's WNBQ starting Feb. 20, Sat. 6-6:30 p.m., thru Leo Burnett; Arizona Brewing Co. buys Duffy's Tavern for El Paso, Albuquerque, Las Vegas, Phoenix, Tucson, Yuma, San Diego & Roswell, N. M., thru Advertising Counselors of Arizona... Gorham Co. (silverware) makes first TV buy with All-Star Theatre in Kansas City and Atlanta starting in March, plans to expand to other cities shortly, thru Kenyon & Eckhardt... Armstrong Tire & Rubber Co. offers to sponsor Big Playbook filmed series on 50-50 basis with its dealers in 160 cities... Glidden Paints and DuMont TV dealers team up to sponsor TV-radio of 21 eastern Maine high school basketball tournaments on WABI-TV & WABI, Bangor... Mutual Assn. of Savings Banks sponsors cartoonist Roger Price and his "Doodles" on WABC-TV starting March 1, Mon.-thru-Fri. 7:10-7:15 p.m. ... Bromo-Seltzer buys Janet Dean, Registered Nurse series in 20-30 markets, thru Lennen & Newell ... Paper-Mate Pens to spend $1,600,000 in TV-radio spots, in addition to proposed network program this fall, thru Foote, Cone & Belding ... Packard Dealers of N. Y. to sponsor national indoor tennis championship finals Feb. 22 on WOR-TV 2-5 p.m., thru J. R. Pershall Co., Chicago ... Southwestern Bell Telephone Co. buys Seems Like Yesterday on WBAP-TV, Ft. Worth, thru Gardner Adv. ... Among other advertisers using or preparing to use TV: Lanvin Parfums Inc., thru Cordland D. Ferguson; Lo-Calory Food Corp. (R.D.X. tablets), thru Harry B. Cohen Adv.; Babbitt Co. (Glim detergent), thru Harry B. Cohen; Manchester Hosier Mills, thru Bahn Adv.; Eastern Wine Corp., thru Ben B. Bliss & Co.; Tryne Co. (Hi-Q games), thru Drugstore Adv. Assoc.; Trix-Stix (games), thru Monroe Greenhal Co.; Kidd & Co., Ligonier, Ind. (Kidd's marshmallow creme), thru L. W. Ramsey Co., Chicago.
CREDIT AND DEBIT SIDES OF THE TRADE LEDGER: Despite current good movement of sets, TV-radio makers are genuinely concerned about state of market. They communicated their anxiety quite freely this week at RETMA quarterly meetings in New York, giving these three problems top priority among their worries:

1. **Low prices of TV sets.** "Nobody can make money with 17-in. sets selling as low as $150 and 21-in. at $180," said one. "Where it will stop isn't for me to say but as long as my competition does it, I'll have to go along. But the market is good now and I don't think we have to cut prices like this to make a living."

2. **Slow progress of uhf.** Trade source estimated about 110,000 of 400,000 sets now in factory inventory are uhf-equipped. Same source said uhf sales for the first half of 1954 probably will be no higher than 15% of all TV sales, as contrasted with expected 20-25%. Adding to manufacturers' concern is fact that uhf receivers sell for more than uhf-only receivers and profit margin is greater.

3. **Lagging radio sales.** Almost unnoticed by press, radio sales this year have been going down at a rate many set makers consider alarming. Through Feb. 12, factory sales of all radios, including auto, were estimated at 1,150,000, compared to 1,600,000 for same period of 1953. Inventories of radios, excluding auto sets, stood at 3,000,000 at all levels Feb. 12, compared to 2,000,000 year ago. Crosley's new Super V 17-in. table selling at $140 (Vol. 10:7) gave set makers cause for more anxiety than many would admit. There was plenty of head-shaking as to its effect, particularly as first reports from field indicated Crosley was reaping windfall in sales. Reports that some manufacturers were preparing to duplicate the Crosley action were persistent. In fact, Raytheon this week issued formal denial that it had $140 17-in. table model in works, for release in month or so.

Radio problem was real stickler, one which has been building up since first of year. One reason was decline in auto production below 1953's weekly pace of some 100,000. This becomes important when one considers that 5,132,934 auto radios were turned out last year, out of total radio production of 13,368,556. But portable, clock and home sets are dragging, too. One official's comment: "Radio's an old man who's been on his feet a long time. Maybe he's just tired."

There were problems, to be sure, but fact is that Jan. retail sales probably will prove to be highest on record for that month when final figures are in, said RETMA spokesman, acknowledging that profit won't be nearly as big for all concerned.

One comment is that industry "color truth" campaign had effect for first time in January. Folks realized that color at prices they could afford was long way off and decided their best bet was black & white. Bulk of January sales were in older markets and a large percentage were replacement sales, according to RETMA.

Color's apparent minimal impact on black & white was a continuing source of gratification. In the few cities where color has been demonstrated, notably New York, public's curiosity but not its money was stirred. Customers weren't eager to buy color and dealers weren't eager to sell. Latter complain that with delivery dates uncertain and no satisfactory service plan available, they were inviting future headaches by selling current-sized models -- even if they had buyers.

Black & white trade seemed to be holding up well, showing little change in factory or distributor sales week ended Feb. 12 from preceding week, with inventory about 1,650,000 at all levels. Sylvania chairman Don G. Mitchell said inventory was actually too low, based on current rate of sales. He said industry was producing at rate of 6,000,000 a year but selling at rate of 7,500,000. He predicted sales will improve in second quarter, reversing trend of nearly all prior years.
TV production maintained steady pace, totaling 107,702 week ended Feb. 12, compared to 107,853 preceding week, 110,156 week ended Jan. 29. It was year’s 6th week in RETMA’s statistical calendar and brought production for year to date to some 637,000, compared to 1,079,261 for same period of 1953.

Radio production totaled 190,207, compared to 192,523 week ended Feb. 5 and 202,837 week before. Radio output has thus shown decline in every week of 1954. It brought 6th-week production to approximately 1,250,000 vs. 1,694,366 year ago.

**PRICE WARS BRING INTERFERENCE WORRIES:** The highly competitive TV price situation is causing new concern over interference problems at both industry and FCC levels.

Tendency to cut corners on safeguards against interference and radiation has been evident in some -- but by no means all -- of the new "price leader" sets built to sell for less than $200, we’ve been told by industry engineering sources.

Issue was brought to a head this week when FCC Chairman Rosel Hyde sent wire to RETMA board, meeting in New York, urging industry to stick to its self-adopted "standard" intermediate frequency (IF) of 41 mc -- around which the Commission built its allocation plan for uhf stations.

Telegram was "neither a threat nor a complaint," Hyde told us, but a request for "appropriate action." He said he was concerned about reports that some new TV set models had reverted to old 21-mc IF. But he discounted rumors that FCC may go to Congress with request for special legislation if industry doesn’t act.

**RETMA board authorized chairman Robert C. Sprague to"* appoint a committee with broad powers to establish procedures and possible testing facilities, after consultation with FCC, so that set manufacturers can eliminate all possible sources of spurious emissions which cause interference with the reception of TV signals by other receivers." Committee will weigh all possible actions and attempt to develop effective industry-wide program for voluntary compliance.

Chairman Hyde’s wire gave more urgency to the problem which was already on RETMA board’s agenda. The industry organization has long been concerned by slowness of some manufacturers to comply with the new standards -- and lately has been worried by an apparent tendency of some set makers, who had previously adopted the new 41-mc IF, to backslide. RETMA’s power to make manufacturers adhere to standards is as limited as FCC’s. As a trade association, it can merely "suggest." And neither does the Commission have any jurisdiction in this field.

*All of the top 10 set makers, and 15 minor ones, responded to RETMA poll last fall by saying they would use 41-mc IF in all of their sets by first of this year.

**But today’s price situation apparently has altered some plans. Use of 41-mc IF involves more expense than old 21-mc. Said one industry source: "These days a lot of people are thinking in terms of saving 50¢ to $1 on a set, including a couple of the leading set manufacturers."

TV-radio-appliance retail failures in 1953 totaled 348, compared to 219 in 1952, reported Dun & Bradstreet this week. Liabilities rose to $15,355,000 from $5,485,000 in 1952. Rate of failures per 10,000 concerns was also greater last year—116, compared to 79 preceding year. Business failures in Dun & Bradstreet tabulations include businesses that ceased operations following assignment or bankruptcy; ceased with losses to creditors after such actions as execution, foreclosure or attachment; voluntarily withdrew; were involved in court actions as receivership, reorganization, Chapter XI arrangement or voluntarily compromised with creditors out of court. They don’t include withdrawals due to changes in ownership and voluntary liquidation in which there is no indication of loss to creditors.

Admiral will build $1,000,000 warehouse in Leyden Township, Ill., to house TV & radio receivers, eliminating need for 7 separate warehouses in area. Due for completion in June, it has 152,000 sq. ft. of space.

Licensed TV sets in Britain totaled 2,846,227 as of Nov. 30, increase of 119,157 during Nov.

RETMA board took following actions at meeting this week in New York’s Roosevelt Hotel: (1) Adopted resolution urging Congress to exempt color sets from excise tax in keeping with practice of exempting new products and industries. (2) Commended FCC for “diligence and speed” in processing TV station applications, approving NTSC color standards and facilitating development of uhf. (3) Authorized pres. Glen McDaniel to confer with officials of new electronics div. of Business & Defense Services Administration on ways of promoting industry-govt. cooperation. (4) Approved proposal to provide funds or equipment for educational TV research project at New Jersey State Teachers College, Montclair.

Long-standing patent litigation between Zenith and RCA may get first hearing in April, Delaware Federal District Judge Leahy indicates. Patent issues will be heard first, Judge Leahy having turned down plea by Zenith to give priority to anti-trust issues. Last week Chicago Federal Judge Igoe ruled that hearing on new Zenith counter-claim against RCA (Vol. 10:3) would have to wait until Delaware case is disposed of.
Topics & Trends of TV Trade: TV shipments to dealers totaled 6,056,555 last year, when production was 7,214,787, according to RETMA's cumulative state-by-state and county-by-county report released this week. It was well up from 6,174,505 sets sold to dealers in 1952, when production was 6,098,279, but fell short of record 1950, when 7,068,000 were shipped and 7,463,800 were produced. Decline in TV business last fall was reflected in the 695,308 units shipped in Nov. compared to 756,855 in Nov. 1952 and 856,175 sold in Dec. vs. 965,891 in Dec. 1952. Inventories at end of 1953 were about 1,850,000 compared to 2,310,000 at beginning of year. New York led in shipments, with 555,293; Pennsylvania second, 548,845; California third, 514,512; Wyoming, still without station, trailed with 4058. [For state-by-state shipments of sets to dealers 1950-52, and first 10 months of 1953, see p. 335, TV Factbook No. 18.] Here's state-by-state report for 1953 (county-by-county tables available from RETMA upon request):

Distributor Notes: Shakeup in San Antonio distribution began this week with Zenith's appointment of Joe Thiele Inc., replacing Perry Shankle Co. Latter reportedly will take over RCA Victor line March 1, when Strauss-Frank Co. takes over Sylvania ... Leo J. Meyberg Co., RCA San Francisco outlet, will sell Los Angeles and Fresno branches shortly, said pres. Al Meyer ... Sylvania appoints Merit Distributing Co., 1215 Henderson St., Columbia, S.C.; York Supply Co., Cincinnati, replacing Pease-Gaulet; Electronic Supply Inc., White River Junction, Vt. ... Emerson appoints Wholesale Appliances Inc., 5220 Natural Bridge, St. Louis (John C. Cox Jr., pres.) ... Meek TV appoints Wm. Sales Co., Muncie, Ind.; Watham-Miller Co., Cedar Rapids; Electric Fixture & Supply Co., Salina, Kans.; Ellis Electric Co., Wichita; Davis Wholesale Drug Co., Baton Rouge; Clingan Electric Supply Co., Cambridge, Md.; Breyniney Bain Co., Petoskey, Mich.; Spors Co., Le Center, Minn. ... Admiral Distributors Inc., San Francisco, promotes H. R. Tamberg to gen. mgr., replacing John Barker, now with Hoffman Radio Sales Corp. ... Boyd Distributing Co., Denver (Philco) promotes Wm. H. Pearce from TV sales mg. to gen. mgr. ... Raytheon Philadelphia factory branch names Larry Phister gen. mgr., replacing Harry S. Fink, resigned ... Roth Appliance Distributors, Milwaukee (Stromberg-Carlson) appoints Ray W. Horak sales mgr. ... Strong, Carlisle & Hammond, Cleveland (Philco) announces resignation of TV-radio gen. mgr. Homer G. Frank, who'll head Barclay's Ltd., TV-radio-appliance store at Haverhill, Mass. ... Bendix Radio and Cal Lado Distributors Inc., Tampa, Fla., cancel distribution agreement previously announced ... Motorola appoints Braid Electric Co., Nashville, ex-Zenith, replacing Currey's Distributing Co.

Trade Personals: Kenneth C. Meinken resigns as president of National Union Radio Corp. (tubes), his duties to be assumed by chairman C. Russell Feldmann; Meinken's son, Kenneth C. Meinken Jr., resigned as National Union Radio v.p. & gen. sales mgr. only 3 weeks ago to become sales mgr. of Automatic Mfg. Corp., Newark (electronic components) ... Ralph J. Cordiner, GE president, to be presented annual honor award for outstanding Americanism by Stevens Institute of Technology at banquet Feb. 26; James L. Myers, chairman & pres. of Clevite Corp., will be given citation ... B. F. Valliere elected General Instrument v.p.-gen. mgr., in charge plants at Chicopee, Mass., Danielson, Conn. & Joliet, Ill. ... A. Brewer Hunt, Northern Electric Co. Ltd., Montreal, re-elected pres. of Canadian RTMA ... John W. Christensen promoted to v.p. & chief engineer of CBS Laboratories ... H. C. Edgar, ex-merchandising director, named export director of RCA International div.; Albert F. Watters, ex-RCA Victor personnel v.p., promoted to director of associated company operations of international div. ... Irwin C. Roll resigns as adv. & sales promotion mgr. of RCA Victor tube dept. to join Fuller & Smith & Ross agency on Westinghouse tube account ... Donald Blackman, ex-Canadian GE, named Canadian Admiral regional sales mgr. in charge of Maritime Provinces, headquartered in Halifax ... Cliff Knoble, ex-Eureka Williams Corp. and Ruthrauff & Ryan, named adv. mgr. of Raytheon TV-radio div. ... C. Byron Farmer named southeastern regional sales mgr. for GE replacement tubes ... B. J. Adkins named Capehart-Farnsworth Kansas City regional sales mgr. ... Richard C. Walker named northwestern regional mgr. of Westinghouse major appliances ... Alfred Gartner, ex-Cornell-Dubiler, named sales mgr. of Mica- mold Radio Corp., Brooklyn (capacitors) ... Elmore E. Kayser, ex-Sun Oil Co., named adv. & sales promotion mgr. of Krylon Inc., Philadelphia (TV towers) ... Harold A. Jones promoted to exec. asst. to Eugene Goebel, national sales mgr. of Motorola Communications Electronics Inc. ... Carmine Masueci, ex-Sylvania, named senior project engineer of CBS-Columbia advanced development dept. ... Bill Irvin, veteran TV-radio editor of Chicago Sun-Times, in new Admiral publicity dept. ... J. A. Young, ex-Joske's, San Antonio, named Olympic Radio southwestern district sales mgr. ... Duke Wellington, ex- CBS-Columbia, resigns as national sales mgr. of Tele King, now operating under Chapter XI proceedings (Vol. 10:7) ... Wm. H. Higgins resigns as Spartan field sales mgr. ... Ralph C. Powell named product mgr. of American Screen Products Co., Miami (antennas) ... George Kollar joins Finney Co., Cleveland (antennas) as special asst. to sales mg. M. L. Finney Jr.; Victor Trebutes promoted to plant supt.

Canadian TV sales to dealers will total 446,250 this year, compared to actual sales of 365,000 in 1953, but radios will decline from 613,000 units sold last year to 488,880 this year, according to estimates of 20 manufacturers disclosed by Canadian RTMA at directors meeting this week in Montreal. New entry in Canadian TV market is Canadian Fairbanks-Morse Co., previously Emerson Dominion distributor, now making and marketing own line of 9 models produced in Toronto. Prices range from $230 to $510, said consumer products v.p. H. C. Rindfleisch.
Financial & Trade Notes: Magnavox reports net profit of $1,702,000 ($2.24 a share) on sales of $35,921,000 in 6 months ended Dec. 31, 1953, compared to profit of $1,546,-
000 ($2.02) on $28,126,000 in same period of 1952. The
increase resulted from increments of all divs., reported pres.
Frank Freimann, adding that while TV sales “compared favorably” with 6-month period of preceding year, biggest
gain in civilian items was registered by high-fidelity equip-
mament. Many potential buyers of TV sets are deferring purchase because of “color propaganda” but
added he felt this resistance will “melt away by fall as
people begin to appreciate the true facts and will buy
better quality black-&-white receivers to replace the milli-
ons of sets that are not only outmoded but are in many
cases costing more to maintain than the amortized price of
a new big picture receiver.” Like several other set makers
who have indicated such plans (Vol. 10:7), Freimann said
Magnavox will not market a color set incorporating pres-
ent-sized 15-in. tube but will produce a set with a 19-in.
tube “now under development” which should be available
in “modest quantities” by the end of the year, costing
“slightly over” $1000.

Sparks-Withington Co.’s sharp drop in earnings in 6
months ended Dec. 31 is attributed by pres. John J. Smith
to 10-week strike last summer at Jackson, Mich. plants
(Vol. 9:28), price cutting on TV sets and expenses of start-
ing subsidiary Sparton Bestg. Co.’s WWTV, Cadillac,
Mich. Earnings were $19,981 (1c a share) after taxes of
$14,798 on sales of $14,744,515, compared with $454,341
(49c) after taxes of $664,171 on $15,122,298 in same 1952
period. Company omitted regular semi-annual dividend.
Smith said company expected to offset losses during strike
with greater sales during fall but “October price-cutting
broke out in the TV industry as a result of industry-wide
overproduction. We were forced to reduce prices to meet
this type of competition, and this was very harmful to our
profit picture although it did put us in much better posi-
tion from an inventory standpoint.”

Color TV will have far more adverse effect on theatre
business than did black-&-white, predicted Charles P.
Skoutras, pres. of National Theatres Inc., and he added his
company would have fewer theatres in future than present
417. He said sales for 1953 totaled $17,411,675 vs. $15,-
656,044 in 1952. Net income for 13 weeks ended Dec. 26
was $655,582 (24c a share) compared to $544,697 (20c)
same period of 1952. He said TV competition had been
“stabilized” in older TV markets but was beginning to
show up now in newer markets, particularly in the Rocky
Mountain area, northern California and midwestern states.

Stromberg-Carlson stockholders will vote at special
meeting March 12 on proposal to issue 100,000 shares of
new cumulative convertible $50-par preferred stock and on
plan to eliminate 80,000 shares of 4% convertible pre-
furred, called for redemption Feb. 15. Price and converti-
ibility rate of new issue would be determined later. Pres.
Robert C. Tait said common-share stockholders would be
given first opportunity to subscribe for new preferred,
being sold to raise $3,500,000 to reduce short-term bank
borrowings.

Dividends: Hazeltine, 25c payable March 15 to holders
of record March 1; Oak Mfg. Co., 35c March 15 to holders
March 1; Clevite Corp., 25c March 10 to holders Feb. 26;
Cornell-Dubilier, 30c quarterly and 20c extra March 26 to
holders March 8.

Auction sale of assets of Fidelity Tube Corp., Jewel
Radio Corp. & Gem Radio & TV Corp., all owned by Don
J. Ferraro and adjudged bankrupt last week (Vol. 10:7),
scheduled March 2 on companies’ premises at 900 Passaic
Ave., E. Newark, N. J.

Electronics Reports: Another $5 billion year is in pros-
tect for electronics industry for 1954, with increased sales
of defense and industrial equipment and replacement parts
more than offsetting any decline in TV-radio output. This
was prediction of Robert C. Sprague, board chairman of
RETMA and of Sprague Electric Co. in address to N. Y.
Society of Security Analysts Feb. 10.

He gave these dollar forecasts for this year: TV-
radio, factory sales of $1.3 billion, down from last year’s
$1.4 billion; military electronics, $3 billion vs. $2.8 billion
in 1953; industrial equipment & replacement parts, $700-
000,000. He broke down estimates with these predictions:
TV—Retail sales of 6,000,000 sets, production of 5,-
800,000 black-&-white sets and “no more than 150,000 color
sets,” with more than 500 stations on air by year’s end.
Radio—“There may be a drop in demand for auto sets to
about 4,000,000, but I believe there should be a market for
a total of 11,000,000 sets of all types.”

Defense electronics—“There should be a further rise
in defense volume in 1954, and it is my firm conviction that
this important segment of our business will remain at
high levels for the foreseeable future, despite any reduc-
tions [in] total defense spending.”

Industrial electronics—“No one knows for sure what
the sales of the electronics industry to the industrial mar-
ket are, but they almost certainly run into hundreds of
millions. Although this segment of our business may not
equal the dollar importance of radio-TV and military equip-
ment for a good many years, its rate of growth may well
be the greatest of all.”

Replacement parts (civilian & military)—“This is
already a business of the order of $500,000,000, and should
increase substantially in size in the near future reflecting
the large output of original equipment in the past 3 years.”

One of most fascinating uses of closed-circuit in-
dustrial TV to date got first test Feb. 8 in New York
City when mock police “line-up” was sent from Manhattan
headquarters to Brooklyn headquarters. Both Mayor
Wagner and Police Commissioner Adams were enthusiastic
and gave every indication system would be adopted to
hook up all $5 precintcs to televise regular daily line-up
of suspected lawbreakers. Test used RCA ITV-5 equip-
ment, with signal microwaved to Empire State Bldg.,
then beamed to Brooklyn police headquarters. Commissi-
on Adams estimated it would cost about $50,000 to
install hook-up, including one camera, “minimum number
of receivers” and city-owned microwave equipment.

New color bar generator offered by Telechrome Mfg.
Corp., Amityville, L. I. (Model 509-DR) can provide 11
color standard signals in bars which can be placed in
various combinations across top, bottom or all of color
tube, or in combination with monochrome pictures. It also
produces dot pattern which may be superimposed on any of
the displays for convergence alignment.

Philadelphia Council of TV-Radio Service Assns. spon-
sors color symposium for area distributors, dealers & serv-
iciemen at Bellevue-Stratford Hotel, April 2-4, in con-
junction with regional convention of National TV Service
Assn.

Turning back the clock: Chief of Military History has
approved official change in date of the founding of Army
Signal Corps from March 3, 1863, when Congress author-
ized creation of Signal Corps, to June 21, 1860, when Con-
gress authorized appointment of first signal officer.

Minnesota Electronics Corp., St. Paul, Minn., manu-
facturer of digital computers and subminiature computer
components, has been acquired by Librascope Inc., sub-
ordiary of General Precision Equipment Corp.
CONGRESS will take its first look at TV-radio matters for this session in a couple of weeks when Senate Commerce Committee or its new communications subcommittee under Sen. Potter (R-Mich.) invites FCC to the Hill for "orientation meeting." Subcommittee is expected to hold first closed meeting this week. When FCC appears before Senators, commissioners are certain to be questioned closely about proposed multiple ownership rules, political broadcasting, filing fees, "protest" procedures, uh—virtually every hot issue in the TV-radio field.

First full-dress hearing in communications field probably will be on bill by Sen. Edwin Johnson (D-Colo.) to substitute "nominal" filing fee for FCC's proposed schedule of much stiffer fees (Vol. 10:5:7). Hearings also may be held on FCC's requested legislation to reduce nuisance value of "protest" section of Communications Act.

On the House side, Rep. Bishop (R-III.) introduced the perennial resolution to name special committee to investigate political campaign expenditures, including, of course, TV & radio (H. Res. 439). The House Commerce Committee has been tied up in health legislation since start of session, and there's no telling when it will get around to communications matters. Still pending before House is Hinshaw bill to classify subscription TV as "common carrier" and subject it to rate regulation, limitation of profits, etc.

Rep. Hinshaw (R-Cal.) tells us he has no intention of letting the measure drop, expects committee to hold hearings on it, and may even tack into other communications legislation as a rider. Committee chairman Wolverton (R-N.J.) has said nothing yet about hearings on Hinshaw bill or any other communications legislation.

No similar bill has been introduced in Senate where members appear disininterested in subscription TV legislation, to say the least. Sen. Johnson, who has taken most active part in TV-radio matters, takes wait—&-see attitude on Hinshaw bill, tells us he has no fixed opinion at present—"I'm going to see if the bill gets reported out in the House, and then let nature take its course."

Network service to Albuquerque, N. M.—only pre-freeze city not yet interconnected—will begin Aug. 1. Interconnection was ordered by NBC for KOB-TV and by CBS for KGGM-TV. Interconnected this week to AT&T's nationwide system were WRDW-TV, Augusta, Ga.; WTOK-TV, Savannah, Ga., and WNEM-TV, Bay City, Mich. Slated to be connected Feb. 20 was KTXL-TV, San Angelo, Tex. Private off-air pickups were begun recently by KATV, Fine Bluff, Ark (from Little Rock); WKST-TV, New Castle, Pa. (Pittsburgh); WCHA-TV, Chambersburg (Washington, Baltimore); WTVU, Scranton (New York).

Testimonial dinner for Judge Justin Miller, retiring as NARTB chairman (Vol. 10:5), will be held in Washington's Mayflower Hotel Wed. March 31. Tickets are $20 a plate, with proceeds to be used for appropriate gift. Members of arrangements committee are Frank M. Russell, NBC Washington; Clair R. McColough, WGAL-TV & WGAL, Lancaster, Pa.; Robert D. Swezy, WDSU-TV & WDSU, New Orleans; Ben Strouse, WWDC, Washington. G. Richard Shafto, WIS-TV & WIS, Columbia, S. C., will preside.

CBS-TV cut summer program discount rate from 30% to 20% this week, disclosing all but 4 sponsors remained with network during last summer and all clients stayed on in 1952, when discount was 35%. CBS offer is made only to sponsors on record 13 weeks prior to summer, and to those guaranteeing 13 weeks sponsorship after summer. NBC-TV's summer discount program last year was 25%, available only to new advertisers.

Four applications for TV stations were filed this week with FCC, all of them superseding applications previously dismissed by same principals. Week's applications were for Oakland, Cal., Ch. 2, by General Teleradio officers Ward D. Ingram & Wm. D. Pabst, General Teleradio retaining option to purchase stock (replacing application for same channel by General Teleradio); for Boston, Ch. 5, by Massachusetts Bay Telecasters (resubmitted); for Jefferson City, Mo., Ch. 13, by KWOS (resubmitted with some ownership changes); for Oak Hill, W. Va., Ch. 4 (allocated to Beckley), by Robert R. Thomas (submitted as substitute for one previously filed for Ch. 4, allocated to Fayetteville). There were 12 dismissals this week, leaving total of 301 applications pending, including 54 uhf. [For further details about these applications, see TV Addenda 18-G herewith; for complete listings of all grants, new applications, dismissals, hearings, etc., see TV Factbook No. 18 and Addenda to date.]

First month of Telemeter pay-as-you-look operation in Palm Springs, Cal. was summarized this week by International Telemeter pres. Carl Leserman: (1) Average coin-box-equipped home put $10 in box during month. (2) Number of Telemeter homes increased from 71 to 148, while total homes getting community antenna service increased from 512 to 614. (3) Survey indicates 80-90% of set owners want Telemeter. (4) In first month, 25 events were offered, including following movies: Forever Female, The Moon is Blue, I Confess, Flight to Tangiers, All the Brothers Were Valiant, Little Boy Lost, Shane, Fort Brave, Kind Hearts & Coronets, High Noon, Lady Wants Mink, The Quiet Man, Stalag 17, Bandwagon, I, the Jury, Here Come the Girls, You're Killing Me, Vice Squad, Roman Holiday, Come Back Little Sheba, The Robinson Story, Just For You.

Ad agencies getting big RCA account were announced by pres. Frank Folsom this week. Three agencies will split account, estimated at 58-12,000,000 annually, formerly held by J. Walter Thompson. Kenyon & Eckhardt will get lion's share, handle RCA-sponsored home instruments, TV-radio programs and institutional ads. Grey Adv. is retained for all NBC work plus RCA records. Al Paul Leefon, Philadelphia, will work on home appliances and electronic products other than home instruments. Continuing for RCA Communications is Gehnrich Associates, and for RCA financial ads, Albert Frank Guenther Law.

How to push uhf will be subject of day-long sessions March 1 at Washington's Statler Hotel, under sponsorship of National Citizens Committee for Educational TV. Representatives have been invited from FCC, NARTB, RETMA, networks and Ultra High Frequency Assn. Two-thirds of educational allocations are uhf.

AFM musicians union and 3 TV-radio networks reached agreement Feb. 19 on 10% pay boost to New York staff musicians with no changes in number of musicians to be employed by each network. ABC, CBS & NBC were involved in the negotiations with Local 802.

Proposal to require Washington CAA clearance for all proposed towers higher than 500 ft., backed by Air Force (Vol. 10:7), was deferred for 2 weeks "for further study" by Washington Airspace Subcommittee at Feb. 16 meeting.

Assn. of National Advertisers schedules annual spring meeting at Hot Springs, Va., March 17-19.
CBS SURVEY FIRST WITH VHF-UHF BREAKDOWN: Most authoritative sets-in-use survey available is the CBS-TV report, released this week, which we have reprinted and sent herewith as 12-p. Special Report to all subscribers.

Survey was conducted by A. C. Nielsen Co., based on direct contact with 100,000 families in all 3070 U.S. counties. Study is about as thorough as one could hope for, considering cost and time elements.

Nielsen conducted a 100,000-family survey in May, 1952, which was projected to May, 1953, by NBC and CBS. These projections were reprinted in our TV Factbook No. 17 of July 15, 1953. Current survey supersedes those.

Only drawback of survey -- an unavoidable one -- is that it's dated Nov. 1, 1953. This works to the disadvantage of uhf stations, particularly, because the 4 months since that date have been period of most concentrated uhf production and sales to date. To lesser degree, new vhf stations in brand new markets are also at disadvantage because figures don't reflect set sales of last 4 months.

Survey shows 27,506,500 families with TV sets, vhf and uhf -- a 50% penetration of nation's 47,191,500 homes. Uhf total was 1,774,690, a 4% penetration of U.S. homes -- or 7% of all TV sets.

Our own estimate of uhf sets-in-use as of Nov. 7, 1953 (Vol. 9:45) was "over 1,500,000," showing our calculations were conservative. Using same method of estimating, we figure that 2,750,000-3,000,000 current sets-in-use are uhf equipped. This would mean that approximately 6% of U.S. families have uhf sets and that about 9-10% of all TV sets in hands of public can receive uhf today.

We arrive at those figures as follows: RETMA reports 457,267 sets were uhf-equipped at factory in Nov.-Dec.-Jan. Add estimated 100,000 for Feb. and total is 557,000. Figuring 1.5 "field conversions" (external converters and strips) for each set equipped for uhf at factory, we get 835,000 more. Add factory and field figures and total is 1,392,000 uhfs produced since Nov. 1. Experience indicates that about 2/3 of these have been sold -- for net uhf accretion of somewhat under 1,000,000 to be added to the 1,774,690 found by Nielsen on Nov. 1.

Total of 2,750,000-3,000,000 uhf sets-in-use therefore seems a reasonable figure, since we've found our method of calculation to be conservative in past.

Even more important than U.S. totals, however, are individual figures which speak for themselves -- excellent progress in some areas, poor growth in others.

UHF'S QUESTION FCC 'POWER' PHILOSOPHY: FCC's thinking about raising uhf power "floor" (Vol. 10:8) was immediately attacked by some uhf broadcasters as "unrealistic", in that it ignores excellent coverage frequently achieved with 1-kw transmitters.

Subject is expected to come to head in couple weeks, when the Commission considers whether to open idea to industry comments by issuing proposed rule-making. Whether proposal will ever be advanced by Commission remains anyone's guess. At the
moment, it's more likely than not. If proposed, there's bound to be vigorous opposition, reducing chances of final adoption.

Whole matter is tied up with fact that many stations have CPs for higher-powered transmitters but have been operating with lower power under special temporary authority (STA) because of amplifier unavailability.

With amplifier delivery dates coming closer, FCC is now debating whether the "era of the STA" is near its end and whether operators should be required either to: (1) install amplifiers to reach power specified in CPs or, (2) get CPs modified for the lower power they're now using -- assuming the lower power meets FCC standards.

FCC has generally been cautious, in granting STAs, not to give them out unless STA power provides minimum signal levels specified in rules. If present minimums are retained, operators' problem won't be difficult. But if minimums are upped beyond capabilities of 1-kw transmitters, many stations will be in the soup.

It comes down to question of judgment -- operators' vs. FCC's. Former feel they're in better position to determine coverage in their specific areas and whether purchase of higher power is economically justifiable. At FCC, it's claimed that the early TV and FM history shows that station operators have a tendency to under-power their facilities -- to their own detriment as well as that of viewers and listeners.

3 NEW STARTERS—2 OF THEM IN DULUTH: Race between 2 vhf grantees in Duluth-Superior ended in photo finish this week, with CBS & NBC affiliates both putting out test patterns from temporary towers and antennas with interim power of about 5-kw ERP. Both stations did their building during bitter Minnesota winter and plan to erect permanent towers when weather improves. They're first competitors for WFTV, which began operation last May on Ch. 38.

Also starting this week was new Schenectady outlet, bringing total stations on air to 370 as of this writing, of which 129 are uhf. But one will be subtracted Sun. Feb. 28, when DuMont's KCTV, Kansas City (Ch. 25) is slated to go off air for keeps (Vol. 10:7). Another half-dozen stations are in our "imminent" file, having given March 1 target dates which appear reasonably firm. The latest starters:

WDSM-TV, Duluth-Superior (Ch. 6) began test operations Feb. 23, goes commercial as primary non-interconnected CBS affiliate March 1. It's using 5-kw GE transmitter and 90-ft. interim tower, pending construction of 500-ft. tower as soon as weather permits. It's controlled by Northwest Publications Inc. (Ridder), publisher of Duluth Herald and News-Tribune, which also controls WCCO-TV, Minneapolis and some other newspaper and radio properties. Rodney A. Quick is gen. mgr.; Edwin M. Conrad is production mgr.; Jerry Bauman, chief engineer. Rep is Free & Peters. Station's rates haven't yet been announced.

KDAL-TV, Duluth-Superior (Ch. 3) got on air ahead of target when it turned on test pattern Feb. 19 using interim 5-kw RCA transmitter and temporary 1-bay batwing antenna 106 ft. above ground, begins programming in "2 or 3 weeks" as NBC affiliate. Dalton LeMesurier, principal owner (70%) & gen. mgr., wires: "Many excellent reports -- typical is Ironwood, Mich., more than 100 mi. from Duluth." It plans to increase power to 500 kw with 500-ft. tower late this summer. Odin Ramsland is v.p. & commercial mgr.; Earl Henton, program director; Robert Dettman, v.p. & chief engineer. Base rate is $250. Rep is Avery-Knödel.

WTRI, Schenectady (Ch. 35) began testing Feb. 21, with gen. mgr. Dick Wheeler reporting "excellent coverage of entire area." It has 12-kw GE transmitter, 500-ft. Blaw-Knox tower atop Mt. Rafinesque, 2 mi. east of Troy. It's 3rd station in the Albany-Schenectady-Troy area, competitors being GE's pre-freeze WRGB, Schenectady (Ch. 6) and WROW-TV, Albany (Ch. 41). New station is owned by Fabian Theater interests (Stanley Warner Corp.) and Col. Harry C. Wilder, founder and ex-owner of Syracuse's WSYR-TV, who operates WTRI, Troy. Paul L. Jacobson is asst. gen. mgr.; Raymond Brown Jr., sales mgr.; Albert Chismark, chief engineer. It's alternate interconnected CBS-TV affiliate. Base rate is $200. Rep is Headley-Reed.

KCEB, Tulsa (Ch. 23), which began intermittent tests Jan. 28 (Vol. 10:6), started regular test pattern operation Feb. 22, begins programming March 6.
FEW SIZEABLE MARKETS REMAIN UNSERVED: Analysis of new stations possible this year, based on the 208 CPs outstanding, shows that this year's expansion will be mostly in "depth", i.e., more stations in existing TV cities, rather than brand new markets.

Scanning the nation's largest 312 markets and matching them with grantees yet to go on air, we find perhaps 15-20 "new markets" in prospect -- and parts of most of these markets are already served with fair-to-good signals from other areas.

In applying criterion "new," we've chosen as rough rule-of-thumb any market whose major city is 60 mi. or more from the existing TV cities. Excepting markets smaller than the first 312 -- and there are some CPs for those smaller markets -- here are the prospects for rest of year:

There are actually 16 new markets possible if all present grantees get on air this year. But 6 in these markets haven't set any target dates yet, and while other 10 do have 1954 targets, grantees' estimates are frequently over-optimistic.

Total new homes these stations will bring within range of primary TV signals will be considerably smaller than last year -- perhaps 500,000-800,000 households, compared with 2-3 times that in 1953 -- even when we include in our calculations the 4 additional "CP markets" which are 50-60 mi. from nearest TV city.

With so few completely new markets due to open, it can be seen that increase in TV audience and set sales must come from existing markets to far greater extent than last year. Of course, many of last year's markets have long way to go to reach same saturation as pre-freeze markets -- and other factors such as power & height increases will bring more new families into primary signal range, in addition to the constant and growing replacement and second-set market everywhere.

Biggest market 60 mi. or more from a TV city is Beaumont-Port Arthur, Tex., nation's 94th largest market area.

Others in this category, for which CPs are outstanding: Corpus Christi, Tex. (106th largest); Orlando, Fla. (134); Eugene, Ore. (176); Alexandria, La. (205); Cumberland, Md. (207); Watertown, N.Y. (210); Wausau, Wis. (221); La Crosse, Wis. (245); Wilmington, N.C. (254); Jackson, Tenn. (260); Great Falls, Mont. (275); Enid, Okla. (276); Cheyenne, Wyo. (289); Albany, Ga. (297); Rapid City, S.D. (309).

These additional markets are 50-60 mi. from cities with TV: Chattanooga (79); Williamsport, Pa. (191); Kingston, N.Y. (201); Fairmont, W.Va. (237).

HEARINGS TOO SLOW, CHANGES IN WORKS: Though FCC issued 5 CPs and an initial decision this week, progress in hearings has so bogged down that Commission and industry attorneys this week met and agreed that immediate changes should be made. Federal Communications Bar Assn. plans to submit recommendations next week. CPs this week:

Selma, Ala., WBAM (Montgomery, Ala.), Ch. 8; El Dorado, Ark., KVMA (Magnolia, Ark.), Ch. 10; Washington, D.C., WOOK, Ch. 50; Rapid City, S.D., Hills Bcstg. Co., Ch. 7; Houston, Houston TV Co., Ch. 13. Initial decision, coming after opposition dropped out, favored grant of Ch. 2 to WUSN, Charleston, S.C.

"The new hearing procedures just aren't working," says FCBA pres. Vincent Welch. FCC-industry conference Feb. 26 didn't agree on all reasons why they're not working but it did conclude that immediate action is needed. Principal problems:

(1) Exchange of information. There's no clear-cut procedure whereby attorneys know what information and exhibits to exchange among contestants, and when.

(2) "Points of significant difference" among contestants. Many industry attorneys say this is something they should supply after hearing, not before.

(3) Variations from hearing to hearing. Great differences in opinion among examiners and FCC counsel, regarding procedures, cause many delays.

Among other actions, FCC this week: (1) Dropped its city-by-city processing priorities because it has caught up, can now handle applications as they are filed. (2) Proposed adding Ch. 2 to Havana, Fla., 16 mi. from Tallahassee, and substituting Ch. 68 for Ch. 56 in Petaluma, Cal. (3) Dismissed petition of CP-holder WPRO-TV, Providence, R.I., requesting WNET (Ch. 16) be detained from going on air with STA.
TRANSMITTER shipments continue at modest pace, with 4 reported this week. RCA shipped 10-kw units to WLAC-TV, Nashville (Ch. 5), due on air in spring, to WDEF-TV, Chattanooga (Ch. 12), due in April or May, and to WKBT, La Crosse, Wis. (Ch. 8), with summer target. DuMont Feb. 24 shipped 500-watt transmitter to CFCM-TV, Quebec City (Ch. 4), which has May target. GE reports shipment of 5-bay antenna Feb. 23 to KSAN-TV, San Francisco (Ch. 32), which was sent 1-kw GE transmitter Jan. 22 and gives March 1 as target date. GE has new orders from KALB-TV, Alexandria, La. (Ch. 5) for 5-kw transmitter and 6-bay antenna, and from KPLC-TV, Lake Charles, La. (Ch. 7) for 5-kw transmitter and 12-bay antenna, both to be delivered next month.

General Precision Laboratory reports 1-kw GPL-Continental transmitter is due for shipment next week to WJPB-TV, Fairmont, W. Va. (Ch. 35), to be followed by 1-kw to WQXI-TV, Louisville (Ch. 41) in about 3 weeks. Continental Electronics, Dallas, which makes the transmitters, is slated to have 12-kw uhf unit by late summer, probably using Eimac klystron tube.

RCA was due to ship its second 50-kw amplifier Feb. 27—to WTRF-TV, Wheeling, W. Va. (Ch. 7), which began operation last Oct.

* * * * *

In our continuing survey of upcoming new stations, these were the reports received this week:

WISH-TV, Indianapolis (Ch. 8), granted last month, plans to go on air about July 1, has signed affiliation with ABC. RCA equipment has been ordered, contract has been let for transmitting house and negotiations are under way for tower contract. Bolling will rep.

KQED, San Francisco (Ch. 9, educational) hasn’t yet received converted KPIX transmitter because of delay due to defective part, now has promise of March 1, hopes to begin test patterns March 15, according to gen. mgr. James Day. It’s buying additional equipment with $113,724 grant from Fund for Adult Education (Ford Foundation). Tentative May 1 programming target depends on success of fund drives, particularly on reaching $150,000 goal for gifts and contributions from business firms.

WTTW, Chicago (Ch. 11, educational) hasn’t ordered equipment or begun construction, plans tests next fall, programming in Jan., according to Robert L. Foote, secy. of Chicago Educational Television Foundation. Foundation pres. Edward L. Ryerson reported drive for funds had reached 80% of the estimated $1,100,000 required to build and operate station for 2 years.

WSLI-TV, Jackson, Miss. (Ch. 12) hopes to move March 15 test target, go commercial March 27, reports TV operations mgr. Owens F. Alexander. It will begin with 214-kw visual power, using 20-kw GE transmitter and 12-bay antenna atop 600-ft. Andrews tower. An interconnected ABC affiliate, it will be the third outlet there. WTVJ (Ch. 25) having begun in Jan. 1953, WLBT (Ch. 3) last Dec. Hour rate will be $200. Weed will be rep.

KVAL-TV, Eugene, Ore. (Ch. 13) expects to finish moving into new studio-transmitter building early in March, plans tests about March 15 using 10-kw RCA transmitter and 360-ft. Fisher tower topped by 6-bay antenna, reports gen. mgr. S. W. McCready. It plans April 1 programming, will be NBC affiliate. Base rate will be $175. Rep will be Hollingsbery.

WGTH-TV, Hartford, Conn. (Ch. 18) has GE 12-kw transmitter scheduled for delivery soon, but won’t complete construction until this spring, when it hopes to begin transmitting from 300-ft. Lehigh tower, according to gen. mgr. Fred Wagenvoord. Rep not yet chosen.

WBOC-TV, Salisbury, Md. (Ch. 16), with all construction near completion and RCA transmitter scheduled for March 1 delivery, now plans test patterns 1st week in April, programming April 15, reports v.p.-gen. mgr. Charles J. Truitt. Its 600-ft. Wind Turbine tower, to be topped with 47-ft. RCA antenna, is scheduled to be ready about March 15. It’s building own microwave relay, will carry ABC and DuMont programs. Base rate will be $200. Rep not yet chosen.

KVAN-TV, Vancouver, Wash. (Ch. 21) remains stalemated by lack of equipment and problems concerning location of transmitter across Columbia River in Portland, Ore. (Vol. 10:4), now has tentative April 15 target, reports gen. mgr. Fred F. Chitty. Rep will be Bolling.

WTEV-TV, New Bedford, Mass. (Ch. 28), after finally getting CAA site clearance, began construction of studio-transmitter building Feb. 23 on Bullock Rd., Free-town, about half way between New Bedford and Fall River, writes owner Basil Brewer. He expects to be on the air in 4-6 months with 251-kw visual power using 12-kw transmitter and 650-ft. tower. Rep will be Walker.

WSEE, Erie, Pa. (Ch. 35), with 12-kw GE transmitter due for March 10 delivery and 698-ft. Stainless tower scheduled to be ready by March 31, now has April 15 test target, plans commercial programming April 25, according to gen. mgr. Charles E. Denny. It’s signed as primary interconnected CBS affiliate. Rep will be Avery-Knodel. It will be first local competitor for WICU.

WOOK-TV, Washington (Ch. 50), just granted to United Bestco, Inc. Co., hasn’t ordered equipment or finalized construction plans, but plans start early in 1955, reports owner Richard Eaton who also holds CP for WTLF, Baltimore (Ch. 18). United Bestco, Co. will be rep.

* * * * *

CHSJ-TV, St. John, N.B. (Ch. 4) has its Canadian GE transmitter, now plans March 8 tests, goes commercial March 22. Its 40-ft. Ajax tower is atop Mt. Champlain, 1200-ft. above av. terrain, 18 mi. from St. John. Church St. studios in St. John will send programs by coaxial to penthouse of Admiral Beatty Hotel where they’ll be beamed by microwave to transmitter on Mt. Champlain. It’s first TV to go getting in the Maritimes. CJCJ-TV, Sydney (Ch. 4), is due next July; CBHT, Halifax (Ch. 3), due in Oct. CHSJ-TV’s base rate will be $165. Rep will be All-Canada Television.

PROFITABLE WOOD-TV, Grand Rapids, in particular—and TV station finances in general—are subject of 6-p. story in Feb. 20 Business Week, complete with station’s balance sheet for fiscal 1953. Article details philosophy of intensive local programming ("names make news") practiced by Harry M. Bitner Jr.—whose picture is on magazine’s cover—since he and his father took over station (then WLAV-TV) from Leonard A. Versluis for $1,365,000 in 1951 (Vol. 7:19,38). Bitners also have controlling interest in WFMB-TV & WFMB, Indianapolis, as well as AM stations in Flint, Mich. & Evansville, Ind. and radio WOOD.

WOOD-TV’s net profit before taxes jumped 150% from $137,353 in fiscal year ended Nov. 30, 1952 to $491,418 in fiscal 1953, while total revenues increased 36%, article states. Fiscal 1953 operating profit was $525,066, before deduction of interest and other charges. Station’s revenues for year, as reported by Business Week: Local $269,045; national $576,214; network $482,917; other revenues (including talent & rehearsal charges) $72,228; total operating revenues $1,400,404; less $46,342 for doubtful accounts; net operating revenues $1,354,062.

Operating expenses: Program & studio $230,416; technical $244,610; selling $104,570; administrative & general $121,077; occupancy $127,722; total $823,996. Total investment in station is $1,967,000, including new transmitter (for April delivery), tower & antenna at $602,000. New studio-office building will add $300,000-350,000.
controller of administration, succeeded as CBC Quebec province director by Aurele Seguin, Quebec program director—Alice O’Hare, ex-Dumont Network, named program mgr. of WOLV-TV, Easton, Pa.; Pete Gallagher, ex-WCAU-TV, Philadelphia, named production mgr.—Richard Ross named news director of KING-TV, Seattle, succeeding Charles Herriag, now with CBS-TV Hollywood.—Frank Beasley named sales mgr. of Ackerfield’s KAKX-TV, formerly KAFX-TV.—Wm. P. Geary promoted to sales mgr. of WMGT, Adams-Pittsfield, Mass.—Mario E. Svacina promoted to film editor of WTRI, Schenectady—Henry Boren named merchandising director of KSL-TV, Salt Lake City—Barbara B. Whigham named sales promotion director of WJHP-TV & JWHP, Jacksonville—Steven Briggs, ex-WTWT, Bloomington, Ind., named production mgr. of grantee WISH-TV, Indianapolis—Burt Champion named Paramount Pictures’ TV-radio promotion director—Al Larson named commercial mgr. of KPHO-TV, Howard Stalnaker commercial mgr. of KPHO, Phoenix—Edwin A. Wilhelm joins Maxon TV-radio dept. in charge of Gillette account—Philip A. Melillo promoted to production mgr. of WMAL-TV, Washington, replacing David M. Davis, resigned.

Wilfred S. Roberts, 47, chief TV-radio producer-director of Benton & Bowles (Red Buttons Show, The Doctor) and onetime NBC national production mgr., died Feb. 24 in N. Y. after brief illness.

Media and industries which “compete” with TV are generally stronger than ever—despite early prophesies of doom. That’s gist of 5th annual report of Jerry N. Jordan of N. W. Ayer & Son ad agency for RETMA sports committee. It’s continuation of research done by Jordan at Prinston and at U of Pennsylvania, in which he stressed “novelty theory”—that TV’s harm to competing media slackens off after novelty of set ownership has worn off. In new report, he points out more than half of U.S. families now own TV, and nationally TV passed out of novelty stage in 1953. “Nearly every industry it was supposed to hurt turned upward in income, attendance or sales—many reaching their all-time peak,” he concludes, adding that newspapers, magazines, radio, books, concerts, track & harness racing and professional football had the best years in their history, and motion pictures, college football and basketball were “climbing again after a temporary decline.” Baseball attendance dropped, but income by sports as whole approximated 1949’s all-time peak. Using statistics and figures, report says increase in time and labor-saving devices since World War II has created more leisure time for recreation and that forward-looking leaders of recreation industry have learned to live with and profit by TV. Copies of 26-p. survey, TV’s Novelty Over—What Can You Expect Now?, are available from RETMA.

Now in receivership under state bankruptcy laws, KMPT, Oklahoma City (Ch.19) “looks like it will keep going and probably pay out what it owes,” according to Byrne Ross, former pres. & gen. mgr. of KMPT, and sole owner of Oklahoma City’s radio KLKR. The DuMont affiliate, plagued with technical troubles after it went on air last Nov., lists more than $250,000 in outstanding debts. Court named local attorney Everett Cotter receiver, gave him until April 12 to submit reorganization plan while station continues operation. Ross owns 4.5% of KMPT, but resigned from management about month ago after dispute with board of directors on policy matters—particularly beer & wine advertising, which he opposes—after which most other top staffers quit. Station has 70 stockholders, largest being R. Lewis Barton (11.2%), who succeeded Ross as pres.
Station Accounts: Banks' use of TV will increase this year over 1953, when number using TV more than doubled 1952 rate and was 7 times larger than 1950, according to annual survey by American Bankers Assn., 12 East 36th St., New York. Survey of 14,130 commercial banks shows they plan to increase all types of ads this year to total of $68,000,000, or $7,000,000 more than in 1953. On debit side, however, majority of banks rated TV tenth among media in effectiveness (newspapers led), but replied they planned to increase TV use nonetheless. Just this week, 10 savings banks in Brooklyn and Queens signed to sponsor Happy Felton's Knot Hole Gang on WOR-TV preceding Brooklyn Dodgers baseball games, thru Muir & Co. ... Apropos of banks & TV, Robert H. Cole, U of Illinois, has released new report, How Banks Use TV Advertising, listing reactions (mostly favorable) from 163 banks as of last Aug. ... Eversharp Inc. to sponsor filmed Eversharp Theatre in 50 markets beginning March 1, thru Biow ... California Car Co. to sponsor Danger on the Air on 14-station CBS-TV Pacific Network starting Feb. 28, Sun. 10:30-11:30 a.m., thru M. S. Scott & Assoc., Los Angeles ... Dixie Cup, old network sponsor, moves into station purchases, buying Cowboy G-Men in 18 markets, with option on 6 more, thru Hicks & Greist ... Gobel Brewing Co. and Speedway Petroleum Corp. to sponsor 42 Detroit Tigers games on WJBK-TV & WJBK, former thru Brooke, Smith, French & Dorrance, latter thru W. B. Doner Co. ... American Maize Co. (Amazo puddings) sponsors Adventures of Blinky on KNXT, Los Angeles, Mon.-thru-Fri, 4:15-4:30 p.m., thru Kenyon & Eckhardt ... Roma Wines buys Duffy's Tavern for 26 weeks on KTLA, Los Angeles, Tue. 10-10:30 p.m., thru Foote, Cone & Belding ... Wine Institute, San Francisco, plans $500,000 national campaign, including use of TV, beginning March 16, thru J. Walter Thompson ... Cereal Institute to use TV-radio to promote Cereal and Milk Festival first week in May ... J. J. Little & Ives Co. uses TV-radio to introduce 20th Century Encyclopedia to N. Y. market, thru Wexton Co. ... Among other advertisers reported using or preparing to use TV: TreeSweet Products Co., Santa Ana, Cal. (frozen orange juice), thru BBDO, Los Angeles; Helen Pessl Inc. (Little Lady cosmetics), thru Keystone Adv., N. Y.; Standard Unbreakable Watch Crystal Co., N. Y. (Rocketey Cylinder unbreakable crystals), thru Friend-Reiss-McGlone, N. Y.; Jasco Aluminum Products Corp., New Hyde Park, N. Y. (aluminum storm windows & doors), thru A. M. Snider Co., N. Y.; Rolon Tire Chain Co., Denver, Colo. (Rolon tire chains), thru Wayne Welch Inc., Denver; McCalland's, Tacoma, Wash. (Formula "B" deodorant cleaner), thru Gardner-Jacobson Inc., Tacoma.

Network Accounts: First ten sponsors for NBC-TV's Home series (Vol. 10:7) which debuts March 1, 11 a.m.-noon, were signed this week for 228 participations, representing gross time-&-talent value of $1,500,000. Sponsors: Aluminum Co. of America, thru Fuller & Smith & Ross; Sunbeam Corp. (electrical appliances), thru Perrin-Paus Co., Chicago; Pepperell Mfg. Co., Boston (linens), thru Benton & Bowles; General Mills (Betty Crocker cake mix), thru BBDO; Helena Rubinstein, thru Hewitt, Ogilvie, Benson & Mather; James Lees & Sons (carpets), thru D'Arcy; American Greeting Card Co., Cleveland, thru Fuller & Smith & Ross; Avoset Corp., Los Angeles (Qwip whipped cream), thru Fletcher D. Richards; Dow Corning Corp., Midland, Mich. (Silicon water repellent), thru Anderson & Cairns. Tenet was identified by NBC merely as "leading manufacturer of major kitchen appliances" ... CBS-TV's 7-9 a.m. Morning Show, which debuts March 15 (Vol. 10:8) reportedly signed Renuzit (spot remover), thru Feigenbaum & Weiman, Philadelphia; Old Dutch Cleanser, thru Grant Adv.; Monsanto Chemical Co. (All detergent), thru Gardner Adv., St. Louis ... Ford Motor Co. sponsors New Orleans Mardi Gras March 2 on NBC-TV in 3 segments: Rex parade 11:45 a.m.-12:30 p.m., Comus parade 9:30-10 p.m., Rex ball midnight-12:30 a.m., thru J. Walter Thompson ... Plymouth Motors buys That's My Boy, replacing Medallion Theatre on CBS-TV starting April 10, Sat. 10-10:30 p.m., thru N. W. Ayer ... Post cereals to sponsor Portia Faces Life on CBS-TV starting April 5, Mon.-thru-Fri, 1:15-1:30 p.m., thru Young & Rubicam ... Nash-Kelvinator to be alt.-week sponsor (with Block Drug Co.) of Danger on CBS-TV starting March 16, Tue. 10-10:30 p.m., thru Geyer ... Philip Morris sponsors Public Defender in place of Philip Morris Theatre on CBS-TV starting March 11, Thu. 10-10:30 p.m., thru Biow ... General Foods Corp. (Instant Jello) buys Wed. 3:30-3:45 p.m., portion of Bob Crosby Show on CBS-TV starting March 3, Mon.-thru-Fri, 3:30-4, thru Young & Rubicam ... Lucky Strike to sponsor Jack Benny Show on alt. weeks, rather than every 3 weeks as now, on CBS-TV beginning in fall, 7:30-8 p.m., thru BBDO ... Snow Crop (frozen foods) drops Mon.-Wed.-Fri. 10:15-10:30 a.m. sponsor- ship of Arthur Godfrey Time on CBS-TV ... ABC-TV starts sustainer It's About Time March 4 Thu. 8-8:30 p.m. as replacement for Quick as a Flash.

OF THE MANY station sales known to be cooking, only TV deal to come to fruition this week was purchase of KFOR-TV, Lincoln, Neb. (Ch. 10) for $300,000 by Fetzer Broadcasting Co. (Mr. and Mrs. John E. Fetzer), which last summer bought Lincoln's other station, KOLN-TV (Ch. 12) with KOLN-AM in "distress sale" for $45,000, carefully, assuming $500,000 in liabilities (Vol. 9:30). New sale includes KFOR-TV's equipment, no real estate. Seller of KFOR-TV was James Stuart, who announced he intends to continue operation of radio KFOR. In application to FCC for transfer filed this week, Fetzer also asked approval of plan to move KFOR-TV to KOLN-TV transmitter site. He intends to transfer KOLN-TV call letters to the newly purchased station and "make appropriate disposition of Ch. 12." spokesman for Fetzer interests told us: "At the moment, there has been no decision as to how to dispose of it. If we can't find a buyer in the required time, we'll have to surrender the CP." Fetzer told FCC the transfer would enable station to get network programs that otherwise would be unavailable to KOLN-TV. Fetzer also own WKZO-TV & WKZO, Kalamazoo, Mich. and WJEF, Grand Rapids and 33 1/3% of WMBD, Peoria. KFOR-TV, an ABC affiliate, began operation last May; DuMont-affiliated KOLN-TV started in Feb. 1953. TV played a part in some AM sales consummated this week. Gene O'Fallon's pioneer radio KFEL (5-kw on 560-kc, MBS) was sold this week to A. L. Glasmann, owner of KLO, Ogden, Utah and head of Inter Mountain Network, for sum in neighborhood of $300,000. O'Fallon organized KFEL in 1922, sold it to allow himself and associates "to devote full time to operation of KFEL-TV [Ch.2]." O'Fallon also retains KFEL-FM.

In what is probably biggest radio-only sale deal now cooking, Wm. Cherry interests are expected to sell independent WNEW, New York—reputed one of most profitable AMs in country—to group including Richard D. Buckley, ex-pres. of John Blair & Co. (station rep), Washington attorney Horace Lohnes and Harry Playford, St. Petersburg banker and presently a WNEW stockholder, at a price in excess of $2,000,000. WKTY, La Crosse, Wis. (1-kw on 580-kc, MBS) was sold this week by La Crosse Tribune to Herbert H. Lee, gen. mgr. & partner in KDH, Faribault, Minn., for $100,000, leaving Tribune free to purchase 41% of stock in upcoming WKBT (Ch. 8) and radio WKBH, La Crosse.
COST OF COLOR programming is still far from nailed down, but NBC pres. Pat Weaver this week gave first inkling of what they might be by saying that production costs—exclusive of such costs as talent—look as if they'll run 20-25% more this year than in 1952. Since this excludes cable costs and a few others, over-all figure is still hazy, probably won't be nailed down firmly for several months. But the 20-25% increase in “below-the-line” production costs may stand.

Weaver also said that some completely different kinds of programs are planned for color. He wouldn't elaborate, but they're expected to start this fall.

Barry Wood, wide-awake chief of NBC's “color corps,” in recent series of speeches on color also hinted at new departures in color programming—wherein producers can build entire programs with color in mind from beginning, rather than “converting” existing shows to color.

This was “color evaluation week” on part of New York Herald Tribune Syndicate's John Crosby and New York Times' Jack Gould, two newsmen with color sets. Crosby was much taken with Feb. 23 Armstrong Circle Theatre featuring opera singer Jarmila Novotna. “In black-&-white,” he said, “this would have been a rather ordinary half hour. In color, it was a memorable experience.” He went on:

“There's always been a question in my mind whether color would help or hinder an ordinary play. There are some plays, much as there are some movies, that had best remain in black-&-white, whose dramatic impact is heightened by the austerity of black-&-white. But there's almost nothing else, even John Cameron Swayze, which isn't improved a little bit by color.”

Color Trends & Briefs: Color clinics for servicemen and dealers are getting unprecedented attendance. After reading our report on Washington example (Vol. 10:8), Jack Swift, Hoffman Sales Corp., Kansas City, writes:

“I have never seen anything like the jam they have here, getting heavier each week since we began Feb. 9. Tonight there are 550 men packed into the factory display room, each hovering attentively over every word as David Doss gives them a detailed lecture, with illustrations and demonstrations on a Hoffman color receiver. About 100 others were turned away.

“We will repeat this class, the second lesson of the 13-week course, Thursday night and will have, as we did last week, a different group of 500-600 in here. In addition, more than 1000 other dealers and technicians of all brand affiliations have written asking to be put on the mailing list to receive the correspondence course that Doss is writing and mailing out to these as well as to everyone who attends the school.”

First manufacturer to break with ads offering color sets will be Westinghouse, with nearly full pages in New York Times and Herald Tribune next week. Selling for $1295, sets will be 15-in. mahogany full-door consoles, with “immediate delivery” stressed. Ads will include list of dealers carrying sets—46 in New York, 14 in New Jersey. Westinghouse now has color production line running at Metuchen, N. J. plant, will show it to press March 9.

Color slide scanner of WMAR-TV, Baltimore, is being put to good use. It has produced its first commercial—beer slide before CBS's weekly Fri. 5:30-6 program. Station also carries short still “documentaries,” such as slides taken by Annapolis midshipmen during South American cruise. Another set of color slides will be shot by WMAR-TV cameraman at Baltimore Orioles spring training in Yuma, Ariz.

Critic Jack Gould is harder to please. His conclusion: “Once color is accepted, the familiar criterion prevails: Is it a good show? Not: Is it in color?”

He couldn't see that color added much to Fred Allen, Swayze, Meet the Press, or Howdy Doody, nor did he think it improved “corny” Circle Theatre script, but he concluded that it added tremendously to opera Amahl and the Night Visitors and Hit Parade. And he noted that color in such glittering to women (Vol. 10:9). "Jinx Falkenberg," he said, "demonstrated that color is going to have vital meaning for the ladies. With color, fashions at long last come alive in TV. The same goes for fabrics, curtains, etc. And, perhaps most pertinent, for food."

Gould is also powerfully impressed by color commercials, saying: "The advertisers are going to be the chief beneficiaries of color TV. Every product seen thus far has been infinitely more attractive in color than in monochrome. Color makes for true product identification in a way all the words of an announcer cannot equal."

From an entirely different approach comes another evaluation of color commercials. Kenneth Bache, writing in Feb. 26 Retailing Daily, reports his reactions to seeing Armstrong floor-covering commercials:

"In color TV, the floor coverings industry—and conceivably the entire home furnishings industry—will have a selling medium contrasting almost as sharply with black-&-white TV as the latter does with radio today . . ."

"In the floor coverings field particularly, it has long been recognized and scientifically substantiated that color is a primary factor in the consumer's buying decision. The same thing applies, to a large degree, in such related merchandise as draperies, furniture, lamps, china and decorative accessories."

Move to revitalize UHF TV Assn. has been initiated by group's counsel Wm. A. Roberts. In letter to all association members he proposed New York meeting of uhf telecasters, grantees and networks in late March with these objectives: (1) Reconsideration of groups purpose & objectives. (2) Election of permanent officers. (3) Adoption of plans to finance organization. (4) "The necessity for legislative assistance." (5) "The development of a comprehensive petition to the FCC seeking a revision of its policies with respect to uhf." Association has been inactive since Feb. 1, when its funds were exhausted. Group's pres. Lou Poller, principal owner & gen. mgr. of WCAN-TV, Milwaukee (Ch. 25), this week wrote Sen. Johnson (D-Colo.) urging Congress to impose "little freeze" to take effect immediately in all markets where uhf is in operation and vhf applications are pending. Writing on own behalf and not for UHF Assn., he said "it would be hopeless to reason with FCC along these lines."

Patrick Campbell, TV producer and former Don Lee-Mutual v.p., named radio-TV officer of U. S. overseas information program for Europe, with specific task of concentrating on wider use of TV in Western Europe. Appointment was made by United States Information Agency, headed by Theodore C. Streibert, ex-pres. of WOR-TV & WOR and ex-MBS chairman.

Voice of Democracy contest, one of industry's best cooperative efforts, climaxed this week with presentation in Washington of awards to the 4 students who wrote best scripts on subject "I Speak for Democracy." More than 1,000,000 students participated this year in the contest sponsored by NARIB, RETMA and U. S. Junior Chamber of Commerce.

RCA's fourth seminar for station engineers, et al., was conducted at Camden this week with record 114 attendance—22 from NBC, 15 CBS, 18 WCAU-TV, Philadelphia, 7 AT&T, 2 CBC, majority from individual stations.
PREDICTIONS ON COLOR FOR NEXT 5 YEARS: Just how large color bulks in coming 5 years

is underscored in March Fortune Magazine article, "Upheaval in Home Goods," based on
new survey for Fortune by consulting economists Boni, Watkins, Mounteer & Co. Inc.,
36 Wall St., New York. Prepared by executive v.p. Dr. A. R. Oxenfeldt, report predicts 18,000,000 color sets in use by end of 1959, or one out of every 3 in use at
that time. Year-by-year breakdown:

About 1,000,000 color sets will be sold at retail in 1955, at average price
of $700; 2,500,000 at $540 in 1956; 4,000,000 at $450 in 1957; 5,300,000 at $400 in
1958; 5,000,000 at $350 in 1959. About 200,000 sets will be turned out this year, 
report forecasts, but doesn't say how many will be sold.

Sales of black-&-white sets will gradually decline during 5-year period until 
they total about 1,000,000 units a year, at average retail price of $200 in 1959, 
report says. But the total of combined color and monochrome sales during 5 years
will be "well over $2 billion annually."

Some 53,000,000 sets will be in use by 1959, report forecasts, not taking 
to into consideration any widespread development of 2-set market (it predicts fewer
than 6,000,000 families will own both color and black-&-white by 1959).

An earlier forecast by same firm (Vol. 9:30) estimated 50,000 color set sales
in 1954; 800,000 in 1955; 1,600,000 in 1956; 3,500,000 in 1957. Same report foreshowed 
sales of 7,000,000 TVs in 1954, 7,510,000 in 1955, 7,410,000 in 1956, 7,950,000 in
1957, modifying that to predict 5,250,000 in 1954 if a "moderate recession" occurs.

* * * *

Possibility of modest production increases in next 4 months is foreseen by 
all major manufacturers in wake of RETMA statistics showing nearly 750,000 TVs sold
at retail during Jan. (compared to 640,000 last Jan.) and continued good business in 
Feb. Admiral, RCA, Philco and Motorola spokesmen all said they felt confident they
could boost output. How much production would be increased they wouldn't say, but
all agreed they wouldn't "go overboard" and repeat overproduction errors of past.

Production for year through Feb. 19 stood at about 745,000, with inventories
at about 1,700,000 at all levels on that date. One highly-placed industry research
expert pointed out that sales from factory to distributor during that period ex-
ceeded production, stressing need for higher output. He predicted some 500,000 TVs
would be sold at retail in Feb. and that retail sales in first quarter would exceed
the 1,800,000 sold in first quarter of 1953.

* * * *

Some chance of small price increases might also be forthcoming if business
continues good, same sources hinted. To a man, they agree nobody's making money at
current low prices ($140 and up for 17-in., $180 for 21-in.) and fear is that small
manufacturers lacking diversification will be forced out of business by price cuts.

Motorola's Robert W. Galvin let out some hints on prices this week, telling
Bureau of Home Appliances in San Diego that industry's profit is low or non-existent
and must be "dealt with constructively" in months ahead. He added "there is not
room enough for us to operate" within the present price structure.

Turning to color, Galvin predicted not more than 100,000 color sets will be
produced this year out of some 5,500,000 total, with 19-in. tube making debut within
6 months. And he said color would entail new merchandising problems, declaring:
"Color is harder to work with than black-&-white; service costs are substi-
tually greater, and those willing to pioneer it will be obliged to invest more money
since it will take more capital to sell color. Your turnover will be less because
the price will be high and there will be some sales resistance. But color is going
to be worth the profits it will bring."
TV production totaled 110,544 week ended Feb. 19, compared to 107,702 preceding week and 107,883 week ended Feb. 5. Radio output declined for 8th straight week, totaling 173,833, compared to 190,207 week ended Feb. 12 and 192,523 week before.

RETMA revised Jan. production total this week to 420,571, of which 120,299 were uhf-equipped at factory. It compared with Jan. 1953 output of 719,234. Radio output in Jan. was revised to 871,981 vs. 1,093,142 year ago.

Trade Personalities: Dr. Ralph Brown, research v.p. of Bell Labs, named v.p. in charge of long-range planning; he's succeeded by Dr. James B. Fisk, director of physical science research. Richard L. Beam promoted to Hazeltine asst. v.p., reporting to engineering v.p. Orville M. Dunning ... Frank Folsom, RCA president, named to special task force on gov't. procurement by Herbert Hoover's Commission on Organization of Executive Branch ... Lewis Gordon, ex-Sylvania and chairman of RETMA radio tube committee, named pres. of newly-formed CBS international, to handle export sales of CBS manufacturing divs. (CBS-Columbia, CBS-Hytron, Columbia Records) ... Ernest A. Marx, DuMont international div. director, left this week on inspection tour of DuMont TV installations in Caribbean ... Alfred A. Medica, ex-assist. adv. mgr., promoted to Admiral sales mgr. of national accounts ... George T. Sotol named treas. of Sonotone Corp., Elmsford, N. Y. (electronic components) ... James R. Ireland named assistant director of research, Indiana Steel Products Co., Valparaiso, Ind.; James G. Richmond named asst. mgr. of manufacturing div. ... Anthony Dillon, ex-eastern sales mgr., named CBS-Columbia midwestern sales mgr. ... C. E. Reiner named field sales mgr. of Philco's newly-acquired Dexter div. (laundry equipment) ... John Bullock, ex-Zenith Radio, named sales mgr. of high-fidelity div., Mitchell Mfg. Co. ... John Angel, ex-sales promotion mgr. of Westinghouse TV-radio div., Chicago, named Special asst. to sales mgr. R. L. Sandefur ... R. J. McDonald named Westinghouse eastern sales mgr. for major appliances; M. E. Manning southeastern; W. A. Douglass central; R. C. Walker northwestern; R. C. Dunson southwestern; W. T. Baker Pacific coast ... John E. Nelson, ex-product mgr. of industrial & transmitting tubes, named central regional sales mgr. for GE equipment tubes, headquarters in Chicago ... Albert C. Bourget named to new post of southern district mgr. of GE replacement tube sales, Wm. B. Every remains northern district mgr. ... Wm. L. Cunningham, ex-Bendix Radio, named midwestern sales mgr. of Hammond Mfg. Co. (communications equipment) ... Charles P. Carroll promoted to Hallicrafters' director of engineering, succeeding Harold Adler, resigned ... Leo G. Sands, ex-Bogue Electric Mfg. Co., named administrator of new RCA railway communications equipment sales dept. ... Harold N. Beveridge named mgr. of Raytheon equipment div. operations, Chicago.

RETMA's special committee on spurious radiation, authorized last week to develop industry program for voluntary suppression of TV receiver radiation (Vol. 10:8) — which it will present to FCC for approval — will be headed by GE's Dr. W. R. G. Baker, director of RETMA's engineering dept. Other members named by RETMA chairman Robert C. Sprague: A. Blumenkrantz, General Instrument Co.; K. A. Cittick, RCA Victor; Leonard F. Cramer, Avco (Crosley); T. T. Goldsmith Jr., DuMont; H. L. Hoffman, Hoffman Radio; A. V. Loughren, Hazeltine; David B. Smith, Philco. Committee will hold first meeting in New York March 3.

Radar Electronics Inc., 229 West 28th St., N. Y., formerly Video Corp. of America, filed Chapter XI petition this week in N. Y. Federal Court, listing assets of $207,325, liabilities of $199,981. Plan offers creditors settlement of 20%, payable 5% cash and balance in installments.

Shakeup in CBS manufacturing divs. continued this week with appointment of Admiral adv. v.p. Seymour Mintz as president of CBS-Columbia, succeeding David Cogan, who resigned from CBS-Columbia and as v.p. of CBS but remains on board and retains his 5236 Class A and 5236 B holdings in parent company. It followed by only 3 weeks elevation of Charles F. Stromeyer to presidency of CBS-Hytron, succeeding Bruce A. Coffin, and at same time Lloyd Coffin retired as treas., both retaining their holdings (Vol. 10:6). Cogan, who headed Air King Products Co., and Coffin brothers, who headed Hytron, obtained their board seats and holdings when CBS purchased both companies in 1951. Declining comment, Cogan said only that he would take extended vacation and then planned to re-enter some phase of electronics business, in which case he would be forced to dispose of CBS stock. Mintz, who joined Admiral in 1944, will be succeeded by Edmond I. Eger, who has handled Admiral account almost from company's inception 20 years ago, most recently as v.p. of Russel M. Seeds Co., Chicago. For 25 years he operated his own agency, Crottenden & Eger, Chicago.

Westinghouse organized credit subsidiary capitalized at $10,000,000 this week to provide additional financial assistance to dealers to "meet stiffer competition," with first office due to open in April to serve Pennsylvania, Ohio, West Virginia, Kentucky, Michigan, Indiana, New York & Maryland. New organization will supplement 6-year-old Westinghouse credit plan under which some 4500 banks provide local financing, announced pres. Gwynim A. Price. He said goals of new organization were to help dealers market new consumer products, including TV-radio, and increase sales of established lines, explaining: "It is expected to achieve these goals by making maximum credit available to dealers, by offering financing for installment buying sufficiently flexible to meet varying economic conditions, and by providing financial aid for special promotions where such aid is not now available." Philo last month set up similar financing subsidiary for its dealers (Vol. 10:4).

RETMA lists 28,468,818 TVs shipped to dealers from 1946 through 1953 in special cumulative state-by-state and county-by-county tabulation released this week. Total doesn't include 45,308 TVs shipped to Hawaii and 2330 to Alaska last year. First time those territories took any sets. Over 82% of shipments went to 6 states: New York, 4,100,448; Pennsylvania, 2,647,072; California, 2,611,981; Ohio, 2,236,969; Illinois, 2,048,620; New Jersey, 1,402,698; Michigan, 1,386,542; Massachusetts, 1,257,588.

Radio shipments to dealers (excluding auto radios) totaled 7,242,073 last year, up from 7,066,794 in 1952, according to state-by-state and county-by-county report released this week and available from RETMA on request. Shipments in 1951 were 7,588,810.

Sylvania TV plant at Batavia, N. Y. (Ned Maradino, mgr.), which company claims to be world's largest factory devoted exclusively to TV production (400,000-sq. ft. of floor space), starts operation March 22. Buffalo plant will continue to turn out TVs and radios. Also this week, Sylvania announced purchase of 12-acre tract at Dunnville, Ont., where TV factory will be built, with set production due to begin in August.
Topics & Trends of TV Trade: TV industry's emphasis on table models has one group of manufacturers rubbing their hands in glee—the TV table makers, who foresee a 20% increase in dollar sales volume this year over 1953, when $50,000,000 worth of tables were sold at retail, including those used basically for TV (without tops) and so-called dual-purpose wood tables, which can be used for TV and other purposes.

Featuring ads declaring "every table model has to have a table," manufacturers are going after TV business this year as never before. Two of biggest in field are Universal Co., High Point, N. C. (Murray Abeles and C. A. Troutman, partners) and National Teletable Corp., New York (C. A. Clinton, pres.). Clinton said Jan. business in industry was about 20% over year ago.

Trend in TV tables has been shifting to wrought iron, in keeping with increased purchases of wrought iron living room furniture. They sell for about $6 and up.

* * * *

Citing RCA practice of non-discrimination in hiring and promotions since 1919, pres. Frank M. Folsom this week testified before Senate Labor Subcommittee in support of bill for national Fair Employment Practices Committee. He said: "From the standpoint of good business, it is worth re-emphasizing that the policy of hiring people for what they can do, rather than for who they may happen to be, is hardly sentimental indulgence. The products manufactured for competitive trade are as good as the manpower that makes them, and the consumer is not concerned about whether the hands that made an item are black or white, or whether the maker goes to one church or another."

Canadian Westinghouse moves TV-radio div. from Hamilton to Brantford, Ont. in May, will occupy 120,000-sq. ft. plant leased from Behr-Manning Ltd. for TV-radio output. Spokesman said move was designed to improve production efficiency. Hamilton plants will be used for electronics and defense production projects. No changes in executive staff will be made, according to pres. H. H. Rogge.

RCA cut price of its basic industrial TV unit ITV-5A from about $5000 to $3958. Price includes camera, vidicon tube, combination control monitor & power supply unit and RCA installation supervision. RCA said reduction was made possible by increased sales volume and more efficient manufacturing procedures.

Fighting "bootleg" label, National Assn. of Discount Merchants was formed last week in N. Y., with offices at 551 Fifth Ave., with avowed purposes of countering unfavorable publicity and acting as clearing house for information on legislative actions affecting discount houses. At first meeting it set as first goal adoption of code of ethics for discount merchants.

High Fidelity Institute of the Electronic Industries is new association formed in Los Angeles "to work for uniformity of technical standards for the high fidelity industry, new and established markets, equitable trade practices, effective promotional methods." Jerome J. Kahn, ex-Standard Transformer Corp. was named to top office of temporary commissioner.

Drive to remove 10% excise tax on color sets—and eliminate or reduce it on black & white—will be launched by RETMA TV industry committee at special meeting in Washington March 4. RETMA cited tradition of deferring tax on new industries and products, pointing out it wasn't applied to TV sets until fall of 1956.

Promotion: Harry Alter Co., Chicago Crosley-Bendix distributor, gave crisp $10 bill to every dealer visiting his showroom this week to see new $140 Crosley Super V (Vol. 10:7). Only hitch: one $10 bill to a dealer.

RCA's Award of Merit was bestowed recently on 4 engineers credited with important contributions to development of color TV: Wallace M. James, engineering mgr., receiving tube & transistor operations div., for tube work; Robert K. Lockhart, Camden engineer, for circuits; John W. Wentworth, Camden, terminal design & color projects group, for courses on color TV and notes used as handbook; Steven Slasuk, RCA Service Co., for test equipment used in installation of home color receivers. Sixteen other salaried employees, 2 of whom women, won Award of Merit, with gold watches, at ceremonies addressed by pres. Frank Folsom.

Fabulous electronic future in which TV screens may be hung like pictures on a wall, connected to receiver by a tiny wire, was foreseen last week by GE chairman Philip D. Reed in address to Boston Ad Club. As for immediate future, he said GE's ad budget for calendar 1954 probably will be largest in its history, necessarily so because "we're back in a buyer's market, which is a very healthy condition, with competitive pressures very great, and everyone having to sell hard."

Danish TV is now in regular operation, having been on experimental basis from June 1, 1949 to Jan. 10, 1954. First transmitter, 400 watts, now beams 4 hours of programming weekly from Copenhagen's Radio House, to be expanded to 6 hours by April 1, and 8 hours next summer. Denmark plans 7 Gov't-owned TV stations, financed by license fees paid by receiver owners, 4 of them to start within next 3 years. On Jan. 31 there were 1187 licensed TV sets in Denmark.

Raytheon will build new electronic engineering and research lab in Wayland, Mass. if town's zoning laws can be changed to permit construction. Pres. C. F. Adams Jr. said new plant will eventually employ about 1500, will have 110,000-sq. ft. of floor space. Also this week, Raytheon announced it would close TV parts plant at Oelwein, 1a. March 1 and transfer work to main plant in Chicago.

Slide-rule "Picture Tube Selector," giving at-a-glance information on interchangeability and characteristics of more than 136 picture tube types, is available from Du-Mont tube distributors.

Federal Telephone & Radio, Clifton, N. J., subsidiary of IT&T, discontinues manufacture of picture tubes, plans to expand operations and to diversify output this year.
VHF & UHF Survey

TV SET OWNERSHIP BY COUNTIES

As of November 1, 1953

Total Families & Receivers, By Geographic Areas, States & Counties

Prepared for CBS-TV by A. C. Nielsen Co. Under Direction of Oscar Katz, CBS-TV Director of Research

INTRODUCTION

Last May CBS Television issued the first county-by-county report of television ownership. Demand for copies was so great that a second printing was required within a few weeks.

But aside from the industry’s evident need for up-to-date and accurate ownership figures by county, there is another reason for a current report:

In the six months between May and November, the number of station markets has doubled; and television counties have increased by almost 50 per cent. The number of additional sets—almost four million—would make a whole mass medium by themselves. And the period marked the real beginning of UHF television.

The May report was based on statistical projections. But because of the increasing importance of ownership figures, we commissioned the A. C. Nielsen Company to conduct an actual national television set survey. It includes the first national count of UHF television sets.

This research was based on a sample of 100,000 families, selected by area sampling techniques. The details of the research method are presented in the Appendix.

The following definitions apply in all the tables appearing in this book:

**Total families:** “Sales Management” estimates of total families in each county as of November 1, 1953.

**VHF families:** The number of families with television sets (VHF, UHF or both) in each county on November 1, 1953 as determined by this survey. These figures are reported individually by county only if 10 per cent or more of all families in a county report having a television set.

**UHF families:** The number of families with television sets equipped to receive a UHF signal. These figures are reported only if 10 per cent or more of all the families in a county report having a UHF set.

**TV counties:** Counties with at least 10 per cent set-owning families.

**Other counties:** Counties which have less than 10 per cent television ownership. For each state, these counties are reported as a group.

The following symbols are used throughout the book:

* Indicates a county which is part of a Nielsen cluster, i.e., a group of two or more adjacent counties used as a sampling unit. In this report, the percentage of television set ownership for the cluster has been applied to each of the counties within the cluster.

* Indicates a television county in which there is some UHF but less than 10 per cent of all families, and hence the figure on UHF ownership is not reported separately. The number of UHF families for such a county is, however, included in state totals. Because of this, the state total of UHF families in television counties can exceed the sum of the individually-reported county figures.

LT Indicates less than 1%.

SURVEY TECHNIQUES

In May, 1953, the CBS Television Research Department made this study the basis of a report called “U.S. Television Ownership by Counties.”

**Present Study:** The present study consists fundamentally of a re-survey of the 100,000-homes panel to determine changes in television set ownership status that have occurred since May, 1952. For this purpose, the sample was divided into three groups:

**Group A:** 72,561 non-owners as of May, 1952. This group was surveyed to measure new television set ownership (VHF or UHF) since that date.

**Group B:** 13,433 owners as of May, 1952 within range of one or more UHF signals by November, 1953. This group was surveyed to measure conversion to, or acquisition of UHF equipment.

**Group C:** 13,491 owners as of May, 1952 beyond the range of UHF in November, 1953. It was assumed that the set ownership status of this group had remained unchanged, and hence, the group was not resurveyed.

Groups A and B were reached by a first-class mailing sent on October 15 and 16, 1953. This mailing consisted of a letter asking for cooperation in supplying the requested information, a return reply card, and a letter opener sent as a premium. On October 19 and 20, a follow-up reminder and “thank you” containing a duplicate reply card was mailed to each family. By November 9, the closing date set for mail returns, usable replies had been received from 54,233 of the 85,694 cases in Groups A and B. This represented a return of 63.3%.

The 54,233 families who replied in Groups A and B combined with 13,491 families in Group C brought the total number of cases whose set ownership status had been determined as of November, 1953, to 67,724, or 68.3% of the over-all panel.

The figures as reported in this booklet represent the information gathered from these 67,724 cases adjusted for two types of bias:

(1) non-response bias—i.e. the possibility that the
television set ownership of the non-repliers differed from that of the repliers.

12) exaggeration bias—i.e., the possibility that some of the repliers had incorrectly reported acquisition of a television set since May of 1952. Separate studies, described below, were conducted to determine these two factors.

Study of Non-Repliers: A 3,000 cross-section sample of the non-repliers was selected for further follow-up. Approximately a week after the closing date for mail returns, an additional mailing went forward to these families including another return reply card and fifty cents in coins as an extra premium. Intensive efforts—by mail, telephone, and personal interview—were then made to reach those who did not reply to this appeal. In this way, information was finally received from close to 75% of the sample of non-repliers.

The degree of television set acquisition of repliers and non-repliers was compared for groups of counties classified according to various characteristics such as county population. It was found that the greatest statistical variance in television acquisition occurred when the repliers and non-repliers were compared in terms of whether they came from counties in which the mail return had been high, medium, or low (county response level). Consequently, this breakdown was used to adjust for the non-repliers. The adjustment factors were arrived at as follows:

<table>
<thead>
<tr>
<th>County response level</th>
<th>repliers</th>
<th>non-repliers</th>
<th>adjustment factor for non-repliers</th>
</tr>
</thead>
<tbody>
<tr>
<td>High (66.8% and over)</td>
<td>26.3%</td>
<td>25.2%</td>
<td>1.04</td>
</tr>
<tr>
<td>Medium (59.0%-66.7%)</td>
<td>33.4%</td>
<td>33.4%</td>
<td>1.04</td>
</tr>
<tr>
<td>Low (under 50.0%)</td>
<td>27.2%</td>
<td>28.6%</td>
<td>1.05</td>
</tr>
</tbody>
</table>

For each county or county-cluster, the appropriate factor was applied to the rate of television set acquisition among the repliers to obtain an acquisition rate for the non-repliers. In this manner, possible bias resulting from non-response was minimized.

Study of Exaggeration: During the same time that the non-response study was being conducted, 1,000 telephone calls were made to a sample of those who had indicated that they had become television families since May of 1952. The purpose of this survey was to measure the extent of exaggeration in the affirmative answers to the question of television ownership in the mail study. Consequently, in order to dissociate the two studies, the telephone calls were made in the name of a different research organization. The telephone survey was ostensibly a study of viewing. The interviewer started out by asking: "Is your television set turned on?" and then continued regarding the channel or program being watched, and the channels that could be received. As a result of this questioning, it developed that 1.8% of the families had exaggerated in their claim of becoming television set owners since May, 1952. This factor was applied to the results obtained from the mail study to adjust for exaggeration.

**URF families**

---

**Notes:**

- The table represents the total number of families in various counties across the states of Illinois, Indiana, and Iowa.
- The data includes the total number of families, families classified under TF, and those under URF.
- The percentages indicate the distribution of families under TF and URF categories.

Financial & Trade Notes: RCA's 1953 sales soared to all-time high of $553,000,000, up 22.9% from previous high of $493,941,000 in 1952, which was 16% above 1951's $598,555,000. Net profits were $35,022,000 ($2.27 per share), up from $32,325,000 ($2.10) earned in 1952 and $31,913,000 ($2.02) in 1951 but considerably down from the record $46,250,000 ($3.10) earned in 1950. Annual report released Feb. 27 showed Federal and local taxes more than double net profits—amounting to $76,673,000 ($5.39 a share).

Total current assets at end of year were $349,735,000 vs. $304,867,000 at end of 1952 and $255,993,000 at end of 1951. Shipments to armed forces accounted for 19% of sales and current backlog of govt. orders was about $500,000,000 at year's end. Additions to plant and equipment during year amounted to $33,644,000. There were 65,000 employees at year's end, up 1000 from 1952, and payroll of $281,769,00, compared to $238,848,000 in 1952. There were 177,000 stockholders as of Dec. 31. Combined gross of RCA Victor, RCA Laboratories and RCA International was $645,117,000 (75.6% of total sales), compared to $507,554,000 (73.1%) in 1952. NBC grossed $176,052,000, of which 80% was achieved by TV, compared to $162,521,000 in 1952.

In joint statement by chairman David Sarnoff and pres. Frank Folsom, RCA listed among 3 most significant achievements (1) magnetic tape recording of TV programs in both color and black & white (Vol. 9:40); (2) new method to convert radioactivity into electricity (Vol. 10:5); (3) continued development and new applications of transistors. Turning to future, statement said RCA Laboratories was continuing to work on each of those achievements and in addition was developing "tri-color viewing tube in various sizes, projection-type color TV receivers, and an experimental tri-color camera tube designed to take the place of color pickup tubes used in RCA's present color TV cameras."

General Electric's 1953 sales set all-time high of $3,128,172,000, increase of 19% over $2,623,888,000 reported in 1952. Net earnings for 1953 were $165,728,000 ($5.75 a share), 9% higher than $151,720,000 ($5.26) in 1952, but below 1950's record high of $173,423,702 ($6.01). GE board Feb. 26 proposed to split common stock on 3-1 basis. The 247,000 stockholders will be asked to approve split at annual meeting in Schenectady April 20; approval by holders of two-thirds of stock on March 19 is required.

Stromberg-Carlson reports net profit of $1,667,308 ($3.40 a share on 484,551 common shares outstanding) after taxes of $3,440,000 on peak sales of $65,241,861 in calendar 1953, compared to profit of $1,240,746 ($3.28 on 337,454 common shares) on $48,098,209 in 1952. Pres. Robert C. Tait told directors all nearly preferred stockholders had taken advantage of priority to buy or convert 80,000 shares of 4% convertible stock (Vol. 10:8), with result that only 227 shares were redeemed, and entire issue is now retired.

Western Electric, manufacturing subsidiary of AT&T, reports earnings of $52,604,613 on record sales of $1,507,053,000 in 1953, compared to profit of $47,081,705 in 1952. Sales to AT&T companies represented 67% of total. Billings to govt. accounted for additional 20%.

Television-Electronics Fund, Chicago, reports net assets as of Jan. 31 at all-time high of $31,509,881, $71.19 a share after distribution of 21¢ a share, compared with $6.92 a share 3 months earlier. Shares increased to 4,384,527 from 4,091,842 during 3 months.

Among officers' and directors' stock transactions reported by SEC for Dec.: Robert L. Huffines Jr. sold 1000 AB-PT, holds none; Edmund Ludlow bought 100 Arvin, holds 1800; James D. Shouse bought 1500 Avco (Nov.), holds 5050; Clarence Francis bought 100 Bendix Aviation, holds 100; Leon Levy bought 800 CBS "B," holds 40,900; Allen B. DuMont bought 500 DuMont (Nov.), sold 3000, holds 42,900; Edward J. Kelly bought 500 Emerson, holds 1000; John M. Otter bought 2000 Philco (May & Oct.), holds 3512; Wn. Gammell Jr. sold 200 Raytheon, holds 15,300; Frederick Straus sold 600 Trav-Ler, holds 400.

Dividends: Sylvania, 50¢ payable April 1 to stockholders of record March 10; Stromberg-Carlson, 37½¢ March 31 to holders March 15; Hoffman Radio, 25¢ March 15 to holders Feb. 26; Sprague Electric, 40¢ March 15 to holders Feb. 27; General Precision Equipment Corp., 40¢ March 15 to holders March 5; Aerovox, 15¢ March 15 to holders March 1; Bendix Aviation, 75¢ March 31 to holders March 10; Radio Condenser, 5¢ March 22 to holders March 1; Wells-Gardner, 16¢ March 15 to holders March 4; Admiral, 25¢ March 31 to holders March 16; WJR The Goodwill Station, 10¢ March 12 to holders March 4; GE, $1 April 26 to holders March 19.

Magne-Tronics Inc., 122 E. 42nd St., N.Y. 17, is new company headed by Percy L. Deutsch "to operate in the over-all audio and visual fields and primarily to promote the recording and reproduction of sound on magnetic tape." Company's first project will be to offer musical tapes for industrial, office and restaurant use beginning March 15. Magne-Tronics v.p. is Joseph F. Hards, pres. of Magnetic Recording Industry Assn. and ex-v.p. of Audio Video Tape Laboratories.

Gabriel Co. reports net profit of $2,144,624 (35¢ a share) after taxes of $162,000 on sales of $21,976,182 in calendar 1953, compared to $13,927,214 (21¢) after taxes of $7200 on sales of $17,888,893 in 1952.

P. R. Mallory & Co. reports net profit of $2,547,813 ($3.74 a share) on sales of $70,874,347 in calendar 1953, compared to earnings of $1,897,772 ($3.12) on $53,443,117 in 1952.

"Seeding" TV audiences with uhf converters is plan suggested to uhf station executives by pres. Horace Atwood Jr. of Industrial TV Inc., Clifton, N. J., which makes converters, boosters and other electronic items. In exploratory letter this week to heads of uhf stations, Atwood said his company has new converter—not yet offered through trade channels—which could be made available to stations in lots of 1000 at about $10 each. He suggests stations run promotional contests—perhaps in "partnership" with servicemen or jobbers—with converters as prizes for 1000 best entries. Planting 1000 new families in uhf audience, he says, would mean: (1) "at least $20,000 of installation business for the installation-service trade in your area," (2) at least $10,000 in antenna and installation business for parts jobbers, (3) greater stimulation of further converter sales through increased interest in station.

First "stereophonic TV" program will be WNBQ-WMAQ-WMQF-FM simulcast in Chicago March 7 of NBC-Chicago orchestra concert. Program is in regular AM-FM series, New Dimensions, which broadcasts weekly experimental "3-D sound" programs, involving use of AM & FM receivers spaced 5-9 ft. apart to recreate directional sound—but addition of TV will be innovation. To get stereophonic effect, viewer or listener must have AM set and TV or FM receiver, but conventional reproduction of program is obtainable on any set.
Telecasting Notes: Confidence is running high at ABC on heels of latest Nielsen report for Jan. 9-23, showing rating gains for almost every important ABC-TV show—network officials expressing view that turning point has passed in AB-P’s effort to climb into “major network” category. Network’s top-rated show is Lone Ranger with 34.6, highest of any network show for its particular time period, as are Stu Erwin Show with 31.2 and Name’s the Same with 21.3. But ABC’s especially proud of its newer shows, which showed these increases from Jan. 9 to Jan. 23: Motorola TV Hour, 16.8 to 27.7; Donny Thomas 22.9 to 23.7; U.S. Steel Hour 20.4 to 22.4. Big step in plans to revamp NBC-TV program set-up was long-expected announcement this week that Sid Caesar & Imogene Coca will leave Max Liebman’s 5-year-old Show of Shows next June, Caesar getting own hour show and 10-year contract, Miss Coca probably slated for own 30-min. show and Liebman continuing to produce Show of Shows with new stars and format. Instantaneous newsfilm distribution is being explored by UP Movietone, INS-Telenews & CBS Newsfilm, states Feb. 24 Variety, which says they plan to send it out on coaxial-microwave lines from N.Y. & Washington, with subscribing stations making kines for quick re-use; UP reportedly will test scheme within 3 months. WSEE-TV, Erie, Pa., uhf station due on the air April 15, becomes primary CBS-TV affiliate April 25, replacing pre-freeze WICU, which is expected to sign primary agreement with NBC-TV. That’s gold in them thar ratings: Merchandise sold with Lucille Ball-Dessi Arnaz endorsements or tags grossed more than $20,000,000 in last 16 months, reports Desilu Inc., which gets 5%. Half-hour TV film series on N.Y. stations have more than doubled in last 10 weeks, Feb. 20 Billboard reports, its survey showing 72 vs. 34 last Dec. General Teleradio, having purchased Phillips H. Lord TV package (Gangbusters), slated to enter TV film distribution field in April. Scoop for Ford Foundation’s Omnibus (CBS-TV): Its cameras will invade inner sanctum of New York Times, probably March 21, to show how big paper is put together, first time TV has been permitted inside. Missouri legislature session was televised for first time this week as Gov. Donnelly’s address opening special session was carried by AT&T microwave from Jefferson City to KSD-TV, St. Louis. TV became meeting hall in Minneapolis when AFL Teamsters’ Union took time on WTCN-TV to notify Minneapolis-Honeywell Regulator Co.’s 9000 employees of terms of new contract agreement, averting strike. More Rate Increases: WXEL, Cleveland, adds new Class AA hourly rate of $1100 & min. of $300 for 8-10:30 p.m. segments daily and raises Class A hour rate from $900 to $1000, min. from $175 to $225; KONA, Honolulu, raises hour rate from $200 to $300, min. $40 to $50; WJAC-TV, Johnstown, Pa., hour from $600 to $650 & min. $110 to $125; KIDO-TV, Boise, Idaho, hour from $150 to $175. WPAG-TV, Ann Arbor, Mich., on air since April, 1953, names Everett-McKinney rep.

Cost-per-1000 homes reached by average evening half-hour TV show is still higher than its radio counterpart, new Nielsen survey indicates. For Sept.-Oct. 1953, TV’s average was $7.81 vs. radio’s $6.75. But lowest show in TV group was $3.15, below radio’s lowest, $3.46. In breakdown of half-hour evening TV programs by audience size, Nielsen found the 18 most popular (7,000,000 or more homes) had highest total cost, averaging $48,900 for time & talent—but lower average cost per 1000 ($5.27) than all groups reaching fewer than 7,000,000 homes. Average soap opera has lowest cost-per-1000 in TV ($3.88). Mystery shows were lowest of evening programs ($6.11).

To utilize all NBC talent to the hilt, pres. Pat Weaver is readying mid-March announcement of new div., NBC Enterprises under v.p. Ted Cott, aimed at every conceivable market. A few samples: movies, legitimate road-shows, records (distinct from RCA Victor label), home 8mm & 16mm films, drama and dance schools throughout nation (a la Arthur Murray), syndicated columns. Possibly biggest bonanza visualized is merchandise-franchising which has produced multi-millions in sales of toys, clothes, games, etc., for license-owners of Hopalong Cassidy, Roy Rogers, Howdy Doody, Walt Disney characters and the like.

Give up TV-radio for week during lent, suggest Archbishop John F. O’Hara of Archdiocese of Philadelphia in pastoral letter to be read in all churches of the Archdiocese Sun., Feb. 28. “Disconnect your set for a week, and then take an honest appraisal,” pastoral letter says. “Have you anything worth while? What have you gained? The art of conversation is restored in the family, perhaps; many duties are performed that might otherwise have been neglected; your own judgment may be more sound because you will have missed thousands of words of propaganda.” Lent begins March 3.

First GPL vidicon film camera chains will be shipped next week to WNET, Providence, R. I. (Ch. 16) and WPJB-TV, Fairmont, W. Va. (Ch. 55) says TV mgr. E. A. Hungerford Jr. He adds GPL is also working on color TV film chain, and that it is now shipping to stations and networks its new zoom-type Vari-Focal lens, which is capable of 5-to-1 focal length changes. A studio lens its range is 3-15 in. at f5.6, outdoors 6-30 in. at f12.

FCC goes before communications subcommittee of Senate Commerce Committee in closed session March 2 to brief newly appointed group under Sen. Potter (R-Mich.). Subcommittee had organization meeting this week, scheduled hearing March 16 on S-2926, introduced by Sen. Edwin Johnson (D-Colo.), to substitute “nominal” filing fees for FCC’s proposed schedule of fees (Vol. 10:15, 7-8). FCC will be first to be heard on measure.

Power increases: Time-sharing WMIN-TV & WTCN-TV, Minneapolis-St. Paul (Ch. 11), boost ERP from 70 to 316-kw; KNXT, Los Angeles (Ch. 2) due to go from 46.8 to 100-kw this week end; KATV, Pine Bluff, Ark. (Ch. 7) now putting out 172.8-kw ERP, up from 43-kw; WCOC-TV, Meridian, Miss. (Ch. 30), on air since Dec. with reduced power, now on test pattern operation with 252-kw.

TV therapy: Laborite Kenneth Robinson told British House of Commons there ought to be more TV in mental hospitals, and introduced motion for Govt. to provide more “modern amenities” for patients. “It is wonderful,” said Robinson, “to see patients who have never shown the slightest interest in their surroundings sit positively glued to the TV screen.”

Willys Motors will show studio vidicon camera chain for live and film use at IRE convention next month. Company’s first uhf transmitter package (1-kw) is now slated for July 1 shipment, specifications to be released soon following FCC approval (Vol. 9:30, 39).
INDUSTRY WEIGHS 15-in. vs. LARGER COLOR: What's the story on color set production? Though picture is now obscure -- to say the least -- considerable clarification is expected by month's end, possibly sooner.

Current uncertainty is centered on 15-in. tube and manufacturers' doubts about whether to go ahead with it. Consider this week's developments:

(1) GE's announcement of "curtailment of production" of 15-in. tube at its Syracuse plant, laying off 125-150 employees, because of "recent indications that the future trend is going to be toward the larger sizes of color tubes."

(2) Westinghouse's reports of almost no sales, though much shopper curiosity, following ads stressing "immediate delivery" of sets in New York (Vol. 10:9).

(3) Emerson's announcement it would lease color sets, not sell them -- with the terms of lease to be revealed next week -- because, according to company, color sets are too costly and too small, and color programming is too limited.

(4) Raytheon said 15-in. is "already obsolete," won't be mass-produced.

* * * *

The real key to situation is RCA. This week, it sent to all its receiver licensees an invitation to attend March 26 symposium at Bloomington, Ind. receiver plant. Purpose is all-out: To show regular production lines turning out 15-in. color sets at substantial rate; to turn over to licensees complete production know-how; to supply them with diagrams, bill of materials, sources of supply -- the works.

RCA's aim, in short, is to fulfill earlier promises to give to licensees the fruits of its years of experience with color. March 26 may well prove to be most decisive, then, in determining course of color production for many months to come.

RCA move precisely parallels its famous 1947 action -- a symposium on 10-in. black-&-white TV that proved to be the catalyst that precipitated TV production.

Attitude of RCA may be summed up this way: We're serious about color TV.

We're serious about the 15-in. and we aim to make the 19-in. as fast as we can.

At all RCA levels, word is "no change in previously announced plans." Those plans were to get into production within 6 months after FCC decision and to sell sets for price between $800 and $1000 (Vol. 9:26).

* * * *

GE said it would continue pilot production of 15-in. sets, though curtailing tube output, and will continue to supply outlets with demonstration models. Development of larger tubes will continue. Announcement went on:

"The acceptance and sales of black-&-white sets have been very good since the beginning of the year, and there is every indication that the current level of production of this type of receiver at Electronics Park will at least be maintained for the foreseeable future."

Westinghouse spokesman said "very limited number" of color sets were sold in
N.Y. stores, but that this was expected and company officials weren't surprised or disappointed. Whole purpose was to test public acceptance, he said.

Prompted by Westinghouse ads, he added, customers did bombard dealers with questions about when prices would come down, when larger screens would be available, when table models would be produced, etc. Westinghouse plans to make similar tests in other markets, starting in Philadelphia in about a month.

Emerson's decision to try the leasing plan, pres. Benjamin Abrams said, was based on study of public reaction to recent color promotion by N.Y. dept. stores which "convinced [customers] that color represents a relatively poor investment at the present time." Emerson sales v.p. Sol W. Gross said several calls have already been received -- mostly from hotels, institutions, etc. -- interested in lease plan. Elaborating on reason for leasing, he said: "People who buy 15-in. sets may complain that they were stuck; we don't want anybody to say he was stuck on an Emerson set."

Some manufacturers thought Emerson plan novel, worth studying. Philco and Westinghouse were among these. Others displayed no interest in plan; these included RCA, Admiral, DuMont, Raytheon.

SAN FRANCISCO, CHEYENNE STATIONS TEST: Two "firsts" this week -- first uhf station for San Francisco, first TV for Cheyenne -- both on air with test patterns, bringing number of stations on air to 371, of which 129 are uhf. Since first of this year, 16 stations have begun telecasting. These started this week:

KFBC-TV, Cheyenne, Wyo. (Ch. 5) opened up new TV area March 2 when it put out first test pattern from 5-kw DuMont transmitter. Its 500-ft. Trilsch tower is on a promontory 7000 ft. above sea level in Borie, Wyo., about 10 miles SW of Cheyenne. Nearest TV is in Denver, 96 air mi. "Reports of good reception as far as 150-mi.," wires gen. mgr. Wm. C. Grove. Starting with kine, it has been promised early interconnection, will be CBS affiliate and will carry ABC & DuMont programs as well. The station is controlled by Tracy S. McCracken newspaper interests (Wyoming State Tribune & Wyoming Eagle), which also operate other newspapers and 3 AMs in state. C.P. Cahill is commercial mgr.; D.E. Allen, TV sales mgr.; R.C. Pfannenschmid, chief engineer. Base Class A rate is $150. Hollingbery is rep.

KSAN-TV, San Francisco (Ch. 32) began test patterns March 1 with "many outstanding reports received from the entire Bay area," according to owner & gen. mgr. Rev. Norwood J. Patterson, who also operates radio KSAN and KJAY, Topeka, Kan. The area's first uhf has 1-kw GE transmitter on Clarandon Heights between Mt. Sutro and Twin Peaks, 1200-ft. above sea level. Facing competition from city's 3 pre-freeze stations and billing itself as "Bay area's first and only sports station," the unaffiliated outlet begins 7-8 p.m. daily programming March 9 with films of same day's races at Bay Meadows and of spring training of San Francisco Seals & Oakland Oaks baseball teams. Station will have "official opening" April 6, when it begins 5-11 p.m. programming with the opening game of San Francisco Seals vs. Seattle Rainiers. Asst. gen. mgr. is Roger Skelton, ex-KPIX; sales mgr. Ralph M. Sacks. Base rate is $500. McGilvra is national rep.

DENVER & SPRINGFIELD TV STATION SALES: Two more TV station sales are in the works -- one vhf, one uhf -- in addition to sale of two uhf CPs. The vhf sale of KLZ-TV (plus AM-FM) Denver, to Time Inc., is expected to be announced next week. Uhf sale is 50% ownership, for $250,000, of WHYN-TV (plus AM-FM), Springfield-Holyoke, Mass. to employes' pension fund of Springfield Republican and Union newspapers.

The uhf CP sales involve transfer of WUTF, Youngstown (Ch. 21) to WFMJ-TV (Ch. 73) which would shift to the lower channel, and transfer of oilman H. L. Hunt's grant for KTXG, Corpus Christi (Ch. 43) to McLendon family which once operated the Liberty Network, now defunct; Hunt merely says he decided not to go ahead.

Price of NBC-affiliated KLZ-TV hasn't been disclosed so far, may be about $4,000,000. Time Inc. is seeking 100% ownership, would like Hugh Terry, pres.-gen. mgr. and 16% stockholder to continue as manager if his health permits; Terry recently left hospital after 6-week illness. Other major stockholders are J. Elroy McCaw, Theodore R. Gamble, Harry E. Huffman, Frank H. Ricketson.
Time-Life group would then have 3 TV-radio properties, others being 50% of KOB-TV & KOB, Albuquerque (Wayne Coy owns other 50%) and 75% of KDYL-TV & KDYL, Salt Lake City (G. Bennett Larson 25%).

Springfield properties are owned by pres. Wm. Dwight and family (two-thirds) and v.p.-mgr. Charles De Rose and family (one-third). Each group's holdings in the station would be halved after sale is approved.

Purchaser is Republican Television Inc., owned by the Republican Daily News Employees Beneficial Fund and Springfield Union Employees Beneficial Fund. President of Funds is Paul F. Craig, editor of the Union. Though De Roses own Northampton Daily Gazette and Dwrights own Holyoke Transcript, neither has any ownership in the two Springfield newspapers whose employees' pension funds are buying 50%.

WHYN-TV operates on Ch. 55, has CBS & DuMont affiliations, was one of first uhfs to get 12-kw transmitter. Uhf set sales and conversions in the area have been quite respectable, both numerically and percentage-wise.

* * *

Multi-millionaire Hunt, in news lately because of his backing of Senator McCarthy, is to receive $5608 from McLendons for out-of-pocket expenses of getting CP. Hunt shows net worth of $8,182,000 as of May 31, 1952, says there's been no substantial change since that date.

Decision of Youngstown Vindicator to buy CP for WUTV's Ch. 21 and switch from Ch. 73 is attributed directly to technical problems, principally those involving receivers. Filing with FCC, Vindicator said:

"Considerable technical difficulty has been encountered in the WFMJ-TV Ch. 73 operation, which will not be encountered on Ch. 21. Many serious complaints of poor reception have been received from viewers in this area which are due to poor receiver sensitivity, high loss transmission lines, unstable oscillators, and other receiver problems directly attributable to the extremely high frequency of Ch. 73. Oscillator tubes in many instances are not only unstable, but very short lived. The life of oscillator tubes has in numerous cases been only a few weeks."

Vindicator is paying Polan Industries $76,612 -- $51,612 for equipment that Polan has bought, $25,000 for organizational and other expenses. WFMJ-TV requests that it be permitted to operate on Ch. 73 until transfer is approved and modification of site is obtained so that there will be no lapse in service. It says it could put Ch. 21 in operation with new 1000-ft. tower 2-4 weeks after FCC approval.

2 CPs GRANTED, MORE PERMITS DROPPED: All FCC's grants this week were uhf, including 2 CPs and an initial decision -- one of the CPs going to a uhf grantee in nearby town who simultaneously dropped uhf CP. This week's grants:

Great Bend, Kan., Central Kansas TV Co., Ch. 2; Carthage, N.Y., WWNY (Water-town, N.Y.), Ch. 7. Initial decision set up KTUK, Tulsa, for CP on Ch. 8.

WWNY was station dropping uhf CP for Ch. 48 in Water-town. Other CPs cancelled by grantees this week: Poughkeepsie, N.Y., WEOK-TV, Ch. 21; Durham, N.C., WCIG-TV, Ch. 46; Lewistown, Pa., WMRF-TV, Ch. 38.

Several more applicants were lined up for CPs soon when competitors dropped out of hearing, leaving the survivors ready for initial decisions. The survivors: Lexington, Ky., WLEX, Ch. 18; Bangor, Me., WGUY, Ch. 2; Las Vegas, Nev., KRAM, Ch. 13; Spokane, Wash., KSPO, Ch. 2.

* * *

FCC Chairman Rosel Hyde showed he means business in his aim to speed final decisions in contested cases. (Vol. 10:6). To strengthen the Office of Opinions & Review, the FCC's decision-writing corps, the following experienced attorneys were detailed from broadcast bureau: Herbert Schulkind, Thomas Fitzpatrick, Arthur Feld, William Jensen, Forest McClennan.

Among other actions, FCC this week: (1) Denied protests against site move of WORD-TV, Spartanburg (Vol. 10:8), filed by WGVF, Greenville (Ch. 23) and WAIM-TV, Anderson (Ch. 40). (2) Allowed KSTM-TV, St. Louis (Ch. 36) into the Ch. 11 hearing there, adding as an issue question whether station has right to comparative hearing for Ch. 11 while it is operating Ch. 36 at same time.
SENATE SUBCOMMITTEE PLANS UHF PROBE: Hearing on uhf problems—to which all interested parties will be invited—was announced this week by chairman Potter (R-Mich.) of new communications subcommittee of Senate Commerce Committee.

Announcement followed closed subcommittee session during which FCC members were quizzed for more than 2 hours on TV matters—with emphasis on uhf. Fortcoming hearing, which probably will be held in late March or April, was called to determine what can be done to help encourage growth of uhf.

FCC's multiple ownership proposal may also be thrown into a Senate hearing. Fiery Sen. Edwin Johnson (D-Colo.), strongest critic of proposal, told us this week he's preparing legislation on the subject and probably will introduce it next week—but that there's still chance he might not throw it in the hopper at all.

Object of his bill will be to bring multiple ownership into "open discussion" before Senate committee, he says, although he has little hope for passage of the measure. Mere existence of bill wouldn't necessarily hold up FCC approval of its plan to permit ownership of 5 vhf & 2 uhf—but if subcommittee decides to hold hearings, it may well delay FCC action.

To help encourage growth of uhf, Johnson tossed out this tentative suggestion as alternative to the FCC proposal now in process of rule-making:

Why not let present multiple owners trade in their vhf stations for uhf on a 2-for-1 basis, giving them perhaps 5 years to make up their minds? This would raise station ownership limit to 10 uhf. Johnson didn't say he was in favor of this plan, but some subcommittee members thought it might be good idea if bill embodying such a principle were introduced, to open issue to Senate exploration. If bill actually is introduced, it may embrace somewhat different proposal. Commissioners wouldn't comment on this plan, except to say it would require good deal of study.

Sen. Potter, who at 38 is one of Senate's most energetic and powerful junior members, made it clear his subcommittee will take intense interest in TV-radio matters. The March 2 get-together with FCC will be followed soon by another, to cover other communications topics. Subcommittee has also scheduled hearing March 16 on Sen. Johnson's bill to substitute "nominal" filing fees for FCC's proposed schedule of charges for those doing business with Commission (Vol. 10:5).

While public was barred from subcommittee session with FCC, details of the meeting were later made known by Sen. Potter, without direct quotes from any of the participants. All Commissioners except Hennock were present. Subcommittee members participating, in addition to Potter, were Schoeppel (R-Kan.), Griswold (R-Nebr.), and Hunt (D-Wyo.)—all except Pastore (D-R.I.). Sen. Johnson, ranking minority member of Senate Commerce Committee, also attended.

Meeting was harmonious, and for most part devoted to general policy, rather than specific plans and actions of Commission. FCC did most of the talking, and nothing startling or new was revealed by Commissioners or Senators. Highlights:

Uhf is now FCC's major problem, Commissioners said, but they pointed out that vhf faced same uphill battle in TV's early years, when some 13 stations surrendered CPs and pioneers lost heavily. Senators wanted to know how many post-freeze grants had been given up, were told figure came to about 50, of which 42 were uhf. Asked if some of the 50 entered TV for speculative purposes, Commissioners replied yes, but in many cases the grantees just exercised poor business judgment in filing their applications without first making detailed studies of their markets.

Persuading consumers to buy new sets or convert old ones is uhf's toughest problem, Commissioners said. They also saw too-low power as a real obstacle to the development of uhf—although many uhf operators disagree violently on this point (Vol. 10:9). No mention was made of possibility that FCC will seek to raise the uhf power "floor" (Vol. 10:8-9), though it's known Commission is now considering plan to permit nothing less than 5-kw transmitter for future uhf stations.

* * *

Commissioners attended another session devoted to uhf just one day before their Capitol Hill appearance. Uhf conference in Washington, sponsored by National
Citizens Committee for Educational TV and Joint Committee on Educational TV, heard each Commissioner express faith in future of uhf.

How to get viewers to convert to uhf was question tackled in panel sessions, with 2 Washington area commercial broadcasters exemplifying opposing approaches to problem. Richard Eaton, grantee of WOOK-TV (Ch. 50), saw little hope for uhf success until set makers equip all receivers with uhf at no increase in price. But pres. M. Robert Rogers of WGMS, Ch. 20 applicant, argued that uhf audience can be developed only by broadcaster himself, "not by manufacturers or anyone else."

RCA hopes some day to eliminate vhf-only receivers, said home instrument merchandise mgr. Allan Mills -- but it's an economic impossibility now. However, such simplification of set manufacturers' lines will some day make reel savings possible. Uhf sets now constitute about 50% of RCA factory inventories, he stated.

Industry-wide inventory of uhf sets was placed at 35.6% in January by RETMA exec. v.p. James Secrest, up from 32% in December, though output of uhf sets in 1953 averaged only 20% of that. Such difficulties, he said, are due to shift to "dual tv system" at time when 20,000,000 sets were in use. "It would have been a miracle if the adjustment had been accomplished without casualties."

Heavy promotion of uhf stations is necessary and desirable, but you can't sell uhf converters or sets until there's a picture to watch, conference was told by RCA Service Co.'s J.D. Callaghan, who revealed RCA-NBC's huge campaign in Norfolk, to spur conversion before WVEC-TV went on air, produced "practically no results" until a uhf picture was available. While promotion can harness the incentive to convert sets, only good programming can create that incentive, he said.

Personal Notes: A. L. Hollander Jr. named director of DuMont Network's new operations dept. in charge of mechanical details of program production; Marge Kerr, ex-N. W. Ayer & Son, named mgr. of DuMont program development ... Wm. M. Materne, coordinator of ABC-TV o&o stations, named asst. national sales mgr., reporting to Charles Abry; Baron Treener Jr. named asst. to ABC-TV program mgr. Charles F. Holden ... Matthew J. Culligan promoted to sales supervisor of NBC-TV's Today-Homes unit, reporting to network sales v.p. George H. Frey ... John Delehanty, pres. of WACH, Newport News-Norfolk, assumes duties of acting gen. mgr., succeeding Frederic F. Clair, now TV-radio consultant specializing in uhf, with office at 9642 Fourth St., Norfolk ... Charles W. Godwin, Mutual director of station relations, named asst. to ABC v.p. Ernest L. Jahncke, to specialize in station relations duties; he's succeeded by his aide, Robert W. Carpenter ... Walter L. Braeger, ex-WVIS-TV, Lansing, Mich., named gen. mgr. of WNAM-TV, Neenah, Wis., replacing Steven Pozgay, now gen. mgr. of WTVP, Decatur, Ill. ... Don Mann, ex-WBBM-TV, Chicago, named director of TV, WOKY-TV, Milwaukee ... Robert L. Heald named partner of Welch, Mott & Morgan, Washington law firm ... Martin Olson named commercial mgr., Lew Martin program director of WDSM-TV, Duluth-Superior ... John Grandy appointed sales mgr. of KALD-TV, Duluth-Superior ... Judge Justin Miller, retiring NARTB chairman, nominated for 3-year reappointment as member of U. S. Advisory Commission on Information ... Arthur E. Duram, TV-radio director of Fuller & Smith & Ross, elected v.p. ... C. M. (Tom) Meehan, sales mgr. of WBZ, Boston, returns to Washington headquarters of Westinghouse Bstg. Co. for "special assignment in the public relations field"; he's succeeded by Wm. J. Williamson, ex-sales mgr. of WLWD, Dayton ... Norman Nelson, ex-managing director of Southern California Broadcasters Assn., named BAB national promotion director ... Powell Ensign named exec. v.p. of rep Everett-McKinney Inc., N. Y. ... John D. Kelly, ex-mgr. of WQRS, named v.p. & asst. to Wm. M. O'Neil, pres. of WJW, Cleveland ... George C. Stevens promoted to sales mgr. of WNBC ... Ron Harman promoted to chief coordinating producer, CBUT, Toronto ... Wm. Monroe, ex-assoc. editor of New Orleans Item, appointed news director of WDSU-TV & WDSU, New Orleans ... Ken White, Denver Post TV-radio columnist for last 7 years, joins KOA-TV & KOA as newscaster ... Warren Abrams, Detroit mgr. of CBS-TV Spot Sales, transferred to N. Y. to work on sales for 7-9 a.m. Morning Show; he's replaced by Tony Moe, ex-KXTL, Los Angeles ... Gene Roth promoted to program director of KXTV-YTV, Spokane ... Lois Hennessy, ex-Seattle Post-Intelligencer, named publicity mgr. of KPTV, Portland, Ore. ... Wm. Stewart, ex-United Press Movietone News, named asst. to Frank LaTourette, CBS-TV Hollywood news director ... Leon Drew, ex-Geller Theatre Workshop, named production mgr. of KNX, Los Angeles ... Wright Esser, ex-NBC Chicago & ABC Hollywood, appointed production mgr. of KGMB-TV, Honolulu ... Michael Schwartz named TV-radio director of Co-Ordinated Adv. Corp., N. Y. ... Martin Codel, publisher of Television Digest, and Mrs. Codel returned March 5 from 4-week tour of South America.

Pioneer FM station KIE2XCC, Alpine, N. J., high power outlet operated since 1939 by late Maj. Edwin H. Armstrong, FM inventor, closed down March 6. It's estimated Maj. Armstrong spent $1,500,000 building and operating station. Alfred McCormack, attorney for Armstrong estate, said he hopes way will be found to start station up again. Tower and other equipment will continue to be used by Govt. for classified work.

William S. Paley, CBS chairman, gets NARTB Keynote Award for 1954 at Chicago convention May 25, which he'll address, as did last year's winner, RCA chairman David Sarnoff. Kenyon Brown, KWPT-TV, Wichita Falls, Tex., chairman of convention committee, said Paley was chosen from 14 industry leaders whose names remained on honor list following screening of 50 nominees.

James B. McElroy, 44, appointed engineering asst. to FCC Comr. John C. Doerfer; he was chief engineer of Guatemalan govt. radio stations from 1937-45, operated his own station in Guatemala from 1945-49, has been employed by U. S. Navy since 1940.
DIRECTIONAL ANTENNAS are providing practical answer to good uhf coverage in certain areas particularly suited to them, by increasing ERP in the direction of populated sectors. RCA this week reported 5 of its directional in use, 2 more being fabricated. These stations now on air have RCA directional antennas, with cardioid patterns: WTRI, Schemitschady, N. Y. (Ch. 35), approximate gain 49 in principal direction; KMJ-TV (Ch. 24), approximate gain 38, KJEO (Ch. 47) gain 40 and KBID-TV (Ch. 53) gain 47.5, all Fresno, Cal. WITV, Fort Lauderdale, Fla. (Ch. 17) has peanut pattern, with gain of about 54.

Standard Electronics Corp., subsidiary of Claude Neon Inc., reports order of 10-kw transmitter from WALE-TV, Albany, Ga. (Ch. 10), for delivery later this month. Station has June target date. Only transmitter shipment reported this week was 25-kw RCA, shipped Feb. 27 to KTEN, Ada, Okla. (Ch. 10), aiming for May or June debut. GE this week shipped 4-bay antenna to WSEE, Erie, Pa. (Ch. 35), which plans to take delivery of 12-kw transmitter next week, has April target. GE reports order from WWJ-TV, Detroit (Ch. 4) for 35-kw transmitter for July delivery.

In our continuing survey of upcoming stations, these were the reports received this week:

KULA-TV, Honolulu (Ch. 4), now installing 5-kw DuMont transmitter which arrived last month by ship, plans March 15 test patterns and April 9 programming, according to asst. mgr. Art Sprinkle, ex-KPHO-TV, Phoenix. Interim operation begins with 26.3-kw visual power using antenna 365-ft. above ground at new TV-radio building on Ala Moana Blvd., Waikiki. Grantee plans to build tower on Mt. Tantalus and double ERP at later date. It's signed as non-interconnected ABC affiliate, will have $300 base rate. Rep will be Headley-Reed.

WLAC-TV, Nashville (Ch. 5), with 10-kw RCA transmitter awaiting installation, building now 40% completed and 1000-ft. Ideco guyed tower scheduled for completion about May 15, now plans June 1 tests, according to T. B. Baker Jr. He owns 50% of Capitol Bestg. Co. which has option to acquire half interest in TV outlet after disposing of radio WKDA in Nashville. Rep not yet chosen.

The Brockway Co., new grantee for Ch. 7 in Carthage, N. Y. this week, has given up its CP for WWNY-TV, Watertown (Ch. 48), will build new station on Champion Rd., 9 mi. E of Watertown and 6 mi. W of Carthage. Grantee is owned by Watertown Times, will begin construction as soon as weather conditions permit, has late summer target; said pres. John B. Johnson. Station will use GE 20-kw transmitter, GE 12-bay antenna atop 500-ft. guyed tower, with 190-kw ERP. Call letters haven't yet been announced, nor has rep.

WINT, Waterloo, Ind. (Ch. 15), with 12-kw GE transmitter ordered for April 1 delivery, has started construction at new site 16 mi. north of Fort Wayne, reports pres. R. Morris Pierce, who operates radio WDKO, Cleveland. Its 800-ft. Stainless tower, topped by GE antenna, is due to be ready by May 1 and test patterns are slated to begin shortly thereafter. Rep not yet chosen.

WTLV, New Brunswick, N. J. (Ch. 19, educational), is now slated as result of Gov. Meyner's opposition to proposed $292,000 appropriation. Governor recently told legislature he doubts "propriety of publicly-financed, state-controlled interference with local school programs."

WHA-TV, Madison, Wis. (Ch. 21, educational), has finished installing its 1-kw RCA transmitter, now awaits delivery of Gabriel antenna which it hopes to have installed by March 25, plans April 1 tests and programming 10 days later, according to exec. director H. B. McCarty.

WNBT, Providence (Ch. 16) now plans March 17 tests, programming March 29, with 1-kw RCA transmitter and 420-ft. Stainless tower, has 5-kw DuMont transmitter ordered for delivery later this year. It will be ABC and DuMont affiliate, will have $250 base rate. Rep will be Raymer. It will be first local competition for pre-freeze WJAR-TV (Ch. 10). WPRO-TV (Ch. 12), other grantee there, has been delayed by protest.

WGBM-TV, Harrisburg, Pa. (Ch. 27), studios 80% ready & transmitter house scheduled for mid-March, now has't specific target, but 5-kw DuMont transmitter is due for May delivery and 400-ft. Wind Turbine tower, topped by RCA antenna, is scheduled for June-July, reports v.p.-gen. mgr. Ed K. Smith. Base rate will be $200. Rep will be Donald Cooke.

WUOM-TV, Ann Arbor, Mich. (Ch. 26, educational), whose $500,000 TV construction fund was cut from state budget by Gov. Williams, now is at "standstill" as far as transmitter is concerned, writes TV director Garnet R. Garrison. University's TV Service has completed move to new studios in remodeled funeral home on Maynard St.; it's now scheduling 2 1/2 hours of live programming each week over local WPAG-TV (Ch. 20). Three years ago it began feeding live and kinescope educational broadcasts, later feeding to state's commercial stations; now it's producing 5 hours weekly, hopes eventually to offer 30 hours weekly.

WKNV-TV, Kingston, N. Y. (Ch. 66), has completed 450 ft. of its 600-ft. Stainless tower at Fort Ewen, 5 mi. from Kingston & 10 mi. from Poughkeepsie, as to owner Joseph C. Close. He also reports RCA equipment ordered for his new CP in Keene, N. H. (Ch. 45), but hasn't set target date. WKNV-TV has its 1-kw RCA transmitter, was expecting RCA antenna about March 3, and, according to TV operations mgr. Robert L. Sabin, now plans tests between March 15 & April 1. It will carry NBC, CBS & DuMont programs. Base rate will be $100. Rep will be Meeker.

* * * *

CKCK-TV, Regina, Sask. (Ch. 2), planning July 1 tests, has 5-kw Canadian GE transmitter due for delivery May 1, reports gen. mgr. H. A. Crittenden. Using 600-ft. Stainless tower, it has set Sept. 1 date for full-time operation. Reps will be Weed (for U. S.) & All-Canada Television.

Engineering study of tower lighting & marking problems—with particular reference to guy wires of high TV towers (Vol. 10:4:5)—is slated to begin in next 2 weeks under CAA auspices. "Terms of reference" for study were completed March 5 by subcommittee on airdromes, air routes & ground aids (AGA) of CAA's Air Coordinating Committee, providing for ad hoc group to (1) determine whether existing standards are adequate, and if not, (2) develop possible avenues of approach to better system to warn pilots of high towers. Represented on ad hoc group will be the gov't. agencies in AGA (Arthur L. Catudal, chairman): Air Force, Army, CAB, Commerce Dept., FCC. During course of study, engineers will seek assistance from all interested organizations, and any conclusions on new methods of marking towers probably will be referred to FCC for rule-making. Group is expected to explore new ideas, some of which involve ground warnings near base of tower.

Houston regional office of FCC was eliminated this week, San Francisco office taking over New Mexico, Atlanta office taking over Tex., Okla., Ark., La., Miss. New Mexico was also reassigned from Dallas district office 10 to Denver district office 15.
Telecasting Notes: Rise in TV film sales and ratings in recent weeks is pointed out by fact that increasing number of locally placed film series are now outpulling many a competing network show in same time slot. Some of TV film shows most popular with independent stations are network-syndicated re-runs of top half-hour series which had their first runs on competing network stations... Examples of the "pull" of syndicated TV films, from this week's Billboard and Variety: WOR-TV, in 7-station New York, replaced 3 local shows with NBC film properties Wed. nights, hikes ratings from .9 to 12.7, 2 to 8.1 & .7 to 2.3; in 7-station Los Angeles, KTTV switched to syndicated films, climbed into first, second & third positions in their time segments Sat. nights; Ziv's I Led 3 Lives on WLWT piled up 47.7 rating in 3-station Cincinnati... CBS TV Film Sales reports 300% increase in gross sales for first quarter 1954 over first quarter of last year... ABC Film Syndication acquires John Kieran's kaleidoscope, 104 quarter-hours... NBC Film div., which started just a year ago with 2 shows and now offers 14 series, made 1100 individual sales in its first year... Specialized education: American Telecasting Corp., Hollywood TV school, now offering 16-week course in "TV film buying," which it claims is first of its kind in country... Nation's 3 top shows, according to ARB's first Feb. report, are all on film—I Love Lucy, Draguen & Grouch Marx... 3 billion "TV home impressions" for public service causes—that's the record of commercial network TV for 1954, Advertising Council pres. Theodore S. Reppier announced in annual report; TV networks, stations, advertisers and agencies contributed to "16 major campaigns and 18 other causes"; commercial radio network programs delivered 2.5 billion home impressions... "Overweight" will be first spring program in widely praised March of Medicine series of special telecasts, sponsored & produced by Smith, Kline & French Laboratories with AMA, on NBC-TV, 10:10:30 p.m. March 11; others will be April 29 & June 24... Cowboys still outrank interplanetary shows with small fry, according to Youth Research Institute, which took poll, found 63% of kids prefer westerns, 27% space shows, 10% undecided... National Open golf tourney, never before televised, will be covered by NBC-TV 4-6 p.m. June 19 from Baltusrol (N. J.) Golf Club, using "traveling eye" Cadillac mobile unit, first used at Inaugural Parade, for close shots of golfers in action... Radio's "Mr. Anthony"—John J. Anthony, who broadcast advice on personal problems for 23 years—has been signed by independent KTTV, Los Angeles, for TV series... $1000 musical scholarships being awarded each 13 weeks to best young musician appearing on elaborate new Debut on KCOP (formerly KLAC-TV), Los Angeles, which features full concert orchestra whose members' average age is under 20... $1,756,000 suit filed by actor John Ireland against TV film producers Norvin Productions and TV Programs of America, charging slander and breach of contract; actor's suit says his contract to portray detective Ellery Queen was broken by the studios on grounds he was "politically unacceptable"... WDSM-TV, Duluth-Superior (Ch. 6) which began Feb. 23, has set base Class A hourly rate of $250, min. $50... More rate increases: WAVE-TV, Louisville, raises Class AA hour from $750 to $850, min. from $150 to $170; WLWA, Atlanta, adds new Class AA hour of $700, min. $112, effective 8-10 p.m. daily, and raises Class A hour from $500 to $650, min. $75 to $104; WMBR-TV, Jacksonville base hour goes from $550 to $600, min. from $80 to $150 for 8-10 p.m. segment daily, $120 for other Class A time... Rate reductions: WEEU-TV, Reading, cuts base hour from $250 to $150 & min. from $40 to $20, rates now effective for all time segments; WRAY-TV, Princeton, Ind. cuts hourly rate from $250 to $150, min. $50 to $30.

FIRST COMMERCIAL color cameras were shipped by RCA this week, to NBC and CBS. In latter case, it was first installment on CBS's near-$1,000,000 order for 12 complete chains. Among others to get cameras before long, though dates aren't given, are: WKY-TV, Oklahoma City; WBAP-TV, Fort Worth; WBEN-TV, Buffalo; WTMJ-TV, Milwaukee; WCCO-TV, Minneapolis; KTLA, Los Angeles; WDSU-TV, New Orleans.

Though some stations are easing into local origination by purchasing slide equipment first, then film, Huntington's WSAS-TV plans to start right out with live RCA camera—hopes to have it in use by summer.

Mr. Lawrence H. (Bud) Rogers, elated with station's first pickup of network color—March 5 Bride & Groom—via station's private 3-hp microwave from Columbus, O., said he's going to let development of slide and film equipment shake down a while. Disagreeing with some other station managers, he feels present camera is going to be standard for considerable period.

Rogers was particularly pleased to get color job completed this week because RCA holds seminar for servicemen in Huntington March 8-9, and he was anxious to supply color pictures of Ding Dong School those 2 days.

Number of stations now equipped to rebroadcast network color is hard to determine. Even RCA doesn't know, because lately it has been shipping portions of necessary equipment—even without sending out "crash" crews with complete kits as it did for Jan. 1 Tournament of Roses parade (Vol. 10:2).

Total stations equipped is figured at 30-40, and NBC research chief Hugh Beville last week estimated that 180 would be ready by year's end. He also predicted that 10,000 color sets would be sold in 5 years.

Lashing out at radio ownership of TV stations, Sen. Kilgore (D. W. Va.) last weekend wrote Sen. Langer (R.-N. D.), chairman of Senate Judiciary Committee, and Sen. Bricker (R.-O.), chairman of Commerce Committee, urging their serious study of problems relating to "threat of developing monopoly" in communication field. Enclosing article by Washington attorneys Henry B. Weaver Jr. and Tom Cooley which appeared last year in Pennsylvania Law Review assailing FCC attitude on radio ownership of TV (Vol. 9:28), Kilgore's letter stated: "If radio interests succeed in gaining dominance of TV, further concentration is inevitable, and perhaps it will create something even approaching complete monopoly of broadcasting... A single corporation now owns not only several major radio and TV stations, but also a nationwide radio network and a nationwide TV network, while at the same time it is one of the largest producers of broadcasting equipment and receivers and exercises a wide influence throughout the industry by reason of its ownership of numerous important patents. Plainly, such concentration as this poses problems which at a minimum would strain the resources of the Dept. of Justice antitrust div. in addition to any possible exercise of authority by the Communications Commission. And it may well be that existing powers and agencies are simply incapable of dealing with a concentration of such inordinate size and infinite ramifications..."

Record 37,000 religious programs were telecast and broadcast last year, according to annual report of Broadcasting and Film Commission of National Council of Churches of Christ in U.S.A. Exec. director Rev. S. Franklin Mack said nearly 1,000,000 viewers and listeners wrote to request religious literature offered on these programs — 4 times the number 3 years ago.
Station Accounts: Live commercials delivered by co-owners of Gwen & Lorrayne Co., Los Angeles, makers of Pink Ice facial cream, have paid off handsomely for company, which now is moving eastward after extensive spot penetration on West Coast, reports March 1 Advertising Age. Co-owners Gwen Seager and Lorrayne Bunn do commercials live in each new market, leaving them to local personalities only after they’ve gotten “feel” of the product. Recently they used KOY-TV and KOOL-TV in Phoenix, plan to enter El Paso, Houston and other Texas cities shortly . . . A&P Food Stores buys re-run of Schlitz Playhouse of Stars films on WABC-TV, Wed. 9:30-10 p.m., thru Paris & Peart . . . Lincoln Mercury Dealers Assn. buys Chicago Crossroads on WNBQ Mon. 11 p.m.-midnight, thru Lincoln Adv. . . . Evans Fur Co. buys Frames of Jeffrey Jones on WBKB-TV, Chicago, Sun. 10:10-11:30 p.m., thru Arthur Meyerhoff & Co. . . . G. Krueger Brewing Co. to be alt. sponsor (with Carter Products) of Cases of Eddie Drake on WCBS-TV, thru Grey Adv. . . . Ralston Purina Co. buys 130 live partic. on WABD's Saddle Scouts, Mon.-thru-Fri. 5-6 p.m., and Magic Cottage, 6-6:30 p.m., thru Gardner Adv. . . . Pabst Beer buys last remaining adjacencies before and after N. Y. Giants games on WPIX, thru Warwick & Legler; sponsors previously signed are Shulton Inc. (Old Spice shaving lotion) and Paper Mate Pen Co. . . . Pabst also will sponsor St. Patrick's Day parade on Fifth Avenue March 17 on WNBC, 12:30-4 p.m., thru Warwick & Legler . . . Safeway buys The Playhouse, filmed drama series, for KLZ, Denver, Mon. 1:00-2 p.m., and KPTV, Portland, Ore., Thu. 2-2:30 p.m., thru Fos, Cone & Belding . . . Lewyt Corp. to spend $1,700,000 in 12-week campaign for its vacuum cleaners, using 93,000 TV-radio spots, thru Hicks & Greist & W. Manischewitz Wine doubles ad budget for 1984, with 90% for TV-radio, thru Emig Magul . . . Among other advertisers reported using or preparing to use TV: Fry Krist Co. Jackson, Mich. (Fry Krist donut & batter mix), thru Rogers & Smith Adv. Agency, Chicago; Idaho Peat Co., Downey, Idaho (Peat), thru Geoffrey Wade Adv., Hollywood; Perfect Plus Hosiery Mills, Chicago (hosiery), thru Arthur Meyerhoff & Co., Chicago; Rutland Fire Clay Co., Rutland, Vt. (Rutland patching plaster), thru Charles W. Hoyt Co., N. Y.; Williamson-Dickie Mfg. Co., Ft. Worth (Dickie work clothes), thru Evans & Assoc., Ft. Worth; Dixie Paint & Varnish Co. (Dura-lite Paint), thru Mitchell-Werbell, Atlanta; Rice's Fashion Center Inc., Norfolk (apparel accessories & footwear), thru Shelvo Inc., N. Y.

Picketing of WOR-TV & WOR, New York, by AFM musicians was temporarily banned by New York state Supreme Court Justice Dineen this week at request of stations which are seeking injunction against picketing. Picket line was set up Feb. 28 after stations dismissed staff of 40 musicians following expiration of their contract with Local 802. In addition to injunction, stations seek $1,000,000 damages from union. Justice Hammer March 4 reserved decision on stations’ motion.

Network Accounts: Favorable reviews by critics saluted debut of NBC-TV’s 11 a.m.-noon Home this week—N. Y. Herald Tribune's John Crosby predicting “it should be a whale of a show on every count.” Variety's George Rosen declared show is on “plus side,” should pay off investment of $1,000,000 promotion and $200,000 in equipment, though cautioning against being “too talkie-talkie.” Times' Jack Gould was a little more reserved, saying show is almost certain to be commercially successful but judgment on its quality should be reserved until more time has elapsed . . . Rybutol to sponsor The Goldbergs as summer replacement for Bishop Sheen's Life Is Worth Living, on DuMont, Tue. 8-8:30 p.m., thru BBDO . . . Falstaff Beer to sponsor baseball “game of the week” on 60 stations on ABC-TV, thru Dancer-Fitzgerald-Sample; some 60 other stations are expected to pick it up on co-op basis . . . American Safety Razor Co. replaces Carter Products as alt.-week sponsor (with Gruen watches) of Walter Winchell simulcast on ABC Sun. 9-9:15 p.m., thru McCann-Erickson . . . General Foods (Instant Jello) buys 3 partic. on Pinky Lee Show on NBC-TV, Mon.-thru-Fri. 5-5:30 p.m., thru Young & Rubican . . . Hazel Bishop (cosmetics) drops Peter Potter Show on ABC-TV, substitutes Dr. I. Q. Sun. 9:30-10 p.m., thru Raymond Spector Co. . . . Kent cigarettes buys Father Knows Best from Screen Gems for showing on unidentified network this fall, thru Young & Rubican . . . Campbell Soup Co. drops Campbell Soundstage on NBC-TV Fri. 9:30-10 p.m. but retains time for replacement in fall . . . Arthur Murray drops Arthur Murray Party on NBC-TV Mon. 7:30-7:45 p.m.

“The bashful stage of the courtship is over, and Hollywood and TV are ‘going steady.’” So said pioneer moviemaker Sam Goldwyn in interview in March 5 U. S. News & World Report. As one phase of “growing interrelationship of motion pictures and TV,” he pointed to pay-as-you-see TV, which he said is inevitable. “With paid TV, Hollywood could take in more money in one night than they can now in 6 months.” Asked if studios will sell old pictures to TV, he replied that good old films can be shown over and over in theatres—to a new audience every 10 years. He said movie industry is making comeback because it is producing better pictures. “You will find that the public would rather pay more money and be entertained than stay at home and see some mediocre TV for nothing.” He added TV is now having some of the troubles which caused movie box office doldrums— poor programs from which people get some of their sets, just as mediocre films drove customers from the movies. TV, he declared, was only one of the factors in the movies' slump. However, Spyros Skouras, pres. of 20th Century-Fox, took different view in press interview March 3. Asked what impact TV has had on films, he replied: “Impact? It's knocked hell out of us already,” but he said movies have passed TV crisis and are now overcoming it.

Britons will have to pay more for privilege of owning TV set beginning in June. Postmaster General Earl De La Warr told House of Lords March 2, annual license fee would be raised from £2 ($5.60) to £3 ($8.40) to keep BBC from going broke and to provide nest-egg for new commercial TV system.

N. Y. State Board of Regents this week informed Gov. Dewey it objected to his bill for operation of state's educational TV channels by private, non-profit corporations (Vol. 10:6). Focal point of objection was provision banning "political" broadcasts, which board contended was too broad in scope and would prevent controversial programs.
PARTS SPURT AUGURS WELL FOR TV INDUSTRY: Those usually reliable trade barometers, the parts makers, are providing support for hope that recent TV pickup will continue for quite a while -- reporting sizable increases in orders from set manufacturing customers last few weeks in anticipation of stepped-up production schedules.

Matt Little, chairman of RETMA parts committee and pres. of Quan-Nichols Co. (speakers), said parts business showed noticeable spurt in February after rather poor December and January and orders now on books led him to predict 1954 TV parts dollar volume will be just as good as 1953's estimated $700,000,000 at factory.

"Parts people were being hurt earlier this year because set makers were building out of their parts inventory which accumulated last fall," he observed. "So although TV business was exceptionally good in January, we didn't benefit much in the way of new orders. But February was different. Inventory in sets and parts went down and our customers had to come back for more components."

Leslie F. Muter, pres. of Muter Co. (resistors, coils, etc.), said week ended Feb. 8 was best he's had in many months and upbeat is still continuing. He forecast set manufacturers would step up production in next 4 weeks -- perhaps to as high as 150,000 a week, compared to current 105,000-110,000 pace.

"Business now is better than it's been in some time," he commented. "The TV makers are bringing in new orders every day. They want quick delivery and we can give it to them now. We couldn't do that a couple of years back."

Parts prices are at "rock bottom," says Muter, and he doesn't plan to increase them, for fear of upsetting good volume. Like the TV makers, he's depending on big volume to offset price cuts. He predicted good business in replacement parts and new equipment in last 6 months of 1954, due to TV and high-fidelity. Taking another look at TV market in retrospect, he continued:

"I think we all underestimated the TV market this year. I believe very few of us thought we could sell as many sets as we already have. A lot of people said color would have a much greater impact than it's shown so far. The limitations of color in its present form have simply proven there's still a black-and-white market."

Parts trade was cheered further this week by report of National Credit Office, 2 Park Ave., New York, predicting 1954 sales by jobbers of electronics parts, including TV-radio, are expected to equal or exceed 1953's $500,000,000 volume.

* * *

TV sales up, profits down -- the familiar refrain heard since price-cutting first began on large scale in December -- continued to epitomize big trade picture. Retail sales reportedly exceeded production in Feb., based on preliminary findings, but all levels of trade continued to complain about profit in that month, as well as in Jan., when retail sales were about 750,000, as against production of 420,000.

 Inventories are down nicely, totaling about 1,600,000 at end of Feb., made up of 300,000 at factory, 400,000 in distributors' hands and 900,000 at retail. That's lowest inventories have been since last April.

* * *

TV production totaled 105,721 week ended Feb. 26, compared to 110,544 units preceding week and 107,702 week ended Feb. 12. It brought Feb. production to estimated 430,000 and combined total for 2 months was about 850,000, compared to 2-month 1953 production of 1,449,831 (719,234 in Jan., 730,597 in Feb.).

Radio production totaled 192,949 units, up from 173,833 week ended Feb. 19 and 190,207 week before. It was first week this year that radio output has shown an increase. It brought Feb. production to about 750,000 and for 2 months to approximately 1,620,000, compared to 2,285,581 in first 2 months of 1953.
**Topics & Trends of TV Trade:** RETMA strategy to reduce 10% excise tax on black-&-white receivers and exempt color sets will be to ask Senate Finance Committee to make proportionate cuts in excise taxes on all products, as against House Ways & Means Committee formula of reducing only excise taxes above 10%. After meeting of TV-Radio Industry Committee March 4, RETMA pres. Glen McDaniel said he would urge Senate Finance Chairman Millikin (R-Colo.) to hold open hearings on tax bill and permit testimony by RETMA.

Despite President's opposition, Ways & Means Committee this week approved Reed Bill (H.R. 8224) calling for reduction to 10% of all excise taxes, except those on liquor and tobacco, effective April 1. Should proportionate tax reduction be substituted by Senate for House committee proposal, 10% excise tax on TVs would be reduced to 8%, McDaniel pointed out.

In plea for color exemption, McDaniel sent wire to House Ways & Means Chairman Reed (R-N. Y.) declaring advent of color threatens to retard sale of black-&-white and thereby reduce production and increase unemployment.

Reorganization of Muntz TV was ordered this week by Chicago Federal Judge Win G. Knoch on basis of petition filed under Chapter X of Bankruptcy Act by 3 creditors with claims totaling over $475,000. Petition estimates Muntz, one of top 10 manufacturers at one stage, has assets of some $3,000,000 and fixed liabilities of over $3,000,000 but also has contingent liabilities of $10,000,000 with finance companies, representing unpaid balances on TV set purchases. Muntz attorney Arthur E. Boroughf insisted company was solvent but would not contest reorganization. Petition was filed by attorneys Michael and Leonard Gesas on behalf of ad agency Michael Shore Inc., with claim of $422,000; Tel-Radio Transport Corp., $49,168; Permoflux Corp., $5931. Judge Knoch appointed Chicago attorney C. Wylie Allen as trustee and authorized Earl Muntz to continue as president at salary of $500 a week. Affected in reorganization are distribution and sales organization Muntz TV, and its 2 manufacturing subsidiaries, Tel-A-Vogue Inc. (TVs) and Muntz Industries Inc. (air conditioners). Earlier in week, Muntz announced that TV production was being halted temporarily so inventory could be reduced and said sales branches had been reduced from 32 to 10 in last 4 months. He blamed his plight on "public's reluctance to buy black-&-white sets because of color talk." But another manufacturer had this explanation: "It's simple. When other manufacturers started cutting prices, there was no need for the public to rush to Muntz to get bargains." Current Muntz line begins at $100 for 21-in. table, goes up to $220 for 27-in. console.

GE launched color service seminars March 4 in Detroit, plans to hold sessions in every major market, to be open to servicemen of GE distributors and dealers. W. L. Parkinson, TV-radio product service mgr., explained courses are 4 or 8 hours or 3 days to suit convenience of servicemen. Meetings are scheduled in Hartford March 17, Bridgeport March 19. Three-day meetings will be held subsequently in Philadelphia, Cleveland, Boston & Los Angeles, dates not yet set.

New Columbia Records div., Cryton Precision Products, has been formed for manufacture of general line of molded plastics in Columbia's plant at Bridgeport, Terre Haute, Los Angeles and South America. James Hunter will be v-p-gen. mgr.

Chicago area TV sales totaled 22,454 in Jan., bringing sets-in-use to 1,594,574, increase of 232,857 since Jan. 31, 1953, reports Chicago Electric Assn.

Overcome by inattention, Retailing Daily reporter Henry Best this week reported after personal shopping tour of big 4 N. Y. retail TV outlets that next to nothing was being done by salesmen to sell TVs. Brief wrote he was ignored by salesmen or given uniform answers to his questions. Color sets showing black-&-white programs were badly in need of adjustment. Tour took in Gimbel's and Stern's dept. stores and Vim & Davega chains.

RETMA's new spurious radiation committee, under GE's Dr. W. R. G. Baker (Vol. 10:9), held first meeting March 3 in New York, reached "general agreement on objectives of reducing spurious radiation," and hopes to hold second meeting end of next week, says RETMA exec. v.p. James Secrest. Committee's task is to develop voluntary program by receiver manufacturers for suppression of radiation, and it will confer soon with FCC officials.

RCA asked Chicago Federal Court this week to dismiss Zenith's amended counterclaim for more than $16,000,000 triple damages against RCA, GE and Western Electric in patent litigation (Vol. 10:3, 8). RCA charged (1) that amendment failed to state claim upon which relief can be granted, (2) that alleged rights of action claimed didn't accrue within legal time limit.

Motorola will spend $5,000,000 developing 40-acre tract in Niles, Ill., bordering northwest Chicago, for immediate construction of engineering building and eventual location of company headquarters and engineering laboratories. TV production will continue at Franklin Park and N. Cicero Ave. plants.

Magnavox entered table radio field this week, introducing 2 high-fidelity receivers. in mahogany and oak, at $60 & $70. Trade reports are that Magnavox will shortly start production of 8 or 9 table radios.

Improved TV business this week prompted Sylvania to (1) recall about 125 workers to TV plant in Buffalo (2) start third shift at tube plant in Seneca Falls, N. Y.

Emerson shows net profit of $449,231 (23¢ a share) for 13 weeks ended Jan. 30, compared to $899,516 (46¢) in corresponding quarter year ago. Though no sales figures were reported, pres. Benjamin Abrams estimated sales were 5-6% above year ago, with competitive pricing forcing profits down.

Stewart-Warner reports net profit of $4,081,000 ($3.04 a share) on sales of $128,798,000 in 1953, compared to $4,224,000 ($3.30) on $122,552,000 in 1952. Pres. James S. Knowlson told stockholders in preliminary report that profit decline was due largely to dip in defense orders.

Arvin reports 1953 earnings of $2,255,000 ($2.53 a share) after taxes of $2,437,146 on sales of $75,355,197, compared to profit of $2,209,733 ($2.48) after $2,249,803 on $64,289,781 in 1952.

Aerovox lists 1953 earnings of $1,074,500 ($1.54 a share) on record sales of $27,100,900, compared to profit of $941,550 ($1.35) on $22,400,000 in 1952.

Financial & Trade Notes: Philco sales went to record high of $430,420,000 in 1953, compared to $366,963,850 in 1952 and $305,328,670 in 1951, with earnings after all taxes amounting to $18,251,000 ($4.86 per share) as against $11,491,207 ($3.15) in 1952 and $12,168,046 ($3.35) in 1951. Earnings included non-recurring income, after taxes, of $5,283,000 ($1.43) from $5,500,000 sale of WPTZ, Philadelphia, to Westinghouse (Vol. 9:8).

Working capital during year increased from $45,483,000 to $54,656,000. Of total income, $6,016,000 was paid out as dividends and remaining $12,335,000 was reinvested to increase working capital and provide funds for plant expansion, which included opening of new TV plant in Philadelphia, construction of TV-radio plant in Toronto and refrigerator-freezer plant in Connorsville, Ind.

TV sales broke record, despite fact that "many customers at least temporarily postponed their purchases of TV receivers" last fall because of color publicity, report said. But it noted that TV market "has recovered from the special problems of last fall and our models are enjoying very favorable acceptance." Predicting 150 new stations will go on air in 1954, extending service to 2,400,000 additional families, report said "trend toward replacement of sets with 7, 10, 12 & 14-in. picture tubes, obsolete by present standards, and purchases of second sets for the home, will give major impetus to TV sales in 1954."

Sylvania's 1953 profits and sales were highest in company's 52-year history. Earnings were $9,536,181 ($3.10 on 2,968,812 shares) after taxes of $14,950,000 on sales of $233,267,408, compared to profit of $6,960,625 ($3.04 on $1,870,851) after taxes of $10,700,000 on sales of $235,023,437 in 1952. TV sales were "well above" 1952 while TV picture tube sales were 40% over 1952. Backlog of defense orders at year's end totaled about $90,000,000, compared with $75,000,000 at end of 1952. Payroll for average of 27,500 employees was $111,176,513, up from $93,147,384 a year earlier. Total assets increased to $204,433,298 from $176,418,658 at year's end.

Westinghouse reports net profit of $74,722,000 ($4.53 a share) after taxes of $85,845,000 on record sales of $1,582,047,000 in 1953, compared to $68,581,000 ($4.23) after $111,933,857 on $1,454,272,599. Consumer products, including TV-radio, accounted for 23% of sales vs. 21% in 1952. Working capital at end of 1953 was $929,725,000, compared to $535,211,000 at end of 1952. Fourth-quarter profit was reported at $21,104,000 ($1.29) vs. $19,841,000 ($1.21) on $419,500,000 corresponding 1952 quarter.

Tung-Sol Elec Co. reports earnings of $1,780,882 ($0.57 on 1,038,902 shares) after taxes of $2,250,000 on record sales of $40,017,549 in 1953, compared to $2,007,713 ($3.75 on $14,056) after taxes of $3,425,000 on sales of $35,468,558 in 1952. Lower earnings were caused principally by "lower fourth quarter sales resulting from customer inventory caution, coupled with a substantial volume of non-recurring costs connected with our plant expansion and improvement program," said chairman Harvey W. Harper. It spent $1,930,000 last year for plant expansion and new equipment.

General Precision Equipment Corp. reports 1953 profit of $3,463,349 ($5.09 a share) after taxes of $4,404,000 on sales of $87,763,925, compared to earnings of $1,255,278 ($1.88) after taxes of $1,700,000 on $54,326,849 in 1952.

Dividends: Corning Glass, 25¢ payable March 31 to stockholders of record March 15; Arvin, 40¢ March 31 to holders March 15; American Phenolic, 25¢ April 30 to holders April 16; GE Ltd., 3%/ stock April 14 to holders March 8; Capitol Records, 15¢ April 1 to holders March 15; Decca Records, 17¹⁄₂¢ March 31 to holders March 17; Claude Neon, 10¢ March 31 to holders March 18.
Network TV-Radio Billings
January 1954 and January 1953
(For December reports see Television Digest, Vol. 10:5)

NETWORK BILLINGS continued record-breaking pace in Jan., according to Publishers Information Bureau, reaching $25,056,449—a 45% increase over the $17,275,943 for Jan. 1953. CBS-TV retained lead, with record $10,713,329, while ABC-TV showed biggest percentage gain in year— rising 73% from $1,604,892 in Jan. 1953 to $2,780,574 in Jan. 1954.

Network radio figures were down slightly from year ago—$13,224,393 this Jan. vs. $13,878,459 same month of 1953—CBS maintaining top position with $5,192,906. The PIB tables for January:

<table>

</table>

Note: These figures do not represent actual revenues to the networks, which do not divulge their actual net dollar figures. They’re compiled by PIB on basis of one-time network rates, or before frequency or cash discounts. Therefore, in terms of dollars actually paid to networks they may be inflated by as much as 40%. Figures are accepted by networks themselves, however, and by the industry generally, as satisfactory index of comparisons & trends.

Big Ten outlined its regional football TV plan this week, and hinted that if NCAA TV committee doesn’t adopt it at March 15 meeting, it may televise games in defiance of NCAA controls. Big Ten wants to divide nation into geographical regions, with games to be televised according to either of these methods: (1) Any game could be televised on station or stations within region where game is being played, no team to be televised more than once at home and once away during season. (2) Any game may be televised nationally if it’s played before last weekend in Sept. or after weekend preceding Thanksgiving; but games played in the 9-week period in middle of football season must be televised on regional basis only. Within the rules, each college could negotiate its own TV rights, subject to approval of its opponent.

Ten top agencies of 1953, out of 57 which did $10,000-000 or more business, are ranked in March 1 Advertising Age in this order (in millions): J. Walter Thompson, $163 vs. $142 in 1952; Young & Rubicam, $138 vs. $120; BBDO, $137.5 vs. $118; McCann-Erickson, $106 vs. $94; N. W. Ayer & Son, $86.5 vs. $86.5; Foote, Cone & Belding, $72 vs. $70; Benton & Bowles, $57.5 vs. $52.8; Biow, $50 vs. $50; Grant Adv., $49 vs. $45; Leo Burnett Co., $46.4 vs. $37.6. Only Leo Burnett Co. is new to top 10, replacing Dancer-Fitzgerald-Sample, which fell to tie with Wm. Esty Co. for 13th. In 1952, 52 agencies did at least $10,000,000. Five additions were Weiss & Geller, $11 vs. $5 in 1952; Hewitt, Ogilvy, Benson & Mather, $10.7 vs. $8.5; Geoffrey Wade Adv., $10.4 vs. $9.8; Doremus & Co., $10 vs. $7.8; Ellington & Co., $10 vs. $9.

Interconnected to AT&T network lines March 1 was WCOV-TV, Montgomery, Ala. when first section of 400-mi. Atlanta-to-Jackson microwave route was completed. Next in line for interconnection are KCEB, Tulsa, about March 6, and KMMT, Austin, Minn. & WSJV, Elkhart, Ind., about March 15. AT&T’s longer-range plans include microwave links to Waterloo, Ia. April 15, and Mobile, Ala. & Alexandria, La. Oct. 1.

Call letter changes: WETV, Macon, to WNXE-TV; WHEN, Syracuse, to WHEN-TV, with WAGE (AM) becoming WHEN; KOEN, educational CP for Oklahoma City, to KETA.

“Strike it Rich” got clean bill of health from a N. Y. state legislative committee, but city welfare dept. reiterated its insistence that program’s producers file an application for license for public solicitation (Vol. 10:8). Joint Legislative Committee on Charitable and Philanthropic Agencies said close check indicated that money donated by listeners and viewers to the TV-radio program went to needy persons appearing on show “at an administrative cost of less than 2%,” and saw no need to hold public hearings. Committee added the program’s officials promised to investigate each case before calling needy persons to appear on show. Meanwhile, in Washington, Rep. Katharine St. George (R-N.Y.) March 9 introduced bill “HR-8196” to amend Communications Act “to require licensees to investigate persons and organizations on whose behalf contributions are solicited on radio and TV programs.”

Attempted assassination in House of Representatives got heavier TV-radio coverage than any other news event of the last year or so, with exception of Queen Elizabeth’s Coronation. ABC-TV, CBS-TV, NBC-TV all had live pick-ups from House within 1½ hours after the tragedy. News editor John D. Connelly of WNBW and WRC, Washington, in House Radio Gallery at time of the shooting, personally apprehended Lolita Lebron, ringleader of the group of Puerto Rican Nationalists which shot 5 Congressmen. Rep. Alvin Bentley (R-Mich.), most seriously wounded of the group, is one-third owner of WKNX-TV, Saginaw, Mich., which went on air last April. Rep. Kenneth A. Roberts (D-Ala.), who was wounded in the left knee, is member of House Commerce Committee, in charge of TV-radio-communications legislation.

Opposition to FCC licensing fee plan (Vol. 10:5) was voiced by NARTB pres. Harold Fellows, who said fees “for the privilege of engaging in an established means of free communication are inadvisable and contrary to the historic policy of governmental encouragement of the instrumentalities of communication.” He said NARTB v.p. Ralph Hardy would testify March 16 before Senate Commerce Committee in opposition to Sen. Johnson’s bill (S. 2926) to amend Communications Act so as to permit “nominal” license fees. He said NARTB believes Congress should specifically forbid FCC to levy license fees.

Five Pennsylvania uhf outlets jointly petitioned FCC this week to reconsider its decision authorizing WGAL-TV, Lancaster, to increase power and height and move site (Vol. 10:5). They argued that WGAL-TV’s new Grade B contours would completely encompass Grade B areas of 4 of the uhf stations and about 95% of the 5th, causing “grave and serious injury” and possibly depriving them of their network affiliations, since Lancaster station is affiliated with all networks. Petitioning uhf stations are Harrisburg’s WTPA, WHP-TV & upcoming WCMB-TV and York’s WSBA-TV & WNOW-TV.

RKO “has never considered selling its pictures for TV,” pres. James R. Grainger said this week. Despite some rumors that Howard Hughes, if he succeeds in plan to buy big film producer, would release its 800-picture backlog to TV, Grainger added: “It is true that [we have] received some ridiculous offers, but there has been no consideration of them, and there is no intention of so disposing of them.”

Session on color TV film, ardently sought by independent film makers, will be conducted by NBC at Center Theatre March 10 for some 50 members of New York Film Producers Assn. Program will include closed-circuit demonstration of color film supplied by NBC and FPA, plus question-answer period with NBC’s Barry Wood, Stan Parlan and O. B. Hanson.
'UHF PROBLEMS' FORCE 2 MORE OFF AIR: These are days of decision for some post-freeze telecasters -- particularly uhf operators in vhf strongholds.

The basic problem: TV's breakneck expansion in 1953 has resulted in more outlets than the market can profitably support at the present time.

The decision: To continue operating at a loss, perhaps for a long period, or to throw in the sponge before more losses pile up.

For uhf operators, the difficulties are sharper than for vhf. There are the added problems of conversion, higher equipment costs, receiver troubles -- and, of vital importance, the difficulty of getting good network affiliation when you have to build up audience from scratch. As Senators and FCC pondered "what can be done to help uhf," there were these developments this week:

(1) Two more uhf stations -- in Dayton, O. & Little Rock, Ark. -- decided to go off the air, the former this week end, latter March 31, because of problems arising out of vhf competition. [Incidentally, vhf KFOR-TV, Lincoln, Neb. (Ch. 10) also goes off air this week end as an indirect result of financial distress.]

(2) FCC formally proposed that future uhf stations be required to start with transmitter power of at least 5 kw (Vol. 10:8-10).

(3) Sen. Johnson (D-Colo.) introduced his multiple ownership bill to permit any entity to own either 5 vhf or 10 uhf stations -- or various combinations of the two (such as 3 vhf & 4 uhf, 2 vhf & 6 uhf) -- and to encourage present multiple owners to swap their vhf stations for uhf on 2-for-1 basis (Vol. 10:10).

* * * *

The 2 uhf stations which decided to call it quits provide study in contrasts. WIFE, Dayton (Ch. 22) was losing money in substantial amounts, had no major network affiliation in a 2-vhf market where only about 10% of receivers are equipped to pick up uhf. KRTV, Little Rock (Ch. 17), CBS-affiliated and a reputed money-maker, in a city with close to 100% uhf conversion, feared the market couldn't support 3 stations (2 new vhf), so decided to quit while it was ahead.

WIFE started operation last Oct., competing with pre-freeze vhf WLWD (NBC) & WHIO-TV (CBS-ABC). A "supplementary" ABC & DuMont affiliate, it found itself unable to get good network shows, even when it offered to carry them free. It had an impressive studio building, 12-kw transmitter, with investment of $600,000-$700,000. It lost $30,000-$50,000 a month, for a total operating loss of more than $160,000.

It's due to leave the air March 13, but principal owners Ronald B. Woodyard and Loren M. Berry asked Commission to let it retain CF until expiration date Aug. 4 to permit it to seek more finances and "see what will be done by the Govt. to help uhf stations." Woodyard, who is also principal owner of profitable radio WONE in Dayton, says he's retaining physical equipment and property and hopes "to be back in the TV business in Dayton in the near future."
KRTV was Little Rock's only TV when it went on air last April. Its first competitor was Pine Bluff's KATV (Ch. 7), which began telecasting in Dec. from site 25 mi. from Little Rock. Another vhf, KARK-TV (Ch. 4), is due to begin in Little Rock next month with NBC affiliation -- and KRTV feared it would be unable to renew its CBS contract. To compete with 2 vhf stations, KRTV management decided it needed 12-kw transmitter -- which would cost $4000 a month to pay off.

Opportunity to sell its physical facilities to KATV for $400,000 was important factor in KRTV's decision to surrender CP -- though a spokesman said action was dictated by "poor prospects for the economic future." Pine Bluff station will use KRTV facilities for its Little Rock studios, plans to retain some of KRTV staff. CP will be surrendered and telecasting discontinued March 31. KRTV's principal owners, Kenyon Brown & John H. Rowley, also own vhf KWFT-TV & KWFT, Wichita Falls, Tex., and Brown has additional interest in vhf KMBY-TV, & KMBY, Monterey, Cal. and 2 other AMs.

*   *   *   *

How many other stations are at the crossroads? It's difficult to estimate. We know of perhaps a dozen which could swing either way. Three other uhf stations have gone off air: WROV-TV, Roanoke, began Feb. 15, 1953, quit July 17; WBFS-TV, Buffalo, Sept. 5-Dec. 18, 1953; KCTV, Kansas City, June 6, 1953-Feb. 28, 1954. Oklahoma City's KMPT, still on air, is in receivership (Vol. 10:9).

But it's not only the uhf stations which have had post-freeze troubles. One of the 2 Lincoln (Neb.) vhf outlets bought at distress prices by Fetzer Bestg. Co. (Vol. 9:30; 10:9) goes off air March 13. John Fetzer continues to operate KOLN-TV (Ch. 12) while closing down KFOR-TV (Ch. 10). After FCC approval of KFOR-TV sale, he plans to shift KOLN-TV to Ch. 10. Vhf KFXD-TV, Nampa, Ida., also foundered shortly after going on air (Vol. 9:39), and although its CP has been bought by new owners, it's still off air. Vhf KONA, Honolulu, went off air last March due to financial troubles (Vol. 9:11, 23), resumed operation in June with new owners.

*   *   *   *

We do not subscribe to the view that uhf itself carries the seeds of failure. There are many uhf stations now operating profitably, as secure in their markets as any vhf outlets. We have been accused of beating the drums for vhf as often as we have been accused of selling uhf short. But we'll continue to report facts, and call the shots as we see them. In this light, what is uhf's biggest problem?

Uhf's technical difficulties -- and they're due principally to its newness -- don't constitute uhf's most important problem, they merely contribute to it. We have said before that the program's the thing -- and that still holds. Conversion problems can be licked only with good shows.

But there's no question now that the public will convert if conversion is the only way they can get top programs of the leading networks. If they can get these shows easily on vhf, the uhf audience buildup is extremely slow.

The strictly technical problems fade to insignificance beside the simple fact that it takes top-notch network programming to build an audience. We won't say that there can't be exceptions to this rule -- and we know of several stations making progress by concentrating on sports, good local programming, etc.

The pre-freeze pioneers went through years of red ink that makes current uhf losses look like peanuts. But vast majority of post-freeze grantees can't stand big losses, and a number of them are known to be desperately seeking more capital to continue operation. The big question for many: Go in deeper or quit now at a loss?

*   *   *   *

What can be done to encourage uhf? FCC's proposal to permit ownership of 5 vhf and 2 uhf has support of uhf operators, who believe it would give networks and other multiple owners bigger stake in uhf success. On other hand, some uhf stations are alarmed about FCC's 5-kw "power floor" plan. It would force them to spend extra money they can ill afford for more elaborate equipment, they say.

FCC's new proposal (Notice 54-327, Doc. 10952) would apply initially to stations not yet on air, eventually to many stations now operating. However, chances of final adoption are slim. Comments on proposal are due April 18.
Sen. Johnson's multiple ownership bill (S-3095), which he first proposed last week during Senate communications subcommittee session with FCC (Vol. 10:10), would permit any vhf operator to swap his vhf grant for 2 uhfs — one of which must be in the area formerly served by his vhf — within 5 years after bill becomes law. The Senator told us last week he has little hopes for adoption of his bill, but hopes it will stimulate open discussion of multiple ownership proposals and of uhf problems.

Disturbed about reports from some uhf grantees — particularly the failure of WIFE -- Sen. Bricker (R-O.), chairman of Senate Commerce Committee, this week asked FCC if legislation is needed to cope with uhf situation. Spokesman for the Senator says he has "the suspicion that there's not enough authority in the Commission to deal with it, and the Senator has some ideas of his own."

You can expect plenty of open discussion, and large number of proposals — but no panaceas — when Senate communications subcommittee begins its hearings on uhf problems late this month or early next month.

COLD ECONOMICS OF THE STATION OUTLOOK: We doubt whether as many as 100 new TV stations will take to the air this year — a far cry from the 251 of 1953. Therefore, we're inclined to go along with Richard P. Doherty's prediction that by late 1955 there will be approximately 500 TV stations in operation.

The land-rush has subsided, and now they're coming one by one -- nothing like the one-a-day of latter 1953. In 11 weeks thus far this year, for example, only 19 new starters have been reported -- bringing current total to 372. About 200 CPs are outstanding, possibly half of which won't ever be built; less than 300 applications are pending, most of which will be dismissed or denied after hearings.

And as against just 8 "economic mortalities" quitting air since freeze ended (see p. 2), with 2 back on roster, many more are now freely predicted for this year.

* * *

Dick Doherty's calculations are highly respected in the industry. Recently resigned as NARTB employer-employee relations director, now a management consultant in Washington, he's the man who warned last winter against the hell-for-breakfast pace of TV expansion (Vol. 9:43). We then quoted him as stating:

"There will be no jackpot for many new stations during 1954. The year ahead will be one of overexpanded activity, during which new operations will tend to expand at a relatively faster rate than total TV revenue will rise. In all probability, at least 30% of the new stations will lose money during the next 12-15 months, and such red ink operations will include vhf as well as uhf, some of them network affiliates."

Now he forecasts that, even with 500 stations on the air toward the end of 1955, only 150 will be "blue chip" operations, or huge money makers; about 200 more will be "good, sound investments if well conceived and well managed"; and some 150 will be marginal or loss operations.

For the near-term, he foresees 34-40% of all 1954 stations losing money and says that during the next 15-18 months "the going will be difficult for one out of 3 to one out of 4 stations."

Why? Lumping in shaky uhf operations with ill-conceived vhf, he cites these factors: excess manpower, poor scheduling of manpower, bad union contracts, over-expanded capital investments, inadequate financing, lack of sound cost control, excessive operating costs, inadequate charges to sponsors for services and facilities.

* * *

Here's an "economic profile" of a TV station, as Doherty notes some typical characteristics from a wide cross section of stations he has visited or surveyed:

(1) Average station employs staff of 55-65, some 40% technical, about one-third programming. Payrolls average close to $5000 per employee per year for established stations, $4500 for newcomers, accounting (exclusive of talent costs) for 41% of total operating costs. Locally originated film programs occupy 27-30% of average network station's schedule, about 60% of non-network stations, absorbing some 10% of annual operating costs in the case of affiliated stations.

(2) Stations may estimate composite revenue potential (for all stations in a TV market) at about $10.25 per set, the average tending to increase with advent of
2nd, 3rd or 4th stations. About two-thirds of revenues derive from national & local spot, one-fourth from network payments, remainder from production and other services. Total annual vhf revenues run at better than 100% of total capital investment, uhf average running appreciably lower.

(3) Fixed capital is being depreciated, on an overall basis, over a 6-year period, or at composite rate of about 16%, with this depreciation item varying from 9-15% of total operating costs.

(4) The typical station, within the category of profitable stations, earns between 27-30% profit before taxes on its total station revenue.

VERMONT’S FIRST CP AND OTHER GRANTS: Producing 3 CPs and 2 initial decisions this week, FCC included grant in Vermont -- heretofore only state without either CPs or stations on air. The week's grants:

Montpelier, Vt., WCAX (Burlington), Ch. 3; Grand Forks, N.D., KNOX, Ch. 10; Green Bay, Wis., Valley Telecasting Co., Ch. 5. Initial decisions prepared way for CPs for WDEX, Lexington, Ky. (Ch. 18) and KREM, Spokane, Wash. (Ch. 2).

Montpelier CP was result of final decision coming after competing Colonial TV Inc. showed what FCC called "almost incredible lack of diligence" in preparing its case -- failing to make obvious amendments in time, etc.

Initial decision for Ch. 18 in Lexington is particularly interesting because WLAP-TV, Ch. 27 grantee in Lexington, not only has quit building (Vol. 10:8) but just this week asked for reallocation to put Ch. 4 in nearby Richmond. WLAP-TV says zone lines should be changed to put northern Kentucky in Zone I, permitting the vhf assignment, for which it would apply, dropping uhf CP.

* * * *

FCC repeated its opinion that no difference in high and low uhf channels should be recognized for allocation purposes. Considering Sarkes Tarzian proposals for quasi-satellites around Bloomington, Ind. (Vol. 10:7), Commission turned down extensive reallocation to put low-end channels in Anderson and Logansport. It did, however, propose to add Ch. 21 to Huntington, Ind., which has no channel now.

In other allocations actions, the FCC started rule-making to reserve Ch. 5, Weston, W.Va., for educational use and to substitute Ch. 53 for Ch. 23 in Fitzgerald, Ga. All these proposals are subject to comment in support and opposition.

In celebrated site-move case of WORD-TV, Spartanburg, S.C., uhf stations WAIM-TV, Anderson, S.C. and WGVL, Greenville, have appealed to courts in effort to stop WORD-TV from moving to temporary site nearer to them (Vol. 10:10).

NETWORKS AND AT&T PLAN COLOR EXPANSION: AT&T and networks are about to cut loose and extend color service to more stations in more cities. Phone company and RCA-NBC apparently have caught their second wind after the frantic preparations for coast-to-coast colorcast of Tournament of Roses parade Jan. 1 (Vol. 10:2). CBS is also ordering more color-equipped routes for its affiliates.

Next expansion is divided roughly into two parts. One is addition of cities and stations along the major "backbone" coast-to-coast route. Other is the equipping of more major "legs". Here are targets for the two categories, as ordered from AT&T by networks, for guaranteed "100%" color signal:

(1) For "backbone" fill-ins: NBC-TV -- Johnstown, March 13; Fresno, April 1; San Diego, Oct. 1. CBS-TV -- Salt Lake City, April 2; Denver, June 1; Cincinnati, Aug. 1; Hannibal, Mo., Oct. 1.

(2) For additional legs: April 15, Providence & Boston; May 1 (possibly June), southwest from Kansas City to Galveston; "June", Dallas to San Antonio; June 15, upstate New York to Buffalo; Dec. 1 (though possibly July), Sacramento-Seattle.

Intermediate stations along these newly equipped legs generally will be able to get service if networks order it. Presumably, intermediate color-served cities will include all major TV cities. For example, it's expected color will be available by June 15 to stations in these cities on New York-Buffalo leg: Schenectady, Utica, Syracuse, Rochester. There's doubt Binghamton will get color same time as others, because of special technical microwave problems for its branch.
Cities served by coaxial, such as Amarillo, still have indefinite targets because special frequency conversion equipment is needed.

Programs to be fed this expanded color network will continue to be varied, again including remotes as NBC's mobile unit goes back into service. Present plans for remotes, though always subject to change, include: Gillette fights, March 26; Home program from Washington, with fashions and cherry blossoms (blossoms depending on weather), April 1 or 2; Today show, also from Washington, April 5; National Open Golf Tournament, from Baltusrol Country Club, near Summit, N.J., June 17-19.

Rest of NBC's color schedule, through April: Name That Tune March 15, 8-8:30; On Your Account March 19, 4:40-5; Three Steps to Heaven March 22-23, 10:45-11 a.m.; American Inventory March 28, 2-2:30; Eddie Fisher March 31, 7:30-7:45; Paul Winchell April 4, 7-7:30; Youth Wants to Know April 11, 1-1:30; Easter Parade and Frontiers of Faith April 18; Kraft Theatre April 21, 9-10; American Forum of the Air April 25, 2:30-3. CBS still has only its 5:30-6 Friday show.

47 STATES NOW HAVE STATIONS, TOTAL 372: New Hampshire got its first TV outlet this week, leaving Vermont only state without one -- but Ch. 3 grant went to that state's capital Montpelier this week (see p. 4). Altogether, 3 more stations can be added to log of stations on the air. After subtracting the ones in Dayton, O. & Lincoln, Neb. quitting as of March 13 (see p. 1), that makes 372 in all, 128 uhf. Latest starters:

WMUR-TV, Manchester, N.H. (Ch. 9), state's first outlet but located only 48 mi. from Boston, got under way March 5 and plans regular programming March 28 as ABC affiliate, with some programs from DuMont. It uses 10-kw RCA transmitter and former FM tower atop 1500-ft. Mt. Uncanoomuc. Owner is ex-Gov. Francis P. Murphy; gen. mgr., Harvey Carter; sales mgr., Gordon Moore; chief engineer, Vincent Chandler. Base hour rate is $250. Rep is Weed.

WINK-TV, Fort Myers, Fla. (Ch. 11) on March 6 brought first local service to state's southwest coastal area, 91 mi. from St. Petersburg, more than 100 mi. from Miami. It goes commercial Feb. 18, ABC affiliated, non-interconnected. It uses 2-kw RCA transmitter, is owned by Cleveland Yellow Cab Co. group (Daniel Sherby, pres.). A.J. Bauer is gen. & sales mgr.; Bob Bachman, technical director; Frank Nodine, program mgr.; James Lacy, chief engineer. Base rate is $150. Rep is Weed.

WAPA-TV, San Juan (Ch. 4), second station in Puerto Rico (WKAR-TV on Ch. 2 started last month) reported excellent results of first tests March 6; using an RCA transmitter with temporary 160-ft. antenna atop downtown radio building where owner Jose Ramon Quinones, sugar cane grower, who built radio WAPA in 1947, had provided for expansion into TV. Charles E. Bell, ex-WBTV, Charlotte, is gen. mgr.; Howard Hayes, operation mgr.; Morgan Craig, technical director. It's NBC & DuMont affiliate, non-interconnected. Base rate is $225. Rep is Quinones-owned Caribbean Networks Inc.

Networks won praise for refusing to bow this week to Sen. McCarthy's demand for time to answer Adlai Stevenson's March 6 TV-radio address--in contrast to the censure heaped upon them when they gave the Senator time to answer ex-President Truman's speech on the Harry Dexter White case. It was front-page news most of week, with editorial opinion markedly favoring the network stand.

After McCarthy blasted CBS & NBC as "dishonest and unmoral," even turning his back on their cameramen and radio reporters, President Eisenhower told news conference he thought networks had discharged their responsibility in letting Republican Party choose who was to reply to Stevenson (Vice President Nixon on CBS-TV & radio, NBC radio--same hookups Stevenson had).

Even FCC Comr. Robert E. Lee, close friend of McCarthy, agreed that the networks' decision "seems like a square deal to me." The Senator said his attorneys were preparing petition asking FCC to change its rules to allow free TV or radio time for a reply by any person who is attacked on free time--but by week's end it hadn't been filed, and consensus is that it wouldn't have the proverbial chinaman's chance.

Edward R. Murrow's treatment of the McCarthy issue on his March 9 See It Now (CBS-TV) won special laudation from influential newspapers and from an overwhelming majority of viewers who phoned and wired CBS. New York Times called it "crusading journalism of high responsibility and genuine courage."

Editorializing on both Murrow's telecast and the CBS-NBC stand on McCarthy's demand, Herald Tribune stated: "Like the free press, the free broadcasters met a controversial subject with a frank and responsible approach. . . . By refusing to be bullied, the broadcasters will assure their own future and help to guarantee America's." Fact that Murrow is on CBS board of directors lent added importance to his and his network's boldness in facing up to the Wisconsin Senator. And the Cohn-Schine disclosures that followed, understandable to everyone identified with the uniform of the military services, indicated that McCarthy isn't likely to be the industry's--and the country's--"headache boy" much longer.

"Senator McCarthy threatens to boycott NBC and CBS. That is what you call a station break."--Dan Kennedy, in Scripps-Howard Newspapers.
Personal Notes: Martin Silver, ex-Federal and ex-mgr. WTVU, Scranton, joins Tel Instrument Co., Carlstadt, N.J. as mgr. of newly formed broadcast equipment div., offering full line of studio color equipment (already a CBS supplier); Lawrence C. Freeman to handle sales, service & engineering contacts in mid-Atlantic & New England states ... Ken R. Dyke, ex-NBC v.p., now Young & Rubicam public relations v.p., named director of agency's U.S. branch office operations ... Eduard P. Genock, ex-March of Time, appointed head of TV production, Eastman Kodak Co. Wm. F. McCrystall, ex-KNBH, Hollywood, appointed sales mgr., KOA-TV, Denver ... Frank Burke, editor, Radio-Television Daily, elected v.p. & director of Radio Daily Corp., headed by Jack Allocato ... Walter L. Dennis, ex-WILS, Lansing, Mich., named gen. mgr. of upcoming WJNO-TV, West Palm Beach, Fla. (Ch. 5); Walter Brown, ex-RCA-NBC, named chief engineer ... Richard W. Hubbell resigns as mgr. of WGLV, Easton, Pa., and its AM counterpart WEEX; Nelson S. Rounsley, business mgr., takes charge ... Wm. Ashworth, merchandising director of WSPD-TV, Toledo, appointed sales mgr. ... Ben Baylor has resigned as gen. mgr. of KEDD, Wichita; he's onetime commercial mgr. of WMAL-TV, Washington ... Irwin Rosten resigns as DuMont Network mgr. of news & public affairs ... Wm. Crawford, ex-sales mgr. of WOR, named sales director of WATV, Newark, succeeding Murray Grabhorn, resigned ... Frank N. Jones promoted to sales mgr., WBNS-TV, Columbus ... Barnaby Prescott Smith, ex-DuMont, heads new TV-radio dept. of Harper Assoc., 350 Fifth Ave., N.Y., personnel consultants ... Jack Gilbert promoted from program mgr. to asst. station mgr., K Kol-TV, Kearney, Neb. ... Ralph H. Davidson, ex-KSL-TV, Salt Lake City, named sales mgr., Larry Stevens promoted to local sales mgr., KGMB-TV, Honolulu ... Jacob Evans, NBC-TV adv. & promotion director, takes on same duties for radio ... H. Roy Marks appointed Boston mgr. of CBS-TV Film Sales ... David Beblin, ex-KGO-TV, joins Avery-Knodel San Francisco staff as asst. to mgr. ... David H. Sandberg in charge of TV sales ... J. R. W. Graham shifted from radio to asst. director of CBLT, Toronto ... Frank Coffin, ex-KGW, promoted to local sales mgr., KGIN-TV, Portland, Ore. ... Paul Mensing promoted to NBC spot sales div. mgr., Detroit: Wm. Fromm named TV promotion supervisor ... Phil Dean, ex-WNET publicity director, partner in new public relations firm, Dean & Schultz Inc., 28 W. 44th St., N.Y. ... Al King, ex-sales v.p., KSTM-TV, St. Louis, opens own adv. agency at 7818 Forsyth Blvd., Clayton, Mo. ... Louis B. Ames resigns as program mgr., WPIX, N.Y. 

Lieut. Col. Wm. B. Campbell, Signal Corps, has been chosen as engineer-mgr. by FCC Comm. Robert E. Lee. Campbell previously had been mentioned as candidate for FCC commissioner or secretary. He's 54, served in World War I & II, worked for RCA Communications, Press Wireless, operated electronics schools in New York. 

Mrs. Clifford J. Durr, wife of the ex-FCC commissioner, now working in his law office in Montgomery, Ala., has been subpoenaed to appear before Sen. Jenner's Internal Security Subcommittee in New Orleans March 15, in connection with probe into Southern Conference Educational Fund. She was once on its board. 

Wm. L. McLean Jr., 58, v.p. & treas. of Philadelphia Bulletin and treas. of its WCAU Inc., died March 10 after being stricken with cerebral hemorrhage. He was a brother of Robert McLean, pres. of The Bulletin Co. and pres. of AP. 

Harry LaMertha, 72, for 31 years radio editor of St. Louis Globe-Democrat until retirement in 1951, died of cancer March 10.

Network Accounts: NBC-TV's trilogy of participating sponsorship programs moved step closer this week with disclosure that Tonight undoubtedly would go on air this fall, 11:20 p.m.-12:50 a.m., joining Today (7-9 a.m.) and Home (11 a.m.-noon). Pres. Pat Weaver is pushing Tonight, starring Steve Allen in format similar to Today, with same enthusiasm he gave to highly-successful Today (Vol. 10:3) and Home, which went on air March 1 amid $1,000,000 promotion. Each program would utilize "magazine concept" of selling, in which sponsor buys participation, like an insert in magazine, leaving program content entirely to network ... Reminiscent of Ford Motor Co.'s highly-raised American Road last June (Vol. 9:25), General Foods will spend more than $300,000 on special 25th anniversary program on combined CBS-TV & NBC-TV Sun. March 28, 8-9:30 p.m., directed by Richard Rodgers & Oscar Hammerstein and featuring musical highlights of their Broadway productions during last 11 years ... Yardle & Co. Ltd. (soap, shaving lotion) buys Tue. 1:30-1:45 p.m. segment of Garry Moore Show on CBS-TV starting April 6, thru N. W. Ayer & Son ... Parker Pen Co. to be alt.-week sponsor, with Singer Sewing Machines, of Four Star Playhouse on CBS-TV starting April 8, Thu. 8:30-9 p.m., thru J. Walter Thompson ... Minute Maid Corp. (orange juice) to sponsor 5:30-6 p.m. segment of Super Circus on ABC-TV starting June 6, Sun. 5-6 p.m., thru Ted Bates & Co. ... Sid Caesar's new show in fall tentatively scheduled Mon. 8-9 p.m. on NBC-TV, format and sponsor still undecided. 

Broadcaster Edward Lamb, operator of TV station WICU, Erie, Pa., and several AMs, also applicant for TV in several cities, this week was finally told by FCC that it looks as if a hearing will be necessary to determine whether he falsely stated he never was a Communist or had Communist affiliations. Commission said it has information before it alleging that Lamb was a party member, particularly in 1944-48. Lamb's counsel J. Howard McGrath, ex-U. S. attorney general, said he's gratified FCC has finally called a hearing and "appropriate steps will be taken" to assure that Lamb "will be in a position to know the identity of his accusers and thus be prepared to expose their falsities and motives." Similar charges against Lamb in past have been rejected by Commission. Current campaign to bring Lamb to hearing was led by Comr. Doerfer. 

Charges of bias, levied against FCC counsel David Kraushaar by Mansfield Journal Co., which is competing for Mansfield's Ch. 36 with Fergum Theaters, were dismissed by FCC as "sham and false." Said Commission: "This is an unfortunate diversion when there is more to be gained in getting on to the basic business of providing service to Mansfield than in dissipating energies on impulsive charges born of the heat of hearing."

CBS's Ed Murrow will get his 6th honorary degree in June—from Hamilton College—in recognition of "the intelligence, honesty and clarity" of his broadcasts. He already has such degrees from U of No. Carolina, Temple U, Washington State College, Rollins College, Muhlenberg College.

Roy J. Turner, 12½% owner of KWTU, Oklahoma City, has announced he will oppose Sen. Robt. S. Kerr for Democratic nomination. Both are ex-governors of Okla., both millionaire oilmen.

CBS-TV president J. L. Van Volkenburg's recent commencement address at his alma mater, U of Minnesota, has been reprinted by the network in booklet form; it's titled "Television as an Extension School of Democracy."
Telecasting Notes: Mutual Broadcasting System's chairman-pres. Thomas F. O'Neil seized occasion of interview with Advertising Age's Maurine Christopher to nail recurring rumors network is in trouble, a whispering campaign which writer says reached crescendo a few months ago when network tried unsuccessfully to sell affiliates on a time barter arrangement. Far from being in trouble, Mutual never had it as good, said O'Neil, pointing to 1953 sales of $23,000,000, up 10% from 1952, and to growing list of top-hole sponsors. He said he still thinks the plan to give affiliates "upgraded" shows to sell locally in exchange for carrying a specified number of network programs was a good one—but he won't try to revive it . . . General Teleradio, like Mutual a subsidiary of General Tire, already has 3 TV stations (WOR-TV, WNAC-TV, KJH-TV), has closed deal to buy WHBQ-TV, Memphis (Vol. 10:5), owns 55% of upcoming uhf WGHT, Hartford. But it has no plans to become 5th TV network, said O'Neil; instead, it's going to concentrate on syndication of live & film shows . . . Bank of America v.p. Francis Herwood has leased 4-year rights to 30 big-name feature films, on which it had foreclosed, to General Teleradio for sum reported in excess of $1,000,000; their 1946-49 vintage, cost bank $17,000,000, are called "dynamite for TV" . . . WOR-TV claims it carries more second-run films than any other station in country; they pay off, says film chief Mel Fenster, for "after all, you don't expect theater audiences to catch films the first time around" . . . ABC film v.p. George Shupert, incidentally, this week released study of TV re-runs titled Lightening Strikes Twice . . . TV is no danger to movies, said Eric Johnston, MPAA pres. to Brasil Herald interviewer while at Sao Paulo film festival last month; rather, "it is stimulating us to improve the techniques and there is every likelihood that movies and TV finally will unite, although that may be a marriage not necessarily inspired by love" . . . Television Age for March surveys trend in station rates, notes they've jumped 400% in last few years but are now leveling off, yet says about 38% of then-counted 365 stations plan rate boosts this year with 14% "undecided"; same issue carries extremely valuable tabulation of women's programs on several hundred stations, with titles, conductors, times, spot rates . . . TV station rates range all the way from $90 to $4800 per hour, some 60% falling in $90-$300 range; one-time spot rates run $20 to $1076 . . . You can't compare ratings of TV against radio, says ABC in new study of daytime radio, Millions of Numbers, just released; ABC has also released brochure on TV, a New Super Sales Force for Super Markets . . . Duluth's year-old uhf WPTV, though it lost NBC & CBS shows to area's 2 new uhf outlets (Vol. 10:9), has gone into new Television Center at 230 E. Superior St., affiliated with ABC & DuMont; mgr. James Cole reports "local business is steadily increasing" . . . Fabulous giveaway; WTV, Bloomington, Ind., has sent electric blankets to timebuyers and friends as "a warm, friendly" reminder that the "Electronic Blanket of the Hoosier Heartland" has changed to Ch. 4 with 1000-ft. tower and 100-kw power . . . Snowbend Cleveland got 24-hour service from WNBK & WTAM, reporting on weather roads, school closing, factory shutdowns, etc. during 5 days last week that city was digging out from under 22 in . . . N. Y. Mayer Wagner going on TV, rotating among 5 local stations, with Sun. 2:30-3 p.m. Mayor's Conference along format of Meet the Press; city-owned radio WNYC will also carry off tape . . . Century Theatre, 7th Ave. off Central Park, N. Y., leased for 5 years from April 1 by NBC to replace soon-to-be-vacated Center and International theatres . . . Burton Rascoe, noted author, starting newspaper column titled TV First-Nighter, syndicated by Classic Features, 434 Broadway, N. Y. . . . WJPB-TV, Fairmont, W. Va. (Ch. 35), due on air any day, switches rep to Gill-Perma . . . Mary Margaret McBride, 20 years on radio as of May 3, quits 6-a-week show on ABC May 15 for long vacation, hopes to return in fall for once weekly TV and/or radio show . . . American Character Doll Co. establishes $2000 annual fellowship at Columbia U Teachers College in honor of Dr. Frances Horwich—"Miss Frances" of NBC-TV's Ding Dong School.

Evidence that TV and newspapers are essentially complementary, not competitive, is fact that in 1953, when 231 new stations went on air, daily newspaper circulation soared to record 54,472,286 and number of nation's dailies dropped only one, to total of 1785, according to new 1954 Editor & Publisher Yearbook.

Significant exception, however, was New York City, where only morning Times and evening Post showed circulation increases in 1953. All other papers showed enough decline to bring over-all circulation figure below 1952. New York daily newspapers dropped more than 500,000 in circulation over 5 years (thru 1952), with Sunday circulation off 1,500,000.

Asked why by New York U journalism students in series of interviews, circulation executives gave TV as chief reason. Other factors: higher price of papers, more non-English speaking residents, higher subway & railroad fares, population shift to suburbs.

Actual declines from their peaks (between 1946-50) to Sept. 1952 are reported in Dec. NYU News Workshop as follows, on basis of ABC figures: News, daily (Mon.-thru-Fri.) down 222,618, Sunday down 769,383; Mirror, 178,243 & 696,385; Herald Tribune, 26,960 & 141,456; Journal-American, 71,477 & 298,964; World-Telegram & Sun, 55,451 (no Sunday paper); Times, 34,915 and gain of 93,973 Sundays. Only Post showed daily rise, up 135,600.

Charles Streehan, Mirror, said TV has cut into circulation because people can fill their time more easily with it. A. D. Wallace, World-Telegram & Sun, stressed effects of TV on duplication sales and Charles Hoffmann, Times, said TV particularly hurt first editions of morning newspapers. B. G. Cameron, Herald Tribune, said TV's impact usually was reduced after first year.

New N. W. Ayer & Son's Directory of Newspapers & Periodicals shows U. S. English-language dailies hit new record combined daily circulation of 54,048,953, more than 300,000 over 1952's previous record.

TV-radio's emergence as a prime news medium is at least partly due to newspapers' preoccupation with providing "entertainment" for their readers. So said New York Times Sunday editor Lester Markel following March 8 White House visit. He said President agreed with him that the American people should be better informed on public affairs. Markel added that because "too many newspapers have turned to entertainment, many people have turned to other sources for their news." As example, he said more and more people in metropolitan areas are depending on NBC-TV's Today for their morning news. He cited survey which showed about one-half of the American people now get their news from TV-radio.

Editors of the 19 Scripps-Howard newspapers, meeting in Cincinnati, saw TV as a challenge but not a threat. Memphis Commercial Appeal editor Robert F. Paine Jr., who headed TV committee at 3-day seminar, made this report March 10: "TV is a challenge to newspapers for their readers' time, but they can meet the challenge by continuing to give readers what TV cannot. TV's necessarily brief news coverage should only stimulate newspapers to do a better, more complete job, particularly in the local field. . . ."

March Reader’s Digest article by Herbert Corey titled “TV and a Revolution,” excerpted from The Freeman, offers startling “news” that TV is changing political habits and outlooks, purports to quote ex-FCC chairman Paul A. Walker as saying that “in another year there will be 2000 TV stations with perhaps 100,000,000 viewers.” Mr. Walker doesn’t recollect making any such statement, though he may have done so around time he lifted the freeze in spring of 1952 (less than 2 years ago). He now agrees with us that as many as 500 by end of this year will be surprising indeed.

Shull Bonsall, Los Angeles investor, has bought Consolidated TV Sales (Dwight Whiting, gen. mgr.) from Norman Chandler (Los Angeles Times-KTTV) and Austin Sherman; has also acquired added features from George Bagnall & Assoc., which will act as its distributor. Sherman has ended his association with Jerry Fairbanks Inc., whose past telefilms are now owned by Bonsall, and Fairbanks Productions of California is now sole owner of its Sunset Blvd. studios.

GENERAL ELECTRIC reports it has shipped 32 uhf transmitters of 12-kw power since Jan. 1953, when it began deliveries of units using the 15-kw klystrons developed for it by Varian Associates, San Carlos, Cal. Thous uhf shipments of all manufacturers have dwindled to a trickle, Gates Radio reported this week it will show its 1-kw uhf transmitter for first time at IRE convention in New York, March 22-25, and RCA reported first 1-kw shipment of year to date—to upcoming KUDO, Corpus Christi, Tex. (Ch. 22).

Only new vhf order reported this week was by GE from WDBO-TV, Orlando, Fla. (Ch. 6); it ordered 35-kw transmitter and 6-bay antenna, which are due for delivery in about a month.

In our continuing survey of upcoming new stations, these were the reports received this week:

KALB-TV, Alexandria, La. (Ch. 5), with 5-kw GE transmitter ordered for delivery later this month and 500-ft. Phillips tower due to be completed by latter July, plans tests in Aug. or later and commercial programming in Sept. or Oct., according to pres. W. H. Allen. Weed will be rep. Ownership interlocks with KPLC-TV, Lake Charles (Ch. 7), which has July 1 target.

KPLC-TV, Lake Charles, La. (Ch. 7), remodeling newly-acquired building at 320 Division St. into studio-transmitter house, has ordered 5-kw GE transmitter for delivery later this month, hopes to get going by July 1, according to gen. mgr. Dave Wilson. Rep will be Weed.

WCHS-TV, Charleston, W. Va. (Ch. 8) has ordered RCA equipment for June 1 delivery, began construction March 15, plans July 1 tests and July 15 programming, reports pres. Lewis C. Tierney. It will affiliate with CBS & DuMont. Base hour rate to be $550. Rep will be Branham.

WKBT, La Crosse, Wis. (Ch. 8), with 10-kw RCA transmitter on hand and 500-ft. Stainless tower scheduled to be up by April 20, plans tests June 21, programming in July, according to pres.-gen. mgr. Howard Dahl. La Crosse Tribune is selling its radio WKTY to Herbert H. Lee (KDHI, Fairbault, Minn.) in order to exercise option to buy 41% of WKBT. Raymer will be rep. WTLB (Ch. 38), other La Crosse grantee, hasn’t set target date.

KQED, San Francisco (Ch. 9, educational), now hopes to begin tests by March 20 from atop Mark Hopkins Hotel using converted KFIP transmitter, reports gen. mgr. James Day. Larry M. Reed, ex-chief engineer of experimental KM2XCM, named KQED chief engineer. Drive for 6800 dues-paying members at $10-a-year in bay area began March 10 in San Mateo-Burlingame when Dr. A. John Bartky, chairman of Governor’s Citizens Advisory Committee on Educational Television, keynoted “sign for 9” kickoff rally in Burlingame Recreation Center.

WALB-TV, Albany, Ga. (Ch. 10), with 10-kw Standard Electronics transmitter being shipped soon, now hopes to get going by April 1, according to chief engineer John L. Rivard. It’s owned by Albany Herald. Rep will be Burn-Smith.

KBMT, Beaumont, Tex. (Ch. 31), now installing its GE transmitter, has 440-ft. Andrews tower scheduled for completion by April and has set April 15 as “rough target date,” writes new v.p.-gen. mgr. Jack Rossiter, ex-WJTV, Jackson, Miss. Application just filed with FCC proposes transfer of $5000 of the half interest in KBMT now held by J. A. Newborn Jr. & Jack S. Josey (25% each). After transfer, equal owners will be Randolph C. Reed, who will be new pres., and N. D. Williams, continuing as secy., with Rossiter holding option to buy 25% in equal amounts from two principals. Headley-Reed will be rep.
RCA COLOR RECEIVER PRODUCTION PLANS: "Some one has to step out in front and take the risk. And there's always some one in the crowd who cries 'you can't do that.' But when you're out in front, no one can kick any dirt in your face."

With his typical pithy language, RCA pres. Frank Folsom epitomizes company's attitude on its decision to plunge into production of 15-in. color sets -- in face of indications from many manufacturers that they're waiting for larger sizes, lower prices and more color programming (Vol. 10:10). Folsom's comment came after his March 11 announcement that RCA:

(1) Would begin commercial color set production within 10 days -- 3 months ahead of previously announced target -- and has set price at $1000.
(2) Has reached 2000-per-month rate of tri-color tube production -- this also is several months ahead of its earlier predictions.
(3) Would disclose its color production methods to all set-making licensees at March 26 session in Bloomington, Ind. receiver plant (Vol. 10:10).

Set to be produced is model CT-100, open-face console with 36 tubes including kinescope. Folsom stated that "several hundred" pilot sets have been built at Bloomington. He also stressed that service for the sets will be available, though price of service policy wasn't indicated.

*   *   *

Folsom feels situation today parallels that of 1947. 'Then,' he said, 'the rest of the industry wasn't interested in television until we showed them what we were doing at Camden. Now, business has been good in black- &-white for the last couple months and they're saying 'We don't need color.' I think this attitude will change when they see there's some business to be done in color.'

Asked about worries that 19-in. will quickly obsolete the 15-in., Folsom snorted: 'Is last year's Cadillac obsolete?'

RCA thus commits itself to the 15-in. shadow-mask tube while many other manufacturers are still debating whether it's best to start with larger tube or with different type of tube.

One thing is sure: When color "breaks" -- in the sense that color sets are produced in substantial quantities and public buys them -- there's going to be a mighty scramble to produce. One company, incidentally, which got off to slow start in black- & white but aims to get in on ground floor of color, is Westinghouse. For its attitudes and preparations, see p. 10.

AS TRADE SETTLES DOWN, MORE CASUALTIES: Current business recession, which some see as merely a slight slipdown from 1953 boom, has TV-radio-electronics manufacturers moving cautiously, producing at decelerated pace, selling reasonably well but at close-cropped profit margins.

There are many who regard this as a period of readjustment which will bring an inevitable squeeze on more companies. In wake of Muntz and Tele King bankruptcy proceedings (Vol. 7,10), it's freely predicted more "financial embarrassments" may soon come to light by way of bankruptcy proceedings, assignments or settlements -- possibly even a wave of mergers of smaller firms not likely to be precluded by any adverse Dept. of Justice interpretation of the anti-trust laws.

With the first 1954 quarter not yet ended, we've already seen Muntz (with its affiliated Tele-Vogue), Tele King, Shaw and Radar Electronics Inc. (once called Video Corp. of America) in bankruptcy court, to say nothing of CR tubemaker Fidelity Tube Co. and its radio-making Jewel & Gem affiliates.

Are more failures in the offing? We can't say -- but won't be surprised, though we've heard the same talk ever since the big fellows began their competitive
price forays after the great 1950 boom and the severe "inventory recession" of the spring of 1951. National Credit Office reports that since 1946 start of TV, exactly 168 firms related to electronic production of one kind or other have been involved in financial troubles, 47 of them identified as makers of TV and/or radio receivers.

Very few distributors have gone bust, though many have faded out of TV -- but TV-radio-appliance retail failures totaled 348 in 1953, reports Dun & Bradstreet, as against 210 in 1952, or 116 out of every 10,000 concerns vs. 76 the year before. That doesn't include changes in ownership or voluntary liquidations without loss to creditors. Small wonder creditors of retail establishments are unusually wary, as are creditors of the manufacturers since Muntz's troubles became known.

* * * * *

Our own records show that last year the "economic casualties" among manufacturers were Jackson Industries and its affiliated National Electronics Mfg. Co., Gotham Television (name changed from Harold Shevers Inc.), Transvision Inc., Regal Electronics, Video Products Corp., Television Equipment Corp., and tube-maker Zetka.

In 1952, Tele-tone, Starrett, Monarch and U.S. Television Mfg. Co. went under, also communications maker Link Radio; in 1951, Freed, Richmond, Vidcraft and Commander; in 1950, Trans-Vue, Remington, Nielsen, Televisa and Electronic Corp. of America.

Few electronics manufacturers unrelated to TV receivers have gone into bankruptcy; for the most part, those that got into trouble were simply absorbed by the bigger companies, some of them newcomers to electronics, or else merely switched to other production, or simply faded quietly out of business.

Note: Only top-echelon manufacturer of TVs on bankruptcy lists, Tele-tone (Vol. 8:5) was ranked 9th in production in 1950 (175,000 units valued at $21,875,000) by Television Shares Management Co. (Vol. 6:8) but wasn't on first-10 list in 1951.

* * * * *

TV production totaled 113,026 week ended March 5, compared to 105,721 units preceding week and 110,544 week ended Feb. 19. It compared with 166,235 in corresponding week of 1953 and brought production for first 9 weeks of 1954 to 1,050,000 vs. 1,616,066 same 1953 period. Radio output March 5 week was 188,526, compared to 192,949 week before. Nine-week production was 1,800,000 vs. 2,600,000 year ago.

Retail TV sales in January set record for that month, as expected, totaling 731,917, or about 75% more than Jan. production of 420,571. Furthermore, they were only 5.5% below normally peak Dec. sales of 774,856 and well above the 640,073 sold at retail in Jan. 1953. Retail radio sales in Jan. totaled 306,407, excluding auto sets, way down from the 1,456,008 sold in Dec. and 414,721 in Jan. 1953.

SHOOTING HIGH in color, whereas it admittedly lagged in black-and-white, giant Westinghouse confidently expects to keep pace with industry's Big 3 in production and sales of TV receivers. "We're all starting even in color," said TV-radio mgr. T. J. Newcomb this week after conducting us on tour of Metuchen, N. J. production line, "and Westinghouse is going to be the TV leader, for once."

Spurred by pres. Gwynv Price's avowed intention of lifting company's TV position to a level comparable with its high stature in appliances, Westinghouse subordinates are going all-out to prove they can grab an early lead in color and stay in forefront. Newcomb asserts Westinghouse, one of first to start color production line and put sets on retail market, "has the capacity to be a leader in production and we can expand our facilities further to equal the capacity of any manufacturer."

Why, we asked, is Westinghouse concentrating so much time, energy and money on sets with 15-in. tube, when so few other manufacturers besides RCA seem to be going ahead on that size?

"We want to be identified in the public mind with color," answered Newcomb. "We're prepared to spend a lot of money on advertising to make sure the consumer knows we're making a color set, which can be bought for $1,295. Of course, we don't expect to sell many of these sets to the public. Our experience with New York stores shows they won't buy them and we're not disappointed in that. But the more stores they're in, the more people will know about Westinghouse sets. Furthermore, we hope to use this period to learn how to merchandise color. I'm not convinced any manufacturer knows that yet. Maybe it's costing us too much to learn, but we think it will pay off eventually."

Westinghouse produced 200 color sets through Feb. and Newcomb says each costs about $9000 to produce. Current daily production varies, ranging up to 22. In addition to its own sets produced uses RCA, GE & Sylvania tubes. All sets produced have been sold to distributors, who report strong demand from dealers seeking traffic-builders.

Color production line has 115 operating positions, of which only 34 are now manned. The 34 employees will be used as cadre to train other workers in color. So complicated is color circuitry that twice as many wiring errors are made along line as on black-and-white. Consequently, it takes 16½ hours to assemble and test color sets vs. 5½ hours for black-and-white. Labor costs are 3 times as great.

Bendix Radio buys 25-acre tract across highway from main plant at Towson, Md., near Baltimore, for expanded manufacturing facilities.
Topics & Trends of TV Trade: "Fighting chance," is how RETMA spokesman describes odds on getting excise tax relief for TV-radio-appliance manufacturers (Vol. 10:10). Pres. Glen McDaniel made spirited plea for lowering 10% tax in conference this week with Senate Finance Chairman Millikin (R-Colo.), will testify before full committee March 15.

McDaniel sharply criticized House action this week in passing Reed bill (HR-5224) calling for reductions on score of items with excise taxes over 10% but ignoring TV-radio-appliances. "It is inconceivable that Congress would, in the first excise tax reduction program in 20 years, deliberately discriminate against the consumers of household articles indispensable to the health and welfare of every American family," he said.

He will tell Senate committee that House has provided for immediate or future tax reductions on items providing 90% of revenue from excise taxes, whereas household items on which tax was not reduced provide only 4% of excise tax payments and could be cut with substantially less loss of revenue to Govt. He'll also show that reduction of excise taxes on household articles will bring lower prices to consumer and increase employment.

* * *

TV set sales by Canadian factories totaled 34,890 in Jan., at average price of $367, compared to production of 43,835, reports Canadian RTMA. Projected production estimate is that 121,266 more sets will be turned out next 3 months. Inventory was 77,778 at end of Jan., compared to 68,833 at start of month. Quebec led in sales with 13,288; Toronto second, 8437; other Ontario, 3502; Ottawa & eastern Ontario, 2961; British Columbia, 2775; Hamilton-Niagara, 1950; Windsor, 1607; Prairies, 176; Maritime Provinces, 214.

Picture tube sales in Jan. totaled 575,661 valued at $12,173,923, down from 644,287 at $14,801,856 in Dec. and 988,316 at $23,892,982 in Jan. 1953, reports RTMA. Some 76% were 19-in. and larger. Receiving tube sales totaled 22,133,347 valued at $16,412,505, compared with 23,404,026 at $17,832,387 in Dec. and 37,343,081 at $25,688,914 in Jan. 1953. Of sales, 13,542,667 went for new sets, 7,158,537 renewal, 1,082,917 export, 389,226 govt.

Growth of discount houses and how they operate is told in 2 articles in March 8-9 Wall Street Journal based on 13-city survey. They show how they "combine austerity and psychology to cut prices and get mass sales" chiefly through savings on deliveries, sales help and merchandising frills. One Houston executive comments: "It's getting to the point where you're considered a fool if you buy anything at the regular retail prices."

Junking left-wing union, 20,000 GE production workers at Schenectady voted to sever connections with independent United Electrical, Radio & Machine Workers (UE) and affiliate with CIO's International Union of Electrical Workers (UEI). Former union was expelled from CIO after being consistently characterized as under left-wing domination.

Philco entered commercial air-conditioning field this week, disclosing plans to produce 2-ton air-cooled and 3 & 5-ton water-cooled units at new Connersville, Ind. plant. Prices were not disclosed. Philco also announced it will continue to purchase room air conditioners from York.

Commerce Dept. schedules TV-radio-electronics trade conference April 6, to which top manufacturing and trade assn. executives have been invited. Secy. Weeks will address conference, one of series with leading industries.

Magnavox donates about $1500 worth of TV-radio equipment to Purdue's Ft. Wayne Center for use in its technical courses, directed by Dr. R. M. Bateman.

Muntz TV, ordered reorganized last week after filing of petition under Chapter X of Bankruptcy Act by 3 creditors with claims totaling more than $475,000 (Vol. 10:10), this week asked court permission to file $10,000,000 counter-suit against American Television pres. U. A. Sanabria, his attorney I. Harvey Levinson and ex-Muntz engineering v.p. Raymond Olson. Pres. Earl Muntz charged trio, all Muntz stockholders, with "false and malicious" statements concerning his solvency, said they were conspiring to acquire Muntz firm through bankruptcy or forced sale. Chicago Federal Judge Knoch set hearing April 9 on increasingly acrimonious case. Muntz meanwhile halted TV production and shut down all retail stores except those in Chicago, Detroit, Cleveland & St. Louis. In other bankruptcy developments: (1) Tele King, which filed Chapter XI petition month ago (Vol. 10:7), was permitted to continue until March 24, when schedules will be filed. (2) Shaw Television Corp., Brooklyn, offered creditors 50% in installments, was allowed to remain in business. (3) Assets of bankrupt Fidelity Tube Corp., Jewel Radio & Gem Radio, all of 900 Passaade Ave., E. Newark, and owned by Don J. Ferraro, were sold for $370,000.

* * *

Remember those Nujiel-filled magnifiers that were offered in the long ago days of 10 & 12-in. "supersizes" in order to magnify TV images? Well, here's one to beat them all—and it could come only from Hollywood. Columnist John Crosby relates, "At Pickfair, Miss [Mary] Pickford and her husband, Buddy Rogers, watch TV on a custom-built set with a 30-in. screen which, when pulled out, becomes 40-in. Between the tube and the screen, there is a compartment containing 5 gallons of oil. This gives a third dimensional effect. The set is so good, Miss Pickford claims, that movies made 25 years ago look brand new."...

RCA offering for sale its 200,000-sq. ft. cabinet plant in Pulaski, Va., once employing 800, closed last 2 years, price undisclosed. And, having farmed out some of 45rpm phonograph to V-M and others, RCA is now making them at its Cambridge, Mass. and Canonsburg, Pa. plants.

GE consolidates receiving tube production at Tell City, Ind. plant next week, closing down tube mount assembly plant at Huntingburg, Ky. and transferring some 450 employees.

Ziff-Davis Pub. Co., Chicago, has purchased Communication Engineering Magazine from Milton B. Sleeper, will merge it with Radio & Television News beginning with April issue.

Electronics Reports: Two new transistor developments, making possible transistors with “complete stability” and transistors capable of operating effectively at high temperatures, were announced and demonstrated by James J. Sutherland, gen. mgr. of Sylvania’s electronics div. to group of military officials in Washington March 10. Sutherland said stability was achieved through use of “stabilized germanium” which prevents characteristics of transistor from changing and decreasing its efficiency or making it inoperative. Stabilized germanium is immune to effects of moisture and deterioration through aging, he said, overcoming “the greatest single obstacle to widespread use of transistors.” Sylvania plans to begin quantity production of stabilized germanium transistors later this year.

Sylvania also is applying principles of germanium stabilization to its crystal diodes, and claims new process will “lock in permanently the characteristics that initially are built into diodes.”

Company also disclosed development of germanium-silicon alloys which permit high-temperature operation of transistors. One such alloy, Sutherland said, permits effective transistor action up to about 350°, as opposed to 212° limit of efficient operation of germanium transistor. He said Sylvania engineers are now testing laboratory-produced transistors containing various percentage mixtures of germanium and silicon.

Another use for transistors: Ampro Corp. announces motion picture projector incorporating transistor for sound amplification, eliminating separate bulky power transformer. New projector, priced at $725, is primarily designed to play back film with magnetic sound tracks. Announced recently by Army Signal Corps was dynamic microphone with transistor amplifier built into handle, which “shows promise of eliminating the hissing and rattling noises which many times have seriously disrupted radio communications” from combat vehicles.

First all-transistor telephone system—without a single vacuum tube—is being operated experimentally at Americus, Ga., 135 mi. south of Atlanta, by Bell Labs. It uses 310 transistor circuits, Bell Labs says, and plant is one-tenth size that would be required if tubes were used. Transistors are operated from dry batteries, eliminating need for power plant.

Self-propelled undersea TV camera system, successfully used at depths up to 100 ft., is described in new report from radio & electrical engineering div. of National Research Council of Canada. Available from Library of Congress, Publication Board Project, Washington, as Commerce Dept. technical report PB 112610, the 12-pp. report is $1.75 in microfilm, $2.50 photostat.

Burroughs Corp. last week began occupying new $3,000,000 electronics research laboratory in Paoli, Pa. The 105,000-sq. ft. center by June 1 will be fully occupied by 350 engineers and office workers, now headquartered in Philadelphia.

DuMont's first 2-way mobile equipment is for 25-54 mc band, with 35 watts output for 25-45 mc and 30 watts for 45-54 mc. Equipment for 150-160 mc and 450-470 mc bands is under development.

New compact vidicon camera for industrial and broadcast use has been introduced by Kay-Lab (Kalbelf Lab-oratories Inc.), 1090 Morena Blvd., San Diego, Cal.

GE heavy military electronics equipment dept. to construct 2 new buildings in Syracuse, adding 100,000 sq.-ft. for office and shop activities.

Financial & Trade Notes: Motorola 1953 sales set all-time record of $217,964,074, gain of 29% over $168,734,663 in 1952 and considerably ahead of previous high of $177,104,669 in 1950. Net earnings were $7,076,335 ($3.66 a share), slightly higher than the $7,012,700 ($3.62) reported in 1952, but well under 1950's record $13,130,246 ($6.78). At year's end, consolidated working capital stood at $38,222,001, increase of $214,754, and shareholders' equity increased $4,173,639 to $45,929,419.

Pres. Paul Galvin, in annual report, characterized 1953 as year of preparation—acquisition of new facilities, and engineering development in fields of color TV, plated circuitry and transistors. While fourth quarter's sales fell below expectations "due in part to the general slackening of demand for consumer durables and in part to publicity given color TV," he predicted 1954 would be second best sales year in history. He forecast sales of 100,000 color sets by industry in 1954; said volume production awaits satisfactory large-size picture tube which may appear in 1954; added, "and color TV may, sometime in 1955, begin to constitute a significant portion of our sales." Motorola has not yet attempted to press for production and sales of color sets, he said.

Motorola's civilian and military electronics and communications sales set new records in 1953, "and contracts in hand indicate that these records may again be exceeded in 1954," said Galvin.

Among officers' and directors' stock transactions reported by SEC for Jan.: Robert L. Huffman Jr. bought 1000 AB-PT, holds 1000; Sterling B. Withington bought 500 Avco, holds 2000; Charles A. Dilley bought 100 Clevite (Dec.), holds 960; O. P. Gokay bought 100 Clevite, holds 1000; Sydney L. Hall bought 200 Clevite, holds 200; Stanley F. Patten bought 100 DuMont, holds 400; Irving G. Rosenberg sold 100 DuMont (Dec.), holds none; R. T. Capodanno bought 500 Emerson Radio, holds 550; Walter E. Green bought 100 General Precision Equipment common, 595 pf., holds 633 common, 595 pf.; R. N. Harder bought 525 General Precision pfds., holds 525; Philip F. LaPallette bought 100 Hazeltine, holds 2000; Ruby M. Ballard sold 600 Muntz TV, holds none; Thomas E. Courtney sold 5000 Muntz TV, held 30,000 as of Jan. 13; Edwin D. Foster bought 100 RCA (Dec.), holds 300; Harry C. Hagerty bought 100 RCA, holds 100; Mildred MeAfee Horton bought 100 RCA (Aug.), holds 200; Ivan A. Getting bought 200 Raytheon, holds 200. Note: In our listing of Dec. stock transactions (Vol. 10:9), we erred in reporting sale of 3000 shares by Dr. Allen B. DuMont. The item should have read that Dr. DuMont purchased 500 in Nov., gifted 3000 in Dec. to school and charitable institutions, holds 42,900.

Wilcox-Gay (Majestic) reports record 1953 sales of $17,747,842, net profit of $201,515 (7¢ a share), compared to preceding year's $17,641,548 and $330,110 (10¢). Chairman Leonard Ashbach predicted new sales record for 1954 due to company's recent entry into air conditioner and major appliance field.

Muter Co. declares 2% stock dividend in lieu of usual cash dividend, pres. Leslie F. Muter reporting it's to conserve funds for possible purchase of another firm in electronics field, unnamed but now in hands of creditors' committee.

Westinghouse, in recognition of its 7500 stockholders who live in California, holds annual meeting April 7 in Sunnyvale, Cal., 40 mi. south of San Francisco, first time annual session has been held in west.

Electronic Associates Inc., Long Branch, N. J., reports 1953 profit of $130,700 ($1.18 on 110,667 shares) compared with $96,800 ($8.98 on 98,037 shares) for 1952.

Storer Broadcasting Co.'s first report since adding some 1500 shareholders by placing 200,000 shares on public sale last year (Vol. 9:45,47) shows 1953 net profit of $1,955,677 after provision for normal and excess profits taxes. After preferred dividends of $101,032, earnings on common amounted to $1.70 per share. Federal income taxes for 1953 were estimated at $3,947,675 ($3.57 per common share), of which $983,000 (89¢) was excess profits tax. Five radio properties (out of 7 owned) for which comparable data is available for 1952 gained 31%; 4 TV stations (out of 5 owned) increased 45.4%. Company also owns 46 2/3% of voting stock of Standard Tube Co., Detroit manufacturer of electric welded steel tubing; owns outright the Miami Beach Sun, evening and Sunday newspaper; owns 95% of CMTV, Havana, Cuba (Ch. 11). Total assets are given as $17,446,318 as of Dec. 31, 1953, including $4,915,405 earned surplus after payments of preferred and $310,104 in common stock dividends. Current liabilities were $5,623,351, total long-term debt $4,014,405.

Tight safeguards against "American-style" TV have been written into British Gov't.'s bill to establish commercial TV. The measure, published March 5, would establish Independent TV Authority (ITA) as competitor of non-commercial BBC, and provides that programs and commercials shall be "predominantly British in style, of high quality and well balanced in subject matter." Other provisions of proposed law: (1) Commercials would be allowed only at beginning and end of programs or in "natural breaks." (2) ITA would own transmitting facilities and operate on subsidy of up to $2,100,000 from license fees paid by TV set owners to support sustaining programs. (3) Commercial programs would be put together by contractors, who must be British subjects and must not be "advertising agents." (4) ITA would not be permitted to buy sole TV rights to "public ceremonies, public spectacles and important sporting events"; BBC must have equal access. (5) Three commercial stations would be permitted to go on air by mid-1955—in London, Manchester and Birmingham. (6) Postmaster General would have virtually absolute authority over programs, facilities and number of stations.

NLRB decision affirming musicians' rights to ad lib on radio programs without coming under jurisdiction of other talent unions was hailed this week by AFM's Jimmy Petrillo as a major victory in his union's running battle with AFTRA. The NLRB ruling involved AFTRA petition to certify bargaining unit at Westinghouse's KEX, Portland, Ore, including all employees appearing regularly before microphone. Board ruled that 2 musician employees didn't necessarily belong in the AFTRA unit, since their speaking duties were incidental to their employment as musicians.

Schine Chain Theatres, 55% owners of grant for WPTV-TV, Albany, N. Y. (Ch. 23) and 50% of CP for WNYT-TV, Rochester (Ch. 27), were targets of criminal and civil contempt actions filed by Justice Dept. in Buffalo district court this week. Organization is charged with failure to comply with terms of 1949 anti-trust decree—involving sale of theatres, bookings, etc. Chances are FCC will withhold any action on Schine, as a grantee, pending outcome of Justice Dept. proceedings.

Dividends: American Broadcasting-Paramount, 25¢ payable April 24 to stockholders of record March 26; IT&T, 25¢ April 15 to holders March 19; General Instrument, 25¢ April 15 to holders April 2; Canadian Westinghouse, 50¢ April 1 to holders March 15; National Co., 10¢ March 30 to holders March 25; Muter Co., 2% stock div., March 31 to holders March 15.
Orders to buy Tulsa’s KOTV (Ch. 6) are under consideration, reports March 9 Tulsa Tribune whose Washington correspondent states that John Hay Whitney & Co., New York, is considering one proposition and that actor Bob Hope, part owner of Denver’s KOA-TV, is reported to have offered $2,600,000 but that co-owner Helen Maria Alvarez has said she would not sell for less than $4,000,000. “A prominent Oklahoman,” who asked not to be identified, also is quoted as saying Mrs. Alvarez had offered him the station. Wrede Petersmeyer, of the Whitney firm, which is associated with Jerrold in several community antenna enterprises, told the newspaper KOTV is “one of the many propositions” before the company. Mrs. Alvarez, who founded the station in 1949 and later acquired half interest when it was reorganized and 50% sold to Hollywood oil millionaire Jack Wather, is on a European vacation and could not be reached for comment. Mr. Wather, however, informed his Washington counsel station is not for sale—but he said offers have been received, as in the case of most profitable TV stations. Mrs. Alvarez and Mr. Wather also own KGMB-TV, KGMB, San Diego, which they purchased last year (Vol. 9:5, 13), and are known to have been seeking to buy other TV properties. At recent FCC hearing on Corpus Christi Ch. 10 Mrs. Alvarez testified she would move to that city if her group won grant.

Details of Time Inc.’s purchase of 4½-month-old KLZ- TV (Ch. 7), along with pioneer KZL (5-kw on 560 kc), as first hinted last week (Vol. 10:10), were released this week by principals. Big publishing house is buying all outstanding stock at $240 a share, making total commitment approximately $3,500,000. Time Inc. acquires net current assets and assumes certain long-term obligations. It has asked pres. & gen. mgr. Hugh B. Terry, who sells his 18% stock, to stay on—and he’s expected to do so after a vacation to convalesce from recent serious illness. Other stockholders who will sell, subject to FCC approval; Harry E. Huffman, chairman, 13.33%; J. Elroy McCaw & Theodore R. Gamble, 20.36% each; Frank H. Ricketson Jr., 13.57%; and 38 others, none owning more than 1.5%. It’s Time Inc.’s 3rd TV-AM purchase; other 2 (KOB-TV & KOB, Albuquerque, Wayne Coy, gen. mgr. & 50% owner; KDYL-TV & KDYL, Salt Lake City, G. Bennett Larson, gen. mgr. & 20% owner) are NBC affiliates while KLZ-TV & KLZ are CBS. Ex-FCC chairman Coy, also TV-radio consultant to Time Inc., acted in the Denver deal along with Wes Pullen, of the Time Inc. business staff.

Two new TV applications this week, and week’s 3 grants and 4 applications dismissed or denied, brought total pending at week’s end to 279, of which 49 are for uhf stations. Applications were for Parma, Mich., Ch. 10, a group including WKHM, Jackson, WMKH, Dearborn, and WKMF, Flint; for Gastonia, N. C., Ch. 48, by Air Pix Corp., Lowell, N. C., headed by yarn manufacturer Coit M. Robinson and free-lance announcer W. C. Bivens. [For further details about these applications, see TV Addenda 18-J herewith; for complete listings of all grants, new applications, dismissals, hearings, etc., see TV Factbook No. 18 with Addenda to date.]

Senate passed and sent to White House March 12 three FCC-requested amendments to Communications Act: HR-4557, abolishing necessity for grant, amateur & mobile stations to get CPs; HR-4558, giving Commission 30 days instead of 15 to act on protests; HR-4559, reclassifying first-offense violations of Communications Act as misdemeanor rather than felony. All had previously been passed by House.

NARTB Code Review Board (John E. Fetzer, WKZO-TV, Kalamazoo, chairman) holds quarterly meeting at NARTB headquarters, March 29-30.

Long-discussed Westinghouse deal to acquire KPIX, San Francisco (Ch. 5), first revealed as a 49% sale (Vol. 9:45), is nearing closing stage, should be finalized shortly, will be an outright sale of all stockholdings of approximately $6,000,000. Primarily, it will be a tax-free exchange of stock, most of the equities in KPIX being swapped for Westinghouse stock. Contract is still being worked on by the attorneys—James Lawrence Fly for the KPIX group and Westinghouse counsel John Steen—and it’s planned to make contract retroactive to last Jan. 1, subject to FCC approval. Sellers are Associated Broadcasters Inc. (Wesley Dumm), 71%; Philip G. Lasky, gen. mgr., 14%; R. C. D. Bell, 10%; Franklin Dumm, 3%; George Hughes, 2%.

General Teleradio Inc.’s purchase of WHBQ-TV, Memphis (Ch. 13), along with WHBQ (5-kw day, 1-kw night on 500 kc, MBS), has been finalized essentially as first reported (Vol. 10:5) and transfer papers will be filed in about a week. Cash payment to seller Harding College will be $600,000, remainder ($1,900,000) to be paid over 10 years by way of leaseholds with options to pay up. General Teleradio, to comply with 7-limit AM rule, has agreed to dispose of its KGB, San Diego (1-kw on 1960 kc, MBS) to gen. mgr. Marzes R. Harris, in partnership with Don Lee Network v.p., Willet Brown’s young son, who has just been inducted in the Army. Terms of sale haven’t yet been released.

Senate hearing on FCC filing fees (Vol. 10:5, 7-8) will take at least 2 days—March 16 & 17—because of the number of witnesses asking to appear. Communications subcommittee headed by Sen. Potter (R-Mich.) actually will be airing S-2926 by Sen. Johnson (D-Colo.) to substitute “nominal” fees for FCC’s proposed schedule—but some witnesses, such as NARTB, are expected to attack whole principle of fees, nominal or not. In addition to FCC & NARTB, these witnesses have asked to be heard: Assn. of ICC Practitioners, American Merchant Marine Institute, Conference on Maritime Labor & Management, Pacific Steamship Assn., communications attorney Carl Shipley, Lake Carriers Assn., Royal Call Co. of Cleveland.

Continuing his TV-radio “anti-monopoly” crusade, Sen. Kilgore (D-W. Va.) this week wrote Attorney General Brownell, asking whether present anti-trust legislation is adequate to prosecute any corporations which have monopoly over TV-radio communications, and requesting him to recommend new legislation, if necessary. Last week he asked Sen. Bricker (R-Ohio) and Sen. Langer (R-N. D.), chairman of Commerce and Judiciary Committees, to investigate (Vol. 10:10). This week Langer replied that his monopoly subcommittee will look into matter, and Bricker said he had turned Kilgore’s request over to Sen. Potter (R-Mich.), chairman of communications subcommittee.

Reminding stations about new color transmission standards, FCC has notified them that excessive out-of-channel radiation will be produced unless proper modifications are made when transmitting programs originating in color. If modifications aren’t made, Commission said, station should remove chrominance components from color signal received from network. (For full text of FCC’s technical standards for color, see Television Digest Dec. 17 reprint of Final Color Report.)

N. Y. Supreme Court denied WOR-TV & WOR temporary injunction to ban picketing by 40 fired union musicians March 11 (Vol. 10:10), and AFM Local 802 said picketing would be resumed.

Next interconnections scheduled by AT&T: KMMM, Austin, Minn. & WSJY, Elkhart, Ind., March 15; KHQA, Hannibal, Mo., March 20; WSLI-TV, Jackson, Miss., March 21.
In this issue:

1. Adds TV to AM-FM Plant for $118,005, page 1
2. 3 New TV Cities as 5 Start, One Quits, page 1
3. 2 CPS—VHF's in Spokane and El Paso, page 2
4. TV Competition—The South American Way, page 3

March 20, 1954

ADDS TV TO AM-FM PLANT FOR $118,005: "We made it! We're on the air with a capital outlay of only $118,005 -- the lowest, I think, of any TV station in history." Thus, exultantly, J. Patrick Beacom phoned us to report that his WJPB-TV, Fairmont, W.Va. (Ch. 35) had begun test patterns this week. It goes commercial March 28, with shows from all the networks via own one-hop relay from Pittsburgh, 95 mi. distant.

Prudent equipment buying and integrated TV-radio operation is the answer to the problem of smalltown TV, said this 46-year-old ex-GI who also owns 250-watt AM WVVV, Fairmont; WBUT, Butler, Pa.; WBTZ, Martinsville, W.Va.; and WJPB-FM, also in Fairmont. Combined TV-radio staff in Fairmont (1950 pop. 29,546) totals only 22.

The $150 TV card rate also offers special inducements to radio sponsors.

Pat Beacom, who has sat in both houses of the State Legislature, started out with no added investment in real estate, having planned radio building for ultimate TV expansion. He bought Continental uhf transmitter for $46,500; RCA slotted antenna with lines, $18,000; General Radio monitor, $5000; GPL vidicon chain (first of kind) with GPL projector and remote camera, plus relay equipment, etc., costing remainder.

Station will start in operating black, says Beacom, already has a nice list of national accounts. He's particularly proud that he has proved it wasn't just "big Irish talk" when he asserted last year (Vol. 9:50) that he would get north-central W.Va.'s first TV station on air within shooting distance of $117,565 budget. He did it, all right -- put out first signals on St. Patrick's Day, at that!

Note: Rogan Jones reported he spent only $82,000 on KVOS-TV, Bellingham, Wash. (Ch. 12), this figure covering home-built transmitter and other equipment without camera chain (Vol. 9:21). He also publishes $90 Class A rate, lowest of record.

3 NEW TV CITIES AS 5 START, ONE QUITS: Five more stations took to the air this week -- including one vhf educational and 2 uhf -- and another uhf is going off. Total on air thus is brought to 376, of which 129 are uhf. Three cities get stations for first time: Great Falls, Mont.; Fairmont, W.Va.; Elkhart, Ind. The other 2 went into Pittsburgh (educational) and Jackson, Miss.

Latest economic casualty is WOSH-TV, Oshkosh, Wis. (Ch. 48), which notified FCC it's quitting March 22. Like other 5 uhf which have given up (Vol. 10:11), it attributed financial troubles to difficulty in getting top network programming, says it lost about $150,000 since debut last June. It's owned by AM broadcasters mgr. Wm. F. Johns Jr. & Wm. F. Johns Sr. It had uhf competition from WNAM-TV in nearby Neenah (Ch. 42), vhf from CBS-affiliated Wabay-TV, Green Bay (Ch. 2), about 30 mi. away. WMBV-TV, Marinette (Ch. 11) is due on the air this summer, NBC affiliated, its transmitter midway between Marinette and Green Bay. This week's new starters:

WQED, Pittsburgh (Ch. 13), first vhf "competitor" to DuMont's WDTV for audience in that 1-uhf, 2-uhf station metropolis, began regular test patterns March 19 and will be formally inaugurated April 1 as the 4th educational non-commercial station actually on the air. Its 5-kw DuMont transmitter & RCA antenna are installed...
at Westinghouse's KDKA-FM tower on Herron Hill overlooking Pitt Stadium; studios at 4337 Fifth Ave. are in building donated to U of Pittsburgh by Pittsburgh Plate Glass Co. It's community project, launched with $350,000 in grants from Arbuckle-Jamison Foundation, Ford Foundation and A.W. Mellon Trust. Operating funds come from voluntary $0.50-per-student contributions in schools in the 10-county area around city and from $2 subscriptions to monthly WQED Program Previews, as well as gifts. Pittsburgh Plate Glass v.p. & gen. counsel Leland Hazard, prime mover in project, heads impressive group of civil and business leaders guiding WQED. William A. Wood, ex-CBS-TV Washington director of public affairs, is gen. mgr.; Edward P. Wegener, ex-WO1-TV, Iowa State College, program mgr.; Edward Horstman, ex-ABC Chicago, chief engineer.

KFBB-TV, Great Falls, Mont. (Ch. 5) opened up new market when it aired first test patterns March 19, being located 117 mi. from Butte, 178 mi. from Billings, only other cities in state with TV. Programming starts March 21, 4½ hours per day, as CBS non-interconnected affiliate. Station uses 5-kw DuMont transmitter, 400-ft. tower on Glacier Park Highway. Joseph F. Wilkins is pres.-gen. mgr., owning 50.4%; Fairmont Corp., Anaconda Mining Co. subsidiary, which also publishes chain of newspapers in state, owns 30.3%. Base hour rate is $150. Rep is Weed.

WJPB-TV, Fairmont, W.Va. (Ch. 35) began testing March 17, goes commercial with service from all networks via own relay from Pittsburgh March 28, reports good signal over 30-mi. radius, which includes Morgantown (19 mi. away) and takes in some 280,000 people. This is the station whose owner J. Patrick Beacom aimed to put on air at half the usually accepted "irreducible minimum" cost of $250,000 -- and did (see p. 1). Robt. Drummond is gen. mgr.; Jas. Friderome, TV director; Robt. Frazier, program mgr.; Richard McBride, chief engineer. Base rate is $150. Rep is Gill-Perna.

WSJV, Elkhart, Ind. (Ch. 52), just east of South Bend and second uhf in area, began testing March 15, limited commercial operation March 20. Owned by the Elkhart Truth, daily newspaper, it has 1-kw RCA transmitter with antenna atop WTRC's radio tower only 14 mi. from South Bend. John F. Dille Jr. is pres. & gen. mgr.; John J. Keenan, commercial mgr.; Edwin J. Lasko, ex-WBKZ-TV, Kalamazoo, program mgr.; Lester W. Zellmer, chief engineer. Basic network affiliation is ABC, with some NBC & DuMont programs. Base hour rate is $250. Rep is R Television.

WSLI-TV, Jackson, Miss. (Ch. 12) put on first test patterns March 15, interconnects with ABC March 27. It uses 20-kw GE transmitter with 12-bay antenna on an Andrews tower. Owned by Standard Life Bstg. Co., it's second vhf in city owned by an insurance firm (Lamar Life's WLB, Ch. 3, NBC, having started last Dec. 20) to compete with newspaper-owned uhf WJTV (Ch. 25, CBS-DuMont) which began Jan. 20, 1953. L.M. Sepaugh is gen. mgr.; Owens Alexander, TV mgr.; Evan Hughes, commercial mgr.; C.A. Perkins, chief engineer. Base hour rate is $200. Rep is Weed.

2 CPs—VHF's in Spokane and El Paso: Unusual grant this week, of the 2 issued, was one for Ch. 13 to KELP, El Paso, which thus gets channel relinquished last Dec. 23 by KEP0. Apparently, KELP is more hopeful of making out despite existence of two other stations in town -- KROD-TV (Ch. 4) and KTSN-TV (Ch. 9). KELP is owned by McLendon family, once operators of now-defunct Liberty network. They also hold CP for KLIF-TV, Dallas (Ch. 29), are buying CP for KTG, Corpus Christi (Ch. 43).

Other CP this week was to Louis Wasmer (KREM), Spokane (Ch. 2). There was also an initial decision favoring Ch. 18 grant to WFLB, Fayetteville, N.C., after competitor Ralph E. Hess amended to Ch. 54.

Another FCC action had novel aspect -- final decision denying application for Ch. 30, San Bernardino, Cal., on grounds applicant is too weak financially and technically. Denied was Orange Belt Telecasters, the group of youngsters who proposed to build station for $25,984 (Vol. 9:38). Commission acted on its own, denying the grant despite favorable report by examiner and FCC Broadcast Bureau.

Readying for CP on Ch. 10, Wichita, are KAKE and Mid-Continent TV. Former had been favored in initial decision, but the 2 have agreed to form new corporation 50% owned by each and have asked for CP, now that contest is dissolved.

FCC continues to keep after old grantees who haven't built, meanwhile, to make sure they have good reasons. This week, for example, it informed 2 more that
it can't give them more time to build without better explanations; letters went to WSGN-TV, Birmingham, Ala. (Ch. 42) and WCBS-TV, Rochester, N.Y. (Ch. 15).

There have been 58 CFs turned in since freeze, 47 of them uhf. Quite a few more "on the FCC hook" are now making up their minds.

FCC finalized a flock of allocations changes this week, making assignments read as follows: Manford, Ala., *7; Crossville, Tenn., *77; Lexington, Tenn., *11; Sneedville, Tenn., *2; University, Ala., *74; Tupelo, Miss., 9, 38; Cookeville, Tenn., 24, *69; Jackson, Tenn., 7, 16. In another action FCC proposed that Ch. 35, occupied by WTRI, Schenectady, be assigned to Albany-Schenectady-Troy rather than to Schenectady alone. WROW-TV, Albany (Ch. 41) is opposing the change.

Another step in long wrangle between Providence grantees WPRO-TV (Ch. 12) and WNET (Ch. 16) came this week with FCC's dismissal of WPRO-TV's protest against grant of STA to WNET permitting it to start operations, due momentarily.

TV COMPETITION—THE SOUTH AMERICAN WAY: Just as the German Volkswagen is cutting deeply into U.S. domination of automotive business of South America, so the Dutch company Philips — and, to a lesser extent, Siemens and Telefunken of Germany — are giving our American TV-radio-electronics manufacturers and importers an increasingly tough run for their money down there.

Visiting with one U.S. brand-name distributor while on tour there recently, we asked him to name his competitors — expecting to hear usual American names because so many are so prominently advertised. His grim-humored reply spoke volumes:

"Well, there's Philips, and then there's Philips, and of course Philips." A General Motors man who was present piped up, "Oh yes, and don't forget Philips of Eindhoven, Holland!" I observed that my distributor friend, who also handles many other lines of appliances and machinery, had a large Siemens all-wave table radio in his own parlor. "We handle some Siemens items, too," he said, as if such overlapping representation was perfectly natural, "and I must say that Telefunken is getting to be quite a competitor also."

Restrictions on importations of TV chassis, tubes and parts by way of license quotas, dollar exchange controls, tariffs put TV definitely in the luxury category in the soft currency countries of South America — and most of them are very soft! To a lesser extent, domestic-built radios feel the same pressures in importing certain components, notably tubes. But the radio business is well-established, with plenty of broadcasting stations (including many shortwavers beaming into the hinterland) owned by plenty of politically important people.

A sizeable radio manufacturing industry has grown up, domestic and foreign-owned, especially in Brazil where some 600,000 sets are produced annually with all tubes imported from U.S., Holland, Denmark (including estimated 2,000,000 replacements per year). There's also a flourishing radio production in Argentina and Chile.

Brazilian radio plants have assembled some TV sets, would make a lot more if dollar exchange were procurable at more reasonable rates. Most prominent U.S. plants are GE, RCA, Philco, Standard Electric (IT&T). Most important foreign -- Philips. Most prominent domestic -- Invictus, Semp, Florida, Assumpcao. All told, they've turned out an estimated 30,000 TVs in last 2 years, importing some 30,000 additional chassis, importing all picture tubes, making own cabinets. The rest have been imported in job lots under license, or singly by individuals.

Everybody foresees great prospects for TV trade, once more stations go on the air and once govt. controls are relaxed and the industry can become more self-sufficient. Tubes are a highly competitive item, with Philips moving in heavily on CR picture tubes. There have been announcements that both Philips and RCA are going to set up tube plants, a project Sylvania also surveyed but is said to have shelved.

The Brazilian military, very important politically, are particularly favorably disposed to the encouragement of a TV industry that can provide a ready source of radar and other electronic gear, as it does in the U.S. That's one of the most
promising aspects of the industry's future in that country, where 3 stations are already operating in Sao Paulo, one in Rio de Janeiro, others projected (see p. 5).

Argentina has only Radio Belgrano's LR3 TV in Buenos Aires, hopes for more but has such tight economic controls under Peron that profits can't be taken out and there's little to persuade U.S. capital to expand present operations.

* * * *

Despite the stiffest kind of competition from overseas competitors and local assemblers, able to produce more cheaply and unhindered by cartel restraints, TV sets of all kinds come very high. In Brazil, for example, a 17-in. table model will cost anywhere from $360 (made by entering local Invictus firm for its own label and for Sears Roebuck private label) to $700. Some of the in-betweens are outdated U.S. brands, many of them obviously dumped but commanding the high prices because of American brand prestige. Same and even better 17-in. now cost under $200 here.

There are some 19-in. and a few 21-in., the latter much "too new" and costly to be a big factor on the market. Consoles with 17-in. are commonplace at $1000, often are luxury items at $1500 and $2000 with the popular 3-speed phono and growing emphasis on hi-fi. The phonograph record business is booming, prices of records being comparable to those in U.S. since all pressing is done locally.

Up to 50,000 TV receivers are claimed for booming Sao Paulo, the telecasters claiming perhaps 25,000 more in fast-spreading environs of that fabulous metropolis. Between 25,000 & 35,000 are claimed for one-station Rio, about the same number for Buenos Aires. Admen think the count is too high, especially since station card rates compare with those in U.S. cities with TV sets-in-use running into 6 figures.

Chile and Peru, the only other countries we visited, have no TV stations as yet, awaiting govt. sanctions of applications by private enterprisers (mostly, as in U.S., radio and newspaper folk) which are confidently expected soon. Only other city in South America having TV stations is Caracas, Venezuela, with 3 (one govt.-owned) but we didn't stop there long enough to conduct any kind of inquiry.

Political favoritism and endless bureaucracy are generally accepted as integral phases of frustratingly slow and casual Latin business & regulatory methods -- with a decided predilection for govt. operation of at least some TV stations, as is the case in radio. Anybody wanting to make a quick buck had better stay away, though dealers aren't above doing so with their 50%-and-higher margins of profit and an unregulated installment buying system that permits 1½ per month on unpaid balances.

* * * *

North America's booming TV industry is eyed enviously, respected enormously -- so much so, indeed, that there's scant chance of the adoption of any other than U.S. transmission standards in most places. Temporarily, the Rio station is operating on European 625 lines, 25 frames, but it's committed to go to U.S. 525-30 once a second station starts, expected soon. Govt.-owned but privately operated Buenos Aires station, built by IT&T, is on European standards, too -- but no others.

Mainly, what makes the TV trade outlook in South America different from ours is the absence, outside the very big cities, of a dominant middle class as we know it here. Thus the scope of buying power is restricted not only by price but by numbers of people. Mass production is a long way off unless the Govt. decides that TV is an essential. Today it's looked upon as an even greater luxury than automobiles.

More stations are coming, but network prospects are nil (except for one projected linking of Rio & Sao Paulo). The impulse to rush into the business of telecasting isn't overwhelming, with equipment from the U.S. costing double or more what a North American might pay. European competitors, none too popular yet, must charge nearly as much. Always the hard-bargaining Latin buyers will hold out to companies like DuMont, GE, RCA & Standard Electric proposals to swap for TV-radio advertising time, sometimes even for newspaper & magazine space.

There are quite a few eager applicants, particularly among the prosperous Brazilian broadcasters (see p. 5); and the first grants are said to be very near in Chile and Peru. Outlook in the Argentine is vague; it's a dictatorship, and there never is any question who really runs press, radio and TV.
There's also — in Rio, Sao Paulo and Buenos Aires — the matter of 50-cycle current and annoying power surges. They're no problem in sets made specially for the markets. But old sets predominate, and the unsteady images they show don't induce many non-set owners, however wealthy, to rush out and buy. There are many club but few bar installations to help popularize TV, as in its inventive days in the U.S.

We'll have more to report on the telecasting phases later. Curiosity about TV is enormous, and the American visitor is plied with questions — not only by gaping TV-radio reporters (real go-getting newshounds) but by radio station owners, publishers and even the English-speaking executives of U.S. branches.

They're especially curious about color, of all things. In Peru the President is even quoted as having said he'd like to see TV start there with color. With its strong economic position, Peru's TV might very well begin that way.

The barrier of language kept us from learning what the average man thinks about TV. But there was one universal and unmistakeable sign of intense interest: the same open-mouthed kids gawking at it wonderfully in the appliance shop windows.

* * *

Note: Bogota, capital of Colombia, soon gets its first TV station as result of a $300,000 contract awarded Siemens & Halske, Germany, for transmitter & antenna and DuMont for mobile, camera, film & associated equipment. Their bids for a govt.- owned station won out over those of RCA, Standard Electric, Philips, Telefunken, Fye, and others. Plan calls for operation by June 13, first anniversary of President-General Gustavo Rojas Pinillas' accession. Unstated number of receivers soon will be ordered through the Gov't.'s Dept. of Supply.

Best deal ever turned over in our memory of TV trade: When Standard Electric in 1951 sold Argentina's Belgrano completely installed Federal station for $600,000, 1000 Capehart-Farnsworth receivers were included in the package. All but half dozen or so were 17-in. sets, salable on retail market for $500 or more each — enough to fetch back to the Gov't., owner of physical equipment of the station, most if not all of purchase price. The several 21-in. combination consoles included went into the presidential palaces and, along with some of the 17-in. sets, into hospital and orphanage projects enjoying the patronage of the late Eva Peron.

Radio Televisao Tupi (Ch. 6), the GE-installed TV station with transmitter atop famed Sugar Loaf Mt. at entrance to Rio de Janeiro harbor, is due soon to lose its monopoly of the Brazilian capital's TV audience.

Radio Record TV, which operates Ch. 7 station in Sao Paulo, expects to get a grant in Rio in a matter of weeks, has elaborate plans to compete with the existing Rio station which is owned by firey Brazilian publisher Senator Assis Chateaubriand (25 newspapers, 20 radio stations, 5 magazines, 2 TV stations).

Radio Record TV already has on hand GE equipment, including mobile unit, has contracted to link Rio and Sao Paulo outlets via its own 8-hop microwave system costing $1,000,000 and usable also for private intercity telephony and telegraphy.

A $4,000,000 concern, Radio Record is headed by broadcaster J. B. Amaral, with onetime GE engineer Charles G. Lacombe as technical chief. Its $900,000 Sao Paulo station PRB3-TV, which started last Sept., is slowly but surely beginning to pay off — with $20,000 per month gross income first 4 months on air. A second station in Rio, in the usual trade tradition, means bettering the area's TV receiver population (see story, p. 4) by double or more, so is eagerly and heartily awaited by the trade.

Brazil has only 4 stations, 3 in Sao Paulo, but that's more than any other South American country. Besides the 2 aforementioned, there are PRF3-TV, Radio Difusora de Sao Paulo (Ch. 3, due to shift to Ch. 4), an RCA installation, also owned by Senator Chateaubriand; and Televisao Paulista (Ch. 5), DuMont-Federal equipped, owned by a stock company headed by Dr. Ortiz Monteiro, tobacco planter and radio parts manufacturer, who is also a Representative in Brazil's national Congress.

But the Govt. has allocated 6 more channels to Rio, 4 more to Sao Paulo—all granted but no one save Radio Record as yet making any great effort to build, due to prohibitive costs of U. S. equipment under Brazil's rigidly controlled dollar exchange. One of the Rio CPs presumably is being relinquished to Radio Record.

All of the CP holders are radio broadcasters. Three of those in Rio are governmental, and considerable opposition has developed to appropriating for their construction. They are: Radio PRE-8 (Ch. 4), granted Radio Nacional, big govt-owned broadcaster and a tough commercial competitor in the AM field; PRA-9 (Ch. 7), to be operated by same mgr., Victor Costa; PRA-2 (Ch. 11), granted to Ministry of Education & Health. The other Rio grantees: Radio PRD-5, Radio Roquete Pinto (Ch. 2); Radio PRD-8, Sociedade Radio Emissores Continental (Ch. 9); Radio PRH-8, Radio Maua (Ch. 13).

The 4 CP holders in boomtown Sao Paulo (one new building every 50 minutes of 1953, population already close to Rio's 3,000,000) : Radio PRA-6, Fundacao Caspar Libero (Ch. 2); Radio PRE-4, owned by multimillionaire pharmaceutical family Fontoura (Ch. 11); Radio PRG-9, Excelsior (Ch. 9); Radio PRH-9, owned by Ademar de Barros, ex-governor of the State of Sao Paulo and avowed candidate for president of Brazil.

Only one more CP is outstanding — though an all-vhf allocation plan has been promulgated designating channels, along U. S. lines, to every population center in the country. It is held by PRH-6, Reo Horizonte (Ch. 4), also owned by Sen. Chateaubriand, who in addition plans stations in Recife and Porto Alegre.
Personal Notes: Sidney M. Kaye, attorney and a founder of BMI, becomes its chairman April 1, succeeding Justin Miller, retiring chairman of NARTB ... W. Robert Rich promoted to program mgr. of WPIX, N. Y., succeeding Louis B. Ames, resigned ... Patrick J. Goode, pres. of WYHC-TV & WNJC, New Haven, winner of annual friendship award of Ancient Order of Hibernians ... Leslie H. Pearl Jr., mgr. of WBAL-TV & WBAL, elected v.p. ... Gene Grant, operator of own radio rep firm in San Francisco last 10 years, named sales mgr., KBID-TV, Fresno; Robert C. Merrifield, ex-KVTV-TV, Tulare (formerly KCOK-TV), named news editor ... Richard W. Hubbard, recently in charge of WGLV, Easton, Pa., now with DuMont Network sales force ... John C. Pomeroy appointed gen. mgr., WLS-TV & WLS, Lansing, Mich., replacing W. A. Pomeroy, withdrawing from active participation; David Froh heads commercial & production depts., John A. Maters program development mgr., Mrs. Howard Miller controller ... Joseph J. Bernard, ex-national sales mgr. for Rowley-Brown Bestco, named TV mgr. of Niagara Frontier Amusement Corp., which has been awarded initial decision for Ch. 2 in Buffalo; Karl B. Hoffman, ex-WGR, is engineering mgr. ... Harmon O. Nelson, ex-KNBN, Los Angeles, named TV-radio operations mgr., Stromberger, LaVene, McKenzie, L. A. ... W. O. Edholm, ex-KFMB-TV & KFMB, San Diego, named commercial mgr., KJEO, Fresno, Cal. ... Bernard T. Wilson, ex-pres.-gen. mgr. of WTVI, Belleveille-St. Louis, named sales mgr. of KSTM-TV, St. Louis. ... Richard Wehrheim promoted to NBC Chicago supervisor of TV-radio technical maintenance ... James Byrd named chief engineer of KHU, Houston educational outlet, replacing W. T. Davis, resigned ... Walter A. Lawrence joins Fuller & Smith & Ross on Westinghouse account, in charge of all eastern divs., including TV-radio ... Charles M. Amory quits as Pacific Coast v.p., Pathe Lab, to head Minot TV Inc., own new TV picture distributing firm ... George H. Griby, Young & Rubicam v.p. in charge of TV-radio commercials, appointed copy director for all media ... Kenneth E. Cherrin, ex-U. S. Chamber of Commerce, joins N. Y. office of AAAA on TV-radio production ... Winfield Holden, TV-radio supervisor of J. Walter Thompson Co., Detroit, elected pres., Detroit Television Council ... Victor Seydel, TV-radio chief, promoted to v.p., Anderson & Cains Inc., N. Y. ... Roy A. Meredith named TV-radio director, Grant Adv., N. Y. ... Walter Tibbals, BBDO Hollywood TV production director, elected v.p. ... Frederick M. Ford, TV-radio director, promoted to v.p., Ingersoll-Minter Co., N. Y. ... L. B. Lindquist, TV-radio director, promoted to v.p., Ketchum, McLeod & Grove.

Telecasting Notes: TV's traditional appetite for good feature films may not be all it's cracked up to be, hints March 20 Billboard in article noting that while 3 new packages totaling 52 feature films soon will be on market, stations fear "economic recession" may dictate against profitably investing in the new films when they "have pretty much learned to get along with the feature films that have so far been available." The new feature packages soon to come on market: General Teleradio's 4-year lease of 30 titles from Bank of America (Vol. 10:11): 10 Eagle Lion pictures being sold by Chesapeake Industries (now reported choosing between two $300,000 bids): 12 Sherlock Holmes films made by Universal in the 1940's, reportedly acquired by Motion Pictures for TV Inc. ... Hollywood will turn out 6000 hours of TV film in 1954, as against 500 hours of theatrical pictures the major producers used to complete yearly in movies' heyday, writes Stanley Frazen in March issue of The Cinemeditor, published by American Cinema Editors ... Industrial films are being groomed for TV in a big way, reports March 17 Variety which says "dozen or more of the nation's biggest industrial firms have begun gearing their institutional films for TV as carefully laid out sustaining fare." Hundreds of others are remaking or editing their pictures for TV—particularly for new stations eager for the free programming. Variety says estimates of worth of industrial properties now available to TV run $4,000,000-$5,000,000 ... RKO-Pathe moving into TV film field as producer of commercials and industrial documentaries for TV, mostly in color ... Walter E. Heller & Co., Chicago, prominent in independent film financing, reported by Film Daily as backing TPA's Ellery Queen series for TV, now has $3,000,000 revolving fund for both films and TV. Trade paper says, "This brightens the horizon considerably for TV as well as screen producers for the Chemical Bank & Trust Co., of N. Y., long a holdout in TV, let down the bars recently" ... Bankers Trust Co., N. Y., has also bankrolled some TV production ... Paramount reported planning to test films produced for TV as short-subjects in theatres with release of 6 Scotland Yard films made by Paramount in Britain when company was in TV film business; the films were never shown on TV, but lecution of theatrical experiment may determine whether TV films owned by other movie makers will find their way into theatres ... Top-rated I Love Lucy may join rerun parade; Desi Arnaz, who just reached agreement with CBS-TV for 2-year contract extension, says he's now discussing Sunday afternoon re-runs aimed particularly at children who have to miss Mon. 9-9:30 show ... TV film reruns mean more money for actors, but nobody's sure just how much more. Screen Actors Guild's contract provides for payments for 3rd & 4th runs of films made since March 1, 1952—and so far they've received $19,546 for 361 actors in 81 films, some $16,000 of it since Feb. 1 ... Academy Awards telecast March 25 will use 16 cameras, NBC-TV says—8 at Hollywood Pantages theatre, 4 at ABC's Burbank studios for Oldsmobile commercials, 4 in N. Y. Center theatre to pick up any winners there; TV crew members at Pantages have been ordered to wear tuxedos ... Add hazards of tall towers: New 1000-ft. tower for WBFFM-TV, Indianapolis, being opposed in lawsuit by group of property owners, charging zoning commission with illegal grant of permission ... More rate increases: WKRC-TV, Cincinnati, April 1 raises Class A hour from $850 to $1000, special Class A $1100 to $1300 ... KRLD-TV, Dallas, base hour from $750 to $850, min. $150 to $175; WTVT, Decatur, Ill., hour from $220 to $250 ... Correction: WMBR-TV, Jacksonville, 1-min. rate for 8-10 p.m. raised from $110 to $150 and for other Class A time from $110 to $120, not from $80 rate reported in Vol. 10:10 ... WPIX cuts discounts from 80% to 40% on buy of $1000 a week worth of spots or partic.
Network Accounts: Critics aren't scoffing now at network daytime efforts, such as NBC-TV's 11 a.m.-noon "Home show"—especially after observing astounding popularity and commercial success of Dave Garroway's 7-9 a.m., "Today," now in 50 cities, which is going to West Coast via kine starting Sept. 20. This week's debut of CBS-TV's 7-9 a.m. "Morning Show," with Walter Cronkite as m.c., elicited no skepticism this time at all from Herald Tribune Syndicate's John Crosby, though he called its imitation of many features of "Today" the sincerest form of flattery. "New York Times" Jack Gould took much the same tack, warning probable commercial success but warning that format so similar to "Today" may put it in rut . . . Two more sponsors bought partic. in "Morning Show"—Continental Motors, using network for first time, thru Cummings & Hopkins, Detroit; Kiplinger's Washington Newsletter, thru Albert Frank-Guenter Law . . . Light's Diamond Jubilee Committee, representing nation's electric industry, to sponsor mammoth 2-hour TV documentary Sun. Oct. 24 "to interpret the spirit and meaning of American life, past and future" in observance of 75th anniversary of Edison's invention of incandescent lamp. It's likely all 4 networks will carry program, to be produced by David Selznick, though only NBC & CBS have announced it as yet . . . Arco Mfg. Corp. (Crosley-Bendix) becomes first sponsor to extend contract on NBC-TV's "Home," buying partic. for 29 weeks in addition to 13 it now buys, thru Benton & Bowles; Necchi Sewing Machine Co. buys 13 partic. on "Home," starting first week in April, thru Cecil & Presbrey; Peerless Electric Inc. (Boll-Quik kitchen equipment), 4 partic. week of April 23, thru Zlowe Co., N. Y. . . . General Foods (Log Cabin syrup) buys 21 partic. on NBC-TV's "Today," thru Benton & Bowles; Noxzema, 13, thru David J. Mahoney Inc.; Washington State Apple Adv. Commission, 8, thru Pacific National Adv., Seattle; Wm. Cooper & Nephews Inc., Chicago (Stay-o-Way insecticide), 7, thru Phil Gordon Inc., Chicago; Kiplinger's "Changing Times Magazine," 1, thru Albert Frank-Guenter Law Inc.; Tri State Plastic Moulding Co., Chicago, 1, thru Ovesey, Berlow & Straus, N. Y. . . . Curads (plastic bandages) buys Fri. 2:45-3 p.m. portion of Art Linkletter's "House Party" on CBS-TV starting April 30, Mon-thru-Fri. 2:30-3 p.m., thru Leo Burnett . . . Philco, radio sponsor of Don McNellis' "Breakfast Club" for 8 years, makes it first simulcast on ABC starting March 29, Mon-thru-Fri. 9-10 a.m., thru Hutchins Adv. . . . Chesterfields extends sponsorship of "Spike Jones Show" thru May 8 on NBC-TV, Sat. 8-8:30 p.m., thru Cunningham & Walsh . . . Robert Sherwood's plays are expected to be presented every 4th Mon. on NBC-TV 8-9:30 p.m., starting in fall, with "Sid Caesar" (8-9) and "The Mede" (9-9:30) taking up segment other 3 weeks; "Big Story" will move from 9 to 9:30 and new "Campbell Soup show" will be placed 10-10:30.

Stuart Peabody, asst. v.p. of Borden Co., this week succeeded Philip L. Graham, publisher of Washington Post (which this week bought Washington Times-Herald from Col. Robert R. McCormick) as pres. of the Advertising Council. John C. Sterling, publisher of This Week, was elected a vice chairman; Louis N. Brockway, Young & Rubicam v.p., and Leo Burnett, Chicago agency head, were reelected vice chairmen. NBC's Pat Weaver and MBS's Tom O'Neill represent TV & radio, respectively.

First annual Lee deForest award for "most consistent TV and radio programming in the public interest" was presented by National Assn. for Better Radio & TV in Los Angeles March 9 to Hallmark Cards Inc.'s pres. Joyce C. Hill, of Kansas City, in recognition of Hallmark Hall of Fame's presentations of Hamlet, Amahl & The Night Visitors, etc.

Station Accounts: Hallmark's success on TV evidently has impressed Munson Inc., whose 9 N. Y.-N. J. plants turn out 2,000,000 greeting cards a day. Never before an advertiser, except on subway cards, 50-year-old firm has set up a $1,350,000 ad budget ($1,100,000 for printed media, $250,000 for TV spots) to be administered by sales v.p. Don Pruess, ex-International Latex and Eversharp. Agency is newly formed Alden Co., N. Y. . . . Talon Inc. (zippers), collaborating with Trouser Institute of America and National Committee for the Promotion of Skacks, supplying retailers with TV-radio kits for campaign starting April 28 to promote sales of odd trousers; McCann-Erickson is Talon agency . . . WCBS-TV's new 9-10 a.m. "George Skinner Show," Mon-thru-Fri. starting March 29, signs 5 sponsors using 16 partic. . . Nestle's Instant Coffee, Thomas Protein Bread, Old Dutch Cleanser, Chef-Boy-Ar-Dee, Uncle Ben's Converted Rice . . . Robert Hall Clothes Inc., opening 15 new stores to build chain to 175, expands TV spot buying to 75 markets for pre-Easter season, thru Frank B. Sawdon Inc., N. Y. . . . Monarch Wine Co. earmarks for TV-radio about 90% of $2,000,000 budget to advertise Manischewitz kosher wines, thru Emil Mogul Co., N. Y. . . . Ethyl Corp. buys Screen Gems' 15-min. "The Big Playback," 26-week series, for placement in 55 markets starting in May, thru BBDO, N. Y. . . . Among other advertisers reported using or preparing to use TV: Pro-Fresh Products Co., East Orange, N. J. (dry cleaner spray gun), thru Lewin, Williams & Saylor, N. Y.; A. Goodman & Sons, Long Island City, N. Y. (Goodman's matzobs), thru M. M. Winer Co., N. Y. ; A. E. Staley Mfg. Co., Decatur, Ill. (Sta-Flo liquid starch), thru Ruthrauff & Ryan, Chicago; Lanolized Inc. (sioyery lanolizing process), thru Abner J. Gelula & Assoc., Philadelphia; Tennessee Coal & Iron Div., U. S. Steel Corp., Fairfiled, Ala. (coal & iron products), thru BBDO, Pittsburgh; Harriet Hubbard Ayer Inc. (now owned by Nestle-Lemur Co.), thru Huber Hoge & Son, N. Y.

NEW TV-RADIO REP firm of Venard, Rintoul & McConnell Inc. begins operation March 22, taking over the offices and facilities of Venard Inc. which recently acquired part of the O. L. Taylor list after that firm had been acquired by Raymer (Vol. 9:48 & 10:2). Officers and stockholders of new firm, headquartered at 444 Madison Ave., N. Y., are Lloyd George Venard, pres.; Stephen R. Rintoul, v.p.; James B. McConnell, v.p.; Abner Lichtman, secy-treas. Chicago mgr. continues to be Howard B. Meyers, with Duncan Scott as San Francisco & Los Angeles rep.

All members of firm are veterans of broadcasting and rep fields—Venard onetime head of Taylor company; Rintoul originator of first transcription library service while with World in 1930, later with Katz, then a station owner, recently mgr. of Schine theatres' 50-kw WPTR, Albany; McConnell a 20-year NBC executive who organized and directed its Spot Sales Div. and resigned in 1952 to become Blair v.p.; Lichtman a former partner in big Ungerleider stock brokerage firm, still a stockholder in Edward Petry & Co.

Venard list being taken over embraces 24 radio stations and these 7 TVs: WFIE, Evansville, Ind.; WITV, Ft. Lauderdale, Fla.; WLS-TV, Lansing, Mich.; WKLO-TV, Louisville; KMD-TV, Midland, Tex.; KTXL-TV, San Angelo, Tex.; KCMC-TV, Texarkana, Tex. Also on list are CP holders WJTN-TV, Jamestown, N. Y.; WERE-TV, Cleveland, O.; KTRE-TV, Lufkin, Tex.
FIRST RCA 12.5-kw uhf transmitter (Vol. 10:4, 7) is slated to go to WBBF-TV, Wilkes Barre, Pa. (Ch. 28), which went on air with RCA 1-kw transmitter Jan. 1, 1953, and has long-standing order for high-power transmitter. RCA this week officially announced the new tetrode-powered transmitter, and said first delivery is scheduled for May. Also this week, RCA revised power curve for new transmitter as result of tests which showed it gives higher power on some channels than originally anticipated.

GE shipped 12-kw transmitter March 16 to WSEE, Erie, Pa. (Ch. 35), due on air in April (Vol. 10:9). On May 17, it shipped 12-bay antenna to Crosley’s WLWA, Atlanta (Ch. 11), and this week it reported that WTVJ, Miami (Ch. 4) was testing new 35-kw GE amplifier into dummy load with expectation of having 6-bay antenna up within a few more weeks.

RCA shipped 25-kw transmitter March 15 to CKLW-TV, Windsor, Ont. (Ch. 9), across river from Detroit, due on air in July. On March 17, RCA shipped 1-kw to WBOC-TV, Salisbury, Md. (Ch. 16), due in April.

* * *

In our continuing survey of upcoming new stations, these were reported this week:

KRGB-TV, Weslaco, Tex. (Ch. 5), delayed when antenna fell (Vol. 10:2), now is raising GE replacement atop 700-ft. Phillips tower, plans to be operating by March 25 using 5-kw GE transmitter, reports TV director Millman Rochester. Owner O. L. Taylor, who sold rep firm bearing name to Raymer Co., also is applicant for Ch. 3 in Wichita. KRGB-TV will be NBC & DuMont affiliate with $200 base rate. Rep will be Raymer.

WMBV-TV, Martinette, Wis. (Ch. 11), call letters changed from WMGB-TV, has 10-kw RCA transmitter ordered for March delivery, hopes for July 14 test patterns, programming by Aug. 1, reports gen. mgr. Joseph D. Mackin. Transmitter house is scheduled to be ready by May, installation of transmitter and of RCA 12-bay antenna atop 740-ft. Stainless tower scheduled for late June or early July. It will be NBC affiliate for Martinette-Green Bay, plans to get 25-kw RCA transmitter later. George W. Clark will be rep.

KNOX-TV, Grand Forks, N. D. (Ch. 10), granted March 10, reports its TV plans are still in formative stage. First it will finish building new 5-kw AM on 1310 kc, replacing its 250-watt on 1400 kc, according to gen. mgr. Elmer Hanson.

Houston Consolidated Television Co. (Ch. 13), formed after Feb. 23 grant was made contingent upon merger of 4 competing applicants, now is deciding on equipment, expects to have tower over 1000-ft. high, according to newly elected pres. John T. Jones Jr., nephew of Jesse Jones and pres. of Houston Chronicle (KTRH). Other board members: Wright Morrow, Democratic National Committee man from Texas; Roy Hofheinz, mayor of Houston and 25% owner of KHTH; B. F. Orr, pres. of KTRH; John Paul Goodwin, advertising executive, now in TV-commercial film production. Washington attorney Frank Wozencraft, onetime “boy mayor of Houston,” is assst. secy.

KETC, St. Louis (Ch. 9, educational) expects to have all RCA transmitter equipment delivered by end of March, according to gen. mgr. Richard J. Goggin. It now has tentative June target because move of Ideco tower from main campus to site between St. Louis U High and Oakland Stadium won’t be completed until late May.

WTHT, Wilmington, N. C. (Ch. 3), has ordered 5-kw RCA transmitter, will place its RCA tower atop downtown Trust Bldg., to be renamed TV Bldg., plans test patterns about June 1, reports 25% owner Milton Hammer, who also produces TV show titled Washington Spotlight. Rep not yet chosen.

WODO-TV, Orlando, Fla. (Ch. 6), now plans May 5 test patterns, May 15 commercial debut, reports pres.-gen. mgr. Harold P. Danforth. Its 500-ft. Stainless tower is completed, GE antenna is scheduled for April 10 delivery, 35-kw GE transmitter is scheduled for late March early April when transmitter house is expected to be ready. It’s CBS primary interconnected, will also feed from other 3 networks. Base rate will be $200. Rep will be Blair.

WBOC-TV, Salisbury, Md. (Ch. 16), now installing 1-kw RCA transmitter, expects to have 600-ft. Wind Turbine tower ready in 2 weeks, plans commercial debut April 15-30, reports v.p-gen. mgr. Charles J. Truitt. Construction on its microwave tower at East New Market, Md. is scheduled for week of March 22. An ABC & DuMont affiliate, it will also carry televised Baltimore Orioles baseball games, plans daily 2 hours of own live studio programs. Base rate will be $200. Burn-Smith will be rep.

WLTE, Evanston, Ill. (Ch. 32), delayed by protests on tower height, now awaits formal action by city council, hopes to be on air in about 12 months, reports Angus D. Paas, pres. & co-owner with Howard S. Martin, scientific glassware manufacturer. Equipment hasn’t been ordered as yet, nor has rep been chosen.

Music Corp of America pres. Jules Stein has announced 5-year plan for distribution of 57% of his common stock to trusts set up for benefit of executives and employees and to 9 officers and directors, first time any MCA stock has left Stein family in its 30 years existence. Biggest of all talent agencies, MCA particularly rewards executives who have 17-27 year records, several starting as office boys. The 9 participants: Lawrence Barnett, Karl Kramer, Maurie Lipsey, Charles Miller, Michael Rockford, Herbert Rosenthal, Taft Schreiber, Lew Wasserman, David A. Werblin.

White collar TV owners polled by Northwestern National Life Insurance Co., Minneapolis, preferred variety shows & drama—by wide margin; they disliked westerns, wrestling & quiz shows most; favored Sun. day & night evening listening hours; listed Toast of the Town, This Is Your Life, Bishop Sheen, Dragnet, I Love Lucy as favorite programs, in that order.

Kagran Corp., 4 W. 58th St., New York, has issued its 1954 Howdy Doody merchandise catalog, picturizing and listing the various products and manufacturers licensed to use its title.

"Gladd to have you here" said General Electric’s pre-freeze WRGB to its 2 new uhf competitors—Albany’s WROW-TV & Schenectady’s WTRI—in full-page ads in Schenectady Gazette and Albany Times-Union. Ads were headlined: "Memo to the new uhf stations—WRGB welcomes you; you mean competition . . . and that’s the way we like it." Text of ad read in part: "Your arrival on the TV scene means the existence of an American essential—competition. It means American free enterprise has been given its rein, and that is what we have been looking forward to. Your efforts in competition with our own will result in a finer product for the consumer. As it always has, competition will mean increased benefits for the people who sit at home—the people who are essential to all of us in TV. We have always believed that our audience should have the opportunity for selection. You have brought the luxury of choice . . ."

Asst. of TV Program Managers being organized by Victor F. Campbell, program director of WBAL-TV, Baltimore, to promote exchange of ideas and programs.

WTRF-TV, Wheeling, W. Va. (Ch. 7) is scheduled to increase power next week from 100-kw to 316-kw ERP.
**TV SALES STRONG, HIGHER PRICES TALKED:** There's very likely to be some action soon -- surely there's been plenty of talk already -- about low TV prices, which are skimming the profit off the impressive TV sales volume thus far this year. Industry leaders are aware, of course, that higher prices mean risking a lot of sales in 17 & 21-in. tables, predominantly under $200, which in Jan. accounted for nearly 50% of the 1,155,000 TVs sold at factory and distributor levels -- but they say that, demand being what it is, it's a risk they hope they can get away with.

Motorola's present inclination, for example, is to put higher price tags on new models to be introduced in June. Following up on San Diego speech month ago by Motorola exec. v.p. Robert Calvin, hinting at future price hikes (Vol. 10:9), sales v.p. Edward Taylor told us his company would like to raise prices sooner than June but sees no point in hiking lists during normally slow spring and summer.

Admiral and Philco spokesmen weren't willing to say yes or no as of now when asked about prospective price hikes. But they agreed they certainly would like to raise them and are studying market statistics closer than ever to determine if and when they can safely do it. RCA says only there's no present plan to raise them.

From our conversations with these and others, we'd guess it's quite possible all major set makers will announce higher prices at midyear conventions or marts.

Motorola's position is somewhat awkward on prices. Having several months ago advertised "shortest line with the longest discounts," company admittedly was most reluctant to cut lists (and discounts), did so only when forced by competition. Motorola's line now ranges from a 17-in. table at $160 to a 21-in. console at $300. Taylor said price hikes probably would be on all models, adding:

"We think the trade has taken a disastrous turn since December, when everyone started cutting prices senselessly. I think all of us underestimated and underplayed the market this year because of color. We see how little effect color in its present form is exerting, yet we're afraid to go after a little profit on monochrome."

Profit declines on record sales have been the general rule in the financial reports of TV-radio-electronics manufacturers for 1953. And March 19 Wall Street Journal, summarizing reports of some 750 manufacturers in 1953 and their estimates of first quarter this year, notes that great corporate profits boom of early 1950's is leveling off. Included in summary were reports of 4 TV-radio makers listing 1953 earnings of $63,437,000, up 19.5% over the $53,092,000 earned by same firms in 1952.

* * * *

Nobody knows whether there's more trouble ahead -- but the Federal Reserve Board's annual survey of consumer finances released this week reported "considerably fewer" consumers planned to buy TV sets this year than in 1953 but held out hope that sales of all durables, including TV, would pick up in last half of year. Other features of report, published in March Federal Reserve Bulletin:

Prices will be important factor in consumer durables buying, with customers expecting prices to remain stable or decline during year; consumers were "less confident" about their personal finances this year; about 7.8% planned to buy new autos this year (vs. 9% year ago); about 6.8% planned to buy "non-farm" homes (vs. 8.8%).

* * * *

TV production totaled 118,484 week ended March 12, highest since week before last Xmas, compared with 113,026 preceding week and 105,721 week ended Feb. 26. It compared with 167,279 in corresponding week of 1953 and brought production for first 10 weeks of 1954 to 1,120,000, compared to 1,783,345 for same period last year.

Radio production totaled 181,710 March 12 week, down from 188,526 week ended March 5 and 192,949 week before. Output in corresponding week of 1953 was 306,683. Ten-week production total this year stood at about 1,980,000 vs. 2,900,000 in 1953.
Topics & Trends of TV Trade: Credit Senator Ed Johnson (D-Colo.) with a valiant, even though unsuccessful, attempt to eliminate 10% excise tax on color receivers in closed session of Senate Finance Committee which on March 19 approved $1 billion excise tax reduction on long list of items—but not including TV, either color or black & white.

Vote against eliminating tax on color sets, as urged by RETMA pres. Glen McDaniel (Vol. 10:10-11), was said to be 8-5. In keeping with custom at executive sessions, committee sources refused to identify individual Senators' votes. RETMA strategy now is to urge Senate to amend bill on floor when it comes up next week, probably Tues., March 22, but hopes for this are virtually nil. Because he is a member of committee, Johnson—a young protagonist of color-in-a-hurry—said he would not lead floor fight for amendment and described chance for revision as "zero."

Though he lost his "case," Attorney McDaniel won praise from industry observers for getting TV-radio categorized with home appliances as products "essential to the home" and deserving of tax relief.

* * * *

Muntz TV creditors committee voted this week to try to keep company in business pending reorganization after filing of petition under Chapter X of Bankruptcy Act (Vol. 10:10-11). Harold S. Lanning, co-counsel of 7-man creditors committee, said production would be resumed at Chicago plant within several weeks. Also, Muntz will franchise distributors to handle TVs, rather than sell directly via own retail outlets. Servicing will be handled by independent franchisees under contracts with court trustees. Adding to Muntz' woes, Govt. filed tax lien of $593,938 representing withholding taxes in 1953 and unspecified excise taxes.

Germany's big Telefunken, though it's staying out of U. S. TV market for present, has placed 3 radio models in hands of U. S. distributors through American Elite Inc., N. Y. exclusive U. S. agent (Michael V. Mendel, pres.). Mendel tells us U. S. TV market is too competitive for Telefunken but added "in 3 or 4 years the situation may be different." Radio models are Orchestra, AM-FM short wave table, 3 speakers, retailing at $250; Jubilate, AM-FM 5-tube table, $100; Bajazzbo, AM-FM portable, 10 lbs., using American batteries, $125. In addition, Mendel said, Telefunkenplans to introduce phono unit in 6 months.

Details of color set leasing plan (Vol. 10:10), as released by Emerson this week: (1) $200 first month, $75 monthly thereafter. (2) No extra charge for servicing. (3) Customer to lease set for as many months as he chooses. (4) Sets to be leased to dealers who will sublease them to customers. (5) System to start in New York, Philadelphia, Chicago, Los Angeles, expand later. (6) Deliveries to start first week of April. Emerson has stated it won't start selling color sets until they're larger and cheaper, and amount of programming increases.

TV shipments to dealers totaled 612,622 in Jan., when production was 420,571, according to RETMA's state-by-state and county-by-county report released this week and available from RETMA on request. Total includes 1248 sets shipped to Hawaii and 256 to Alaska. It compared with 660,515 TVs shipped in Dec. and 695,087 in Jan. 1953. New York led, with 56,173; Pennsylvania second, 41,402; Illinois third, 40,977. Wyoming trailed with 721.

New vhf-uhf tuning device, priced approximately one-third less than previous model, will be put into production about April 1 by General Instrument Corp., Elizabeth, N. J. Using 13-pression vhf turret coupled to continuous uhf tuner, it is designed so vhf unit can be installed separately, and uhf section added in the field "at a cost no higher than 2 channel strips."

Trade Personals: Virgil M. Graham, Sylvania director of technical relations since 1946, resigns to take charge of RETMA engineering dept., 500 Fifth Ave., New York, retaining title of associate director which he held on part-time basis; he succeeds Ralph R. Batcher, who resigned after 4 years as chief engineer ... Antony Wright, ex-Capehart-Farnsworth consumer products v.p., named CBS-Columbia v.p. & engineering director under new pres. Seymour Mintzer; Merle Wick, CBS comptroller, named CBS-Columbia financial administrator ... James H. Carmine, Philco exec. v.p., elected commodore of Anglers Club, Key Largo, Fla. ... Henry Bowes named Philco TV-radio sales promotion mgr.; Edward M. Bland appointed adv. mgr., succeeding Morgan A. Greenwood, now corporate adv. mgr. ... Chester F. Gilbert, mgr. of Westinghouse retail finance div. since 1945, elected v.p. & gen. mgr. of new Westinghouse Credit Corp. formed recently to aid dealer financing (Vol. 10:9) ... Laurence W. Scott named adv. mgr. of Westinghouse consumer products, succeeding Robert M. Fichter, now refrigeration specialties sales mgr. ... Charles P. Stromeyer, CBS-Hytron pres., elected a v.p. & director of parent CBS ... Inwood Smith appointed sales v.p., RCA Estate Appliance Corp., Hamilton, O. ... Clarence Felix, gen. mgr. of Crosley govt. products div., elected dir. div. ... Benjamin J. Katz, ex-Jerrold Electronics, starts own adv. & public relations agency, 1512 Walnut St., Philadelphia ... Sol Sanders, ex-Walker & Crenshaw, N. Y., named adv. & public relations director, Chromatic Television Labs (Paramount), handling Chromatron Lawrence color tube ... Walter R. Wolfgan, ex-Standard Transformer Corp., appointed factoryupt., Jensen Mfg. Co., Chicago, taking over from T. L. Pierce, now setting up new production facilities outside the state ... Abraham Hyman named head of Brach TV antenna development section ... Fred Miller, ex-Kayehalbert, named chief engineer, Caltech Electronics Corp., Culver City, Cal. (high-fidelity equipment); O. S. Gerstman named sales director, Joe K. Davis production director ... Herman J. Schorle named works mgr. of Manchester, N. H. plant, Insuline Corp. of America ... W. A. Galbreath, head of Televisions, elected pres., Houston Appliance Dealers Assn. ... Robert I. MacClelannamed Zenith Pa.-W. Va. regional mgr. ... Ronald M. Robinson, v.p., appointed gen. mgr. Canadian GE electronics div., comprising TV-radio dept. and electronic equipment dept.

Distributor Notes: Crosley-Bendix appoints newly-formed Delaware Valley Appliance Distributors Inc., 19th St. & Allegheny Ave., Philadelphia (Theodore H. Kapnek, pres.), replacing Judson C. Burns Inc. ... DuMont appoints American Distributing Corp., New Haven (Frank T. Barmore, pres.) ... Sylvania appoints Commonwealth Sales Corp., Richmond (James T. Little, pres.) ... Radio & Appliance Distributors Inc., E. Hartford (RCA) elects Irving Roth secy. and asst. to pres. Louis K. Roth ... Sacramento Electronics Supply Co., Sacramento (Raytheon) appoints Craig Malcolm district mgr. ... Pacific Mercury Sales Corp. Fresno, names Austin W. Fazio as mgr., succeeding John B. Chadwell, now sales mg. of Kinney & Faust, Fresno (Hoffman Radio).

New round of picture tube cuts seems pretty general, Sylvania this week following RCA and GE in lowering prices, with others expected to follow suit shortly. Sylvania cut was 10-15% across-the-board. RCA reductions ranged from $3.15 to $10.60 on 21 tube types. GE cut was 25% on replacement tubes.

Four new receiving tubes designed for color sets were announced by GE this week, production to start within 60 days. The new types: 2V2, filamentary diode; 5A4U, twin diode; 6AR8, double-anode sheet-beam deflection tube; 6B5U, low-current, high voltage beam pentode.
INKERTOY, the revolutionary new automatic production method developed under Govt. auspices (Vol. 9:38), is being pushed as a "natural" for cheaper and better TV manufacture by at least 2 companies—with announcement of a new tinkertoy especially developed for TV due at next week's IRE convention in New York.

"Project Tinkertoy," first released from security wraps last Sept., when Govt. showed fully operating pilot plant at Arlington, Va., uses as basic "building blocks" 7/8-in. square wafers, on which are printed such circuit components as resistors, capacitors, coils, etc. These are assembled in skyscraper fashion to form "modules" carrying elements for one or more electronic stages. They can be built, assembled and tested completely automatically—with the advantages of complete uniformity, economy, ease of replacement and production speed.

Govt. project, sponsored by Navy, Air Force and Bureau of Standards, in cooperation with Sanders Associates Inc., Nashua, N. H. research & development firm, and Willys Motors electronics div., was aimed at reliable automatic production of military mass electronic items. Sanders is adapting tinkertoy techniques to production of end items for military contracting firms.

Earlier this year, Sanders showed tinkertoy TV set, using 13 modular units (sets of wafers) on 3 plug-in printed circuit chassis, eliminating nearly 600 hand-soldering operations (Vol. 10:6). Now pres. R. C. Sanders Jr. says he will display next week a "more advanced form of tinkertoy, designed especially for TV." He says TV industry heretofore has shown strong interest in the new production method, and he feels it will adopt it in its new form—which hasn't yet been shown to anyone in the industry. He says his company may go into manufacture of tinkertoy modules and wafers.

Another company banking heavily on tinkertoy is big American Car & Foundry, now in process of setting up new subsidiary ACF Electronics in 32,000-sq. ft. former skating rink in Alexandria, Va. One of ACF's biggest assets is its manufacturing mgr., young Robert L. Henry, formerly of National Bureau of Standards, credited with being tinkertoy's principal developer.

Color Trends & Briefs: To ease cost and difficulties of color receiver servicing, RCA Service Co. has come up with a technique it believes will not only simplify servicing but will keep servicemen's purchase of color test instruments to a reasonable minimum.

During last week's demonstration to FCC representatives at WNBW, Washington, RCA Service officials stated that station need transmit only a thin sliver of yellow-green at extreme edge of picture, without interrupting black-&-white transmission, and servicemen would immediately know whether color receiver is properly adjusted. Therefore, whether color is being transmitted or not, servicemen would be able to get frequent color checks. RCA suggests that signal be transmitted briefly and periodically, perhaps at station breaks.

As demonstrated, signal was unobtrusive on color sets, practically invisible on black-&-white sets. The engineers said that test signal made it necessary for servicemen to buy only 2 test instruments—in addition to regular black-&-white equipment—to service any color receiver problem. They said that the 2 instruments, dot and bar generators, would probably cost no more together than a single good oscilloscope.

The cost to station, to originate the signal, was said to be minor—involving purchase of bar generator similar to that used by servicemen. Test signal is proposed only for stations, not for network use. It would also serve as reference point for color set owners for tuning.

No FCC approval is required by stations planning to transmit signal, commissioners said. Attending demonstrations were Comrs. Hyde & Sterling, chief engineer Edward Allen, broadcast bureau chief Curtis Plummer. Showing was supervised by RCA Service Co. pres. E. C. Cahill and NBC engineering v.p. O. B. Hanson.

The 3 vidicom color camera (called "3-V") has been picked by RCA over fast-pulldown and continuous motion projectors, with deliveries scheduled to start late this year. RCA had been experimenting with all 3 methods (Vol. 9:44), finally settled on vidicom technique for these reasons: (1) Can be used with standard black-&-white TV film projectors with minor modification of latter. (2) Uses either 16mm or 35mm film. (3) Permits use of single camera chain and new "optical multiplexer" with 3 signal sources—2 film projectors and a slide projector.

Using its color slide scanner 9:30-9:45 a.m. daily, WMAR-TV, Baltimore (CBS), has country's first regular news program in color. E. K. Jett, v.p., and TV director, says he has color film projector on order, expects 4 RCA color sets next month for demonstration in lobbies of old and new Baltimore Sun buildings. In addition, he says he's placed order with RCA for two "19-in.-to-21-in." color sets and asked for November delivery.

Raytheon will have 19-in. color tubes by summer, plans 21-in. rectangular tubes by late 1954 or early 1955, is now shipping small quantities of 15-in. tubes "to several set makers," said v.p. Norman B. Krim at March 19 press conference in N. Y.
Electronics Reports: When electronics executives meet with Commerce Secy. Weeks April 6 in Washington, they'll be asked to lend a top-notch official to serve without compensation as director of Business & Defense Services Agency's Electronics Div., headed by acting director Donald S. Parris. Principal items on agenda for meeting are addresses by Secy. Weeks and Asst. Secy. Lothair Teetor. Talks are also scheduled on BDSA, by administrator Charles F. Honeywell; on manufacturers' census, by Maxwell Conklin, Census Bureau; on defense materials system, by BDSA advisor Wm. C. Truppner; on industrial defense, by BDSA's W. E. Haines; on research & development, by Asst. Defense Secy. Donald Quarles; on tax program, by Treasury Undersecretary Marion B. Folson—followed by discussion and recommendations of industry representatives.

Further conferences will be held from time to time, Commerce Dept. says, with other electronics industry leaders asked to attend. Invited to April 6 meeting by Secy. Weeks are: Ross Siragus, Admiral; Dr. Allen B. DuMont; Dr. W. R. G. Baker, GE; H. Leslie Hoffman, Hoffman Radio; Wm. C. Jordon, Hughes Aircraft; Charles B. Thornton, Litton Industries; H. J. Hoffman, Machlett Laboratories; Frank Freimann, Magnavox; Robert W. Galvin, Motorola; Leslie F. Muter, Muter Co.; Joseph H. Gillies, Philco; A. D. Plamondon Jr., Plamondon Magnetics; Ralph T. Brengle, Potter & Brumfield; Russell E. Cramer Jr., Radio Condenser Co.; W. W. Watts, RCA; Glen McDaniel & James Secrest, RETMA; J. A. Milling, Howard W. Sams & Co.; W. M. Adams, Sprague Electric; Sidney R. Curtis, Stromberg-Carlson; Max F. Balcom, Sylvania; Robert S. Alexander, Wells-Gardner.

Transistors are used in more than 90% of hearing aids being manufactured today—just one year since first commercial use of the transistor (Vol. 9:1-4). So said Raytheon v.p. Norman B. Krim in summing up first year's experience in production of transistors for commercial end-products, at New York press conference March 19. Highlights of his remarks:

Close to 200,000 of nation's hearing aid wearers, out of total of 1,250,000, have converted to transistorized aids, with saving of more than $5,000,000 in battery replacement costs during year. Transistors have cut hearing aid operating costs from $40-$80 a year to as low as $2-$5. Savings to users will amount to nearly $25,000,000 in 1955. As to reliability: More than one billion transistor operating hours have been passed, and rate of failure now runs approximately 1% yearly compared to about .5% for high-quality subminiature hearing aid tubes during their first year of service.

"But this performance took over 15 years to attain," said Mr. Krim. "The average transistor we are shipping in quantity today has one-third the noise level, more gain and far less cutoff current, compared to the product of a year ago," he said. He predicted small quantities of transistors will be incorporated into a few portable radios before end of 1955, and by 1958 in some TV sets. "In less than 10 years, nearly all radios and TV sets will include a few," he said. Raytheon will begin small commercial production of power output and radio frequency transistors this year.

"He Makes Tinkering Pay" titles cover story in March 13 Business Week about Arthur A. Collins who "turned his amateur radio hobby into an $80,000,000 manufacturing business"—Collins Radio Co., Cedar Rapids, Ia. Story details Collins' ingenious approach to electronics research, with emphasis on mechanical as well as electronic engineering. Company is now Cedar Rapids' largest employer, with 4800 in the home plant, another 1700 at branches in Dallas & Burbank. Twenty-one years after founding of Collins Radio, it builds about 75% of the radio and instrument landing equipment on commercial and executive planes, as well as high-powered commercial and military radio transmitters and ham radio equipment—latter described as "showcase of Collins quality."

Aerovox has opened 2 new plants in California—20,-000-sq. ft. factory housing its Cinema Engineering Co. div. at 1100 Chestnut St., Burbank, and 51,000-sq. ft. plant for subsidiary Acme Electronics Inc. and Aerovox Pacific Coast div. at 2724 S. Peck Rd., Monrovia. The 2 plants currently have more than 400 employees, and eventually "the total will exceed that amount many times." James L. Fouch is Cinema Engineering gen. mgr., Hugh P. Moore pres. of Acme.

Spring Technical Meeting on propagation and related subjects will be held at National Bureau of Standards, Washington, May 3-6, under sponsorship of USA National Committee of International Scientific Radio Union and IRE professional group on antennas & propagation. Sessions will be held on radio measurement methods & standards, tropospheric radio propagation, ionospheric propagation, terrestrial radio noise, radio astronomy, electronics, radio waves & circuits including antennas.

Link Aviation Inc., Binghamton, N. Y., manufacturer of electronic flight simulators for military & civilian planes, will be acquired by General Precision Equipment Corp., New York holding company which owns General Precision Laboratory and other firms in motion picture and scientific instrument fields. Link will operate as GPE subsidiary under present management (Edwin A. Link, chairman).

Hunt Capacitors (Canada) Ltd. is new company formed at Ajax, Ont. by Canadian Marconi Co. and A. H. Hunt Ltd., British capacitor manufacturer. Canadian Marconi gen. mgr. J. J. Kingan is pres.; R. A. Grouse, formerly of A. H. Hunt Co. is chief engineer. Canadian Marconi tube & components div., Toronto, will market Hunt capacitors, with production slated to begin this quarter.

Symposium on Automatic Production of Electronic Equipment will be held April 19-20 at San Francisco's Fairmont Hotel, sponsored by Stanford Research Institute & U. S. Air Force. Keynote speaker will be Lt. Gen. Lawrence Craigie, Air Force deputy chief of staff in charge of development.

Continental Radio Corp., 1623 No. Wells St., Chicago, maker of table, clock & portable radios, has combined with Industrial Spring Corp., but continues under own name.

Bell Telephone transistor patents were made available this week, royalty-free, to makers of hearing aids.

Christian E. Rogers Jr., communications attorney with Mechlin, Marshall & Smith, Washington, and Naval electronics specialist in World War II & Korean war with USNR rank of commander, has been named telecommunications specialist on staff of ODM by Wm. A. Porter, asst. ODM director for telecommunications.

R. M. Soria, American Phenolic Corp. research director, elected pres. of 1954 National Electronics Conference, scheduled Oct. 4-6 at Chicago's Sherman Hotel.
Financial & Trade Notes: Admiral reports record 1953 sales of $250,931,605, exceeding by 31% the $191,224,356 of 1952, and 9% above previous record of $230,397,661 set in 1950. Net earnings were $8,213,165 ($3.48 a share), down from $8,711,133 ($3.69) in 1952 and from 1950's record $18,767,554 ($9.73).

Pres. Ross Siragusa, in annual report, attributed lower earnings to additional tooling and pre-production costs of several new major appliances, among other factors. New-station TV boom in first half of 1953, he said, gave way to second-half lag "as the result of the widespread publicity on color TV that led the public to believe that color TV receivers were just around the corner." As soon as public saw first 15-in. color sets, he added, black-&-white sales increased substantially.

He predicted 1954 industry-wide TV sales of 5,500,000-6,000,000 sets. "I doubt if the TV industry can produce more than 75,000 color sets this year because the delivery of 19-in. tubes will be delayed until fall," he said. "Admiral expects to make 10,000-15,000 of these sets."

Company invested more than $5,500,000 in plant expansion and other capital expenditures during 1953, and export sales of all products were substantially higher than in any previous year, Siragusa said. Defense production also continued at high level.

* * * *

Zenith set new record of $166,733,276 sales in 1953, up 21% from $137,537,697 in 1952. Net profit declined to $5,631,701 ($11.44 a share) after $576,656 loss caused by flash flood that damaged Zenith's Wincharger plant at Sioux City, Ia, last June, compared with profit of $5,845,032 ($11.87) in 1952. Net profit before flood loss was $5,208,357 ($12.61). Annual statement said Zenith enjoyed increase of 22% in TV unit sales to dealers last year, more than twice the industry average, also reported increase in radio and govt. contract shipments. Company added $3,325,219 to its physical facilities in 1953.

Raytheon reports net earnings of $1,065,000 (46¢ a share) on sales of $45,065,000 after provision of $1,920,000 for taxes for quarter ended Feb. 28. This compares with $1,355,000 (60¢) on sales of $51,240,000 same 1953 quarter, but is improvement of 32¢ a share over preceding quarter. For 9 months, profit was $2,703,000 ($1.17) on sales of $126,242,000 vs. $3,267,000 ($1.43) on $130,027,000 in like period preceding year. Current backlog of govt. orders is $174,000,000.

Oak Mfg. Co. reports 1953 sales of $20,680,557 and net income of $1,229,017 ($9.36 per share) after tax provisions of $2,290,000. This compares with $15,925,950 sales, $1,103,100 ($2.10) net earnings, $1,970,000 taxes in 1952. New year started off more slowly than in 1953, but belief is expressed year's volume will compare favorably with record 1953. Annual meeting will be on April 22.

Erie Resistor Corp., in preliminary report to stockholders, states that unaudited accounts indicate 1953 earnings of $1,139,446 before taxes, $580,390 after taxes, as against $773,298 & $450,333 preceding year.

Eitel-McCullough reports 1953 profit of $596,871 (88¢ a share on $680,497 common shares outstanding) on sales of $11,576,674, compared to earnings of $613,694 (96¢ on $638,903 shares) on sales of $19,203,302 in 1952.

National Co. reports 1953 sales of $7,085,593, net income of $228,218 (87¢ a share) after taxes of $258,500; its 1952 sales were $9,261,100, net income $172,573 (64¢), taxes $184,000.

Dividends: Motorola, 37½ payable April 15 to stockholders of record March 5; Packard-Bell, 25¢ April 26 to holders April 4; Trav-Ler Radio, 7¼¢ March 29 to holders March 25; American Phenolic, 25¢ April 30 to holders April 16.

"Before too long, many radio and TV operations traditionally performed by hand will be entrusted to machines, thereby decreasing production costs." Thus Arvin pres. Glenn W. Thompson—predicting 1954 will be one of his company's best years as it expands product lines (adding 2-speed window fan, folding metal chaise lounge, hostess cart) and cuts production costs. Arvin's 1953 business of $73,395,197 ($2.53 per share net) derived 43% from automotive parts, 34% TV-radio, 10% electric housewares & car heaters, 9% metal furniture, 4% govt.

Expanded Canadian TV market, anticipating sale of 1,000,000 sets in 1954 and 1955, is foreseen by Stuart Finlayson, pres. of Canadian Marconi, who recently signed agreement to make and market Emerson TVs & radios in Dominion. Canadian sets-in-use totaled about 600,000 at end of 1953, his report to stockholders states, adding that 24 stations should be on air by end of 1954, as against 7 at start of year. Earnings in 1953 were $1,349,243 (30¢ per share) vs. $643,300 (14¢) in 1952.

Stromberg-Carlson on March 17 offered its common stockholders 72,025 new shares of $50 per value 4½% convertible preferred stock at $50 a share, one share being offered for each 7 of common now held. Underwriting is by syndicate of 10 houses headed by First Boston Corp. Money will be used to pay off $1,100,000 of bank loans. New preferred is convertible into common at rate of 1.4 shares of common for each share of preferred, new shares subject to redemption at $52 a share until March 31, 1958.

Clevite Corp. reports record 1953 sales of $71,304,940, profits of $3,478,611 ($1.77 on 1,799,652 shares) compared with 1952 sales of $54,103,077, profit of $3,444,240 ($1.97 on 1,509,652). A large automotive supplier, Clevite is also deeply in electronics now as result of acquisition of Brush Electronics Co. (crystals, magnetic recording heads, etc.) and Transistor Products Inc. Annual statement says non-automotive business amounted to 50% of sales in 1953, and electronics sales were "substantially higher than in 1952."

Collins Radio Co. reports for 6 months ended Jan. 31 sales of $37,925,586, net income of $1,476,406 ($3.41 a share), compared with $36,718,471 & $893,198 ($2.05) for same period preceding year. Backlog of orders was $225,000,000 Jan. 31 vs. $255,000,000 as of July 31, 1953.

New Sears, Roebuck catalog features 17-in. vhf-only black leatherette table model at $140, labeled "not for fringe" reception. Other TV's listed: Tables, 17-in. mahogany $160; 17-in. mahogany $190; 21-in. mahogany $220. Consoles, 17-in. open-face mahogany $200; 21-in. open-face mahogany leatherette $200; 21-in. open-face mahogany $230. All-channel sets in each model are $30-40 extra.

Some 20 Italian TV set manufacturers and assemblers, along with radio, electronics and component makers, are listed in U. S. Commerce Dept. Office of International Trade list, Radio & TV Equipment—Manufacturers, Italy ($1). Domestic TV set production in Italy is expected to reach 100,000-150,000 sets by end of 1954. List gives addresses of manufacturers, number of employees and estimated output of each, where available.

Motorola employees' savings & profit sharing fund reached all-time high of $17,614,000 in 1953, some 6864 of company's 8500 employees voluntarily contributing $1,033,000 during year, company contributing $2,836,000 and fund's investments earning $466,000. Motorola also gave awards totaling $22,798 to 1100 employees whose constructive suggestions were put in practice during year.

Apace with booming record sales, hi-fi is going such great guns that New York Times will publish special section devoted to it, Sun., March 21.
Mrs. Virginia Durr, wife of ex-FCC commissioner (1941-48) Clifford R. Durr and sister of U. S. Supreme Court Justice Hugo Black, went through stormy sessions of Sen. Jenner’s Internal Security Subcommittee at New Orleans March 19 when she was charged with having Communist ties at one time. She denied it vehemently and her husband, acting as counsel for ex-National Youth Administrator Aubrey Williams, threatened libel action when his name also was linked with Reds. Only Sen. Eastland (D-La.) was sitting when Paul Crouch, ex-Communist now with U. S. Immigration Service, testified that Mrs. Durr had persuaded Justice Black to address Southern Conference for Human Welfare in 1938; now the Southern Conference Educational Fund, it’s under investigation by the committee. Mrs. Durr wasn’t labeled an actual party member, but Crouch charged she had “plotted” with the party. She bitterly denied it, and issued this angry statement after the session: “I refuse to submit to the authority of this committee, and I stand in total and utter contempt of it.” Well known for her “crusading” proclivities while in Washington, Mrs. Durr once before got some unpleasant publicity when she admitted contributing to party liner Vito Marcantonio’s N. Y. campaign for reelection to Congress.

Phoenix’s KOOL-TV & KOY-TV, sharing Ch. 10 since they began operating last Oct., will be consolidated under ownership of Marley Broadcasters Inc., controlled by cowboy actor Gene Autry and operators of KOOL-TV with radio KOOL. Subject to FCC approval, Autry firm proposes to buy out KOY-TV for $400,000. Network is ABC-TV—KPHO-TV (Ch. 5) having CBS and KTVL-TV, Mesa-Phoenix (Ch. 12) having NBC & DuMont. Charles H. Garland, 5% owner, is gen. mgr. of KOOL-TV. Albert D. Johnson, 20% stockholder, is gen. mgr. of KOY-TV & KOY, presumably will continue with the radio station; other stockholders are John L. Hogg, Glenn Snyder, George R. Cook and John R. Williams, each 20%.

Objections of 5 uhf stations in Harrisburg and York, Pa. to power-height increase and site move of WGAL-TV, Lancaster (Vol. 10:59) were opposed by FCC’s Broadcast Bureau this week. It pointed to “unusual belatedness” of petition, said stations must have been aware of WGAL-TV’s application long before it was granted, stated that petitioners’ “allegations of economic injury are simply assertions so highly speculative as to be clearly inadequate to give the petitioner standing to file the instant petition.”

Air crash in which 28 were killed when American Airlines plane collided with 2 towers of radio WPTR, Albany, last Sept. 16 (Vol. 9:38) was attributed by CAB to pilot’s error, in report filed March 19. “Under existing conditions, the pilot should have abandoned the approach to airport,” board said. The 2 other 1953 crashes involving TV towers were also blamed on pilots by CAB (Vol. 9:49 & 10:4).

Application for 10-watt satellite on Ch. 13 to serve Elkins, W. Va., filed last year by Elkins TV Assn. (Vol. 9:24), was turned down this week by FCC, which said applicant didn’t meet Commission rules for experimental stations, i.e., didn’t propose any real scientific study. Group wanted to pick up and rebroadcast WDVT, Pittsburgh.

Interconnected this week to network circuits: KECEB, Tulsa, and KMMT-TV, Austin, Minn. Next on AT&T’s schedule: KHQA, Hannibal, Mo., about March 20, and WSJL-TV, Jackson, Miss., March 27. Phone company plans to add third microwave channel to Norfolk, Va. area April 1.

NARTB’s TV code was endorsed in resolution unanimously adopted March 17 by general board of National Council of Churches. Revised edition of code, as amended in Jan. (Vol. 10:4-5), was released this week and is available from NARTB, 1771 N St. NW, Washington.

Opposition to FCC filing fees was voiced by all 7 nongovt. witnesses appearing before Senate communications subcommittee March 16-17 in hearings on bill by Sen. Johnson (D-Colo.) to establish “nominal” fees in place of FCC’s schedule (Vol. 10:5;7-8 & full text in Special Report of Jan. 30, 1954). The witnesses—most of whom represented marine and other private carriers—also objected to Johnson’s bill, most of them opposing whole fee principle. FCC Chairman Hyde told subcommittee its fee schedule is still only a proposal and was submitted pursuant to Congressional order. As to Johnson’s bill, he urged that it be amended so that “the exact standard which Congress intends the Commission to follow in computing fees [is] fully and carefully spelled out.” Sen. Johnson, present at hearing, inserted in record the previously expressed views of Comrs. Webster and Bartley, who oppose fees, and challenged FCC’s authority to levy fees since such authority is not contained in Communications Act, but in appropriations bill. NARTB v.p. Ralph W. Hardy urged Congress to “clearly declare a policy which would forbid the FCC or any other agency [to] require the payment of license fees for broadcasting.”

Competing with theatres for closed-circuit TV business meetings, Sheraton Hotel chain launched its TV hook-up March 16 with 6-city telecast in which Sheraton Corp. officials discussed offering of new bonus issue, from DuMont’s New York studios. Hotels on circuit were in New York, Detroit, Chicago, Boston, Baltimore, Washington—first 5 having purchased RCA theatre-TV equipment. Chain says any of its 33 hotels in U. S. and Canada can be hooked up, some using portable projection TV equipment. Also participating in this week’s show, and reportedly lined up for hotel-TV meetings of their own, were Ballantine Beer, Trans-World Airlines and Railway Express Co. More closed-circuit TV sales meetings have been held in first 3 months of 1954 than in all of 1953, principal ones being National Dairy Products Corp. in 15 cities, Ford 32 cities, Dodge 29, Pan American Airways 20—all in theatres.

Closed-circuit educational programs originating from WBNNS-TV and beamed to ballroom of Columbus’ Deshler-Hilton Hotel will be feature of annual Ohio State U Institute for Education by Radio-TV, April 7-10. Broadcasters and educators in hotel will be asked to criticize programs. Main speaker will be Theodore Streibert, chief of U. S. Information Administration, reviewing overseas libraries program. Among other educational TV developments: (1) Gov. Dewey’s bill for operation of N. Y. State’s 10 educational channels by non-profit corporations was amended to permit “controversial” programs, a change sought by N. Y. board of regents, which will have over-all policy supervision. (2) Ohio State U gets $100,000 grant from Ford Foundation for proposed WOSU-TV (Ch. 34).

Big color “spectaculars,” 90-min. big-name programs 8-9:30 Mon. and 9-10:30 Sat., are being blueprinted at NBC-TV for this fall. Also for this fall is a color show weekly then go weekly with programs comparable to smash Ford 50th anniversary (Vol. 9:25). To build the shows, producer Leland Hayward is seeking to line up such names as David Selznick, Walt Disney, Joshua Logan, Cecil B. DeMille, Sam Goldwyn, Buddy Adler, Stanley Kramer, et al. Concept of the “spectacular” has been idea of pres. Pat Weaver for some time; he now envisions them as naturals for color.

Grantee WOPA-TV Inc., Chicago (Ch. 44), with same ownership as AM station WOPA, in suburban Oak Park, was denied use of call letters WOPA-TV this week, FCC refusing to waive policy requiring different call letters for different cities even though stations have same ownership.
SENATORS PUT FCC FILING FEES ON ICE: FCC's proposal to levy fees of $3 to $1500 on those it regulates (Vol. 10:5) now appears to be dead -- or at least in a state of suspended animation for the next year or so -- as result of objections by everybody in general and Senate Commerce Committee in particular.

It was Congress, not FCC, which imposed filing fee idea in the first place -- as rider to appropriations bill, which established fee policy for govt. regulatory agencies. But this week, following Senate hearings in which all witnesses opposed principle (Vol. 10:12), Committee asked FCC to suspend rule-making until July 1955.

Committee unanimously passed resolution stating that the license fee proposal "raises basic questions with regard to the fundamental philosophy of regulation under the Communications Act, [and] any departure from the existing structure of licensing should be resolved specifically by the Congress after the conclusion of our present inquiry." At week's end, Commission hadn't acted, but it probably will bow formally to the Committee's request next week.

CONCEPTS OF COLOR GROWTH—RCA's PLANS: Skepticism about the eagerness and haste of the public in buying color TV receivers, clearly manifest in industry ranks despite the enormous publicity color has had, may be slowing down color's pace -- certainly is now causing soft-pedaling of some of the predictions for its immediate future.

Nevertheless, RCA this week reiterated its faith in color, invited its set-making licensees and competitors to share both initial expenses and ultimate profit as it laid before them its own color plans for 1954 -- covering production of sets and parts, equipping of stations, and programming via NBC-TV.

Many other set manufacturers, however, have been mighty dubious about going ahead with production now, principally because they believe 15-in. tube too small and price of receivers much too high. Nearly every one with research facilities is doing something, telling almost nothing, though many had tubes in various stages of development on display at IRE convention this week (see p. 14).

* * * *

More than 250 licensee representatives were at RCA's March 26 symposium at its big receiver plant in Bloomington, Ind., where the day before RCA officials had also briefed newsmen. To the licensees, as to newsmen, RCA stated own 1954 goal of 5000 sets with 15-in. tubes, 5000 with 19-in. -- and showed 15-in. in production.

But they made clear the very important fact that RCA won't build tubes and other special color components for other set makers until it gets firm orders for them. In this significant respect, RCA policy differs from that of 1947 when it began stockpiling black-&-white tubes in advance of orders.

Policy applies both to 15 & 19-in. Reason for it, said v.p. E.C. Anderson, in charge of licensing, is because of "the present cost of color tubes and the fact that additional types may become available."
With most other manufacturers backing off from 15-in., or not trying it at all, RCA thus showed it intends to give it at least a substantial try. Consumer products exec. v.p. Joseph Elliott said he's satisfied "quite a few" will be sold at $1000. He likened the set to a Cadillac or Lincoln (though one competitor calls it a "Jaguar"). He said "orders for hundreds" have been received from all cities where color signals are available.

Whether RCA's example will persuade its tube customers to give the 15-in. a similar whirl, it's too early to say. It asked them to place orders for tubes and other components soon as possible, stating there's substantial lead time involved.

Said tube div. marketing mgr. Douglas Y. Smith: "The minimum lead time we need for color kinescopes is 30 days and may run 90-120 days, depending on the magnitude and timing of demands. For receiving tubes, it's 30 days, may run to 90. For components, it's 30 to 60 days; for testing equipment, 90 days minimum up to 120-270 days."

Asking others to get into the swim, Elliott said the development of color as a national service is "too big for any one firm." After saying he expects RCA to build 10,000 sets this year, he estimated industry total at 100,000 -- of which he figures 70,000 will be sold this year. From then on, he foresaw this growth in sales: 350,000 in 1955; 1,780,000 in 1956; 3,000,000 in 1957; 5,000,000 in 1958.

The real "mass market" will come some 3-5 years from now, said Elliott, taking the now more conservative line of Chairman Sarnoff and President Folson, who weren't present. By then, he said, a 19 or 21-in. color set will sell for $500.

Fostering of color expansion is no simple trick, the speakers acknowledged. Said Anderson: "The introduction of color to the public is a different and more difficult problem than black-&-white TV. The public had only one choice in 1947. Now, they are able to choose between color and black-&-white." Very cheap black-&-white, he might have added -- so cheap now as to throw a new complexion on market.

* * * * *

Though we attended the newsmen's session at Bloomington, we were barred from the licensee session Friday, our deadline day, so had time to get reaction from only one manufacturer who attended. He's a medium-sized producer, by no means tied to RCA apron strings, and his comments may be significant:

"I think it was a great promotion for color on the part of RCA. It was impressive, too, for we actually saw the sets in production -- very slow, actually only 10 to 15 per hour. They're trying for 40. I must say the line looked good, the method of production was very clean, and they showed how we can all do it and doubtless even improve upon it and bring down costs.

"But it's all up to the consumer, in the last analysis, just as the RCA people said. We must count on losses at the outset. The question is: How cheap can we make this set, so it can be sold at a reasonable price? And, will they buy?"

"Were you enough impressed to go back and start your own line?" we asked.

"I'll have to reserve comment on that -- but you can say for me that RCA's pitch was really terrific."

* * * * *

There certainly are differences within the industry about when and how the new color art and industry will develop -- but the situation was oversimplified in Jack Gould's front-page New York Times article of March 22, which was the talk of the industry all this week. It spoke of sharp disagreements over when color should be introduced to the public, with RCA on one side and, ranged on the other, "virtually all the other set makers who do not believe that it is either technically or economically feasible to begin color for some time."

Fact is, as far as we can adduce at this time, there's no such unanimity or certainty of opinion among set makers yet, even though RCA alone so far has stated specific plans and production schedules. There's puzzlement, uncertainty, a waiting for "things to happen" -- presumably, now, for public reaction to marketing efforts of RCA and any others who undertake to make and sell sets.

(Westinghouse also has announced production line, has advertised sets avail-
able for immediate sale, but reportedly has sold very few as yet. Emerson leasing plan [Vol. 10:10,12] has apparently aroused very little trade enthusiasm.)

Other manufacturers aren't tooling up, Gould reported, contending that "public interest in color has subsided because of the high retail costs of initial sets -- more than $1000 for 12-in. pictures -- and that the 'immediacy' of tinted TV can now be discounted." He went on to state that some have cancelled orders for various color parts, and that CBS has decided not to expand its color programs because an informal survey "showed the number of color TV sets in use this year would be far below many original enthusiastic estimates."

The Times reporter concluded, quite rightly: "At issue, basically, is a complex problem of a multi-million dollar business going through a transitional period. Involved are difficulties in the engineering laboratories, novel problems in merchandising and industry politics."

* * * *

It was apparent to us, in tour through the Bloomington plant, that RCA is seeking to give its model CT-100 color set the same reputation for solidity that its famous pioneering 630-TS 10-in. black-&-white set enjoyed.

Bloomington plant has 5 production lines, 3 of them on black-&-white sets, one on color, other unused at present. Plant mgr. Thomas A. Weeks said the color line is capable of producing 2000 sets monthly -- a rate which can be achieved in 6-8 weeks. He said color set has 1012 parts vs. 437 parts in 21-in. black-&-white and that complexity of production is about at 2%-to-1 ratio.

Plans for 19-in. were given as follows: Developmental samples of tubes available in April, commercial production of tubes during July, production of receivers "shortly thereafter." No indication of price of 19-in. tube or set or rate of their production was given except that they would "cost more". It was also stated that the focus-mask tube (Vol. 10:4) will be demonstrated next year.

* * * *

Color receiver service warranty conditions were disclosed for first time, with 3 kinds of contracts available at option of purchaser:

(1) "A" contract -- $149.50 for guarantee on all parts, including the picture tube, for one year, plus unlimited service calls for one year.

(2) "B" contract -- $99.50 for guarantee on all parts, including the picture tube, for one year, plus unlimited service calls for 90 days.

(3) "C" contract -- $25 for installation and instructions. Service calls thereafter to run $5.95 for first ½ hour, $3.50 for each additional ½ hour.

* * * *

On the station side, engineering products v.p. T.A. Smith revealed that 35 stations are now equipped to rebroadcast network color, and "partial shipments" of color equipment have been made to 35 more.

Turning to network connections, Smith estimated that 75 cities would be color-connected by July 1, more than 140 cities by end of 1954 -- thus making it possible to put color signals in range of 75% of nation's homes.

Live cameras are now being shipped, he said (see p. 8), and some 25 stations are due to get new vidicon color film cameras this year (Vol. 10:12).

For NBC-TV's color programming plans, see below.

NBC-TV OUTLINES COLOR 'SPECTACULARS': What inducement will public have to buy those $1000-up color sets? NBC-TV officials believe they have some powerful programming injections to whet viewers' appetites for color.

NBC color coordinator Barry Wood, addressing symposium of manufacturers at RCA Bloomington receiver plant March 26, stated that NBC would be providing at least 3 color shows weekly by end of year -- 2 from New York, one from Hollywood.

In addition to studio programs, he said, mobile units will originate such things as cherry blossoms from Washington, golf tournament from Baltusrol, N.J., Mardi Gras from New Orleans, fashion shows from Manhattan, rodeos from southwest.
Then he came to "Spectaculars in Color" (Vol. 10:12), details of which NBC pres. Pat Weaver gave to affiliates in closed-circuit telecast March 26.

Starting in October, Weaver said, these 90-min. fortnightly programs will be "peaks in the schedule... bringing back to TV the role of a conversation piece." They will have the "appeal of the 'hit' in show business," he said.

They're going to cover whole gamut of show business -- musical comedy, drama, circus, operetta, aquacade, ice show, etc. -- produced by such men as Walt Disney, David Selznick, Rodgers & Hammerstein, plus NBC's own producers.

Programs will be scheduled Sat. 9-10:30, Sun. 7:30-9, or Mon. 8-9:30. There will be 13 of these this fall, sponsor for which is to be announced soon. In addition, there will be an "occasion" program for which NBC will pre-empt time.

Emphasis will be on producers and writers, including the "creative brains" of Hollywood, rather than primarily on personality of stars.

If programs are all Weaver says they'll be, NBC can scarcely go wrong -- because programs will be seen on black-&-white, thanks to compatibility. As for cost, while RCA & NBC say they're prepared to spend many more millions to promote audience and color set sales, other telecasters and manufacturers seem inclined now to go more slowly, tread cautiously, look into expense factors more closely.

* * * *

Wood described NBC's color facilities as follows: Colonial Theatre, 4 color cameras and 35mm slide scanner; Studio 3H in Rockefeller Center, with 2 cameras and slide scanner; one mobile unit with 3 cameras and more under construction.

Another studio will be equipped in Brooklyn by fall, he said, as will one in Burbank, Cal. Chicago will have one a year later, then Cleveland and Washington.

Note: We watched Scholz-Andrews fight March 26, the firstbout carried in color by NBC, found color added little to what was basically a good fight. We doubt whether color would help a poor match one iota. Washington Post sportswriter Herb Heft seems to share our views quite precisely. He wrote: "I'd say, on the basis of my first look, that the fight looked nice in technicolor. But I wouldn't put out the extra dough to see another one like it, good as it was. Maybe to see the Rose Bowl pageant or the Mardi Gras. But not for a fight."

5 MORE STATIONS START, ONE IN CANADA: Four new TV outlets went on air in that many U.S. cities this week, one more in Canada -- making 379 in this country (130 uhf), 9 in the Dominion. The U.S. count allows for one more uhf quitting as of March 31: KRTV, Little Rock (Ch. 17) where KARK-TV (Ch. 4) has just started testing. Week's starters bring first service into Eugene, Ore. and St. John, N.B., first local uhf into Little Rock, first uhf into Providence, third uhf into Madison. They are:

KARK-TV, Little Rock, Ark. (Ch. 4) started tests March 24, plans schedule of test patterns beginning April 1, day after Little Rock's KRTV (Ch. 17) is due to go off the air after selling its studios and other facilities to KATV (Ch. 7) in nearby Pine Bluff (Vol. 10:11). KARK-TV has 25-kw RCA transmitter, 340-ft. tower, plans later to build 1170-ft. tower and emit 100-kw. Chief owner is T.H. Barton (73%) with T.K. Barton (18.16%) as v.p.-gen. mgr.; Dale Hart, program mgr.; Champ Smith, chief engineer. Network is NBC, base hour rate is $350. Rep is Petry.

WNET, Providence, R.I. (Ch. 16) began testing at 10 a.m., March 23, will go commercial soon after April 1, boasts Studio One as first network order from CBS. It is first local competitor for pre-freeze WJAR-TV (Ch. 10), is putting on big drive for uhf conversions. John Porterfield, v.p.-gen. mgr., ex-Raymer, reports excellent signals from initial tests of 1-kw RCA transmitter, 420-ft. Stainless tower. Plant includes 2 studios, one 30x80. Station got 2nd of new GPL vidicon camera chains. Harold C. Arcaro, attorney, is pres. of corporation having 1200 local stockholders. Chief engineer is Herbert F. Evans, ex-CBS. Base rate is $200. Rep is Raymer.

KVAL-TV, Eugene, Ore. (Ch. 13) opened new market when it began test patterns March 22, for it's 103 mi. south of Portland, 120 mi. north of Medford. It's also 61 mi. from Salem, state capital, which has 2 CPs without announced target dates. KVAL-TV begins programming in mid-April or earlier as NBC interconnected. It has

WHA-TV, Madison, Wis. (Ch. 21), for which Wisconsin U regents in 1952 allocated $105,750 and which then got another $100,000 grant from Ford Foundation, put out first test signals March 26 from 1-kw RCA transmitter and Gabriel antenna on WHA-FM tower. It begins program tests April 5, suspends for spring vacation April 19-24, then starts 2-3 hours of daily programming from May 3. Its 5th educational non-commercial outlet on air. Studios in Radio Hall of university's WHA ("oldest station in the nation") are equipped with 3 GPL camera chains, projector and kine recording equipment. Educational radio pioneer H.B. McCarty is executive director.

CHSJ-TV, St. John, New Brunswick (Ch. 4), first TV in the Maritimes and the easternmost in North America, began testing March 22 and 2 hours later went on program schedule with CBC and U.S. network kinescopes and films. It's Canada's 9th outlet, 4th privately-owned. It uses Canadian GE transmitter and 40-ft. Ajax tower on 1200-ft. Mt. Champlain, 18 mi. from city. Transmitter house was built under same sort of rugged conditions that faced CBUT, Vancouver, and in addition required 2½-mi. of new mountain road. Integrated with radio operation, its owned by group headed by Thomas A. Drumme, with George A. Cromwell as gen. mgr., Earl McCarron, program director. Base hour rate is $165. Rep is All-Canada Television, none in U.S. yet.

**Few CPs, Multiple & UHF hearings soon:** FCC gave out 2 CPs this week, took one back from grantee who failed to build after prodding, got rather roughly handled itself when House Appropriations Committee cut its budget from $7,664,400 to $6,544,400.

The week's grants: Montgomery, Ala., WSFA, Ch. 12; Charleston, S.C., WUSN, Ch. 2. The CP revoked was for oilman Tom Potter's WTVI, Chattanooga (Ch. 43).

Though still leaning towards its multiple ownership proposal, which would permit owners of 5 vhf to acquire 2 uhf (Vol. 10:4:6), Commission has decided to withhold further action until Potter communications subcommittee of Senate holds hearings on uhf -- now scheduled April 27-29, with FCC providing first witnesses.

Sen. Johnson's multiple ownership bill (Vol. 10:11) will get airing at same time, since its stated purpose is to help uhf.

UHF operators and grantees are expected to be out in full force to present their ideas. One operator, Leon Green, secy. of Houston's KNUZ-TV, is inviting all grantees to meetings in Washington April 25-26 to discuss proposals to put before subcommittee. Among his ideas is govt. loans to TV stations.

The "protest" section of Communications Act brought its most unusual result to date this week when owners of Clarksburg, W.Va. newspapers Exponent and Telegram filed protest to Ch. 12 grant to WBLK-TV, alleging "economic injury." It's first time anyone not a TV or radio grantee or applicant has ever protested a grant.

Complaint states that grant of WBLK-TV increases "dominating position" of its owners -- Stubblefield family -- who control newspapers in 9 West Virginia cities plus 54% of WTRF-TV, Wheeling, plus AMS WBLK, Clarksburg and WPAR, Parkersburg. Owners of WBLK-TV replied that protest was "based upon a fear of competition" and that "the protestor sees TV, not as a force for public good, but as a threat to its long enjoyed monopoly in the newspaper field."

Commission hasn't indicated its decision yet, but it generally hasn't been too eager to grant protests and hold hearings on them.

---

Million-watt uhf station may be possible within a year, spokesmen for tubemaker Eitel-McCollough Inc. believe. At IRE engineering show this week the San Carlos (Cal.) manufacturer showed full-scale model of huge 50-60-kw klystron which will power tomorrow's maximum-power uhf outlets. An official of the company which supplies DuMont, Federal and others, said the new tube should be in production in about 6 months, or at least by end of year. Task of designing transmitter around the tube shouldn't pose difficult problem, he added, because of its similarity to current 12-kw models. New and far bigger power supply will be largest obstacle. Rival klystron-maker, Varian Associates, Palo Alto, Cal.—which designed 12-kw tube now being made by GE—wouldn't be pinned down on plans for top-power uhf tubes. Pres. Russell Varian told us his plans are now uncertain, inasmuch as demand seems to have tapered off somewhat and it may not be feasible to go ahead now in view of uhf's economic situation.
Personal Notes: Frank Stanton, CBS pres., conferred with President Eisenhower at White House March 25, told reporters afterward he had nothing to say... Keith Kiggins, ex-ABC v.p. and one-time NBC director of station relations, who has been living in retirement in La Jolla, Cal., appointed administrative asst. to George B. Storer at new Storer headquarters in Miami Beach, Fla. Chris Witting, Westinghouse Broadcasting Co. pres., named to 3-year term on board of Advertising Council... George Crothers, ex-director of CBS-TV religious broadcasts, named CBS-TV mgr. of public affairs broadcasts... Alfred DiGiovanni promoted to CBS-TV Spot Sales research mgr... Francis V. Guidice promoted to program mgr., WTTG, Washington, and DuMont contact at White House and Capitol, succeeding Roger M. Coeles who becomes mgr. of KONA, Honolulu... James C. Cole re-names as gen. mgr. of WFTV, Duluth, his job being taken over temporarily by C. G. Alexander, gen. mgr. of Great Plains Television Properties Inc. (Sheffel-Burger)... Jim Moroney Jr., asst. treas., Dallas News, and asst. supervisor, WFIA-TW & WFIA, married to Helen Claire Wiltso, known on WFIA as singing star Lynn Holt; George Stevens promoted to WFIA-TW local sales mgr... Wes Izzard promoted to gen. mgr. of Globe News’ KGNC-TW & AM, Amarillo, replacing Tom Krist; resigned; Aubrey Jackson, from his radio KEYS, Corpus Christi, to asst. commercial mgr.; Bud Thompson to TV station mgm. Sid Tremble promoted from program director to commercial mgr. of KCMO-TV, Kansas City; Ken Heady, new program director... James Allen adds duties of publicity director for all 4 Crosley TV stations, plus WLV, to title of director of TV promotions... Harold S. Falter named gen. mgr. of Dallas branch, Forjoe rep firm... L. T. Steele, TV v.p., Benton & Bowles, elected to agency’s board of directors... Robt. Marcato joins Kenyon & Eckhardt TV-radio dept. to work on RCA account.

Millard M. Garrison, 49, partner of Page, Creutz, Garrison & Waldschmitt, Washington consulting engineers, died suddenly of heart attack March 25. He was born in Stanwood, Ia., attended Minneapolis schools, was graduated from U of Minnesota in 1938. During World War II, he was responsible for work on various kinds of Navy airborne identification radar and navigation beacon equipment, head of Bureau of Aeronautics radar section, attained rank of captain in reserves. He was Washington consultant since 1951, starting with Jansky & Bailey, forming partnership with Joseph Chambers (now head of Motorola labs in Phoenix) after war, maintaining own firm from 1950 until joining latest partnership in 1953. Surviving are widow and 2 sons, 13 & 10. Military funeral will be conducted 1 p.m. March 29 at Ft. Myer Chapel, Arlington, Va.

Junius P. Fishburn, 58, publisher of the Roanoke (Va.) Times and World-News, operating radio WDBJ, suffered a stroke during a Washington hearing March 24 before FCC examiner J. D. Bond. Rushed to a hospital, he died a few hours later. Hearing on competitive applications of WDBJ & WROV for Ch. 7 had been in progress, off and on, since last Sept. 25 and was indefinitely postponed.

E. Finlay MacDonald, operator of CJCH, Halifax, was elected pres. of Canadian Assn. of Radio & TV Broadcasters at this week’s annual meeting in Quebec City, succeeding E. E. Elphicke, CKWX, Vancouver.

Forjoe & Co., station rep, moves April 5 to new offices at 580 Fifth Ave., N. Y.; phone, Judson 6-3100.

How one uhf telecaster is attacking problem of good converter installations: Walter Reade Theatres’ WRTV, Asbury Park, N. J. (Ch. 58) promotes “WRTV Seal of Approval” which is awarded to dealers and servicemen making quality installations at realistic prices. Those earning seal get decal for store windows, mats of seal for mailings and newspaper ads, advertising in lists of approved dealers in 4 area newspapers for which WRTV foots bill, plugs on WRTV and in trailers shown in Walter Reade theatres. To get seal, dealers apply to station, which investigates, checks quality of several installations made by dealer, who must meet these criteria: (1) Conversions must be made with money-back guarantee for satisfactory reception of WRTV. (2) Proper types of antennas, lead-ins, converters, strips, etc. must be used. (3) Prices must not be “exorbitant.” Station says it’s not concerned with brand or make of equipment—only with quality—and as to price, it doesn’t want seal to go to “some of the firms which are charging $70, $80 & $90 for conversions that belong in the $30, $40 or $50 class.”

Gov. Dewey signed educational TV bill March 25, opening way for establishment of privately-owned non-profit stations to be operated under supervision of State Board of Regents (Vol. 10:6). Bill gives Regents authority to incorporate any group for operation of educational station, bars use of programs “for partisan or political purposes or to influence legislation.” Non-profit groups have already been organized in New York, Buffalo, Albany-Schenectady-Troy. State is allocated 10 non-commercial channels, all uhf. Board of Regents itself holds 7 CPs (see TV Factbook No. 10), will turn them over to privately-owned groups as they are chartered. First to get charter (and CP) probably will be New York City’s Metropolitan Educational TV Assn., which expects to be chartered at Regents’ next meeting at end of April.

British commercial TV was approved by House of Commons March 26 on crucial second reading, 298-269, after acrimonious debate. Deputy Labour party leader Herbert M. Morrison, pledged to make TV commercialism issue in next political campaign, said if his party came into power it would block the new broadcasting service —and Conservative asst. Postmaster General L. D. Gammans suggested Labor Party adopt this election slogan: “Vote labor and lose your second program.” Actually, the TV bill is very mild one, setting up safeguards against over-commercialism and “over-Americanism,” and giving Govt. same censorship power it has over BBC (Vol. 10:11).

J. Fred Muggs has asked CBS for equal TV time to “refute all gestures made by the chimpanzee who aped me” on Ed Murrow’s See It Now March 23, according to UP dispatch. Chimpanzee Muggs, featured performer on NBC-TV’s Today, has become symbol of evils of commercial TV to Britons. Murrow’s show, devoted to the British TV dispute, used film featuring rival British chimp, “J. Fred Muggridge,” being exploited by British Laborites as weapon against commercial TV. Muggridge is namesake of Punch editor Malcolm Muggridge, one of most persistent and outspoken advocates of commercial TV.

Barnard College’s 4th annual Summer Institute of Radio & TV, jointly sponsored with NBC in N. Y., June 28-Aug. 6, will include new course in “Technical Operations Orientation” directed by RCA Institute Inc.’s Paul L. Gerhart.

Stock Shots to Order Inc., 500 Fifth Ave., N.Y., has been formed by R. A. Pheelan, ex-WOR-TV, and Edna Paul, ex-NBC, to supply TV producers with programs or commercial shots they can’t get from stock film libraries.

Arizona Gov. Howard Pyle still calls himself program director of KTAR, Phoenix, and intends to return to that station when he quits politics.
Station Accounts: Possible trend to foreign-language specialization in some markets, as has happened in radio, is seen in announcement that newly authorized KELP-TV, El Paso (Ch. 13), city's third, will concentrate on Spanish programs, and that new KBID-TV, Fresno (Ch. 53) has set aside 3½-hour block of time each week aimed at the Latin-American audience. Recently started KGBT-TV, Harlingen, Tex. (Ch. 4), in heart of Rio Grande Valley, has even appointed a Spanish language sales specialist, Richard T. O’Connell. New Spanish Hour on WOR-TV, N. Y., Mon, 10:30-11:30 p.m., bi-lingual variety show, already has 3 sponsors: Albert Ehlers (Cafe Caribe coffee), thru Quinn-Lowe Inc.; Gustone (vitamins), thru Reed Adv.; Manning’s (used cars). Indiana Telephone Co. sponsored 1954 state high school basketball finals at Indianapolis last week, with WFBM-TV feeding to 6 other stations in basketball-wild Indiana, 3 in Kentucky; phone company guaranteed $10,000 gate, lost deficit of about $2500. Wilbur-Ellis Co. (Southern Star Bonito) buys N. Y. news segment of WCBS-TV’s new Morning Show, 8:25-8:30 a.m., thru West-Marquis Inc., San Francisco. Seven-Up new. Kink. Vitamin. General. Turing. P. E. (chain. 7-Up.)

Benton from history, thru Mon.-thru-Fri. Pacific Agency. $2500 ready. N. has Goodyear Harlingen, programs, thru Bishop, Mon. & thru-Fri. (Rybutol) Latin-American TV, total this. Welcome. On Your Account, Mon.-thru-Fri., 1:30-2 p.m., thru Dancer-Fitzgerald-Sample, and On Your Account, Mon.-thru-Fri., 4:30-5 p.m., thru Benton & Bowles. Third show, unannounced, will occupy Mon.-thru-Fri., 1:15-1:30 p.m., also starting July 5. Since P&G already sponsors 3½ hours of daytime on CBS-TV, its total is 10 hours per week on that network (reported billings: $9,000,000), practically filling up its day periods and requiring realignment of most other daytime schedules. General Foods’ 25th anniversary program, featuring Rogers & Hammerstein Music with big lineup of name stars, Sun. March 28, 8-9:30 p.m., was to be carried by total of 235 stations on all 4 networks (including 6 of the 7 in N.Y.); biggest commercial hookup in TV history and costing somewhere between $500,000 & $750,000. Agency is Young & Rubicam. Vitamin Corp. of America (Rybutol) sponsors The Goldbergs on 160 DuMont stations, assuming Bishop Sheen’s Tue. 8-9:30 p.m. period for 13 weeks from April 13, undetermined time thereafter, thru BBDO. DuMont says station lineup is biggest in TV history, involves $5,500,000 contract. General Time Corp., Westclox Dix., buys 13 weeks of part in CBS-TV Pacific Network’s Panorama Pacific. Mon.-thru-Fri. 7-9 a.m. PST, thru BBDO; State Farm Insurance Co. buys 26 weeks on same show, thru Needham, Louis & Brobray.

Network Accounts: Largest time sale in TV history is claim of CBS-TV sales v.p. Wm. H. Hylan, in signing up Procter & Gamble for 3 more daytime shows, totaling 6½ hours weekly. Two of the shows are being taken away from NBC-TV as of July 5—Welcome Travelers, Mon.-thru-Fri., 1:30-2 p.m., thru Dancer-Fitzgerald-Sample, and On Your Account, Mon.-thru-Fri., 4:30-5 p.m., thru Benton & Bowles. Third show, unannounced, will occupy Mon.-thru-Fri., 1:15-1:30 p.m., also starting July 5. Since P&G already sponsors 3½ hours of daytime on CBS-TV, its total is 10 hours per week on that network (reported billings: $9,000,000), practically filling up its day periods and requiring realignment of most other daytime schedules. General Foods’ 25th anniversary program, featuring Rogers & Hammerstein Music with big lineup of name stars, Sun. March 28, 8-9:30 p.m., was to be carried by total of 235 stations on all 4 networks (including 6 of the 7 in N.Y.); biggest commercial hookup in TV history and costing somewhere between $500,000 & $750,000. Agency is Young & Rubicam. Vitamin Corp. of America (Rybutol) sponsors The Goldbergs on 160 DuMont stations, assuming Bishop Sheen’s Tue. 8-9:30 p.m. period for 13 weeks from April 13, undetermined time thereafter, thru BBDO. DuMont says station lineup is biggest in TV history, involves $5,500,000 contract. General Time Corp., Westclox Dix., buys 13 weeks of part in CBS-TV Pacific Network’s Panorama Pacific. Mon.-thru-Fri. 7-9 a.m. PST, thru BBDO; State Farm Insurance Co. buys 26 weeks on same show, thru Needham, Louis & Brobray.

Thirty-five advertisers, reports Billboard, are “chomping at the bit” to buy alternate-week shows employing the so-called major-minor plan whereby 2 sponsors get every-week coverage by buying a network time period and then alternating the commercial emphasis, viz., Philco-Goodyear on NBC-TV, U. S. Steel-Motorola on ABC-TV, and, mostly recently, Block Drug-Nash Motors on CBS-TV (Danger). One week one sponsor gets the “full treatment” with substantial mention of the other; next week, they shift—and rate-holding is same as standard practice in magazines whereby an advertiser buys a color page one week, a small black-&-white ad next week. Among clients ready to go major-minor, as listed by Billboard: Procter & Gamble, which it says “wants more TV”; Parliament, Schick, Block, Paper-Mate, Texaco, Brown & Williamson, Owens-Corning, Dow Chemical, Purex, Ronson.

What, indeed, hath TV wrought? “Displacement of the dining area of the living room and the one-a-day meal eaten in silence before the TV set is bringing about a whole new concept of merchandising based on the snack,” reports March 24 New York Times. Accordingly, 4 makers of snack items are getting together under the auspices of Ross-Roy Inc., N. Y. agency, to form “Snackmaster’s Guild,” pooling their resources for advertising, merchandising & promotion. They’re Lummis & Co., Philadelphia (salted peanuts); Pretz-L Products Corp., Reading, Pa. (pretzel nuggets); Adams Corp., Beloit, Wis. (Adams Korn Kurls); Kink Kone Corp., N. Y. (Old London Cheese Sandwiches).

Skiatron Electronics & TV Corp. has signed agreement with Matthew Fox, owner of Motion Pictures for TV, giving him rights to its subscription TV development—including manufacture, operation, licensing and financing. Terms of agreement weren’t disclosed. Fox has formed Skiatron TV Corp. as operating company, with Skiatron Electronic’s Arthur Levey on board, says he’ll file petition asking FCC to commercialize pay-as-you-see TV.

“Underground” TV station will be built by BCC beneath site of old Crystal Palace, replacing present Alexandra Palace operation. Scheduled for completion within 2 years, new station will be almost completely underground, with 640-ft. antenna tower the only important above-ground structure.
Telecasting Notes: Farm TV audience gets analytical attention of March 27 Tide, which notes at least 60 stations now telecasting programs designed for farmers and concludes that "farm TV can, and perhaps should, be reckoned with now." It studies CBS's recent county-by-county figures on TV set ownership (full text published by Television Digest, Feb. 27) and notes national TV set saturation is 58%. Then it takes the 2359 farm counties as defined by J. Walter Thompson Co. (i.e., those with no city of 25,000 and where majority do not live in urban areas), and finds 617 with 40% or more TV saturation, 636 with 20-40% . . . Map shows farm counties with TV are generally closely grouped, usually circle an urban county: thus an advertiser using TV in these major cities has a good chance of reaching farmers: Atlanta, Baltimore, Birmingham, Dallas, Denver, Des Moines, Ft. Worth, Grand Rapids, Houston, Jacksonvile, Kansas City, Lincoln, Louisville, Memphis, Minneapolis, Nashville, New Orleans, Oklahoma City, Omaha, Philadelphia, Salt Lake City, San Francisco, Tulsa. Article, with its state-by-state breakdown of farm saturation, is excellent ammunition for station sales force . . . Howard Hughes' acquisition of RKO for $23,489,478 ($8 a share) leaves up in air again whether its backlog of 700 films, carried on books at $1, will be made available to TV; trade reports have it that MPTV's Matty Fox once offered $12,000,000 for them, DuMont $5,000,000 . . . 5-year rights to 10 major feature films, including 1949 Technicolor production Tulsa (Susan Hayward & Robt. Preston), were sold this week for $300,000 to Samba Pictures Inc. (Jerome Hyams, pres.) for TV distribution, which will be by Hygo films; others in package are Big Cat, Black Book, Down Memory Lane, Lost Honeymoon, Mickey, Port of New York, Man from Texas, The Spiritualist, Trapped . . . Empire State Bldg. proposes the 7 N. Y. stations occupying its 222-ft. tower sign 15-year leases and pay annual rental of $85,000 each, starting April 30, as against $70,000 they now pay; they’re balking, and dispute may go to arbitration . . . U. S. Senate now has new, bigger, more modern TV-radio studio for taping and filming; it’s in Capitol, run by Mr. & Mrs. Robt. Coar . . . More rate increases: WBTW, Charlotte, N. C., raises Class A hour from $750 to $900, special Class AA min. rate from $175 to $225; KWTW, Oklahoma City, base hour from $465 to $600, min. $93 to $120; KOMO-TV, Seattle, hour from $700 to $800; KPRC-TV, Houston, hour from $700 to $770; WWLP, Springfield, Mass., hour from $250 to $300; WAFB-TV, Baton Rouge, hour from $200 to $250; CFPL-TV, London, Ont., hour from $200 to $275 . . . W. Va. Network "package" being formed by ABC-TV, comprising new WPJB-TV, Fairmont (Ch. 45); WKNA-TV, Clarksburg (Ch. 49); WTAP-TV, Parkersburg (Ch. 15) . . . KHJ-TV replaces KTTV April 1 as DuMont Los Angeles affiliate.

To WKY-TV, Oklahoma City, goes distinction of getting first commercial color camera shipped to station other than NBC and CBS New York key outlets. Camera was received March 21; rest of chain was due March 22, while second complete chain and a spare camera were to follow shortly. Mgr. P. A. Sugg said tests would begin in April and he hoped to have regular local live schedule before May 1. Station's order has been on file for 3 years. Other stations due to get cameras soon: WBAP-TV, Ft. Worth; WBEN-TV, Buffalo; WTMJ-TV, Milwaukee; WCCO-TV, Minneapolis; KTLA, Los Angeles; WDSU-TV, New Orleans.

Big screen color: Skywriter Virgil E. Noble, of Venice, Cal., claims that after 12 years of experimenting he's prepared to sky-write in 4 colors—just as soon as he finds someone willing to pay for it.

Details of 2 TV TAPE recorders were revealed for first time at IRE convention this week, together with novel plan for putting color TV pictures on black-&-white film and technical reports on 2 color film scanners. Engineers for both RCA and Bing Crosby Enterprises Inc. (Los Angeles) said they expect to have color TV tape recorders ready for commercial production in about 2 years—each using a different engineering approach.

RCA Labs' Harry F. Olson gave engineers technical data on RCA's color tape recorder which was demonstrated at Princeton last Dec. (Vol. 9:49), then told newsmen that in the 3½ months since demonstration, RCA engineers "have brought the tape speed down materially and have been able to reduce the width." The recorder shown by RCA and described in this week's technical paper uses ¾-in. magnetic tape running at 30 ft. per second, but RCA is aiming at ¾-in. tape at 20-ft. per second.

Bing Crosby Enterprises' chief engineer J. T. Mullin described system first demonstrated in 1951 (Vol. 7:46). Although it has been used only for monochrome recording to date, he said color model will be demonstrated in 6 months. Black-&-white model uses ½-in. wide tape running at 100 in. per second, carries about 1.7-mc of information, but apparent definition was described as much better than 1.7 mc. Unlike RCA's 5-track color recording, BCE's system uses 10 tracks to carry black-&-white information, 2 more for sync information and sound, can carry color with addition of 2 more tracks. System is based on "time division multiplexing"—recording one track at a time for intervals of 10 microseconds each. Mullin said monochrome system is "already better than the average kinescope recording," and that 16-minute program can be recorded on 17-in. reel.

When color is added, tape will probably be speeded up to about 150 in. per second, he said, giving "more than 3-mc. definition," or about same as RCA's.

"Color film and tape aren't the only ways to store color TV images," said Iowa State College's Wm. L. Hughes in technical paper at the convention. For the small station, he believes it may be more feasible to use black-&-white film. Advantages over color film would be in cost of film itself, and in processing, which can be done at station just like any black-&-white film. Equipment cost would be less than tape, he said, and pictures could be taken with completely mechanical camera using no electronic gear. Playback would require electronic setup.

He described experimental work he's doing for Iowa State's WOI-TV with 35mm monochrome film which he said should give definition equivalent to 16mm color film. Film doesn't record 3 separate images simultaneously, instead uses switching system to provide brightness signal at 60-field rate and alternate pieces of color information at 30-field rate, giving color bandwidth of 1-1½ mc, which "meets NTSC standards." Using such a system, he said, small station can take "color" pictures or kine recordings and show them within an hour in color. He emphasizes he hasn't built complete equipment yet but said that its practicality has been proven.

Jesse H. Haines described DuMont's 16mm color film scanner as giving "better picture than the original 16mm print itself" through use of "electronic masking" which compensates electronically for deficiencies in color film. He said scanner's development is now complete and disproves theory that any color film smaller than 35mm is unsatisfactory. He added that DuMont will have 2 of the scanners in continuous operation at NARTB convention in Chicago week of May 23. Philco's color film scanner was described in paper by Joseph F. Fisher.
HARD-LUCK KRKV-TV, Weslaco, Tex. (Ch. 5), delayed when its antenna fell to the ground while being raised onto 700-ft. tower in Jan. (Vol. 10:5), suffered another delay this week when its antenna bent a 3-ft. bolted section as it hanged against tower while being hoisted during a high wind. New section had to be rushed from GE factory in Syracuse, and owner O. L. Taylor now hopes to get Rio Grande city's first station on air in week or so.

GE this week shipped 5-kw transmitter to KGVO-TV, Missoula, Mont. (Ch. 13), with 12-bay antenna due to go out in May. It also reported order for 5-kw from new Montpelier, Vt. Ch. 3 grantee (WCAX, Burlington), for spring delivery along with 4-bay antenna. To existing WDSM-TV, Duluth, Minn. (Ch. 6), GE this week shipped 35-kw amplifier to replace 5-kw, and got order from KCMC-TV, Texarkana, Tex. (Ch. 6), for 35-kw amplifier for delivery as soon as FCC approves power boost. Also shipped were 12-bay antennas to ABC-TV's WXYZ-TV, Detroit; WBKB, Chicago; KGO-TV, San Francisco—all Ch. 7. Also shipped was 12-bay antenna to upcoming WGAN-TV, Portland, Me. (Ch. 13).

RCA reports shipping 1-kw transmitter this week to WCET, Cincinnati (Ch. 48, educational), which reports May-June target. This week also, RCA shipped 50-kw amplifiers to WHJBQ-TV, Memphis (Ch. 13) and WOOD-TV, Grand Rapids (Ch. 8); 25-kw amplifier to WFBM-TV, Indianapolis (Ch. 6); 10-kw amplifier to WIBW-TV, Topeka (Ch. 3); and bi-directional antenna to WRAY-TV, Princeton, Ind. (Ch. 52) which will up its gain to 55.

In our continuing survey of upcoming stations, these were reports received this week:

WBRZ, Baton Rouge, La. (Ch. 2), under construction, has 10-kw RCA scheduled for May-June delivery, writes pres. Douglas L. Mansip, publisher of Baton Rouge Advocate and State Times. It has reported mid-Sept. target, will use 750-ft. Emsco tower topped by RCA antenna. Rep will be Hollingbery. It will be first competition for WAFB (Ch. 28), which began in April, 1953.

WTHS-TV, Miami (Ch. 2, educational), still waiting for WTVJ's old Ch. 4 GE transmitter and antenna, hasn't specific target, reports asst. director Vernon Bronson. WTVJ hasn't finished work on new tower & transmitter, may not be ready for switch to new equipment for another 30 days or more, he says. WTHS-TV will be ready to begin conversion as soon as it gets equipment. It will utilize FM radio tower atop Everglades Hotel, 306-ft. above ground, for TV. Transmitter will be directly below antenna, "making it one of the shortest transmission lines in the country."

WCAX Bestg. Corp., Montpelier, Vt. (Ch. 3), state's first grantee, will build GE transmitter atop Mt. Mansfield, state's highest peak, 2729-ft. above average terrain, plans debut "as fast as weather and necessary business contract arrangements will permit," reports pres. C. P. Hasbrook. Beginning with films & kine, it's signed as CBS primary affiliate, also will use programs from other 3 networks. With antenna rising 100-ft. above Mt. Mansfield, it expects to reach as far north as Montreal, as well as neighboring New York and New Hampshire. John A. Dobson named sales mgr. Weed will be rep.

KFYO-TV, Lubbock, Tex. (Ch. 5), hasn't set target yet, but has ordered 25-kw DuMont transmitter for Aug. delivery and has 785-ft. tower, to be topped by 6-bay RCA antenna, scheduled for completion in Sept., according to gen. mgr. Gordon Thompson. Grantee Globe News Publishing Co. (Parker F. Prouty) publishes Amarillo Globe News and operates KGNC-TV there. KFYO-TV will be third vhf in Lubbock. Rep will be Katz.

KGLO-TV, Mason City, Ia. (Ch. 3), hopes to begin test patterns early in May, plans programming as soon as possible thereafter as interconnected CBS & DuMont affiliate, reports exec. v.p.-gen. mgr. Herbert R. Obrt. Transmitter house at Kensett (Ia.) site, 15-mi. north of city, is ready for 25-kw DuMont transmitter due in mid-April; RCA 6-bay antenna on 400-ft. Truscon tower is due to be ready early in April. Ownership interlocks with Mason City Globe-Gazette, KHQA-TV, Hannibal, Mo., and radio WTAD, Quincy, Ill. Hour rate will be $200. Weed will be rep.

KQED, San Francisco (Ch. 9, educational), has changed target again, now hopes to test converted KPIX transmitter atop Mark Hopkins Hotel on April 2, begin programming early in May, according to gen. mgr. James Day. Current "sign-for-9" drive seeks 6800 dues-paying members at $10-a-year in bay area.

WDEF-TV, Chattanooga (Ch. 12), will have downtown Volunteer Life Bldg. studios and transmitter house atop Signal Mt., 6.5 mi. N of city, completed by end of March, plans tests around April 1, according to gen. mgr. Harold E. Anderson, ex-KOLN-TV, Lincoln. It will use 10-kw RCA transmitter, 300-ft. Emsco tower, and will interconnect with NBC. Rep will be Branham. WOUC (Ch. 49) and WTVT (Ch. 43), other Chattanooga grantees, haven't reported targets.

WHO-TV, Des Moines (Ch. 13), delayed by antenna accident (Vol. 10:7), on March 21 hoisted rebuilt 12-section RCA superturnstile atop 700-ft. tower, now plans tests of 10-kw RCA transmitter April 15, programming April 25, reports v.p.-mgr. Paul A. Loyet. It will join NBC basic, has $850 base hour rate. Ownership interlocks with WOC-TV, Davenport, Ia., & KMTV, Omaha. Rep will be Free & Peters.

KBIC-TV, Los Angeles (Ch. 22), its GE 12-kw transmitter already tested, plans to install GE antenna on Mt. Wilson during next 2 months, reports owner John Poole. Now concentrating on establishing KBID-TV, Fresno (Ch. 53), which began last Feb. 8, he writes: "When we come on the air [with KBIC-TV], it will be of necessity, be at a level of operation which may be continued indefinitely while awaiting certain solutions of the TV industry's problems."

WMSL-TV, Decatur, Ala. (Ch. 29), expecting 1-kw RCA transmitter any day and 580-ft. RCA tower in 3 weeks, now plans April 25 tests, according to mgr. Bill Guy. It hopes to begin programming about May 1, will have $100 base rate. Rep will be Thomas F. Clark.

WOBS-TV, Jacksonville, Fla. (Ch. 30), now plans transmitter site near that of WJHP-TV (Ch. 30), won't make April target, reports gen. mgr. Jim Macri. It will use 423-ft. Stainless tower topped with RCA antenna, has GPL transmitter scheduled for delivery next Aug. Pres. & 60% owner is E. D. Rivers Sr., ex-Gov. of Georgia, who also owns WCTV, Thomasville, Ga., and 50% of WMIE-TV, Miami, both TV grantees; he also operates radio WLBS, Birmingham, and WGAA, Ceddartown, Ga. Hour rate will be $150. Rep will be Stars National.

WSEE, Erie, Pa. (Ch. 35), with 12-kw GE transmitter on hand, expects to meet April 15 test target, begin programming April 25 as primary CBS interconnected affiliate, according to gen. mgr. Charles E. Denny. Its 700-ft. Stainless tower, topped by 4-bay GE helical antenna, is scheduled to be ready by March 31. It will be first local competitor for pre-freeze WICU (Ch. 12). WLEY-TV (Ch. 66), other Erie grantee, hasn't yet announced target date. Rep will be Avery-Knodel.

WCET, Cincinnati (Ch. 48, educational), now completing construction, got its 1-kw RCA transmitter this week, plans test in late May or June, programming in Sept., writes gen. mgr. Uberto T. Neely. It will use RCA antenna, 350-ft. up on WLWT's tower.
NO EXCISE TAX RELIEF FOR TV-RADIO: The TV-radio-phonograph industry, along with the automotive, got caught in a political squeeze play on Capitol Hill this week -- and lost its valiant fight for excise tax relief by Senate vote of 64-23. This despite Senate's adoption of Capehart Amendment, the preceding day, cutting excise taxes on other household appliances from 10% to 5% as of April 1, 1954.

Whether the appliance reductions will stick, in face of Administration opposition, isn't at all certain. This may be known in few days if House-Senate conference committee shapes final tax bill in form for submission to both houses next week. Capehart Amendment would cut taxes on refrigerators, stoves, fans, water heaters, flatirons, air conditioners, electric blankets, toasters, mixers, broilers, clothes dryers, dishwashers, polishers, garbage disposals, home freezers -- among main items.

After GOP Sen. Capehart's proposal to halve the appliance tax was passed, Sen. Douglas (D-Ill.) demanded it be extended to TV-radio-phonos. He argued mainly that their sales were down about 40%, employment off some 25%. But his own party's Finance Committee leadership opposed further losses of excise revenues. Chairman Millikin (R-Colo.) asserted the Treasury would lose $80,000,000 from TV and radio alone. Ranking minority member, Sen. George (D-Ga.), 24 other Democrats and 39 Republicans voted against, 18 Democrats, 4 Republicans, 1 Independent for.

As things stand now, it looks like a lot of luxury items (like jewelry, furs, perfumes) will get excise tax relief -- but not TV-radio, or even automobiles which Sen. Douglas also tried to get cut to 7% from present 10%. And it's not certain household appliance cut on final vote can surmount Administration opposition.

Thus despite the efforts of GOP Sen. Capehart, the Democrats can claim they tried to help the average householder but were thwarted by GOP.

Only chance left for TV-radio is possible inclusion of a cut in the broader revenue bill now before the House. But from practical standpoint, though some legislators are quite sympathetic, very little chance is seen.

So it looks now like the TV-radio industry is one of the very few consumer goods producers not getting even a modicum of relief in pending legislation -- but through no lack of effort on the part of RETMA pres. Glen McDaniel, tax committee-man Maurice Paul (Philco) and special counsel F. Cleveland Hedrick, who carried the fight in committee and called on Senators during the floor fight. Nor of the many manufacturers, distributors and dealers who wired their Senators.

Seems that the continuing high rate of TV unit production and sales, albeit prices and profits are way down, had something to do with defeat of the TV-radio excise cut. For Sen. Millikin quoted from March Survey of Current Business, Dept. of Commerce, which stated that Jan. retail sales of TV sets were higher than a year ago and only slightly under Dec. He also said color probably was deterring TV sales.

What Sen. Millikin didn't note was that the same survey, reporting gradual easing of business this year, stated that manufacturers of hard goods like TVs and refrigerators have been suffering most. "This has resulted in large part from the continued liquidation of inventories...and a further drop in activity in the plants producing defense goods," said the Survey.

The argument against the excise cut, however, was basically the loss of revenue to the U.S. Treasury. Pro arguments, supported by labor unions and strongly espoused by Sen. Douglas, ex-professor of economics from a state pivotal to the TV-radio industry, were based on some hard statistics on individual plant employment. From a normal complement of 48,140 workers in 34 plants, Sen. Douglas noted nearly 1200 have been laid off, detailing individual plant layoffs as listed on p. 11.
TV production held steady at 118,289 units for week ended March 19, compared with 118,484 in top 1954 week ended March 12 and 113,026 week ended March 5. In same 1953 week, total was 160,683. For first 11 weeks of 1954, total output is 1,323,000 which compares with 1,944,000 same period last year.

Radio production went up to 202,893 March 19 week from 181,710 week before, and 327,322 in corresponding week of 1953. For first 11 weeks of this year, radios totaled 2,182,000 vs. 3,229,000 for same 1953 period.

ENGINEERS MUM ON NEW COLOR TV PLANS: Annual smorgasbord for electronic engineers, the IRE convention, usually brings some exciting and unexpected announcements about big new advances in the TV art -- either in company-arranged press conferences or in engineering papers and exhibits. Convention in New York this week, biggest ever, had plenty to offer engineers -- but no big surprises in TV field.

It was certainly most color-ful IRE convention yet -- components for color, color test and generating equipment, color tubes, even community antenna systems guaranteed for color. Yet by and large the convention exhibitors used color mainly as a traffic builder -- much as today's retailer uses color set to lure customers into his store so he can sell them black-&-white sets, and perhaps even waffle irons.

The technical papers detailed nothing radically new in TV, we were told by well-versed engineers who attended the sessions. One paper which was to describe a new color tube was even withdrawn for competitive reasons (see p. 14).

Watchful waiting is keynote of TV industry today -- particularly as regards color. "The other fellow" is the key, and everybody's waiting for him to make the first move. Nevertheless, IRE convention made plenty of news -- as it always does -- in terms of progress reports on industry's newest developments. For stories on tape & film color TV recording, color test & studio equipment, color tubes, top-power uhf transmitters, printed TV circuits, Dr. Alfred N. Goldsmith's predictions on electronic future, and other IRE highlights, see below and pp. 5, 8, 13, & 14.

PRINTED-CIRCUIT TV, constructed with new "3rd dimension" technique by Sanders Associates Inc., Nashua, N. H., was unveiled to TV manufacturers and engineers in New York this week in special private showings held in connection with IRE convention and show. A variation of the "tinkertoy" principle (Vol. 9:38 & 10:12), new technique uses etched plastic plate to replace conventional wiring, with small etched panels, about size of match book, attached perpendicularly to base plate and containing the various circuit components.

Sanders showed 21-in. TV, with conventional circuit, made by its new "Reliaplate" method. Circuit plate was less than 12-in. long, 6-in. wide, used 19 of the small "Reliaplate" panels, which plug into base plate, and contained adhesive-tape resistors and ceramic capacitors. Sanders spokesmen explained that conventional resistors and capacitors can also be used in this new construction. Initial cost studies, they said, indicated savings of $5-$10 at manufacturer's level for 21-in. set.

They see big future in color TV for new method, since compactness of new circuit method will permit color TV circuitry to fit in same size chassis as black-&-white. New design technique, says Sanders, "can be installed at a very nominal cost with full scale production within a few months using standard components, and a little over 12 months using the more economical non-conventional components." Sanders hopes not only to help manufacturers set up plants using new techniques, but to sell them tools, "Reliaplates" and components.

Ad claims for miniature indoor antennas should be toned down. N. Y. Better Business Bureau notified retailers this week. After testing several of the $2-$2.50 devices, which are currently getting heavy push, BBB found no justification for claims they "outperform all others" or "outperform outdoor" types.

Here's where unemployment has hit hard in the TV-radio industry, as noted by Sen. Douglas (D-Ill.) in Senate debate March 25 on proposed excise tax cut (see p. 10) -- the statistics presumably coming from union sources: Philco, Philadelphia, 1000 laid off out of normal complement of 8000; another undesignated Philco plant closed, and third laid off 500 out of 1300; RCA Cincinnati, 600 out of 1800; RCA, Montreal, 370 out of 1000; Sylvania, Buffalo, 800 out of 2200; GE, Huntingburg, Ind., 230 out of 450; GE, Tell City, Ind., 50 out of 1784; International Resistance Co., 900 out of 1500; Magnetic Winding Co., 300 out of 500; Philadelphia Insulated Wire Co., 80 out of 230; Photoswitch Co., 700 out of 1000; National Co., 500 out of 1000; Clarostat, 550 out of 1000; Philharmonic Radio, 50 out of 200; Bendix Radio, 160 out of 300; Video Products Co., 150 out of 225; General Instrument Co., 1200 out of 1500; Micanord Co., 250 out of 900; Ward Lumber Co., 150 out of 1100; Leonard Electric Co, 180 out of 250 (75 recalled); American Measuring Co., 245 out of 275; Hammardul Co., 100 out of 500; Erie Resistor Co., 380 out of 1245; Mallory, 600 out of 3000; Warwick, 300 out of 400.

**Topics & Trends of TV Trade:** Sales of Crosley's new "Super V" models—17-in. masonite tables introduced in early Feb. (Vol. 10:7) to list at $140 in walnut finish, $150 mahogany, $160 blonde—are so "hot" that v.p.-gen. mgr. Leonard F. Cramer claims, "We are now making more sets per day than anybody else in the business." Factory has added night shift, 6 days a week, to meet demand and Crosley has stopped production on all other models. By time of summer trade shows, said Cramer, an equally simplified and low-priced 21-in. will be ready.

"We're getting fantastic reaction," said Cramer, "and we haven't even opened up the entire country yet. Only 64 of our 80 distributor locations have gotten the sets, and an example of dealer demand is fact that in New York we've grown from a mere 35 to more than 400 dealers and 500 outlets. And they're all clamoring for more."

Can Crosley make money on the sets? "Absolutely," said Cramer, "and what's more were getting a position in TV marketing. This set weighs only 53 lbs. and can be moved from room to room. It's the nearest thing to a portable, and certainly the answer to the second set in the home." He said 4 manufacturers have asked Crosley for licenses to manufacture it, seeking rights to its unique vertical plane chassis and special circuitry.

The $140 model is sold to distributor at 29% and to dealer at suggested 22% discounts, the $150 model at 32% & 24%, the $160 at 35% & 25%.

---

**Tele King Corp.,** permitted by referee to continue operation and offering 100% settlement in installments, lists assets of $5,201,251 and liabilities of $4,752,970 in Chapter XI proceedings in Federal district court of N. Y. (Vol. 9:7)—assets including $2,973,638 stock in trade, $2,208,454 accounts receivable, $463,053 machinery & fixtures, $205,620 cash; liabilities consisting of $2,975,685 unsecured claims, $1,255,841 secured claims, $329,731 taxes, $31,617 wages, $162,241 advances on govt. contracts. Big list of creditors included those with claims over $10,000: Post Tranformer Co., $56,590; Colonial Products Co., $35,111; Electronic Components, $32,936; Consolidated Molded Products Corp., $29,405; Monroe Greenthal Co., $28,308; Centralab, $27,463; Hagerstown Cabinet Co., $26,588; Laminated Cabinet Corp., $25,344; All Star Products Inc., $24,916; Hall Organ Co., $22,598; Fred Landau & Co., $10,450; Edwin I. Gutman & Co., $18,769; Dwight-Helman, $17,016; Hanft Electric Co., $14,727; Industrial Hardware Mfg. Co., $13,242; All Craft Container Corp., $12,328; International Resistance Co., $12,027; Industrial Fasteners Corp., $11,055; Denion Coil Co., $10,170.

**Ulysses Sanabria's American Television Inc.** Chicago, which makes own TV line and uses DeForest label, this week began distributing Wilcox-Gay's Garod models through its own outlets—a 17-in. table at $140, 21-in. table $160, 24-in. open console $230, 27-in. open console $235. Wilcox-Gay pres. Leonard Ashbach confirmed American TV's right to Garod in cities where it has branches.

Sylvania cut prices of 11 TV models this week by $30 to $60, at same time introducing new 21-in. tables at $300 & $310. All have Halo-Light. Reductions were at upper end of line, all 21-in., starting with $400 open console cut to $370, up to $520 blonde console cut to $470.

Stromberg-Carlson has added several new low-priced TVs, has also resumed output of popular-priced radios, including portables and clock models. New TV line includes 21-in. Carrier table models at $290 & $250, Studio console in mahogany $290.

Capchert-Farnsworth adds new 21-in. leader table-model called Overture at $200, also new AM-FM-3 speed radio-phonos in mahogany, with doors, at $240.

---

**Trade Personnels:**

---

Sylvania began producing TV sets on first of 4 TV assembly lines March 22 in new 422,000-sq. ft. plant in Batavia, N. Y. Plant now employs 230, will have 1500 when all 4 lines are in operation by June, according to Ned J. Maradino, mgr.

Month-long strike at Crosley plant in Richmond, Ind. ended March 22 when more than 2200 workers returned to jobs after ratifying new contract.

Emer-on Radio licenses S.I.C.A.R.T., Floreover, Italy (Aldebrando Sacardi, pres.) to manufacture electronic products under its name.
Electronics Reports: The virtually limitless horizons of electronics—from cooking and air conditioning to interplanetary travel — were scanned briefly by TV-radio pioneer Dr. Alfred N. Goldsmith in address at March 24 IRE banquet in New York. Accepting IRE Founders Award upon his retirement after 41 years as editor of Proceedings of the IRE, he speculated thus on an electronic tomorrow:

"The role of electronics in industry will steadily widen. Manufacturing and production, handling, storing, retailing, accounting and billing will all draw heavily on electronics. Mass communication to the home and to vehicles will expand until tomorrow's color TV will be only the foreshadowing of some even more comprehensive system of the future . . . Electronics will be applied to home cooking, refrigeration, air conditioning, cleaning, advanced lighting and heating. And perhaps even acoustic silencing may be based on electronics. There is also a reasonable prospect that the atomic battery will evolve into a large-scale and highly effective device both in the home and elsewhere . . ."

"Perhaps radio astronomy will serve ultimately as a means of interplanetary guidance and protection for the intrepid space travelers of the distant day. In a more mundane field, economic studies and other analyses of the ordered or random behavior of man will be carried out by elaborate computers, which might equally well be applied to the precise prediction of the weather . . ."

"It may be that the greatest triumphs of electronics in a human sense will come in the field of medicine where electron microscopy and its successors—namely, exquisitely delicate and informative instrumentation, accurate diagnostic devices and appropriate methods of electronic physiotherapy—may contribute greatly to the health, comfort and length of life of man."

Robert C. Sprague, pres. of Sprague Electric Co. and former RETMA chairman & pres., drew high praise March 25 from members of Senate Armed Services Committee after he briefed them on top-secret investigation which showed nation is following "sound" program for continental air defense. Committee last fall assigned Sprague task of probing adequacy of the program. Chairman Saltonstall (R-Mass.) termed the appraisal a "thorough and searching investigation" and other Senators told UPI it was "best briefing they had ever heard."

Accompanied by Senatorial delegation, Sprague will present report to President Eisenhower March 30.

Dage Electronics Corp. Beech Grove, Ind., maker of vidicon cameras and equipment, has been purchased by Thompson Products Inc., Big Cleveland manufacturer of automotive, aircraft & electronics parts—marking Thompson's first entry into TV equipment field. Thompson entered high-fidelity field last year with acquisition of Bell Sound Systems, said then it plans to make its electronic activities "as big as any division the company has today." (Vol. 9:46).

"Inditron" is name National Union gives to new tube whose filament can show numbers and letters. Tube, about 2-in. long, is designed for devices that tabulate information—such as electronic computers, adding machines, pinball machines, etc.

RETMA has reprinted and is distributing text of speech on "Research and the Electronics Industry" delivered at its N. Y. electronic merchandising rally March 21 by Rear Admiral F. R. Furth, chief of Naval Research, first electronics specialist to reach that high rank in the Navy.

Olympic Radio has set up new subsidiary, Multra Corp., Stamford, Conn., to develop new machine tools.

IRE Miscellany: Vest-pocket radio, weighing about 5 oz., worn like hearing aid, using transistors and diodes in place of tubes and powered by 2 penlite batteries, was demonstrated by GE engineers as potential civil defense tool . . . Cathode ray tube which can be viewed in brilliant sunlight and retains image for several minutes was described by RCA engineers, who developed it for direct daylight viewing of radar displays; it can also be used for airborne facsimile systems, oscilloscopes, etc., and may have TV uses . . . Nearly 30% of tubes discarded from military electronic equipment have been found to operate satisfactorily, according to studies made by Aeronautical Radio Inc.; report was based on examination of 80,000 discarded tubes, blamed waste on military servicing methods . . . Color x-ray photography and fluoroscopy were described as advanced tool for studying human body by U of California's R. Stuart Mackay—with presentation by color TV seen as definite possibility as aid in diagnosing ailments . . . "Electronic ear" that can dissect sounds into $4,000 bits of information per second was displayed by Raytheon; called a "spectrum analyzer," it can instantaneously and simultaneously recognize almost infinite variety of sound characteristics such as pitch, tone, timbre, resonance, intensity, volume, range, etc. . . . One of radio show's most popular displays was GE's elaborate model train setup demonstrating germanium devices in electronic control circuits; automatic system had 3 trains traveling about same track layout in opposite directions at varying speeds, without colliding.

New industrial TV systems shown at IRE convention ranged from extremely simple to very elaborate—and in price from $975 to $7200 and up, all using vidicon tube. One traffic-stopper was tiny Kay Lab camera (9 ½ x 9 ½ x 5 ¼-in.) introduced by Kalkbrell Laboratories Inc., San Diego, Cal., for studio or industrial use. Basic camera with control unit and lens sells for about $2000. Capehart-Farnsworth (IT&T) introduced new Farnsworth "Eye" TV, deluxe job with remote focusing and control, at $7200 installed. DuMont showed "completely remodeled and simplified" miniaturized Tel-Eye self-contained camera system at new low price of $975.

Pre-recorded tapes for use as background music in hotels, restaurants, banks, offices, etc., will be distributed by Graybar under new arrangement with Magna-Tronics Inc., N.Y., which has acquired tape rights to Capitol program service and several other music libraries. Magna-Tronics is headed by Percy L. Deutsch, formerly of Audio & Video Products Corp. and World Broadcasting Co. (transcriptions).

Portable TV dolly-tripod, shown by DuMont at IRE convention this week, is full-sized adjustable dolly, from which superstructure can be removed and used separately as folding portable tripod, weighing less than 40 lbs. Called Porta-Dolly & Porta-Tripod, it hasn't yet been priced.

New single-lens "Telejector," which can project 2 x 2 transparencies in uninterrupted sequence, automatically changing through series of 12 slides in one loading, was shown for first time at IRE convention by Gray Research & Development Co., Manchester, Conn. It's priced at $895.

Psychology of color in advertising seems to be both important and complex. March 27 Tide carries interview with Dr. Ernest Dichter, of Institute of Mass Motivation Research, who gives several examples of how people react to colors. "You can make color work for you, not against you," he says, "by understanding your product's emotional value and using color as the correct carrier. The wrong color can destroy not only the effectiveness of a product appeal, but actually hurt sales."
LENTY of developmental big-screen color tubes were
displayed at IRE Radio Engineering Show in New
York this week—though none was demonstrated with
a color picture. Nothing was shown which hadn't pre-
viously been announced, and spokesmen for most manu-
facturers were vague on their future color tube plans (see
also pp. 1 & 11).

There were even more rumors than displays. For ex-
ample, there was talk of a tube, reportedly in Philco labs,
identified by code name of "apple." Device was said to
be simpler than shadow-mask types but requiring far
more complicated receiver circuitry. No comment on it
could be obtained from Philco.

Only tube types displayed were 15 & 19-in. CBS &
RCA-type 3-gun shadow-mask tubes and 21, 22 & 24-in.
Lawrence-type single-gun grid focus tubes—but only
operating tubes at show were RCA-type 15-in. The 3
tube makers which are rumored to have "something differ-
ant" in color tubes—Philco, GE & DuMont—didn't com-
mit themselves. Philco showed no color tubes; GE showed
15 & 19-in. RCA-type models, while spokesmen promised
bigger, brighter rectangular tubes; and only color tubes
at DuMont booth were 15-in. used in receiver and moni-
tor for color slide scanner demonstration.

For what it's worth, one incident at IRE convention
cause some raised eyebrows. Convention program,
printed long in advance of actual sessions, listed paper
on "the GE post acceleration color tube" by GE's C. G.
Lob—but it was never delivered. Questioned about this,
GE's electronics v.p. Dr. W. R. G. Baker said: "We didn't
want the whole industry to know what we're doing."
He added that GE's color tube design isn't yet frozen.

Color Trends & Briefs: Equipment to produce color
TV signals—for stations, manufacturers, laboratories and
servicemen—was shown by at least 8 manufacturers at
IRE Radio Engineering Show in New York this week,
and drew big crowds to the vividly colored monitors dis-
playing slides, color bars and test patterns. Much of the
equipment was new and shown for first time, some of it
by manufacturers new to color field.

Tel-Instrument Co., 728 Garden St., Carlstadt, N. J.
showed new line of complete station equipment, at "eco-
nomics"—everything but the camera, which company
promises to produce next year. Prices quoted for the gear,
including color processing equipment and power supplies:
color monoscope $4200, sync generator $3922, bar &
gamma generator $4505, color monitor $2100.

Telechrome Inc., Amityville, L. I. showed its com-
plete station gear, and DuMont showed flying-spot scanner
using color slides, as well as other color station equip-
ment. Wickes Engineering & Construction Co., Camden,
N. J., showed "color conversion package," including inter-
face signal generator, bar generator, color coder for sta-
tions or laboratories, as well as vector display monitoring
and test instruments.

Polarad Electronics Corp., 100 Metropolitan Ave.,
Brooklyn, displayed its first color generating equipment:
sync generator $3050, bar generator $3850, 15-in. monitor
$2850. Industrial Television Inc., Clifton, N. J., showed
new color monitor with self-contained dot generator at
$2750, production to begin in June. It also plans to pro-
duce complete color test equipment for stations and manu-
facturers. Color servicing equipment introduced at IRE
show included new Philco portable color bar generator,
to sell at about $300. Kay Electric Co., Fine Brook,
N. J., showed "Chromabar" multiple color bar generator
at $990, single color generator at $395.

Chromatic boss Lawrence Hodgson announced this week
15 of grids for sale to its licensees. "Originally, we had
planned to produce 25,000 units before the end of the year,
but we have recently upped that goal drastically," he
said. He added that Chromatic's licensees (currently
only Crosley & Thomas) are making significant pro-
gress toward mass-production of 21 & 24-in. sets using
Lawrence tubes, and that "we have pushed our develop-
ment of the 24-in. grid ahead by 3 months so that Emery-
ville production can keep up with the demand of Chro-
matic's licensees and other manufacturers who we believe
will be adopting the tube design shortly."

When will color be "here?" H. L. Hoffman, pres. of
Hoffman Radio Corp., gave following definition in March
19 speech and color demonstration before Los Angeles
Rotary Club: When regular color shows are telecast at
least one hour daily between 7 & 10 p.m., and a color set
simple to operate and service sells for less than $1000.
He expects this status to be reached in fall of 1956, though
he stated: "It is highly possible that the stimulus created
by certain special events being telecast in color, or an
engineering development which we do not know about as
yet, might change this picture."

Color is keynote of Jerrold Electronics Corp.'s pitch
for its TV distribution systems, as displayed at IRE con-
vention. Exhibit was aimed at demonstrating "ability of
Jerrold systems to pass the full spectrum of broadcast
color programs with no distortion or degradation."

More than 27,000 servicemen have attended the first
35 of its color clinics, reports RCA Service Co. Sessions
are being conducted in 65 major cities. Company has
distributed more than 80,000 copies of textbook Practical
Color TV for the Service Industry.

Test of 3 color film processes is being conducted by
Screen Gems, which is shooting Fall Mall commercials
in Eastman, Technicolor and Kodachrome to determine
which is best for color TV. It's one of most elaborate tests
to date; end product will be tested on closed circuit by NBC.
Financial & Trade Notes: ABC Div. of American Broadcasting-Paramount Theatres Inc. increased gross income from $49,734,000 in 1952 to $54,758,000 in 1953, year of ABC's merger with UPT (Feb. 9, 1953), but it did not show profit for 1953 due to "high costs of program development, increased advertising, improvement of physical facilities and the difficulty of clearing stations to carry network programs." Annual AB-PT report, released this week, does not break down ABC Div. profit & loss, does show consolidated net profit of $8,996,000 ($4,480,000 from all operations, $4,516,000 from capital gains, last principally from $6,000,000 sale of WBKB, Chicago, to CBS). Profit compares with $4,580,000 from operations and $1,379,000 from capital gains in 1952, when company operated theatres only.

Total income in 1953 was $172,196,000 compared (pro forma) with $167,417,000 in 1952. Pres. Leonard Goldenson states that theatre operating income and earnings for 1953 were higher on a theatre-by-theatre basis than in 1952, though operating income of $114,926,000 was down slightly from 1952 due to fewer theatres and fiscal 1953's one week less of operations. During the year, AB-PT disposed of its interests in 39 theatres; it is required to divest itself of 65 more by Sept. 9, 1954 under Dept. of Justice consent degree. At end of 1953, it owned 669 in whole or part.

Goldenson estimated $6,000,000 will have been spent by end of this year to equip about 260 theatres for 3-D and wide screen. ABC capital expenditures of $1,344,000 represented improved physical facilities, including outlays for power increases for its own 5 TV stations. "Rebound" in theatre business in certain of the larger TV-saturated markets was noted. But, Goldenson states: "A number of theatres in the smaller towns, particularly in the South, are now feeling the effects of TV for the first time and the grosses are being adversely affected. Based on our experience in other areas, we feel that, as the novelty of TV wears off, a like upward trend will take place in these areas as well.

Company's working capital at Jan. 2, 1954 was $25,-462,000, down from $27,034,000 Jan. 3, 1953. During year, $9,988,000 was applied to retirement of term debt, including $8,281,000 of the total ABC debt of $10,557,000. Long-term debt at end of year amounted to $40,512,000.

Steady growth of Hazeltine Corp. is again reflected in annual report for 1953, released March 19, showing net income of $2,232,105 ($3.17 per share on 700,000 shares of common outstanding) on gross income of $10,057,032 from sales, less costs, royalties, engineering services and miscellaneous items. This compares with net of $2,006,790 ($2.86) on income of $9,273,189 in 1952, $1,459,490 ($2.08 on 350,000 shares) on $5,090,090 in 1951, $1,428,431 ($2.04 on 350,000 shares) on $7,203,741 in 1950. Total sales volume isn't shown. Consolidated earned surplus at end of 1953 was $9,053,106 vs. $8,017,400 in 1952.

Sprague Electric Co. reports 1953 sales of $46,778,635, new record, and net profit of $2,888,281 ($3.75 a share) vs. $4,449,891 & $3,136,553 ($4.18) in 1952. Report notes military volume somewhat lower, industrial electronics up, TV-radio markets modestly gaining—and states company does not expect color TV sales will be much of a factor in its business this year.

Weston Electrical Instrument Corp. reports net income of $1,025,930 ($2.40 a share) on $32,409,838 sales in 1953 vs. $330,372 ($2.71) on $27,881,458 in 1952.

Sign of the booming record trade: Capitol Records Inc. jumped to $16,914,250 sales & $590,154 earnings ($1.43 a share) in 1953 from $14,738,341 & $500,993 ($1.01) in 1952.

RCA and GE have entered agreement whereby RCA continues to have right, until Dec. 31, 1952, to grant licenses to others for manufacture of TV-radio apparatus under GE inventions made on or before Dec. 31, 1954. These include patents on inventions useful in radio, black & white and color TV, transistors. Said GE: "This, in effect, establishes a cutoff date for sublicensing rights on GE inventions made before Dec. 31, 1954, provided RCA by a 1952 agreement known as the A-1 agreement. A recent interpretation by the Federal court of Wilming- ton, Del. concluded that under the A-1 agreement, RCA's rights to use sublicensees on the GE patents involved would continue for the life of each patent. In some cases this could have continued the sublicense right for 20 years or possibly longer. The new agreement limits the sublicensing rights and the sublicenses themselves to 8 years beyond Dec. 31, 1954."

Capper Publications Inc. filed application with SEC March 24 to register $4,000,000 in 5 & 10-year bonds, money to be used to pay off other bonds, for working capital and "to complete a TV station"—presumably its WIBW-TV, Topeka (Ch. 15), which went on air last Nov. 10. Founded by local businessman Capper, company publishes various farm journals, the dailies Topeka Capital and Kansas & Kansas City Kansas, owns radios WIBW, Topeka, and KCKN, Kansas City, Kan.

Avco Mfg. Corp. net income for 3 months ended Feb. 28 fell to $1,612,199 (17¢ a common share) from $2,890,241 (31¢) same period year ago. Consolidated net sales were $94,426,496 vs. $116,666,203. "Unsettled" conditions in appliance field were blamed, though chairman-pres. Victor Emanuel said electronic business has been stimulated by new Crosley Super V table set at $140, $150 & $160 (see Topics & Trends).

Chesapeake Industries, Inc, parent of Pathe Laboratories, major film processing concern which owns Pathecolor, earned net profit of $1,031,080 on sales of $20,307,792 during 1953, with film processing accounting for sales of $7,326,896. Chesapeake sold Eagle Lion Studio in Hollywood last Dec. for $1,100,000.

TV will never hurt magazines and newspapers seriously, according to David P. Crane, director of media coordination for Benton & Bowles. Speaking at this week's convention of Assn. of national Advertisers in Hot Springs, Va., he gave these reasons: (1) Printed media's "long life in the home." (2) The magazine is "a package of carefully edited, thoughtfully-balanced editorial material, plus advertising," as contrasted with "bits and pieces" of TV fare that viewer elects. He conceded, nevertheless, that TV is "a dramatic sales medium" and that expenditures for other media will be tailored to make adequate use of TV.

Really, comrade, it's not that bad. Moscow Radio describes "a typical scene in an American home" as follows: "Lights are out. The whole family is gathered around a TV set, they are watching a usual show—a drama at the 99th floor of a New York skyscraper. A maniac murders a woman and throws her body through the window. A sadistic laugh of the maniac is heard... There is commotion among the viewers. The lady of the house faints, her husband calls a doctor. Children are crying... Blood, blood and more blood—this is the U.S. daily TV program."

French radio tax was raised from $3.65 to $4.15 a year by National Assembly to help finance 4-year plan for construction of 38 new TV stations. TV receivers are taxed $8.50 a year.

Licensed TV sets in Britain totaled 3,105,644 as of Jan. 31, increase of 148,798 in Jan.—largest monthly rise in history of British TV.
Radio station sales, many related to TV acquisitions, continue to crowd FCC agenda. This week, Commission authorized C. Arnhold Smith, chairman of U. S. National Bank, San Diego, to acquire another 50% of KSDO there (5-kw day, 1-kw night on 1310 kc) for $50,000 from Copley Press, which recently bought KLAC-TV, Los Angeles (now KCO?), for $1,375,000 from New York Post publisher Mrs. Dorothy Schiff Sonneborn (Vol. 9:46, 49, 52). This week, too, WLC, Baton Rouge, La. (1-kw on 910 kc, ABC) was sold for $135,000 to permit present owners to participate in recently granted CP for WBRZ there (Ch. 2) due on air in Sept.; 10 AM buyers hold 10% each, including Lamar Simmons, commercial mgr. who becomes gen. mgr. Unrelated to TV was Boston Post's purchase this week of WCP (5-kw on 1150 kc) for unnamed sum from A. C. Beamam & T. B. Baker, of Nashville, and Roy V. Whisnand, who continues as mgr. Control of KHON, Honolulu (5-kw on 1380 kc) was sold this week to Brysson Ross Gardner, formerly of Tacoma, by Ralph Fitkin & L. Roy Turner for about $5000, buyer also paying Wiramel Corp. $5550 for all preferred stock and assuming note for $27,000.

New microwave relay route from Jackson. Miss. to Dallas via Shreveport, La., initially carrying one westbound TV channel, is planned for completion in about a year, according to petition filed with FCC by AT&T this week. Commission this week gave AT&T permission to construct new TV microwave routes from Amarillo, Tex. to Albuquerque, N.M. and from Minneapolis to Duluth, bringing first network service to Albuquerque and Duluth. Last weekend, AT&T linked WSJIV, Elkhart, Ind. and KHQA, Hannibal, Mo. to network circuits, and WTRI, Schenectady, was slated for hookup this weekend. Due April 1 are KFEC-TV, Cheyenne, Wyo.; KVAL-TV, Eugene, Ore.; WJHL-TV, Johnson City, Tenn.

Time Inc.'s basic reason for buying TV-radio stations is investment—and it's only a happenstance that the stations thus far purchased (KOB-TV & KOB, Albuquerque; KDYL-TV & KDYL, Salt Lake City; KLZ-TV & KLZ, Denver) lie within a 340-mi. radius. This was explanation of Time's Wes Pullen to Tide Magazine interviewer. Though not significant, selection of the 3 cities has been fortunate, said Pullen, for they're "live, dynamic markets." Big magazine firm, which has just revealed record 1953 earnings of $16,259,000, net profit of $8,144,000 on revenues of $170,449,000, is interested in TV-radio because "we're in the communications business," said Pullen, and very likely will acquire some more outlets.

Westinghouse asked FCC to give it until April 1, 1955, to comply with decision holding that minority interests of 3 of its directors should be counted under multiple ownership rules (Vol. 10:3, 7). Westinghouse argued that holdings of director John M. Schiff shouldn't be counted, because he has no voting rights in his 15% of Continental Properties, which controls 4 stations. It also reported that director John L. Hall has resigned as v.p.-director of Boston Herald-Traveler Corp., which controls WHDH, Boston, removing him from picture. Third director, Dillon Anderson, owns less than 3% of Boston Ch. 13 applicant.

FCC approved purchase of KFOR-TV, Lincoln, Neb. (Ch. 10), this week for $300,000. Buyers are Mr. & Mrs. John E. Fetzer, who own WKZO-TV, Kalamazoo, and who last year bought KOLN-TV, Lincoln (Ch. 12) with radio KOLN at distress sale (Vol. 9:30). Seller of KFOR-TV was James Stuart, who continues KFOR. Fetzer will move KFOR-TV to KOLN-TV transmitter site, retaining former's channel but latter's call letters, were authorized to increase power to 316-kw. "Economic distress" dictated virtual merger, which eliminates Ch. 12 from Lincoln, only 50 mi. from Omaha.

Three new TV applications this week, and week's 2 grants and 2 applications dismissed, brought total pending to 274, of which 45 are for uhf stations. Applications were for Boston, Ch. 5, by DuMont Network; for Toledo, Ch. 11, by group of manufacturers and professional men including Harold F. Gross, owner of WJIM-TV, Lansing, Mich.; for Washington, N. C., Ch. 7, by local radio WRRF, whose ownership interlocks with upcoming WTIK-TV & WTIK, Durham, and other N. C. AMs, with ex-Army Secy. Kenneth C. Royal as 7.6% stockholder. [For further details about these applications, see TV Addenda 17-L herewith; for complete listings of all grants, new applications, dismissals, hearings, etc., see TV Factbook No. 18 with Addenda to date.]

The 1953 Alfred I. duPont Awards, presented in Washington March 26, went to: (1) WBZ-TV & WBZ, Boston, for "consistent, well-planned programming designed to serve the needs of an informed and progressive community and to develop and encourage good citizenship." (2) WOI-TV, Ames, Ia., for "leadership in development of programs of practical and cultural value." (3) NBC commentator Pauline Frederick, for "thoughtful, original, objective and responsible reporting and interpretation." Awards comprise plaque and $1000. Awards committee also gave special commendation to WBAL-TV, Baltimore; KNXT, Los Angeles; WHAS-TV, Louisville; KFJX, Grand Junction, Colo.; ABC newsmen Martin Agronsky.

New TV film chain has been announced by Federal Telecommunication Laboratories (IT&T), Nutley, N. J. Claiming low initial and operating cost, manufacturer says camera chain FTL-105A uses photoconductive tube, has small camera head weighing only 7½ lbs., control monitor and rack-mounted power supply. Also available is optical multiplexer FTL-287A, which can be used with new camera to provide pictures from 2 film projectors, one slide and one opaque projector, automatically controlled.

Edward Lamb's request that FCC identify those who allege he sought to conceal former Communist affiliations (Vol. 10:11) was turned down by Commission this week. Lamb, owner of WICU, Erie, Pa., et al, had told Commission he believed Communications Act requires such identification. FCC said it didn't have to because it conducted the investigation itself. Furthermore, it added, if case goes to hearing Lamb will get full opportunity to protect himself by cross-examining witnesses, etc.

Newly merged Peoria, Ill. newspapers—Star (a.m.) & Journal (p.m.)— are actively negotiating to buy out WTIVH-TV, Peoria (Ch. 19) with its radio WTIVH (1-kw on 1590 kc). TV station, which started last Aug., is 52% owned by gen. mgr. Hugh R. Norman, who also controls radio KSTT, Davenport, Ia. City has one other station: WEEK-TV (Ch. 43).

Three amendments to Communications Act, requested by FCC, were signed into law this week by President Eisenhower: HR-4557, waiving CPs for govt., amateur & mobile stations; HR-4558, giving FCC 30 days instead of 15 to act on protests; HR-4559, reclassifying first-offense violations of Communications Act from felonies to misdemeanors.

Bill to exempt from FCC regulation carriers whose communications between stations in same state are classified as "interstate" only because they use radio (HR-6436) was approved this week by Senate Commerce Committee. It had previously been passed by House.

Talent walkout on ABC-TV & ABC radio networks was averted March 25 when AFTRA and AFPM settled jurisdictional dispute over employment of 3 musicians by ABC's Chicago studios.
ABC IN BIG DEAL WITH WALT DISNEY: ABC's climb to stronger competitive status -- it still runs poor third to CBS & NBC (see p. 14) -- should get biggest push to date as result of "partnership" deal with Walt Disney Productions, finalized Sat. April 3. Perhaps even more important, pact breaks down another big barrier between the major movie studios and the TV broadcasting industry.

It came as surprise to other networks, which had also been dickering with Disney, and it didn't even leak out until after AB-PT board on March 29 ratified tentative agreement between ABC div. pres. Robert Kintner and Disney pres. Roy Disney. Agreement reportedly runs into "millions of dollars." These are details:

Contract runs for "great number of years," calls for Disney to produce minimum of 26 hour-long filmed shows annually, using both live action and cartoon techniques. They'll be filmed specially for TV -- in color, though ABC doesn't contemplate televising them in color when series begins next Oct. They will be produced under Walt Disney's personal supervision, reportedly budgeted at $100,000 each.

"Entirely new concept of TV programming," is how joint ABC-Disney announcement describes format -- based on variety, adventure, romance and comedy. A major food company is said to be interested in sponsorship (rumor centers around General Foods, General Mills, Standard Brands).

ABC also acquires "exclusive rights to all present & future Disney properties for TV." This doesn't mean backlog of theatrical films will automatically be available for TV, but it does mean that whatever Disney decides to release for TV will go to ABC -- and it's entirely likely that excerpts from some old Disney features and shorts will be integrated into programs.

Disney and ABC will be joint proprietors of "Disneyland" amusement park and studios to be built at site yet to be selected, said to be in Anaheim, near Los Angeles. Admission will be charged. Completion is scheduled in 2-3 years.

Deal with Disney would be plum for any network. His techniques and material have long been considered a "natural" for TV -- just as his theatrical films and his character creations have won 21 Academy Awards, including 4 this year. Said Disney: "We are firmly convinced of the compatibility of the 2 fields. [We see a] bright future with motion picture and TV production working hand-in-hand with each other."

Disney firm will continue theatrical film production separate from TV activities, has heaviest movie-making schedule in its history booked for next 5 years.

JOCK WHITNEY PAYS $4,000,000 FOR KOTV: In the scant 10 weeks since our TV Factbook came off the press, listing some 3 dozen major TV station ownership changes between 1949 & 1953, there have been nearly a dozen more sale deals -- including this week's $4,000,000 purchase of KOTV, Tulsa (Ch. 6) by J.H. Whitney & Co., big venture capital firm headed by John Hay Whitney. Deal was first hinted in our Vol. 10:11.

Jock Whitney is a brother-in-law of CBS chairman Bill Paley. Significance
of this, aside from fact KOTV is a CBS-TV basic affiliate, is merely that Paley may have told him the station was worth the price. CBS itself last year paid a record $6,000,000 to acquire a Chicago outlet, is known to have shopped for still more, is currently party to intensely competitive applications for Boston and St. Louis.

The sellers are Helen Maria Alvarez (50%), who founded the station in 1949; Jack Wrather, Oklahoma oil heir now residing in Beverly Hills, Cal. (25%); and his mother Mrs. Mazie Wrather (25%). Just about 2 years ago, they combined to buy oilman George Cameron's control and the then Alvarez minority for $2,500,000 (Vol. 8:9).

Terms of the deal, handled by broker Howard Stark, weren't disclosed -- but it isn't all cash. Mrs. Alvarez and Wrather remain on board of newly formed Osage Broadcasting Corp., along with Whitney partners C. Wrede Petersmeyer, William H. Jackson, Robert F. Ryan. Whitney firm was formed to finance development of growth industries and is identified with such companies as Spencer Chemical, Minute Maid, Great Northern Paper, Morton Packing and others in the power tool, home equipment, oil and natural gas fields, has for several years been interested in various local community antenna projects along with Jerrold Electronics.

Whitney firm's motives in acquiring first of what's expected eventually to be a string of stations was stated thus, in April 1 release: "TV is one of the dynamic postwar growth industries. We feel that TV broadcasting offers an exceptional opportunity to serve the public interest. We are pleased that our first investment of this type is in the progressive city of Tulsa...an exceptionally attractive TV market because of its high economic level and growth prospects."

[For report on other TV station sale deals so far this year, see p. 13.]

2 MORE STATIONS IN TROUBLE, SUSPEND: No new starters reported this week, though a few more are imminent -- but 2 uhf outlets went off the air while their owners try to raise enough money to resume operation.

Closing down but retaining CPs were WACH, Newport News, Va. (Ch. 33) and KETX, Tyler, Tex. (Ch. 19), the 9th & 10th post-freeze stations to quit or suspend. Seven uhf and 3 vhf have left the air to date, though one has resumed and others plan to come back (for list see Vol. 10:11-12).

Two other uhf grantees not yet on air dropped CPs this week (see p. 3), for total of 51 uhf & 11 vhf grants relinquished since freeze-end. 

Troubles of this week's "mortalities" apparently stemmed from management and financial difficulties, not primarily from fact they're uhf. Others also are known to be in trouble but trying to keep going until after Senate uhf probe of April 27-29 (Vol. 10:11,13), hoping it may offer a formula to help through "conversion" period.

Another uhf this week cut out all local programming, dismissed all personnel connected with local telecasts, stated it will carry film & network shows only. It's WKLO-TV, Louisville (Ch. 21), which competes with 2 pre-freeze vhf. Said Joe Eaton, pres.: "It is necessary that all possible economies be made in order to continue operations until the situation facing uhf stations in most cities improves."

* * * * *

The 2 latest shutdowns leave room for speculation that vhf in similar situations might have had tough sledding, too. WACH was 4th station (3rd uhf) in Norfolk-Portsmouth area -- a low-budget operation with no network, virtually no sales force, no live programming. It started last Oct., tried various film formats, finally ending up with "continuous performances" that repeated same feature films 3 times each evening. It went off air March 26 after staff had been cut to 3 on-duty.

Its plight raises question whether Norfolk market, with 176,000 homes, could profitably support even 4 vhf at present time. There's parallel in Omaha-Lincoln area, with 153,000 households, which apparently couldn't support 4 vhf -- forcing the 2 in Lincoln to go on the block in distress (see p. 13 and Vol. 9:30 & 10:9,11). Nevertheless, principal WACH owner John Dooley is seeking new financing, has asked FCC to change his AM's call letters from WHYU to WACH and his TV to WACH-TV.

Norfolk is home of successful uhf WVEC-TV, which got NBC affiliation when pre-freeze WTAR-TV switched to CBS. City's other station, WTOV-TV (Ch. 27), this week petitioned FCC to add Ch. 13 in nearby Princess Anne. It carries some ABC & DuMont
programs, but reportedly has curtailed operations somewhat recently. Fifth channel allocated to area, No. 10, is now tied up in FCC hearing.

Exactly what happened in Tyler, Tex. is still somewhat obscure. Insufficient finances and quarrel between ownership and management seem to underline troubles of KETX, which started last Aug. as only TV outlet in county with 21,500 households. Except for local community antenna service, it had virtually no competition -- nearest vhf being in Dallas, 92-mi. away. New vhf is due in Tyler this summer but all sets there are equipped for uhf. Even community antenna carried programs from KETX.

It went off air March 25 after owner Jacob Newborn wired FCC for permission to shut down because of "labor dispute". Next day, another wire reported shutdown because some equipment had been "damaged beyond repair" during Xmas eve cold wave.

KETX phone has been disconnected, most employees gone. They had been given an option to buy station Feb. 5 but failed to raise funds. Finally reached by phone, Newborn said he intends to take over management and put station back on air -- but at press time it was still silent and reportedly heavily in debt.

**WFAA-TV & KRLD-TV PROPOSE UNUSUAL TOWER:** Out of the Southwest comes another tall tower proposal -- a unique 1521-ft. "candelabra" with the antennas of KRLD-TV & WFAA-TV, Dallas, 75-ft. apart on platform at top of structure.

Tower has been cleared in all respects -- airspace committee, zoning, etc. -- awaits only FCC approval which, presumably, may be expected soon. It's estimated that completion of construction would take about a year.

Structure would be second tallest TV antenna extant -- exceeded only by the 1572-ft. tower being fabricated for KWTV, Oklahoma City (Vol. 9:32). KWT is also providing place on tower for educational grantee KETA (Ch. 13).

WFAA-TV once proposed a fantastic 1747-ft. tower (Vol. 8:45) which was finally rejected by CAA (Vol. 9:32) because of proximity to new Amon Carter airport.

Tower is designed by Ideco engineers, as is KWTV's. It's a guyed structure with triangular cross-section, would have an elevator. According to the engineers, unusual candelabra arrangement of the 2 antennas is actually more stable than a vertical setup of the two. Tower would have a triangular platform at top, with the two antennas at two of the corners. A third antenna could be accommodated; in fact, the absence of a third makes it necessary for a weight to counter-balance the other two.

Site is one mi. west of Cedar Hill, 16½ mi. southwest of center of Dallas, 25 mi. from Ft. Worth. Guy wires require 80 acres of land.

Cost is estimated at $1,151,000 -- major components of which are $686,000 for tower, $150,000 land, $150,000 transmission lines, $100,000 antennas.

Both stations would operate with maximum power -- KRLD-TV with 100 kw on Ch. 4, WFAA-TV with 316 kw on Ch. 8.

To comply with air safety requirements, 3 special provisions have to be met: installation of radar reflectors; broadcast of a radio signal on govt. frequency; placement of markers locating the guy wires. Consulting engineers on the project are Earl Cullum for WFAA-TV and Craven, Lohnes & Culver for KRLD-TV.

**ONE CP ISSUED, 2 RETURNED TO COMMISSION:** Rate of new grants by FCC has been slow for some time, is likely to stay that way indefinitely. This week produced merely one, plus one initial decision. CP was for Wichita, KAKE, Ch. 10; initial decision looks toward Ch. 2 grant to WGUY, Bangor, Me. Grants surrendered were KAGR-TV, Yuba City, Cal. Ch. 52, and KPIC, Salem, Ore. Ch. 24.

In its desire to aid uhf, the FCC this week proposed a change in its network affiliation rules regarding "territorial exclusivity." However, net effect of the change, if finally adopted, would mean little to average station, uhf or vhf.

What FCC proposes is a change which would prevent any station from signing agreement with a network to stop the network from supplying programs to a second station in the same community (or in community within 15 miles).

Actually, only NBC-TV has such contracts and, more important, if a sponsor doesn't want the second station to get his program the station doesn't get it, re-
Famous Spartanburg site-move case is over (Vol. 10:11). WSPA-TV (formerly WORD-TV), Spartanburg (Ch. 7), had obtained permission from FCC to operate temporarily at Paris Mt., nearer Greenville and Anderson than Spartanburg.

UHF grantees in area protested to FCC and lost even though Sen. Johnson championed their cause. But WAIM-TV, Anderson, and WGVL, Greenville, wouldn't give up; they appealed to courts, this week obtained ruling which, in effect, won case for them. Court issued a stay order preventing WSPA-TV from starting at Paris Mt. pending hearing on merits of whole case.

WSPA-TV then conceded fight was over by telling FCC it would build at original Hogback Mt. site. The stay order, it said, frustrated whole purpose of temporary site -- fast service to area -- because of inherent legal delays.

FCC set April 30 for start of CBS-Zenith hearing on Ch. 2, Chicago, turning down Zenith's argument that it really should be competing with original licensee Balaban & Katz Corp. rather than with CBS, now operating WBBM-TV on the channel.

Other hearings scheduled to start April 30: Odessa, Tex., Ch. 7; Minneapolis, Ch. 9; Pittsburgh, Ch. 11; Klamath Falls, Ore., Ch. 2; Hatfield, Ind., Ch. 9.

COLOR STATUS--PRICE, PROGRAMS, PICTURE SIZE: Color symposium for set manufacturers, conducted by RCA in Bloomington last week (Vol. 10:13), appears to have impressed set makers with RCA's intentions about color -- but if any manufacturers have been stimulated into speeding up their color plans they aren't saying so yet.

Principal immediate effect has been to force Westinghouse to bring price of its set down from $1295 to $1110 -- near RCA's $1000 figure for its initial 15-in. set, which is now moving out to the market -- and to bring GE announcement that price of its set is $1000, with service policies same as RCA's (Vol. 10:13). GE says it has shipped to 15 distributors.

Situation is so turbulent technically, in the opinion of many manufacturers, that they can't afford to freeze designs and produce the 15-in. receivers now being built. One exasperated manufacturer expressed it this way: "There's an invention every 5 minutes. Not only our own, but others too."

Planning to produce about 10,000 sets this year (half 15-in., half 19-in.), RCA has committed itself to a "$10,000,000 gamble" on being first with the most whenever market "breaks."

Regarding new inventions, Philco remains mum about picture tube it's supposed to have developed, confirming and denying nothing. Pres. Wm. Balderston, speaking before Newcomen Society in Philadelphia March 30, had only this to say:

"The real bottleneck in this whole situation is the color picture tube...
What is needed is a vastly simplified color tube [and] I am utterly confident that a simplified color tube, adaptable to mass production techniques, will be developed by electronic science in the foreseeable future."

It will be 2-3 years, Mr. Balderston said, "before anything approaching mass production can be achieved."

CBS pres. Frank Stanton, after long silence about color, gave his evaluation in talk to Investment Bankers Assn. in Chicago March 31. He said that CBS-Hytron will have "large numbers" of 19-in. color tubes commercially available in second half of this year; that new Kalamazoo plant nearing completion will double company's tube production capacity. He called tube "CBS-Colortron 205," meaning 205 sq. in.

More and better large color tubes, Mr. Stanton said, "will get the production of color sets off dead center and initiate the process of consumer acceptance and cost reduction that will rapidly lead toward mass output."

Of future of color, he had little doubt, saying: "This field will certainly be very large. The qualitative superiority of color programming is such that just about every TV family will want to have a color TV set. This means that in the course of the next 7 or 8 years something like 30 to 40 million color sets may be sold at prices considerably higher than those that have ruled in black-&-white."
The three catchwords of color remain "price, picture size and programming." There is growing opinion that programming should be accorded more weight than it is generally given in relation to other two factors -- that it may be more important than picture size, at any rate.

There's little doubt in our minds that public will really begin to hanker for color when it can get sufficient programs of caliber of March 31 NBC-TV "Home" show. Mobile unit in Washington showed cherry blossoms, models, fashions, picnic table, etc. -- achieving one of best color shows to date. Another example was the beautiful flower display on "American Inventory" March 28 -- a program which would have been impossible to present with significance in monochrome.

Such programs may be contrasted with March 26 boxing match (Vol. 10:13), which gained scarcely anything from color. It's expected that some other sports, such as football, will be substantially enhanced by color.

* * * *

Some of NBC's color-expansion plans were detailed last week (Vol. 10:13), when pres. Pat Weaver described 90-min. "spectaculars" scheduled this fall. NBC will have capacity to deliver 5-7 hours of color weekly this fall, color coordinator Barry Wood told newsmen in Washington this week. Robert E. Shelby, NBC engineer in charge of color systems development, reported on AT&T's plans for feeding color to additional cities this year. There are some additions and changes in schedule we reported recently (Vol. 10:11). Here are current estimates:

April 15, Providence, Boston; May 1, Kansas City, Oklahoma City, Ft. Worth, Dallas, Tulsa; May 15, Youngstown; June 1, Fresno (changed from April 1); June 15, Syracuse, Utica, Schenectady, Dayton, Buffalo, Columbus, O.; July 1, Houston, San Antonio, Peoria, South Bend; July 15, Winston-Salem, Atlanta, Memphis, New Orleans, Jackson, Miss., Birmingham, Charlotte, N.C., Portland, Seattle (last 2 not certain); Aug. 1, Louisville, Grand Rapids, Indianapolis; Sept. 1, Miami, Jacksonville, Ft. Lauderdale, Macon, Fort Wayne, Wheeling, Columbia, S.C.; Oct. 1, San Diego, Hannibal, Mo. Changes are always possible, of course.

Some of these cities and others already get color via microwave uncorrected by AT&T -- sometimes excellent, sometimes not so good.

Notable among the new connections are first dates for equipping coaxial to handle color -- for Miami, New Orleans, et al. Up to now, all color connections have been microwave; coaxial requires more special equipment.

Though CBS has delayed its proposed addition of color programs, it's going ahead on lining up network facilities for affiliates. Among latest, it has Denver and Cleveland scheduled for June 1, Cincinnati Aug. 1, Detroit Aug. 15.

About 650 TV stations will be on the air in more than 300 communities by end of 1957, when about 90% of U. S. homes will be equipped with TV. This prediction by CBS pres. Frank Stanton, addressing central states group, Investment Bankers Assn., in Chicago March 31, was implemented with another significant forecast:

"Advertising expenditures on TV ... approximated $700,000,000 in 1953 which represented about a 40% increase over 1952. Assuming the continuation of the past relationship between advertising expenditures and TV set population, I believe we can look forward to aggregate TV advertising expenditures of the order of 1% billion by 1957 or 1958."

Where is the additional half billion coming from? The spectacular growth of TV has not cut into the aggregate revenues of any of the competing media. Looking at the list of radio, newspapers, magazines and all other media combined, we find that advertisers' expenditures in each type of medium in 1953 was greater than in 1948, in spite of TV. Some part of the growth in the old media was, of course, merely keeping up with the growth of the overall economy and the rise in the general price level.

"However, it still remains true that the printed media as well as TV grew at a faster rate than the economy as a whole. Accordingly, it is clear that TV was financed out of the increased aggregate advertising expenditure rather than at the expense of the other media. There appears sufficient room for TV advertising to grow since only a small part of the expected growth of aggregate advertising will be adequate to support the projected total increase in TV.

"TV presently absorbs less than 10% of the total advertising expenditure. Even if the aggregate advertising expenditure should cease growing, it is quite probable that, given TV's share of the public attention and its sales effectiveness, it would successfully increase its total revenues at the expense of the other 90%."
Norfolk's WTAR-TV (Ch. 3) turned on new 23-kw RCA transmitter March 30, replacing 5-kw, and on March 30 KVTV, Sioux City, Ia. (Ch. 9) turned on its 20-kw GE amplifier. Also reported, by RCA, was March 31 shipment of 50-kw transmitter to WBAL-TV, Baltimore (Ch. 11).

GE got off 5-kw transmitters March 27 to upcoming KALB-TV, Alexandria, La. (Ch. 5) and KPLC-TV, Lake Charles, La. (Ch. 7), both of which will get antenna in May. GE also announced that Ch. 6 transmitter has been shipped to KRDO-TV, Sedalia, Mo., which already had antenna, and that order for 12-kw has been received from WFIE, Evansville, Ind. (Ch. 62) to replace present 1-kw.

In our continuing survey of upcoming new stations, these were the reports received this week:

KFXJ-TV, Grand Junction, Colo. (Ch. 5), now running dummy loads on 500-watt Gates transmitter acquired from KFXD-TV, Nampa-Boise, Ida., hopes to begin test patterns by mid-May, programming by end of month, reports pres-gen. mgr. Rex G. Howell. It will use 3-bay GE antenna atop 940-ft. Aerial tower; delivery of latter awaits only FCC approval of height increase. Base hour rate will be $100. Hal Holman will be rep.

KFXD-TV, Nampa-Boise, Ida. (Ch. 6), which quit the air for economic reasons last Aug. (Vol. 9:34), but was recently acquired by Idaho Bestg. & Television Co. (Vol. 10:5), hasn't set target date. Present CP holders operate KGERM, Boise, recently gave up CP for Ch. 9 there (KTVI), still seeks to determine whether third station can be operated economically in area, reports pres. Frank Carman, engineer-broadcaster. KFXD-TV's 500-watt Gates transmitter has been sold to KFXJ-TV, Grand Junction, Colo. (Ch. 5), which has May target (see above). A higher-powered transmitter will be installed if KFXD-TV decides to build. Rep will be Hollenberg, who may include it under “group market plan” along with 5 other stations with interlocking ownership—KOPR-TV, Butte, Mont. (Ch. 4); and the upcoming KUTV, Salt Lake City (Ch. 2), and Idaho grantees KWIK-TV, Pocatello (Ch. 10), KLIX-TV, Twin Falls (Ch. 11), and KIFT-TV, Idaho Falls (Ch. 8).

KWIK-TV, Pocatello, Ida. (Ch. 10), owned by Frank C. Carman-Grant Wrathall group, now doesn't expect delivery of transmitter until early summer, has delayed test pattern target to Sept. 15, programming to Nov., reports new gen. mgr. John R. Taylor. Transmitter is being custom-built in Salt Lake City workshop operated jointly by all Carman stations. It will use 88-ft. tower topped by RCA antenna, 5893-ft. above sea level. It's only 48-mi. from Idaho Falls, where KID-TV (Ch. 3) started last Dec.; KISJ (Ch. 6), other Pocatello grantee, plans debut by next summer. KWIK-TV rep will be Hollenberg, who will offer it under “group market plan.”

WTHK-TV, Terre Haute, Ind. (Ch. 10) is remodeling newly-acquired 8-story building into TV-radio headquarters. With footings already poured, construction of 475-ft. Idecow tower begins April 14. It has 50-kw RCA transmitter scheduled for May delivery, plans mid-June tests, July 1 programming as CBS affiliate. Base hour rate will be $400. Rep will be Bolling.

WTVK-TV, Durham, N. C. (Ch. 11), now that it's selling radio WTIK to Chanticlear Bestg. Co., New Brunswick, N. J., will apply for new call letters, WTVN (Watch Television Durham), reports pres. Harmon L. Duncan. Change won't be made until June 23, however, because it's assigned until then to 20th Century-Fox for use in movie Taxi. Station plans Sept. start with DuMont equipment.

KSWM-TV, Joplin, Mo. (Ch. 12), just starting building construction, has 10-kw RCA transmitter promised for April and Stainless tower scheduled for completion in July, now plans Aug. 1 tests, writes pres-gen. mgr. Austin Harrison. It plans Aug. 15 programming, has signed with CBS. Rep not yet chosen.

WQXL-TV, Louisville (Ch. 41) has completed 250-ft. Blalow-Maxon tower topped with 43-ft. GE antenna, now awaits delivery of 1-kw GPL-Continental transmitter before setting target, reports owner Robt. W. Rounsville. He also holds CPs for WQXN-TV, Cincinnati (Ch. 54), with summer target, and WQXI-TV, Atlanta (Ch. 30) due in fall. Forjoe will be rep for WQXL-TV & WQXN-TV; rep for WQXI-TV not reported.

CFCM-TV, Quebec City, Que. (Ch. 4), with 95% of technical equipment on hand and construction nearing completion, now plans tests during latter May of 500-watt DuMont transmitter in suburban Ste. Foye, reports operations & program mgr. Claude Garneau. In June, 35 hours of programs per week begin, 5-6 p.m. & 7-11 p.m. daily. It's jointly owned by Famous Players Canadian Corp. and AM stations CHRC, CJKQ, CKCV. Famous Players also owns 50% of CKCO-TV, Kitchener, Ont., which began last Dec. CFCM-TV base hour will be $200. Reps will be Weed (for U. S.) and Jos. A. Hardy & Co.

General Foods reassings products to agencies as follows: Young & Rubicam (Jell-O, Minute Rice, Minute Tapio, Calumet baking powder, Certo, Sure-Jell, D-Zerta, Birds Eye frosted foods, Baker chocolate & cocoa, Baker's Coconut, Log Cabin Syrup, Swan's Down, Instant Postum, Sanka, Birely's soft drinks, Kernel-Fresh salted nuts); Benton & Bowles (Post cereals, Maxwell House, Bliss & Yuban coffees, Gaines dog food); Foote, Cone & Belding (Kool-Aid).

Personal Notes: Frank A. Cowan, asst. director of AT&T Long Lines, wins 1958 Lamme Gold Medal of American Institute of Electrical Engineers in recognition of engineering achievement; it will be awarded June 21 at Pacific general meeting of AIEEE in Los Angeles . . .

Judge Justin Miller, retiring NARTB chairman and gen. counsel, was honored at testimonial dinner in Washington’s Mayflower Hotel March 31, attended by about 600 notables in govt. and industry—including at least 150 out-of-town network & station executives. Preceding the dinner, Judge Miller was presented with a scroll by Vice President Richard M. Nixon, one of 40 of his former law students signing it (he’s former law dean at Duke and USC). Mrs. Miller was presented with a Sheffield candleabra by BMI, and NARTB presented the Judge and Mrs. Miller a Chevrolet station wagon. They will make their home at 15520 Earlham St., Pacific Palisades, Cal.

Network Accounts: Networks go on Daylight Saving Time Sun., April 25, continuing thru Sat., Sept. 25, and NBC-TV explains this means: (1) Program schedules of all NBC-TV stations in DST areas will remain unchanged. (2) All non-interconnected stations will retain program schedules on same local clock hour basis as before DST. (3) Most programs carried on live or kine basis on interconnected stations in Standard Time areas (Mountain Time Zone excepted) will be seen one hour earlier. (4) All interconnected stations in Mountain Time Zone will schedule network programs on clock hour basis, thru quick kine, except for sports and special events programs which will be carried live . . . Trendex rating on General Foods’ 90-min. Rodgers & Hammerstein Show on all 4 networks March 24, polled in 10 cities on overnight basis, showed 66.5 score, indicating program reached 24,000,000 homes, 80,000,000 persons. By networks, ratings were CBS-TV, 33.1; NBC-TV, 25.7; ABC-TV, 5.2 . . . Most sponsors of Show of Shows, says NBC, will continue on summer replacement to be called Saturday Night Revue, Sat. 9-10:30 p.m. for 15 weeks from June 12, with Eddie Albert as m.c., Alan Young & Ben Blue as alternate feature comics; light comedy revue will search for unknown talent . . . Benrus Watch Co., buying 10-min., first sponsor to sign for next edition of Max Liebman’s Show of Shows when it resumes in fall, thru Cecil & Presbyte . . . Tony and 5 Day Deariosr Laboratories (pads) on April 26 take over Tue. 8-8:30 & 8:30-9 p.m. periods, respectively, as summer replacement for Buck-Berle Show on NBC-TV, format of new show undecided as yet; Tony also buys Mon. 7:30-7:45 replacement of Arthur Murray Party on NBC-TV . . . Chrysler may carry Stork Club, now local in N. Y. on WNTB, on ABC-TV in the fall, Sat. 10-10:30 p.m., but it isn’t officially announced yet.

Marked improvement in commercial practices of some TV programs which prompted complaints 6 months ago (Vol. 9:87,50) were noted by NARTB TV Code director E. H. Bronson in report this week to Washington quarterly meeting of Code Review Board, headed by John E. Fetzer (WKZO-TV, Kalamazoo). Monitoring by board’s staff, he said, has had “salutary effect” and code subscribers responded cooperatively. Referring to group of programs monitored during last 3 months, then monitored again more recently, Bronson said changes recommended by code board had been put into effect by stations and networks involved in more than half of cases. In 2-day meeting, Code Review Board also: (1) Confirmed with Sen. Bricker (R-O.), Chairman of Senate Commerce Committee, to acquaint him with progress of TV self-regulation. (2) Sent letter to non-subscribers urging their “support in this movement toward continuing improvement of the profession” . . . (3) Adopted resolution expressing appreciation to retiring NARTB chairman Justin Miller for “his leadership and his substantial contribution” to the code.

Sen. Edwin C. Johnson (D-Colo.) announced his “final and irrevocable” decision not to run for reelection this year. The outspoken 70-year-old former chairman of Interstate & Foreign Commerce Committee—and now its ranking minority member with keen interest in TV-radio matters—said he had no plans for future, except “to catch up on a lot of little things . . . a little golf . . . a little fishing . . . a little browsing around in the hills of Colorado.” Non-salaried chairman of Western Baseball League, his hobby, he said he wasn’t quitting Senate for any baseball job, as rumored. In reply to question at news conference April 2, he said chances that he would run for governor of Colorado were “very dim.” He has served in Senate 18 years.
ANOTHER $150 SET; THE BUSINESS OUTLOOK: Now comes Hallicrafter with a 17-in. table model at $150 in walnut finish, $160 mahogany, $170 blonde to compete with Crosley's fast-moving Super V series listing at $140, $150 & $160 (Vol. 10:13) and reportedly being produced now on a 3-shifts-a-day basis. We checked also on rumors that a $150 model was about to be introduced by another manufacturer, but he denied it flatly.

Whether the Crosley & Hallicrafter prices will deter anticipated increases in list prices of new lines due from the majors this spring and summer (Vol. 10:12), it's too early to tell. It could be that those who abandoned 17-in., notably RCA, whose low end now is a 21-in. table at $200, will be forced back to it if indeed the 17-in. has peculiar appeal as home's second set and consumer demand persists.

Among some of larger manufacturers, however, they say that the phenomenon of today's market is demand for higher-priced merchandise -- bigger and better sets. This despite prospect of even more expensive color. One told us dealers are clamoring for more deluxe items than company had planned for, noting especially the brisk demand in places like the Fresno (uhf) area and such new markets as Great Falls, Mont., where buying power is likewise high and signal strength extraordinarily good.

"It's going to be a terrific second half," said this optimistic spokesman. But another medium-sized manufacturer sized up the market thus:

"Business seems to be holding up well in quantity, but the problem of making money at the prices at which the retail salesmen are selling our products is one to conjure with. It will be very interesting to see what happens at the retail level when RCA starts selling their color sets." [RCA 15-in. at $1000 due on market soon.]

Looking at general business situation, you get every which-way kind of analysis from the economic experts -- ranging all the way from Federal Reserve Board to the big & little manufacturers. What they boil down to, apparently, is that the business decline is showing signs of leveling off. N.Y. Herald Tribune's Harvey E. Runner puts it this way:

"April will be a better economic vane than March. Easter retail sales may be the decisive clue...In fact, the April gain in retail sales could be sufficiently large to make up a fair part of the decline sustained in the first 3 months..."

National Assn. of Purchasing Agents reports buying on hand-to-mouth to 90-day basis, but also sees signs that the business decline has abated. On basis of survey of its members in March, it found prices showing some strength, inventories of unworked material down, employment situation improving. On the other hand, Office of Business Administration, Dept. of Commerce, found recession persisting into 1954 because of continuing inventory liquidation and defense cutbacks.

Philco financial v.p. Courtnay Pitt is one who takes an optimistic view of the outlook. Last week, he told American Bankers Assn.'s National Installment Credit Conference in Chicago that a higher percentage of TV-appliance sales is being financed now than at any time since the war. He predicted 6,000,000 TV set sales in 1954, said "inventories are down to a good working basis and it is even possible you will see some price increases this year, as compared with reductions in late 1953."

Philco looks to 50% or more increase in consumer sales of air conditioners over 1953, or 1,250,000 units at $450,000,000 retail, he said, and by 1956 the figure will exceed 1,500,000. He said refrigerator sales should be as high as last year's 3,775,000 units; home freezers slightly better than last year's 1,200,000 retailing for $480,000,000; electric ranges, up 10% to 1,430,000 units. Trend will doubtless continue to automatic home laundry equipment, he added, and good market is indicated by fact there are 44,000,000 wired homes but only 2,500,000 automatic dryers as yet.
TV production went to new high of 124,343 for year to date during week ended March 26, up from 118,289 preceding week and comparing with 172,329 same 1953 week. It was highest figure since last Dec. 11. It was year’s 12th week, brought total to 1,321,000 vs. 2,116,000 for comparable period last year.

Radio production was 191,149 units week ended March 26, not much change from preceding Feb.—March weeks and comparing with 303,770 in same 1953 week. For the 12 weeks, radio output totaled 2,405,000 sets as against 3,532,000 same 1953 period. RETMA recap for first 2 months shows auto sets (726,403) by far the biggest item.

Note: One big tubemaker this week warned that receiving tubes may go on allocation soon — with shortages likely in latter half of this quarter because of minimum recent purchases while inventories were being run down. Moreover, recent layoffs in tube plants mean they can’t get back into full production overnight. Some types are already short, it was said, due to good current business in TV receivers generally throughout the industry. "Even the 17-in. sets use circuit tubes," spokesman said. There’s plenty of capacity for producing more 17-in. picture tubes.

RETMA’s PLAN TO HALT SPURIOUS RADIATION: The 5-year-old problem of TV & FM receiver interference finally looks as if it’s really on way to solution. Convinced that FCC either has the power to impose onerous controls over the industry — or can get that power from Congress — RETMA has broached a voluntary all-industry plan which it feels confident will eventually mean the end of the vexing interference problem.

What brought matters to a head was FCC’s mounting impatience, expressed by Comr. Sterling in Toronto speech (for full text, see Special Report, Oct. 31, 1953) and by Chairman Hyde’s wire showing serious concern over reversion to 21-mc IF by some manufacturers, notably Crosley (Vol. 10:8).

Hope and expectation of RETMA leaders is that new plan will cause all set makers to build TV sets with 41.25-mc IF stages — upon which FCC’s whole uhf allocation plan is predicated — and to bring spurious radiations down to levels which the Commission considers feasible and reasonable.

Beyond these immediate goals, aim is to reduce sweep radiation, minimize subcarrier problems in color sets — and eventually confine all unwanted transmissions, regardless of source, to insignificant levels.

Plan proffered by RETMA was submitted to all set makers this week; they were asked for "statement of intention" to adhere to it. Briefly, this is the idea:

1) Establishment of an independent certification laboratory empowered to test all TV and FM sets for conformance to standards acceptable to FCC.

2) Authorizing manufacturers to affix laboratory seal of approval to their sets if they meet those standards.

3) Informing FCC who meets standards and who doesn’t.

* * * *

RETMA has no power to force compliance, of course, but implicit in plan is fact that those who comply can make the most of seal of approval in their ads and promotion, and that non-compliers would be exposed to whatever FCC might do.

RETMA’s committee on spurious radiation admits frankly that five years have failed to produce adequate adherence to standards RETMA itself proposed to FCC. In letter to manufacturers, chairman Dr. W.R.G. Baker stated:

"If the industry program fails to solve the problem, the FCC will be forced to find some more drastic procedure for its solution." And again: "Your committee is of the opinion that if the industry does not voluntarily abide by the [standards] and work effectively toward their improvement, then stricter standards will be forced upon the industry by the FCC."

FCC has endorsed plan warmly, but at same time stating it regards initial interference standards to be temporary and expects continuous tightening. In TV, the specific standards provide for 41.25-mc IF and the following radiation limits, all measured at 100 ft. by IRE standards:

130 mc or less, 50 uv/m; 130-174 mc, a linear interpolation between 50 uv/m
and 150 uv/m; 174-260 mc, 150 uv/m; 260-470 mc, a linear interpolation between 150 uv/m and 500 uv/m; above 470 mc, 500 uv/m.

Each manufacturer adhering to program would submit one of first 100 chassis of each model, plus one a month from production lines. Lab would also be empowered to check sets obtained from open market and even enter the plants. Actually, it's expected that conformance would be so widespread that lab would need merely to confirm each manufacturer's own measurements most of the time.

Confidence of obtaining wide support is so strong at RETMA that its board, meeting in Niagara Falls, Ont. April 29, is expected to announce start of project.

Among labs being considered are: Armour, Battelle, Brooklyn Polytechnic, Columbia U, Cornell U, Franklin Institute, Mellon Institute, Mid-West Research Institute, New York U, Stanford Research Laboratory, U.S. Testing Labs, Syracuse U.

Topics & Trends of TV Trade: TV-radio-phonograph industries were skunked, as expected (Vol. 10:13), in the tax bill (HR-8224) which President Eisenhower signed March 31 and which became law April 1. But, happily, a sizeable segment of the trade will benefit by reason of the reduction from 10% to 5% in excise taxes on refrigerators, freezers and certain other appliances—and the consensus seems to be that it will serve to give lagging business a needed hypo since most of the saving will be passed on to consumers.

Since appliance stores are major TV-radio-phono marketeers, increased store traffic may help that trade, too—but that remains to be seen. Meanwhile, for the sake of our numerous distributor-dealer subscribers, we checked at the Internal Revenue Bureau to find out exactly what items are covered by the 5% reduction. These were our findings:

HR-8224 simply designates (1) "electric, gas & oil appliances," and (2) "refrigerators, freezers (excluding air conditioners)" as the categories reduced from 10% to 5%. The Internal Revenue Code's Sec. 3406(a)3 lists the following under the category of electric, gas & oil appliances:

"Electric direct motor-driven fans and air circulators (not of the industrial type): and the following appliances of the household type: electric, gas, or oil water heaters; electric meat irons; electric air heaters (not including furnaces); electric immersion heaters; electric blankets, sheets, and spreads; electric, gas, or oil appliances of the type used for cooking, warming, or keeping warm food or beverages for consumption on the premises; and electric mixers, whippers, and juicers; electric belt-driven fans; electric exhaust blowers; electric or gas clothes dryers; electric door chimes; electric dehumidifiers; electric dishwashers; electric floor polishers and waxers; electric food choppers and grinders; electric hedge trimmers; electric ice cream freezers; electric mangles; electric motor or still picture projectors; electric pants presses; electric garbage disposal units; and power lawn mowers."

The Code's Sec. 3405(a) lists refrigerators and quick-freeze units as follows: "Household type refrigerators (for single or multiple cabinet installations) having, or being primarily designed for use with, a mechanical refrigerating unit operated by electricity, gas, kerosene, or gasoline; household type units for the quick freezing or frozen storage of foods, operated by electricity, gas, kerosene, or gasoline; combinations of such household type refrigerators and units."

Sec. 3405(b) lists refrigerating and freezing apparatus as follows: "Cabinets, compressors, condensers, condensing units, evaporators, expansion units, absorbers, and controls (hereinafter referred to as 'refrigerator components') for, or suitable for use as parts of, or with, household type refrigerators or quick-freeze units of the kind described in subsection (a), except when sold as component parts of complete refrigerators, refrigerating or cooling apparatus, or quick-freeze units (hereinafter referred to as 'refrigerating equipment'). Under regulations prescribed by the Secretary, the tax under this subsection shall not apply in the case of sales of any such refrigerator components by the manufacturer, producer, or importer to (1) a manufacturer or producer of refrigerating equipment, or (2) a vendee for resale to a manufacturer or producer of refrigerating equipment if such components are in due course so resold. If any such refrigerator components are resold by the manufacturer or producer to whom sold or resold otherwise than on in connection with, or with the sale of, complete refrigerating equipment manufactured or produced by him, then for the purposes of this section such manufacturer or producer shall be considered the manufacturer or producer of the refrigerator components so resold by him."

Sec. 3405(c) defines air-conditioners as "self-contained air-conditioning units."

Emerson Radio of Canada Ltd. has been formed to manufacture and distribute complete Emerson line there. Pres. is Selby J. Sinclair, headquarters at 74 Trenton Ave., Mt. Royal, Que. Norton J. Anderson is gen. mgr., Rupert K. Grant sales mgr.
Electronics Reports: Electronics will be $10 billion industry by 1960, in terms of annual value of factory sales, with commercial electronics becoming increasingly important segment of the business. This prediction is part of study of commercial and military electronic fields being conducted by Stanford Research Institute for Hoffman Radio. Analysis is being made to determine best direction of expansion in non-household fields, Hoffman's goal being to develop line of commercial electronic products which might some day represent $15-$20,000,000 annual sales.

Institute estimates 1955 electronic factory sales at $5.5 billion, 1960 sales at $10 billion. The 1960 prediction, broken down (with comparable 1953 estimates in parentheses): household products, $3.75 billion ($1.675 billion); military equipment, $5 billion ($3.4 billion); commercial products, $1.25 billion ($425,000,000). Component sales in 1960—excluding tubes—may total $2 billion, compared to 1955's $1.1 billion.

In commercial electronics, "the greatest promise immediately ahead appears to be in the electronic data-processing field, and more research dollars are now being spent in that field than on any of the other commercial markets." Recommended for further investigation were these possibilities: (1) data-processing machine market; (2) commercial communications market; (3) prospects for a major electronic components manufacturer on coast.

Analysis of branches of commercial electronics market showed these anticipated factory sales for 1960 (estimated 1953 sales in parentheses): Data processing equipment, $50,000,000,000 ($25,000,000,000); laboratory & service equipment, $200,000,000,000 ($100,000,000,000); industrial control instruments, $150,000,000 ($65,000,000); X-ray equipment & tubes, $90,000,000 ($60,000,000); broadcast equipment, $80,000,000 ($60,000,000); mobile & amateur radio, $60,000,000 ($35,000,000); heating apparatus, $50,000,000 ($20,000,000); radiation instruments, $50,000,000 ($20,000,000); industrial TV, $40,000,000 ($6,000,000); microwave relay, $25,000,000 ($12,000,000); marine equipment, $15,000,000 ($9,000,000); aviation equipment, $15,000,000 ($7,000,000).

Boasting full line of industrial TV equipment, General Precision Laboratory is putting heavy emphasis on remote control. At last week's IRE convention, GPL's entire exhibit was devoted to ITV. Items demonstrated: GPL-Pye remote controlled industrial camera which permits control of lens change, iris, focus, pan & tilt from distances of 1000 ft. or more; new GPL-Pye industrial camera complete in small package including internal sync generator, using English station tube said to be "roughly equivalent to the 6198 vidicon" and capable of more than 500 lines of resolution; new remote control pedestal utilizing fast servos manufactured in collaboration with Kearfott Co.; small GPL-built low-priced camera with its own simplified remote control pedestal.

Skeletonized defense materials system, cutting out much of the paperwork required to obtain military materials, was announced by Commerce Dept.'s Business & Defense Services Administration this week. As spelled out in new amendments and directions to DMS Reg. 1 & 3, new system requires only largest prime contractors and suppliers to keep materials allotment accounts, but retains basic format of defense materials system, so that controls may be quickly imposed when Defense Dept. and Atomic Energy Commission need so much material that their orders threaten civilian production.

Atomic battery demonstrated in Boston this week by Tracerlab Inc. employs tritium, an element used in H-bomb. Battery shown recently by RCA (Vol. 10:5) used strontium-90. Alexander Thomas, Tracerlab physicist, reported that beta particle emanations from battery are so weak that danger is practically non-existent. Device produces up to 400 volts, was demonstrated firing standard flash bulb and lighting small neon lamp.

Printed circuit IF strip for monochrome TV receivers with 41-mc IF and intercarrier sound is being offered by Allen D. Cardwell Mfg. Corp., Plainville, Conn.

Dr. Ralph J. Slutz, former National Bureau of Standards computer & mathematics consultant, named asst. chief of Bureau's Central Radio Propagation Laboratories.
Color Trends & Briefs: Color will dominate engineering sessions of NARTB convention in Chicago, May 23-27—with about half the papers devoted to subject. Following is tentative schedule of sessions, prepared by convention committee and A. Prose Walker, NARTB mgr. of engineering:

New color test equipment: Electronic Instruments div., Burroughs Corp., Philadelphia, has developed TV sync & color bar generator for use by TV manufacturers' research & development laboratories to study test performances of color circuits. Telechrome Inc., Amityville, L. I., offering portable "Chromalyzer" for alignment of receivers, adjustment of transmitters, etc., designed to generate all required standard color signals and information independent of other apparatus (price $750).

Transmission of color "stripe" by stations, to enable servicemen to check alignment of receivers even during monochrome transmission (Vol. 10:12), was recommended to NARTB engineering advisory committee by RETMA service subcommittee. RCA announced that it will cost station about $500 to add "color stripe generator."

RCA's fifth color seminar for engineers in Camden, conducted this week, brought total attendance to about 500. The 81 attending this week included men from NBC, CBS, AT&T and many individual station.

Financial & Trade Notes: CBS set all-time records for profits and sales in 1953. Net income was $8,894,642 ($3.50 a share) on gross revenues of $33,908,800, nearly 25% higher than 1952's gross of $251,594,490. Net income in 1952 was $6,445,506 ($2.75). Though there was no dollar breakdown by operating units, annual report said each increased its sales volume over 1952.

CBS-TV network, with 74 affiliates, "showed the greatest increase in dollar volume, a gain of more than $28,000,000 over 1952—a 41% rate of increase compared with 22%, 16% & 15% for the other networks." CBS-radio, increasing its lead in billings, had 5% rise in dollar volume in 1953, and its advantage over nearest competitor was 38%, compared with 24% year before, said report. In manufacturing activities, tabulating subsidiary CBS-Hytron reported 28% greater dollar sales in 1953 than 1952. Sales of CBS-Columbia TV sets increased by 50%, compared to "industry's increase of 11%." Aiming particularly at new markets where CBS-Columbia had opportunity to start on par with other trade names, report said it attained "significant and satisfactory share" of these markets.

Columbia Records, div. sold its 20,000,000th LP record last year, is now developing automatic injection molding process for its factories, with new Terre Haute, Ind. plant scheduled to be "industry's first fully automatic factory completely equipped with injection molding machines." Columbia Records sold 50,000 table model "360" hi-fi phonographs in 1953, report notes.

Annual meeting of CBS stockholders is April 21, and proxy notice lists these officers & directors whose aggregate remuneration exceeded $30,000: ex-CBS-Hytron pres. Bruce A. Coffin, $77,395; ex-CBS-Hytron chairman Lloyd H. Coffin, $77,395; ex-CBS-Columbia pres. David H. Cogan, $77,395; Columbia Records pres. James B. Conkling, $73,106; CBS-Radio pres. Adrian Murphy, $65,000; newscaster & CBS director Edward R. Morrow, $240,628 (not including royalties of $33,600 to Persons to Persons Corp., 32 1/2% owned by Morrow, his son and his mother); chairman Wm. S. Paley, $100,000; CBS pres. Frank Stanton, $235,780; CBS-TV pres. J. L. Van Volkenburg, $88,885.

International Resistance Co. reports 1953 earnings of $508,058 (38¢ a share) on sales of $12,755,041, compared with 1952 earnings of $777,877 (44¢), sales of $11,778,836. Breakdown of company's sales shows TV-radio manufacturers were its biggest group of customers in 1953, buying $6,547,974 worth of components; industrial and Govt. customers bought $4,807,229, replacement accounted for $1,382,675, export $147,004.

Trav-Ler Radio Corp. reports 1953 profit and sales both well over 1952, net earnings rising to $412,257 from $291,565, sales to $14,069,624 from $11,860,387. In annual report, pres. Joe Friedman said: "While it is difficult to predict the business future generally, we believe that the coming year should continue to show a growth in our civilian business." Board has voted to resume quarterly 7 1/2¢ dividend.

Hoffman Radio Corp. reports record 1953 sales of $50,415,416, some 40% more than the $36,379,658 reported for 1952. Net income for 1953 was $1,199,655 ($2.07 a share) vs. $1,023,708 ($2.81) for 1952. Annual statement calls 4th quarter 1953 earnings "a definite disappointment," blames color publicity and "the decision of a well-known company to liquidate its inventory at drastic discounts."

Indiana Steel Products Co. reports 1953 net income of $335,925 ($2.36 a share), compared to $300,565 ($2.16) in 1952. Annual report called net sales highest in history but dollar volume wasn't given. Sales for 1952 were $6,385,911 (Vol. 9:11).
ANY TRANSFER of ownership deals still pend before FCC—but, except for last week's approval of "distress" sale of KFOR-TV, Lincoln, Neb. (Ch. 10), now off the air, the Commission hasn't yet acted on any of the other transfer proposals made so far this year. Several haven't even been filed by.

Biggest deal since the ABC-UPT merger, Storer Broadcasting Co.'s $10,000,000 purchase of Empire Co. (WXEL, Cleveland; KPTV, Portland, Ore.; Empire Co., manufacturer), revealed in early Jan. (Vol. 10:9), still awaits Storer's disposal of one of his 5 vhf stations and possibly action on proposed FCC rule permitting any entity to own 2 uhf in addition to any vhf stations.

Storer says he hasn't found any buyer yet, though it's still obscure which of the stations he's willing to sell. It's reasonable to assume his broker, Howard Stark, who negotiated this week's sale of KO'TV, Tulsa, (see p. 1), would like to sell more stations to the Jock Whitney firm. At all events, transfers are presently bogged down.

Another big deal. Westinghouse's pending $6,000,000 purchase of KPIX, San Francisco (Vol. 10:11) ought to be finalized fairly soon—and its expected that 14% stockholder, gen. mgr. Philip G. Lasky, will remain at that post for Westinghouse.

There's General Teleradio's $1,000,000 purchase of WBHQ-TV with WBHQ, Memphis (Vol. 10:11); Time Inc.'s $3,500,000 purchase of KLZ-TV with KLZ, Denver (Vol. 10:10-12); Jessica Longston group's $350,000 purchase from Carl Raymond of KMO-TV with KMO, Tacoma (Vol. 10:5); Gene Autry group's $400,000 purchase of half-time KOY-TV, Phoenix, for merger with its time-sharing Kool-TV there (Vol. 10:12); and 50% sale of WHBY-TV with WHBY, Holyoke-Springfield, Mass. to employe pension fund of Springfield News and Union (Vol. 10:10)—none acted upon as yet.

In the works, among quite a few other deals to be announced, are Sheldon Anderson's proposed sale of his KVVG with radio KCKV, Tulare, Cal. for reported $700,000; sale of WTVH-TV with WTVH, Peoria, Ill., for unnamed sum to recently merged local newspapers (Vol. 10:13); J. O. Willett's acquisition of 98% of KFAZ, Monroe, La., by buying out a partner's 36% for $25,500 (Vol. 10:8); and proposed $400,000 sale of the physical assets of now-defunct uhf KRTV, Little Rock, to new vhf KATV in nearby Pine Bluff, Ark. (Vol. 10:11).

There are also several CP sale deals, including proposed $76,600 sale of assets of projected WUTV, Youngstown, so that WFMJ-TV can take over its Ch. 21 (Vol. 10:10); McJendon family's proposed $5000 purchase of Texas oilman H. L. Hunt's Ch. 43 CP for KTLG, Corpus Christi (Vol. 10:10); Edward Lamb's proposed $5000 purchase of Ch. 47 WTVQ, Pittsburgh (Vol. 9:30).

U of Nebraska proposes to acquire, though it hasn't yet applied for CP, the Ch. 12 equipment of KOLN-TV, Lincoln, Neb., whose owners recently bought now-silent KFOR-TV (Ch. 10) in "distress sale" (Vol. 10:13). Mr. & Mrs. John E. Fetzter (WKZO-TV, Kalamazoo) originally bought station KOLN-TV under "distress" circumstances last year (Vol. 9:30,34), now plan shift to Ch. 10 using KFOR-TV equipment. Fetzers will install, and operate at no expense to university, KOLN-TV's 5-kw DuBont transmitter and associated equipment (RCA 6-ray superheterodyne antenna, etc.) for $100,000 on mutually satisfactory terms. Meanwhile, Fetzers are transferring it to Byron J. Dunn, pres. of National Bank of Commerce, Lincoln, as trustee for university. According to report filed with FCC, university cannot act yet because (a) new chancellor is being selected, and (b) further appropriations of funds won't be available before July 1, 1955.

Creditors of Tele King Corp., with Chapter XI claims exceeding $10,000, in addition to those listed last week (Vol. 10:1): Thomas Electronics, $110,651; Westinghouse, $93,829; Sylvan, $84,386; Tung-Sol, $80,706; Progressive Electronic Inc., $43,315; Micamaco Radio Corp., $46,693; Red Lion Novelty Furniture Corp., $46,939; Waterbury Co. Inc., $42,686; Victory Container Corp., $39,927; Mallory, $31,926; Sessions Clock Co., $30,049; Sheldon Electric Co., $29,516; Radio Receptor Co., $27,084; RCA Victor, $24,799; Oak Mfg. Co., $23,272, Stanwyck Winding Co., $22,488; Hagen & Hagen Inc., $21,715; Sprague Electric Co., $20,502; Videocraft Mfg. Co., $17,612; Webster-Chicago, $15,264; Rogers Electronics Corp., $14,644; Modern Die & Machine Co., $11,870; Precision Plastic Products Inc., $11,388; U. S. Electronics Corp., $10,714; Manfredi Wood Products Co., $10,370; Standard Winding Co., $10,072.

Image orthicon and vidicon camera tubes, heretofore manufactured only by RCA, will be made by GE, with commercial production scheduled for 1955. Project under Harry L. Thorson is in production planning stage at Schenectady tube plant. At no time since start of TV has any company besides RCA gone into regular commercial production of the costly and difficult-to-produce tubes.

Dividends: RCA, 25¢ payable May 24 to stockholders of record April 15; Emerson Radio, 10¢ quarterly & 5¢ extra April 15 to holders April 5; Webster-Chicago, 15¢ April 20 to holders April 8.
NETWORK TV and radio billings held steadily in Feb., despite short month — radio actually showing increase of more than $500,000 over Feb. 1953, though Jan.-Feb. aggregate is considerably under same 1953 period. TV billings for month were $23,089,609 as against $25,056,448 for Jan. and $15,840,989 for Feb. 1953. TV’s strong position thus far this year is indicated in $48,146,057 aggregate for Jan.-Feb. vs. $33,116,932 for same 2 months of 1953.

Publishers Information Bureau monthly report also shows CBS again leading both TV and radio network billings, with ABC-TV again strong but not quite achieving its record of Jan. 1954. The complete PIB report:

* Revised to March 29, 1954.

**Telecasting Notes:** Lineup of big-budget shows has been proposed by DuMont program chief James Caddigan to win that network a long- overdue position — what Variety calls “the biggest bundle of quality shows on the camera ever gathered at one time in its sporadic history.” Flushed with success in landing The Goldbergs as summer replacement for Bishop-Sheen (Vol. 10:15), DuMont program and production braintrusts have added more top-grade but costly shows on tap, says Variety, and now seek “to convince the front office that sufficient coin outlay to carry the programs as sustainers until they're sold is the kind of gamble necessary to bring the network to eminence” — Money to gamble on nebulous program properties is one of keys to other networks’ success; lack of it one of DuMont’s drawbacks, just as it was one of reasons ABC had such tough going before joining up with UPT. For example, ABC-TV couldn’t stand Studio One sustaining overhead, though show had quickly proved it was Grade A, so dropped it only to see CBS-TV latch onto it, run it sustaining a few times, sell it to Westinghouse shortly thereafter . . . ABC Film Syndication Inc. now a separately incorporated, self-contained subsidiary of AB-PT, with George Shupert as pres.; Don Kearney, sales v.p.; Edward Graessle, treas.; Raphael Scobey, secy. . . . Unusual instance of feature film being presented on TV before release to theatres happens this week when Eros Studios (British) permits WNBNT, N.Y., to carry The Thirteenth Green on its midnight movie period March 27, acquired thru American-British TV Movies Inc. . . . TV car auction called Carnival, started March 31 on WMAL-TV, Washington, sponsored by Ourisman Chevrolet and Tom’s Auto Service; two announcers display and describe new and used cars, start bidding, sell to highest bidder (via telephone) who is permitted to inspect car in person before final purchase . . . Century Theatre, famed N.Y. Shubert playhouse on 7th Ave, where Al Jolson held forth, now being converted by NBC into TV studio . . . KACY, St. Louis (Festus) cuts base hour from $500 to $250, one-min. from $100 to $40 . . . More rate increases: WLW, Columbus, adds new Class AA with hour rate of $800, min. $140, Class A hour goes from $625 to $700; WLWD, Dayton, also adds new Class AA with $800 hour, $140 min., raises Class A hour from $675 to $750; WTVN, Columbus, raises base hour from $500 to $600, min. $80 to $100; WEEK-TV, Peoria, hour from $300 to $400, min. $60 to $80; WOSCTV, Charleston, S. C., hour from $200 to $300, min. $40 to $60; KROD-TV, El Paso, hour from $250 to $300, min. $50 to $60; KLAS-TV, Las Vegas, hour $150 to $200, min. $30 to $40; KIMA-TV, Yakima, Wash., hour from $150 to $200, min. $25 to $40 . . . WTVT, Bloomington, Ind., which recently shifted from Ch. 10 to 4 with 100-kw and new 1000-ft. antenna relocated at Choterdale, Ind., becomes NBC primary for Bloomington-Indianapolis-Terre Haute July 1, its Class A rate upped from $600 to $1000; WPFW- TV, Indianapolis (Ch. 6) is CBS basic.

In applying for power boost to 100-kw this week, KCMC-TV, Texarkana, Tex. (Ch. 6), reported to FCC that combined TV-AM operations resulted in net loss of $1165 in 1953; KCMC-TV started operating Aug. 16, 1953. In 1952, without TV, radio station had net profit of $5325 after taxes.

Interconnected to AT&T network circuits this week: WTRI, Schenectady; WSLI-TV, Jackson, Miss.; WAIM-TV, Anderson, S. C.; WJHL-TV, Johnson City, Tenn.; KATV, Pine Bluff, Ark. Scheduled for connection next week are KFPC-TV, Cheyenne, Wyo. and WSEF, Erie, Pa.

American Women in Radio & TV Inc. holds third annual convention in Muehlbach Hotel, Kansas City, April 22-25. Anne Hayes, KCMO, Kansas City, is chairman.
MORE EDITORIALIZING? McCarthy REPLY A DUD: Has CBS broken the dam, finally and permanently, and inaugurated a strong editorial policy that will be emulated by other networks and stations? Probably not, though there's important school of thought within the industry that says TV-radio station owners should take stands on public issues same as newspapers.

It will be surprising indeed if the Murrow-McCarthy exchange marks dropping of the industry's historically neutral attitude on controversial issues -- except now and then as a commentator lets loose on an explosive subject.

Controlled as it is by a govt. agency, the FCC, the industry has always felt the Commission an uncertain shadow over it, depending on the character of the commissioners and the political temper of the times. One chairman, actually, once ordered a network to hearing on renewal of its station licenses because Mae West used what he construed an indecent inflection in her famous line, "Come up and see me sometime."

Sponsors, too, have been traditionally reluctant to offend even the smallest fraction of their audience. Editorializing as a general practice, to put it plain, has been too complicated and too risky.

* * * *

Not much doubt where CBS -- and President Eisenhower and the Army -- stood after Sen. McCarthy's April 6 reply via film to Edward R. Murrow's notable telecast of March 9 on Alcoa's See It Now. Nor is there any question where the TV-radio broadcasting industry, most newspapers and apparently the majority of viewers stand.

It seems more than mere coincidence that Gen. Eisenhower invited CBS pres. Frank Stanton as guest at White House stag dinner April 8, day after news conference where the President told reporters he had known Murrow for many years, considers him his friend, recalls his great wartime broadcasts from London. Same day, U.S. Military Academy invited Murrow to deliver lecture on security at West Point, April 25. Same day, too, New York Newspaper Guild voted Murrow its annual Page One Award -- latest of some 50 prizes the famed commentator has won.

Murrow relinquished his whole Alcoa period for the McCarthy reply, then went on air briefly to refute the McCarthy charges that he follows Communist party line, that he was once a member of the I.W.W. -- and to nail the McCarthy innuendo of Communist favor because he was favorably mentioned in the Daily Worker (out of context, because same "praise" told of Adlai Stevenson, Senator Flanders, the Army and broadcasting companies, even Eisenhower, having given McCarthy "a slap on the wrist").

The Senator put his foot into it, too, with what his own party leaders are calling a reckless declaration that Communist influence caused an "18-month deliberate delay" in govt. program to develop and produce the hydrogen bomb. This had nothing to do with the Murrow-McCarthy squabble, but was seen as typical McCarthy tactics by many editorial writers, let alone by govt. officials.

"Caught with his charges showing," wrote N.Y. Times' Jack Gould, "the Senator wandered all over the lot and at the end of the program the casual listener must
have been amazed at what a guy Murrow was." Sloppy detective work was also apparent when McCarthy called Murrow a CBS v.p., which he isn't, and educational director of the network, which he hasn't been for 17 years.

CBS-N.Y. reported 4907 phone calls and 1801 telegrams upholding Murrow, 3069 & 602 pro-McCarthy, up to time it quit counting April 7. Ratio was about same in other cities. Said a CBS statement: "Mr. Murrow's achievements during the past 19 years have brought honor and distinction to CBS...CBS subscribes fully to the integrity and responsibility of Mr. Murrow as a broadcaster and as a loyal American."

Note: Bill for the McCarthy film, amounting to about $6000, which he first asked Alcoa to pay, but which sponsor declined to do because it buys Murrow production as package, has been guaranteed by "an important man outside the TV industry," said CBS spokesman. This means CBS isn't paying it. Guess it's Texas oilman H.L. Hunt, who underwrites the syndicated "Facts Forum" films.

5 MORE START, OPENING SMALLER MARKETS: Three of latest 5 new stations open up new markets for TV -- in Wilmington, N.C.; Albany, Ga.; Beaumont, Tex. Another station on verge of start is KRGV, Weslaco, Tex. (Ch. 5), which advised us it lacks only a bit of wiring to get going by Sun., April 11. This week's crop includes 3rd outlet in Honolulu and 6th educational non-commercial -- a vhf in San Francisco. Latest additions, bringing total to 382 now on air, 129 of them uhf:

KULA-TV, Honolulu (Ch. 4), city's 3rd, began test patterns April 2, starts programming April 16 as non-interconnected ABC affiliate. It uses 50-kw DuMont transmitter and 350-ft. tower at new TV-radio building on Ala Moana Blvd., plans to build new tower later on Mt. Tantalus. Principals are owners of WMT-TV & WMT, Cedar Rapids, Ia., and KJBS, San Francisco, headed by Wm. B. Dolph, who also is mgr. of Fulton Lewis Jr. KULA-TV gen. mgr. is Jack Burnett; asst. gen. mgr., Art Sprinkle; sales mgr., Hugh Ben LaRue; TV coordinator, Ted R. Scott; chief engineer, Ronnie Miyahira. Base hour rate is $250. Rep is Headley-Reed.

WMFD-TV, Wilmington, N.C. (Ch. 6), opening up entirely new market in booming seaport area embracing new jet air base, Army munitions depot, Marines' Camp Lejeune, Army Camp Davis, began testing April 8, programming next day, affiliated with NBC. Nearest other station is in Greenville, N.C., more than 100 mi. away. Wires owner gen. mgr. Richard A. Dunlea: "Getting excellent reception reports." Station uses 10-kw RCA transmitter, 358-ft. Truscon tower, plans new tower site after it can meet height restrictions imposed by new air base. Base rate is $200. Rep is Weed.

KQED, San Francisco (Ch. 9), privately-financed educational non-commercial outlet, began tests April 2, plans programs in early May. A community effort, it's 5th station in bay area, second starter this year -- KSAN-TV (Ch. 32) having begun March 1. It uses converted KPIX transmitter atop Mark Hopkins Hotel, got grant of $113,724 from Ford Foundation for additional equipment. Annual operating budget is $250,000, being met by special gifts drive for $150,000 and campaign for 6800 dues-paying members ($10 a year). James Day is gen. mgr.; Larry M. Reed, chief engineer.

WALB-TV, Albany, Ga. (Ch. 10) began feeding signals into antenna at 4 p.m., April 7, according to wire to FCC from chief engineer John L. Rivard. It opens up virtually new market, Columbus being 79 mi. and Macon 92 mi. away. It's first to start with new 10-kw Standard Electronics transmitter, has RCA antenna on loan from WLWA, Atlanta, on 287-ft. tower. It's NBC non-interconnected, owned by Albany Herald (James H. Gray, pres.), with Tom Stillwagon as gen. mgr. Rep is Burn-Smith.

KBMT, Beaumont, Tex. (Ch. 31) was to begin testing night of April 9, has not yet fixed commercial date, looks to good signal from GE 1-kw transmitter over entire rich Beaumont-Port Arthur-Orange area -- nearest other TV station being another uhf in Lake Charles, La., 65 mi. away. It's owned equally by Randolph C. Reed, oilman, who also heads Gulf-York Inc., Philco distributor, and N. D. Williams, oil & lumberman, who recently acquired Newborn-Josey holdings. John Rossiter, gen. mgr., ex-WJTV, Jackson, Miss., has option to acquire 25%. Frank Browne is commercial mgr., Frank Leins, chief engineer. Base rate is $200. Rep is Headley-Reed.
5 MORE CPs, ST. LOUIS VHF GRANT SOON: Way was cleared for Ch. 4 into St. Louis this week as FCC permitted KXOK and Missouri Valley TV Co. to dismiss, leaving KWK free for grant as result of merger agreement (for details, see p. 14). Also in the week's grants was CP for Buffalo's Ch. 2 to Niagara Frontier Amusement Corp., final disposition of affair involving charges of strike action, payoff, etc. (Vol. 10:8). Both St. Louis and Buffalo at present have only one vhf outlet.

There were 5 CPs this week. In addition to the one to Buffalo, they went to: Marquette, Mich., Peninsula TV Inc., Ch. 6; Muskogee, Okla., KTUL (Tulsa), Ch. 8; Gastonia, N.C., Air Pix Corp., Ch. 48; Seattle, Seattle Construction Co., Ch. 20.

One grant was returned -- for KITO-TV, San Bernardino, Cal., Ch. 20. There was also a Canadian CP this week -- CHEX, Peterborough, Ont., Ch. 12 -- recommended by board of governors of CBC, equivalent of grant.

Initial decisions favored: Wisconsin Valley TV Corp., Wausau, Wis., Ch. 7, and WSAV, Savannah, Ga., Ch. 3. First came after agreement whereby WSAV dropped out. Owners of WSAV -- Charles Lemke (49%) and John R. Tomek (51%) -- are to sell station to Wisconsin Valley for $170,000. Lemke is to buy 400 shares of Wisconsin Valley at $100 a share, eventually own 25%. Tomek is to get $15,000 as consultant.

In Savannah case, WSAV was favored over WJIV in Examiner Cunningham's initial decision for two main reasons: (1) "Integration" of ownership and management, with WSAV principal stockholder Harben Daniel to devote his full time to station. (2) Single vs. multiple station ownership -- with Daniel controlling only WSAV-AM-FM, while WJIV owner E.D. Rivers Jr. owns 4 AMs and has TV grant for Valdosta (Ch. 37).

Cunningham also held, however, that WSAV had done some prior TV construction (tower base and transmitter-projection-control room in Liberty National Bank Bldg.). This doesn't prevent it from getting CP, he said, but he ruled that none of the construction could be used when authorized construction starts.

(For further details about principals in foregoing grants, see TV Addenda 18-N herewith, and Blue Section of TV Factbook No. 18.)

* * * *

Shift of WHIZ-TV, Zanesville, O., from Ch. 50 to Ch. 18 was granted this week, first case of its kind. Other operating uhf stations have sought to file for vhf and keep operating uhf at same time. FCC turned them down, saying it couldn't countenance "straddling" two channels. It said Zanesville case is different, however, because no other applicant sought Ch. 18.

WHIZ-TV management is convinced lower channel is better, despite FCC refusal to recognize any difference. Engineers have compared coverage with that of WTAP, Parkersburg, W.Va. (Ch. 15), covering same kind of terrain; testing receiver sensitivity, etc., they concluded Ch. 18 is much better suited to Zanesville area. Station won't move immediately to new channel, must yet order equipment.

* * * *

That novel newspaper protest of TV grant in Clarksburg, W.Va. (Vol. 10:13) looks as if it's going to hearing, thus delaying construction of WBLK-TV (Ch. 12). Actually, Commission voted to accede to protest this week, told staff to draft hearing order, bring it back next week for approval.

Having no broadcast interests and applying for none -- thus differing from previous protestants -- Clarksburg Exponent & Telegram filed protest against grant, alleging station will cause it economic injury, increase monopoly.

Lawyers are wondering if grant of protest would lay any new CP wide open to a successful delaying action by anyone who can show that TV hurts his business -- by theatre operators, play producers, concert impressarios -- almost anybody.

FCC's augmented staff for TV processing is likely to be "unaugmented" come June 30. Hired specifically with extra funds provided by Congress for TV processing for one year, quite a few lawyers and some engineers may be dropped. About 55, including examiners and hearing counsel, were hired on temporary basis and were warned that their tenures may be short.

Hearing examiners now have full calendars, with approximately 25 more hearings waiting for examiners. Latest scheduled is for Ch. 9, Dothan, Ala., May 7.
STORER SELLS TO SAN ANTONIO PUBLISHER: Newspapers and newspaper-broadcasters continue to be a dominant category of TV station ownership -- and this week’s $3,500,000 purchase by owners of San Antonio Express and News of George B. Storer’s KGBS-TV (Ch. 5), with radio KGBS (50-kw day, 10-kw night on 680 kc, CBS), further points up fact that publishing interests are determined to maintain the same identity with TV that they have gained over the years in radio.

At beginning of this year, 105 TV stations were wholly or partly owned by newspaper interests, 7 more by magazine publishers (see pp. 39-41, TV Factbook No. 18). Since then, 5 more newspaper-identified TVs have been added, all new starters (see p. 6), besides which Time Inc. has made deal to buy KLZ-TV & KLZ, Denver (see p. 14). That means, as of now, nearly 30% of the 382 TV stations currently on air have newspaper ownership -- about same proportion as prevails in radio.

San Antonio publisher Frank G. Huntress must sell his KSTA (5-kw on 550 kc, ABC), which he bought from Gene Howe group in 1949 for $300,000. But with KGBS he recaptures CBS radio affiliation which Storer took away, gets basic CBS-TV besides. On Storer's part, though he announced that the deal was intended to pave way for his $10,000,000 purchase of Empire Coil Co. (Vol. 10:2), he still has obstacles to overcome for FCC has made it plain it won't rule on ownership of 2 extra uhf by 5-limit vhf owners until after Senate's uhf probe of May 4 (postponed from April 27).

Storer bought KGBS-TV (then KEYL) for $1,050,000, plus assumption of DuMont note for $200,000, in 1951 (Vol. 7:30,51). He has spent more than $1,000,000 on its plant improvement. Then, last year, he bought KGBS (then KABC) for $700,000 (Vol. 9:26,34). His son George Jr., lately reassigned to Miami headquarters, was gen. mgr. Combined TV-radio reputedly show monthly operating profit of well over $50,000.

Another newspaper getting into TV via purchase is Peoria Journal-Star, about to take over WTVH-TV (Ch. 19), on air only since last Aug., for $225,000 -- of which about half is said to be assumption of obligations.

* * * *

Note: Recent sale of Col. Robert McCormick's Washington Times-Herald to Eugene Meyer's Washington Post (WTOP-TV & WTOP, WMBR-TV & WMBR) was really forced by bad times the Chicago Tribune publisher faced with his Washington venture. It recalls how late Louis G. Caldwell, counsel for the McCormick-Patterson interests, had urged Mrs. Cissie Patterson, then Times-Herald publisher, to apply for TV while channels were available. She wouldn't, and the channel she might have had went to R.H. Macy interests (then owning WOR). They sold WOIC (now WTOP-TV) to Meyer (55%) and CBS (45%) for $1,400,000 in 1950. The TV-radio properties, as FCC records reveal, have been the bulwark of Washington Post Co.'s income ever since -- even overcoming the newspaper's operating deficits. TV would inevitably have been a main asset of the Patterson estate. By same token, Portland Oregonian, which in 1948 turned in a prefreeze CP, and itself was later sold to Newhouse for $1,000,000, would have been worth several times that sum had it ventured into TV.

SUPREME COURT REVERSAL OF GIVEAWAY BAN: FCC stuck its neck out a little too far -- back in 1949 -- when it coined a new definition of "lottery," and got slapped down this week by highest court in the land because it "overstepped the bounds of interpretation [and] exceeded its rule making power."

Gist of 8-0 decision of U.S. Supreme Court (Justice Douglas not participating) was that Commission erred in classifying as lotteries those programs, such as "Stop the Music," on which prizes are awarded to viewers or listeners reached by telephone at their homes. The court pointed out that this definition had never been accepted by any court or any other Federal agency and "there cannot be one construction for the FCC and another for the Dept. of Justice."

Chief Justice Warren, delivering decision, pointed out that a lottery must involve distribution of prizes for chance, for a consideration -- and he rejected FCC's contention that mere viewing or listening to a program constituted a "substantial consideration" paid to the broadcasting station.

Decision actually set no important precedent -- other than to put Commission on its guard against too broad an interpretation of Criminal Code -- according to
communications attorneys who have studied case. However, one aspect of ruling which
was overlooked in press reports is that it affirmed FCC's right to deny licenses to
stations which it believes are violating Federal laws, even though Justice Dept. has
not taken action against stations for the alleged violations -- a right which was
questioned by the networks when they originally filed to upset FCC giveaway rule.

"The Commission would be remiss in its duties if it failed, in the exercise
of its licensing authority, to aid in implementing the [Federal lottery] statute,
either by general rule or by individual decisions," said Justice Warren.

FCC promulgated "anti-giveaway" rule 5 years ago (Vol. 5:34-59), and it was
immediately challenged in court by ABC, CBS & NBC, which got stay order nullifying
rule pending disposition of case. Last year, New York Federal court upheld FCC rule
as it applied to contests of chance where participants are required to provide money
or anything of value, presumably including boxtops (Vol. 9:6). But it rejected --
as did the Supreme Court this week -- the idea that telephone-type contests can be
considered lotteries. FCC then appealed lower court decision.

Note: Like FCC, Canadian Broadcasting Corp. is concerned about prize contests
"in which the main element is chance instead of skill." Its board of governors an-
nounced this week that it has discussed problem with broadcasters, advertisers and
agencies with view to reducing number of such programs. If there is no improvement
in coming months, board said in statement, it "intends to hold public hearings re-
garding the possibility and advisability of a regulation which would check such
prize schemes depending mainly on chance..."

UHF STUDY—AT FCC & CONGRESS LEVELS: One thing is certain about uhf: It's getting
plenty of attention -- and the more light shed on the subject the better.

Upcoming hearings by Senate communications subcommittee -- postponed for one
week to May 4-7 -- can be expected to look into virtually every angle of uhf, from
station finances to receiver sensitivity.

AT FCC level too, uhf is subject of constant exploration. This week, Commis-
sion informally discussed staff memorandum containing virtually every proposal sug-
gested to date for improvement of competitive position of uhf stations. One idea
getting some consideration was proposal to open way for more network programs on uhf
stations by barring interconnected station from carrying network programs on delayed
(kine) basis when another station in area is available to carry them live.

Study of Satellites and boosters is continuing (Vol. 10:7), with possibility
that Commission will take some sort of action in a few weeks. The whole objective
in taking them up at this time would be to aid uhf.

Satellites would give Commission least trouble, because they'd use regularly
allocated uhf channels, wouldn't create new interference problems. They could be
authorized in either of 2 ways -- through rule-making or through simple grants of
CPs to applicants proposing to get all programs from "mother" stations. Actually,
FCC has no rules requiring station to produce certain minimum of local programming.
However, everyone knows better than to seek CP without proposing some local shows.

Question of powers and heights for satellites is wide open, with no indic-
ation whether FCC would place lower floor under satellites than regular stations.

Boosters get more cautious approach because they affect co-channel and adjac-
ent-channel relationships of stations. FCC still doesn't seem confident that all
interference problems have been licked.

Surprising lack of reaction to "5-kw transmitter" proposal (Vol. 10:8-11) is
reported by FCC. However, there are indications that the flat 5-kw minimum may be
dropped in favor of minimums tailored to size of city. At least one well-informed
commissioner leans that way as of today.

Most valuable information to date on how uhf operators are faring financially
and program-wise will be presented to Senate subcommittee May 4 when FCC reveals the
results of its second survey of post-freeze stations (Vol. 10:5). First survey, which
included very few multiple-station markets, showed uhf stations doing about as
well financially as vhf, during first few months of operation (Vol. 9:51 & 10:1).

Senators won't want for witnesses during 3-day hearings. Though subcommittee
hasn't yet compiled formal list, it already has received plenty of inquiries from stations, and from some manufacturers. Definitely due to testify are FCC, RETMA, the networks, UHF Assn., and several individual telecasters.

* * *

Another uhf station has suspended operation, and one which was temporarily silent has gone back on air, losing only 2 days. Leaving air was KACY, Festus-St. Louis (Ch. 14); resuming operation was KETX, Tyler, Tex. (Ch. 19).

KACY asked FCC permission to leave air April 2 for 120 days while it seeks at least $350,000 in additional capital. One of 4 stations in St. Louis area (1 uhf, 3 vhf), its attorneys told Commission it had lost more than $250,000 since Sept. 1953, that stockholders have advanced $120,000, and added:

"Our client's faith in uhf TV remains unshaken by the tremendous losses it has absorbed, and in good faith it believes that in a relatively short time it can make necessary arrangements for additional capital."

Station has filed suit against CBS and WTVI, Belleville-St. Louis (Ch. 54), for $2,533,000 triple damages under anti-trust laws. It charged "conspiracy" between network and station prevented it from getting any CBS programs not carried by St. Louis' vhf KSD-TV, and said this resulted in operating loss of $244,300 instead of $100,000 profit and reduced value of its plant from $650,000 to $150,000.

* * *

KETX, Tyler, Tex. wired FCC this week that it had returned to air March 27, just 2 days after it went silent (Vol. 10:14). Owner Jacob A. Newborn Jr., who has taken over operation of station with staff reduced from 20 to 8, tells us: "I put it on in the black on March 27 and it has been that way ever since." Tyler newspaper this week reported 3 local creditors had instituted involuntary bankruptcy proceedings against KETX and group of former employes was also contemplating action. Meanwhile, FCC this week approved transfer of Newborn's 25% ownership in another Texas station -- Beaumont's KBMT (Ch. 31), due on air this week end -- along with 25% held by oilman Jack S. Josey, to station's other 2 owners for $5000 total.

Five new stations with newspapers identified in their ownership can be added to those listed on pp. 39-41 of TV Factbook No. 18—and there are applications pending for transfers of 50% of WHYN-TV & WHYN, Springfield-Holyoke, to employ pension fund of Springfield News and Union, and 100% of KLZ-TV & KLZ, Denver, to Time Inc. About to be filed are transfers of WTVH-TV, Peoria, to Peoria Journal-Star, and KGBS-TV & KGBS, San Antonio, to San Antonio Express and News. The 5 that can now be added to the Factbook list, with their AM and newspaper affiliations: WDSM-TV (WDSM), 51% owned by Ridder brothers, publishers of Duluth Herald and News Tribune and St. Paul Dispatch and Pioneer Press; WJBP-TV (WWVW), Fairmont, W. Va. same ownership as Mannington (W. Va.) Times, weekly; KFBB-TV (KFBB), Great Falls, Mont., 50.5% owned by Fairmont Corp., publisher of Butte Montana Standard, Billings Gazette, Helena Independent-Record, Livingston Enterprise, Missoula Missoulian; KFBC-TV (KFBC), 47.66% owned by same interests (Tracy McCracken) publishing Cheyenne Wyoming Eagle and Wyoming State Tribune, Laramie Republican-Boomerang and Bulletin, Rawlins Times, Rock Springs Rocket, Worland Northern Wyoming News; WKAQ-TV (WKAQ), San Juan (P. R.) El Mundo.

Threatened nationwide strike against all TV & radio networks was averted April 6 when AFL Radio & TV Directors Guild announced "conditional ratification" of new contract ceiling for average 10% pay boost for some 600 directors, associate directors, floor managers and program assistants in New York City. Signing of contract, Guild said, is dependent on settlement of local problems between union and some independent stations throughout country.

Power increases: WDTV, Pittsburgh (Ch. 2) this week boosted ERP to 100-kw by adding new 6-bay antenna.

Raising money for charities and political parties via subscription TV was visualized by Zenith publicist Millard Faught in address to convention of National Small Business Men's Assn. in Washington, April 6. He repeated his thesis that sponsored TV and fee TV can live side-byside; that pay-as-you-look will double number of stations, etc. Sen. Schoeppel (R-Kan.), member of communications subcommittee, was so impressed that he had 3-page speech reprinted in April 7 Congressional Record "notwithstanding the cost," which, he said, was $233,75. In New York this week, Skiatron stockholders approved agreement giving rights to its developments to Matty Fox (Vol. 10:13). The 99-year contract, Skiatron pres. Arthur Levey said, is good "so long as any Skiatron patents have any validity." Skiatron counsel James Landis said he's confident FCC will approve subscription TV.

"Piracy" of baseball games through their "re-creation" on TV is planned by McLendon's upcoming KELP-TV, El Paso and KLIF-TV, Dallas, according to protest filed with FCC this week by N. Y. Yankees and Brooklyn Dodgers. Teams argue that Commission erred in March 4 decision renewing license of KELP, now ask that KELP be ordered to cease and desist from future "re-creations" or be set for hearing. Protest says that TV presentations planned by Gordon McLendon would use "a large board with a baseball diamond drawn on it and figures of players placed at appropriate positions."

Bill to exempt from FCC regulation some point-topoint carriers not interstate in nature (HR-6436) was passed by Senate April 5 and sent to White House. Senate passed over 2 other communications bills on calendar without taking action—S-1393, Sen. Johnson's bill to curb telecasting and broadcasting of pro baseball games, and S-2314 to prohibit transmission of gambling information.
TWO ALL-SPANISH TV stations are due to go into operation soon in the El Paso area— KELP-TV, El Paso (Ch. 13), and XELJ-TV, Juarez (Ch. 5). KELP-TV grantees Gordon McLendon, operating radio KELP there and onetime head of now defunct Liberty Broadcasting System, claims his station will be first all foreign-language TV station in the U. S., for he plans to program it 100% in Spanish. RCA equipment has been purchased from an unnamed Columbus (O.) station, construction of added facilities in radio building is under way, and plans for 352-ft. tower drawn up and it's planned to go on air around next June 15, McLendon reports. Rep will be Forjoe.

Across border in Juarez, new XELJ-TV, owned by broadcaster Pedro Meneses Jr., and now being installed by engineer Morton Zimmerman, has set target date of May 17. Mr. Meneses says its programming will be built around sports telecasts, including filmed bullfights from Mexico City as well as local events and Spanish translations of such favorites as Cico Kid, Boston Blackie, Unexpected, My Favorite Story. Rep will be National Time Sales, N. Y.

There are already 2 stations in El Paso (1950 pop. 130,485, with Juarez credited another 122,598). They're KROD-TV (Ch. 4, CBS) and KTSM-TV (Ch. 9, NBC).

GE reports order for 12-kw transmitter from WKNX-TV, Saginaw, Mich. (Ch. 57), which began year ago with 1-kw; this is the station one-third owned by Congressman Alvin M. Bentley, now recovering from bullet wounds suffered when Puerto Ricans shot up house of Representatives. GE also reports WTVJ, Miami (Ch. 4), switches to new 35-kw transmitter and new tower site April 15.

RCA reports shipment of 10-kw transmitter April 9 to KGEQ-TV, Enid, Okla. (Ch. 5), and 50-kw amplifier same day to WCAU-TV, Philadelphia (Ch. 10).

In our continuing survey of upcoming new stations, these were reports received this week:

WSFA-TV, Montgomery, Ala. (Ch. 12), has tentative Oct. 1 target, reports v.p.-gen. mgr. Lionel F. Baxter. Its plans for new TV-radio center in Cleverdon section include outdoor studio. RCA transmitter has been ordered, with 750-ft. tower and 12-bay superturnstile RCA antenna, to be located on Mt. Carmel, 23-mi. south of city. C. B. Smith is technical director. Ownership interlocks with Montgomery Advertiser & Alabama Journal. It will be city's second outlet, WCOV-TV (Ch. 20) having begun April 17, 1953. Rep not yet chosen.

WLOS-TV, Asheville, N. C. (Ch. 13), has ordered 25-kw Federal transmitter for June 1 delivery, plans Aug. tests, Sept. programming, reports v. p. Charles B. Brit. It already has 300-ft. Lehigh tower, will top it with Federal antenna. Work on transmitter house & tower atop 5721-ft. Mt. Pisgah begins May 1 after 2.3 miles of road have been graded and 3000-ft. inclined railway built up 45-degree slope. It will be first local competitor for WISE-TV (Ch. 62) which began last July. Rep not yet chosen.

KGYO-TV, Missoula, Mont. (Ch. 13), with 5-kw GE transmitter on hand and 12-bay antenna due in May, expects to meet June 15 test target, start programming July 1, reports pres. Art Mosby. It plans to cover all western Montana from transmitter site atop mountain, 1905-ft. above av. terrain, near Evaro, 10-mi. north of Missoula. Footings have been poured for transmitter house and 200-ft. Iedco tower is scheduled for completion by May 15. Hour rate will be $200. Rep will be Gill-Perna.

WAAB-TV, Worcester, Mass. (Ch. 20), with 5-kw DuMont transmitter scheduled for July delivery, now plans Sept. tests, Oct. programming, reports pres. George F. Wilson. Its 24-bay Gabriel antenna is ready, as is old WGTR-FM tower, but date hasn't been set yet for antenna installation. Rep will be Hollingbery.

CFPA-TV, Port Arthur, Ont. (Ch. 2), has ordered 2-kw RCA transmitter for Aug. delivery, plans tests late that month, programming Sept. 3, writes owner Ralph H. Parker. It bought unused City Fire Hall, located at highest point in city, for TV-AM headquarters, plans move of offices and radio studios next June while TV studio installation is underway. It will have 200-ft Stainless tower and 3-bay RCA antenna. Rep not yet chosen.

CJB-R- TV, Rimouski, Que. (Ch. 3) has ordered 10-kw RCA transmitter for July delivery, plans tests late next summer, programming in Sept., reports gen. mgr. Jacques Brillant. It's expanding radio studios for TV, will build transmitter house and RCA-designed 120-ft. 4-sawtack tower & antenna on Peak Champlain, 1137-ft. above sea level. It will carry CBC French language programs. Reps will be Adam Young (for U. S.) and H. N. Stovin.

NBC color schedule has following changes from last report (Vol. 10:11): Dropped: American Forum of the Air April 25. Added: Voice of Firestone May 3, tour of Metropolitan Museum May 8, Kubla, Fran & Ollie May 9. Some 60 program and production personnel of NBC-TV's first affiliates equipped for color will study techniques in 3-day seminar in New York May 10-12. Others will be scheduled as more stations become equipped.

Chromatic TV Labs, pushing its grid-type Lawrence tube—claiming large size, simplicity, ease of production, good performance—has issued 19-p. brochure on tube, available from company at Paramount Bldg., New York. Company estimates 24-in. tube can be mass produced for less than $100. This week, it cut price of grid structures for tube from $150 to $125, offering them to tube makers.

Start of color studio construction in Burbank, Cal. is scheduled for end of April with goal of completion by year's end, according to NBC west coast v.p. John K. West. The 12,600-sq. ft. structure will cost $2,000,000.

Latest station reporting color activity, WBTB, Charlotte, N. C., expects to be testing network rebroadcasting equipment by end of month.

Technical description of RCA 19-in. color tube (Vol. 10:4) is included in April Tele-Tech Magazine.
Teletcasting Notes: "The Robert Montgomery influence," is simplest explanation of new easy-mannered and relaxed attitude President Eisenhower manifested in his April 5 talk on combined networks. Informal pose he struck, standing or leaning against desk, and use of cue-cards which he ignored more often than not, was exactly in the manner of the noted actor, who for some months has been unofficial and unpaid White House advisor on TV-radio. Fact is, Montgomery was in the room with the President and several dozen other visitors, though it was same night (Mon.) as his regular Robert Montgomery Presents (Lucky Strike) on NBC-TV. His own show used film strips for his narration ... Said UP, in describing the White House TV pickup: "President Eisenhower set a new standard for TV speakers last night. Although dealing with such tension-loaded subjects as the H-Bomb, Communism and depression, he was as relaxed as a neighbor leaning on his lawnmower, informal almost to the point of being chatty. [He] used no script and spoke with a sort of effortless simplicity and calm. Just as one of his predecessors, the late Franklin D. Roosevelt, was the first President to master the radio microphone, Mr. Eisenhower has progressed from his own early days of knuckle-cracking uneasiness on TV to the smooth job he did last night..." ... Mannie Sacks, RCA v.p. and RCA-NCB chairman Sarnoff's special troubleshooter, who heads RCA Record Div., has been called into action to help build up NBC's lagging radio business, reports Variety, with both Wm. Fineshriber and Ted Cott reporting to him ... Amos 'n' Andy and Range Rider film series have been purchased from CBS-TV film div. by BBC, thru its TV rep in N. Y., Aubrey Singer; BBC immediately got protest from National Assn. for the Advancement of Colored People brandind show as "gross caricature" of the Negro which has done harm in U. S. and may do more even in England—a protest CBS long ago rejected ... Delbert Mann, who directed Paddy Chayevsky's hit play Marty on Philco Playhouse, signed as one of first TV directors to be hired to direct a feature movie; he'll do film version of Marty for Hecht-Lancaster ... About 100 Hal Roach Our Gang shorts, owned by Clinton Pictures Corp. (Joseph Auerbach) to be released to TV thru Allied Artists' Interstate Television Inc. ... Enlarging TV studios on Wilmington Pike, WHIO-TV, Dayton, is adding 50x84-ft. studio, 3 large radio studios for WHO, consolidating all TV-radio operations in one building, designed and constructed by Austin Co. and due for completion early next year ... South Bend Tribune plans new ultra-modern downtown TV-radio building for its expanding WSBT-TV & WSTV, with one studio 50x80-ft.; architects are Pereira & Luckman ... Crosley's WLW and 4 TV stations soon to be represented by NBC Spot Sales in Detroit and on West Coast; Crosley will retain own N. Y. & Chicago branches, will represent NBC in its station cities: Cincinnat, Dayton, Columbus, Atlanta ... More new reps: KRCI-TV, Cedar Rapids, IA., to newly-organized Venard, Rintoul & McConnell; WOKY-TV, Madison, Wis., to Gill-Perna; WJMR-TV, New Orleans, to McGillivra; WCSH-TV, Portland, Me., which began last Dec. 1 with $250 base rate, will increase to $300 June 1 ... WCAU-TV, Philadelphia, sets new Class AA rate at $3240 an hour, increasing all other periods about 20%.

Station Accounts: Pittsburgh Pirates games will be televised on regular schedule for first season, with Atlantic Refining Co. buying 24 weekend away games on uhf WENS, thru N. W. Ayer; WENS pres. Thomas P. Johnson is also chief owner of Pirates ... Heavy schedules of baseball sponsorships, as reported in Vol. 10:11, are augmented by Borden Co. (Pioneer Ice Cream div.) purchase of half of 15-min. Happy Felton's Talk to the Stars after Brooklyn Dodgers' games on WOR-TV, thru Doherty, Clifford, Steers & Shenfeld; 20-sec. adjacencies to Dodgers' games were also sold to Hoffman Beverage Co., thru Warwick & Legler; Shell Oil Co., thru J. Walter Thompson; Household Finance Corp., thru Needham, Louis & Broby; Colgate-Palmolive Co. (Rapid shave cream), thru Wm. Esty Co. ... Esskay Meat Products, Schmidt Bakery & Sherwood Bros. (Betholine-Sinclair dealers) Bobo Newsom's Knothole Gang and Talk to the Stars before and after Baltimore Orioles' games on WAAM, thru Van Sant, Dugdale ... Jay Broiler Co. (Roto-Broil broilers) buy 15-min. segment across-the-board, for estimated $130,000 for year, as first sponsor of new Ernie Kovacs Show on WABD starting April 12, Mon.-thru-Fri. 11:15 p.m.-12:15 a.m., thru Product Services Inc. ... N. Y.-N. J. women's clubs, telling about their charities, provide basis for audience partic. show on WATV, Newark, titled Half Hour Holiday, Mon.-Wed.-Fri. 3:30-4 p.m.; sponsors already signed are Linda Foods Inc., Newark (Rice Cream); Viking Corp. (Mircaloth), thru C. Wendell Muench, Chicago; Louis L. Libby Inc. (frozen foods), thru Hicks & Greist, N. Y. ... Among other advertisers reported using or preparing to use TV: International Metal Products Corp., Phoenix, Ariz. (Arctic Cooler air conditioner), direct; Eskimo Pie Corp., Bloomfield, N. J. (ice cream), thru Buchanan & Co., N. Y.; R. T. Collier Corp., Los Angeles (Tap Sprite carbonated water filters), thru West-Marquis Inc., L. A.; Indian River Medeine Co., La Follette, Tenn. (Scall's Indian River Medicine, herb tonic), thru Claude Harrison & Co., Roanoke, Va.; Griesedieck Bros. Brewery Corp., St. Louis (GB beer), thru Kruptnick & Assoc., St. Louis; McKesson & Robbins Inc., Bridgeport, Conn. (Tartan suntan lotion), thru Ellington & Co., N. Y.; Safe-way Stores Inc., Oakland, Cal. (Sunnybank margarine), thru Erwin, Wasey, L. A.; Wm. Schwartz & Co. Inc., Philadelphia (Chips & Twigs apparel for boys), thru Feigenbaum & Wermers Adv. Agency, Philadelphia; Sales Afiliates Inc., New York City (Zotos shampoo, Inecto hair bleach), thru Picard, Marvin & Redfield, N. Y.; Devoe & Raynolds Co., New York City (paints, lacquers, enamels), thru J. Walter Thompson, N. Y.; Dr. Pepper Co., thru Ruthrauff & Ryan, N. Y.; Ad-Lab Products Inc., Columbus, O. ("Ex Static" fabric rinse), thru Munn, Mullay & Nichols Inc., Columbus; General Concrete Products Inc., Van Nuys, Cal. ("Flaggerete," "Slumstone," "Romancerete") thru Tilds & Cantz, Hollywood.

New $80,000 TV-radio set census gets under way May 3 under auspices of Advertising Research Foundation, 11 West 42nd St., N. Y., designed primarily for civil defense information, to be financed by networks and BAB, with field sampling by Alfred Politz Research Inc. On extremely modest basis and with emphasis on radio, survey calls for only 10,000 interviews nation-wide, with questions asking number of TV & radio sets in home, kind of sets (i.e., uhf-equipped, AM-only, etc.), rooms in which they're located, number of autos with radios, etc. Only one over-all national figure will be published for TVs (possibly in July) but it's planned to break down radio ownership by 6 geographic regions. Federal Civil Defense Administration has been urging project, headed within ARF by CBS radio research director Harper Carraine, others on committee being BAB pres. Kevin Sweeney, Biow research v.p. E. L. Deckinger & General Foods research director G. S. Brady.

George Polk awards for distinguished journalism, presented annually in memory of late CBS correspondent, went to NBC and exec. producer Merrill Mueller for its Weekend—Sunday Newspaper of the Air and TV columnist John Crosby, N. Y. Herald Tribune Syndicate.
Personal Notes: William C. Fits Jr., CBS director of labor relations who joined network's legal dept. in 1950 after leaving law firm of Fly, Fits & Shuebruk, headed by ex-FCC chairman James Lawrence Fly, elected CBS v.p. ... Charles R. Denny, NBC v.p. in charge of owned stations and spot sales, and Mrs. Denny back from month in Europe ... A. James Ebel, Peoria consulting engineer associated with WMBD there, named acting mgr., KOLN-TV & KOLN, Lincoln, Neb., succeeding Harold Anderson, now with upcoming WDEF-TV, Chattanooga ... Otis H. Segler and David Andrews, ex-KOLN-TV, named sales mgr. & production director of WDEF-TV, Chattanooga (Ch. 12) due on air momentarily ... Paul B. Marion promoted to sales mgr., WBTW, Charlotte, and Virgil V. Evans Jr. to WBT sales mgr.—both reporting to gen. sales mgr. Wallace J. Jorgenson ... Joseph Carleton Beal, ex-production mgr., WDSU-TV, New Orleans, named mgr. of new public service div., World Wide Broadcasting Corp., Boston shortwave operation headed by Walter S. Lemmon ... Donald N. Walker, who operated own printing business in Urbana, Ill. last 3 years, named mgr. of National Assn. of Educational Broadcasters personalsec. in Urbana, to centralize recruitment of staff for all educational TV & radio stations ... Jerry Burns, ex-TV director of KOLU-TV, Phoenix under gen. mgr. Charles Garland, named gen. mgr. of KIVA, Yuma, Ariz. ... Paul Mills promoted from radio program staff to program director of WISE-TV, Asheville, N. C. ... John H. Smith Jr., NARTB promotion mgr., elected pres. of American Public Relations Assn. ... Henry Salomon Jr., producer of NBC-TV's Victory at Sea, appointed chief of new TV documentary unit, reporting to Davidson Taylor, director of public affairs; Isaac L. Kleinerman will be editor-in-chief; Donald B. Hyatt, business mgr.; Richard F. Hansen, head writer ... Herbert Jaffe, ex-MPTV & MCA, joins Official Films as director of sales, with syndication v.p. Herman Rush assigned as administrative asst. to pres. Harold Hackett; Verne W. Behnke, N. Y. sales mgr., succeeds Jaffe at MPTV ... Wynn Nathan promoted to sales v.p., United TV Programs ... Ted Wick resigns as Paramount Pictures TV-radio adv. & exploitation director to become CBS-TV Hollywood director of publicity & exploitation, succeeding Norman Seigel, resigned ... John D. Allison, ex-Headley-Redd v.p., now local sales mgr., KGMB, Honolulu ... Bruce McConnell, WISH, Indianapolis, elected pres., Indiana Broadcasters Assn. ... Lansing B. Lindquist promoted to TV-radio v.p., Ketchum, MacLeod & Grove ... Ursula Halloran resigns as v.p. in charge of N. Y. office, Rogers & Cowan, to open public relations agency specializing in TV at 50 Madison Ave., N. Y. ... J. Vance Babb, onetime NBC press div. v.p., now associate director of public relations of N. W. Ayer, N. Y., elected v.p. ... Tom Hargis new head of TV-radio dept. in Hollywood office, Ruthrauff & Ryan, succeeding Wm. Burch, resigned ... Carroll O'Mara, ex-KNBH, opens own consulting offices at 1610 No. Argyle, Hollywood.

Gen. Mark W. Clark, recently retired UN supreme commander in Far East, now president of The Citadel, has become associated with Jefferson Standard Broadcasting Co., operators of WBTV & WBT, Charlotte, and upcoming WBTW, Florence, S. C., serving as consultant on international affairs and advisor on educational and cultural matters.

Mrs. Ferdinand M. Thieriot, one of owners of San Francisco Chronicle, daughter of its founder Michael H. de Young and mother of Charles de Young Thieriot, asst. publisher and v.p. in charge of its KRON-TV and of KAFY-TV, Bakersfield (49% owned), died April 3 in San Mateo. One of her sisters, Mrs. George T. Cameron, is wife of the Chronicle's present publisher.

Network Accounts: Kelly-Springfield Tire Co., in first network TV sponsorship, buys NBC-TV colorcast of National Open golf championship at Baltusrol, N. J. Mon. April 19, thru Compton Adv. ... Quaker Oats joins Philco as simulcast sponsor of Don McNeill's Breakfast Club on ABC-TV starting June 1, buying TV portion Tue. & Thu. 9:45-10 a.m. and dropping AM Mon.-Wed.-Fri. 9-9:15, thru J. Walter Thompson ... Packard Motor Co. to sponsor Packard Program Starring Martha Wright on ABC-TV starting April 18, Sun. 9:15-9:30 p.m., thru Maxon Inc. ... Old Gold to sponsor Truth or Consequences on NBC-TV starting May 18, Tue. 10:10-11 p.m. ... Ford Foundation disclosed Omnibus would return on CBS-TV Oct. 17, Sun. 5-6:30 p.m., with Scott and Greyhound Bus reportedly renewing as sponsors; Ford is dropping Excursion on NBC-TV ... ABC-TV drops The Mask Sun. 8-9 p.m., effective May 28, hoping to replace it with Paul Whiteman Show originating from Hanna Million-Dollar Pier in Atlantic City ... Steve Allen signs for 15 programs, Judy Holliday for 4, on Max Liebman's new edition of Your Show of Shows on NBC-TV in fall ... Aveset Corp. (Qwip cream product) and Florist Telegraph Delivery Assn. buy partic. on Morning Show on CBS-TV, Mon.-thru-Fri. 7-9 a.m., former thru Fletcher D. Richards, latter thru Grant Adv.

Another blast at TV commercials this week from publicist Edward L. Bernays—this one purporting to show that, based on 115 replies to 3800 questionnaires, "bar and tavern keepers, barbers, butchers & butchers" are as strongly opposed to commercials as were the educators and businessmen cited in previous survey (Vol. 10:5). His conclusion: "The 2 studies show that the people of the U. S., whatever their station or profession, are for a large part resistant to present TV commercials and that sponsors and advertising agencies are approaching the point of diminishing returns. As the public grows more resentful of abuses, they will be less likely to purchase the products offered for sale." No comment from NARTB, whose recently amended Code of Practices tightens restrictions on multiple-spotting, cow-catchers, trailers, length of commercials, etc. Nor any intimation whom Bernays is representing in this second outburst against commercialism.

Ward Wheelock & Co., Philadelphia, will close down in July, having lost its 18-year-old Campbell Soup Co. account (now divided among BBDO, Leo Burnett, Compton, Dancer-Fitzgerald-Sample). Other accounts are Brevich Co. (canned soft drinks), now with Stauffer, Colwell & Bayles; Stephens F. Whitman Co., and Adam Scheidt Brewing Co., which have not yet appointed new agencies.

Printers' Ink index of advertising volume for Jan.-Feb. shows it was up 17% from same 1953 period, only network radio showing loss (8%). Gains: network TV, 50% (see Vol. 10:14 for detailed PIB figures); magazines, 12%; newspapers, 6%; outdoor, 5%; business papers, 4%.

New York City ad agencies, thru local AAAA council, are vigorously opposing proposal to extend city's 3% sales tax to agency services.

Gordon Webber, of Benton & Bowles staff, who writes CBS-TV Mama show, has had second novel, The Far Shore, published by Little-Brown. First was Years of Eden.

Mark F. Ethridge, publisher of Louisville Courier-Journal and Times (WHAS-TV & WHAS) elected a trustee of Ford Foundation.
TV TRADE's FIRST-QUARTER REPORT CARD: TV-radio industry's first 1954 quarter, ended April 2, shows nicer balance between production, sales and inventory than in many years -- albeit considerably down from same 1953 period. RETMA estimates production at 1,445,000 TVs, factory sales, 1,586,000; distributor sales, 1,663,000; retail sales, 1,767,000. Inventories at all levels were about 1,600,000 at close of quarter.

Thus the 1954 first-quarter trade statistics, looking very much like 1952 at most levels, are way below same period 1953 -- except for retail sales, which held up remarkably unit-wise because of wave of buying of low-end sets, some as low as $140.

The comparable 1953 figures: production, 2,260,000; units; factory sales, 2,174,000; distributor sales, 2,060,000; retail sales, 1,780,000; inventories at all levels, 2,100,000. For 1952: production, 1,325,000; factory sales, 1,307,000; distributor sales, 1,260,000; retail sales, 1,280,000; inventories, 1,500,000.

Radio production in first quarter was 2,585,000 units vs. 3,834,784 in 1953.

TV production totaled 123,280 week ended April 2, compared to 124,343 units preceding week and 118,289 week of March 19. Radio production was 180,726 compared to 191,149 week of March 26 and 202,893 week before.

* * *

Emerson is also out with 17-in. table at $150, along with Crosley and Hallcrafters (Vol. 10:13-14) -- again leading to inevitable question: Whither TV prices? Immediate trend seems downward, but you can provoke a lively discussion by asking which way they'll go when new models are introduced in June and July. Nobody has a definite answer yet, at least as far as we can discern.

We even heard one manufacturer say that the industry is so full of surprises these days that he wouldn't be shocked to see a $100 model this summer. Nobody will agree with him now, of course.

RCA and Philco say they see no increase in offspring, but won't project their predictions beyond June. Philco spokesman was especially cautious, saying company is "playing it by ear" from week to week and problem is always under review.

Admiral's Joe Marty said it all depends on what happens to parts prices in next 60 days. If they stay at present levels, chances are TV prices won't go up, he said. But if they rise, set makers may well pass along increases, he declared.

Admiral pres. Ross Siragusa this week told annual stockholders meeting company's largest capital expansion program in its 20-year history would get under way this fall, with most of it going to TV, said details would be released in 2 or 3 weeks. He reported Admiral's first-quarter sales and profits were below the $3,056,878 earned on sales of $69,191,849 in first quarter of 1953.

Motorola's Ed Taylor reiterated his previous statement to us (Vol. 10:12) that his company definitely plans to raise lists, and markups, on new models to be introduced in June. He said recent talks with distributors & dealers convinced him it was absolutely necessary to raise prices. Dr. Allen R. DuMont, with no sets selling under $200, agreed with Taylor that prices will go up.

Possibility of 2-way stretch in prices, with leader models going still lower to around $120 or $130 and some over-$200 models going higher, was broached by one major manufacturer. Taylor said Motorola was considering "stretch" idea among several alternatives. Other manufacturers we spoke to didn't think it feasible.

Unknown factor in price situation is what effect Crosley's $140 Super V will exert on the market come June. It's apparently selling quite well, according to reports from markets where it has been introduced. Avco chairman Victor Emmanuel told stockholders meeting this week success of Super V had established the "salability of a so-called second set." Unverified trade reports had Crosley turning out more than 2500 per day, as against originally-planned total output of 40-50,000.
Topics & Trends of TV Trade: Wells-Gardner pres. Robert S. Alexander, speaking from experience, tells us the private-label set maker who specializes in higher-priced TVs is taking a beating in today's cut-price market. Wells-Gardner, he declared, is now getting ready to offer its chain store customers a cheaper 21-in. console as perhaps the first wedge to reduce prices generally and capture a share of the under-$200 market.

"We operate in a different league," Alexander told us. "We don't set prices the way other manufacturers can and do. We must adapt to orders from the chains, who tell us they want a table model or console at such-and-such a price. So now all we can do is offer them a set at a lower price, which we think today's market demands, but it's up to them to accept or reject it."

Using RCA components, Wells-Gardner has produced an experimental color set but is making no effort to market it. "The chain stores are not interested in color in its present form," he said. "The color set which will be sold to the consumers is not yet available."

Wells-Gardner also is losing ground on another high-priced item—the radio-phonograph console, once a mainstay of its output. Today it's one of the slowest-moving items in the TV-radio market, its customers are overstocked and as a result Wells-Gardner is almost out of radio production.

Despite its problems, Wells-Gardner has no intention of producing own TV line, Alexander says. He wants no part of setting up a jobber structure, thinks the TV market will eventually stabilize itself and the whole industry, including the private label manufacturer, will enjoy a new prosperity.

* * * * *

Picture tube sales in first 2 months totaled 1,203,396 valued at $26,050,401, down from 1,234,767 at $43,923,663 in first 2 months of 1953, reports Retma. Some 76% were 19-inch and larger. For Feb., alone, 645,715 picture tubes worth $13,916,478 were sold, compared to 557,681 at $12,173,923 in Jan. and $36,451 at $20,030,681 in Feb. 1953. Receiving tube sales in first 2 months totaled 47,322,494 worth $34,732,324, down from 77,367,566 at $52,976,840 in first 2 months year ago. Feb. sales were 25,189,147 at $18,319,819 vs. 22,133,347 at $16,412,505 in Jan. and 40,061,683 in Feb. 1953.

TV set sales by Canadian factories totaled 73,675 at average price of $370 in first 2 months of 1953, when production was 85,302, reports Canadian RTMA. Projected production estimate is that 129,875 more sets will be turned out next 3 months. Inventory at end of Feb. was 80,460, compared to 77,778 at start of month. Quebec led in sales with 27,988; Toronto second, 17,204; other Ontario, 7363; British Columbia, 6709; Ottawa & eastern Ontario, 5856; Hamilton-Niagara, 4191; Windsor, 2981; Maritime Provinces, 1016; Prairies, 367. For Feb. alone, sales were 38,785, production 41,467.

Trad Television Corp., 1001 First Ave., Asbury Park, N.J. (Victor Trad, pres.), manufacturers of private label TVs and electronic equipment for govt., this week filed petition under Chapter XI of Bankruptcy Act, listing assets of $1,979,220 and liabilities of $2,175,897 and offering 15% settlement, payable 1% monthly starting 6 months after confirmation. Among largest creditors: Sylvania, $78,993; RCA, $13,184; Sangamo Electric Co., Marion, Ill., $13,898; Erie Resistor Co., $12,000.

New CR tube making firm, Texas Electronic Manufacturing Co., 3120 Lamar St., Houston, has been formed to begin operating by June. Owners also control Television Equipment Distributors, handling picture & receiving tubes, antennas and accessories. Founder is A. W. Larkin, pres.; Harry Pennings, sales mgr.

Trade Personalals: Robert Brown, GE Washington district mgr. of govt. equipment marketing, transferred to Syracuse to become mgr. of sales for heavy military electronics, succeeded in Washington by H. A. Crossland (heavy equipment); Jack Painter, special Washington representative for GE broadcast equipment, has been transferred to Boston, succeeded by Lewis F. Page... Hodge C. Morgan promoted to Bendix Radio gen. sales mgr., replacing Arthur E. Welch, resigned; he reports to gen. mgr. Edwin K. Foster... John S. Frietsch, ex-Cincinnati district rep., Philco, named radio div. adv. mgr. ... Thomas J. Kelly, from commercial service div., appointed Raytheon director of licensing... Rudolf Leopold promoted to mgr. of DuMont's new specifications & records dept., in charge of designing broadcast equipment & mobile communications products... R. S. Gates named exec. v.p., Collins Radio Co., L. E. Bessemer named mfg. v.p. and R. T. Cod v.p. ... J. D. Campbell named gen. mgr. of all consumer products in consolidation by Canadian Westinghouse; J. W. Kerr appointed gen. mgr. of apparatus products... Richard C. De Witt, ex-T. A. O'Loughlin & Co., Newark (Philco), named Fada adv. mgr., succeeding late Herman N. Lubet... Joseph Nauer Jr. named Stewart-Warner Electric midwest sales mgr., Cincinnati, replacing Graeme W. Stewart, now sales & sales promotion mgr. of parent company... H. R. Marien Jr. resigns as exec. director of Television Service Assn. of Michigan to become exec. director of Florida Television & Technicians Guild, Miami... John Walker, ex-Philco & Stewart-Warner, named Emerson midwest district mgr., Cincinnati... Dudley Bell, ex-western div. mgr., American Lava Corp., appointed gen. mgr., Solar Mfg. Corp. ... Jerome Bresson resigned as Tele King chief engineer to go into sales engineering... Richard J. Brandt, ex-pres.-gen. mgr. of Sterling Products International S.A., of Guatemala, appointed to newly created post of director of sales, Sylvania international div.

Industry spokesman had generally favorable reaction to meeting with Commerce Dept. officials this week (see p. 13), one representative saying he was "pleased as punch" with the spirit of cooperation. Commerce Secy. Weeks told them he hoped new Business & Defense Services Administration unit, headed by Don Parris, would serve as spokesman for industry in dealings with Govt. He visualized BDSA as a central point where any manufacturer with a complaint or needing help from Govt. could go.

Westinghouse now has about 5½% of TV sales market, said v.p. Mark W. Cresap at stockholders' meeting in Sunnynvale, Cal., April 7. This is up from 3½-4% in 1953, keeps pace with improvement of 5% in general consumer products sales during first 2 months of 1954.
COLOR SITUATION remained little changed this week: Westinghouse feeling out public market-by-market, RCA preparing to launch commercial sales, most of rest of industry holding off because of "price, programming and picture size."

Westinghouse was reported selling only 3 sets in Chicago this week, but with dealers enjoying increased traffic for black-&-white because of color set on floor.

RCA New York distributor Bruno-New York plans heavy promotion when it introduces set to market in next couple weeks, says it now has orders for 80% of its allotment for next 3 months. Nature of RCA campaign for other cities hasn't been indicated yet.

RCA's prices for color set and servicing are now being adopted generally. Last week, GE went along with the $1000 for set, $150 for year's service, established by RCA. Admiral did same this week.

Though Admiral has lowered its sights on color production this year, it's more optimistic than most. Sales v.p. W. C. Johnson says he expects industry to build about 75,000 sets this year—and that Admiral will make 10,150,000 of them. RCA says it's aiming for 10,000 (Vol. 10:14).

Thus, of the Big 3 — Admiral, Philco, RCA — only Philco has nothing to say about marketing sets this year.

Repeated efforts to elicit information from Philco were unavailing. It has demonstrated a color tube in its labs and claims to have developed "the Philco color system," just as RCA refers to "the RCA color system."

Though Philco is silent now, presumably it will eventually seek to become strongly identified with color in public's mind and patent-wise. Philco has demonstrated developments to competitive manufacturers, asking them to refrain from public comment, even giving tube code name of "apple." It's obvious, however, that Philco's work is not now commercially ready, nor is there any indication when it will be ready. Tube itself is said to be simpler than shadow-mask type but to require "monstrously complicated" circuitry at present stage.

GE's Dr. W. R. G. Baker summed up views of many in April 5 speech before Electric Club of Los Angeles.

"The TV industry is in the untenable position," he said, "of having announced under political and competitive pressure, a new service to the public without having the technological ability to deliver the service within the standards of economic limits acceptable to the public . . . The rub of the problem is the color picture tube."

He thought satisfactory tube might be available by mid-1955 "by heroic engineering effort." He said that "a real marketing job on color" won't come before 1956.

Dr. Baker also intimated that industry could get together on standardization of receiver production just as it did on transmission standards — an unusual concept. His comments:

"Congress did establish the FCC to set up standards to insure that there would be only one uniform signal specification, but the only law governing equipment standardization is [the Sherman Anti-trust Act]. I am told that it is possible even under the Sherman Act for companies to pool such efforts, provided, however, that the fruits of the combined work are made openly available to all on reasonable terms. However, these are matters well beyond the scope of my remarks today."

Financial & Trade Notes: Allen B. DuMont Laboratories Inc. reports record gross sales of $91,828,982 in 1953, compared with $76,166,782 in 1952 and $50,741,596 in 1951. Net profit after $1,549,000 Federal taxes was $1,544,782 (60c a share) in 1953 vs. $1,424,603 (55c) after taxes of $1,473,300 in 1952 and loss of $583,000 in 1951. TV receiver and broadcasting divisions operated at loss last year, reports Dr. DuMont, but CR tube, tube development, instrument, transmitter and gov't. divisions showed profit of 12.8% before taxes. CR tube div. alone increased sales by 33%, and gov't. contracts accounted for about 17% of total volume.

Regarding color, Dr. DuMont reiterated his oft-expressed position that it's still in an "early developmental stage" and that it "will be a number of years before we will be able to supply large-screen color receivers at a price most consumers can afford." Meanwhile, he states, the sale of black-&-white sets will be adversely affected. DuMont production this year will concentrate on table models and open consoles.

* * * *

Among officers' and directors' stock transactions reported by SEC for Feb.: Lewis Gordon bought 100 CBS "A," holds 100; Edward R. Murrow bought 300 CBS "A" (June 1953), holds 300; Benjamin Abrams trusts bought 6200 Emerson (Dec. & Jan.), Abrams and trusts & foundations hold 304,439; Elliott V. Bell bought 100 General Precision Equipment, holds 300; Jeffrey S. Granger partnership bought 500 Sentinel Radio, personally and through partnership he holds 2000; E. Finley Carter bought 144 Sylvania, holds 1022; Don G. Mitchell bought 404 Sylvania, holds 3335; Howard L. Richardson bought 106 Sylvania, holds 437; Frederick W. Strauss bought 600 Traveler Radio, holds 1000; Hugh Robertson bought 100 Zenith, holds 1000.

Television-Electronics Fund lists total assets of $36,491,226 ($7.80 a common share) as of March 31, compared to $27,835,082 ($6.93) on Oct. 31, 1953.

Teleprompter Corp., cueing system which recently completed its largest assignment to date in handling more than 100 speeches during 4-day IRE convention, reports $17,281 net profit before provision of $9152 for taxes on gross rental business of $323,188 during 1953. This compares with $47,277 net profit before provision of $10,831 for taxes during 1952. Earned surplus on Dec. 31, 1953 was $26,586 as against $18,487 Dec. 31, 1952. Teleprompter renewed long-term contract with CBS, reports chairman Irving B. Kahn, and this month is being used for first time in making a full-length Hollywood production. Year has been period of "growing pains" and costly solution of manufacturing problems, Kahn states, but future holds "excellent prospects" and up to April 1 this year volume of business has run double that of same 1953 period.

Muter Co. reports net earnings of $447,463 (66c on 681,680 common shares) after taxes of $464,791 on sales of $15,190,100 in 1953, compared to profit of $3,455,573 (52c on 661,825 shares) after taxes of $432,445 on sales of $12,653,060 in 1952. Working capital at year's end was $2,972,283, compared to $3,077,975 at end of 1952. Pres. Leslie F. Muter predicted start of color production forefinger increased business in coming years because color sets require 3 times as many components as monochrome.

National Union Radio Corp. reports net profit of $1,666,458 (10c a share) on sales of $12,158,045 in 1953, compared to $139,920 (21c) on $14,464,694 in 1952 and $700,910 (21c) on $13,671,112 in 1952. Working capital was $1,713,297 at year's end, compared to $973,242 at end of 1952. In annual report, pres. C. Russell Feldmann attributed decline in sales to sharp drop in demand for picture tubes in last half of year.

Servomechanisms Inc. reports net profit of $305,689 (40c on 760,700 common shares outstanding) after taxes of $541,352 on sales of $13,332,746 in 1953, compared to $276,024 (36c on 758,000 shares) after taxes of $522,288 on sales of $10,151,589 in 1952.
Olympic Radio reports net profit of $62,187 (14¢ a share on 431,925 common shares outstanding) on sales of $17,667,485 in 1953, compared to $84,747 (20¢ on 429,925 shares) on $12,765,708 in 1952 and $426,514 ($1.11 on 383,593 shares) on sales of $14,467,072 in 1951, when company received tax credit of $235,000. Working capital at year's end amounted to $2,891,045, compared to $2,902,780 at end of 1952. Backlog of defense orders was $14,000,000. In annual report, pres. Morris Sobin blamed TV price-cutting and factory wage increase retroactive to July 1 as major reasons for profit decline. Color publicity, he added, also upset normal industry pattern of high sales in last quarter of year. Several experimental color sets have been built by Olympic and factory personnel and are being trained so "regular production may commence as soon as larger color picture tubes and components become available." Proxy notice for annual stockholders meeting April 26 in company's Long Island offices discloses these remunerations paid to officers & directors in 1953: Sobin, $33,099; Albert Friedman, sales v.p., $65,600; Dr. R. Bowling Barnes, research & development director, $31,100.

Wells-Gardner & Co. reports record 1953 sales of $22,572,069, net income of $772,939, compared with $16,301,043 & $459,976 for 1952. "We enter the new year with a large backlog of gov't work which should result in a substantial sales volume and a profit during 1954," says annual statement. "However at the outset, the reverse is true in the civilian field. Shipments of radio & TV receivers showed a marked drop during the last few months of the year, and our customers entered 1954 with high inventories [But] reduced production during the last quarter of 1953 and continuing into 1954 is bringing inventories back to normal."

Webster-Chicago Corp. reports profit of $927,162 ($1.87 a share) on sales of $27,757,899 in 1953, compared to loss of $408,951 on sales of $19,580,686 in 1952. Gov't. billings accounted for 17% of 1953 sales, with backlog of $13,000,000 at year's end, reports pres. R. F. Blash. He said all divisions—consumer products, laminations, govt. contracts—showed gains in 1953 and predicted 1954 sales of consumer products would be "as good as or better than 1953."

Reeves Soundcraft Corp. reports net earnings of $284,301 on sales of $8,566,054 in 1953, compared to $90,187 on $3,364,921 in 1952 and loss of $77,570 on $2,054,401 in 1951. In addition, Airdesign Inc., wholly-owned subsidiary of Tele-Video Corp. (owned 66% by Reeves), showed net profit of $30,755 on sales of $344,542. Company now owns 431,849 common shares of Cinerama Inc, and is contracting with several motion picture studios for use of its magnetic striping process for Cinemascope pictures, said annual report of pres. Hazard E. Reeves.

Stewart-Warner Corp. and subsidiaries report 1953 sales of $122,797,592, net income of $4,080,810 ($3.04 per share), compared with 1952 sales of $122,551,883, net income of $4,223,850 ($3.30). Annual report blames "larger than normal carryover of TV & radio sets" for bulk of $8,000,000 increase in inventories, but adds that shipments since first of year have substantially reduced this figure. Report says Stewart-Warner expects to build "modest quantity" of color sets this year.

RCA reports "increased" results, but notes that "the favorable effects of low production costs were offset by several adverse factors." Figures at 29 cents a share vs. 13.5 cents in 1953. In a comment on earnings, John C. Cahill, vice pres. & gen. counsel, observed that "the year 1954 was a period of transition in the electronics industry and a period of adaptation for RCA to the changing conditions of its environment."

Electronics Reports: Defense electronics progress and problems occupied large part of this week's Washington meeting between top electronics industry executives and high officials of Commerce, Defense and Treasury Depts.

Asst. Defense Secy. Donald A. Quarles told conference the research & development program is now at its top level—greater than World War II—at annual rate of $1.3 billion, but this will be cut back 7-10% in fiscal 1955. Some 60% of research & development is now being contracted to private industry, 10% to non-profit institutions such as universities and research organizations.

Acting director Donald S. Pariss of Electronics Div. of Commerce Dept.'s Business & Defense Services Administration (BDSA) revealed that tax-aided expansion of electronics industry's defense production potential approved by Govt. now totals $328,000,000 in new and proposed facilities. Some 1200 requests for rapid tax amortization have been approved from Jan. 3, 1951 to Apr. 5, 1954, he said, giving this breakdown: tubes, $102,000,000 in new facilities; components, $52,000,000; end equipment, $174,000,000.

Comments and questions by industry representatives included: (1) Opposition to recent Air Force policy of concentrating contracts with a prime "systems" contractor, leaving it to him to control procurement of such items as electronic systems, in place of former policy of giving separate prime contracts for electronic equipment and other items used in aircraft. Quarles replied that Defense Secy.'s office has set up applications engineering group to correct this situation. (2) Complaint that number of electronic engineering graduates has declined to 50% of former level and that shortage is becoming more acute. BDSA official said his office will try to determine what can be done to encourage more young people to study engineering. (3) Request for Defense Dept. to disclose its electronics requirements in the event of all-out mobilization.

Dr. Oliver G. Haywood Jr., recently Sylvania mgr. of engineering planning and a West Point graduate, appointed mgr. of its new Missile Systems Laboratory in Queens County, N. Y., his staff including Frank S. Manov, mgr. of systems analysis dept.; Dr. Maurice E. Bell, mgr. of plans dept.; Ernest Schleben, mgr. of electronics dept.

Lloyd Esphenschied, noted Bell Labs inventor (more than 100 patents, including co-invention of coaxial cable system), retiring after 44 years with Bell System. He was born in St. Louis in 1889, joined AT&T in 1910.

IBEW pres. Daniel W. Tracy resigned, effective April 15, to be succeeded by international secy. J. Scott Milne, whose place will be taken by J. D. Keenan.

T. V. Learson, ex-gen. sales mgr., promoted to director of electronic data processing machines, International Business Machines Corp.

Crosley's Canadian subsidiary doubling floor space of its West Toronto plant to 90,000 sq. ft.; estimated cost is $800,000 and payroll will be 600.
TALLEST TOWER authorized to date—1572-ft. structure to be used jointly by KWTV (Ch. 9) and educational KETA (Ch. 13), Oklahoma City (Vol. 9:32, 10:14)—was officially underway this week after ground-breaking ceremonies April 5. Wielding shovel and pickaxe were chairman John Griffin and pres. Roy Turner (ex-gov. of Okla., and announced candidate for U. S. Senate). Goal is completion by “late summer or early fall.”

Statistics are startling: tower weight, 1,050,000 lbs.; guy wires, 27,000 ft. weighing 267,000 lbs.; base insulators, 21 porcelain tubes 4-in. in diameter; paint, 650 gals. for one coat; triangular cross-section, 12-ft. on a side; base legs, 10½-in. solid round steel; 4 transmission lines measuring 6500 ft., plus 2000 ft. of lines from transmitters to tower; 1200 cubic yards of concrete reinforced with 30,000 lbs. of steel.

Tower alone, erected, with one coat of paint, costs $550,000. Most of steel has been fabricated and delivered to Idecos yards in Columbus, O.

Next tallest tower granted is the striking 1521-ft. "candelabra" structure planned jointly by WFAA-TV & KRLD-TV, Dallas (Vol. 10:14).

Reappointment of Rosel Hyde as FCC chairman seems more certain than ever as end of his one-year tenure, April 18, approaches. Boom for Comr. Doerfer as chairman has subsided in face of unprecedented support for Hyde from all quarters—industry, education, fellow commissioners, Republicans, even Democrats. Presidential action is expected next week; if by any chance it doesn’t come through by April 18, Communications Act provides that commissioners themselves name chairman temporarily. There has been talk that a dark horse is being pushed for chairmanship to be named to succeed Doerfer who would be shifted to another Govt. agency when his term expires this June 30. Little weight is given to that possibility now.

TV program awards of Ohio State U’s Institute for Education by Radio-TV: special interest, Frontiers of Faith (NBC-TV) and Foramtown, U.S.A. (WBBM-TV, Chicago); cultural, Hallmark Hall of Fame (NBC-TV) & The Long Voyage (WOL-TV, Ames, la.); basic freedoms, American Forum of the Air (NBC-TV) & The Independent Mr. Jefferson (WNBQ, Chicago); public affairs, United Nations Open House (CBS-TV) & They Come Home (KPIX, San Francisco); children’s, Watch Mr. Wizard (NBC-TV) and Wanda, Wanda (KING-TV, Seattle); instruction, Shakespeare on TV (KNXT, Los Angeles); classroom, District of Columbia Public School Series (WNBW, Washington).

Edward Lamb challenged FCC’s right to examine allegations he was a Communist (Vol. 10:13) at time of renewal of his WICU, Erie, Pa. In brief filed with Commission, he said FCC should have tried to revoke his license instead, putting burden of proof on itself rather than on him. Former Attorney General J. Howard McGrath, now a Lamb v. p., is handling case alone—firm of Fly, Shuebruk, Blume & Gaguine having dropped out after disagreement on how to handle case. Lamb’s brief included letters of praise from J. Edgar Hoover and others.

FCC has advised principals in proposed $350,000 purchase of Carl Raymond’s KMO-TV, Tacoma (Ch. 13), with KMO (5-kw on 1360 kc), that hearing will be necessary because purchasers own an overlapping AM in nearby Seattle. It’s KAYO (5-kw day, 1-kw night on 1150 kc), buying group being headed by Jessica Longston (Vol. 10:5).

Millionaire oilman H. L. Hunt was authorized by FCC this week to assign CP for projected KTLG, Corpus Christi, Tex. (Ch. 43), to Trinity Broadcasting Co., owned by Gordon McLendon family, for consideration of $5608 expense to date.

Transfer papers in purchase deal whereby Time Inc. proposes to acquire KLZ-TV (Ch. 7) along with KLZ (Vol. 10:12), filed with FCC this week, disclosed that proposed purchaser, LTF Broadcasting Corp., will pay $3,553,760 for 100% of stock, which is owned by theatre men Harry E. Huffman & Frank Ricketson, gen. mgr. Hugh L. Terry (now convalessing in LaJolla, Cal. from serious illness but expected to continue in post), Theodore R. Gamble and J. Elroy McCaw. Replacement value of equipment was put at $1,273,200, depreciated to $923,952 since station went on air last Oct. 29. Balance sheets show KLZ (AM & FM) earned profit of $97,940 before taxes, $39,066 after taxes during 6 months ending Jan. 31, 1954, which compares with $135,073 & $31,598 in same period last year. KLZ-TV operating profit from its start last Oct. until Jan. 31 was $24,705, profit after taxes $9858. That the stations are doing increasingly better, especially the TV, is revealed in Jan. figures showing that TV profit before taxes was $32,839, after taxes $18,119, while AM-FM profit before taxes was $5183, after taxes $3273. Filed with FCC this week also were transfer papers for proposed sale of K0Y-TV, sharing Ch. 10 in Phoenix with Gene Autry’s KOOL-TV which proposes to consolidate it (Vol. 10:19). Purchase price is disclosed as $200,000, not $400,000 as previously reported. K0Y-AM will remain in present hands.

St. Louis Ch. 4 merger (p. 3) has following conditions: KXOK (Elzey Roberts) is to buy 14,145 shares of KWK Inc. (Robert Convey) at $14.64 a share (total: $207,082) and is to dispose of KXOK. KSTP Inc., St. Paul (Stanley Hubbard), owning 50% of Missouri Valley TV Co., is to buy same amount, and other 32 stockholders of Missouri Valley TV Co. to be buy 1848 shares. Ownership of proposed TV grantees, KWK Inc., is to end up with these percentages: Convey family, now majority stockholders of KWK, 27%; St. Louis Globe-Democrat, now minority of KWK, 22%; Elzey Roberts’ KXOK, 27%; Stanley Hubbard’s KSTP Inc., 23%; the 39 Missouri Valley stockholders, 3%.

Single TV application this week was for Boston’s Ch. 5 — sixth applicant for that channel — by Boston Post, owned by financier John Fox, who recently purchased radio WCPQ, subject to FCC approval (Vol. 10:13). Three applications were dismissed this week, and number pending is now 264 (43 ugh). [For further details, see TV Addenda 18-V herewith; for complete listings of all grants, new applications, dismissals, hearings, etc., see TV Factbook No. 18 with Addenda to date.]

Westinghouse purchase of KPIX, San Francisco (Vol. 10:11), was formally announced by pres. Gwilym Price at stockholders meeting April 7. He said final approval not only depends on FCC but “upon the outcome of tax legislation now in Congress affecting this type of transaction.” It’s understood tax-free deal contemplates exchange of Westinghouse stock valued at about $6,000,000. Controlling stockholder Wesley L. Dunn retains radio KSFO. Gen. mgr. Philip G. Lasky and staff remain with KPIX.

City Council of St. Petersburg, Fla. voted this week to advertise for sealed bids to dispose of municipally-owned WSUN-TV (Ch. 38) and radio WSUN (5-kw on 620 kc, ABC). Bids are returnable by 11 a.m., April 28. First and only TV station in Tampa-St. Petersburg area, on air since last May 15, WSUN-TV is reputedly profitable, and last year was about to be sold to Ted Mack, Lou Goldberg and others associated with Original Amateur Hour (Vol. 9:41) for unnamed sum.

Interconnected to network circuits this week were time-sharing KOOL-TV & K0Y-TV, Phoenix. Next on AT&T’s hookup schedule, probably next week, are KVAL-TV, Eugene, Ore.; KARK-TV, Little Rock, Ark.; WNIT, Providence; KWWL-TV, Waterloo, Ia.
LOG OF THE 1954 STARTERS TO DATE: So far this year, exactly 36 new TV stations have gone on the air, including the 3 reported for this week on p. 3. Two more started in Canada, and 7 in the U.S. quit operating. So many of you have asked for lists, since our last semi-annual TV Factbook came off the presses just 3 months ago, that we've compiled them for your convenience; you'll find the tabulation on p. 12. Note that detailed data on most of these stations has already been published in TV Factbook No. 18 of last Jan. 15, wherein you will find names of owners, executives, rate data, etc. Similar data on the 1954 starters not covered in the Factbook will be found in our Newsletters Vol. 10:1-16, for as regular readers of Television Digest know, each station gets a "sendoff" report the week it starts test patterns. Incidentally, we are about to start work on our mid-summer Factbook, which will detail all stations on the air to July 15 and as many of the autumn starters as report bona fide plans.

FCC BACKSTOPS RETMA ON RADIATION CONTROL: The "one-two" punch to lick interference problems was nearer completion this week when FCC backed up RETMA plan (Vol. 10:14) by issuing notice of proposed rule-making specifying some limitations on spurious radiations that RETMA has adopted.

So all-inclusive is FCC's proposal -- covering every device in the country employing an oscillator -- that we're reprinting document in full as Special Report herewith. It merits close study by every manufacturer.

RETMA is pleased with Commission's action, doesn't regard such intervention as the brandishing of a punitive "big stick". RETMA now fully concedes FCC's powers in the matter, is happy that Commission endorses industry's voluntary efforts.

RETMA's own proposal is bringing good response, including approval already by several major manufacturers. There seems little doubt that board meeting in Niagara Falls, Ont. April 29-30 will take steps to put plan into effect.

There's nothing new about the fact that FCC says it intends to control the unwanted radiations from TV and FM receivers. Such a provision was part of proposal initiated 5 years ago, which this week's action supersedes. What's new about it is that industry and FCC see eye to eye on it -- former recognizing Commission's jurisdiction and latter accepting RETMA's plans for voluntary policing.

Not only TV and FM receivers would come under the new rule. All "restricted radiation devices" would. These are defined as follows:

"Devices which radiate radio frequency energy and are specifically designed to generate radio frequency energy (whether or not they are intended to be used for communications purposes) and which are not specifically covered in any other part of the Commission's Rules and Regulations."

Also under the rule are "incidental radiation devices" -- defined as "electrical apparatus in which the generation of radio frequency energy is unintentional." No specific standards for these are proposed at this time, though FCC always claims power to stop "harmful radiation" of any device affecting communications.
Another class of radiation covered is "carrier current systems" such as voice and control signals induced on high-voltage power lines, campus radio, etc. New rules will hit some of these quite hard.

Tightest restrictions of all were applied to community TV antenna systems. Limit: 10 uv/m at 10 ft. All new systems built after rule is adopted would have to comply. All existing systems would have until June 30, 1955 to comply. The FCC attitude on this tight limit is that there will always be some people living near the cables who prefer to receive free signals on their own antennas, and that these viewers have a right to protection from cable interference. Rule wouldn't affect multiple outlet systems confined to single building -- such as hotels, etc.

* * * *

The certification plan which FCC endorses is briefly as follows:

1. Establishment of an independent certification laboratory empowered to test all TV and FM sets for conformance to standards acceptable to FCC.
2. Authorizing manufacturers to affix laboratory seal of approval to their sets if they meet those standards.

One thing RETMA proposes that FCC doesn't is that all manufacturers comply with 41.25 mc IF for TV sets. Commission decided to see how industry reacts to the RETMA plan first, before considering further measures.

* * * *

FCC would thus provide the "mailed fist" within RETMA's "velvet glove". No receiver manufacturer has yet rejected the RETMA proposal. Industry responses to FCC proposal will be accepted until June 16. Meanwhile, RETMA's committee under Hazeltine research v.p. Arthur Loughren is studying various institutions to determine which would best serve as certification laboratory.

NEwsPAPER PROTEST GRANTED; 3 CPs ISSUED: That unique newspaper protest to Ch. 12 grant of WBLK-TV, Clarksburg, W.Va. (Vol. 10:15) succeeded in delaying construction of the station, as expected, though it barely squeezed by FCC on 4-3 vote.

Commission issued 3 CPs and one initial decision, meanwhile. One CP was returned -- KTCO, Ft. Worth (Ch. 20) -- making 67 grants surrendered since freeze, 55 uhf, 12 vhf. This week's CPs:

San Jose, Cal., Standard Radio & TV Co., Ch. 11; Lexington, Ky., WLEX, Ch. 18; Fayetteville, N.C., WFLB, Ch. 18.

Initial decision favored KWK, St. Louis, for Ch. 4 grant after big 3-way merger last week. Uhf station WTVI, in nearby Belleville, Ill., has petitioned FCC not to grant the merged applicant.

San Jose CP came from final decision in which Commission upheld examiner's opinion that competing FM Radio & TV Corp. had been dilatory in preparing for the hearing and had finally defaulted. Lexington and Fayetteville CPs came from final decisions after competitors had dropped out.

* * * *

Clarksburg protest case has stirred a lot of speculation to effect that host of non-broadcast interests will seize upon it as precedent to delay construction of TV stations. No doubt of it, door is wide open -- at the moment.

By acceding to the protest of Clarksburg Exponent & Telegram and by ordering WBLK-TV to hearing, FCC doesn't acknowledge any merit to newspapers' arguments. All FCC says is that they have right to be heard. Matter of fact, chances are they'll get very short shrift in the hearing when it comes.

What decision does mean is that FCC majority has become a bit court-shy after getting its ears slapped down for failure to grant protests in the Spartanburg case (Vol. 10:14). It's felt the Clarksburg protest can be disposed of and station construction started much faster than would be the case if the protest were denied and court granted a stay order, as it did in Spartanburg appeal.

Commission would also like to make "horrible example" of case, encouraging Congress to eliminate or change protest section -- which FCC never did like.
Comrs. Bartley, Doerfer and Lee dissented. Bartley: "I cannot believe that Congress intended that Sec. 309(c) be so subverted, in the light of the mandate contained in Sec. 1 of the Communications Act to make available to all the people of the U.S. an efficient and nationwide radio and TV system." Doerfer: "That the protestant has successfully asserted he is a party in interest within the intent of the law is an absurdity..." Lee: "I cannot conceive of Congress intending to stretch party in interest to ridiculous extremes for the very evident purpose of delay."

**UHF OPERATORS ORGANIZING 'UNITED FRONT':** At least three "nationwide" groups of uhf telecasters are being formed to try to get together on testimony for hearings beginning May 4 before Senate communications subcommittee.

Some or all of these groups may merge before the hearings -- if they can agree on concrete proposals. Informal regional conferences of uhf operators have also been held, and most of them will be absorbed into new "unified effort."

Behind the meetings is desire to thrash out uhf problems, get together on sound, practical suggestions to bring to hearing -- rather than have large number of uhf telecasters bewilder Senators with a like number of individual panaceas. So far there's been no agreement on specific proposals.

These were the principal groups being convened to prepare uhf testimony:

1. **UHF Industry Coordinating Committee**, formed April 12 by representatives of more than 25 stations, named as temporary chairman Harold Thoms, WISE-TV, Asheville, N.C., retained counsel and is expected next week to invite all uhf stations and groups to join it in formulating all-industry testimony.

2. **Group led by Leon Green, KNZU-TV, Houston**, has meeting scheduled for April 25-26 in Washington (Vol. 10:13), but is likely to merge with Thoms group.

3. **UHF TV Assn., led by Lou Poller, WCAN-TV, Milwaukee**, is calling meeting of its board May 1, and of all interested uhf operators May 3 in Washington.

---

Coordinating Committee met behind tightly closed doors, released no information following meeting. It tentatively selected as counsel Ben Cottone, ex-FCC gen. counsel, and voted also to hire consulting engineer, as yet unnamed. Subcommittees were named to explore various proposals, report to next meeting, possibly next week.

Meeting was devoted to informal discussion of uhf problems and possible suggestions for testimony, but no definitive recommendations were approved. The telecasters heard presentation by a Washington engineer urging allocation of additional vhf channels from govt. and FM bands to replace uhf.

UHF Assn. petitioned FCC to reinstate freeze, withhold all grants pending the outcome of Senate hearing. Petition was filed after Coordinating Committee meeting, which was attended by Poller and gen. counsel Wm. A. Roberts, and at which merger or agreement between the 2 groups was discussed but not accomplished.

---

List of witnesses for uhf hearings is growing -- and it's doubtful whether the 3 days allotted will be sufficient to hear everyone. Slated to appear so far: FCC; the 4 TV networks; RETMA; GE electronics v.p. Dr. W.R.G. Baker; National Citizens Committee for Educational TV; Storer Broadcasting Co.; Poller; Green; Wm. Johns, WOSH-TV, Oshkosh, Wis. (now off air); Wm. Putnam, WWLP, Springfield, Mass.; David F. Milligan, WFAM-TV, Lafayette, Ind.

NARTB currently doesn't plan to take part in hearings, but v.p. Thad Brown says question is under study and broadcasters' group may decide to come in later. Tied up in the hearings is fate of FCC's multiple ownership proposals (5 vhf, 2 uhf) and Sen. Johnson's sliding-scale substitute permitting ownership of up to 10 uhf.

**CHATTANOOGA, DES MOINES & WESLACO:** Three vhf "firsts" -- one opening up substantial new market -- went on air this week, bringing U.S. total to 385 (129 of them uhf). Chattanoog area gets first outlet, as does Weslaco, Tex. Des Moines gets first in-town vhf to compete with local uhf & pre-freeze vhf in nearby Ames. *Week's starters*:

WHO-TV, Des Moines, Ia. (Ch. 13) went on 9 a.m.-noon, 1-4 p.m. & 7-8 p.m. daily test patterns April 15, begins commercial programming April 25 as basic NBC
affiliates. Col. B.J. Palmer, veteran broadcaster, heads project with Paul A. Loyet as v.p.-gen. mgr.; Harold Fulton, commercial mgr.; Jack Kerrigan, program mgr.; Reed Snyder, chief engineer. Owning 40% by reason of merger deal is Ralph Atlass' Independent Bostg. Co., which sold local KLOA but still owns WLOL, Minneapolis. Only TV competitor in immediate area is KGT, Des Moines (Ch. 17) and Iowa State College's WOI-TV, Ames (Ch. 5). WHO-TV uses 10-kw RCA transmitter with 700-ft. tower. Its RCA 12-section superturnstile had to be rebuilt after it fell in Feb., causing $40,000 damages and delaying start. Base hour rate is $550. Rep is Free & Peters.

WDEF-TV, Chattanooga, Tenn. (Ch. 12) opened up brand new market with April 15 tests which brought "excellent reception reports from more than 100 miles," as wired by pres. Carter M. Parham. Nearest other TV is in Rome, Ga., 54 air miles, with no others nearer than Knoxville, Nashville & Atlanta, all more than 100 mi. Chattanooga still has uhf Ch. 49 WOUC pending since Aug. 1952, also had another Ch. 43 uhf grant which FCC cancelled on oilman Tom Potter for lack of diligence. WDEF-TV becomes NBC interconnected, CBS secondary, goes commercial April 25. It uses 10-kw RCA transmitter, 300-ft. Emson tower on nearby Signal Mt. FCC this week approved new stock setup whereby WDEF group owns 45%; Tri-State Telecasting Corp., 27.5%; Southern Television Inc., 27.5%. WDEF's Mr. Parham remains pres.-gen. mgr.; Moses Lebovitz (Southern), v.p.; Alex Guerry Jr. (Tri-State), treas.; Edward Finley Jr., secy. Station mgr. is Harold E. Anderson, ex-KOLN-TV, Lincoln, Neb., with Morris Quave, program mgr.; Otis Segler, local sales mgr.; B.C. Baker, chief engineer. Base hour is $350, rep Branham.

KRQV-TV, Weslaco, Tex. (Ch. 5), long delayed by series of antenna mishaps (Vol. 10:5,13), began operating commercially as an NBC & DuMont affiliate April 11, day after first test patterns went on air. It's just 18 mi. from Harlingen, 36 mi. from Brownsville-Matamoros, where only other stations in rich Rio Grande Valley are located. It uses 5-kw GE transmitter with GE antenna atop 700-ft. tower. Owner O.L. (Ted) Taylor, who recently sold his rep firm to Raymer, is also applicant for Ch. 3 in Wichita. His TV director is Millman Rochester, with Byron Ogle as station mgr.; Allan Page, sales mgr.; Lewis Hartwig, chief engineer. Base rate is $200, rep Raymer.

Personal Notes: Jules Herbuveaux promoted to gen. mgr. of NBC's WNBQ & WMAQ, Chicago, succeeding the late Harry C. Kopf ... A. E. Joscely, ex-CBS, organizing new KHOP, Stockton, Cal. (Ch. 13), Mt. Diablo project headed by H. Leslie Hoffman, TV-radio manufacturer; Wm. Hollenbeck, ex-KGO-TV, named program mgr.; Stanton D. Bennett, ex-KOMO-TV, Seattle, chief engineer ... John H. Smith Jr., NARTB promotion mgr., appointed public affairs mgr., assuming publications & information duties handled by administrative v.p. Robert K. Richards ... Bernard I. Ochs promoted to gen. sales mgr., WLWA, Atlanta ... Michael Horton, who organized NBC color information program, named network information director, in charge of expanded institutional & public services ... Roy Dabadiie named gen. mgr. of upcoming WBBZ, Baton Rouge, La. (Ch. 2), due in Sept.; Charles Garvey succeeds him as gen. mgr. of AM affiliate WJBO ... Robert Owen resigns as chief engineer of KOA-TV & KOA, Denver, to join RCA Service Co., Camden ... Theodore B. Pitman Jr. promoted to gen. mgr. of WTAQ-TV & WTAO, Cambridge-Boston, replacing Frederic S. Bailey, resigned; Richard H. Gurley Jr. named TV sales mgr., Fred H. Stein program supervisor ... Dick J. Kasten named gen. mgr. of KSTM-TV, St. Louis; Wm. Knight, sales mgr. ... Ralph Sacks resigns as sales mgr. of new uhf KSAN-TV, San Francisco ... John R. Taylor returns to Pocatello, Idaho, to be gen. mgr. of KWIK-TV (Ch. 10), Carmen-Wrathall station due in fall, after being sales mgr. of KIFI, Idaho Falls ... John B. Burns promoted to midwest mgr., ABC Film Syndication Inc.; Miss Lee Francis, ex-CBS-TV Film Sales, promotion mgr. ... Charles M. Amory, ex-v.p. Eagle-Lion Studios & Pathe Labs, heads newly formed Minot TV Inc., distribution firm associated with Motion Picture Adv. Service and United Film Service ... Harry Wayne McMahon, who in 1939 founded Five Star Productions Inc., Holly-

Top FCC jobs now completely out of civil service merit system—reclassified from Schedule A to Schedule C this week—are gen. counsel, chief engineer and chief accountant. Change makes appointments and removals entirely up to FCC without reference to civil service status. Still pending is FCC request that secretary be given same status.

Edward T. Ingle, for 7 years TV-radio director of Republican National Committee and now in public relations consulting practice, has been retained by Citizens for Eisenhower Committee, Dupont Circle Bldg., Washington, to handle TV-radio-film phases of Congressional campaign.

Telecasting Notes: Everybody’s getting into the TV awards act, sure-fire for publicity—and it isn’t surprising that one of the TV Guide gold medal awards went to U. S. Steel Hour for excellence of its Theatre Guild performances. Odd, though, that the Motorola Hour, which alternates same time on same network with same kind of dramatic show, didn’t get one, too. Incidentally, from where we sit, we’d say Robert Galvin’s commercials on Motorola Hour are as adult and intelligent as U. S. Steel’s are silly. Despite shining example of Alcoa, Reynolds & Revere, whose institutional and sales aims are much the same, U. S. Steel’s commercials are incredibly puerile—silky palaver by a simpering young couple expressing juvenile wonderment over the uses of steel and actually insulting the intelligence . . . “TV is opening a tremendous field for us, and it will be a world-wide market before we are through,” said Republic Pictures pres. Herbert J. Yates at April 9 stockholders meeting. Republic has released many of its old films to TV via subsidiary Hollywood TV Service Inc., owns one of biggest film processing labs, does big TV business . . . Roy Rogers & Gene Autry films alone will bring in $3-4,000,000 when and if they’re cleared for TV, said Yates. Both cowboy actors have used to prevent it—Rogers winning, Autry losing in lower courts, both decisions being appealed (Vol: 7:42-44 & 8:20) . . . March of Time library, embracing some 15,000,000 ft. of used & unused film, taken over by NBC film div. for sales & distribution, as of May 1. Thus Time Inc. quits the production end of TV-movie business, while expanding in TV-radio station ownership with outlets in Albuquerque, Salt Lake City and Denver (Vol: 10:15) . . . Telefilm Enterprises formed by Charles Wick, talent agent, as new film syndicate, first show being Fabian of Scotland Yard being made in London by Trinity Productions; Bud Austin, ex-

BIGGEST TOWER project yet proposed is Selma, Ala. structure which would measure 1373 ft. from ground to tip of Ch. 8 antenna. Proposal by grantee WSLA (radio WBAM, Montgomery) is now on agenda of regional air-space subcommittee at Ft. Worth, and will be filed next week with FCC. Station received grant in Feb., hopes to get on air by end of 1954 with full power from 50-kw Standard Electronics transmitter.

The 1800-ft. guyed tower will be fabricated in Birmingham by Vulcan Tower Co., owned by WSLA v.p. Wm. E. Bens Jr. and secy.-treas.-mgr. Wm. J. Brennan. It will be erected near Lwondesboro, 22 mi. from Montgomery and 25 mi. from Selma, will take about 3 months to construct, to be topped by GE antenna.

The 752-ft. tower of WBAM (AM) in Montgomery is presently Alabama’s tallest structure, according to Bens. TV studios will be in remodeled building in Selma. Rep hasn’t yet been named.

Note: Tallest towers so far authorized are 1572-ft. structure in Oklahoma City now being built by KWTV (Ch. 9) and to be used also by educational Ch. 13 KETA (Vol: 10:15), and 1521-ft. “candelabra” tower planned for KRLD-TV and WFAA-TV in Dallas (Vol: 10:15).

First educational fold-up, State of New Jersey’s CP for 12-hour WTLV in New Brunswick is due to be surrendered next week, because of state legislature’s refusal to appropriate $229,000 for station’s operating expenses. Democratic Gov. Meyner had opposed appropriation, observing in budget message: “A 20-in. screen should never be allowed to come between teacher and pupil during school hours.” Ford Foundation grant of $100,000 and studio equipment valued at $150,000 loaned to station by commercial sources will be returned. Granted CP Dec. 3, 1952, station had been beaming closed-circuit telecasts into classrooms in nearby communities.

George Foster Peabody Awards for 1953, as presented April 14 at luncheon meeting of Radio & TV Executives Society of N. Y.: news, Gerald W. Johnson (WAAM, Baltimore); music, NBC TV Opera Theatre; entertainment (double award), Television Playhouse (NBC-TV) and Imogene Coca (Show of Shows, NBC-TV); education (double award), Cavalcade of Books (KNXT, Los Angeles) & Camera Three (WCBS-TV, N. Y.); children’s, Mr. Wizard (NBC-TV); international understanding, BBC coverage of Coronation; public service by TV-radio station, WSB-TV & WSB, Atlanta, for You and Your Health and Removing the Rust from Radio; radio news, Chet Huntley (KABC, Los Angeles); public service by radio station, WBAW, Barnwell, S. C., for Church of Your Choice. In addition, a special award went to CBS’s Edward R. Murrow, 4th time he has won a Peabody.

Gold Medal program awards of TV Guide Magazine: See It Now (CBS-TV); U. S. Steel Hour (ABC-TV); Cavalcade of Sports (NBC-TV). Runners-up for “Show of Year” honors (in alphabetical order): Adventure (CBS-TV); Comedy Hour (NBC-TV); Dragnet (NBC-TV); Arthur Godfrey and His Friends (CBS-TV); I Love Lucy (CBS-TV); Life Is Worth Living (DuMont); Make Room for Daddy (ABC-TV); Omnibus (CBS-TV); Toast of the Town (CBS-TV); Today (NBC-TV); Your Show of Shows (NBC-TV).

Sigma Delta Chi award winners for distinguished journalism in 1953 included WHAS-TV, Louisville & CBS Radio, both for public service; Gordon Gammack, KRNT, Des Moines, radio reporting; Charles J. Chatfield, WHCU, Ithaca, N. Y., radio news writing.

Kine recordings of Hallmark’s widely acclaimed 2-hour King Richard II with Maurice Evans, carried on NBC-TV last Jan. 12, are being made available free to schools and colleges in 16mm prints.

Official Films, named gen. & sales mgr. . . . Princeton Film Center producing 15-min. Rural Review series, aimed at farm audience and available for quadruple local sponsorships; narrator is Fred Bailey, ex-UP, Washington . . . NBC signs Boston Symphony for 1954-55 season to replace NBC Symphony, being dissolved with retirement of conductor Arturo Toscanini; NBC also announced 6th season starting in Oct. for its TV Opera Theatre . . . NBC-TV Burbank studios subject of 10-p. illustrated article in Progressive Architecture Magazine . . . Fourth Storer station to become primary basic CBS-TV affiliate is WSPD-TV, Toledo . . . “First revival ever to be presented over TV” offered by WGVL, Greenville, S. C. beginning Easter Sunday, with 30-min. service daily for week following, conducted by evangelist Dr. Bob Jones . . . Who’s got the ding dong? TV Merchandising Inc, owner of Ding Dong School (NBC), has filed suit against toy mfr. Milton Bradley Co. to restrain it from using the name . . . Good promotion idea: KOA-TV, Denver, holds “matchless menu” contest, with appliance prizes to viewers supplying best recipes for each course of “ideal” 6-course dinner . . .

WAYS-TV, Charlotte, N. C., cuts base hour from $300 to $200, min. from $60 to $40 . . . More rate increases: WTVR, Richmond, adds new Class AA hour of $875, raises Class A hour from $625 to $775, min. from $120 to $140; WKTU, Utica, base hour goes from $425 to $475, min. from $75 to $85; KATV, Pine Bluff, Ark., hour from $300 to $350, min. $60 to $70; KTVH, Hutchinson, Kan., on May 1 hour from $400 to $450, min. $80 to $100; WEHT, Henderson-Evansville (Ind.) hour from $150 to $200, min. $30 to $40 . . .

New reps: WAIM-TV, Anderson, S. C. to Headley-Reed; KOLN-TV, Lincoln, Neb., to Avery-Knodell; upcoming KSWM-TV, Joplin, Mo., to Venard, Rintoul & McConnell.
PROPOSAL to require uhf stations to start with at least 5-kw transmitters (Vol. 10:8-11, 15) drew scant and unfavorable response as FCC's deadline for comments on its proposed rule-making passed April 16—and it now appears virtually certain to be dropped or drastically modified.

RCA, biggest maker of uhf transmitters, objected to Commission's "arbitrary" minimum on transmitter power, arguing that 1-kw transmitter and high-gain antenna can give 15-20 kw ERP and render good service in many communities. It urged FCC to consider such factors as antenna power, contour of antenna pattern, size of community, etc. Extra cost of higher power transmitters might discourage smaller communities from having their own TV service, RCA added.

Joint Committee on Educational TV said: (1) Antenna height is more important than transmitter power for uhf. (2) 1-kw transmitter is adequate for many small or medium sized cities where terrain is reasonably flat. (3) Proposal would increase construction and operating costs, perhaps prevent some groups from entering TV.

WCOS-TV, Columbus, S. C. (Ch. 25) said its 1-kw transmitter is giving "highly satisfactory local coverage to 40 mi. or more" and surveys have shown "audience is determined by the popularity of the program presented, not whether is it uhf or uhf, and without regard to the transmitter power." It pointed out it would get same coverage with 5-kw transmitter and an antenna 300-ft. above average terrain as it now gets with its 1-kw at 650-ft. Uhf's principal problems were said to be "economic, not technical."

Grantees and applicants continue to ask FCC to substitute vhf channels for uhf and low channels for high channels in their home territories. KFAZ, Monroe, La. (Ch. 43) this week petitioned Commission to substitute Ch. 13 for 43, so it can "operate effectively" with KNOE-TV (Ch. 8). Even though it was first on air, KFAZ stated it had been able to get only a "bonus" affiliation with one network "which costs KFAZ a considerable amount of money each month," and has found it "virtually impossible to get national advertising."

Sunbury Broadcasting Co. asked substitution of Ch. 38 for 74 in Sunbury, Pa., 74 for 38 in Lewistown, addition of 65 to Shamokin. It said it will apply for Ch. 38 if switch is made, stated lower channel offers better chance of success.

Successful pre-freeze TV operators who control and operate WSAT-TV, Huntington, W. Va. (Ch. 3), with WSAZ, this week bought out WGKV, Charleston, W. Va. (250 watts on 1490 kc, NBC) and thereby obtained new headquarters for own TV-radio sales & studio staff in state's capitol. Purchase price is $75,000, with WGKV pres. R. M. Venable planning to retire to Florida and 32% stockholder Willard H. Irwin Jr. to devote himself to his accountant's practice and to his 20% interest in CP for WJOL-TV, Joliet, Ill. (Ch. 48). Station staff remains unchanged. Buyers are all identified with Huntington Publishing Co. (Herald-Dispatch and Advertiser) which owns 89% of WSAZ Inc., with Mrs. Eugene Katz, wife of the rep, owning 11%. In purchase of Charleston AM station, these are stockholders: Col. J. H. Long, pres. of Huntington Publishing Co., 5%; Wm. D. Burke, v.p., 25%; Edward H. Long, 15%; Robert Long, 15%; Lawrence H. Rogers, mgr. of WSAT-TV, 20%; Leroy Kilpatrick, chief engineer, 10%; Eugene Katz, 10%.

"Re-creation" of baseball games won't be undertaken this year, FCC was advised by stations KLIF, Dallas, and KELP, El Paso (Vol. 10:15). They said plans were called off because complaints filed by Yankee, Dodgers & Cardinals produced too many delays.

General Teleradio Corp. pres.-chairman Thomas F. O'Neill, of the parent General Tire & Rubber Co. ruling family, caustically denies reports Mutual Broadcasting System may soon be sold—replying to hints by both Broadcasting and Variety that Texas oil millionaire H. L. Hunt (Facts Forum), a supporter of Sen. McCarthy, is prospective purchaser. Variety recalls Mutual's considerable "trimming" and reshuffling of executives, notes that veteran production v.p. Jules Seebach left April 12 on "a 4-week vacation" and even goes so far as to say all this has been done "to make the operation a more attractive purchase for a potential buyer like Hunt." MBS commentator Fulton Lewis Jr., denying published report he's Hunt's confidante and advisor on broadcast affairs, says "there's not an iota of truth" in the reports so far as he's concerned. Another observer said he doubted very much Hunt's willingness to sink own money into any such enterprise, noting that he has a fetish for making everything pay for itself. Nobody has discussed any such sale with any member of FCC, careful inquiry indicates; it's customary, when any major deal is contemplated, to go over it first with FCC chairman or key member—and that hasn't been done. Trade newsmen, smelling "something cooking" at MBS, led O'Neill some weeks ago to scout rumors of bad times there by asserting the network never had it so good, with 1953 gross time sales of $23,000,000, up 10% from 1952 (Vol. 10:11). Fact is that PIB figures show it continuing in Jan.-Feb. of this year slightly ahead of same 1953 months (Vol. 10:14). O'Neill's April 14 denial read: "Since our acquisition and control of Mutual and General Teleradio, we have never discussed any sale of part of these 2 corporations with any one at any time. The latest unfounded rumor of sale to H. L. Hunt is the most fantastic I've heard of yet and should be consigned to the oblivion it so richly deserves."

Chronicle Publishing Co., San Francisco (KRON-TV) becomes 971/2% owner (instead of 49% as now) of KBAK-TV & KBAK, Bakersfield, Cal. (Ch. 29), formerly known as KAFY-TV, in transfer deal filed with FCC this week. It acquires the 375 shares of stock held by attorney John P. Hearne for $30,000 and 350 shares from Charles Theriot for $37,501. Theriot, gen. mgr. of KRON-TV, retains 1 1/2%; Harold P. See, KRON-TV station mgr., 1%. Founder Sheldon Anderson last Dec. sold his 8.3% interest to Theriot. Deal includes agreement that if radio KBAK is sold, Theriot and Hearne, jointly or individually get first refusal rights.

FCC approved Rollins Broadcasting Co. purchase of WAMS, Wilmington, Del. (1-kw on 1380 kc, MBS) for $5000 plus assumption of $10,914 liabilities, at same time authorizing stock changes whereby O. Wayne Rollins owns 50% and John W. Rollins 45% in parent firm, which also holds CP for WHRN (Ch. 40) in Dover, Del., owns AMs WJWL, Georgetown, Del.; WNJR, Newark, N. J.; WRAD, Radford, Va.; WRAP, Norfolk, Va. Rollins have proposed to give up daytime WRAP in Norfolk (1050 kc) and buy out WCAV there (1-kw on 850 kc), continuing the WRAP call letters and specializing in Negro programs.

Subscription TV tests with Zenith system are planned by WOR-TV, New York, which filed letter with FCC asking special temporary authority to air scrambled signal before regular programming for 90 days starting May 15. All of signal would be telecast, differing from Zenith's own tests in Chicago several years ago when it employed phone company lines. Station says purpose is to try high-powered transmission; Chicago tests used 1-kw transmitter. WOR-TV previously has tested Skiatron's coded-card method.

"World's smallest" commercial radio will be marketed by Emerson; it measures 3½x3x¾-in., weighs 7½-oz.
Network Accounts: Chrysler all but signed this week as sponsor of 13 NBC-TV color "spectaculars" this fall (Vol. 10:13), with its 4 makes of cars sharing promotion. High-budget "spectaculars" produced by Leland Hayward, are scheduled at rate of one every other week Sat. 9-10:30 p.m., Sun. 7:30-9 p.m., Mon. 8-9:30 p.m., Colgate-Palmolive renews Comedy Hour on NBC-TV starting Sept. 19, Sun. 8-9 p.m., thru Ted Bates & Co., leaving every 4th Sun. open for color "spectacular"... American Chicle Co. buys 20-min. of new Sid Caesar show on NBC-TV in fall, Mon. 8-9 p.m., thru Dancer, Fitzgerald & Sample; current sponsors of time, Block Drug Co. & Speidel (Name That Tune, 8-8:30) and Firestone (Voice of Firestone, 8:30-9) have been offered first chance at remaining 40 min. of Caesar show... Benrus, buying 10 min., became first sponsor of Max Liebman's new Show of Shows in fall on NBC-TV, Sat. 8-9:30 p.m., thru Ocell & Freabrey... E. I. duPont de Nemours Co., for its nylon products, buys 13 partic, on NBC-TV's Home, Mon.-thru-Fri. 11 a.m.-noon, thru BBDO... Paper-Mate Pen Co. to be alt. sponsor (with General Mills) of Stu Erwin Show on ABC-TV starting April 30, Fri. 7:30-8 p.m., thru Foote, Cone & Belding... Lincoln-Mercury Dealers Assn. to sponsor Toast of the Town thru summer, with m.c. Ed Sullivan taking 5-week vacation... GE sponsors Bing Crosby Show, featuring Bing's second star role on TV, on CBS-TV Sun. April 25, 9-9:30 p.m., thru BBDO... Dave Garroway's highly-successful 7-9 a.m. Today on NBC-TV is running well ahead of last year's time sales pace, is expected to gross $11,000,000 for year, compared to $5,000,000 in 1953 (Vol. 10:3)... With co-op sponsors, Mon. 9:30 p.m. boxing bouts from Eastern Parkway Arena, Brooklyn, move from DuMont to ABC May 17; DuMont will continue fights at that time from other site.

Army-McCarthy hearings due to start April 22 will be carried in full at start by all networks except CBS-TV, which gained tremendous stature with Ed Murrow's stand-up battle with Sen. McCarthy (Vol. 10:11,15). With jam-packed daytime commercial commitments to CBS, said it would have only filmed highlights of each day's hearings at 11:30 p.m.-12:15 a.m., and preceding day's hearings would be covered on 7-9 a.m. Morning Show, with newsmen Walter Cronkite interviewing personalities involved. Equally concerned with displacement of commercial schedules, NBC-TV announced it would cover hearings in full first 2 days, then decide whether continuance is worth the enormous time rebates and talent payments involved. ABC-TV & DuMont said they will cover hearings fully. Tentative times are 10:30 a.m.-12:30 p.m. & 2:30-4:30.

Ed Murrow-Sen. McCarthy feud (Vol. 10:15) has put Alcoa in "very uncomfortable position" but has been successful from public relations and advertising standpoint, said sponsor pres. I. W. Wilson. No stockholder has raised any objection, and responses after Murrow's first telecast ran 3 to 1 in his favor, after McCarthy rebuttal remained 2 to 1 in Murrow's favor. CBS reports phone calls, wires and letters up to April 12 totaled 15,443 in favor of Murrow, 6018 pro-McCarthy, or about 2½ to 1.

Advertising Club of N.Y., biggest of them all, to present bronze plaque of achievement at luncheon April 28 to Edward R. Murrow "for his realistic, accurate and individual depiction of the news through the great advertising media of radio and TV." And this week Hamilton College announced it would bestow an honorary degree, his sixth, on Murrow June 6.

ABC-TV's Dr. I.Q., in first telephone quiz since Supreme Court overruled FCC ban on giveaways (Vol. 10:15), on Sun. April 25 and each week thereafter, will give $1000 to viewer identifying author of famed quotation.
EASTERNMOST North American TV station, nearest to Europe if ever a Transatlantic relay system is devised, will be CJCB-TV, Sydney, Nova Scotia (Ch. 4), whose DuMont studio equipment is due for shipment May 15, presumably coincident with an as yet unannounced 10-kw RCA transmitter & antenna. Owned by N. Nathanison, to be operated by sons Marvin and Norris, CJCB-TV has Aug. 15 target, will be represented by Weed and All-Canada. At present, farthest east station on continent is CSJIJ-TV, St. John, N.B. (Ch. 4), which began testing March 22 (Vol. 10:12).

DuMont also reports orders for 25-kw transmitter from John Boler, KXJB-TV, Valley City, N. D. (Ch. 4), and 5-kw from WDXI-TV, Jackson, Tenn. (Ch. 9)—both due on air sometime in July. Mr. Borer is also operator of KCBJ-TV, Minot, N. D. (Ch. 13).

RCA this week shipped 10-kw transmitter to upcoming educational non-commercial WGBH-TV, Boston (Ch. 2), last reporting Oct. debut date, and 5-kw to educational KETC, St. Louis (Ch. 9), due on air in June. Week's only shipment reported by GE was new 3-bay Ch. 5 antenna to KTLA, Los Angeles.

* * * *

In our continuing survey of upcoming new stations, these were the reports received this week:

Buffalo's Ch. 2 grantee of last week, Buffalo-Niagara Amusement Corp., signed basic NBC affiliation this week, promised to be ready by June. It has applied to FCC for permission to take over radio WGR and, if granted, plans to ask for WGR-TV call. *Niagara Falls Gazette* has option to buy 25%. President of large stockholders group is George F. Goodyear, investments (10%), with Myron Kirk, senior v.p., Kudner Agency, as v.p. and largest single stockholder (10.66%). Joe Bernard, onetime mgr. of KOMA, Oklahoma City, recently associated with Kenyon Brown, will be gen. mgr. of new station, with WGR exec. v.p. Karl G. Hoffman as engineering mgr. [For full list of present stockholders, see *TV Faebook* No. 18, p. 218.]

Peninsula Television Inc., last week's grantee for Ch. 6 in Marquette, Mich., hasn't ordered equipment or begun construction, but plans Oct. start, according to pres-gen. mgr. Jerome Sill. He also owns 25% of WMIL, Milwaukee, TV applicant for Ch. 6 in nearby Whitefish Bay. Rep not yet chosen.

WCNY-TV, Canton, N. Y. (Ch. 7), planning late summer debut, got call letters just last week, starts construction as soon as weather permits at Champion Rd. site, 6 mi. west of Canton and 9 mi. east of Watertown where it gave up Ch. 48 CP for proposed WWNY-TV (Vol. 10:10). It will use 20-kw GE transmitter and 12-bay GE antenna atop 500-ft. guyed tower, expects to cover northern N. Y. and “large area in Canada.” Owned by Watertown Times, it will be CBS primary interconnected, also will carry ABC. Rep will be Weed.

WISH-TV, Indianapolis (Ch. 8) has 50-kw RCA transmitter ordered for June 15 delivery, expects to meet July 1 programming target, according to v.p-gen. mgr. Robert B. McConnell. Transmitter house ready, it's now adding 3-story addition to studios. Interim 473-ft. Ideco tower is scheduled for completion by May 1, with 12-bay RCA antenna. Network will be ABC, base hour rate $800. Rep will be Bolling.

KTXV, Muskogee, Okla. (Ch. 8), granted last week, hasn't finalized construction plans but has ordered GE equipment and hopes to get on air by mid-summer, reports v.p-gen. mgr. L. A. Blust Jr., ex-mgr. of radio KTUL, Tulsa, which has same control (John T. Griffin). E. Snider, KTUL chief engineer, and George Ketchum, promotion mgr., have also moved to TV. Muskogee is 44 air miles from Tulsa, but KTXV transmitter will be north of Haskell, about half way. Avery-Knedel will rep.

KLTV, Tyler, Tex. (Ch. 7), call letters changed from KGKB-TV, has ordered 10-kw RCA transmitter with 12-bay antenna to go atop 420-ft. Andrews tower, all due for June delivery so that test target has been tentatively set for Aug. 1, commercial debut Aug. 15. It will be first vhf in rich oil & cattle area, nearest others being in Dallas, 92 mi. to west, and Shreveport, 100 mi, east. Owner Mrs. Lucille Ross Lansing has acquired hangar and office space at former airport on edge of town, providing 12,500 sq. ft., which is being designed into a TV-Radio Center. Marshall Pengra, ex-KGBK mgr., recently mgr. of KSTM-TV, St. Louis, is returning to Tyler to run KLTV, with Hudson Collins as chief engineer and Jerry Lansing managing KGKB and coordinating TV-AM operations. No rep has yet been selected.

KLIX-TV, Twin Falls, Ida. (Ch. 11), proceeding slowly to keep costs down, won't make May target, probably will get on air next Aug., reports v-p-gen. mgr. Frank G. McIntyre. Transmitter is being custom built in Salt Lake City workshop operated jointly by all Frank Carman stations. KLIX-TV has published $120 base rate, has 2 fulltime salesmen out selling time in advance. Rep will be Hollingbery, who may include it under “group market plan” along with 6 other stations with interlocking ownership—KOPR-TV, Butte, Mont. (Ch. 4); and upcoming KUTF, Salt Lake City (Ch. 2), KWtk-TV, Pocatello (Ch. 10), KIPT-TV, Idaho Falls (Ch. 8), KFXD-TV, Nampa-Boise (Ch. 6).

KHOP, Stockton, Cal. (Ch. 13) now has July 15 test target for 25-kw transmitter with 12-bay antenna on order from RCA, plans Aug. 1 programming, reports pres. H. L. Hoffman, TV manufacturer. He's given up plan to utilize Radio Diabo's KSBR building for TV studios, has leased former auto agency building with 15,000 sq. ft. Tower will be on 3840-ft. Mt. Diablo, from which good signal is expected into San Francisco area. Rep not yet chosen.

WBOC-TV, Salisbury, Md. (Ch. 16), construction slowed by wind and rain, now plans May 15 start reports v-p-gen. mgr. Charles J. Truitt. It will use 1-kw RCA transmitter, 600-ft. Wind Turbine tower, is building own microwave tower at East New Market, Md. to deliver ABC & DuMont, will also carry Baltimore Orioles games. Base hour will be $200. Burn-Smith will rep.

Transfer of CP for Atlantic City's WOCN (Ch. 52) from Mata Enterprises to David E. Mackey for $10,446 was approved this week by FCC. In petition to FCC, partners Wm. G. & G. C. Mata, real estate & coal stripping operators, said they intend to devote efforts to pursuing their application for Braddock, Pa. Ch. 4 (allocated to Irwin, Pa.) and said they have been “unable to obtain the high power [10-kw] uhf transmitter [necessary to] successful uhf operations in Atlantic City.” Mackey is former Toledo TV distributor and onetime salesman for KDKA, Pittsburgh, and WBZ-TV, Boston.

Production of TV transmitter filters for reduction of spurious and harmonic emissions (Vol. 9:24) has been started by RCA, shipments beginning in May. No charge will be made for filters for transmitters shipped since July 1, 1953. For others, prices are: Ch. 2-5, 10 kw, $560; Ch. 7-15, 10 kw, $750; Ch. 2-5, 50 kw, $1700; Ch. 7-15, 50 kw, $1350; Ch. 14-43, 15 kw, $525; Ch. 44-83, 15 kw, $825. Vhf transmitters require two filters, uhf stations one.

Community antenna systems are classified as public utilities, Wyoming Attorney General Howard B. Black advised Public Service Commission in case involving Community TV Systems of Wyoming Inc., Casper, Wyo. (Bill Daniels, pres.). Immediate effect is to require Casper system to charge 2% sales tax for service, as do other utilities.
21-in. CONSOLE STILL LEADS ALL SALES: Even while the low-cost 17-in. sets are enjoying resurgence of demand -- both as first and second sets in home (Vol. 10:14-15) -- fact remains that 21-in. receiver is still way out front as hottest seller. That's not as surprising as fact that both production and sales of 21-in. consoles are running far ahead of table models -- this despite enormous publicity surrounding current heavy sales of 17-in. tables retailing as low as $140.

RETMA estimates for first 2 months, which we've projected for year to date, indicate 21-in. category runs 80% of production, 77% of factory sales, and 75% of distributor sales; and it's fair to assume that retail sales rate (figures unavailable) approaches distributors'. Of the total 21-in. production, 84% are consoles, 15% are table models, 1% combinations. Of factory sales, 85% are consoles, 14% tables. Of distributor sales, 86% are consoles, 13% tables.

Philco for some months has been devoting entire production to 21-in. RCA devotes 85-90% of output to 21-in., though it plans to resume 17-in.

* * * * *

Other sizes are also doing all right. While 17-in. now total 15% of output, 17% of factory sales, 18% of distributor sales, it's noteworthy that 24-in., once regarded as strictly de luxe item along with 27 & 30-in., has been showing remarkable upturn lately. For example, RCA tells us 10% of its current production are 24-in. consoles, listing -- and selling well, currently as at $395 in mahogany, $415 in blonde. Prospect is that more 24-in. models will be added to RCA's new line.

Foreshadowing possible increased 24-in. output generally are reports of the tube makers indicating pickup in orders for that size from set manufacturers. Our projections of RETMA figures indicate 24-in. (virtually all consoles) thus far in 1954 accounted for 5% of total production, 5% of factory sales, 8% of distributor sales. It should be noted, however, that many of first quarter's 24-in. sales came out of inventory, for factory sales of 54,000 in the first 2 months were more than double the 25,000 produced. Distributor sales in same period were 64,000.

Admiral also expressed "pleasant surprise" at movement of its 24-in., which list at $400 & $500 in open-face, $535 in half-door. But spokesman declined comment on future production plans, hinting further information might be included in details of Admiral's expansion program (Vol. 10:15), expected to be released shortly.

* * * * *

Buoyed by start of baseball season, set sales continued to maintain steady pace, though volume for full month of April is likely to show normal seasonal downturn -- but perhaps less of a decline than in past years. Industry leaders say they are pleased with sales for this time of year, though still bemoaning lower profits.

Regional differences in trade patterns continue, as always. May Electrical Merchandising Magazine tells how the South is "rising again" as fertile TV market, spurred by opening of new stations. It quotes R. P. McDavid & Co., RCA Birmingham distributor, as having backlog of 500 orders for TVs, taking ads in newspapers to explain delivery delays. It reports "market on the march" again in Atlanta, and better-than-1953 business everywhere in South except Carolinas.

* * * * *

TV production totaled 124,771 week ended April 9, top week so far this year, compared to 123,280 units preceding week and 124,343 week ended March 26. It was year's 14th week and first of second quarter, brought production for year to date to about 1,570,000, compared to 2,415,000 in corresponding period of 1953.

Radio production totaled 198,461, compared to 180,726 week ended April 2 and 191,149 week before. It brought 14-week production to approximately 2,785,000, as against 4,135,000 in same period year ago.
Topics & Trends of TV Trade: Admiral sales v.p. W. C. Johnson predicts sale of $5 billion worth of TVs as first sets in 14,000,000 homes during next 3 years. In speech titled "Changing Pattern in TV & Appliance Merchandising," delivered at this week's annual convention of Southern Wholesale Hardware Assn. in New Orleans, he also predicted:

(1) TV replacement market will amount to at least 7,000,000 sets a year by 1957, and 6,700,000 annually after that. (2) Within 5 years, 50% of all electrified homes will have either a freezer or combination refrigerator-freezer, and 25% will have an air conditioner. (3) Replacement market potential for refrigerators is about 3,250,000 units a year, representing almost $1 billion annually at retail.

"At Admiral," he said, "we expect that within a decade the amount spent each year for electrical appliances should double."

He noted a shift in distribution picture toward "more complete stocking of fewer lines," predicted trend is bound to continue because dealers can order merchandise more efficiently and can sell more profitably by concentration.

Sen. Russell D. Long (D-La.) promised this week to introduce amendment to omnibus tax bill to provide excise tax relief for TV-radio manufacturers, who were excluded from recent tax cut on appliances and other household equipment (Vol. 10:13). After hearing testimony by RETMA pres. Glen McDaniel before same Senate Finance Committee which turned down his earlier request (Vol. 10:13), Long said he would offer amendment as means of stimulating employment. McDaniel's testimony got big play in press, attributable largely to his off-the-cuff remark that color in present form had created a "great monster" for manufacturers seeking to promote black-and-white sales. McDaniel made remark in reply to question by Long as part of his earnest appeal to committee to correct excise tax "injustice" suffered by TV industry. Since Administration spokesmen say there's no likelihood Senate will include any excise tax changes in pending bill, RETMA officials are only faintly hopeful of favorable action.

All RETMA divisions and exec. committees meet April 26-27 at New York's Roosevelt Hotel, with proposal to revise dues and budget structure the major topic for action. If approved by board, it will be submitted to membership at proxy meeting in May and could be made effective Aug. 1. GE's Dr. W. R. G. Baker, chairman of special committee on spurious radiation, will report on response to RETMA's proposal for industry-wide certification laboratory to minimize TV interference caused by radiation. Following N. Y. meetings, RETMA board will meet jointly with Canadian RTMA April 29-30 at Sheraton-Brock Hotel, Niagara Falls, Ont., when annual Medal of Honor winner will be selected.

NARDA chairman Mort Farr, in address to Michigan Appliance & TV Dealers in Grand Rapids, suggested 6 steps dealers can take to prepare for color: (1) Start training service personnel as early as possible, sending them to manufacturers' and distributors' clinics. (2) Let manufacturer and distributor know what you want margin you require to sell color in businesslike manner. (3) Get color set on floor quickly and place price tag on it prominently, next to black-and-white for pointed comparison. (4) Cultivate future color customers by telling them about network program plans, larger screen sizes, etc. (5) Ask local TV stations to purchase inexpensive generating equipment for transmitting color bar signals at station breaks. (6) Read trade papers closely for new color developments, to be prepared for public's extensive questions.

TV shipments to dealers totaled 1,073,000 in first 2 months, when production was $47,504, according to RETMA state, county & territorial tables available on request. They compare with 1,348,178 shipped in first 2 months of 1953, when production was 1,449,831, New York led, with 98,203; Pennsylvania second, 72,083; Illinois third, 69,955. For Feb. alone, shipments were 460,378, compared to 611,118 in Jan. and 653,091 in Feb. 1953.

Video Products Corp., 370 Seventh Ave., N. Y. (Richard A. Marsen, pres.), was adjudged bankrupt April 13 after failing to post $25,000 indemnity bond in Chapter XI proceedings begun last Sept. (Vol. 9:38). It formerly made Sheraton TVs, its ownership interlocking with Sheraton Television Corp.
COLOR LEADOFF cities for RCA will be Washington and Oklahoma City, with full-page ads scheduled to break there Sun., April 25. Time schedule hasn't been released, but it's known that New York, Philadelphia and Baltimore promotions start May 2. All 38 cities equipped for color will have RCA sets by May 9.

Promotional details will be left largely to individual distributors. Company spokesman told us: "As in every other program, certain basic promotional recommendations will come from the factory, but each distributor—who after all knows his market best—is empowered to modify them according to local conditions." Southern Wholesalers Inc., RCA Washington distributor, reported at weekend it was still consulting with factory on details of introduction.

RCA will place samples of the $1000 set on dealer floors without charging for installation, as means of assuring good position for demonstration purposes. Normally, installation of each set costs dealer $15-25.

As many other RCA distributors are expected to do, Philadelphia's Raymond Rosen & Co. already has scheduled series of dealer meetings, first to be April 21 after dealers witness Kraft Theatre colorcast. Meanwhile, first RCA color set sold was installed 2 weeks ago in home of Norwalk, Conn. customer.

To list of VIPs with color sets, add the 7 FCC commissioners who now have sets on loan from RCA. State Dept.'s Blair House, used for visiting foreign dignitaries, now also has color set. One of first sets sold in Washington by RCA was to Woodward & Lothrop dept. store, where it has already been installed. White House has had receiver for several months, as have NBC executives, Broadcasting-Telecasting Magazine and Television Digest. Admiral reported first color set sale this week. It went to Michael J. Joyce, retired Chicago moving company executive.

How electronics is taking up slack in New England cities deserted by textile industry is detailed in April 11 Wall Street Journal. Article reports textile jobs in New England slumped from 275,000 before World War II to 221,000 last year, while "electrical machinery" jobs (including electronics) rose from 53,000 to 137,000. Specifically mentioned are new plants of Eastern Air Devices Inc. and Clarostat Mfg. Co. in Dover, N.H.; Sprague Electric Co. in Nashua, N.H., Western Electric in Lawrence, Mass.—among the "dozens" of electronics companies filling idle plant space and bringing jobs back to New England textile centers.

Magnavox reports sales of slightly more than $51,000,000 for 9 months ended March 31, up 12% over the $45,000,000 in comparable period of last fiscal year. Earnings report is not available yet. Pres. Frank Preimann said decline in TV sales last fall was more than offset by increases in high-fidelity volume. He attributed TV decline to "the public's erroneous belief that commercial color TV is imminent." He predicted this trend will reverse itself by fall as consumers "develop an awareness of the limitations of color in its present stage of development and begins to recognize that color TV, at commercially acceptable prices and satisfactory picture sizes, is still years away."

Radio Condenser Co. 1953 profit declined to $384,001 from 1952 earnings of $525,916, even though sales advanced from $14,745,068 to record $21,465,247. Pres. Russell E. Cramer blamed such "abnormal" factors as heavy initial production costs on new products and lower demand for TV & radio receivers last fall. In addition, annual report says company "was forced to share an industry setback attributable to the failure of uhf stations to commence broadcasting in the numbers and rate originally anticipated by set manufacturers."
Thirty-six new stations have gone on the air and 7 have quit since Jan. 1, 1954—and the list is printed herewith in response to requests by many subscribers. Two more can be added in Canada, too.

Note that most of the stations here listed (those indicated by asterisks) are given detailed listings in our TV Factbook No. 18 of last Jan. 15, wherein you can find data on their ownership, executives, rates, etc. Details on those not listed in the Factbook will be found in the issue of Television Digest indicated in brackets. These are the 1954 starters to date:

- KARK-TV, Little Rock, Ark. (Ch. 4) [Vol. 10:13]
- KHED-TV, Fresno, Cal. (Ch. 3)*
- KQED, San Francisco, Cal. (Ch. 9) [Vol. 10:15]
- KSAN-TV, San Francisco, Cal. (Ch. 32) [Vol. 10:10]
- WUNE-TV, Fort Myers, Fla. (Ch. 10)*
- WEAR-TV, Pensacola, Fla. (Ch. 3)*
- WLAB-TV, Albany, Ga. (Ch. 10) [Vol. 10:15]
- WBDW-TV, Augusta, Ga. (Ch. 12) [Vol. 10:7]
- WTOC-TV, Savannah, Ga. (Ch. 11)*
- WSJV, Elkhart, Ind. (Ch. 52)*
- WHO-TV, Des Moines, la. (Ch. 13) [Vol. 10:16]
- WNET, New York City, N.Y. (Ch. 74)*
- WNET-TV, Bay City, Mich. (Ch. 5)*
- WRAI-TV, East Lansing, Mich. (Ch. 60)*
- KDAL-TV, Duluth, Minn.-Superior, Wis. (Ch. 3) [Vol. 10:9]
- WDSM-TV, Duluth, Minn.-Superior, Wis. (Ch. 6) [Vol. 10:9]
- WISL-TV, Jackson, Miss. (Ch. 12) [Vol. 10:12]
- KPFB-TV, Great Falls, Mont. (Ch. 2)*

† Dagger indicates non-commercial educational station.

Foreclosure suit against KETX, Tyler, Tex. (Ch. 19), to recover transmitter and other equipment, has been filed by General Electric in Federal Court in Tyler. Involved is $344,687 promissary note for equipment, and 3 rented klystron tubes. Suit followed filing of involuntary bankruptcy action against KETX and owner Jacob A. Newborn Jr. by Tyler Woodworks, Layton Engineering Co. and John A. McCullars Sheet Metal Works, which claim station owes them $11,000. Newborn also has been named defendant in $1736 civil action by local merchant for alleged unpaid balance on furniture. Station went off air for 2 days last month when most of staff left, is now being managed by owner Newborn (Vol. 10:14-15). Regular TV ownership audit (Vol. 10:4), one of industry's crying needs, looks no closer though NARTB this week appointed 2 subcommittees to "finalize and recommend specific plans" for circulation study. Date for start of study still hasn't been set. Paul Raibourn, KTLA, Los Angeles, heads committee on organization-implementation; Hugh Beville, NBC, is chairman of organization & finance.

 Biggest radio station sale deal in history was approved by FCC and completed this week—new owners being scheduled to take over New York's independent and fabulously successful WNEW (50-kw on 1150 kc) as of April 27 with Richard D. Buckley, ex-Blair pres., as pres., gen. mgr. & 25% stockholder. Total purchase price was $2,100,000, which included about $500,000 in net quick assets, so that the $1,600,000 net price exceeded by far the $1,000,000 net paid last winter for Cleveland's WGR (50-kw on 1220 kc, CBS) out of a total purchase price of $1,750,000 that included about $750,000 net quick (Vol. 9:50). Purchasers, along with Buckley, are Horace Lohnes, Washington attorney, secy.-treas. of new WNEW Broadcasting Co. Inc., also 25% (50,000 out of 200,000 authorized shares); Harry R. Playford, St. Petersburg banker, v.p., 33,334 shares; H. W. Holland, St. Petersburg attorney, director, 33,333; Ed C. Wright, financier, director, 33,333. Sellers are Wm. S. Cherry Jr. of Providence's big Cherry & Webb dept. store (WPRO), who owned 48%, and who with local associates controlled 95%; Bernice Judis, gen. mgr., and her husband Ira Herbert, sales mgr., whose stockholdings and options brought them $250,000 of the total sale price. This group bought WNEW in 1950 for $2,000,000, which included $500,000 net quick. Miss Judis and Mr. Herbert will return to the stations in consulting capacities after vacation. Profitability of WNEW is indicated by, as shown in FCC papers, that it had net profit after taxes of $109,204 during 3 months ended Jan. 31, 1954 (on gross sales of about $750,000). During 1953, it had record sales of $2,800,000, and as of Oct. 31, 1953 it had an earned surplus of $783,765. It's expected the new WNEW owners will drop application for New York City's uhf Ch. 31.

Overwhelming approval of NCAA football TV control plan (Vol. 10:14) was voted by member colleges in mail referendum. Although Big Ten had proposed alternative program of regional telecasting (Vol. 10:10), only 26 schools opposed NCAA plan, while 184 voted in favor. TV networks, ad agencies and prospective sponsors will meet with NCAA TV committee in New York April 21-23 to submit proposals for telecasting and sponsorship. NCAA member votes on TV controls to date: 1951 convention, 161-7; 1952 convention, 163-8; 1952 mail referendum, 185-15; 1953 referendum, 172-13; 1953 referendum, 157-12; 1954 convention, 172-9; 1954 referendum, 184-26.

Channel shifts and power increases: NBC's WNBK, Cleveland April 25 switches from Ch. 4 to Ch. 3, increases power to 100-kw ERP, using non-directional antenna for first time. New transmitting plant is in Parma, antenna atop Cleveland's Terminal Tower Bldg. NBC flagship WNBT, New York (Ch. 4) April 11 raised ERP to 30-kw, highest permitted for its Empire State Bldg. antenna. WOOD-TV, Grand Rapids, Mich. (Ch. 8) this week boosted to 316-kw ERP.

Sen. Dwight Griswold (R-Neb.), who died in Bethesda, Md. Naval Hospital May 12 after heart attack, was member of Senate Interstate & Foreign Commerce Committee since he came to Senate in Jan. 1953 to fill out unexpired term of late Sen. Wherry (R-Neb.). He was also member of recently appointed communications subcommittee under Sen. Potter (R-Mich.). At week's end no replacement on Committee or subcommittee had been announced.

Interconnected to network facilities this week: KARK-TV, Little Rock, Ark.; KWWL-TV, Waterloo, la. Scheduled for AT&T hookup April 17 was KVAL-TV, Eugene, Ore.; April 19 WNBT, Providence, R. I.; April 25 WHO-TV, Des Moines; WDEF-TV, Chattanooga; WSEE, Erie, and WDBO-TV, Orlando, Fla.

FCC chairmanship was still unsettled at press time, with Rosel Hyde's one-year tenure expiring April 18. If President says nothing by then, commissioners will select own temporary chairman—undoubtedly picking Hyde.
Proposed Restrictions on Spurious Radiations

To Control Spurious Emissions of All Radio Devices Not Now Covered by FCC Rules & Regulations

including

All TV and FM Receivers

Providing System of Equipment Certification to Insure Compliance

Comments Due by June 16, 1954 (see Television Digest, Vol. 10:16)

In the Matter of
Amendment of Part 15 of the
Commission's Rules Governing
Restricted Radiation Devices

Docket No. 9288

NOTICE OF FURTHER PROPOSED RULE MAKING

1. Notice is hereby given of further proposed rule making in the above entitled matter.

2. On April 13, 1949 the Commission issued a Notice of Proposed Rule Making in this Docket which proposed to amend Part 15 of the Commission's Rules relating to Restricted Radiation Devices. By order of July 29, 1949 this Docket was subdivided into four parts: Part A pertained to Incidental Radiation Devices; Parts B, C and D of the Docket pertained to Restricted Radiation Devices.

3. The rules proposed in 1949 would have limited radiation from incidental radiation devices to 15 microvolts per meter at 100 feet or 15 microvolts per meter at a distance in feet equal to 157,000 divided by the frequency in kilocycles, whichever is greater. Comments addressed to this proposal expressed the opinion that comprehensive studies of the technical and economic aspects of regulation of incidental radiation devices were necessary before any rules governing this type of equipment were put into effect. Studies in this field directed to radio devices have developed limits which can be adopted at this time, where

as the studies of interference from electrical apparatus, such as power, lighting and ignition systems, are inconclusive. For this reason, the Commission proposes to classify radio receivers and some other forms of radio frequency generators as restricted radiation devices and to provide the class of incidental radiation devices for electrical apparatus in which the generation of radio frequency energy is unintentional. No specific radiation limits are proposed for incidental radiation devices but in the event that interference is caused to authorized radio services by operation of these devices, the operators of the devices will be required to take prompt action to eliminate the interference.

4. Subpart A of the attached proposed rules contains general provisions for the operation of restricted radiation devices. These provisions are in the form of minimum power and field intensity limitations, and will apply to all restricted radiation devices except insofar as specific provision for the operation of certain devices is contained in Subparts B and C. These limitations are set forth in terms of decibels above one microvolt per meter (dbu), and, merely for convenience, they are also set forth in terms of approximately equivalent microvolts per meter. Two sets of field intensity limitations are set forth in the proposed rules. The Commission proposes to place one set into effect as soon as these rules become effective, to be superseded by the second set on June 30, 1956. The limits to be placed in effect initially are based primarily on the Radio-Electronics Television Manufacturers Association's present radiation standards for television and FM receivers. Since it is not now known to what extent the RETMA standards can immediately be made applicable to all receivers, it is proposed to make the rules applicable now only to FM and TV receivers, and land mobile receivers above 25 mc, which have been the source of the most serious interference problems caused by receivers. The rules would become applicable to all receivers manufactured after January 30, 1956.

5. The rules proposed by the Commission in 1949 would have limited the operation of carrier current devices to the frequencies 10-200 kc with a radiation limit of 15 microvolts per meter at a distance in feet of 157,000 divided by the frequency in kilocycles. Comments directed to those proposed rules generally opposed the adoption of any rules which would restrict the operation of such carrier current devices.

6. Subpart B of the rules now proposed contains provisions for the operation of carrier current systems. Such systems operating in the band 10-425 kc which meet the radiation requirements of Subpart A could be operated without certification. However, provision is made for such systems to be operated with greater radiation if they are certified in accordance with the procedure set forth in Subpart B.

7. Carrier current systems operating above 425 kc for the purpose of distributing programs to more than one receiver and which are installed after the effective date of these rules would have to be certified as meeting the requirements specifically applicable to them. Such systems which are in operation on the date these rules are made effective would have to comply with all applicable provisions by June 30, 1955, and, until that date, such systems operating in the band 425-1605 kc would continue to have to meet the existing radiation standard set forth in Part 15 of the Rules. Moreover, all systems would immediately be governed by the provision of the rules which provides that the users or operators of restricted and incidental radiation devices which cause harmful interference to any authorized radio service shall promptly take such steps as may be necessary to eliminate such interference.

8. Subpart B of the proposed rules also provides that receivers shall be certified as complying with the applicable radiation limitations by the manufacturers thereof or by an appropriate certifying authority, or where this has not taken place, by the users of the receiver.

9. Subpart C of the proposed rules provides a procedure whereby restricted radiation devices which do not comply
with the provisions of Subpart A or B can be operated pursuant to a license issued by the Commission. Such licenses would be granted by the Commission only if it found that the device in question could not meet the requirements of the rules, but that its operation would serve the public interest, convenience and necessity.

10. The Commission also wishes to point out that while various radiation limits are now being proposed, the Commission may find it necessary in the future to impose stricter radiation limits in light of new developments in the electronics field, and the necessity for providing adequate protection from harmful interference to authorized radio services.

11. These proposed rules are issued pursuant to the provisions of Sections 4(i), 301 and 303(r) of the Communications Act of 1934, as amended.

12. Any interested person may file with the Commission on or before June 16, 1954 a statement or brief setting forth his comments in regard to the proposed amendments of the Commission’s rules. Comments in reply to the original comments may be filed within 20 days from the last day for filing original comments. No additional comments may be filed unless (1) specifically requested by the Commission or (2) good causes for the filing of additional comments is established. The Commission will consider all comments before taking action in the matter, and if any comments are submitted which appear to warrant the holding of a hearing or oral argument, notice of the time and place of such hearing or oral argument will be given.

13. In accordance with the provisions of Section 1.764 of the Commission’s rules, an original and 14 copies of all statements, briefs or comments filed shall be furnished to the Commission.

APPENDIX

Part 15—Rules and Regulations Governing Restricted and Incidental Radiation Devices

Subpart A—General

15.1 Statement of basis and purpose.—(a) Section 301 of the Communications Act of 1934, as amended, provides for the control by the Federal Government over all the channels of interstate and foreign radio communication and further provides, in part, that no person shall use or operate apparatus for the transmission of energy, communications, or signals by radio when the effects of such operation extend beyond state lines or cause interference with the transmission or reception of energy, communications, or signals, of any interstate or foreign character by radio, except under and in accordance with the Communications Act and a license granted under the provisions of that act. Restricted and incidental radiation devices emit radio frequency energy on frequencies within the radio spectrum and constitute a serious source of interference to authorized radio communication services operating upon the channels of interstate and foreign communication unless precautions are taken which will prevent the creation of any substantial amount of such interference.

(b) The following rules and regulations are designed to have a two-fold effect:

(1) They set forth the conditions under which the operation of equipment of the type covered by this part of the rules will not be considered to fall within the category of situations covered by the provisions of Section 301 of the Communications Act, for which a station license is required as a condition of lawful operation.

(2) They provide a procedure for the licensing of devices covered by this part of the rules which are unable to meet the conditions set forth for operation without a license.

15.2 Definitions.—For the purpose of this part the following definitions shall be applicable:

(a) Incidental Radiation Devices: Devices which radiate radio frequency energy but which are not specifically designed to generate radio frequency energy.

(b) Restricted Radiation Devices: Devices which radiate radio frequency energy and are specifically designed to generate radio frequency energy (whether or not they are intended to be used for communications purposes) and which are not specifically covered in any other part of the Commission’s Rules and Regulations.

(c) Carrier Current Systems: Restricted radiation devices comprising systems for the transmission of intelligence, including control signals, principally by means of conducted radio frequency currents.

(d) Harmful Interference: Any radiation or any induction which endangers the functioning of a radio navigation service or of a safety service or obstructs or repeatedly interrupts a radio service operating in accordance with the table of frequency allocations contained in Part 2 of the Commission’s Rules whether or not such interference occurs within the normally recognized field intensity contours of the authorized station.

15.3 Operation of Incidental Radiation Devices: Until further order, all devices of this nature shall be governed solely by the requirements specified in Section 15.5 of this Part.

15.4 Operation of Restricted Radiation Devices: The operation of all Restricted Radiation Devices manufactured or installed after the effective date of these rules shall be in accordance with the limitations set forth in sub-sections (a) and (b) below except insofar as Subparts B and C contain specific provisions for the operation of certain types of restricted radiation devices, in which event the operation of such devices shall be governed by those provisions of Subparts B and C.

1. The device shall not deliver more than the following amounts of power to an artificial load having electrical characteristics that provide maximum transfer of energy from the device to the load:

Prior to July 1, 1936, these limits shall not be applicable to radio receivers other than television and frequency modulation broadcast receivers and land mobile receivers above 25 mc.

### Frequency

or

(b) The device shall not create an electromagnetic field in excess of the values shown in the following table.
15.5 Information Concerning Apparatus: Upon request by the Commission the owner or operator of any device which is required by the provisions of this part to be certified, shall promptly furnish the Commission with such information as may be requested concerning the operation of such equipment, including a copy of any field intensity measurements performed by the owner. The determination of whether radiation complies with the limits specified in this part.

Subpart B—Operation of Restricted Radiation Devices That Require Certification

15.101 Certification of equipment: The owner or operator of a restricted radiation device which requires certification under this subpart shall have posted in the room in which such equipment is operated, a certificate of a competent engineer setting forth the general conditions under which such equipment should be operated and certifying that the equipment involved is capable of complying with the radiation limits set forth in this part as applicable to such equipment. The certification required by this section shall describe with certainty the equipment covered thereby and a brief, but specific statement of the engineering tests upon which such certification is based and the results thereof.

15.102 Renewal of Certification: No regular renewal of certification is required. However, the certification required by Section 15.101 shall be renewed for particular equipment by such date as the Commission may specify if the Commission has reason to believe that the operation of such equipment may be inconsistent with the provisions of this subpart or a source of interference to authorized radio services.

15.103 Carrier Current System Operating in the Range 10-425 kc:

(a) Carrier current systems operating at frequencies between 10-425 kc may exceed the limit set forth in Section 15.4 provided the system is certified in accordance with Section 15.101 and provided further that the field intensity shall not exceed 1000 microvolts per meter for frequencies between 10 kc and 157 kc, and 250 microvolts per meter for frequencies between 157 kc and 425 kc at a distance greater than 1000 feet from any point in the system, and that radiation at distances greater than 500 feet from any point in any carrier current system operating under the provisions of this section and located within the 50 uv/m contour of a co-channel authorized station, shall not exceed an intensity of 15 db below the prevailing field intensity of such co-channel station.

(b) As a precautionary measure to avoid interference to navigational service, carrier current operators should discuss proposed installations and changes in existing installations within the frequency bands allocated to the aeronautical and marine services with the field offices of the Civil Aeronautics Administration, the United States Coast Guard and the Federal Communications Commission.

15.6 Interference From Incidental and Restricted Radiation Devices: No incidental or restricted radiation device, irrespective of whether it otherwise operates in accordance with the provisions hereof, shall be operated in a manner which causes harmful interference to any licensed radio service. Where harmful interference is in fact caused by the operation of any such device its operation must cease immediately until the condition responsible for such interference has been eliminated.

(c) Carrier current systems that normally radiate for a period of less than one second duration at intervals of more than one minute shall not be subject to the field intensity limitation and certification requirements set forth in this part.

(d) Spurious and harmonic emissions from carrier current systems shall not be in excess of the values specified in Section 15.4.

15.104 Carrier Current Systems Operating Above 425 kc:

(a) The following provisions shall be applicable after the effective date of these rules to all carrier current systems which operate on frequencies between 425-1605 kc for the purpose of distributing programs to more than one broadcast receiver, provided, however, that until June 30, 1955, existing carrier current systems in this band shall be required in the alternative to meet the radiation limit of 15 microvolts per meter at a distance from any radiating source of 157,000 feet below the frequency in kilocycles:

(1) Radiation shall not exceed an intensity of 40 uv/m at distances of 100 feet or more from any radiating source, provided, however, that such radiation shall not exceed 15 uv/m at the border of the property exclusively under the control and for the exclusive use of the owner and operator of the system.

(2) The carrier frequency on which the system operates shall be and odd multiple of 5 kc, and the system shall not deviate more than 10 cycles from the carrier frequency.

(3) The system shall be certified in accordance with the provisions of Section 15.101.

(b) Carrier current systems, including wired television distribution systems, used for the purpose of distributing programs to broadcast receivers at frequencies above 1600 kc, shall be certified in accordance with Section 15.101. Such systems installed after the effective date of these rules shall not radiate in excess of 10 microvolts per meter at a distance of 10 feet or more from any point in the

(a) Receivers which are required to meet the radiation limitations set forth in Section 15.4 of these rules, shall be certified as to their compliance with such requirements in accordance with the procedure set forth in Sec. 15.101.

(b) The owners and operators of receivers need not themselves comply with the certification requirements of subsection (a), provided that the manufacturers of such receivers or an appropriate certifying authority have certified that they are capable of operating within the radiation limits set forth in Sec. 15.4, and the manufacturers have marked or identified each receiver accordingly.

15.106 Information and Inspection.

(a) Upon request by the Commission the owner or operator of any restricted radiation device governed by this subpart of the rules shall promptly furnish the Commission with such information as may be requested concerning the operation of such equipment. The premises on which such devices are operated, and any certificate required hereby, shall be available for inspection by representatives of the Commission at all reasonable hours.

Subpart C—Operation for Which a License Is Required

15.201 When a license is required:

No restricted radiation device which does not comply with Subparts A or B or this Part shall be operated except pursuant to a station license issued by the Commission.

15.202 Showing required:

An authorization for the operation of a restricted radiation device may be granted upon proper application therefor in accordance with the provisions of this Part and a showing that in the light of the following considerations the public interest, convenience, and necessity would be served by such a grant:

(a) The purpose for which the equipment sought to be licensed will be used.

(b) The reasons why the equipment involved cannot be operated in compliance with the provisions of this Part for unlicensed operation.

(c) The nature and extent of interference that may be caused to authorized radio services by the operation of such equipment.

(d) The procedures that will be followed to eliminate promptly any actual interference to authorized radio services.

15.203 Filing of Applications:

All applications for new station authorizations, or applications for modification or renewal of station authorizations shall be submitted to the Commission's offices at Washington, D. C. Each application shall be submitted in duplicate and one copy shall be signed under oath or affirmation by the applicant if the applicant be an individual, by any one of the partners if the applicant be a partnership, by an officer if the applicant be a corporation, or by a member who is an officer if the applicant be an unincorporated association. Each application shall contain full and complete information concerning the station location, proposed equipment, operating frequency, expected magnitude of the radiated field and all information required by Section 15.202 or other sections of this Part. (The precise form of the application will be specified at such time as these rules may be finalized.)

15.204 Station License: Each station license authorizing the operation of a restricted radiation device will be issued for such period as the Commission may specify after consideration of the facts in a particular case; provided, however, that no license will be issued for a term in excess of 1 year. Such licenses shall be renewable upon application if the Commission finds the renewal will be in the public interest. Each station license shall be non-transferable and if the equipment for which the license is issued passes from the possession of the licensee, for any reason whatsoever, the licensee shall notify the Commission thereof and, when possible, include in such notification the name and address of the recipient of the equipment. The original license shall be posted in the room in which the equipment is operated or attached to the equipment itself.

15.205 Operator Requirements: The operator requirements for stations licensed under this Part will be determined and prescribed by the Commission after consideration of the application for station license.

15.206 Revocation of License: Any license issued pursuant to this Part of the Rules may be revoked by the Commission for the reasons and in accordance with the procedure set forth in Section 312 of the Communications Act and Section 1.402 of the Commission's Rules.

15.207 Information and Inspection: Upon request by the Commission the owner or operator of any restricted radiation device governed by this subpart of the Rules shall promptly furnish the Commission with such information as may be requested concerning the operation of such equipment. The premises on which such devices are operated, and any license required hereby shall be available for inspection by representatives of the Commission at all reasonable hours.
**TELEVISION ADVERTISING BUREAU PLANNED:** Success of ANFA's Bureau of Advertising (it was even host to President Eisenhower for his address during newspaper publishers convention this week) has prompted the managements of an imposing list of top-flight stations to plan a similar organization for TV. They envisage it as a "centrally-directed promotional and educational effort to educate new advertisers to the value of the TV medium" as well as a permanent liaison with advertisers, agencies, etc.

They'll call it Television Advertising Bureau, plan headquarters in N.Y., and propose that it should function entirely separate from NARTB. Group has retained Richard F. Doherty, recently resigned NARTB employee-employer relations v.p., now in consulting practice, to draw up organization plan for initial meeting — possibly at time of NARTB convention in Chicago, May 23-27.

Networks weren't represented at quietly-arranged and unpublicized sessions in New York's Biltmore Hotel, April 22-23, where executives representing 24 major stations agreed on necessity of TAB, pledged finances, got pledges of support from other managers. The heads of the major rep firms were present, including Station Representatives Assn. pres. John Blair and managing director T.F. Flanagan.

Publisher Norman Chandler, Los Angeles Times, which owns KTTV, urged group to organize TAB, told them ANFA's Bureau of Advertising has proved to be "the most important factor in the development of national and local newspaper advertising." Organizing committee is under chairmanship of KTTV's Richard Moore (see p. 6).

**OLD ORDER CHANGING, BUT TRENDS ARE SAME:** Two major station deals this week -- sale of Kansas City's KMBC-TV & KMBC for more than $2,615,000 and Buffalo's radio WGR for approximately $1,000,000 -- illustrate again the constantly "changing order" that TV is bringing about in the business of broadcasting. Yet they also prove that basic economic trends are unchanging. Consider:

KMBC-TV has been sharing Channel 9 with WHB-TV, equally with a common transmitter but on a split-schedule basis, since operation began last Aug. 1. This week, it was sold, along with KMBC (5-kw, 980 kc, CBS) and satellite KFRM, Concordia, Kan. (5-kw daytime on 550 kc, CBS), to Cook Paint & Varnish Co., Kansas City. Sale price was $1,750,000 cash, plus assumption of approximately $865,000 in obligations, plus 10-year contract at $25,000 a year under which KMBC founder and chief owner Arthur B. Church and his wife agree not to go into TV or radio in that area.

Purchasing firm is owner of half-time WHB-TV and radio WHB (10-kw daytime, 5-kw night on 710 kc, MBS), and proposes to merge the 2 TV half-timers, to retain the KMBC-TV call letters, to keep radios KMBC and KFRM, and to sell radio WHB.

Ill health of veteran broadcaster Arthur B. Church, who built up KMBC since 1921 as one of the nation's leading stations and won for himself the reputation of being one of the industry's finest operators, hastened this particular deal.

Most significant factor is the "merger" of share-time stations, the second involving post-freeze grantees. It has happened in radio through the years; it's
happening again in TV -- and this one won't be the last, either, for TV sharers are finding such operation as uneconomical and confusing as it has always been in radio. There are very few time-sharing radio stations left.

But the fact is that, despite FCC's zeal to hasten TV stations on the air, causing it to sanction "mergers" of competing applicants even to point of issuing 2 "half licenses," the long-range trend is inevitable. They may deny it at present, but the other time-sharing TV stations on the books -- all of them post-freezers -- will undoubtedly go the same way, eventually.

First TV time-sharers to propose merger are KOY-TV & KOOL-TV, Phoenix (Ch. 10); Gene Autry owns latter and has made deal to buy KOY-TV for $200,000 (Vol. 10:12). Other time-sharers now on air: KMBY-TV & KSBW-TV, Monterey Salinas, Cal. (Ch. 8); WTCN-TV & WMIN-TV, Minneapolis-St. Paul (Ch. 11); WHEC-TV & WVET-TV, Rochester, N.Y. (Ch. 10). Holding CP to share are KLFY-TV & KVOL-TV, Lafayette, La. (Ch. 10).

* * * *

The retirement of Arthur B. Church comes coincidently with retirement of 2 other leaders of the broadcasting industry who have similarly been high in the CBS councils -- Leo J. Fitzpatrick and I.R. (Ike) Lounsberry. They completed deal to sell WGR, Buffalo (5-kw on 550 kc, CBS) to city's new Channel 2 grantee, Buffalo-Niagara Amusement Corp., for $1,450,000. Price includes about $450,000 in net quick assets. Fitzpatrick owns 70%, Lounsberry 30%. FCC approved transfer April 21.

This deal involves TV-network maneuvering -- but it also means that a well-heeled newcomer on the Buffalo broadcasting scene (for Ch. 2 grant details, see Vol. 10:16) takes over in both TV and radio after radio interests had failed to get TV. New station will be known as WGRB (though may elect to take WGR-TV) and will become basic NBC outlet when completed in June. It will replace Buffalo News' WBEN-TV (Ch. 4) whose defection to CBS was a recent industry cause celebre (Vol. 9:42).

Radio WGR presumably also will switch to NBC. Neither Fitzpatrick, pioneer broadcaster who announced the famed Kansas City Nighthawks in the early '20s, nor Lounsberry, who recently headed the CBS affiliates advisory committee, will be connected with the new combined TV-radio operation.

Note: Indicating that you can expect more and more TV station sale deals, was near sale of Nashville's WSIX-TV (Ch. 8), with WSIX (5-kw on 980 kc, ABC), to unnamed New York buyers this week. WSIX-TV has been on the air only since last Nov. Negotiations collapsed when chief owner & gen. mgr. L.R. Draughon turned down terms.

(For further details about these and other station deals, see p. 12.)

ST. LOUIS VHF GRANTED, 3 MORE STARTERS: FCC granted only one CP this week -- but it was a big one, Ch. 4 to KWK Inc., St. Louis. CP came via final decision following 3-way merger and dismissal of 2 competing applications (Vol. 10:15-16). FCC approval was over objections of uhf station WTVI, Belleville-St. Louis, whose counsel says it will appeal. WTVI had also filed Ch. 4 application this week.

Another applicant was readied for CP when the much-litigated Mansfield (0.) Journal dropped from hearing, leaving Fergum Theatres free to get Ch. 36.

Third station in Portland, Me., second in Erie, Pa., first in Kingston, N.Y. were this week's additions to log of TV stations now in operation. These, minus the 2 more uhf quitting this week (see p. 3), mean 386 on the air, 129 of them uhf. And one more Mexican border station also began, opposite El Paso. Week's new starters:

WGAN-TV, Portland, Me. (Ch. 13), city's third outlet, second vhf, after preliminary tests April 21, begins daily 9 a.m.-3 p.m. test patterns as of May 3, goes commercial May 16. It uses 20-kw GE transmitter, temporary 2-bay antenna on 62-ft. steel pole at site of 240-ft. Truscon tower now being built atop Blackstrap Hill, W. Falmouth, Me., on which 12-bay superturnstile will be placed. Owner Gannett Co. (Guy P. Gannett) publishes Portland Press-Herald and Express and other Maine newspapers. C.E. Gatchell is gen. mgr.; Richard Gates, sales mgr.; S.G. Henderson Jr., program mgr.; Roger Hodgkins, chief engineer. Base rate is $250, rep is Avery-Knodel.

WKNY-TV, Kingston, N.Y. (Ch. 66), 81 mi. up Hudson River from New York, began regular test patterns April 23, goes commercial May 15 with interconnections
with NBC, CBS & DuMont. It opens up new primary coverage area, being 51 mi. from
Albany, 60 mi. from Schenectady, 70 mi. from New Haven. It uses 1-kw RCA transmitter
with 600-ft. Stainless tower at Port Ewen, some 10 mi. from Poughkeepsie. Pres.
Joseph Close also controls WKNE-TV, Ch. 45 grantee for Keene, N.H. Robert Peebles
is v.p.-gen. mgr.; Robert Sabin, TV operations mgr.; Robert Perry, program mgr.;
Carl Egolf, chief engineer. Base rate is $100. Rep is Meeker.

WSEE, Erie, Pa. (Ch. 35), first local competitor for pre-freeze WICU (Ch. 12)
links with CBS April 25 as a primary interconnected affiliate following week of test
patterns that elicited good reception reports in its tri-state area. Station uses
12-kw GE transmitter, 700-ft. Stainless tower with 4-bay GE helical antenna, located
about 5 mi. south of city. New stockholders recently added include George J. Mead
(16.6%), now president, and John J. Mead Jr. (13%), co-publishers of the Erie Times.
Also a stockholder is John W. English (6.9%), who is pres. of WNAO-TV, Raleigh, N.C.
Charles Denny is v.p.-gen. mgr.; Donald Boyce, commercial mgr.; Frank Palmer, pro-
gram director; Ed Zellefrow, chief engineer. Base rate is $200, rep is Avery-Knodel.

XEJ-TV, Juarez, Mexico (Ch. 5), across border from 2-station El Paso, is now
testing, plans May 17 inaugural program. It's first of 2 projected all-Spanish lan-
guage stations, Gordon McLendon's KELP-TV, El Paso (Ch. 13) having June 15 target.
It's third Mexican border station seeking to derive main sponsorships from U.S., the
others being in Matamoros (opposite Brownsville, Tex.) and Tijuana (near San Diego).
Owner Pedro Meneses Hoyos says programs will be built around sports, including films
of bullfights in Mexico City and other films and kines in Spanish. R. Hurtado is
program mgr.; J. L. deLira, chief engineer. RCA 500-watt transmitter is used.

NO DRASTIC UHF PLANS UP FCC'S SLEEVE: Don't look for FCC to advance any radical
proposals when it presents its testimony before Senate communications subcommittee
at the uhf hearings scheduled to begin May 4.

Certainly some drastic suggestions will be submitted -- but not by the FCC. Newly
organized UHF Industry Coordinating Committee (Vol. 10:16), for example, will
ask reallocation of the nation's TV channels to minimize or eliminate intermixture
of vhf & uhf stations in same communities.

Hearings will be held against backdrop of mounting concern over the future of
many uhf stations now near end of their financial rope. Two more suspended opera-
tions this week -- WKLO-TV, Louisville, Ky. (Ch. 21) and WBKZ-TV, Battle Creek, Mich.
Ch. 64) -- and 2 other CP-holders relinquished their grants, deciding not to build.

Some well-situated uhf operators say business is good, and insist that some
dropouts are inevitable due to the too-rapid buildup of new stations. As against 9
uhf outlets which went off air, they point to 129 now telecasting (including 2 new
ones which went on air this week; see p. 2). We've been told by several telecasters
that nothing has hurt their business so much as recent uhf scare-talk, and some fear
is expressed that the Senators may not be told there are some successful uhf stations.

Here's general thinking on uhf problems among the commissioners -- likely to
be reflected in Chairman Hyde's testimony as lead-off witness:

One way to help uhf is to liberalize multiple ownership rules to permit own-
ership of 5 vhf & 2 uhf, as proposed by FCC. (Hearing will consider Sen. Johnson's
substitute measure to permit ownership of as many as 10 uhf on sliding-scale basis,
depending on how many vhf are owned; see Vol. 10:11,13.)

Commission will oppose as impractical proposals to take over part of FM band
to provide more vhf channels, or to move all stations to uhf -- and it certainly
won't be receptive to suggestions involving compromise in engineering principles,
such as reducing station separations, etc.

FCC will consider granting immediate STAs for satellites or boosters (p. 4)
-- but only to fill in a station's local service area, not to expand it. The commis-
sioners feel it's too soon to determine whether TV service should be extended by
such means rather than by regular stations.

To help uhf stations get more network programs, some commissioners are inter-
ested in plan to bar interconnected stations from carrying network shows on delayed
basis as long as another station in same area is available to carry them live.

One FCC proposal certain to go by the boards is its plan to require minimum of 5-kw transmitter power for uhf stations (Vol. 10:8-11,15-16). Rule-making proposal on this measure drew 11 comments in opposition, none in favor (see p. 11).

* * * *

Backing reallocation, 23-member UHF Industry Coordinating Committee this week invited all uhf stations and grantees to join it in preparing testimony for hearing, in letter over signature of temporary chairman Harold H. Thoms, WISE-TV, Asheville, N.C. (for members, see p. 6). Enclosed was summary of previous meetings at Washington and Charlotte, N.C., which endorsed this proposal:

"Legislative or administrative proceedings should immediately be instituted to explore methods of reallocation or reassignment of channels in such a manner that ...equality of competitive opportunity is more readily available. [Meanwhile] there should be an immediate suspension of any further grants of applications for new TV permits and for changes in existing TV authorizations affecting coverage."

Eighteen witnesses are now tentatively slated to appear before subcommittee. In addition to those listed last week (Vol. 10:16), list now includes: RCA technical products v.p. W. W. Watts; Dr. Allen B. DuMont; NBC finance v.p. Joseph V. Heffernan; Bloomington, Ind. vhf telecaster (WTVI) and equipment maker Sarkes Tarzian; pres. Ronald Woodyard of uhf WIFE, Dayton, O. (now off air); pres. Harry Tenenbaum of uhf WTVI, Belleville-St. Louis.

Hearings will have to be postponed again if McCarthy-Army airing drags on longer than anticipated. Originally scheduled to begin April 27, the uhf probe was pushed ahead to May 4 because communications subcommittee chairman Potter (R-Mich.) is also member of committee which is hearing McCarthy dispute.

* * * *

Going off air for economic reasons April 20, WKLO-TV, Louisville, told FCC it hopes to "re-survey the situation" and resume operations July 25. It was the only uhf in a city with 2 pre-freeze vhf outlets, first went on air last September.

WBKZ-TV, Battle Creek, Mich., owned by John L. Booth of Michigan newspaper family, went dark April 23, hopes to resume June 1 after increasing power and height to afford "greater assurance of success." It was losing $9000 to $10,000 a month.

Another uhf station revealed heavy losses in balance sheet filed with FCC in unsuccessful attempt to forestall Ch. 4 grant to KWK, St. Louis (see p. 2). WTVI, Belleville-St. Louis, showed deficit of $330,000 since its debut last August. It's one of 2 uhf stations on air in St. Louis area. Third -- KACY, Festus -- went off air April 2 to seek additional capital, having lost more than $250,000 (Vol. 10:15).

Relinquishing CPs this week were WOUC, Chattanooga, Tenn. (Ch. 49) and WGLM, Lawrence, Mass. (Ch. 72) -- making 69 surrendered since freeze, 57 uhf, 12 vhf.

MORE BOOSTER EXPERIMENTS IN THE WORKS: Efforts to fill "holes" in uhf station coverage have stepped up recently, particularly after FCC indicated willingness to issue quick special temporary authority for boosters and satellites (Vol. 10:7). Boosters are in limelight at the moment, with several organizations experimenting.

FCC's thinking on subject should be clearly understood. There's no intention to allow the repeaters to extend service areas. As Chairman Hyde explained it this week: "We'd consider them in filling in weak signal areas within the logical service radius of the station. It's too early to consider them for extending service to towns which might have their own local stations when TV matures further."

RETMA group on boosters and satellites, under GE's W. J. Morelock, met in New York March 21, discussed problem with FCC Comr. George Sterling, NARTB engineering chief Prose Walker and others. Conclusion was that more information is needed.

Long-time experimenter WSM-TV, Nashville, has for years tested booster in Lawrenceburg, Tenn. on vhf Ch. 4. Pres. J. H. DeWitt remains enthusiastic over results, and residents of Lawrenceburg are extremely pleased with the service.

FCC is more concerned with uhf, however, and the fillip that boosters might give to their coverage. Now experimenting in uhf is consulting engineer Ben Adler,
New Rochelle, N.Y., who recently obtained FCC experimental grant. This week, he reported good results with preliminary tests (for details, see p. 11). After further tests at labs, he plans to move to point within Grade B contour of WICC-TV, Bridgeport, and experiment with actually filling "holes" in station's coverage. Explaining his purpose to FCC, Adler said:

"Careful measurements have been made on [stations we have engineered] and it is our opinion that a booster system of this type is greatly needed by the industry to improve uhf as a TV broadcasting service to the public."

Proposing to work with WJTV, Jackson, Miss. (Ch. 25), RCA this week filed application for FCC permission to test booster at Vicksburg, 37 mi. from Jackson. Town is behind bluff, gets little signal. RCA proposes to use transmitter up to 10 watts, radiating about 1-kw ERP from directional antenna. Location will be about 2½ mi. north of Vicksburg. Plan is to start about May 1, run tests for 90 days. Project is under Dr. George Brown of Princeton Labs, pioneer uhf experimenter.

GE says it is also planning booster tests in South, but it hasn't disclosed station with which experiments will be made.

With more experience behind them, RETMA, NARTB and individual stations can come to FCC with firm recommendations. Manufacturers tend to favor satellites, considering them better from interference standpoint because they would use regularly allocated channels. Broadcasters like boosters because they use same channel as mother station, and viewers would have no confusion over identity of originating station. Satellites, using different channels, could produce confusion.

**PATTERN OF UHF RECEIVER CIRCULATION:** Transcendental importance of top-notch network programs in influencing public to buy uhf receivers and converters is demonstrated more strikingly with each new batch of statistics.

To build conversion rapidly, the uhf station must present good programming which does not duplicate that on any other channel available to local viewers. We drew that conclusion nearly a year ago when we analyzed the first survey of vhf-uhf metropolitan areas by American Research Bureau (Vol. 9:24). Subsequent quarterly ARB surveys have further strengthened this prime theorem of uhf.

Using data from ARB's just-completed April survey of 56 vhf-uhf areas (we're not permitted to reveal individual area percentages), and correlating it with our own study of today's 126 commercial uhf stations in regard to proximity of vhf competition, the pattern is clear:

Uhf stations 60 miles or more from nearest vhf -- there are 29 in 24 cities. ARB has measured 14 of these areas (which have 19 uhf stations) in recent surveys. Disregarding length of time the stations have been on air, ARB survey shows in these markets an average of 90% of receivers are equipped for uhf. Area with lowest conversion has 71%, highest 100%.

Uhf stations with only one vhf within 60 mi. -- there are 57 in 47 cities. April ARB survey covered 32 of these stations in 24 market areas, showing an average conversion of 61.4% -- ranging from 16.8% for the lowest to 99% for the highest. Fourteen cities on this list were also measured 3 months ago, and since then their conversion increased an average of 7.4 percentage points, ranging from zero to 11.8. TV saturation as a whole increased at the same time, making the gain for uhf more significant than it may appear at first glance.

Uhf stations with 2 or more vhf within 60 mi. -- there are 40 in 35 cities. The 26 stations (22 cities) in this category included in survey showed an average conversion of 32.7%, and ranged from 3% to 75%. Comparison sample of 16 of these areas showed average increase of 4.7 percentage points in 3 months -- individual areas ranging from loss of .2 to gain of 14.2 points.

Note: Foregoing figures illustrate more than geography. The availability of unduplicated network programs to uhf stations nearly always depends on the number of vhf competitors. A uhf with 2 vhf competitors has virtually no chance of getting the best shows from the biggest networks.

Bear in mind, too, that conversion is not a synonym for success -- it's mere-
ly a prerequisite. In uhf as in vhf -- or in any business -- other prerequisites include good management, aggressive promotion, wide-aware sales force. Of the 9 stations which have gone off air, several were in areas with over 70% conversion.

Production of vhf-uhf sets to date has totaled about $1,645,000. Added to this are estimated 2,000,000 or more "field conversions" -- external and internal converters and sets of strips -- for total of at least $3,650,000 uhf reception units manufactured to date.

Murry Brophy, 56, onetime CBS artists mgr. in Los Angeles, recently owner of KRUX, Phoenix, and wartime OWI radio chief, died suddenly April 18 in Washington, where he had been serving as consultant to Senate and House appropriations committees.

Of the 17 members of projected Television Advertising Bureau's organization committee, representing 24 stations, these attended N. Y. meetings this week (see p. 1): Richard A. Moore, KTTV, Los Angeles, temporary chairman; Ben Berenson, WGN-TV, Chicago; Richard Borel, WBNS-TV, Columbus; Norman Gittleson, WJAR-TV, Providence; Payson Hall, 4 Meredith stations; George B. Storer Jr. & Tom Harker, 5 Storer stations; Wm. Kelley, WFBM-TV, Indianapolis; Wm. Quarton, WMT-TV, Cedar Rapids; George Whitney, KFMB-TV, San Diego. Not attending but pledging support: Roger W. Clipp, WFIL-TV, Philadelphia; John H. DeWitt Jr., WSM-TV, Nashville; John Peter, WKZO-TV, Kalamazoo; Howard Lane, KOIN-TV, Portland; Lee Runwheel, WTVJ, Miami; Charles Thieriot, KRON-TV, San Francisco; P. A. Sugg, WKY-TV, Oklahoma City.

Associated Press, which gained 83 TV & radio station members last year to bring total to 1253 (as against 1788 newspaper members in U. S.), has TV-radio ownership prominently identified on its board of directors as constituted at this week's annual meeting. Robert McLean, Philadelphia Bulletin (WCAU-TV & WCAU), was reelection; pres. Clarence B. Hanson Jr., Birmingham News (WABT & WAPI), was elected first v.p. Re-elected to board were John C. Knight, Knight Newspapers (owning 45% of WAKR-TV & WAKR, Akron; applicant for Miami); James M. Cox Jr., Cox Newspapers (WHIO-TV & WHIO, Dayton; WSBN-TV & WSB, Atlanta); Mark Ethridge, Louisville Courier-Journal (WHAS-TV & WHAS). Newly elected to board was Bernard M. Ridder Jr., Duluth News Tribune (WDSM-TV & WDSM; WCCO-TV & WCCO, Minneapolis). On executive committee are Ben McKeilay, Washington Star (WMAL-TV & WMAL); Paul Miller, Gannett Newspapers (WHEC-TV & WHEC, Rochester, et al.).

Dr. David D. Henry, New York U, elected chairman of Joint Committee on Educational TV, succeeding Edgar Fuller, now vice-chairman; Ralph Steeble re-elected exec. director.
COLOR PROGRAMS won't cost much more than black-
white—averaging only 10% more—and advertisers
would be wise to climb aboard soon even though whole
color situation is temporarily locked on "dead center."
That was essence of telecasting-manufacturing industry's
advice to sponsors during symposium on color TV at
AAAA convention this week in White Sulphur Springs,
W. Va.

CBS-TV pres. Jack Van Volkenburg projected net-
work rates to 1958, going beyond his projections last year
when he predicted 1956 setup (Vol. 9:39). He said he
expected 90% black & white saturation in the top 100 mar-
kets in 1958. Average advertiser using 100-station CBS
network, he said, would pay about $58,000 for time & cable
charges for nighttime half hour, plus about $25,000 for
typical talent & production costs—a gross of $83,000.
This, he added, would be $2.31 per 1000, same as today.

To buy same show in color, Van Volkenburg said,
typical show would run $91,000, or $2.54 per 1000. Costs
will range from 5% extra for such programs as What's My
Line? to 20% more for hour-long drama.

He had no doubt that most advertisers would choose
color at those prices because they've been willing to pay
average of 48% extra for magazine color.

"The time to start color TV is this fall," NBC pres.
Pat Weaver told the group. Alert advertisers, he said,
will employ even the limited distribution of color sets to
"excite their organizations" through dealer demonstra-
tions, color TV parties for prospects, etc.

Promoting NBC-TV's "magazine concept," Weaver
said: "Whatever an advertiser wants for his program,
that he can get on a national basis in color from NBC, no
matter how big or small his budget. All-night spectacu-
lars, 5-second billboards, 365-day continuity, once-a-year
explosions—you name it, and we'll have it, in color."

RCA's Joseph B. Elliott, executive v.p., consumer
products, told group his firm's first production run of

Color Trends & Briefs: First color efforts of individ-
ual stations are gradually developing. Following expa-

tion plan reported last week by WMAR-TV, Baltimore
(Vol. 10:16), first sale of a locally-originated live pro-
gram was announced by WKY-TV, Oklahoma City, the
first to get RCA camera. Second station to get cameras—
2 chains—is WBAP-TV, Ft. Worth. Next RCA cameras
go to CBS and NBC.

WKY-TV's initial commercial colorcast was half-hour
variety show April 21, sponsored by Dulaney's, local RCA
distributor. On April 26, station inaugurates regular
daily 1-2 p.m. cooking show in color. Mgr. P. A. Sugg
says: "We're in color all the way and we hope to expand
our schedule of live shows as quickly as possible."

WMAR-TV has set up a system of prices for color
slides, calling it a "service charge." It comprises: (1)
monochrome rates plus 10%, (2) production costs equal
to out-of-pocket expenses plus 10%. If advertiser supplies
color photo suitable for reproduction in 2x2-in. slide, sta-
tion charges $3 for processing it.

WMAR-TV sold first slides April 22 to Schmidt
Baking Co. whose president Harold A. McManus said:
"The package showed up beautifully, and the bread slices
looked not only good but appetizing."

NBC-TV color network will comprise 54 stations by
year's end, 31 more than now carry colorcasts, engineering
v.p. O. B. Hanson reported this week. The 54 stations
will put color signals in reach of 27,100,000 homes and
22,000,000 set owners. The 31 additional stations that
will be able to broadcast signals obtained from AT&T
"color guaranteed" facilities are, according to NBC:
WBAP-TV, Ft. Worth; WFAA-TV, Dallas; WBRC-TV,
Birmingham; WFMJ-TV, Youngstown; KJMY-TV, Fresno;
WLWD, Dayton; WLMC, Columbus; WSAZ-TV, Huntington;
WRGB, Schenectady; WKTV, Utica; WSYR-TV,
Syracuse; KPRC-TV, Houston; WOAI-TV, San Antonio;
WSJS-TV, Winston-Salem; WMCT, Memphis; WDSU-
TV, New Orleans; WSB-TV, Atlanta; WOC-TV, Davenport;
WTIV, Bloomington; WAVE-TV, Louisville;
WOOD-TV, Grand Rapids; WTRF-TV, Wheeling; WSLS-
TV, Roanoake; KFSD-TV, San Diego; KPTV, Portland;
KOMO-TV, Seattle; WPTL-TV, Ft. Lauderdale; WLBV,
Jackson; WEEK-TV, Peoria. Some of these now get color
via their own microwave facilities or through unguar-
anteed AT&T facilities.

Color dot generator, serviceman's instrument for test-
ing picture tube beam convergence, is offered by Sylvania
at list of $129.50.

Color monitor, type IT-146R, now being offered by
Industrial TV Inc., 369 Lexington Ave., Clifton, N. J.

Color set census has been started by WTMJ-TV, Mil-
waukee, which found 55 in use in its area as of April 23.

American Assn. of Advertising Agencies, at White
Sulphur Springs convention this week, elected Wm. R.
Baker Jr., Benton & Bowles, as chairman of board to
succeed Earle Ludgin, Chicago; Henry G. Little, Campbell-
Ewald Co., Detroit, vice chairman; Robert E. Grove,
Ketchum, McLeod & Groce Inc., Pittsburgh, secy.-treas.
Elected directors-at-large for 3-year terms: James M.
Cecil, Cecil & Presbrey; J. Davis Danforth, BBDO; George
G. Reeves, J. Walter Thompson; Ken R. Dyke, Young &
Rubicam.

Network Accounts: Tonl Co., with 6 shows, emerges as major network sponsor this summer, most recent purchases being Sun. 10-10:30 p.m. on NBC-TV for modification of old Key Kyser's College of Musical Knowledge, and Sat. 9:30-10 p.m. on CBS-TV for undisclosed program. It previously signed to sponsor Break the Bank on NBC-TV Tue. 8-8:30 p.m., Tony Martin Show on NBC-TV Mon. 7:30-7:45 p.m., Meet Millie on CBS-TV Tue. 9-9:30 p.m., & Place the Face on CBS-TV Thu. 10-10:30 p.m., all thru Weiss & Geller . . . Nozzema to be alt. sponsor with Amoco of Ed Murrow's Person to Person on CBS-TV starting in May, Fri. 10-11:30 p.m., thru Sullivan, Staufer, Colwell & Bayles . . . Gillette CBS-TV sponsorship of Kentucky Derby Sat. May 1 will be on 124 stations, one of largest one-shot sports events . . . Pabst to continue Wed. 10 p.m. boxing bouts thru summer on CBS-TV, thru Warwick & Legler . . . Armour Products & Dow Chemical buy alt. weeks of 9-9:30 portion of Saturday Night Revue during summer on NBC-TV, Sat. 9-10:30 p.m., former thru Foote, Cone & Belding, latter thru MacManus, John & Adams . . . International Harvester (air conditioners) buys Wed. & Fri. 7:50-7:55 portion of Morning Show on CBS-TV, starting May 15, Mon.-thru-Fri. 7-9 a.m., thru Leo Burnett . . . Wynn Oil Co., Azusa, Cal. (Wynn's motor oil) buys 52 partic. on NBC-TV's 7-9 a.m. Today, thru BBDO; Diamond Crystal Salt Co. buys 12 partic., thru Benton & Bowles . . . GE starts new weekly General Electric Theatre series on CBS-TV in Sept., Sun. 9-9:30 p.m., thru BBDO . . . 71 stations have been cleared to date by NBC-TV for fall start of Lux Video Theatre, Thu. 10-11 p.m. . . . ABC-TV to originate Paul Whiteman Show from Atlantic City's Steel Pier starting June 13, Sun. 8-9 p.m. . . . Motorola drops Motorola TV Hour on ABC-TV, effective June 1, alt. Tue. 9:30-10:30 p.m. because of expense (reportedly $1,400,000 for 13 productions); its plans for fall TV activity are indefinite . . . Pontiac drops Dave Garway Show on NBC-TV in fall, Fri. 8-8:30 p.m., is expected to purchase another show . . . Procter & Gamble drops Paul Winchell Show on NBC-TV in fall, Sun. 7-7:30 p.m.

TV's role in mid-term political campaigns this fall is still to be thrashed out in detail by both parties—but thus far Republicans have much more ambitious plans than Democrats. National GOP publicity director James Bassett says “substantial” portion of its budget has been earmarked for TV, with additional funds to be raised by local committees. “At least one and probably more network programs” are planned, remainder of funds being allocated for spot purchases in politically-strategic areas. In addition, film strips of campaign issues will be provided GOP candidates. Campaign director Robert Hughes told recent Republican Women's Centennial Conference that TV might be deciding factor in doubtful states, adding “we have already had instances where a complete unknown has been put over because he had a TV personality.” Democratic National Committee may map TV plans at budget meeting in Washington May 6-8, but publicity director Sam Brightman says “very modest” use of TV is contemplated, with virtually all available funds channeled to local use. Nationally, Democrats will confine their contribution to providing film and scripts to local candidates. Very little network time will be bought, he said.

Telecasting Notes: TV-radio should be as free to discuss controversial topics as are newspapers and magazines, in the opinion of nearly 9 out of 10 of the respondents to Tide Magazine's survey of "the country's 2200 top marketing executives," as reported April 24. Citing recent TV & radio discussions of McCarthyism, touched off by Edward R. Murrow's widely praised See It Now telecast (Vol. 10:11, 15), Tide said 10% of those responding thought controversial subjects should be limited to sustaining time, but only 2 respondents wanted TV-radio industry to prohibit such discussion and only one wanted tighter FCC censorship—although "quite a few admens indicated they would hesitate to themselves to sponsor controversial programs" ... Big Music Corp. of America has been quietly seeking to unload its TV film production, chiefly handled by subsidiary Revue Productions, so as to restrict telefilm activities henceforth to representation and distribution, reports Hollywood Variety. Prerequisite to any takeover would be exclusive representation. Revue's network shows: Pride of the Family and Pepsi-Cola Playhouse, on ABC; Meet Mr. McNuttley, CBS. Spot shows: Adventures of Kit Carson, City Detective, The World and I (Joan Crawford), Affairs of War, Soldiers of Fortune. Survey of 273 TV and 1568 radio stations by Wallace A. Ross for Sponsor Magazine, published this week as 120-p. Program Guide, tabulates program specialties of individual stations, showing notably [in TV] that 47% of stations have farm service programs, 52% stressed play-by-play sports, 76% are equipped with kit sets for home economic shows, 10% program at least partly for specialized audience (foreign-language, Negro, etc.) ... "What's the big ID?" captions reply by rep Joe Weed to critics of excessive TV commercial ads who don't like station identifications and other forms of spots. He says: "Stations make no bones about it. The IDs are there to help make a profit in a business beset by high operational costs [and] are ethical, based on sound business practice and in good taste if the station adheres to its continuity acceptance principles. [They] can inform and entertain—and sell a sponsor's product or service. If the spot is in close proximity to network commercials, then network commercials are in close proximity to the spots. Both network and spot are essential for many stations' operations" ... More rate increases: KERO-TV, Bakersfield, which raised base hour by $50 on Jan. 1, now goes from $250 to $300 for Class A hour, $50 to $70 for 10 min.; WTV, Bloomington, Ind., hour from $60 to $800, min. from $120 to $150; KOIN-TV, Portland, Ore., hour from $50 to $600, min. $100 to $120; WCAN-TV, Milwaukee, hour from $400 to $500, min. $70 to $80; WKNB-TV, Youngstown, hour from $300 to $350, min. $60 to $70; KROC-TV, Rochester, Minn., hour from $150 to $200, min. $30 to $40. In addition, all raising hour from $250 to $300, min. from $50 to $60, are: WJG-TV, Ft. Wayne; KSLA, Shreveport; WATE, Knoxville (formerly WROL-TV). And KGNC-TV, Amarillo & KFDX-TV, Wichita Falls, both raise hour from $200 to $250, min. $40 to $50 ... Rep appointments: WMZ-TV, Macon, Ga., to Avery-Knodel; KIVA, Yuma, Ariz., to Hollinger; new WMSL-TV, Decatur, Ala., to Walker ... New rep offices: Adam Young TV on May 1 moves to 477 Madison Ave., N. Y. (phone Plaza 9-1810) and opens new Houston office, 520 Lovett Blvd. (phone Justin 1601); Forjoe-TV, now at 580 Fifth Ave., N. Y. (phone Judson 6-3100).

Robert W. Sherwood, good journalist as well as great playwright and author, columnizing for Herald Tribune Syndicate's John Crosby, writes that "TV has helped to provide the theatre with what it needs most and for want of which it seemed dying: new playwrights." Last few years, he continues, have produced "a bonanza of young playwrights," and he cites some of the writers of current Broadway smash hits "who would not have had the essential training and sustenance had it not been for the labor provided for them by NBC, CBS, ABC and DuMont." For example: Robert Anderson, Tea and Sympathy; George Axelrod, The Seven Year Itch; Howard Teichman, co-author with George S. Kaufman of The Solid Gold Cadillac; Herman Wouk, The Caine Mutiny Court Martial; Samuel Taylor, Sabrina Fair and The Happy Time; John Patrick, The Teahouse of the August Moon and The Hasty Heart—all "alumni" of the scriptwriting stables. The vastly successful Dial M for Murder was first written by Frederick Knott for TV, as was Morton Foote's The Trip to Bountiful. Arthur Miller wrote for radio long before he came to glory with All My Sons and Death of a Salesman; Maurice Valency, who adapted Ondine and The Madwoman of Chaillot, still writes TV dramas. "There are others," adds Sherwood, "who have not quite yet arrived on Broadway, but who are moving fast in that direction; among them, Paddy Chayefsky and Arnold Schulman."

Hulbert Taft Sr. has retired as the editor and publisher of Cincinnati Times-Star, which with Taft family (including TV-radio gen. mgr. Hulbert Taft Jr., 12½%) owns WKRC-TV & WKRC, Cincinnati; WTVN, Columbus; 20% of WBR, Knoxville, TV applicant. David S. Ingalls, of Cleveland, campaign mgr. for late Sen. Robert A. Taft and onetime Asst. Secy. of Navy for Aeronautics, now pres.-publisher.

Herbert Bayard Swope Jr., NBC-TV executive producer-director, will direct Norman Brooks' all-male play, Fragile Fox, for Oct. premiere on Broadway.
OF ILLINOIS’ projected WCLT, Champaign-Urbana
(Ch. 12) got windfall this week when GE donated
demonstrator model water-cooled 5-kw transmitter, which
may make is possible for station to get on air before “late
1954” as last reported. GE this week got order for 20-kw
transmitter for WCNY-TV, Carthage, N. Y. (Ch. 7),
which will be shipped with 12-bay antenna and miscellaneous
studio equipment in mid-June.

Shipped by GE this week were 35-kw transmitter,
visual portion only, along with 6-bay antenna, to up-
coming WDBO-TV, Orlando, Fla. (Ch. 6); new 5-kw
transmitter with 12-bay antenna to KTNT-TV, Tacoma,
Wash. (Ch. 1); 35-kw amplifier to KCMC-TV, Tex-
arkana, Tex. (Ch. 6); 5-bay antenna to upcoming WINT,
Waterloo, Ind. (Ch. 15); 4-bay antenna to upcoming
CKCK-TV, Regina, Sask. (Ch. 2).

DuMont reports April 20 shipment of 25-kw trans-
mmitter with studio equipment to KGLO-TV, Mason City,
Ia. (Ch. 3), due on air in May. RCA reports shipment
April 22 of 10-kw transmitter to WJNO-TV, W. Palm
Beach, Fla. (Ch. 5), and 1-kw March 21 to WMSL-TV,
Decatur, Ala. (Ch. 23).

* * *

In our continuing survey of upcoming new stations,
these were the reports received this week:

KGLO-TV, Mason City, Ia. (Ch. 3), plans test pat-
terns first week in May, programming May 15 from new
TV-radio building, reports exec. v.p.-gen. mgr. Herbert R.
Ohrt. Its 400-ft. Truscon tower, with 100-ft. RCA 6-bay
antenna, now is ready at Kensington (la.) site, 15-mi. north
of city, with 25-kw DuMont transmitter due to arrive
this week. Ownership interlocks with Mason City Globe-
Gazette, KHQA-TV, Hannibal, Mo., and radio WTAD,
Quincy, Ill. It will be interconnected CBS and DuMont
affiliate. Base hour will be $205. Rep will be Weed.

KFXJ-TV, Valley City, N. D. (Ch. 4), now building
1085-ft. tower which it says is “tallest in upper midwest,”
expects to meet July 1 target, wires pres. John W. Boler,
who also operates KCJB-TV, Minot. It has ordered
DuMont 25-kw transmitter, will have studios both in
Valley City and Fargo. It plans Oct. 1 programming as
interconnected CBS primary affiliate. Weed will be rep.

KGEQ-TV, Enid, Okla. (Ch. 5), now plans June 1
tests, June 10-15 programming start, reports mgr. George
Streets, who also is secy. & 18% owner of grantee Streets
Electronics Inc. (appliances). It has 10-kw RCA trans-
mmitter on hand, has RCA 12-bay antenna promised for
May 5, and EmSCO 650-ft. tower scheduled to be ready
by May 20. It will be ABC affiliate. Base hour will be $225.
Pearson will be rep.

KTFX-TV, Grand Junction, Colo. (Ch. 5), waiting for
FCC approval of new tower height, also having trouble
with live camera facilities, still hopes to begin tests May
15, programming May 30, reports pres.-gen. mgr. Rex G.
Howel. It will use 500-watt Gates transmitter purchased
from KTVF, Nampa-Boise, Ida. (formerly KFXD-
TV), with 3-bay GE antenna on 340-ft. Aerial tower.
It has already sold “substantial block” of evening time
to local and regional accounts, plans to book NBC, ABC &
DuMont shows on non-interconnected “per program”
basis. Base rate will be $100. Hal Holman will be rep.

KTRC-TV, Lufkin, Tex. (Ch. 9), got CP extension
to July 1 recently, but hasn’t set a target date, accord-
ing to v.p.-gen. mgr. Richard Lewin. It has ordered RCA
equipment, plans tower 666-ft. above av. terrain. Rep
will be Venard, Rintoul & McConnell.

KVOL-TV, Lafayette, La. (Ch. 10), share-time
granite with KLFY-TV, which had early spring target,
now hasn’t date, reports gen. mgr. George H. Thomas.
KVOL-TV hasn’t reported a rep; KLFY-TV rep is Ram-
beau.

KVAN-TV, Vancouver, Wash. (Ch. 21), which had
 tentative April 15 target, is having difficulty in obtaining
all essential equipment, now hasn’t specific target, accord-
ing to gen. mgr. Fred F. Chitty. It plans tower across
Columbia River in Portland, Ore., on Healey Heights lo-
cation to be shared with KPAM & KPFM, but Portland
City Council must first act on protests by nearby prop-
erty owners. It will use 5-kw DuMont transmitter, 16-bay
RCA antenna. Transmitter house is ready, as are Van-
couver studios in converted Coca-Cola plant. Owner Shel-
don P. Sackett also is applicant for Ch. 2 in Oakland, Cal.
Rep will be Bolling.

WME-TV, Miami, Fla. (Ch. 27), has ordered 1-kw
RCA transmitter for Sept. 1 delivery, plans to get going
in Oct. or Nov., reports pres. E. D. Rivers Sr., ex-Gov.
of Georgia. Although building construction is still in
planning stage, 400-ft. self-supporting tower with RCA
antenna is scheduled for completion by Oct. Gov. Rivers
also holds CP for WCTV, Thomasville, Ga. (Ch. 6), and
owns 60% of WOBS-TV, grantee for Jacksonville, Fla.
(Ch. 30). Rep will be Stars National.

WINT, Waterloo, Ind. (Ch. 15), with 12-kw GE trans-
mmitter in warehouse and ready for shipment as soon as
transmitter house is completed, plans June 15 program-
ing, reports pres. R. Morris Pierce. GE antenna was
shipped April 19 to site, about 16 mi. north of Fort Wayne,
where 800-ft. Stainless tower is scheduled to be ready
about May 15. Other area outlet, WKJG-TV, Fort Wayne
(Ch. 33), got on air last Nov. 14. WINT rep not yet
chosen.

WMSL-TV, Decatur, Ala. (Ch. 23), didn’t make April
25 target because of equipment delays, will not begin be-
fore June, reports mgr. Bill Guy. It will use 1-kw RCA
transmitter with 380-ft. RCA tower & antenna. Base
rate will be $100. Rep will be Walker.

WBEC-TV, Pittsfield, Mass. (Ch. 64), has GE trans-
mitter and antenna ordered for July delivery, but hasn’t
going to work on buildings or set completion date for 200-ft.
Wind Turbine tower, reports gen. mgr. Wendell Budrow.
Owned by Pittsfield Berkshire Eagle, it will be second
station in area—WMGT, (Ch. 74), having begun last Feb.
5. Everett-McKinney will be rep.

* * *

CBWT, Winnipeg, Man. (Ch. 4), will be CBC’s fifth
on air when it joins network on non-interconnected basis
about June 1, reports CBC commercial mgr. W. E. Powell.
It’s first outlet for CBC’s project Prairie Region net-
work which later will include privately owned stations in
Regina, Saskatoon, Calgary, Edmonton. CBWT plant May
tests of 10-kw RCA transmitter and 240-ft. tower. Base
hour will be $200.

CHCH-TV, Hamilton, Ont. (Ch. 11), won’t make April
25 target, now plans start about June 1, reports gen. mgr.
Ken Sobie. RCA 10-kw transmitter is on hand, but
Dominion Bridge firm, building 540-ft. tower, still has
RCA-designed wavestack antenna to get in place. Owners
are radio stations CKOC, CHML & CJSH-PM. Base rate
will be $300. Reps will be Adam Young (for U. S.) & All-
Canada Television.

CHEX-TV, Peterborough, Ont. (Ch. 12), recommended
April 6 by CBC, equivalent to TV grant, hasn’t finalized
construction plans or ordered equipment and expects to
begin “sometime in Jan. 1955,” according to H. S. Free-
man, station supervisor for Northern Bestg. Co. Ltd.
Owners are Sen. W. R. Davies and R. H. Thompson, but
Northern Bestg., which operates their radio properties, is
building CHEX-TV along with CKWS-TV, Kingston, Ont.
(Ch. 11), which has fall target. Sen. Davies publishes
Peterborough Examiner and Kingston Whig-Standard;
Mr. Thompson is chain newspaper publisher. Canadian
rep will be All-Canada TV; U. S. rep not yet chosen.
MOST PARENTS approve of the TV programs their children watch. This was main finding of detailed survey made in New Haven for National Council of Churches of Christ in the USA by Yale Divinity School—and may come as refreshing surprise to those who have followed the surveys of "experts" which have consistently viewed-with-alarm the effects of kiddie shows.

Survey was preliminary report of extensive $70,000 project on use and effect of TV-radio, to be published by U of Chicago Press. New Haven poll was based on random sampling of 3559 households, or 5% of all homes in area, with basic data coming from 650 families with both TV and children. Principal findings:

Of parents expressing their attitude, 69% "generally favored children's programs as they are"; 26% generally disapproved; 5% "favored some aspects of children's broadcasting and opposed others, without apparent bias toward either side." Children averaged 12 hours a week of TV-viewing—about half the amount of time they spend in school.

Parents approving children's shows generally weren't the least bit critical—some 50% of those questioned giving such answers as "they're fine." Others said they kept the kids out of trouble. Many of the disapproving parents objected to number of westerns, and one-fourth of all objections were directed at "excessive violence." There were also complaints of lack of variety in programming—parents' suggested such "new" fields as classic literature, fairy tales, the Bible and science. Most objections came from wealthier and better educated families.

Note: Dr. John Q. Schisler, of Nashville, addressing annual meeting of Methodist Board of Education in Detroit April 1, said many TV programs are "objectionable from the standpoint of moral, ethical and religious content," and urged churches "to develop special TV programs for children."

NBC Souvenir Shop has been opened on mezzanine floor of studios in RCA Bldg, in line with plans to develop new fields of subsidiary rights and activities. Among articles it sells, all NBC-identified, are charm bracelets, pennants, pen & pencil sets, compacts, T-shirts, key rings, Howdy Doody toys, etc. Shop is staffed by guest relations dept., comes under Ted Cott, operating v.p. of radio network. He has also licensed manufacturers to make Pinky Lee items and J. Fred Muggs hand puppets. This week, also, CBS-TV announced that stores throughout country are now selling Winky Dinky Kits — 4 color crayons, tinted plastic transparent sheets to cover the TV screen, erasing cloth—plugged on its Winky Dinky and You show, Sat. 11-11:30 a.m.; CBS itself previously handled them, sold more than 500,000, but has turned the manufacture and distribution over to Standard Toycraft Products Inc., Brooklyn.

Some 12,000 "public interest" programs occupying more than 3100 hours on air are carried weekly by TV stations, according to NARTB projection of survey conducted Jan. 11-17 by questionnaires. Only locally-origi- nated non-network programs were tabulated. "Public interest" programs amounted to 20.3% of all non-network programs; 62% were sustaining, 38% sponsored. About 52% were broadcast during Class A evening hours, 31% in afternoon, 17% morning. Radio survey starts April 26.

Demon rum rears its ugly head again on Capitol Hill May 19-21 when House Commerce Committee under Rep. Wolverton (R-N. J.) holds hearings on long-pending bill introduced by Rep. Bryson (D-S. C.) to curb advertising of alcoholic beverages, including beer. Drys have been bombarding congressmen with petitions to hold immediate hearings on bill. Companion measure was introduced in Senate by Sen. Langer (R-N. D.).
Financial & Trade Notes: Sylvania’s first quarter sales dropped to $66,994,451, net income to $2,121,487 (67¢ on 2,677,726 shares) compared with 1953’s record first quarter sales of $80,606,305 and net of $2,773,243 ($1.01 on 2,425,438). But pres. H. Ward Zimmer told stockholders at annual meeting April 21 that company feels 1954 will be at least as good as 1953. He said Sylvania’s TV sales to distributors were only slightly lower in units than in first quarter 1953, but dollar volume was considerably less because of intense price competition and shift in consumer demand to lower-priced sets. Sylvania’s lamp and photo-flash sales are well ahead of 1953 period.

Chairman Don G. Mitchell said company is in pilot production of 15-in. color tubes, but he couldn’t predict when the industry would begin producing 21-in. When that size screen can be sold for about $500, the mass color TV market will open up, he added—bringing a rush of business even greater than the early days of black-&-white. He estimated that probably fewer than 150,000 color sets will be built this year, selling from $800 to $1200.

Defense buying of electronic equipment this year, said Mitchell, may reach $2.9 billion, up from $2.8 billion in 1952—and assuming no hot war, it should reach annual rate of $3.1 billion in 1957-59.

American Broadcasting-Paramount Theatres Inc. reports estimated earnings of $1,100,000 ($26 a share) for first quarter, including $1,039,000 from operations and $71,000 capital gains. This compares with $3,732,000 ($1.42) same 1953 period, which included $1,480,000 from operations and $4,252,000 from capital gains—the 1953 results including earnings from $6,000,000 sale Feb. 9 of WBKB, Chicago, to CBS. Said pres. Leonard Goldenson: “Theatre grosses for the first quarter were close to 1952 levels for the same period. Theatre earnings, however, were off due primarily to continued high film rental costs and to the increase of approximately $325,000 in depreciation charges over the first quarter of 1953 [which] resulted from the installation of new screen and sound equipment in many of our theatres. In addition, theatres in many of the smaller cities and towns, particularly in the South and Midwest, are feeling the effects of TV for the first time and their grosses and earnings have been adversely affected. As we mentioned in our 1953 annual report [see Vol. 10:15], we feel that, based upon our experience in other areas, an upward trend will take place in these communities as the novelty of TV wears off.”

Storer Broadcasting Co. reports first quarter profits of $803,325 (76¢ a share) on 1,106,000 shares of common stock outstanding; profit before taxes was $1,653,455. This compares with $513,460 (44¢) after taxes and $1,328,460 before taxes same 1953 quarter. For whole of 1953, Storer showed profit after taxes of $1,985,977 ($1.70 a share after preferred dividends) and estimated Federal income and excess profits taxes at $3,947,578 (Vol. 10:11).

CBS business for first quarter ran ahead of same period last year, chairman Wm. Paley told stockholders meeting this week. He gave no specific figures, said they’d be issued next month. In first 1953 quarter, CBS earned $1.03 a share on 2,340,856 shares. Stockholders voted to authorize directors to declare stock dividends in Class A & B stock at their discretion.

WJR The Goodwill Station Inc., Detroit, reports gross sales of $750,271 during first quarter 1954 compared with $714,708 same 1953 period. Net profit after taxes was $118,075 (22¢ a share) vs. $133,209 (25¢).

Muter Co.’s net income for first quarter was $111,173 (16¢ a share on 694,784 shares outstanding) as against $117,588 (18¢ on 661,825) same 1953 quarter.

TRANSFER DEAL where by Kansas City’s KMBG-TV and radio stations are to be sold to owners of time-sharing WHB-TV (see p. 1), involves sale of Midland Broadcasting Co.’s 52,000 shares of issued stock, of which pres. Arthur B. Church owns 20,000 shares; his wife Cicely, 17,500; daughter Mrs. Margaret C. Battison, 2500; daughter Mrs. Virginia Peters (wife of rep Preston Peters), 2500; Arthur B. Church Jr., 1875; Gerald L. Taylor, 2000; Dupuy A. Warrick, gen. counsel, 2000; George J. Higgins, station mgr., 1350. It’s understood Higgins will remain with the stations.

Cook Paint & Varnish Co.’s WHB-TV call letters will be dropped in favor of KMBG-TV, and radio KMBG and KFPR, Coneordia, Kan., will be retained—all as CBS affiliates. Radio WHB, which has grossed about $600,000 annually, has been sold for $400,000 cash, plus accounts receivable at time transfer is approved (expected to be about $40,000), to Robert H. Storz and son Todd, who own KOWH, Omaha, and WTIX, New Orleans. The elder Storz heads an Omaha brewing company, is director of Omaha National Bank and Union Stockyards Co.

President of WHB Broadcasting Co. is Lathrop G. Backstrom, who with Cook Paint & Varnish Co., chairman Robert B. Caldwell negotiated the deals. Donald D. Davis, WHB v.p. & sales mgr., and John T. Schilling, v.p. & gen. mgr., will remain with the new company—management duties presumably to be apportioned to Davis, Higgins and Schilling.

Transfers approved by FCC this week: (1) KBAK-TV & KBAK, Bakersfield, Cal. to San Francisco Chronicle interests (Vol. 10:16). (2) Radio WTIK, Durham, N. C., to owners of WCTC, New Brunswick, N. J., for $110,000, following consolidation of WTIC & WDNC applications for TV. (3) Radio WLOL, Baton Rouge, La., for $135,000, to local group headed by commercial mgr. A. Lamar Simmons, who becomes gen. mgr.—sale forced because former owners want to exercise option to buy 50% of WBRZ, Ch. 2 grantee in Baton Rouge, in partnership with Man ship family (Baton Rouge Advocate and State Times). (4) Radio KFEL, Denver, for $300,000 to KIMN Inc., owned by publisher A. L. Glassman of Ogden Standard-Examiner—the seller Gene O’Fallon quitting AM to devote entire interest to his KFEIL-TV, Denver. Also announced was $258,000 purchase of radio WHKC, Columbus, by TV station WTVN, Columbus; sellers are Cleveland Plain Dealer interests, and purchasers are Cincinnati Times-Star interests (Hulbert Taft Jr.) who bought the TV station last year from Edward Lamb for $1,500,000 (Vol. 9:39).

Stromberg-Carlson reports profit of $571,553 ($1.18 a share on 304,118 common shares outstanding) on sales of $18,285,006 in first quarter of 1954, compared to $576,500 ($1.55 on 333,283 shares) on sales of $19,395,206 same period year ago. Pres. Robert C. Stalker attributed lower earnings to delays in production caused by rescheduling of 2 large electronics contracts. He predicted sales this year will exceed 1953 record of $65,241,861.

General Electric stockholders approved 3-for-1 stock split at April 20 meeting in Senehecaty, increasing to 105,000,000 the number of common shares. GE’s first-quarter profits hit record $48,025,000 ($1.67 a share), 42% over $33,849,000 ($1.17) same period last year, while sales declined 9% to $715,860,000 from last year’s first-quarter record of $777,810,000. Big increase in earnings was attributed to expiration of excess profits tax.

IT&T records report 1953 consolidated net income of $22,377,611 ($3.12 a share) on all-time high sales of $392,193,214, compared with 1952 net of $22,147,753 ($3.09) and sales of $352,007,882.
FIRST BIG-SCALE PROMOTION OF COLOR: RCA launches its color merchandising program week of April 26 with full-page ads in Denver, St. Paul, Minneapolis & Washington newspapers inviting consumers to "see and order." These are first of introductory ads planned by May 15 in 38 cities equipped to receive color (full schedule on p. 15).

Eyes of the whole industry are focused on this first large-scale effort to merchandise color sets -- everybody looking for clues on selling techniques and consumer acceptance as guideposts for their own color plans.

Even as newspapers were processing RCA's first ads for Sun. April 25 release, RCA v.p. J. B. Elliott was telling American Assn. of Advertising Agencies at White Sulphur Springs April 23 his company had nearly sold out its first production run of 15-in. sets less than month after opening of production line. He didn't say how many sets that represented, but RCA has stated plans to produce 5000 of 15-in. and the same number of 19-in. color receivers this year (Vol. 10:13).

Promotion in 4 leadoff cities, which RCA said would be "general pattern" in other areas, consisted of 2 types of ads: (1) full-page institutional message prepared by factory and signed by local distributor; (2) various-sized tie-in displays by local dealers having color sets on their floors.

All ads stress fact color sets are definitely for sale (though the $1000 price is rather inconspicuously displayed), also play up black-&-white -- emphasizing compatibility. First institutional ad traces RCA development of monochrome TV, cites debut at New York World's Fair April 30, 1939. It says:

"The color tube electronically 'paints' all the color of the rainbow on the screen of the set. Imagine! TV pictures so true-to-life you can see the delicate skin-tones of actors and actresses...the flashing colors of ornate costumes as the dancers swirl across the stage...the vivid green of the baseball diamond."

Ad goes on to urge purchase also of RCA service contract to meet the cost of trouble calls. Price of set is small type under a picture of set (model CT-100). Washington dealer ads play down price -- though NARDA's Mort Farr has urged dealers to display price prominently on floors as way of selling black-&-white (Vol.10:15).

Promotions vary in individual cities, depending largely on distributor. In New York, closed-circuit color programs will be beamed into RCA Exhibition Hall when sets go on display May 2. NBC-TV has set up color studio in hall, where Garroway's "Today" show originates, to transmit live programs, thus enabling consumers to see performers in person and to compare their images on color screens.

Special promotions are planned for dept. stores and other "heavy traffic" outlets. Titled "Festival of Color," promotion presents illustrated suggestions for tying in color sets with other depts. of stores, such as summer furniture, garden, clothing, etc. In addition, local TV-radio spot campaigns will also be used.

Washington dealers seemed divided on question of selling color sets. Several said they would strongly try to sell them, on basis of assurances that they could get more on reasonable delivery schedule. Others said they would discourage color sales now, using set for traffic-building and stimulating black-&-white sales.

Other manufacturers were also active in color promotions. Westinghouse put color sets in Baltimore April 23 with 7-column ad bearing this message: "Be the first in Baltimore to own a color TV set. Trade in your black-&-white set now."

Motorola announced its first 100 color sets will be distributed by Colgate-Palmolive Co. as prizes in nationwide contest starting May 9, promoting Fab detergent.

Elliott predicted color demand would exceed supply in 1954 and 1955, in his talk to admen. And he appealed to fellow manufacturers to support color programming "either directly or indirectly" as means of assuring color's growth with same speed.
as black-&-white. Color success, he said, is entirely dependent on good programs. "The total of our production accomplishment is not yet in the millions," he said, "but I anticipate that the output of color sets will grow in the same proportion as did black-&-white." With advent of color, he said, "we start all over again, for every family in the nation is a potential for color receivers."

Turning to tube sizes, he declared: "We knew, as everyone interested in the industry knew, that the trend in tube-size preference had been pointing toward the 17-in. and then 21-in. But we wanted to launch the industry as early as possible because we had deep faith in the public demand for color TV."

* * *

TV production dipped to 108,752 week ended April 16, the lowest for any week since Feb. 12, down from 124,771 preceding week and 123,280 week ended April 2. It was 15th week of year, brought production for year to date to about 1,680,000, compared to approximately 2,565,000 turned out in corresponding period of 1953.

Radio production also went down, totaling 182,685 as against 198,461 turned out week ended April 9 and 180,726 week before. It brought 15-week production to approximately 2,967,000, compared to 4,450,000 in same period year ago.

* * *

We inadvertently erred last week in breakdown of 21-in. production & sales by types of sets for year to date, though our basic theme that 21-in. consoles are biggest seller remains correct. The figures given for 21-in. actually referred to 24-in. The correct breakdown of 21-in. production shows consoles & tables each representing about 45%, combinations accounting for about 10%. However, in factory and distributor sales (and presumably retail sales, though no statistics are available), consoles lead tables by about 40% to 35%, with combinations about 25%. RETMA was source of original data, and mistake stemmed from misreading of statistics.

Trade Personals: Charles D. Hilles Jr., granted year's leave as IT&T gen. attorney, sworn in this week as special legal advisor to U. S. High Commissioner for Germany, Dr. James B. Conant... Benjamin R. Shute succeeds W. E. Miller, retired, as attorney in charge of Westinghouse legal dept... Bruce A. Coffin, ex-CBS v.p. and ex-pres. of CBS-Hytron, elected chairman of Victoreen Instrument Co., Cleveland manufacturer of radiation detection instruments and color TV & electronic components; elected to board were his brother, ex-CBS-Hytron treas. Lloyd H. Coffin, and ex-CBS-Columbia pres. David H. Cogan... James B. Conkling, CBS v.p. & pres. of Columbia Records Inc., elected to board of Louis Braille Music Institute of America; Carl Haverlin, BMI pres., and Stanley Adams, ASCAP pres., appointed to advisory council... Edward C. Bonia, ex-Bendix Radio, recently head of own TV-apparatus marketing firm, joins Emerson Radio as mgr. of dealer relations... Harry E. McCullough, ex-Crosley TV-radio sales mgr., named Magnavox merchandising consultant, specializing in radio & high-fidelity promotions with dept. stores... Francis D. Edes, administrative ass't. to Raytheon TV-radio v.p. Henry F. Argento, elected ass't. secy.-treas. of parent company, but will continue to headquarters in Chicago... J. Roy Costello appointed Sylvania international div. controller... Allan Straus named export director, Olympic Radio, succeeding late Ernest Beyer... Bruce Morehouse, ex-Avo, named national merchandise mgr., Addison Industries Ltd., Toronto, makers of own TVs and Norge appliances... Joseph Hatchwell, DuMont mid-Atlantic sales mgr., named TV service director, succeeding Harold Schuelman, now CBS-Columbia... Robert Starek promoted by Sylvania to asst. midwest sales mgr... H. J. Mitchell promoted to Crosley-Bendix market development mgr. for home appliances... J. Leonard Cohen resigns as DeWealt ass't. sales mgr. to become sales mgr. of Shuratone Products Inc., Brooklyn (phonographs), replacing Irving B. Shurack, resigned... Hugh L. Overbev Jr. appointed Channel Master district sales mgr. for South Carolina, Georgia & Chattanooga; Carlos L. Bailiff, for Alabama, Columbus, Ga. & Pensacola, Fla.; George McAlister, for rest of Florida... Don Larson resigns as Hoffman Radio merchandise mgr.... Joseph R. Horenstein, Nadine Electronics Co., N. Y. & ex-Motorola-N. Y., named managing director & head of new National Assn. of Discount Merchants, 551 Fifth Ave. ... David D. Coffin, mgr. of Raytheon missile of & director & was named, asst. v.p.

* * *

A. Mack Seybold, RCA tube div. chemical engineer, wins ARRl award, including $300 cash, for important contributions to elimination of TV interference caused by amateur radio signals; his selection was based on article "Harmonic Radiations from External Nonlinear Systems" in January, 1953 issue of QST. He's a "ham" himself (W2RYI), works in RCA Harrison plant.

Sam Poncher, pres. of Newark Electric Co., Chicago parts distributor, reported by April 20 Retailing Daily to be selling his 67% interest in Jackson Electronics & Television Inc. to pres. David Kreecham. Following sale, he's expected to resign as exec. v.p. & treas. of Jackson.

Westinghouse centralizes showrooms in 9400-sq. ft. space on 11th floor of Chicago's Merchandise Mart, moving TV-radio & appliances from American Furniture Mart.
Topics & Trends of TV Trade: Summer plant shutdown schedules, released by RETMA this week after survey of its 373 members, include the following vacation periods thus far arranged with unions and employees in accordance with industry tradition:

Set manufacturers: Arvin, June 19-July 6; Aveco, July 1-16; Bendix Radio, June 27-July 12; CBS-Columbia, July 1-15; Capehart-Farnsworth, July 2-19; DuMont, July 1-13; Emerson, June 27-July 10; GE, July 5-19; Hallicrafters, June 28-July 9; Hoffman Radio, July 16-30; Magnavox, June 25-July 9; Motorola, July 2-19; Olympic Radio, June 28-July 13; Packard-Bell, June 21-July 5; Philco, July 1-22; RCA, July 17-31; Raytheon, July 2-16; Stewart-Warner Electric, July 2-18; Stromberg-Carlson, July 5-19; Sylvania, July 19-Aug. 2; Wells-Gardner, July 2-18; Westinghouse, July 19-Aug. 5; Zenith, July 5-19. Admiral, not a RETMA member, hasn't announced its schedule yet, but usually closes down first 2 weeks of July.

Tubes: CBS-Hytron, July 2-16; DuMont, June 24-July 15; Eitel-McCullough, July 31-Aug. 14; Tung-Sol, July 19-Aug. 2. Among those not shutting down is Kimberly Glass Co.

Components and others: Aerovox, July 4-12; Alliance Mfg. Co., July 3-19; American Condenser, July 5-19; American Phenolic, July 19-Aug. 2; David Bogen Co., July 5-19; Clarostat, July 4-11; Erie Resistor, July 5-19; Gabriel Co., July 30-Aug. 9; General Instrument (F. W. Sickles div.), July 18-Aug. 1; Hazeltime, July 26-Aug. 9; Machlett Labs, Aug. 2-16; Oak Mfg. Co., July 5-19; Quan-Nichols, June 26-July 11; Radio Condenser, July 19-Aug. 1; Sangamo Electric, July 16-Aug. 1; Weston Electrical Instrument, July 19-Aug. 2.

These are dates & places for introduction of RCA color sets between now and May 15 (see p. 15) : April 25—Denver, Minneapolis, St. Paul, Washington. May 2—Baltimore, Boston, Chicago, Cincinnati, Cleveland, Detroit, Grand Rapids, Harrisburg, Pa., Huntington & Charleston, W. Va., Kansas City, New York, Omaha, Oklahoma City, South Bend. May 3—Houston, Newark, Jersey City, Trenton. May 7—Salt Lake City. May 9—Dallas, Hartford, Los Angeles, Milwaukee, New Haven. Dates are still to be determined for Johnstown & Lancaster, Pa., Philadelphia-Camden, San Francisco-Oakland, St. Louis, Tulsa, Wilkes-Barre, Wilmington & Youngstown.

Motorola sales are currently 45% in TV, 30% in communications & electronic products, 18% auto radios, 7% home & portable radios, according to tune to company in April 16 Printers' Ink. Its big problem now is “to broaden the public’s concept of Motorola from a maker of car radios to a leading electronics manufacturer of many products,” says the article.

RCA Victor Co. Ltd. starts construction of 45,000-sq. ft. addition to Prescott, Ont. plant, with annex to be devoted to TV-radio production; costing $500,000, it’s expected to be ready by fall.

Washington Woodcraft Corp., Washington, N. J. (TV cabinets) has filed Chapter XI petition in Federal court in Trenton, listing liabilities of $544,313, assets of $419,050.

Newspaper publishers were urged this week by their association’s retiring president to improve their product if they want to stave off what he called “competition” of TV for advertising revenue and reader’s time. Advice came from George C. Biggers, publisher of Atlanta Journal and Constitution (Cox) and one time director of Journal’s pioneer WSB, in speech to American Newspaper Publishers Assn. convention in N. Y.

“Almost incredible” was way he characterized growth of TV—and he should know, for Cox newspapers operate not only WSB-TV, Atlanta, but WHIO-TV, Dayton, and are co-applicants for Ch. 7 in Miami. He called recent General Foods all-network 25th anniversary TV program an “atomic advertising bomb,” declaring: “Think of it! $750,000 spent in 1½ hours! Can you imagine an advertiser figuring such an expenditure in the newspaper of this country on a given day?”

He outlined 8-point program for self-improvement of newspapers: (1) Better editing, more local stories, more “how to do it” articles, features for teen-agers. (2) Live-lifer editorial pages “because this is one feature that TV hasn’t got and never can have.” (3) Better selling to advertisers. (4) Earlier delivery of newspaper. (5) Mechanical improvements to set type faster and print papers in greater quantities. (6) Co-operation of employees in preventing “feather-bedding” contracts. (7) More printing in color in view of approaching color TV. (8) Development of new features by syndicates.

He said color TV “is closer than you think. . . Next fall it may be common. When that comes about, newspapers must be ready to compete with color as well as black & white.”

Biggers’ forebodings notwithstanding, convention was told daily newspaper circulation and advertising broke records last year—circulation going to 54,472,286, national advertising to $634,000,000, retail advertising to $2,021 billion. In addition, some 70 representative publishers in the under-10,000 circulation category agreed unanimously that TV wasn’t hurting newspapers. Robert E. Malik, Shamokin (Pa.) News-Dispater, said “TV will no more usurp or displace newspapers than radio did.”

ANPA voted full cooperation with Justice Dept. in preliminary investigation of advertising commission practices in TV-radio-newspapers (Vol. 10:6). NARTE is also cooperating fully.

Implosion of picture tube in home of Joseph Zeleznak family, Cleveland, was reported this week by UP and widely pictured in newspapers. No one was hurt, though safety glass was shattered while group was watching program. In early days of TV, industry was on tenterhooks for long time, fearing that even a few widely publicized implosions might raise havoc with sales. But such accidents have been so rare as to be almost unheard of, and there hasn’t been a single case reported of home viewer injured by implosion.

Met opera’s opening night Nov. 8, to be carried on theatre TV (Vol. 10:5), will be “gala performance of great scenes from favorite operas.” The performance will be carried closed-circuit in theatres as joint benefit for Met Opera Assn. and local charities, and is first of 3 annual opening nights to be televised through Theatre Network TV Inc. Also via theatre TV, Ford Motor Co. will hold second nationwide sales meeting 11 a.m.-1 p.m. April 29, using theatres in 39 cities, via Box Office TV Inc.

Marciano-Charles heavyweight title fight June 17 in New York is latest to be sold exclusively to theatre TV, through Theatre Network TV—10th major bout carried in theatres, all through TNT.
J. WALTER THOMPSON Co has updated to Jan. 1, 1954 its last report (Sept. 1, 1953) on Where The Sets Are—but hasn’t made it available yet for distribution outside its own organization and clients. It’s the fourth such report since first was published Jan. 1, 1953, and undertakes to show the status of TV in the 312 top markets of the U. S., plus 27 others having TV stations but not among the 312, as delineated by JWT in the book Population and Its Distribution, published in 1951 by McGraw-Hill Book Co.

Like the earlier reports, this one tells only where the TV sets are, market by market, and does not purport to show total number of sets reached by individual stations — recognizing that station signals not only transcend market boundaries but in many instances overlap signals of other stations. The agency states that coverage information showing total sets that may be reached by the signal from any TV market is in preparation for use by its own TV timebuying depts.

We’ve secured permission from JWT to publish the Jan. 1, 1954 counts of TVs and percentages of households in the top 20 markets, omitting retail sales and other data in this as in previous reports (last one we published, for April 1, 1953, having been carried in our TV Factbook No. 17 of July 15, 1953). These are the figures — the areas being defined according to U. S. Census Bureau and not purporting to be coverage areas:

New York, 3,558,269 TV homes, or 83.6% saturation; Chicago, 1,531,197 (85.3%); Los Angeles, 1,372,029 (78.5%); Philadelphia, 1,027,488 (90.2%); Detroit, 776,869 (80.1%); Boston, 725,836 (83.6%); San Francisco-Oakland, 473,170 (56.4%); Pittsburgh, 554,182 (84.6%); St. Louis, 446,722 (79.7%); Cleveland, 420,521 (89.8%); Washington, 399,328 (83.8%); Baltimore, 360,461 (86.5%); Minneapolis-St. Paul, 252,791 (72.5%); Buffalo, 306,889 (89%); Cincinnati, 272,216 (88.9%); Milwaukee, 245,881 (89.5%); Kansas City, 192,223 (64.5%); Houston, 181,638 (61.6%); Providence, 189,088 (82%); Seattle, 158,722 (59%).

Of the 319 other markets tabulated, only these had 85% or better TV saturation: Indianapolis, Worcester, New Haven-Waterbury, Albany-Troy-Schenectady, Bridgeport, Columbus, Rochester, Dayton, Allentown-Bethlehem-Easton, Akron, Toledo, Omaha, Syracuse, Johnstown, Salt Lake City, Wilmingtont, Reading, Davenport-Rock Island-Moline, Trenton, Erie, York, Binghamton, Hamilton-Middletown, O., Pittsfield, Mass., Springfield, O., Anderson, Ind., Kokomo, Ind., Long Branch-Ashbury Park, N. J.

Highest saturation for any single town is for Rochester, N. Y., 94.2%; next Bridgeport, Conn., 90.2%; York, Pa., 91.3%. Runners-up, each with 91.1%; Indianapolis, New Haven-Waterbury, Columbus, Toledo, Syracuse, Reading, Trenton, Erie. Only others 90% or better: Davenport-Rock Island-Moline, 90.9%; Wilmingtont, 90.4%; Hamilton-Middletown, 90.4%; Philadelphia, 90.2%; Long Branch-Ashbury Park, 90%.

Note: More conservative than CBS-Nielsen report on TV Set Ownership by Counties, full text of which we published as a Special Report last Feb. 27, the JWT grand total of TVs in U. S. is estimated at 27,000,000, or 56.6% of all U. S. homes. The CBS-Nielsen survey, dated Nov. 1, 1953, put total at 27,506,600, or 58%. The JWT survey of 339 markets embraces 83.7% of all TV homes for a grand total of 22,602,380 TVs, or 69.3% of saturation.

ABC’s successful bid for NCAA college football games was that network’s second big TV programming coup within a month—first being its long-term contract with Walt Disney productions (Vol. 10:14). NCAA TV committee and ABC made joint announcement April 23 after committee considered bids of all 4 networks. Amount of successful bid wasn’t announced, but it was believed to be higher than the $2,000,000-$2,500,000 reputedly paid last year by NBC. ABC exec. v.p. Robert O’Brien said several sponsors are “interested,” and games will be carried by at least 150 stations at total cost which will probably be “in excess of $4,000,000.” Under NCAA’s 1954 rules, 13 games will be televised Sept. 18-Dec. 4, and schedule doesn’t have to be determined in advance. Since inception of NCAA’s “controlled TV” program, NBC-TV has been successful bidder for the games—with Westinghouse as sponsor in 1951, General Motors in 1952 & 1953.

Taking strong exception to examiner’s decision favoring Mobile TV Corp. over WKRG for Mobile’s Ch. 6 (Vol. 10:7), FCC’s Broadcast Bureau stated flatly that WKRG should have the grant. It said that newspaper connection of Mobile TV Corp. would increase monopoly in news; that applicant “has not used other Commission grants in the best interests of Mobile”; that it has a director “who is not primarily interested in promoting TV’s growth”; and that its dominant stockholders “are strangers to Mobile.” Mobile TV Corp. is 24% owned by Edgar Stern Jr., 10% by Robert Sweezy, both principals of WDSU-TV, New Orleans; Dwight Martin, pres. and 15% owner, is former v.p. of Crosley and General Teletadco.

One of last big hearings to be scheduled, for Pittsburgh’s Ch. 4 (allocated to Irwin, Pa.), is due to start May 21. Five applicants are seeking the channel—WCAE, KQV, WLOA, Irwin Community TV Co., Wespen TV Inc.

Interconnected by AT&T this week was WNET, Providence, R. I. Due April 25 are WHO-TV, Des Moines; WDEF-TV, Chattanooga; WSEE, Erie, Pa.

Televized McCarthy-Army hearings were exciting drama, drew widespread editorial praise as valuable public service. But at week’s end, after only 2 days of hearings, it began to look as if this show might run much longer than had been expected—and in view of fact TV audience was considerably smaller than had been anticipated, it won’t be surprising to see at least one other network drop live telecasts and follow CBS’s lead in filming hearing highlights for presentation in late evening. ABC, DuMont & NBC are carrying 10:30 a.m.-12:30 p.m. & 2:30-4:30 hearings live; CBS, with virtually a full daytime commercial schedule, carries 45 min. of filmed highlights at 11:30 p.m. Cost of live airings will run to many millions in pre-emptions, time, labor & equipment if hearings drag out. ABC & DuMont have virtually no pre-emption problems; between them, there is only one commercial network show during periods covered by hearings. NBC is losing most heavily, canceling good number of daytime shows. First Hooper ratings reported for TV hearings: In New York, 10 on first day, 12 second day, as compared for 32 for Kefauver crime hearings in 1951. Second day’s hearings had rating of 8 in Chicago, 14 in Washington.

Two new applications were filed with FCC this week, making total on file 260 (41 uhf). Week’s applications were for St. Louis, Ch. 4, by WTVI, Belleville-St. Louis (KWK received Ch. 4 grant this week), and for Mt. Cheaha, Ala., educational Ch. 7 (allocated to Munford), by Ala. Educational TV Assn. [For further details about these applications see TV Addenda 18-P herewith; for complete listings of all grants, new applications, dismissals, hearings, etc., see TV Factbook No. 18, with Addenda to date.]

Silence of President Eisenhower about FCC chairman-ship left everyone baffled as Rosel Hyde’s appointment for year expired April 18. In absence of official word, Commission followed provisions of Communications Act and unanimously voted Hyde acting chairman.
PRESENT STATUS & PROSPECTS OF COLOR: Important symposium on color TV, conducted by Assn. of American Advertising Agencies at White Sulphur Springs' Greenbrier April 23 didn't get full attention it deserved in trade press -- largely because of deadlines. Current "interim" period in color developments is so confusing that talks by NBC pres. Pat Weaver and CBS pres. Frank Stanton had unusual significance, merit the particular attention of everyone in telecasting, advertising and associated fields. What they said is so basic to the whole concept of colorcasting that we've reprinted the full texts of both talks as a Special Report herewith.

The talks on color set production and on network color rates -- by RCA's Joe Elliott and CBS's Jack Van Volkenburg, respectively -- were reported in essential detail last week (Vol. 10:17). Substance of Stanton's talk is that color may now be on "dead center" but the tube bottleneck will be broken before long; that the future of TV is color; that "the time is rapidly approaching when a substantial competitive advantage will attach to getting into color TV early." Essence of Weaver's remarks was that color is here now; that it will materially change advertising costs and concepts; and "the time [for advertisers] to start color TV is this fall."

UPTREND IN RATES: WCBS-TV's $6000 HOUR: Talk all they want about TV pricing itself out of market, admen face fact that station rates are constantly going up apace with increased coverage and sets-in-use. Boldest rate hike of them all was announced this week -- CBS's New York flagship WCBS-TV upping basic Class A hour (7-11 p.m. Mon.-Sat. & 6-11 p.m. Sun.) from $4800 to $6000. Other segments go even higher per-centagewise in Rate Card No. 14, effective May 15. For example, a 20-second station break (or 1-min. on sound film) goes from $1075 to $1500, and 10-second spots from $550 to $750. Current sponsors are given usual 6-month extensions at the old rates. (For digest of the new WCBS-TV rate card, see p. 7.)

This $6000 hour is highest in TV, likely will spark other network keys, to say nothing of other stations, to raise their rates for same reasons: more coverage, more sets-in-use, more viewing, lower cost-per-1000 viewers. With its time largely sold out even for summer months, WCBS-TV also claims larger share of audience, which its rivals undoubtedly will dispute. J. Walter Thompson Jan. 1 count shows New York market area with 3,558,269 TV sets in 4,256,400 households, or 83.6% saturation -- and that doesn't purport to embrace whole TV service area by any means.

NBC's New York key WNBT, whose $5500 Class AA rate (10:30-11 p.m. Mon.-Sat. & 6-7:30 p.m. Sun.) has been highest on record since last Dec. 1 (Vol. 9:48), can be expected to ponder another increase soon, as may other N.Y. stations. WNBT's Class A time (7-7:30 p.m. Mon.-Sat.) was then set at $4250 per hour, $750 for 20 seconds, $350 for 10 seconds. Other N.Y. stations' highest hour rates are: WABC-TV, $3100; WABD, $2200; WOR-TV, $1500; WPIX, $1500; WATV, $1000. (For digest of all U.S. and Canadian stations' rate cards, see our TV Factbook No. 18 of Jan. 15, 1954.)

Radio rates continue relatively static, by contrast, few changes being made and increases a rarity. None even approaches the rates of TV network flagships. The
highest radio rates on record are those of the networks' WCBS, New York, $1350 per Class A hour (7-11 p.m.) and WNBC, New York, $1200 (6-10:30 p.m.), with WOR at $1200 from 6-10:30 p.m. and WABC at flat $720 from 8 a.m.-10:30 p.m. Highest outside New York is Cincinnati's WLW at $1080 from 6-10:30 p.m.

DuMont Color Tube & Scanner Impressive: Dr. Allen B. DuMont's well-known skepticism about imminence of color TV seems to have been dispelled. This week, he called in newsmen, telecasters, network and film folk to show them 2 developments he believes will provide a practical foundation for color. These are a 19-in. color tube and a 16mm color film scanner.

Dr. DuMont foresees 19-in. color set at $500-$600 within 2-3 years, says it can be sold at $1000 this year (price of currently offered 15-in.). With scanner, he sees means for stations to begin local programming immediately and inexpensively. Though DuMont company is most eager to stress the scanner and its immediate availability, the interest of most observers inevitably gravitated to the tube. Tube will sell for $150-$200 initially, go under $100 eventually, Dr. DuMont said. Limited production is now underway and deliveries are scheduled for fall. He gave no indication of present or prospective rate of production. RCA hasn't fixed price for its 19-in. when commercial production starts; samples sell for $315. Reason he's finally getting hopeful about mass production of color, Dr. DuMont says, is that he believes there is now a method for making a large-screen set to sell at reasonable price eventually.

* * * *

Demonstrations were impressive. New devices were shown together -- scanner feeding signals to the tube. End results -- the pictures viewed -- were certainly as good as any we've seen. We're no experts in receiver production or scanner operation, but DuMont's presentation made it even clearer to us that color TV is going to flourish in an atmosphere of fierce, productive competition.

Tube is the shadow-mask type pioneered by RCA, modified by CBS-Hytron -- then further modified by DuMont. It employs 3 guns, triads of phosphor dots, and a pierced mask. Like CBS-Hytron, DuMont places dots on face of tube itself and puts a curved shadow mask behind it; dots are deposited photographically. RCA employs an assembly within tube, with a frame supporting flat screen and flat mask.

Where DuMont tube differs most significantly from the other 2 is in new gun. And an important feature of gun is close spacing between the 3 elements, plus electrostatic convergence -- making for simpler set circuitry, according to DuMont.

Specifications of tube: Round, glass, overall diameter 19 5/16-in., length 25½-in. The picture dimensions are 16 9/16-by-12 7/16, giving area of 185 sq. in. Deflection is 60 degrees. DuMont says RCA's 19-in. has 160 sq. in., is 26 15/16-in. long; it didn't compare sizes with CBS, which claims 205 sq. in., because it hasn't received any sample yet. Lawrence 21 & 22-in. tubes, it says, have 155 sq. in.

Tube has 1,300,000 dots, each .012-in. in diameter. Holes in mask are all same size rather than tapered out from center as in RCA tube (Vol. 10:4). The mask weighs 7½-oz. Overall weight wasn't given, but it's claimed to be less than RCA's.

Big picture is certainly desirable, no question about it. DuMont tube was also excellent in resolution, convergence and color fidelity. We haven't seen RCA's 19-in., which has as yet been shown only to licensees.

Much of result is attributed to new gun. "After all," says research v.p. Dr. T.T. Goldsmith, "we've had more experience with guns than any other organization in the world." A weakness of RCA flat-mask approach, he said, is that mask must be kept stretched, adding that a curved mask retains its shape without stretching. And distance between guns, he stated, has much to do with convergence problems.

Mask is made by etching holes, though DuMont is experimenting with method of building mask by electrolytic deposit. DuMont is also working on 21-in. rectangular color tube, both metal-coned and glass.

Tube created great industry interest, as expected, and DuMont is planning to show it to its patent licensees, others in the industry.
Interesting angle is Dr. DuMont's disparagement of Lawrence tube, despite Paramount Pictures' 26% ownership of DuMont and 50% ownership of Lawrence tube. Dr. Goldsmith says a major drawback of Lawrence tube is "complicated circuitry."

DuMont's film scanner didn't excite popular attention, but telecasters who have seen it are greatly enthused. DuMont has been working on it for years, came out with monochrome version first (Vol. 8:14, 9:18), but with color always in mind. Scanner uses principle of continuous motion, doesn't have shutter, sprockets, etc. It has flying-spot CR tube and photocells. It was so planned that monochrome versions (about 30 of them sold so far) can be converted to color.

Among many features claimed for scanner is new "masking" technique, the electronic equivalent of movie practice. Masking permits emphasis or de-emphasis of red, blue or green without otherwise affecting picture. As demonstrated, it is an extremely effective technique.

Scanner was shown with many kinds of film -- Kodachrome original, Kodachrome duplicate, Ansco, Eastman. To us, result was as good as any color movie. And network engineers and TV film folk on hand were definitely impressed.

Black-and-white version of scanner sells for $8000. Converting it to color runs $4500. Masking costs additional $2200. DuMont made 16mm first, is now developing a 35mm -- though it believes only about 25 stations in country will want 35mm.

NARTB convention May 23-28 will provide real battleground for scanners. All manufacturers will be pitching for all they're worth -- because film scanners will provide cheapest means of programming in color locally. Philco showed a 35mm continuous color film scanner last year, is due to have 16mm at convention this year. RCA has come out in favor of a 3-vidicon color camera, rejecting continuous-motion principle. GE and Motorola have announced continuous-motion scanners.

Announcement of DuMont scanner also brought first word of DuMont's start in colorcasting. It begins in September with film on WABD, New York.

**GRANTS DECREASE, SENATE UHF PROBE DEFERRED:** FCC failed to issue any CPs this week, second grantless week since end of freeze. It did manage to squeeze out an initial decision, however, favoring Ch. 5 to KWNN, Ft. Smith, Ark., after dropout of competing George T. Hernreich. Commission cancelled 3 uhf CPs, bringing total turned in to 60; there have been 12 vhf grants surrendered.

Much of FCC's work was in defense of its vhf grants against attacks by vhf stations and grantees. Uhf folk, in turn, were busy preparing for Senate hearing which was again postponed -- this time to May 19-21 (see p. 12).

Two uhf CPs were surrendered voluntarily -- WSGN-TV, Birmingham (Ch. 42) and WJRE, Indianapolis (Ch. 26) -- while Commission rescinded CP for WSJL, Bridgeport (Ch. 49) for lack of prosecution.

A grant for Ch. 9 was in the works for Minneapolis, KEYD being set up for initial decision with dropouts of WDGY and WLOL.

On the uhf vs. vhf front: (1) FCC granted move of WSPA-TV, Spartanburg, S.C. to Paris Mt.; uhf grantee WAIM-TV, Anderson, will promptly appeal that action to the courts. (2) WTVJ, Belleville, Ill. appealed to courts FCC's grant of Ch. 4 to KWK after merger (Vol. 10:17). (3) Still court-shy, FCC allowed WCAN-TV, Milwaukee, permission to intervene in hearing for Ch. 6 allocated to nearby Whitefish Bay.

FCC's hearing procedure got going over in oral argument April 29 over the wisdom of "points of reliance" system (Vol. 10:17). Counsel for applicants in Ch. 7 Miami case and Ch. 9 Charlotte case told commissioners that pre-hearing haggling over the points were sheer waste of time, that hearings could be over with, or nearly so, by now had it not been for such beating around the bush.

FCC Broadcast Bureau asst. chief Joseph Kittner pointed out that President, Congress, courts and govt. agencies have for years searched for means of shortening hearings and asserted that FCC's procedures, while not perfect by any means, would certainly work if attorneys wanted them to.
**XELD-TV & CMTV QUIT; NEW STARTER IN OKLA.:**  Only one new station went on air this week -- KTEN, Ada, Okla. (Ch. 10) -- as first of Mexican-licensed border stations closed down at Matamoros, across Rio Grande from Brownsville, Tex., and as Storer-owned CMTV, Havana (Ch. 11) suspended operations in preparation for liquidation.

Pre-freeze XELD-TV (Ch. 7), on air since Sept. 1951, formally announced cessation of operations on April 18 following "major breakdown" of its 100-kw diesel-powered main generator. The 44% devaluation of Mexican peso in relation to dollar, effective April 18, was final coup de grace because, as stated by mgr. Bert Metcaif, it brought "considerable trouble to clients on the Mexican side of the border and sufficient dollars could not be obtained" to enable continued operation.

Television del Caribe, as Storer station in Havana was known, began testing exactly year ago, managed by Al Shropshire of Storer staff, and is reputed to have been loser from start. Nominal license holder Manuel D. Autran, oldtime Cuban broadcaster, says new company will take over Ch. 11. Fact seems to be, however, that 5 stations in Havana are too many; competition was so keen that even Goar Mestre's CMQ-TV (Ch. 6) and CMBF-TV (Ch. 7) have been reported hard-pressed. Press reports say Cuban telecasters as whole are estimated losing more than $100,000 a month.

* * *

Economic woes of the Mexican border station, which headquartered in Brownsville, were first bruited last Feb. (Vol. 10:5) when it became certain that the rich Rio Grande Valley would have 2 U.S. outlets. They're KGBT-TV, Harlingen (Ch. 4) and KRGV-TV, Weslaco (Ch. 5), which took over basic network services XELD-TV had had to itself. **Onetime big earner,** XELD-TV declined gradually because it depends on American sponsors, who preferred to go on U.S. stations.

Founder Monte Kleban, ex-San Antonio radio executive, sold his interest in XELD-TV 2 years ago, continuing as consultant to new co-equal owners Romulo O'Farrill and Emilio Azcarraga, Mexico City TV-radio station owners and industrialists. Both have extensive plans for other TV stations in Mexico (see p. 177, TV Factbook No. 18) and O'Farrill is reported to have ordered equipment for Guanajuato (Ch. 12) and for Monterrey (Ch. 2) which presumably will now be delayed because the orders were in dollars and expected income would be in pesos.

**Note:** There are 2 other Mexican-licensed border stations now operating -- XETV, Tijuana (Ch. 6), deriving revenues from San Diego area, and new XEJ-TV, Juarez (Ch. 5), across from El Paso, projected as Spanish-language outlet (Vol. 10:17).

* * *

KTEN, Ada, Okla. (Ch. 10), though city's 1950 population was only 15,955, is in rich south central part of state, 67 mi. from Oklahoma City, and opens up new TV area with its 25-kw RCA transmitter, 750-ft. Stainless tower. It began testing April 28, this week also got STA for microwave relay over which it expects to carry operations in 2-3 weeks from studios it's renting from KTVQ, Oklahoma City. Heading the project is Rev. C.C. Morris, 32.3%, who operated local radio KADA for 30 years, also owning KWSH, Wewoka, Okla. Bill Hoover is v.p.-gen. mgr., 32.3%; Brown Morris, 32.3%. Base rate is $300, no network or rep yet reported. It's 387th station on air.

KTYL-TV, PHEONIX-Mesa (Ch. 12), which began just about year ago, was sold this week to owners of KTAR, Phoenix's longtime NBC radio outlet controlled by John J. Louis, of the Needham, Brorby & Louis ad agency, and headed by veteran broadcaster Richard O. Lewis. Consideration was assumption of $150,000 in bank loans and of unpaid balance of $101,242 owed DuMont. Studios will be leased from Harry L. Nace estate, but new owners will take over the rest of physical plant said to be valued at nearly $500,000. Sellers besides Harry L. Nace Jr. (53.72%) include gen. mgr. Dwight Harkins, 35.86%, and treas. Lorenzo K. Lisonbee, 10.42%. They are not selling their radio KYL.

In acquiring KTYL-TV, the Louis group presumably will withdraw from competitive hearing scheduled May 10 on applications for Phoenix's remaining Ch. 3. Other applicant, Arizona Television Co., is 40% owned by ex-U.S. Senator McFarland and 10% by Edward Cooper, ex-nide to Senate Interstate Commerce Committee, now with Motion Picture Assn. Presumably the channel will go to them by default, but KTAR pres. Richard Lewis states KTYL-TV will retain NBC affiliation.

Reason for buying was not only price but eagerness of KTAR group to get into TV more quickly. Mr. Harkins and staff of KTYL-TV will be retained by KTAR, which is expected to change call to KTAR-TV. The KTAR group is already in TV, owning KVOA-TV, Tucson (Ch. 4) as well as radio stations KYUM, Yuma, and KYCA, Prescott. Station would be Phoenix's fourth, though two (KOOL-TV & KKOY-TV) share time on Ch. 10 and are due to be merged shortly into one fulltime ABC outlet (Vol. 10:12,15). The CBS outlet is Meredith's KPHO-TV (Ch. 5).

Edward Lamb was high bidder for Tampa Bay area's first TV station, WSUN-TV (Ch. 38) along with radio WSUN (5-kw on 620 kc, ABC), when St. Petersburg City Council opened bids on city-owned commercial stations April 28—but whether he gets the stations may hinge on outcome of his current difficulties with FCC over alleged "communist" activity. He offered to pay flat $476,000 for 20-year lease and assume $390,000 in obligations, his bid with rentals adding up to $2,265,000 over 20 years; he placed 30-day limit on offer. Ted Mack's Original Amatuer Hour Inc. offered 25-year agreement adding up to $1,154,500 over 25 years. Third bid by Farris E. Rahall, pres. of WFEA, Manchester, N. H., and owner of AM stations in Allentown & Norristown, Pa. and Beckley, W. Va., was disqualified because it lacked $50,000 certified check required with each sealed bid; he offered $400,000 cash and agreed to assume the $390,000 obligations. Council meets May 6 to decide, its attorney still uncertain at week's end whether to advise city to await long-delayed FCC hearing on FCC charge against Mr. Lamb, who owns WNIC & WIKE, Erie; radio WTOD, Toledo; radio WHOU, Orlando; and holds CP for WMAC-TV, Massillon, O.—besides being publisher of Erie Dispatch and owner of various industrial enterprises.

FCC approved takeover of WTVH-TV, Peoria (Ch. 19), along with radio WTVH (1-kw on 1890 kc, MBS), by Peoria Journal Star this week, total consideration for 91% of stock being $55,000 cash plus assumption of notes and obligations totalling $155,000. Newspaper publisher, which recently merged morning Star and evening Journal, and headed by pres. Carl P. Slane, acquired the 52% of Hugh R. Norman, Davenport (Ia.) broadcaster, the 36% of L. W. Hicks, of Pittsburgh, and other holdings. Reason for selling is stated as transfersors' inability "to continue the obligation of supplying the license with the additional capital required for the operation of its stations." Difficulties facing the stations are shown in financial statements showing total liabilities of $324,770 ($174,478 current, $214,292 long-term). Assets include $250,125 net value of plant as of March 31 ($225,078 TV, $17,356 radio, $7691 land), $31,416 accounts receivable, $31,614 charged against costs of securing CP and license for TV. Stations' operating statement for first 3 months of 1954 shows net loss of $40,677, of which $31,331 is charged against TV, $9345 against radio.

Time Inc.'s proposed purchase of KLZ-TV & KLZ, Denver (Vol. 10:11, 15), is protested in petition filed this week by Denver Television Co., unsuccessful applicant for the Ch. 7 grant in FCC decision of June 23, 1953. Law firm of Arnold, Fortas & Porter (Harry Plotkin handling case) asks reinstatement of Ch. 7 application and grant to it in lieu of grantee Aladdin Radio & TV Inc. on grounds that TV station has been on the air only 4 months (it started Oct. 27, 1953) and was sold to a company which was never an applicant and which it claims could have defeated in competitive hearing. Unsuccessful applicant, Wofberg theatre interests, also asserts Aladdin net worth is stated as $650,000, whereas the stations are being sold for more than $3,500,000. Stockholder Harry Huffman's reason for selling, illness, was just as apparent last Oct. as now, it's claimed, and pres. Hugh B. Terry, also ill, has been asked to remain as gen. mgr. Stockholders J. Elroy McCaw and Theodore R. Gamble (20.36% each) are not connected with operation. Case is without direct precedent, may open FCC inquiry into whole question of TV-radio station sales deals made soon after grants.

Guy P. Gannett, 72, pres. & chief owner of WGAN-TV & WGAN, Portland, Me. and radio WGUY, Bangor, and publisher of Portland Press Herald and Evening Express, Kennebec Journal, Waterville Sentinel, died April 24 in N. Y. of heart ailment.

---

Strike against Philco was called for Mon. May 3 by 8000 workers represented by IUE-CIO, which would halt TV-radio-electronics production in Philadelphia, Croxden, Pa. & Sandusky, O. plants. Union demands include guaranteed annual wage, pay increases, extension of hospitalization benefits to include dependents. Company proposed one-year extension of contract, which expired at midnight April 30. No meetings of company and union officials were scheduled for weekend, and hopes of averting walkout appeared dim as we went to press.

Sen. Eva Bowing (R-Neb.) successor to late Sen. Dwight Griswold (Vol. 10:16), was named this week to fill his post on Senate Commerce Committee. Though Griswold was on communications subcommittee, that vacancy hasn't been filled by committee chairman Bricker (R-O.).

Power increases: KTTV, Los Angeles (Ch. 11), April 25 increased ERP from 31 to 110 kw from new 200-ft. tower atop Mt. Wilson. WHBQ-TV, Memphis (Ch. 6), April 26 boosted transmitter power from 10 to 50 kw.

Earliest network programming in history: Some stations in areas not observing Daylight Time now begin program day at 6 a.m. with NBC's Today or CBS's Morning Show.
MILLION-WATT UHP stations are still at least a year off—but that isn’t stopping operators and grantees from assuring themselves a good place in line by placing their orders for the high-power transmitters. Manufacturers aren’t soliciting the orders yet, because they can’t give definite answers to customers’ most important questions—when? and how much? General Electric has about half-dozen unsolicited orders for its projected “60-kw” uhf transmitter (Vol. 10:4), although the klystron tube that will probably power it is still in development stage. Orders are being accepted on contingent basis to establish priority. GE officials informally estimate complete 60-kw transmitter will cost about $225,000, won’t even make a guess at probable cost of 60-kw amplifier. As to timing, nobody expects first high-power unit before mid-1955 at the earliest—and GE isn’t due to get Varian Associates’ first 60-kw klystron until next fall or later.

No new-station shipments were reported by any of the manufacturers this week. However, RCA reported April 27 shipment of 50-kw amplifier to WNHC-TV, New Haven (Ch. 8) and April 28 shipment of 25-kw transmitter to WJIM-TV, Lansing (Ch. 6). GE had one new order—for delivery within 30 days of a 12-kw amplifier to KEDD, Wichita (Ch. 16).

* * *

In our continuing survey of upcoming new stations, these were reports received this week:

WTHT, Wilmington, N.C. (Ch. 3) has ordered 5-kw DuMont transmitter, now plans tests about Aug. 15, programming in Sept., reports 25% owner Milton Hammer, who also produces TV show titled Washington Spotlight. Ninth floor of downtown TV Bldg. (formerly Trust Bldg.) is being remodeled for studios & transmitter. Its 143-ft. tower with RCA superturnstile antenna will be on roof, 104-ft. above street. Rep not yet chosen.

WDBO-TV, Orlando, Fla. (Ch. 6), with visual part of 35-kw GE transmitter & 6-bay antenna on hand, expects to begin tests in mid-May. It’s in process of side-mounting FM antenna on 584-ft. tower, which will also carry TV antenna and be used for AM daytime operation. AM directional operation at night will be from nearby 370-ft. tower. WDBO-TV will be CBS primary interconnected, will also feed from other 3 networks. Base rate will be $200. Blair will be rep.

WTIK-TV, Durham, N.C. (Ch. 11), call letters to be changed to WTOV (Vol. 10:14), has 500-ft. Kimco tower due for completion by July 24, or 100 days after signing contract. Klein Iron & Metal Co., tower manufacturer, has pledged liquidated damages of $100 daily for each day’s delay beyond completion. Station plans Sept. start with DuMont equipment. Rep will be Headley-Reed.

KFVS-TV, Cape Girardeau, Mo. (Ch. 12), has 808-ft. Truscon tower scheduled for delivery about June 18, is negotiating for 12-bay antenna, expects to get on air by Aug. 1, reports pres. Oscar C. Hirsch. Other equipment not reported. It will be primary interconnected CBS. Rep will be Pearson.

CFCM-TV, Quebec City, Que. (Ch. 4) now is shooting for tests during third week of May, plans 35 hours of programming weekly at the beginning of June, writes mgr. & program director Claude Garneau. It will use 500-watt DuMont transmitter in suburban Ste. Foye and 400-ft. tower manufactured by local Cobra Industries Inc. RCA 3-bay superturnstile antenna is scheduled to be ready around May 15. It’s jointly owned by Famous Players Canadian Corp. and AM stations CHRC, CJQX, CKCV. Famous Players also owns 50% of CKCO-TV, Kitchener, Ont., which began last Dec. CFCM-TV base rate will be $200. Reps will be Weed (for U.S.) and Jos. A. Hardy & Co.

**Network Accounts:** Oldsmobile signed this week to sponsor Academy Awards presentations again next March on NBC-TV, heading off movement for motion picture industry backing of 2-hour telecast due to criticism that Oldsmobile over-commercialized it this year. Meeting of top movie executives to consider sponsorship was cancelled after Oldsmobile notified NBC it was renewing option . . . Cudahy Packing Co. (Old Dutch cleanser), in first network sponsorship, buys 4 segments of NBC-TV’s Show of Shows starting May 8, and 15 weeks of Saturday Night Revue starting June 12, Sat. 9:10-10:30 p.m., thru Young & Rubicam . . . National Wholesale Jewelers Assn. sponsors Your Night of Jewels on DuMont starting in Sept., date & time not yet decided, thru Lewin, Williams & Saylor; program will have 6 partic. segments for non-competitive jewelry manufacturers . . . Best Foods Inc. to sponsor Wed. 4:45-5 portion of Robert Q. Lewis Show on CBS-TV starting May 5, Mon.-thru-Fri. 4:30-5 p.m., thru Dancer-Fitzgerald-Sample . . . Bymart-Tintair Inc. buys 1 partic. May 10 on NBC-TV’s 7-9 a.m. Today, thru Erwin, Wasey & Co. . . . United Steelworkers of America orders 93 stations on DuMont for speech by its pres. David J. McDonald Wed. May 5, 9:15-9:30 p.m., thru Willman & Callahan, Pittsburgh . . . Admiral renews sponsorship of Bishop Sheen’s Life Is Worth Living for 3rd season on DuMont starting Nov. 2, Tue. 8:5-9:30 p.m., thru Erwin, Wasey & Co. . . . Pepsi-Cola renews Pepsi-Cola Playhouse on ABC-TV, Fri. 8:30-9 p.m., thru Biow . . . NBC-TV planning to devote 3-5 p.m. to soap operas in fall, with Procter & Gamble reportedly signed for two 15-min. programs . . . DuMont starts boxing bouts from New York’s St. Nicholas Arena May 17, Mon. 9:30 p.m. to conclusion, on co-op sponsorship basis.

More professional football will be televised this year than last, as result of new agreement between National Football League and DuMont Network, which will carry the schedule for 4th consecutive year. Program for this fall: (1) Sun. afternoon “game of the week” to be carried nationally on 50-100 stations Sept. 25-Dec. 11. (2) National Sat. afternoon games Dec. 4 & 11. (3) Sat. night games on regional station lineups. More than 60 games will be shown either nationally or regionally, pattern being same as last year except for the 2 added Sat. afternoon games—with all games again blacked out in immediate area in which they are being played. DuMont sports director Thomas J. McMahon hailed last year’s telecasts as “boon to home game attendance,” pointing to 5% increase in attendance over 1952 for entire league. Meanwhile, Big Ten, which had opposed NCAA’s football control plan and even made veiled threats to go “on its own” in televising its games, this week “reluctantly accepted” NCAA program of televising selected national games over ABC network (Vol. 10:17). Neither ABC nor DuMont has yet announced football sponsors—although General Motors and Westinghouse are reported to be the leading contenders for $4,000,000-plus college football package.

Interconnected to AT&T network lines last week end: WDEF-TV, Chattanooga; WHO-TV, Des Moines; WSEE, Erie, Pa. Scheduled for May 1 hookup were WTTV, Bloomington, Ind. (replacing private microwave); WBFL-TV, Columbus, Ga. (replacing off-air pickup); WDAK-TV, Columbus, Ga. Canadian Bell this week announced construction is underway on 2,400-mile microwave route linking Toronto and Winnipeg, capable of handling TV, due for completion late in 1956.

Birmingham’s WABT (Ch. 13) and WBRC-TV (Ch. 6) swap network affiliations on or before next July 4 by arrangements concluded this week. Also switching are their AM counterparts, WAPI (10-kw day & 5-kw night on 1070 kc) and WBRC (5-kw on 960 kc). WBRC-TV thus becomes last of the 5 Storer stations to affiliate with CBS.
Teletexing Notes: Billboard, which covers the TV film trade quite authoritatively, seems to persist in belief that Howard Hughes’ RKO will soon release at least half of the 750 or more of its old feature films to TV, some maybe by the fall selling season. Reporter Sam Chase quotes “tradesters” as reasoning that Hughes might recoup nearly all the $23,000,000 evaluation of RKO stock by re-releasing, say, 350 of the films which it’s estimated could fetch $60,000 each over 3-year span ... Other Hollywood majors have kept vaults shut tight from TV because they felt they might get more out of re-releases to theatres and, more important, because of fear of offending theatre exhibitors. But Chase says these reasons are less applicable with the coming of CinemaScope, Vistorama and other big-screen techniques, so that “ordinary non-smash old-dimension pix no longer are in such big demand for reissue to theatres” ... If Hughes, with his reputation as a “maverick,” does pull the plug, he may well force the other majors to follow suit and release at least part of their backlog to TV. Live programming are going to way too give up on film shows to all 7 Los Angeles stations, more and more being axed in favor of the half-hour vidpix,” reports Hollywood’s Daily Variety; reason is “strictly economics.” Only station with as high as 75% live, survey shows, is KHJ-TV—but that’s now because of baseball; normally, it’s 51% film, and even CBS’s KNX runs 70-80% film if you count in kines ... Third edition of Directory of Free TV Film (416 pp.), listing thousands of “public relations films” available to TV stations, has been published by Broadcasting Information Bureau, 358 Fifth Ave., N. Y. (Judy Dupuy) ... Old Biograph studios on E. 175th St., New York, closed since 1929, will be reactivated in June by new Biograph Film Studios Inc. to produce TV and other films ... CBS-TV’s Studio One (Westhinghouse) wins Edgar Allen Poe Award of Mystery Writers of America for its production of “Crime at Blossoms,” adapted by Jerome Ross and adjudged best TV mystery of 1953 ... More honors for CBS advertising art: 6 posters, created for on-screen promotion of CBS-TV programs by graphic arts director, Georg Olden, selected for inclusion in 1954 International Poster Annual, published in Switzerland; 4 will go to permanent poster collection of Stedelijk Museum, Amsterdam ... Elaborate commercial: 6-room prefabricated house was constructed in ABC-TV’s New York studios in 6 hours for use in 6 minutes of commercials on U. S. Steel Hour April 27; the 1600 pieces were shipped from New Albany (Ind.) factory in 47 boxes, set up by stagehands with basic hand tools ... Golf tournaments, planned and conducted exclusively for TV, will be presented weekly on WNBQ, Chicago, Tue. 11-12 midnight, direct from Tam O’Shanter Country Club starting June 1, pitting 2 top pros and 2 amateurs against each other in 5-hole tourneys ... Golf lessons via TV is new weekly half-hour feature on WTRI, Albany, featuring area pros, filmed and live ... Free Class A time, 15-min. each, being given to all candidates for Senator, Governor or Congressmen on equal basis by Iowa State College’s commercially-operated WOI-TV, Ames ... DuMont signs 2-year contract with London Sporting Club Inc., paying $12,500 per bout, to put on its Mon. night fights from St. Nicholas Arena, N. Y. ... Rep appointments: upcomming WLOS-TV, Asheville, N. C. (Ch. 13) to Venard, Rintoul & McConnell; WGRB, Buffalo (Ch. 2), to Headley-Reed.

HIGHEST RATES in TV are those of CBS’s New York key WCBS-TV, whose Rate Card No. 14 becomes effective May 15 (see p. 1), exactly 8 months after last rate card was published. Gen. mgr. Craig Lawrence announces that discount structure remains same, namely, 5% on 26-week or longer program schedules, 10% on 52-week; 2½% on 26 or more announcements, 5% on 52. Current advertisers are given 6-month extensions at present rates (for digest of Rate Card No. 13, see p. 113, TV Factbook No. 18 of Jan. 15, 1954). This is a digest of the new rates:

As Army-McCarthy hearings dragged on through seemingly interminable miasma of side issues and legal quibbling, more and more local stations began returning to regular daytime programming, even when hearings were available to them through ABC or DuMont. Despite "deluge of protests" committee Chairman Mundt (R-S. D.) said he received after NBC cancelled live coverage, that network stuck to its decision to carry only filmed highlights at 11:15 midnight, as did CBS from outset (Vol. 10:17). NBC said its 2 days of live coverage cost it more than $125,000 in commercial revenue. Despite declining public interest in hearings, some western TV stations were bitter about unavailability of live show via microwave or coaxial. In terms of showmanship, critics agreed hearings couldn’t be compared with 1951 Kaufman crime investigation, April 28 Variety headlining its critique "Army-McCarthy Spektacular; All-Star Cast Needs a Script." New York Times' Jack Gould advised Senators not to worry too much about their comparatively modest Hooper ratings: "With any new daytime drama on TV, the first few months are always the hardest." Live telecast of hearing Fri. April 30 got Hooper rating of 9 in New York, as opposed to 12 the preceding Friday (Vol. 10:17), 18 in Boston compared to 30 the week before. First rating announced for Milwaukee, in McCarthy's home state, was 7 on April 30—comparatively high considering live hearings were carried only on uhf WOKY-TV.

Rio de Janeiro gets its second TV outlet as result of final govt. grant March 26 of Ch. 13 to the Radio Record TV interests, headed by prominent broadcaster J. B. Amoral, who also operates Ch. 7 station in Sao Paulo, Brazil. Since GE equipment is already on hand, construction won't take long after final decree, reports technical director Charles G. Lacombe, onetime GE engineer in Schenectady. Ch. 13 previously had been assigned Radio Maua. According to Mr. Lacombe's report to Television Digest, President Vargas has also consented to construction of Ch. 4 outlet by Assis Chateaubriand's Radio Guarani (PRH-6) in Belo Horizonte, and the big TV-radio-newspaper magnate has secured authorization to spend equivalent of $362,000 U.S. dollars for equipment. Senator Chateaubriand also owns the only station in Rio, Radio Televisao Tupi (Ch. 6), and one of the 3 outlets in Sao Paulo, Radio Difusora de Sao Paulo (Ch. 3, due to shift to Ch. 4). [For other CP holders in Brazil, see Vol. 10:12.]

New Mississippi libel law, in advance of political campaign, relieves TV-radio stations of responsibility for defamatory remarks made on air by anyone other than station owner or employee.
PRICE TREND VAGUE, COLOR MOVING SLOWLY: Raytheon broke with 17-in. metal table at $140, $150 & $160 this weekend, matching prices of Crosley's "Super V" which stirred market recently (Vol.10:7,13). Raytheon also went below general industry level with 21-in. table at $170. Both sizes embody vertical chassis, come in 8 colors.

Thus the industry's over-all price trend, only month or so before marts and conventions where new models are to be introduced, seems to have no pattern at all -- few willing to say whether trend will be up or down, or both ways.

Trade remains full of contradictions. For example, even as Raytheon followed Crosley in bringing out the cheaper sets, Emerson raised its 21-in. table this week from $180 to $200. Pres. Benjamin Abrams told us no significance should be read into the increase other than fact that "this particular set was underpriced, so we took steps to correct it." But some thought Emerson was testing market to find out if it could absorb higher prices before introducing new line in June.

Both new Raytheon sets are called "Challenger." The 17-in. contains almost same features claimed for Crosley's. Raytheon, like Crosley, stresses portability, says set weighs only 46 lbs. (vs. Crosley's 53). Raytheon cabinet is only 17%4-in. wide, or a mere half-inch wider than picture tube. Controls are on top of the set. Doubled audio power is claimed. "Slip-on" jackets in various colors can be had to cover sets to fit in with decor of room.

If Raytheon sets sell as well as Crosley's are reported to be selling, and if there's profit in them that Crosley claims for itself and its distributor-dealers (Vol. 10:13), other manufacturers may well decide to bring out lower-cost price leaders in June lines. Most manufacturers are uncommunicative about plans these days, awaiting distributor showings. It's reported Philco will announce a few new models in week or so -- some priced lower than comparable sets, others higher.

* * * * *

RCA's first week of color merchandising, in leadoff of 4 of 38 cities which will get color sets by May 15, produced no startling results -- RCA spokesman saying movement was "up to expectations, better than we thought in some areas, not as good in others." Of about 100 sets shipped to dealers, at least 15 were reported sold (at $1000 list) in first 4 days in Washington, Minneapolis, St. Paul & Denver -- and dealers in those cities reported many more prospects were lined up, with more sales likely to be made when network color programming resumes next week. Lack of color programs was chief complaint of dealers in the 4 cities.

Minneapolis-St. Paul distributor F.C. Heyer reported: "We didn't do a big sales volume from dealer to consumer, but at least we were able to answer the oft-repeated question: 'When will color be available?' We showed it to 'em this week." He said appliance stores, most of them open evenings, attracted far greater traffic than dept. stores, most of which close at 6 p.m. He described himself as "pleased" with initial sales effort, looked for greater volume next week.

A Washington dept. store reported sale of 3 sets first 2 days to "folks who just wanted to be among the first in town to have a color set -- big entertainers who are planning to have parties on nights when they program in color."

Sets aroused lots of questions from customers as to when price would come down, when screens would be larger, etc. However, dealers we spoke to differed on whether black-&-white sales were stimulated. A few said it was difficult to trace black-&-white sales to traffic induced by curiosity about color.

Twenty-one more cities got RCA color sets week of May 2, heralded by institutional & dealer ads, as in first 4 cities (Vol. 10:17). [New schedule on p. 10.]

Westinghouse reports 50-60 color sets sold to consumers in 15 major markets where they've been offered since March 1. First 2 weeks of March were devoted to N.Y. market, where 100 sets were shipped. Westinghouse was first to put color set
on market. TV-radio mgr. T.J. Newcomb commented: "The color merchandising problem now revolves around color programming. When more programs are shown, more color sets will be sold. It's as simple as that."

Crosley v.p. Leonard F. Cramer said color production start has been delayed beyond Aug., added Lawrence one-gun tube has been drastically improved but radiation problem is yet to be solved. Stromberg-Carlson gen. mgr. C.J. Hunt said color output would begin May 1 on "very limited schedule," its set also retailing at about $1000. Emerson's Ben Abrams admitted very few color sets have been leased under his rental plan in last 6 weeks (Vol. 10:11) but said he would continue rentals until a larger size is in mass production. And Zenith pres. E.F. McDonald said his company will not market color set until one-gun tube is perfected (see p. 11).

TV production totaled 109,619 week ended April 23, compared to 108,752 units preceding week and 124,771 week ended April 9. It was year's 16th week and brought production for year to date to about 1,790,000, compared to approximately 2,705,000 turned out in corresponding period of 1953.

Radio production totaled 178,752, compared to 182,685 week ended April 16 and 198,461 in week before. It brought 16-week production to about 3,145,000 vs. about 4,628,000 turned out in same period year ago.

Final first-quarter TV output figure was 1,447,110, of which 337,429 (23.3%) were uhf-equipped, according to RETMA report. This compared with 2,259,943 sets in first quarter of 1953 and 1,324,831 in 1952. For March alone, TV production was 599,606, of which 124,855 (20.8%) were uhf-equipped. Total factory output of uhf sets for 1953 and first 3 months of 1954 was 1,796,904 out of total of 8,661,897. Uhf sets turned out in 1952 bring total uhf to well over 1,800,000 units to date.

Radio production in first quarter of 1954 totaled 2,581,565 units, compared to 3,824,784 in first 1953 quarter and 2,668,197 in 1952. For March alone, radio output totaled 940,352. Here's RETMA final monthly breakdown for quarter:

Trade Personal: Norman C. Owen, Webster-Chicago sales v.p., elected pres., succeeding R. F. Blash, who remains as chairman; Peter Jensen, chairman of Jensen Industries, elected Webcor director ... Frank Folsom, RCA pres., flies to Rome May 21 to inspect TV-radio-phono operations, returns about June 1. ... Benjamin Abrams, pres. of Emerson Radio, addresses Sales Executive Club of N. Y. on "New Miracles in Electronics" at Hotel Roosevelt, May 4 ... Raymond B. George, Philco v.p. of merchandising, assumes charge of all Philco advertising, sales promotion & merchandising campaign, with new gen. adv. mgr. Morgan Greenwood reporting to him ... Wm. B. Anderson named asst. to Westinghouse consumer products v.p. J. M. McKibbin ... Robert L. Klabin, gen. mgr. of General Instrument Co.'s F. W. Sickles div., elected v.p. & gen. mgr. of new Elizabeth div. ... Ben Z. Kaplan resigns as CBS-Columbia national sales coordinator to become v.p. & gen. mgr. of House of Louis Feder Inc., N. Y. (theatrical costumes) ... C. M. Granger promoted to Bendix Radio gen. factory mgr. in charge of all mgf. depts., replacing H. C. Harr, resigned; Kenneth Brown promoted to TV service mgr., replacing L. D. Shiplett, resigned ... John V. Deacon promoted to mgf. of adv. & sales promotion, Westinghouse Electric International Co. ... Ted Martin Jr. gets unspecified special sales assignment for RCA tube div., succeeded as southeastern sales mgf. by Lyle O. Shanafelt ... J. B. Anger, Motorola sales training mgf., appointed asst. sales mgf. for radios, succeeded by George Halsted ... Ralph C. Seiler, ex-West Coast Electronics Corp., named asst. sales mgf., Triad Transformer Corp., Venice, Cal. ... Elliott H. Ruttenberg, ex-Raytheon, named price administrator of National Co., Malden, Mass. ... Herbert B. Nichols, ex-Christian Science Monitor, named mgr. of public information, GE research lab, Schenectady ... Judson S. Sayre, ex-Aveco, RCA & Montgomery Ward, now pres. of Norge div., Borg-Warner Corp.

Robert C. Sprague, Sprague Electric Co., chairman of RETMA, was selected this week to receive RETMA's annual Medal of Honor at convention June 17 in Chicago's Palmer House. Meeting jointly with Canadian RTMA at Niagara Falls, Ont., RETMA board also set up policy committees for guidance on tax and uhf problems, with personnel not yet chosen. RETMA engineering dept. was authorized to set up independent certification laboratory for testing receivers to conform to FCC standards on spurious radiation. GE's Dr. W. R. G. Baker was authorized to report to FCC on those manufacturers who were complying with spurious radiation standards (for full text of standards, see Television Digest's Special Report of April 17).

Mort Farr, NARDA chairman & owner of retail appliance stores bearing his name in Upper Darby, Pa., wins Brand Names Foundation's retailer-of-the-year award in electrical appliance store category.
Topics & Trends of TV Trade: New shorter picture tubes, making possible more compact cabinets, will show up in fall lines of some TV makers—including at least one of the top four. The new type 17 & 21-in. tubes, due to be made by all tube makers, use 90-degree deflection angle, as opposed to 70 degrees in current models, and will be 2-3 inches shorter. Current 24 & 27-in. tubes also have 90-degree deflection.

There's nothing like unanimous agreement among set makers as to the role the new tubes will play next fall. All are studying them, but there are disadvantages along with the obvious advantages. Associated components for new tubes will cost somewhat more than for conventional tubes—and, as one big manufacturer said: “The big problem is engineering-wise whether it's good business to change over our production lines to the new circuitry at this time.” Corning Glass says it is ready to supply tube makers with production quantities of bulbs for the 90-degree tubes.

Color Trends & Briefs: NBC-TV is stepping up color programming schedule little by little, this week announced more summer shows. Most interesting is 13-city tour by mobile unit, starting first or second week of June and running 13 weeks. Goal is to feed Today and Home programs three 10 or 15-min. segments from each city. NBC crew is out now, scouting cities to determine best spots for remotes in each.

Ten of the 13 cities have been disclosed: New York, Chicago, Milwaukee, St. Louis, Cleveland, Dayton, Columbus, Pittsburgh, Baltimore, Washington.

Additional programs, not previously reported, are Ding Dong School across-the-board May 17-21 and Martin Kane May 20.

A substantial increase in summer schedule is in works, should be announced shortly. A big reason for it is growing of RCA dealers and distributors that paucity of programming makes demonstrations of color sets almost impossible.

Fall series of 90-min. "spectaculars" (Vol. 10:13) gains momentum—but with ultimate weight to be determined by extent of sponsorship. Max Liebman, famed producer of Show of Shows, is now assigned 20 of the big shows, and Leland Hayward is set for 13. Plan is to have 3 a month, add a fourth if sold.

Delivery of its first color tube to a distributor—American TV Inc., New Haven—was reported by Raytheon. Tube is 15-in. model 15GP22, built in Quincy plant.

Indicted in alleged $2,000,000 coin-operated TV swindle April 27 were Preview Television Corp. and United States Sign Corp., Chicago, and American Institute of TV Manufacturers, Washington, along with 14 individuals. The 13-count mail fraud indictment was returned before Chicago Federal grand jury after U. S. attorney Robert Tieken said postal Inspectors had received about 400 complaints from alleged victims. Operators of "Preview" scheme, according to indictment, contacted motels and hotels, offering to install coin-operated TV sets with Preview device to give guests 4 minutes of free viewing as inducement to deposit $25 to see remainder of half-hour show (Vol. 8:40). U. S. attorneys said that while more than $2,000,000 worth of franchises and equipment were sold, very few Previewers and sets were delivered, hardly any Previewers worked, and no investor got any return for his money. Preview TV Co. is now bankrupt (Vol. 9:26), as is Transvision Inc., New Rochelle, N. Y., which made Previewer equipment but wasn't involved in indictment (Vol. 9:39, 41). American Institute of TV Manufacturers is organization which set itself up 2 years ago as "new TV trade organization" (Vol. 8:24) and quietly folded up about a year later. It claimed to own Preview patents. Individuals indicted—each facing maximum of 65 years in prison and $22,000 fine if convicted: Preview pres. Bruce Hantover, Houston; American Institute pres. Wm. F. Robichaud, Washington; U. S. Sign pres. Nathan James Elliott, Chicago (also known as J. Matt Thompson and reportedly held in New York on another mail fraud count). Also indicted were these former Preview officials and salesmen: Dana J. Maxim, Blanchel A. Murrelle, Earl C. Raphael, Milton G. Severinghaus (onetime Preview pres.), Cyrus Simmons, Lyman B. Jones and Edward C. MacReady, all of Chicago; Eugene R. Flitcrah, Oak Park, Ill.; Dell W. Kettering, Monmouth, Ill.; John Ponsaing, Oakland, Cal.; Herman J. Rodnick, Los Angeles.

Capheart Argentina S.I.A.C. has been formed in Buenos Aires to manufacture TV & radio receivers, phonographs, CR & other tubes, its capital supplied 50% by IT&T and 50% by Argentine industrialists.

RCA's schedule for introduction of color sets between now and May 15, as revised (see story p. 8): May 2—Baltimore, Chicago, Cincinnati, Cleveland, Detroit, Grand Rapids, Huntington & Charleston, W. Va., Kansas City, Milwaukee, New York, Omaha, South Bend, St. Louis. May 3—Houston, Newark, Jersey City, Oklahoma City, Trenton. May 7—Salt Lake City, San Francisco-Oakland. May 9—Boston, Bridgeport, Dallas, Ft. Worth, Harrisburg, Pa., Hartford, Los Angeles, New Haven, Providence, Springfield, Mass., Stamford, Conn., Waterbury, Conn. Dates are still to be set for Johnstown & Lancaster, Pa., Philadelphia-Camden, Tulsa, Wilkes-Barre, Wilmington, Youngstown.

Color kines were shown by NBC-TV for first time when color coordinator Barry Wood demonstrated them to convention of American Women in Radio & TV in Kansas City April 23. They were recorded on 35mm color negative film, prints made by optical reduction onto 16mm color positive film. Quality was termed excellent; drawback is cost.

With daily hour color show (Vol. 10:17), WKY-TV, Oklahoma City, is now carrying more color than all networks combined—and mgr. P. A. Sugg plans to add even more soon. Only other non-network-owned station with live cameras—WBAP-TV, Ft. Worth—is busy installing them, will announce program schedule shortly.

Fourth hospital to get CBS closed-circuit color system is St. Francis, Long Island. Other 3 are Universities of Pennsylvania, Kansas, Chicago. More are scheduled.

Color Television Appraised by Network Presidents

Present Status and Immediate Prospects

Symposium Talks by CBS President Frank Stanton and NBC President Sylvester L. Weaver Jr.

“How It Looks to Me”

By FRANK STANTON, President, CBS

THE DRAMATIC VALUES and greater impact of color television are such as to tempt me to repeat what others have already said about this exciting new medium of mass communication. Great as television is today, and I believe it has already demonstrated its amazing powers to inform and entertain, the fact is that we see the world on the end of the picture tube solely in the gray scale of values from black to white. I am told this is also the way a dog sees the world — in only black and white. I don’t think this should happen, even to a dog.

With respect to television, at least, we have been living in a dog’s world. As a series of printed letters or as an articulated sound on the radio or as a combination of the two on black-&-white television, blue, for example, is nothing more than a word. On the color tube, blue is precisely the blue it is — and the blue you see. Color television wholly eliminates the complex process by which you take a black-&-white image into the dark room of the brain and print the true color picture which the eye actually sees. Thus color television adds speed and clarity, greater impact and more information, to every image. And curiously enough, color adds a lifelike third-dimensional depth quality to television. Putting it another way, color tells more in less space.

You have heard each of the previous speakers present a specific analysis of the component factors involved in color television, namely, the economics of color broadcasting, the problems of programming and production, and the manufacture of tubes and receivers. I have been given the assignment of summarizing the present situation...

Key to the Lock Is Color Tube

Right now it looks to me as though it is on dead center. Color television is in a locked-in situation because of the interdependence of the problems of the manufacturer, the broadcaster, and the advertiser.

In my judgment, the key to the lock is the color tube. Insofar as the set is concerned, today’s television market is conditioned by two things: size and efficiency of the picture tube and the price of the receiver. Despite the far more compelling aspects of color, it is unrealistic, I think, to expect today’s viewer or potential viewer to be satisfied with anything less than these standards in an instrument which sells at a price much higher than he has been accustomed to pay. The receiver manufacturer is clearly alert to this condition, and in the absence of a color picture tube of size and price comparable to the 17 & 21-inch black-&-white tube, he will be slow to get production rolling. Production schedules for color receivers have had to be revised downward pending the development of larger tubes.

It may be interesting to examine why the cost of a color receiver is so high. There are two elements involved. (Continued on Page 3)

“The Time to Start Is This Fall”

By SYLVESTER L. WEAVER JR., President, NBC

THIS IS A GREAT occasion, because it is the birth of another revolution. This one is named color television, and most of you know something about it already. At least, some 36 agencies have already held color clinics, and demonstrations, and testing periods with NBC during our introductory year. We have produced with most of you most of the shows on the NBC schedule, from simple ones like Ding Dong School to complex ones like the 90-minute Show of Shows. We have tested and done commercials with something over 200 products advertised on NBC. We have learned that the only difficult thing about color is the black-&-white picture, which most viewers will be watching, and NBC has had long experience in compatible color.

Information about what we have learned is available to all of you ... all we know is available to all of you. This includes production experience, designing and costuming and all other staging and lighting lore. It includes all we have learned about kinescoping, film characteristics for color filming needs. I do not wish to waste all of your time with specifics which each of you can get from NBC, nor do I wish to summarize that type of knowledge that we now have.

In the few minutes available, I would like to make you think about color as a new force in television and in selling, because the advertising agencies of our economy have more influence than any other factor in the shaping of its future.

Color in television brings reality to every home, creates a magic door out into the real world and the world of entertainment that is exactly the same as physically viewing the event in person. The power of television, and of color television, is so great that it creates a need for the whole new sense of dedication by all of us concerned with communications in modern society.

Color, and the millions of homes that will add both color and black-&-white television, cannot help but mean increasing costs to use national television.

Costs and Changing Advertising Concepts

Five years ago, I stood in this very room to make my first talk to NBC affiliates, having just come from your business—the agency field. I evaluated the future of television from my client and agency experience, essentially as an advertising and marketing man. I told the stations that the patterns which had made them rich in radio broadcasting would fail in television, that they must unlearn their broadcast ritual if they were to develop television properly, for television was a communications instrument more important to mankind than the invention of type.

This morning we again have a new force in our hands—color television. But my 1949 questions and answers are good again for color television. These were the principal 1949 Greenbrier questions and I quote:

(Continued on Next Page)
Weaver—(Continued)

"First, how are our smaller clients going to afford to enter, and all our clients afford to stay in, television? How many advertisers are there who can pick up a tab for several million dollars on one advertising operation?"

"Next, how can the small advertiser get into attractive, glamorous nighttime television that will reach virtually everyone with a set and their thirsty friends?"

"How can we take the circulation risk out of television for agencies and clients? It was bad enough in radio to lay an egg, and have to settle for an under ten rating with a high cost show, but how can our backers survive the much higher cost of picking up a neat 2 Nielsen in television?"

Will not the cost rise for color and more circulation necessarily change the pattern that has served so many so well in black-&-white television? Will not the insert-type programs, like Today and Home, be more attractive to more buyers? Is it not obvious that costs will rule out the alternate week sponsorship device for a whole category of budgets just as black-&-white TV costs ruled out the radio pattern of single sponsorships?

**The Facts of Economic Life**

And these changes are not being forced on the medium, except by the facts of economic life. If you want a great national television service, its costs must be broadly distributed, and the programming must be sold in a way that responds to the many different needs of the many different advertisers. This need not rule out program sponsorship for those large companies who can divide up the time among their own products, but it does mean that the network must serve the same role for smaller advertisers. All-night speculators, 5-second billboards, 365-day continuity, once-a-year explosion—you name it and we'll have it, in color.

The reason this subject is vital to you is simple. It is true today, and will be truer in the future with color, that the television campaign of an advertiser will determine his share of market in television homes. The so-called magazine concept merely means that one does not sponsor one program with all one's funds, but spends for those values one needs—whether personal selling, blue chip association, highly visible advertising, tremendous frequency, or tremendous conversation-piece quality. Whatever an advertiser wants for his program, that he can get on a national basis in color from NBC, no matter how big or how small his budget.

From my first days at NBC, as my 1949 questions indicated, we built advertising values aimed at the whole range of national advertisers, even though we set up discounts and other incentives to make the big advertisers as happy in television as in radio. We also built an operation in which no time would be sold in the old radio franchise sense, because we knew that programming had to be a far more incisive factor than in radio, for the simple reason that the great facilities advantages of 50-kw clear channels did not exist.

All major shows on NBC were multiple sponsored, the key pivots of the program schedule which reassured NBC program leadership.

**Color on a National Basis**

We started at NBC on the basis that any national advertiser should be our potential client, that we should devise patterns to take care of any and all advertising needs. We started also on the basis that every human being was our viewer, and that in addition to finding hits in the great entertainment categories of drama and comedy and extravaganza, etc., and in news and information shows, we should devise special television attractions to offer inducements for non-viewers to view.

Because all advertisers must have it, and because it is equitable that they do have it, color television on a national basis will be available to them.

Because it is vital that the power and influence of television be extended to our society, in all its segments, and with all its varied interests, so color television will be developed in a form that enables a network to offer program innovation, specialized programming and right-of-way scheduling. Only thus can we be sure that the instrument is not depressed to a toy status, a feeder of pale carbon copies, offensive to no one, and fighting for the larger share of the sets which a half of our people surrender themselves to, moving from channel to channel to find escape.

**Advice to Advertisers: Be Ready This Fall**

When it comes to color television, this year, I have this counsel:

First, the color television campaign will determine the share of market of most consumer goods in color television homes and this will start within this coming year. To those companies which need effective advertising to survive—all package goods trademark brand items—I say the time to start color television is this fall. And the place to get the money is from management as extra money to insure that the company learns how to use the most vital new force in its history, and at once.

Second, if you have any clients whose success is largely dependent on theelan and spirit of its selling, dealer and distributor organization, then color television can make new leaders before the year is out. For even the few thousand sets now coming into the market are still enough to permit dealer color television demonstration meetings, and prospect color television parties, and other obvious demonstrations. This kind of color power to sell goods NOW is part of the broader power of color as the new thing, the new-talked-about, exciting, all-interest-focusing conversation piece of the American color. There are many companies who will need color because they are expected to lead and they must lead; and therefore they must be in color or suffer grave loss of standing and prestige within their own trade groups. There are many more companies who will see in color a way to excite their own overall organizations . . . to give them a chance at leadership which may have slipped out of their hands.

**"Go to Color With Present Shows"**

So, I recommend that all major advertisers go to color with their present shows if they can get the facilities, this fall, to learn and to insure their prestige as leaders. And I recommend using new selling punch right now—selling with color even before color is a circulation factor—for those with new programming developed especially for color, and for the promotion possibilities of such special programming.

We hope to have at least one such program a week from NBC, programmed on a once-a-month basis, replacing regular programming on a right-of-way premise.

Television is too great and too powerful to be shackled with chains of custom and usage from radio. We must serve all segments and all interests in our population, and there must be an overall program control that makes the rules in the interest of public service and all-segment population service. This is the business of the networks. If our service dwindles, you will use less of it, or pay less for it. That's the end of your responsibility. If we cater to the heavy viewers with a flood of trivia, as accused in some quarters, we cannot look to you, or to the advertisers large or small, for your jobs are rightly defined by your interest—the sale of the goods and services of your clients. It is not for you to take the blame if the mission of television is reduced from revolutionizing the individual's understanding of his world, as I believe color television should hold as its mission, to becoming a living room toy to keep the kids quiet.

The kind of programming we will do in color this fall will sell color sets just as our program innovations in 1949 and 1950 sold black-&-white sets. Color is here to stay, and it's very much later than you think.
Stanton—(Continued)

The first is the higher cost always encountered with the development of a new product. New types of components are required and these must be expensive until they are produced in great quantities.

The second expense factor is the inherent complexity of the circuits involved in color television. The black-&-white broadcast standards set up by the Federal Communications Commission were designed for the most efficient possible use of the limited spectrum space required by the type of information to be transmitted—namely, the black-&-white signal. In order to provide a color signal, it was necessary to fit and squeeze additional information into the nooks and crannies of the standard black and white signal in such a way as not to disturb reception on black-&-white sets. This great engineering achievement was accomplished at the expense of adding considerable complexity to the circuitry. As a result, we now have a color television system capable of delivering an excellent color picture that can be received in color on color sets and in black-&-white on ordinary receivers; but the equipment, both transmitting and receiving, is complex and expensive.

Present color sets require a minimum of 35 tubes compared with about 20 tubes for black-&-white sets. The color set also involves twice as much hand work in assembly, and uses components, some of which cost ten times as much as their black-&-white counterparts. However, the history of black-&-white television affords an encouraging example of the possibility of simplification of circuitry and the reduction in the cost of the components. Once the initial hurdle of consumer acceptance is overcome, we shall be well on the way to a reduction of the costs of television receivers.

Present Hogtie: Few Sets, Limited Programming

In the absence of a substantial set population, the broadcaster finds it practical to undertake only limited programming. And finally, for the same reason the advertiser who is primarily interested in circulation is reluctant to experiment with color television advertising.

This essentially is the nature of the present hogtie, with each group looking to the other to loosen it. Although I have indicated that, in my opinion, the development of a satisfactory picture tube lies at the heart of the problem, I should say that there are presently in the process of development and production various tubes which, according to their proponents, promise to fulfill the necessary conditions of size, performance and price. I can tell you of at least one such tube—the CBS-Colortron "205"—so named because its picture area is 205 sq. in. This is contrasted with the 99-sq.-in. picture area of the color sets now being offered commercially. Because of the simplicity of construction of the "205," it offers not only a larger picture than has been commercially available up to now, but also presents the opportunity for more economic production.

I am persuaded that the commercial availability of the CBS-Colortron "205" in large numbers in the second half of this year will get the production of color sets off dead center and initiate the process of consumer acceptance and cost reduction that will rapidly lead to mass output. The importance of the "205" is that it is superior in performance and economy of construction to other tubes potentially available this year.

With our new CBS-Hytron picture tube plant at Kalamazoo nearing completion, we are in an excellent position to proceed on a large scale manufacture of color picture tubes. That plant will be the world's most modern facility for the production of picture tubes, both color and black-&-white. It will double our picture tube production capacity.

However, I would like to emphasize at this point that in holding out the merits of the CBS-Colortron "205," I do not wish to imply that we will not go along with any other tube that fulfills the requirements of size, picture quality and price. Our relationship to the problem of the color tube is the same as our relationship was to the problem of a satisfactory color television system. CBS fundamental position, stated publicly in 1949, was that we would "support any system which best suits the problem, no matter by whom invented, no matter by whom suggested." This position applies equally to the color tube.

Uncertainty Among Manufacturers

At the same time, the mere appearance of such a tube is not sufficient in itself to enable the set manufacturer to go full steam ahead. What is primarily required is the settlement of the question facing the manufacturer as to which tube will be generally adopted by the industry. At this moment the leading tube manufacturers, including our own tube division as I have indicated, are engaged in the development of various color picture tubes holding out this promise. It is therefore understandable, I think, that a certain degree of confusion should exist among the receiver manufacturers concerning which of these tubes they should commit their investment to. Nor should we minimize the cost of this investment to the set manufacturer. Tooling-up and getting production started on a mass level can run to several millions of dollars.

The uncertainty which receiver manufacturers face was articulated recently by Dr. W. R. G. Baker, chairman of the National Television System Committee, who declared: "If the proponents of each type of tube takes the position that he can lead the industry out of the wilderness of confusion, then perhaps we have too many leaders . . . A half dozen or more manufacturers are well on the way in developing other tubes using different principles or variations, each claiming points of superiority in performance or cost. The net result is a 'technological dilemma,' with corresponding confusion among the set makers as to which way to head their future set design."

A variant of this reaction was expressed by William Balderston, president of the Philo Corp., who stated that before mass production can be achieved in color television, a vastly simplified color tube eliminating complicated internal assembly has to be developed. As contrasted with Dr. Baker, Mr. Balderston suggested that there were at the present time no leaders in the field rather than too many, and went on to predict how confidence in the ultimate development of the type of color tube he had in mind.

Color Needs Coordinated Industry

The major implication that flows from these circumstances seems to me obvious. Once a tube is developed which satisfies the criteria of size, efficiency and price, there is a clear need for coordinated action among the different branches of industry involved if further deadlocks in color television are to be avoided. This cooperative action is mandatory if only out of self-interest, since it is these three groups—the set manufacturer, the broadcaster and the advertising and production of picture tubes who, having achieved the tremendous potential which color television offers.

Once the manufacturers are in a position to produce sets, it is of the utmost importance for them to get together on a comprehensive campaign to promote the sale of color television receivers. We know that there is a tremendous public interest in color television. The explosive growth of black-&-white television speaks for the public's appetite for television per se. And the public has been pre-sold on color for a long time through the movies, through photography, through the 4-color content of magazines, which all reflect the world of color in which we live.

Selling color television to the public, as you well know, not only involves telling them about it through advertising messages, but actually demonstrating it to them through programs. This is where the broadcaster must come in and expand his production and programming

(Continued on Next Page)
efforts. I would think such an effort would look forward in the near future to an over-all color schedule which would provide an even distribution of color programs throughout the week.

This programming would include both daytime and nighttime broadcasts scheduled in such a manner as to minimize duplication in order to achieve the maximum possible audience for each color program. The existence of such a schedule should be of great benefit not only to the consumer, but to the dealer and service man as well. It should give considerable momentum to public interest in color and provide reassurance to the agencies and advertisers that color is being launched in the most systematic and effective manner.

It is clearly to the advertiser’s long-term interest to supplement the efforts of the manufacturer and broadcaster during this transitional period by getting his programs into color wherever and whenever possible. Even now, the advertiser’s interest will be served by the lead in knowledge and skills to be gained through such participation. The time is rapidly approaching when a substantial competitive advantage will attach to getting into color television early.

**Burden on the Broadcasters**

I recognize that for the present the main burden of color programming must fall on the shoulders of the broadcaster. The heads of the two leading television networks have already outlined their plans for spearheading this exciting new service. By fall of this year, over 100 stations will be equipped and ready to carry these programs. I also recognize that my proposal for coordinated action on the part of the set manufacturers does not resolve the fundamental problem of producing a type of color tube which will earn the support of a substantial part of the industry. I believe this is still the primary knot that has to be untied. Precisely how much longer it will take to unil it I am unable to say, but I expect it will be sooner than most people think.

In short, this is how it looks to me: we have gone through a long and expensive period of technological development and have brought out of the laboratories a workable television system capable of delivering color pictures of exceptional quality, while still permitting 30,000,000 sets now in the homes of the American people to receive a high quality black & white picture. And I am particularly proud of the hand CBS has had in this joint achievement.

This development has opened the way to the greatest and most revealing medium of entertainment and information the world has known—a prospect which in turn leads to what Jack Van Volkenburg has previously described as "the ultimate in advertising value."

Let me say categorically that there is no doubt in my mind that the time will come when all television will be in color. I have been asked to give you a timetable for its arrival. I regret to say there is no timetable, since there is no inexorable rate of progression toward the moment that I regard as certain. You don’t invent by the clock or calendar.

The history of invention reveals that for those developments which have had broad social importance, two stages can be recognized. The first, or laboratory stage, includes that group of inventions which enable the machine to function. The second, or commercial stage, involves that group of inventions which transforms the machine from its primitive, rudimentary form into an efficient, high-performance, and universally employed device.

The automobile is an example of this type of evolution. The first, or laboratory stage at the turn of the century, brought forth an internal combustion engine installed in a buggy. Today the automobile is still an engine and a buggy, but with certain notable differences—the pneumatic tire, the four-cycle engine, the self-starter, the shock absorber, the geared hydraulic drive, and the automatic transmission. All of these differences emerged during the second, or commercial stage of development.

It is well to remember that color television is right now only on its way out of the laboratory. It has probably been carried farther in the laboratory than any invention of comparable significance. It can now be expected to enter the same process of improvement and cost reduction that has historically characterized such devices as the automobile and radio after they entered the commercial stage.

**Commercialization Apace With Improvement**

It is for these reasons, therefore, that I have emphasized the necessity for coordinated activity on the part of the various branches of the television industry. For it is through the interaction of these forces—the commercial as well as the technological—that color television can reach its full maturity. And by its full maturity, I mean its maturity as an electronic mechanism, as a medium of entertainment, information and commerce, and as an essential feature in the life of the family.

As I have previously said, because the universal adoption of color television by the American public still awaits further technical development there is a natural human tendency to suspend action until perfection is achieved. This implies a misunderstanding of the process of technical improvement. At this stage this process becomes concurrent with the commercialization of color television. The one feeds upon the other. And as commercialization emerges the process of technological improvement becomes self-propelling.

We cannot expect to bring forth color television in its ultimate stage of perfection at one fell swoop, like Athena sprung full-grown from the forehead of Jupiter. What we can hope for, and what we are on the threshold of achieving, is a degree of performance and reliability that makes the widespread acceptance of color television inescapable. The acceleration of this end-result is likewise inevitable if only because of the inherent appetite of the public for color television, the technical probability of satisfying that appetite, and the contribution which color television will make to our national economy.
Electronics Reports: Another offspring of the transistor, a "solar battery," has made its debut, introduced by Bell Labs, originator of the transistor. New device is extremely simple looking—consisting of thin strips of silicon measuring about 3-in. by ½-in. Operation is simple, too: shine any light source on it and electric current begins to flow.

Bell Labs officials wouldn't predict when, if ever, solar batteries would be useful for the home. However, they'll soon be employed usefully with transistorized phone system in America, Ga. (Vol. 10:11), may eventually be used with low-power mobile transmitters and receivers. They were demonstrated powering tiny 100-me FM transmitter.

Unit demonstrated at Murray Hill, N. J. labs and at Washington's National Academy of Sciences had 10 silicon strips. Rate of power delivery is about 50 watts per sq. yd. of silicon surface. Bell engineers state battery with area equivalent to roof of average house could probably supply enough electricity for the home.

Disadvantage of solar battery is its dependence on sunlight. It's expected, however, that it will be employed economically for some purposes in conjunction with storage batteries and other conventional sources of current.

Battery converts 6% of light energy into current, is believed to have potential of 10%—figures which compare favorably with efficiency of gas and steam engines. Previous photoelectric devices achieved up to 1%.

Heart of Bell's contribution is development of gas diffusion technique for introducing exact amounts of impurities, such as boron, into surface of silicon wafers.

At this stage of development, device produces several million times as much current as does RCA's "atomic battery" which develops one-millionth of a watt (Vol. 10:5). Another difference is that the RCA battery has a "half life" of 20 years (i.e., loses half its power in 20 years of use) whereas life of Bell battery has no predictable limit. An obvious advantage of the "atomic" approach is that it would be round-the-clock, independent of sunlight.

Radar-Radio Industries of Chicago Inc., association formed during World War II and reactivated during Korean war for liaison between govt. agencies and Chicago area electronics makers, goes on "standby" basis. Leslie Muter continues as president, and group's directors will serve as "emergency committee."

Raytheon's new $2,000,000 electronics lab at Bedford, Mass., for advanced development of military equipment, was formally opened this week.

Westinghouse closes Sunbury, Pa. TV-radio assembly plant Aug. 27, all production now consolidated at Metuchen, N. J.

Sylvania Electric (Canada) Ltd. starts TV production May 15 in temporary quarters at Dunnville, Ont. pending completion of 60,000-sq. ft. factory there about Aug. 1.

Armed Forces Communications Assn. convention will be held in Washington, May 6-8.

Even while DuMont was hailing new 3-gun color tube (see p. 2), Zenith president E. F. McDonald was telling annual stockholders meeting in Chicago that 3-gun tube is a "Rube Goldberg contraption" and that Zenith would wait for 1-gun tube before offering color sets to public. McDonald said RCA is "attempting to strong-arm the introduction of color" quickly because it's having trouble signing up manufacturers for patent renewals. This week, RCA distributed brochure designed to emphasize importance of its patents, listing specific ones of significance to tubes, radio receivers, monochrome & color picture tubes and receivers, transistors, transmitters, etc. RCA and Zenith have been litigating since 1948 over latter's refusal to pay patent royalties.

Financial & Trade Notes: Zenith Radio reports first-quarter profit and sales way down from comparable period of 1955, pres. E. F. McDonald blaming "narrow margins" on low-priced TVs. He said he hoped fall prices will be come "firm", and demand for higher-priced TVs & radios will increase. Earnings were $827,521 ($1.68 a share) on sales of $29,335,190, compared to $2,109,461 ($4.28) on $47,898,773 in first quarter of 1954 and $1,083,242 ($2.20) on $25,755,332 in 1955. For all of 1955, Zenith profit was $5,631,701 ($11.44) on record sales of $166,733,276 (Vol. 10:12). At annual stockholders meeting, gen. counsel Joseph S. Wright was elected director, succeeding late Irving Herriott.

Standard Coil Products Co. reports 1955 sales of $89,270,964, new record, and net profit of $2,972,481 ($2.02 a share on 1,470,000 shares of common) after $4,790,000 in income and excess profits taxes. This compares with $65,990,177 sales, $2,861,290 ($1.95) net profit, $4,275,000 taxes in 1952. Production of TV transistors last year totaled 2,900,000 units, annual report claiming more than 40% of sets-in-use now utilize Standard Coil tuner. Backlog of orders at end of 1955 totaled $39,200,000.

Hoffman Radio reports net profit of $470,258 (81c a share) on record sales of $14,147,872 in first quarter, compared to $476,647 (82c) on $13,849,974 in first quarter of 1953. Pres. H. L. Hoffman noted that dollar value of TV deliveries in first quarter was 11% below year ago, though unit sales showed virtually no decline. He said first color sets, being shipped this month, are for display purposes only.

Olympic Radio reports profit of $58,072 (13c per share) on sales of $4,860,015 in first quarter of 1954. Company didn't issue quarterly reports last year but profit in first 6 months of 1953 was $21,115 (5c) on sales of $7,628,352. Pres. Morris Sobin attributed improvement to more stabilized market, concentration on lower-priced TVs, expansion of radio & air conditioner production.

Packard-Bell reports sharp decline in profit & sales for months ended March 31—earnings being $328,647 ($40 a share on 88,000 common shares outstanding) on sales of $111,188,097, compared to $965,748 ($1.64 on 588,000 shares) on sales of $19,467,477 in comparable period year ago. Regular 25c quarterly dividend was omitted.

General Precision Equipment Corp. reports first-quarter profit of $1,055,648 ($4.18 a share on 688,000 common shares outstanding) on sales of $23,489,132, compared to $664,910 ($1.01 on 646,087 shares) on $20,116,987 in first quarter of 1953.

P. R. Mallory & Co. reports net income of $390,998 (50c a share) on sales of $16,664,955 in first quarter, compared to $907,588 ($1.49) on $19,479,600 in first 1953 quarter.

Webster-Chicago Corp. reports profit of $205,945 (41c a share) on sales of $6,899,586 in first quarter, compared to $184,773 (37c) on $6,945,058 in same 1953 period.

Erie Resistor Corp. reports net income of $595,511 ($2.02 a share) on sales of $12,845,735 in 1953, compared to $450,333 ($1.02) on $10,750,936 in 1952.

ClaroStat Mfg. Co. net income for 1953 was $247,555 ($54c a share) vs. $235,282 ($56c) in 1952.

Dividends: Zenith Radio, 50c payable June 30 to stockholders of record June 11; Magnavox, 371/2c payable June 15 to holders May 25; P. R. Mallory, 50c June 10 to holders May 19; Standard Coil Products Co., 25c May 18 to holders May 5; Servomechanisms, 10c May 17 to holders May 3; Howard W. Sams & Co., 10c May 10 to holders April 29; Westinghouse, 50c June 1 to holders May 10; Stewart-Warner, 40c June 14 to holders June 5; Aircraft Radio, 10c May 24 to holders May 7.
Network TV-Radio Billings
March 1954 and January-March 1954
(For February report see Television Digest, Vol. 10:14)

First quarter network TV billings dropped sharply—from $32,090,629 in 1952 to $30,412,322 in 1953.

In TV, CBS retains its lead, having edged out NBC in March as in preceding 2 months of this year. Its March billings were $11,379,631 vs. NBC's $11,058,748, ABC's $2,696,244, DuMont's $1,185,586—all of which were down from $15,218,246 in 1953. For quarter, CBS total is $32,056,441 vs. NBC's $30,678,994, ABC's $7,979,190, DuMont's $3,739,351.

In radio, only MBS showed March ahead of 1953—but declines of others were slight. CBS continued lead, with $5,471,773. For quarter, the 4 radio networks were down from $14,662,394 in 1953 to $13,907,103 in 1954. The full PIB report:

* Revised to April 26, 1954.

Television Advertising Bureau being projected as counterpart of highly effective ANPA Bureau of Advertising got 8 more supporters this week, all of whom were immediately added to organizing committee named last week under KTTV's Richard A. Moore, temporary chairman (Vol. 10:17). Purpose is to set up agency for intensive sales, advertising & promotion effort, to develop new source of revenue and new sales techniques, to service agencies & advertisers. New members: James H. Bone, WNEM-TV, Saginaw, Mich.; James C. Hanrahan, WEWS, Cleveland; Stanley E. Hubbard, KSTP-TV, St. Paul; Vernon A. Nolte, WHIZ-TV, Zanesville, O.; L. H. Rogers, WSAT-TV, Huntington, W. Va.; W. D. Rogers, KDUB-TV, Lubbock, Tex.; Henry W. Slavick, WMCT, Memphis; Victor A. Sholis, WHAS-TV, Louisville.

Two applications for New York City's Ch. 31 are out of running, leaving city-owned WNYC free to get grant if it still wants channel. New WNEW owners (Vol. 10:16) have indicated they will drop uhf application, and this week WIOV-TV Inc., formed by Ralph Weil's WOV and Fortune Pope's WHOM, have stated they are pulling out because of "insurmountable" economic problems involved in starting a uhf station in N.Y.

Senate UHF hearings were postponed this week to May 19-21, while uhf stations' "operation united front" (Vol. 10:16) gained further support from uhf operators. Second postponement, like the first (from Apr. 27 to May 4) was due to length of Army-McCarthy hearings, currently occupying most of the time of subcommittee Chairman Potter (R-Mich.). No further postponement is likely—even if McCarthy dispute drags on beyond May 19.

Two of the 3 groups preparing testimony for uhf hearings got together this week, when Leon Green of KNZU-TV, Houston, joined UHF Industry Coordinating Committee, headed by Harold Thomas, WISE-TV, Asheville, N. C. (Vol. 10:16-17). Green had previously called meeting of uhf operators in Washington for day before the scheduled hearings.

Coordinating Committee now has some 50 station members, is shooting for at least 75 before start of hearings. This week it engaged economic consultant Melvin Goldberg, onetime exec. secy. of UHF TV Assn., to help prepare testimony—and called mass meeting of uhf operators for May 18 in Washington. UHF TV Assn. still plans to appear before subcommittee as separate entity, though most of its members have joined Coordinating Committee.

Meanwhile, the search for measures to help uhf continues. Beverly Hills (Cal.) attorney Joseph Brenner submitted 4 petitions to FCC: (1) To require networks to have one-third of their affiliates in uhf band after one year, one-half within 2-year period. (2) To authorize subscription TV, for uhf stations only. (3) To permit stereophonic sound transmission, for uhf stations only, by authorizing multiplexing of sound channels. (4) To permit uhf stations to provide music along with test patterns, slides or other unrelated video signals.

FCC this week turned down petition by uhf WITV, Ft. Lauderdale, Fla., to permit it to broadcast audio of McCarthy-Army hearings while carrying test pattern. Comr. Sterling dissented and voted for approval.

■

Bill to ban newspaper control of TV-radio stations in cities of 100,000 or more (S-3350) was introduced this week by Sen. Johnson (D-Colo.) and referred to communications subcommittee of Senate Commerce Committee. Measure would prohibit TV or radio station ownership by "any person who publishes or has a substantial interest in or exercises control over a newspaper of general circulation published in a city of 100,000 or more population [and by] any corporation of which any of the capital stock is owned of record or voted by a person who publishes or has a substantial interest in or exercises control" over such a newspaper. Its chances of passage are regarded as virtually nil.

Week's only TV application was for Parma-Onondaga, Mich., Ch. 10, by Booth Radio & TV Stations Inc. (John L. Booth, pres. & principal owner), grantee of Battle Creek's WBKZ-TV, which went off air last week (Vol. 10:17), and Saginaw's WSBM-TV, and owner of AM stations in Flint, Detroit & Saginaw. Booth has contracted to buy WIBM, Jackson, Mich., also applicant for Parma Ch. 10. Applications pending now total 256 (40 uhf). [For further details see TV Addenda 18-Q herewith; for complete listings of all grants, new applications, dismissals, hearings, etc., see TV Factbook No. 18, with Addenda to date.]

Deadline for comments on FCC's 5-kw uhf transmitter "floor" proposal (Vol. 10:10-11, 15-17) has been extended from April 16 to May 17, on request of NARTB. Deadline for countercomments is now May 27.

H. Gifford Irion, FCC hearing examiner, is author of a novel titled Windward of Reason, being published May 15, 2020.
FEW NOW HURRYING; WEEK'S SOLE STARTER: Only 41 new stations have gone on air in the 15 weeks of 1954 to date and an even dozen have quit -- and we're now more convinced than ever that 100 for all this year is liberal estimate. In other words, only about 60 more 1954 starters; and no telling how many more giving up the ghost.

Even 60 is stretching prospects a bit, as we see them at this writing, for the simple facts are that (a) very few one-station markets of any size remain; (b) without network affiliations in view, many enterprisers are taking a second longer look; (c) uhf CP holders aren't hurrying -- indeed, more have adopted a wait-see policy than are building or have even ordered equipment; (d) The economics of TV, as evidenced by number still in red or quitting, simply do not conduce to low overhead and easy pickings (as in smalltime radio) or getting-rich-quick (as in earlier TV).

The 100 new stations for this year would compare with 231 last year, 17 in 1952 (after midyear lifting of freeze) and 108 pre-freeze. They would come from the 196 commercial & 24 educational CPs presently outstanding plus those the FCC grants rest of year. As of now we count only 252 applications pending, mostly in conflict and many to be dropped -- the residue of a peak of 777 in Dec. 1952. New applications are a rarity nowadays; mergers or dropouts are more commonplace.

Our own carefully kept records show that of the 220 CPs outstanding, only about 80 have reported target dates within the year. Yet only 18 are known to have equipment on hand while 45 have stated they ordered equipment. That would indicate at least 62 building or preparing to build -- but the fact is that 31 are uhf and a mere 5 of these actually have equipment on hand.

List of the CPs reporting 1954 targets will be found on p. 4.

KGLO-TV, Mason City, Ia. (Ch. 3) was the only new starter this week, bringing total to 384 now on air -- after subtracting 3 more uhf stations (see p. 2) and taking into account merger of 2 halftime stations in Phoenix (see p. 14). KGLO-TV began testing May 5, begins programming May 15 with CBS & DuMont affiliations. It's second outlet in rich farm area, first having been KMKT, Austin, Minn. (Ch. 6), 37 mi. away, which began last July. DuMont 25-kw transmitter and 400-ft. Truscon tower are 15 mi. north of city so as to cover "Golden Triangle Area" formed with Austin & Albert Lea, Minn. Ownership (Lee Radio) interlocks with Mason City Globe-Gazette and KHQA-TV, Hannibal, Mo. Herbert R. Ohrt is exec. v.p. & gen. mgr.; Walter Rothschild, national sales mgr.; Roger Sawyer, chief engineer. Base rate is $200. Rep is Weed.

FIRST ROUND OF TV PROCESSING ALMOST OVER: The granting of uncontested applications and scheduling of hearings has progressed so far at FCC that mere 32 applications in 2 cities remain to be set for hearing.

The trickle of grants nowadays comes almost solely from hearings that are cut short after competitors drop out, usually after merger agreements. This week's sole CP, Ch. 2 to Murray Carpenter & Associates in Bangor, Me. was achieved that way. The
same goes for initial decision for Ch. 36 to Fergum Theatres in Mansfield, 0. And another CP is in the works for Ch. 5 in Hastings, Neb. to ex-Sen. Fred Seaton's Seaton Publishing Co. after the dropout of Strand Amusement Co.

Preponderance of applications pending are vhf -- 214 currently on file, compared with mere 38 uhf. Greatest interest is in the fiercely competitive vhf hearings which have been completed and await final decisions. With addition of more experienced attorneys to group preparing decisions -- Office of Opinions & Review -- Commission promises results soon. Major decisions are expected in next few weeks.

The 9 cities to be set for hearings are: Beckley & Bluefield, W.Va., Parma, Mich., San Francisco-Oakland, Boston, Orlando, Toledo, Washington, Los Angeles.

Hassle over hearing procedures, involving how much detail parties must submit in their pre-hearing "points of reliance" (Vol.10:18), was settled by FCC this week when it ruled substantially in favor of contestants and against its Broadcast Bureau, saying that matter will be left to discretion of examiners. Comr. Hennock issued separate concurring opinion stating that decision so relaxes rule that the points of reliance should be abolished altogether.

On allocations front, Commission finally assigned Ch. 21 to Huntington, Ind.; reserved Ch. 5 for education in Weston, W.Va.; substituted Ch. 53 for Ch. 23 in Fitzgerald, Ga. Little or no objection to the proposals had been filed.

15th STATION OFF AIR, 72nd CP RETURNED: You can expect quite a few more of today's 126 uhf stations to leave air next few months -- and perhaps a few more vhf. That is, unless some near-miracle occurs to alter the economic climate around many of them.

We know of a dozen or more uhf stations struggling with fateful decisions -- but we must add hastily that we know of many successful uhf operations. Latter go their way quietly, some even reluctant to tell their "success stories" to upcoming Senate committee hearings. But the limelight now seems to be on "casualties."

Atlantic City's WFFG-TV (Ch. 46), second oldest uhf station, this week became latest casualty, following close on suspension of operations of WTAC-TV, Flint, Mich. (Ch. 16) and KFAZ, Monroe, La. (Ch. 43), both of which went off air May 1.

To date, 15 stations have gone off air or announced they will go off -- 13 of them uhf, 2 vhf -- not counting those which suspended and later returned. Twelve of the 15 left air since March 1, but only 5 surrendered their CPs -- the others hoping to return if conditions become more favorable.

Total of 72 grantees have surrendered CPs since freeze -- 60 uhf, 12 vhf -- including the 5 which were on air. Latest to ask cancellation of grant is WCBI-TV, Columbus, Miss., which relinquished Ch. 28 CP to apply for Ch. 4 there.

Atlantic City station decided to give up the ghost after 17-month struggle against inroads of Philadelphia's 3 pre-freeze vhf stations in resort community 56 mi. from Quaker City. WFFG-TV began Dec. 21, 1952 with 4-network interconnection. But pres. Fred Weber says it lost 33 half-hour programs since last summer, the most crushing blow being power increases of his vhf rivals. WFFG-TV signs off May 17.

Flint's WTAC-TV had competition from Detroit's 3 vhf outlets 57 mi. away, and went off air May 1 after losing minimum of $10,000 a month since it began operation Oct. 28, 1953, according to veteran broadcaster v.p.-gen. mgr. H. Allen Campbell.

Monroe's KFAZ also suspended May 1, gen. mgr. John Ferguson telling FCC it lost "well over $100,000" since Aug. 11, 1953 debut. KFAZ has petitioned Commission to substitute Ch. 13 for 43 in Monroe, so it can "compete effectively" with local competitor vhf KNOE-TV (Vol. 10:16).

* * * * *

Stations which have left air permanently, relinquishing CPs (in chronological order): WROV-TV, Roanoke, Va. (Ch. 27), July 18, 1953 (station's owners are now in hearing for Roanoke's Ch. 7); WBES-TV, Buffalo, N.Y. (Ch. 59), Dec. 18, 1953; KCTY, Kansas City (Ch. 25), March 1, 1953; WOSH-TV, Oshkosh, Wis. (Ch. 48), March 22, 1954; KRTV, Little Rock, Ark. (Ch. 17), March 31, 1954.

Those which suspended, but still hold CPs (in addition to the 3 reported this week): KFXD-TV, Nampa, Ida. (Ch. 6), Aug. 12, 1953 (station sold and call letters
changed to KTVI, Boise); KFOR-TV, Lincoln, Neb. (Ch. 10), March 13, 1954 (owner John Petzer planning to switch his KOLN-TV to Ch. 10 and dispose of KOLN-TV's Ch. 12 equipment); WIFE, Dayton, O. (Ch. 22), March 13; WACH, Newport News, Va. (Ch. 33), March 26; KACY, Festus-St. Louie (Ch. 14), April 2; WKLO-TV, Louisville (Ch. 21), April 20; WKBZ-TV, Battle Creek, Mich. (Ch. 64), April 23.

DuMont's APPROACH TO PROBLEMS OF UHF: Greatly dependent on uhf, DuMont Network is likely to make one of most vigorous presentations at Senate hearing now set for May 19-21. This week, Dr. Allen DuMont summed up for us his views on status of uhf and what should be done about it -- a preview of his Senate testimony.

"If uhf isn't taken care of," he said, "we won't have 4 networks." Basic error, he stated, was in FCC's allocation plan which intermixed vhf and uhf channels in same cities. "What could have been accomplished by allocation," he said, "must now be done by regulation. The allocation plan we submitted to FCC in 1949 would have prevented what has happened. The situation has developed just as we warned it would if vhf and uhf weren't separated. However, it's too late to try to change the allocation plan now."

What regulation can now cure the problem? "Since the answer is 90% in programs and in networks," Dr. DuMont said, "the FCC should require stations to share the networks equally." A formula should be adopted, he said, whereby no station can carry more than one network in any market with 4 or more stations; at other extreme, stations in one-station markets should be prohibited from carrying any network more than 25% of the time. Two-station and 3-station markets would be in proportion.

DuMont's proposal isn't new. During 1948-52 freeze, FCC began rule-making along those lines, supported by both ABC and DuMont, in attempt to distribute equally among the 4 networks the few stations and limited cable facilities. Opposition was too strong, however, and Commission quietly pigeonholed idea.

Casting about for means of helping uhf, FCC has again been giving thought to the idea. Among many proposals considered, Commission seems to regard this one as about half-way between the impossible (e.g., move everyone to uhf) and the insignificant (e.g., require uhf stations to use 5-kw transmitter as minimum).

"There's too much talk about technical aspects -- about receivers and transmitters," Dr. DuMont said, "but those problems are minor. Programs are the thing." He believes there are 4 basic facts of station-network economic life:

(1) Networks are essential to all stations, whether vhf or uhf.

(2) Number of networks is determined by number of stations per city. Top 100 markets can support 4 stations each.

(3) Stations have at least 100,000 population for support.

(4) Networks must have "competitive clearances" and 5 stations of their own.

With only 2 strong networks, Dr. DuMont said, competitive situation in other businesses is also affected because CBS and NBC are sold out while ABC and DuMont can't clear sufficient stations. Thus, he stated, sponsors who climbed aboard NBC or CBS at an early date have decided advantage over competitors now seeking TV time. Dr. DuMont said that one advertiser cancelled plans to spend $40,000 weekly on TV because of inability to get clearance on enough stations.

There's no telling what will come of proposal: It failed to get through FCC when Commission was headed by Wayne Coy and was much more inclined to regulate. On the other hand, there weren't a lot of desperate uhf stations then.

MICROWAVE CP SPARKS COMMUNITY ANTENNAS: Accelerated expansion of community antenna systems was foreshadowed by FCC's action this week in granting specialized microwave to J.E. Balknap & Associates, Poplar Bluff, Mo., to feed TV station signals from Memphis to community systems to be built in Poplar Bluff and Kennett, Mo.

Situation became complicated immediately in Memphis case when city's 2 stations served notice that they wouldn't consent to use of their signals by community systems. In other places, however, where stations regard systems as tools for extending their service areas, Commission's action opens new towns to community sys-
tems — because microwave can supply adequate signal from long distances, whereas out-of-the-air pickups had been too weak to be useful.

Community operators say they're little concerned with stations' objections. Ever since Belknap first filed with Commission 2 years ago, many have marked time waiting for FCC action, and National Community TV Assn. pushed vigorously for approval. It's expected that applications similar to Belknap's will begin to flow in from now on. At least half dozen are in preparation.

Two systems are now fed by Bell System microwave — in Casper, Wyo. and Reno, Nev. (Vol.10:3) — but Belknap's is first to be made to anyone but Bell. Initially, Belknap proposes to feed one channel, via 2-hop microwave using regular common carrier frequencies in 6000-mc band. Later, it's expected Belknap can get more frequencies to supply more channels simultaneously.

Belknap told FCC its tentative rates are $2500 per community system per month. It estimates cost of microwave, plus working capital, at $143,000.

Whether or not Memphis stations can stop Belknap microwave, when built, from serving community systems, is in the laps of the courts — if stations choose to take it there. Presumably, objections will be made to FCC first. WMCT counsel Paul Segal stated: "Stations can't allow that kind of pirating of programs."

Position taken by Memphis stations is that they have no authority to grant anyone else right to distribute and charge for their programs. Whole matter gets into the never-never land of property rights, union contracts, talent arrangements, etc. — and there are no clear-cut court rulings as yet.

FCC said that approval would hurt no one, in making the grant, and that no other common carrier had objected to it. It warned against fly-by-nights entering the business, however, by stating:

"The Commission is concerned about the expenditures of the individual members of the public who may purchase TV sets in reliance upon an expectation of continuity of the contemplated service. We deem it our duty to see that these users are assured of such continuity of service for a reasonable period of time sufficient, at least, to guard against an early obsolescence of their sets."

Commission was also cautious about whole question of its authority over systems, noting: "The Commission is not making any express or implied decision as to the existence or extent of any jurisdiction it may have with respect to the installation and operation of any [community TV] systems." FCC approval was unanimous.

MORE CPS for new TV stations will inevitably be granted by FCC — but, as of now, only 78 of the 220 CPS outstanding having reported in response to questionnaires that they expect to go on the air sometime during 1954. Yet a checkup with equipment makers shows only 18 of these have transmitter equipment already on hand and only 45 others have reported they have actually placed orders for equipment. Hence our conclusion that not more than 60 will reach the air during the remainder of the year (see p. 1) — though it's possible this number might increase through more grants to enterprisers really eager to get going, and perhaps a few "sleepers" among the non-reporting grantees. These CP holders have thus far reported 1954 target dates; as usual, we caution you to discount dates given by a month or more and realize that in some cases the stations probably won't ever be built:

- WLOS-TV, Asheville, N. C. (Ch. 13), Aug.*
- WUNC-TV, Chapel Hill, N. C. (Ch. 4), Sept.*
- WTKV-TV, Durham, N. C. (Ch. 11), Sept.*
- WNNS-TV, Gastonia, N. C. (Ch. 48), Summer 1954
- WOAA-TV, Greensboro, N. C. (Ch. 37), Dec.*
- WHTI, Wilmington, N. C. (Ch. 3), Aug.*
- KXWV, Valley City, N. D. (Ch. 4), July.*
- WCET, Cincinnati, O. (Ch. 48), June.*
- WHK-TV, Cleveland, O. (Ch. 19), Summer
- WEMA-TLV, Athens, Tenn. (Ch. 8), Summer
- KOEO-TV, Enid, Okla. (Ch. 5), June.*
- KVTV, Muskogee, Okla. (Ch. 8), Summer.*
- WFMV-TV, Allentown, Pa. (Ch. 67), By sum-

Telecasting Notes: That profound student of affairs and formulator of public opinion, Walter Winchell, in his newspaper column this week quotes "west coasters" who were "robbed" of the "live" versions of the Army-McCarthy hearings as making these keenly apperceptive observations: "One major network which dropped the show after 2 days (except in editing highspot films) is headed by a General!" "Another major network is headed by a Colonel"... But, says Winchell on his own: "ABC, which carries the live drama farce on its basic network to Omaha, has no landlords with high Army or Navy stripes. The main reason the Coast was dropped by ABC: 'Not enough folks get up at 7:30 a.m. to hear or see the thing. And the cost to Los Angeles (ABC alone) was $8000 daily, just for the cable over the mountains. This does not include cost of crews, etc.'... For more on Army-McCary telecasts, see below... Reasons stated by NBC Chairman Sarnoff in refusing to accept oilman H. L. Hunt-underwritten Facts Forum: "The NBC has consistently maintained the policy of retaining supervision and responsibility for the production of all programs of news, news analysis and commentary broadcasts over its facilities"... Lack of vision, not television" was blamed for declining business in nation's taverns by Continental Distilling Corp. v. R. Robert Smith, addressing recent convention of National Licensed Beverage Assn. He assailed tendency to blame troubles on TV, and National Distillers Corp. v. B. C. O'hlandt suggested: "You can't ignore TV but you can fight it [by offering] your customers a counter-attraction to win their patronage back" just as the movie industry is trying to combat inroads of TV with new techniques... Bar owner in Philadelphia is quoted in Wall Street Journal May 5: "TV hurts us; it takes people's minds off their drinking." He was contrasted with Dallas barman who said "we're selling more beer" as result of noontide crowds coming to watch Army-McCarthy hearings... Nielsen reports TV viewing up to 5 hours, 46 minutes daily in U. S. homes in Sept.-Jan. survey period. Radio listening in TV homes: 1 hour, 46 minutes daily... More surveys: National Nielsen ratings rank CBS-TV's I Love Lucy No. 1, NBC-TV Draget No. 2 for 2 weeks ending April 10, reaching 16,304,000 & 15,321,000 homes, respectively. But American Research Bureau's April report rates Draget at top, Lucy second... New WHO-TV, Des Moines, which began operating April 15 (claims with probable justification) that it's first station ever to operate on 18-hour-a-day schedule from very start... WMTV, Cedar Rapids, raises base hour from $300 to $400, min. from $60 to $80.

Personal Notes: Richard W. Miller appointed asst. v.p., AT&T Long Lines Dept., handling revenues and regulatory matters... John W. Davis, mgr. of Chicago office of Blair-TV Inc., elected v.p. ... Albert G. Hartigan, from Ted Steele Show, appointed asst. program mgr., WPIX, N. Y.... Don L. Chapin, ex-WLW & WKRC-TV, Cincinnati, appointed director of national sales of Tri-State Network comprising WKRC-TV; WHO-TV, Dayton; WTVN, Columbus— with headquarters in N. Y. ... Joe Fisher, ex-ABC Chicago & Free & Peters, on May 17 joins upcoming KHOP, Stockton, Cal. (Ch. 13), as sales mgr.; station is due on air in July, is controlled by H. Leslie Hoffman, the TV-radio manufacturer, has A. E. Joscelyn as operations mgr.... Howard W. Maschmeier, ex-gen. mgr. of WPTR, Albany, named exec. asst. to Roger W. Clipp, gen. mgr., WPIL-TV & WFIL, Philadelphia ... Bert Hauser, Joanne v.p. in charge of cooperative program dept., also heads new development div. for exploring new fields of subsidiary rights & activities of TV-radio properties... Don Rosenquest, ex-CBS-TV Hollywood, named operations & traffic mgr., KNXT, Los Angeles, replacing George Faust ... Harry B. Shaw, sales mgr. of WSJS-TV, Winston-Salem, elected chairman of management board for TV-radio and associated Gordon Gray newspapers ... Robert Rierson promoted from radio WBT to program-production director of upcoming WBTW, Florence, S. C. (Ch. 8) ... J. Elroy McCaw elected pres., Washington State Broadcasters Assn. ... Charles M. Kebbe, ex-NBC, appointed TV-radio casting director, Ted Bates & Co. ... Jerry Lee resigns as commercial mgr. of KBTV, Denver, to join KABC-Tv, Los Angeles ... Norman Mathews, TV-radio commercial production mgr. of Dancer-Fitzgerald-Sample Inc., named v.p.

Edward Lamb intensified fight against allegations that he falsely denied alleged past pro-communist affiliations (Vol. 10:13, 15) by taking ads in newspapers and magazines, offering $10,000 to anyone—"whether stooges or unscrupulous competitors, persons on or off a government payroll"—who can prove he made any such false statements. At stake are his licenses for TV station WICU, Erie, and several AM stations. FCC had sent Lamb letter informing him license renewal couldn't be made because of the allegations and that hearing appeared necessary. Lamb answered with detailed denial, now waits for Commission to schedule hearing or drop case. Ad reads, in part: "We all realize that in these troubled days, there is abrad in our beloved land a growing list of persons who may be induced to bear false witness against their neighbors. These character assassins, informers, professional witnesses, purveyors of evil, all seem to function best when financial rewards are dangled before them." Lamb's counsel and exec. v.p., former Attorney General J. Howard McGrath, issued statement suggesting that "legal action" may be started against "certain persons on the FCC" if it refuses to identify the "anonymous accusers" or to give Lamb public hearing. At FCC, there's perceptible reluctance to talk about case or indicate when hearing may be held; it's understood proceeding has been sparked by Comr. Doerfer.

Emblem for 30 years service with FCC and its predecessors will be awarded Comr. George Sterling at presentation May 10 by chairman Hyde. Three staff members will also get 30-year pins (James A. Pearson, Kenneth G. Clark, Anna L. Poloske) while 41 will receive 10-year pins.

Wm. D. L. Starbuck, 68, who served on old Federal Radio Commission from 1929-34, died at his home in New York May 2. He had been practicing patent law since he failed of reappointment when President Roosevelt set up FCC in 1934.
Network Accounts: Impressive commercial start for NBC-TV's women's-angle Home series (Mon.-thru-Fri. 11 a.m.-noon) is reflected in network's tally of $2,112,000 gross time sales chalked up in 2 months program has been on air. Average gross for Home commercial is $6250 ($2450 for program-production; $3800 for time). Latest Home sponsor is H. J. Heinz Co., which ordered 78 partic. at rate of 3 a week, beginning in Sept., representing $500,- 000 volume ... Hazel Bishop Co. buys first NBC-TV color "spectacular" Sept. 12, Sun. 7:30-9 p.m., thru Raymond Spector Co. ... American Chicle Co. buys 20 min. of new Sid Caesar Show on NBC-TV in fall, Mon. 8 p.m., thru Dancer-Fitzgerald-Sample ... Scott Paper Co. for 3rd straight season, to be one of sponsors of Omnibus Corn CBS-TV starting Oct. 17, Sun. 5:6-30 p.m., thru J. Walter Thompson ... Van Camp Sea Food Co. (White Star tuna) to be alt. sponsor (with Swanson's frozen foods) of Namee's the Same on ABC-TV starting June 1, Tue. 10:30-11 p.m., thru Brisacher, Wheeler & Staff, San Francisco ... Procter & Gamble buys two 15-min. serials on NEC-TV starting July 5, 3:15:30:30 & 3:45-4 p.m. on alt.-day basis; also continues to sponsor Three Steps to Heaven on NBC-TV 10:45-11 a.m., thru Benton & Bowles ... Simoniz Co. buys Tue. 2:15-2:30 p.m. portion of Garry Moore Show on CBS-TV starting June 1, will sponsor Fri. 10:10-15 a.m. portion starting July 6, when show moves to Mon.-thru-Thu. 10-10:30 & Fri. 10-11:30 a.m., thru Tatham-Laidv Inc. ... Pall Mall drops alt. sponsorship (with Sherwin-Williams Paint Co.) of Ray Bolger Show on ABC-TV, will be alt. sponsor (with Dodge) of Danny Thomas Show on ABC-TV starting July 18, Sun. 6:30-7 p.m., thru BBD0 ... Army drops Stars on Parade on 67 DuMont stations & Talent Parade on 119 ABC-TV outlets after House reduced its recruiting appropriation by $200,000; though time was donated by stations, Army paid estimated $340,000 production costs ... Gillette to sponsor Frenkness Sat. May 22, 5:30-6 p.m., and Wood Memorial from Belmont Park Sat. June 12, 4:30-5 p.m., on CBS-TV, thru Maxon.

FCC Comr. Robert E. Lee, speaking to Industrial Communications Assn. Conference in Washington May 5, gave his philosophy of regulation: "Once the determination of the radio licensee has been made, I believe that gov't. interference must be kept to the utter minimum and the true economic forces be permitted to solve the day-by-day problems as they arise. In my concept of free enterprise I do not have any double standard. By that I mean that just as you reap the benefit from good judgment and good operation so must you take the risks of bad judgment and bad operation. In my experience with the appropriations committees of Congress I was frustrated from time to time when the proponents of free enterprise, balanced budgets and low taxes would importune Congress to make an exception for something they were personally interested in. We used to refer to this as 'economy in Gov't. at the expense of the other fellow.'"

Six more major station executives have joined organization committee for projected new Television Advertising Bureau (Vol. 10:17-18), which plans first meeting in Chicago's Palmer House May 14 with newly selected legal counsel, Neville Miller, onetime NAB president. New members, bringing total to 30: Chris Witting, Westinghouse stations; Don Davis, WHB-TV, Kansas City; Charles Crutchfield, WBT-TV, Charlotte; Jack Harris, KPDC-TV, Houston; Edwin K. Wheeler, WWJ-TV, Detroit; Joe Higgins, WTHI-TV, Terre Haute (due on air in June). Final organization is expected to be set up at meeting during NARTB convention in Chicago, May 23-27.

Jack R. Poppele, TV consultant & ex-engineering v.p. of WOR-TV & WOR, appointed to $14,800 job as Voice of America director, headquartered temporarily in N. Y.; he takes office May 10.

Station Accounts: Do-it-yourself craze has real local program possibilities, if artisans or hobbyists can be enlisted to do their stuff. Cleveland's WNKB already has local lumber company and savings & loan bank sponsoring new Walt's Workshop, Thu. 7-7:30 p.m., conducted by vocational instructor Walter Durbahn ... Toy Guidance Council, whose 79 major toy-maker members have set up $1,300,000 public relations program, including TV show on 40 stations from Sept. to Xmas, to be backed up by additional $10,000,000 worth of advertising by manufacturers, wholesalers & retailers; Council's agency is Friend-Reiss-McGlone, N. Y. ... Emerson Radio, plugging "install-it-yourself" theme, will use TV-radio spots in national drive for its new air conditioners, thru Grey Adv. ... American Bakers Assn. has had Keep Your Balance filmed by Kling Studios, Chicago, as first of series ... Among other advertisers reported using or preparing to use TV: Turner Hall Corp., New York (Admiracion shampoo), thru Kieswetter, Baker, Hagedorn & Smith, N. Y.; Chester H. Roth Co., New York (Esquire Expando socks), thru Ross Roy, N. Y.; Cities Service Co., New York (gas & oil), thru Ellington & Co., N. Y.; Williamson-Dickie Mfg. Co., Ft. Worth (Dickie work clothes), thru Evans & Associates Adv., Ft. Worth; Solarinic Co., Baltimore (floor wax & polishes), thru Courtland D. Ferguson, Baltimore; Potato Advisory Board, Bakersfield, Cal. (California white summer potatoes), thru McCarty Co., Los Angeles; Roselux Chemical Co., Brooklyn (Rose-X bleach), thru Lawrence C. Gumbinner Adv., N. Y.; Grimshaw Nurseries, Hayward, Cal. (mail order nursery), thru Ad Fried Adv. Agency, Oakland, Cal.; Douglas Labs Inc., Miami (Copperstone sun tan oil), thru Flakenhainer Adv. Agency, Beverly Hills, Cal.; Wolco Products Inc., Hartford, Conn. (Hi-Shine wax shoe polish), thru Hicks & Greist, N. Y.; Yardley of London Inc., N. Y. (perfume & cosmetics), thru N. W. Ayer, N. Y.; Taylor-Reed Corp., Glenbrook, Conn. (Spandy disinfectant), thru Lewin, Williams & Baylor, N. Y.; B. Cantor, Philadelphia (personalized license tags for bicycles & toys), thru Solis S. Cantor Adv. Agency, Philadelphia; Good Grooming Products Co., Detroit (Wisp stick hair dressing), thru Lawrence C. Gumbinner Adv., N. Y.; Diced Cream Co. of America, Los Angeles (licensors of package ice cream), thru Factor-Breyer, L. A.; Beverich Products Inc., Philadelphia (beverages), thru Sullivan, Stauffer, Colwell & Bayles, N. Y.; Frozen Food Factors Inc., Atlanta (Thrift-T-Pak & Sweet Frost frozen foods), thru Thompson-Frankel Adv., Atlanta; Harco Pharmaceutical Co., Newark (Leopard spot remover), thru BBD0, N. Y.; Oswego Soy Products Corp., Oswego, N. Y. (Penlon plant food), thru Wagar Assoc., Oswego.

Gannett Newspapers purchased J. P. McKinney & Son Inc., newspaper representatives, effective April 22—but that does not in any way affect Everett-McKinney Inc., the TV-radio rep, whose president is Max M. Everett. TV-radio firm is offshoot of J. P. McKinney & Son, but became independent in 1949. It was half owned by Ray McKinney; after his death a year ago, Mr. Everett purchased his stock to become 100% owner. The Everett-McKinney list comprises 28 radio stations, 10 TV stations and 2 CP holders for TV, including all Gannett outlets. Powell Ensign is exec. v.p.

Standard Oil of Indiana, heavily in TV-radio spots, moves its account from McCann-Erickson to D'Arcey Adv. end of Oct. in switch involving estimated $5,000,000 in annual billings. It ends Esso's 25-year association with McCann-Erickson.

Documentary film summary (16mm, 45-min.) of Morrow-McCarthy controversy has been released by Freedom House for rental through Association Films, 347 Madison Ave., N. Y.
ALL TRANSMITTER makers will have exhibits at NARTB convention in Chicago's Palmer House, May 23-27. None reported any shipments or orders this week, some saying they were too busy with preparations for convention. Transmitter manufacturers exhibiting in Chicago: Continental Electronics (whose transmitters are marketed by General Precision Laboratory), DuMont, Federal, Gates, GE, RCA, Standard Electronics, Willys Motors (new electronics div.).

In our continuing survey of upcoming new stations, these were reports received this week:

KETC, St. Louis (Ch. 9, educational) has its 5-kw RCA transmitter on hand, but still has only tentative June target, reports gen. mgr. Richard J. Goggin. Ideno tower has been dismantled and moved to new site between St. Louis U High and Oakland Stadium, where foundation work begins soon. With completion of tower & antenna installation expected about mid-June, specific target won't be announced until "we are very certain there will be no substantial delay," Victor Duncan will be film supervisor; Vincent Park, producer-director; Wesley Eckhart, stage mgr. WTLC, Champaign-Urbana, Ill. (Ch. 12, educational), first planning late 1954 start, hasn't ordered antenna yet, now hasn't a target date, reports director Frank E. Schooley. The 5-kw transmitter donated by GE (Vol. 10:17) has arrived and will be temporarily installed atop Memorial Stadium in Champaign. The Blaw-Knox FM tower purchased last year from WTMJ, Milwaukee, will not be used until permanent transmitter site is chosen.

Nashville's WLAC-TV (Ch. 5), last reported due in June but probably delayed, will be 50% owned by Casualty Insurance Co. of Tennessee, 25% by Tom Baker Jr. and 25% by Alvin Beaman as result of $312,000 sale by latter 2 of their radio WKDA, Nashville (250-watts on 1240 kc) completed last week by Blackburn-Hamilton. This enables them to exercise option on half of WLAC-TV under consolidated application granted by FCC last Aug. They will not, however, own any of radio WLAC. They sold WKDA to John Kluge group, who also own stations in St. Louis, Orlando, Fla. & Silver Spring, Md. WLAC-TV has had transmitter since last Feb., expects to have Ideno tower ready by May 15. Baker and Beaman, with Roy V. Whisnant, recently also sold their WCOF, Boston (5-kw on 1150 kc) to financier John Fox, publisher of Boston Post (Vol. 10:13).

Hearing between CBS and Zenith for Chicago's Ch. 2 opened officially with conference May 7 before examiner Herbert Sharffman. June 4 was set for exchange of points of reliance. June 7 for continuation of hearing conference. Gerald Hadlock participated in conference for FCC Broadcast Bureau: Leon Brooks, for CBS; Robert Seaks, of Wheeler & Wheeler, for Zenith.

GE is now selling 12-kw uhf kilovolt power tubes, at $10,000 list. The telecasting tubes formerly were available only on a rental basis. Stations now may either lease them or buy them outright—as initial equipment or for replacement. Six types cover uhf band.

WQXL-TV, Louisville (Ch. 41), will be delayed from expected start this spring, reports owner Robert W. Roun- saville, who states he's now building WQXL-TV, Atlanta (Ch. 36). He also holds CP for WQXN-TV, Cincinnati (Ch. 54). Earlier in year, he ordered 3 complete uhf station packages, with Continental 1-kw transmitters, from GPL (Vol. 10:7) but deliveries have not been reported. Targets then announced were early summer for Cincinnati, October for Atlanta. Forjoe is to be rep for WQXL-TV & WQXN-TV; rep for WQXL-TV not reported.

WSBM-TV, Saginaw, Mich. (Ch. 51), now has "winter of 1954" as tentative target, reports pres. John L. Booth, operator of radio stations WJLB, Detroit, and WBBB, Flint. His WBKZ-TV, Battle Creek (Ch. 64), went dark last April 23, but hopes to resume on June 1 after increasing power and height (Vol. 10:17). WSBM-TV rep will be Pearson.

CBWT, Winnipeg, Man. (Ch. 4), with 10-kW RCA transmitter on hand, plans tests during latter May, programming as non-interconnected affiliate on May 31, reports regional information representative J. S. Brickenden. Dominion Bridge built 240-ft. tower, now is installing RCA 6-bay superturnstile antenna. CBWT will be CBC's fifth on air, first outlet for projected Prairie Region network which later will include privately-owned stations in Regina, Saskatoon, Calgary, Edmonton. Base hour rate will be $200.

CKWS-TV, Kingston, Ont. (Ch. 11), plans early fall start, has 10-kW transmitter and other RCA equipment ordered for July delivery, according to J. M. David- son, asst. to pres. of Northern Bestg. Co. Ltd. Transmitter in Bath, 12 mi. west of Kingston studios, will connect via microwave. Its 400-ft. RCA tower will be topped with 12-slot Wavestack antenna. Northern Bestg. operates radio CKWS, also will operate TV for owner Brookland Co. Ltd., also owners of CHEX, Peterborough, Ont., which got green light for TV on April 5 from CBC. Brookland is 51% owned by Senator W. Rupert Davies (Kingston Whig-Standard), 49% by Roy Thomson, chain newspaper publisher. Canadian rep will be All-Canada TV; U. S. rep not yet chosen.

Of 9 civilian aircraft crashes with TV-radio towers in last 4 years, only 2 involved towers over 500-ft. tall. CAB made this report May 7 at first working meeting of ad hoc study group on marking & lighting of high towers, appointed by Air Coordinating Committee's sub-committee on airdromes, air routes & ground aids (AGA). Meeting with group, in addition to governmental representatives, were NARTB engineering mgr. A. Prose Walker & attorney Robert Church, and Robert Kennedy for Assn. of Federal Communications Consulting Engineers, as well as representatives of aviation trade groups. Group also heard report from National Bureau of Standards indicating virtual impossibility of marking high towers in daylight to give adequate warning to pilots under adverse weather conditions. They meet again May 20 or 21 to continue initial phase of engineering study—whether present lighting and marking standards are adequate.

North Dakota will get live network service next fall when AT&T completes new microwave route from Minneapolis to Fargo. Long Lines Dept. filed application with FCC this week to construct the 227-mi. route. Meanwhile, AT&T added to its list of interconnected stations this week by hooking up WRBL-TV & WDAK-TV, Columbus, Ga.; WTV, Bloomington, Ind. (replacing private link); KNUZ-TV, Houston. Scheduled for interconnection next week end are WBTM-TV, Danville, Va.; KGLO-TV, Mason City, Ia.; WDBO-TV, Orlando, Fla.; WGAN-TV, Portland, Me.; WKNY-TV, Kingston, N. Y.
LABOR AND PRICE ENIGMAS WORRY TRADE: Pressure from labor, even while public has become accustomed to lower prices for TV-radio receivers, have trade leaders full of worries as they prepare for fall-winter market clouded with uncertainties. While some, like RCA's Gen. Sarnoff, continue to pound away at theme that this is merely a transition period before color gives trade "surest promise for prosperity," hard-headed merchandisers are concerned about immediate problems -- not the least being how to keep black-&-white set sales up, while earning reasonable profit thereon.

Intensely price conscious, the industry continued to feel its way cautiously toward hazy horizons this week -- studying market reports closer than ever before, scrutinizing all information about competitors' plans, watching what Philco pres. Wm. Balderston called an "unjustified" strike at his 10 TV-radio-electronics plants (see p. 11) and its possible impact on themselves. Spokesman for one company (not Philco) epitomized thinking of many manufacturers with this observation:

"The public is demanding lower prices but the pressures in the industry are for wage increases, and this is not a high-gross business we're in. We've already scratched the bottom on our prices and with labor demanding 5-8¢ more an hour, it would be like squeezing blood out of a turnip."

* * * * *

Seasonal trade slump has begun to set in, though first reports indicate it won't be as bad as last year, due largely to planned production & lower inventories. On basis of preliminary reports, RETMA spokesman says April factory sales were less than the 560,000 sold in March but more than the 410,000 sold in April 1953. Likewise, distributor sales in April were less than the 580,000 in March but more than the 390,000 in April 1953. End-of-April TV inventories at all levels were about 1,600,000, compared to about 1,900,000 at end of April 1953 -- regarded as "quite healthy" by some and "too low" by a few others.

Retail sales for first 3 months (13 weeks) totaled 1,780,795, or almost identical to 1,780,899 in first quarter of 1953, though production in first quarter this year was only 1,447,110 compared to 2,705,000 in first quarter of 1953.

Chief virtue of first quarter was clearance of inventories, even though the profit in many cases didn't come up to expectations. Motorola's Paul Galvin stated whole industry's end-of-quarter position quite well in May 3 letter to stockholders:

"We were very cautious going into the first of the year on production of TV receivers because of the inventory position of the industry and not knowing the specific effect of the color TV situation on black-&-white. Consequently, our sales of TV receivers were considerably less than the first quarter of last year. Quite a number of the other manufacturers did the same thing to the end that there were about 400,000 more sets sold at the retail level than were made at manufacturer's level.

"Apparently, the public is becoming more familiar with the actual situation relative to color TV receivers going to be very small in quantity, small in picture size and high in price and have, consequently, gone on to enjoy more black-&-white TV. At the same time, we have reduced our projection of color TV production for 1954. Apparently, until a satisfactory large color TV picture tube is made available at a reasonable price, production of color TV sets will be very limited."

* * * * *

Only thing definite about price policies thus far seems to be their utter indefiniteness. If they have definite plans, all companies are keeping them closely guarded. Nearly all would like to raise prices, especially those who blame lower profit margins for first-quarter earnings decline. But dare they risk upping prices now? That question underscores all present uncertainty in the trade. And being uncertain themselves, manufacturers are exercising great caution in their comments.

Note of caution was manifest in all replies to our queries to manufacturers,
large and small -- though an RCA spokesman forecast "a darn good second half" for that company. He based this on low inventories and what he called a "minimum of confusion now about color" in view of fact consumer curiosity is being satisfied by the color sets now being shown on dealer floors.

RCA plans to show full line to field reps at Atlantic City meeting June 7. No public statement could be extracted as to what models line will contain or at what price. But it won't be surprising to see RCA back with 17-in. and some 24-in. models and with a diversified line that includes plenty of furniture choices.

Admiral spokesman also foresees price rises, but emphasizes that its plans won't be finalized until just before mid-June distributors convention in Chicago. He said Admiral's line probably would contain 17, 21, 24 & 27-in. models.

Philco officials couldn't be reached for comment due to strike. Tight-lipped even when in full production, Philco is even more of an enigma now -- but last word was that it planned to introduce several new models before its June convention.

Motorola has a tentative 2-point price program. It wants to keep its 17-in. price leaders "competitive" -- i.e., around $170 -- while raising lists on step-up models offering greater profit margins. But sales v.p. Ed Taylor says this program "can be upset by the prices and discounts of our competitors." Motorola plans to resume output of 24-in. on limited scale, will show them at marts.

Emerson's Ben Abrams, who has heretofore put great stock in low-priced 17-in. models (with leader selling for $150), tells us he's considering raising prices down the line in new models to be introduced in month or so. And he's also studying the possibility of dropping or sharply reducing production of 17-in. models, which he says "don't amount to a great percentage of our business any more." Like others, he stresses fact he's playing it by ear and plans could change from day to day.

DuMont plans some lower-priced receivers in new line. W.H. Kelley, marketing v.p., says new models "won't be lowest in industry by any means but they'll be a little more competitive. After all, we're about $60 higher than our competitors on many models." He emphasized wood quality won't be sacrificed in cheaper sets.

GE's Dr. W.R.G. Baker said he looked for price line to hold firm, with strong possibility prices will be raised before year is out. And H.L. Hoffman, pres. of Hoffman Radio, said demand for "quality" models has held up nicely, but that low-end offerings like Crosley's have started to cut in. He didn't indicate his future plans, merely said: "It's as you stated last week -- a market without pattern."

Crosley is reported to be bringing out 21-in. version of "Super V" in June, price unknown. Crosley spokesman says only that "no full line" is planned, hinted that conventional models will be shown. He said plans for 21-in "Super V" were only temporarily shelved in March, added that market for 17-in. is still very good and is still requiring double shifts at plant. However, cutback in production is planned toward end of May, for reasons unexplained. It's no secret that the 17-in. "Super V," selling for $140-$160 (Vol.10:13) had some set makers quite uneasy for a time.

Zenith will introduce line in latter July, meanwhile has simply informed its distributors it won't compete with very lowest prices in industry.

* * * * *

TV production totaled 120,687 week ended April 30, compared to 109,619 units preceeding week and 108,752 week ended April 16. It was year's 17th week and brought production for year to date to about 1,910,000, compared to about 2,840,000 in same period of 1953. April output was about 460,000 vs. 567,878 in April 1953. Output of radios, excluding auto radios, totaled 86,461 week ended April 30. RETMA said auto radio data was incomplete, will be reported next week.

Fast-growing Canadian TV market should find 1,040,-000 homes with sets by end of 1954, representing 25% of total wired homes in Dominion and 32% of wired homes in areas where TV reception will be available. So predicted John D. Campbell, Canadian Westinghouse consumer products v.p., in address this week to Assn. of Canadian Advertisers in Toronto. He said stations due to go on air this year will open up potential market of 762,000 additional wired homes in which "satisfactory" signal is received and 1,600,000 more homes in "fringe" areas. Sets-in-use by end of 1954 will represent consumer investment of over $350,000,000, he said. In a longer-range prediction, James P. Gilmore, CBC national TV coordinator, estimated 80-90% of all Canadian homes will have sets in 5-10 years. He spoke to annual meeting of Canadian Retail Federation at Scarborough, Ont.
Topics & Trends of TV Trade: TV and automobiles, whose production curves have followed striking parallels in past (Vol. 8:45, 9:2, 10:10), continue to run relatively close in first 4 months of 1954. TV production for the period is estimated by RETMA at about 1,900,000; auto-truck output for first 4 months is estimated at about 2,300,000 by Automobile Manufacturers Assn.

Though auto-truck output is running ahead of TV in units produced, it’s explained that second quarter of year is usually busiest for autos, rather slow for TVs; former depends on good spring weather, latter banks heavily on Xmas season. However, it’s estimated by economists that each industry will turn out 6,650,000 units this year.

Both industries show parallels in retail sales for first 3 months—TVs 1,780,755, auto-trucks estimated at 1,920,-

Both industries also report appreciable declines in inventories during first quarter.

Economists offer no generally acceptable explanation of the curious phenomenon, and neither do we. But there’s consideration that TV has become as essential in home as automobile. And for the future, there’s added consideration that 2 sets in home are bound to become much more common than 2 cars. Here’s latest month-by-month breakdown of both industries:

TV prices for equivalent screen size have dropped 84.5% in last 7 years, says Telc-Tech, which notes that in 1947 a 10-in. set sold for $357 whereas a brand-name 21-in. now sells for under $225 (several under $180). Thus, it’s reasoned, the consumer paid $5.95 per sq. in. of picture in 1947, now (at $225 price) pays only 92¢.

On basis of investment in initial equipment, Telc-Tech figures a TV set gives entire family a full week of entertainment & education for trifling 50¢.

U. S. Census of Manufacturers reports manufacturers’ sales of home TVs amounted to $1,188,000,000 in 1953, with home TVs accounting for 74% of all sales of TVs, auto radios, phonographs, record players. Total sales of TV and radio sets, along with phonos, came to $1,599,634,000.

Capeshart-Farnsworth is out with 17-in. table in wood cabinet with mahogany finish to retail at $160. Called “Trenton,” it’s available with uhf at $200. Conventions are at Ft. Wayne June 7, San Francisco June 28.

BOOM IN TV in West Germany finds Philips, Telefunken and Siemens in there pitching for market, as in South America (Vol. 10:12), with U. S. receiving sets practically non-existent except as they’re occasionally brought in by Americans. With stations now on the air in Berlin, Frankfort, Hamburg, Hannover, Cologne, Langenbur and Mannheim-Heidelberg out of 27 projected (see TV Factbook No. 18), no less than 19 domestic TV-radio manufacturers are already in the field.

During 1953, they produced 54,475 sets as against 4664 in 1952. During the first quarter of this year, it’s estimated nearly 30,000 will be produced, and for the whole year approximately 200,000. Adoption of mass production methods means also that the Germans are looking to the export market, including other countries of Europe, South America and possibly the U.S.

The German companies now reported making TVs: Grundig Radio Werke, Furth, Bayern (said to be the leader); Deutsche Philips, Hamburg; Telefunken, Hanover; Siemens & Halske, Karlsruhe; Balupunkt Elektronik, Berlin-Wilmersdorf; Continental Rundfunk, Osterode Harz; Graetz Radio, Altena, Westf.; Korting Radio Werke, Grassau, Chiemgau; W. Krefft, Gevelsberg, Westf.; Loewe Opta, Frankenwald; Lorenz-Radio, Stuttgart; Metz Apparatfabrik, Furth, Bayern; Norra-Radio, Charlottenburg; Norddeutsche Mende Rundfunk, Bremen; Scharzwald Apparate Apparate bau Anstalt, Villingen Schwarzwald; G. Schaub, Pforzheim; Tekade Radio, Nurnberg; Tun fuk, Karsruhe; Wego-Werke, Freiburg.

Note: Colombian Govt., which has ordered $300,000 worth of equipment for new Ch. 7 Radio Difusa National in Bogota from DuMont and $90,000 worth from Siemens (Vol. 10:12), has just closed bids on 400 receivers, of which 300 are to be 21-in. and 100 to be 17-in. types. They’re to be placed in public places, schools and educational centers. U. S. firms entered bids but Philips of Holland, which has projected new 27,000-sq. ft. TV-radio and communications apparatus factory in Bogota, was the successful bidder. Govt. has decreed unrestricted importation of receivers, free from customs duties.

Why not require all color sets to include uhf tuners? This question, propounded editorially in April 30 TV Guide, was seconded by Sen. Bridges (R-N. H.) in letter to FCC Chairman Hyde, who placed in Congressional Record May 5 along with text of editorial. Only one major manufacturer specifies uhf-tuners for all its color sets, editorial notes, adding: “This is a golden opportunity, perhaps the only one that ever will arise, to put over uhf TV.” Bridges told Hyde the suggestions seemed to be “worth consideration by your Commission” and bound to benefit viewing public. Sources close to Senate Commerce Committee predicted issue of uhf-equipped color sets would come up in communications subcommittee’s hearings on uhf beginning May 19.

Zenith pres. E. F. McDonald and Chicago adman Hays MacFarland listed among those attending Chicago meeting June 5, called by Chicago Tribune publisher Col. Robt. R. McCormick, to found organization called “For America” to combat “supernationalism and interventionism”—interpreted by some as a third party movement. Gen. Robt. E. Wood, ex-Sears Roeback, and Clarence Manion, dean of Notre Dame Law School, were named co-chairmen, with ex-Sen. Burton K. Wheeler on organizing committee.

Los Angeles chapter of Representatives Inc. has released new 36-p. directory of membership, along with list of some 500 manufacturers represented and product index; it’s primarily for use by manufacturers, govt. agencies, purchasing agents, jobbers. Copies are available without charge from Dr. Ralph Power, exec. secy., 767 Castellar St., Los Angeles 12, Cal.

Maurice S. Despres, 53, Admiral director & founder-president of Dale Distributing Co., its former N. Y. & New Haven distributor, died May 2 in N. Y. after long illness. When Admiral was founded in 1934, Mr. Despres became its N. Y. distributor, remaining until factory branch was established in 1932. During World War II he was War Production Board's national director of consumer durable goods and before that was N. Y. regional director of OPS consumer durable goods section.

SOME PATENT license extensions have already been signed by RCA licensees, Chairman Sarnoff reported at annual stockholders meeting May 4 where he expressed confidence that "substantially" all others will be extended for the usual 5 years beyond 1954. Before distributing new booklet detailing RCA research, inventions and patent policies, Gen. Sarnoff stated:

"RCA has previously granted to others several hundred patent licenses and the majority of them run to the end of 1954. By mutual agreement, these licenses can be extended for a further period of years. A substantial number of the agreements have been signed and extended for a period of 5 years beyond 1954. In view of the great value to our licensees of their right to use the inventions covered by these licenses, we feel confident that by the end of this year, substantially all of the remainder will also extend their agreements."

To a stockholder inquiring about Zenith pres. E. F. McDonald's widely publicized description of the RCA 3-gun color tube as a "Rube Goldberg" (Vol. 10:18), Gen. Sarnoff observed that Mr. McDonald is in error in stating he intends to wait for a one-gun tube as nonexistent. Said Sarnoff: "Some like to take the ride after the wagon starts rolling. When color TV is rolling, you'll see McDonald join the bandwagon just as he did in black-and-white, except that he doesn't want to pay RCA royalties on its inventions." He referred to fact that Zenith has been only major company consistently holding out against payment of patent royalties to RCA, subject of protracted litigation still pending adjudication in the Federal courts.

About $5 billion retail sales in home appliances are forecast in 1960 by R. H. Huston, Frigidaire asst. sales mgr.—representing 50% increase over last year's volume. Addressing retail sales conference in Dayton, he predicted retail sales of clothes dryers in 1960 would be up 192% over 1953, food freezers up 55%, electric ranges 49%, refrigerators 34%, automatic washers 22%.

STRIKE at Philco's 10 TV-radio-electronics plants in Philadelphia, Croyden, Pa. & Sandusky, O. entered second week as we went to press, with likelihood negotiations with Local 101 (IUE-CIO) will be resumed this week. Philco was granted court injunction May 7 to prevent mass picketing by some 8000 production workers, thus enabling unorganized administrative & supervisory personnel to enter plants.

No meetings of company and union have been scheduled, but pres. Wm. Balderston offered to resume talks after injunction was granted. Union seeks guaranteed annual wage, unspecified wage increases & extension of fringes benefits. Philco offered extension of current one-year contract without change.

On another labor front, some 8700 members of IUE Locals 103 & 110 staged mass meeting May 4 to enforce their demands for undisclosed wage increases at RCA's Camden plant, producing govt. & communications equipment, broadcast equipment, TV apparatus, etc. RCA reportedly offers no wage increase.

GE, also in wage negotiations with IUE, rejected guaranteed annual wage proposal because "it would Federalize or wreck the state unemployment compensation system." Company said union proposal is simply means of asking company to provide "private supplement" to state unemployment compensation, and that any workers laid off had access to unemployment rights.

**Color Trends & Briefs:** Color film seems destined to play much more important role in early stages of color-casting than monochrome film did to black-&-white telecasting. That's impression gleaned from this week's convention of Society of Motion Picture & TV Engineers in Washington where RCA exec. v.p. W. Walter Watts, electronics products div., reported that RCA's 3-vidicon color camera will be delivered late this year and that it held out these prospects:

"For exhibitors, its use in bringing color trailers into the home will offer an unbeatable form of exploitation. To the broadcasters, it will make available what we think is the best and most efficient method of handling the film subjects which will constitute a very substantial part of color program schedules."

Thomas G. Veal, Eastman Kodak, chairman of SMPTE's TV committee, is equally sold on color film. He told us: "I'm thoroughly convinced that color film will be easier to use than live pickups. And it will provide better definition than live."

Mr. Veal said he based his views on "problems inherent in the use of a 3-tube camera." He stated that "the registration requirements of the live camera are extremely precise" compared with continuous-motion motion-spot scanner—a version of which Eastman has developed. Eastman scanner was described at convention by developer Otto Wittel. It will be demonstrated at NARTB convention in Chicago May 23-28, offered to telecasters at that time. Mr. Veal didn't indicate price.

Mr. Veal said, "I'm not quarreling with RCA's approach"—the 3-vidicon setup—and "it's up to the telecasters to weigh economics and performance," inasmuch as RCA camera can be used with existing projectors after slight modification.

So important is color film considered that Mr. Veal's committee acted to develop a color test reel for stations, manufacturers, etc., incorporating film processes of Technicolor, Anso, Eastman and DuPont. Each will supply film and SMPTE will put it together, offer it to industry at a fee—its customary practice with test reels.

SMPTe is working with RETMA group under CBS's W. B. Whalley. A joint committee will be established and goal is to have film ready this fall. Both 16mm and 35mm will be available.

NARTB convention certainly shapes up as color feast, technically. Color will dominate both sessions and exhibits (Vol. 10:14). Just this week, RCA reported it will demonstrate "a complete color station" feeding shows to a viewing room.

**DuMont's** 19-in. color tube has aroused intense interest all through the industry since first revealed last week (Vol. 10:18), will be shown to set manufacturers and tube licenses May 10-11 at Clifton, N. J. plant, sampled to customers shortly thereafter. Production will be geared to demand, said Dr. DuMont, but regardless of demand it will go into DuMont's own sets starting in fall. It's called the "Chroma-Sync Teletron," will sell for $150-$200 initially, go under $100 eventually.

First RCA color sets, selling at $1000 (with dealer markup disclosed at about 53%), were reported moving slowly in the 25 markets where introduced (Vol. 10:18). Sales figures weren't divulged, but Chairman Sarnoff told May 4 stockholders meeting that 4000 had been delivered thus far; that on basis of orders from distributors RCA expects to be oversold on its first production run of 15-in., originally reported at 5000; that RCA has been making color tubes at rate of 2000 per month since Feb. and will have 19-in. sets on market this fall.

He reiterated previous color output predictions, estimated about 60,000 color sets this year, several hundred thousand in 1955, about 1,750,000 in 1956, 3,000,000 in 1957, 5,000,000 in 1958.

Emerson's Ben Abrams told N. Y. Sales Executives Club this week that in about 5 years 30-40% of all production will be in color, with output of 2,000,000 of them annually by then. And illustrating great interest in color, RCA's Wm. E. Boss revealed his company has sponsored 67 color service clinics since Jan., attended by some 40,000 servicemen, and promised more of them.

**Picture tube sales in first 3 months** totaled 1,962,864 units, valued at $41,995,088, down from 2,798,921 at $67,696,464 sold in first 3 months of 1953, reports RETMA. Some 76% were 19-in. and larger. In March alone, 759,468 picture tubes worth $15,904,687 were sold, compared to 645,715 at $13,916,478 in Feb. and 974,154 at $23,772,801 in March 1953. Receiving tube sales in first 3 months totaled 76,385,978 worth $56,862,951, down from 122,058,756 at $82,955,567 in first 3 months year ago. March sales were 29,063,484 at $22,130,627 vs. 25,189,147 at $18,319,819 in Feb. and 44,691,200 at $29,978,827 in March 1953.
**Electronics Reports:** Military electronics might run $50-100 billion a year in event of an all-out war—or 10-20 times today's military & civilian electronics production combined. So said Brig. Gen. Preston Corderman, chief of Signal Corps engineering & technical div., at opening session of this week's Electronics Components Symposium in Washington, sponsored by AIEE, IRE, RETMA & WCEMA. He pointed out that electronics production base expanded by $500,000,000 in 1940 to $4.5 billion in 1944 and nearly $6 billion today, and added: "Reliance on electronics is now so great that it has reached the stature of a weapon and takes its place with men, food and ammunition as a factor determining the capabilities and effectiveness of our forces." He urged the 1200-plus engineers & executives attending conference to develop new technical approaches to electronics systems through basic research, to strive for simplicity and cost reduction in equipment, and to aim at automatic production of equipment, using minimum of critical materials.

Two military applications of TV were demonstrated this week at Armed Forces Communications Assn. convention in Washington. Navy unveiled its Instructional TV System (I-TV-S)—a complete audio-video-lighting system designed by Office of Naval Research's Special Devices Center at Sands Point, L. I. Portable by means of large casters, I-TV-S is specifically designed for maximum utility in training servicemen. The pilot model demonstrated had specially designed image orthicon camera, consoles and monitors assembled into single 400-lb. unit, can accommodate more than 100 TV receivers connected by cable, gives pictures of "broadcast quality." A Navy spokesman said system could be mass-produced for $15,000-$20,000. Signal Corps demonstrated "tactical TV" using Dage vidicon cameras, and displayed dioramas demonstrating use of portable TV cameras and transmitters carried "peepee-creepie" style by patrols scouting enemy territory, beaming picture to command post.

Bell Labs' long range planning is subject of article in May Fortune, covering color transmission, long-distance dialing, etc. Regarding a telephone with TV, it says: "Dr. Ralph B. Boyd, r.p., of Bell Labs, feels that the use of vision on the phone is not greatly anticipated today and the use of speech was when Bell invented the thing three-quarters of a century ago. 'People used to ask who'd want to talk into a tin box,' he says. 'Today they can hardly get along without it, but they ask who needs TV with his telephone. But in today's world, sight & sound go together. Some form of vision with the phone is inevitable.'"

Pushing industrial TV as mass item, RCA has had 3 teams comprising engineer and salesmen on month-long barnstorming tour of 40 cities, where they are presenting clinics on use of $995 "TV Eye" system for parts distributors. Among uses suggested to distributors for low-volume industrial training & instruction, property protection, merchandising & promotion display, accommodation of overflow crowds, TV & stage rehearsals, tie-in use with community and other multiple antenna systems.

General Precision Equipment Corp. has acquired 95% of stock of Link Aviation Inc., Binghamton, N. Y. manufacturer of aircraft trainers (Vol. 10:12). Link's sales last year were $20,749,000, net profit $553,000.

Stanley Warner Corp., the Fabian chain of about 300 movie theatres acquired early in 1953 from Warner Brothers Pictures Inc., has purchased International Latex Corp. (rubber products) in move to diversify that began recently when charter was altered to permit 50% acquisition of WTRI, Schenectady. Stanley Warner paid $15,000,000 cash for 100% of International Latex, financed by 6-year loan from group of 6 banks headed by First National of Boston.

**Financial & Trade Notes:** "A good volume of business for the year 1954 as a whole" was forecast for RCA by Chairman Sarnoff at annual stockholders meeting May 4, attended by 916 stockholders, at which he reported record sales and earnings for first quarter 1954. Total volume was $226,600,000, net profit $10,606,000 (66c a share), which compare with $208,007,553 sales and $9,593,141 net profit (61c) for same 1953 period. The 1954 quarter thus was up 9% in sales, 8% in profit.

Gen. Sarnoff pinned RCA's expectation of $1 billion volume on color TV, which he said offers the industry its "greatest stimulus for progress and the most promise for prosperity." He noted that over the last 10 years RCA's volume of business has jumped from $295,000,000 a year to $63,000,000, its net profit after taxes going from $10,192,000 to $35,022,000 a year, its net working capital from $115,336,000 to $228,941,000.

TV accounted for nearly 50% of RCA's total volume in last 7 years, was 54% over last year, he said. Govt. sales were about $55,000,000 first quarter, or about 24% of total volume; international business continued to increase; sales of home appliances (air conditioners & ranges) were 75% ahead and profits nearly double. Summary of the RCA quarterly report for quarter ended March 31:

Motorola first-quarter profit & sales declined sharply from first quarter of 1953—earnings being $1,644,084 (85c a share) on sales of $48,006,800, compared to $3,174,208 ($1.64) on $64,859,867 year ago and $2,238,135 ($1.16) on $38,858,096 in first quarter of 1952. Pres. Paul V. Galvin said first-quarter results do not reflect Motorola's expectations for rest of year and second half of 1954 should be "relatively more satisfactory." Industry spent first quarter working off excess inventory, he said, citing fact that retail TV sales exceeded production by 400,000, thus creating "a much healthier situation." He increased his estimate of black-white retail sales this year from 5 to 6 million and reduced by unspecified amount his earlier estimate of 150,000 color production.

Allen B. DuMont Laboratories Inc. earned net profit of $508,000 (20c a share on 2,361,054 shares outstanding) on gross income of $19,770,000 for first 12 weeks of this year, down from $945,000 (39c) on gross of $24,187,000 for same 1953 period. Results for remaining 3 periods, Dr. DuMont told stockholders meeting May 3, should compare more favorably with 1953 though next few years may mean rough going because of transition to color TV. He predicted mass production of color TV sets within 2 years, citing advantages of own new 19-in. tube and prospect of 21-in. rectangulairs (Vol. 10:18). For all 1954 he estimated sales would be 10% plus-or-minus record $91,828,982 achieved in 1953 (Vol. 10:15).

Dividends: Packard-Bell, 25c payable April 25 to stockholders of record April 12; International Resistance Co., 5c June 1 to holders May 17; Tung-Sol, 25c June 2 to holders May 17; Indiana Steel Products Co., 371/2c June 10 to holders May 25; Globe-Union, 30c June 20 to holders June 2.

Tung-Sol Electric Inc. earned net income of $450,304 (78c a share on 554,926 outstanding) on net sales of $9,518,073 in 13 weeks to April 3 vs. $552,318 (97c on 455,656 shares) on sales of $10,745,129 in same 1953 quarter.

American Phenolic Corp. reports earnings of $801,223 ($2.50 per share) on sales of $32,032,107 in 1953 vs. $1,279,290 ($3.19) on $36,726,812 in 1952.
ARMED FORCES TV “network” is definitely in the planning stage now, with initial batch of 12 U. S.-owned low-power TV stations projected at isolated foreign bases. Project is being handled by Office of Armed Forces Information & Education (AFIE), which also directs and controls Armed Forces Radio Service.

Experimental prototype of the foreign TV installation is Ch. 8 operation at lonely Limestone Air Force Base near Caribou, Me. (Vol. 9:52), now nearing end of 6-month trial period. Station was built at cost of $33,143 with money from PX sales and movie receipts. Basic installation was by RCA—including 10-watt transmitter and vidicon camera in small studio. Operating on shoestring, station now programs 45 hours weekly, using kinescopes and films obtained through cooperation of networks, advertising agencies, TV film distributors—in addition to live newscasts and talks by chaplains. Armed forces agreed to take station off air if any commercial station should be authorized in area.

Following successful trial period, Limestone station gets formal dedication next July 4. The other armed forces stations won’t be located in continental U. S. or in any areas reached by Armed Forces Radio Service or existing TV stations. It’s policy of Defense Dept. to utilize existing facilities wherever possible; for example, in Japan, Germany and French Morocco, arrangements are with existing TV stations to present American film programs especially for U. S. troops. Headng up armed forces TV project is Lt. Col. Mel Williamson, chief of AFIE’s TV section.

The 12 TV stations now contemplated would be located at isolated Pacific island bases, Greenland, Labrador, etc. Funds aren’t yet available, and legislation is needed to establish beyond any doubt the Defense Dept’s authority to build such stations. Bill (S-3401) introduced this week at request of Defense Dept. by Chairman Saltonstall (R-Mass.) of Senate Armed Services Committee, would do this. Committee is slated to hold hearings on it soon, possibly next week.

Westinghouse acquires station whose gross revenues jumped from less than $600,000 in 1950 to more than $3,000,000 in 1953, profit after taxes from about $30,000 to nearly $300,000, in proposed purchase of KPIX, San Francisco (Ch. 5) for which transfer papers were filed this week. Sale price is approximately $6,000,000 in Westinghouse stock (Vol. 10:11), with gen. mgr. Philip G. Laskey, who disposes of his 14%, continuing with the station. Balance sheets filed this week show that in 1950 gross revenues were $572,460, Federal taxes $13,647, net income $29,741; in 1951, gross was $1,385,683, taxes $281,203, net $140,418; in 1952, gross was $1,962,857, taxes $153,589, net $78,601; in 1953, gross was $3,030,210, taxes $812,017, net $292,198.

Merger of Phoenix’s half-time KTOY-TV & KOLV-TV, sharing Ch. 10 since they began operating last Oct. (Vol. 10:12) was approved by FCC this week. They combine as KOOL-TV, controlled by Gene Autry, with mgr. Charles Garland owning 5%. Autry group also owns KOPO-TV, Tucson. Purchase price of KTOY-TV was $200,000, gen. mgr. and 20% stockholder Albert D. Johnson continuing to operate radio KOLV which wasn’t involved in deal. Transfer papers showed KTOY-TV had lost about $45,000 up to last Jan. 31, KOOL-TV about $30,000 up to Dec. 31.

FCC approved $76,612 sale of assets of grantee WUTF, Youngstown (Polan Industries) to WFMJ-TV, Youngstown (Ch. 73), so that latter can take over WUTF’s Ch. 21 (Vol. 10:10:14). At same time it rejected petition of Valley TV Co., onetime applicant for Ch. 21, which asked hearing on transfer.

Change in network affiliation rules regarding “territorial exclusivity,” proposed by FCC (Vol. 10:14), brought lively pro and con comments this week. Commission proposed to prevent any station from signing agreement with a network to prohibit the network from feeding programs to other stations in same community or in cities within 15 miles. Of the networks, only CBS and NBC commented, both opposed. Stations opposed are: Meredith stations; WNHC-TV, New Haven; WTVR, Richmond. In favor of change: WAKR-TV, Akron; WLBR-TV, Lebanon, Pa.; KNUZ-TV, Houston; WFRV-TV, Green Bay, Wis. Said CBS: “Whether or not the section is revised . . . it would be the general practice of CBS-TV to provide its network affiliates, insofar as possible, with unduplicated service.” NBC commented: “It would substitute artificial political boundaries as the measure of protection for a station’s signal in lieu of the common sense standard of whether the signal strength is adequate.” Those favoring change, mostly uhf stations, stated it wouldn’t be cure-all but would help. Several went further and argued that Commission should stop applicants from getting grants in smaller communities then placing transmitters near big cities; examples given were Houston-Galveston, Muskegon-Grand Rapids, Spartanburg-Greenville, Hutchinson-Wichita, Marinette-Green Bay. In same vein, KCEB, Tulsa, this week protested Ch. 8 grant to Tulsa Broadcasting Co. in Muskogee (KTVX) stating that grantee is really aiming at Tulsa, not Muskogee.

Newspaper ownership of TV stations got second Senate slap in 2 weeks when Sen. Kilgore (D-W. Va.), continuing his TV-radio “anti-monopoly” crusade, inserted in May 5 Congressional Record a list of 112 TV stations with newspaper ownership connections—which he viewed with “serious concern.” Last week, Sen. Johnson (D-Colo.) introduced bill (S-3550) to ban 10% or greater ownership of TV-radio stations by newspapers in cities of 100,000 population or more (Vol. 10:15). The 2 Senators are known to have conferred informally on the matter. Kilgore recently assailed radio ownership of TV stations (Vol. 10:10) and asked Senate probe of alleged TV-radio monopolies (Vol. 10:11). Senate Judiciary Committee’s monopoly & anti-trust subcommittee under Sen. Langer (R-N. D.)—of which Kilgore is member—has such an inquiry under consideration, but isn’t expected to get to it for a long time, if at all.

In order to exercise option to purchase one-third interest in KFSD-TV (Ch. 10) and KFSD, San Diego, Charles E. Salik this week sold his radio KCBQ, San Diego (1-kw night, 5-kw day on 1170 kc, ABC) for $250,000. Purchasers are Stanley N. Schultz, Phoenix, and Timothy D. Parkinson, Tucson, co-owners of radio KEUX, Phoenix. Salik hasn’t indicated when he will buy into the Tom Sharp stations, which it’s reported may soon be sold to new interests.

City Council of St. Petersburg, Fla. voted unanimously May 6 to reject both the Edward Lamb and Ted Mack bids (Vol. 10:18) to take over its WSUN-TV (Ch. 38) and radio WSUN (5-kw on 620 kc, ABC), and then by 5-2 decision decided to continue TV-radio operations as a city function. Actions definitely mean, they said, that the stations are no longer on the market.

FM panel May 24 at NARTB convention in Chicago’s Palmer House will have FCC Comr. Sterling and 4 broadcasters, moderated by Ben Strouse, WWDC, Washington.
THE MAGIC WORD IS 'ELECTRONICS': As magical as TV, which is its commercial keystone, electronics during recent years has attracted many companies which never before had anything remotely to do with it -- some in such a big way that the tail now wags the dog. Hardly a week passes nowadays without word of new ventures, expansions, acquisitions or mergers in various fields of electronics. By and large, the main factor motivating non-electronic companies into the field is the desire to diversify.

Everybody in the industry knows the names of the various big TV-radio-electronics manufacturers who pioneered the field, many of them still doing great work for the military services as well as for commercial markets. (For lists of TV set & tube manufacturers, see our TV Factbook No. 18.)

Virtually all the aircraft manufacturers have gone into electronics research, design and manufacture inasmuch as electronics items are integral to flying. And so have a great many office equipment and coin machine manufacturers.

But there are others with businesses seemingly remote from electronics now important factors in the field. To get a sizeup of what these "newcomers" are doing, we asked Chicago financial consultant Edgar Greenbaum Jr. to furnish us with information about unusual entries into electronics fields. He's the specialist in electronics securities who, while with Television Shares Management Corp. from 1948-53, helped set up highly successful Television-Electronics Fund Inc., investment trust. You will find a summary of his data on pp. 12-13.

BRICKER'S NETWORK-REGULATION BOMBSHELL: Triggered by complaints of uhf grantees -- but with implications far beyond immediate problems of uhf -- a bill to put networks under FCC regulation took the industry completely by surprise when introduced May 13 by Senator Bricker (R-Ohio), chairman of the powerful Interstate Commerce Committee whose chairmen (Wheeler, Johnson, Tobey, et al.) have traditionally kept the FCC and the industry hopping to do their bidding.

No believer in the governmental big stick, the conservative Ohioan goes further in his bill (S-3456) than did any New Deal lawmakers in the days when networks and stations, always fair game, were more alert to encroachments by "Big Government." Bricker bill defines "network" as "any person who operates a system which, for the purpose of simultaneous or delayed broadcasting of identical programs, in any way interconnects or affiliates any 2 or more broadcasting stations."

Bricker means business: bill's intent was to bring whole network affiliation issue to a head. As chairman of committee which has authority over all TV, radio and communications matters, he told Senate he has already "requested the FCC and
other govt. agencies to submit comments as soon as practicable on the bill preparatory to exploration of the matter by the committee."

Measure is bound to be discussed at next week's uhf hearings before Commerce Committee's communications subcommittee (see story, p. 3), where most uhf grantees are expected to endorse it -- since their most widely expressed complaint has been inability to get satisfactory network affiliation. However, Sen. Bricker is due to be out of town next week, won't attend sessions.

Reasons for Bricker's drastic proposal were made clear in speech May 13. "In recent weeks," he said, "the committee has received many complaints from all parts of the country, and also from several Senators, outlining the difficulties encountered by certain broadcast stations in negotiating affiliations with the various networks."

The Senator is known to have been deeply impressed by the one uhf casualty in his home state -- WIFE, Dayton (Ch. 22), which gave up March 13 after impressive and well-financed start (Vol. 10:11). Pres. Ronald E. Woodyard came to Washington at the time, got sympathetic reception from Bricker.

"The ability of an individual station to obtain network programming too often determines whether that station lives or dies," Bricker told Senate. "The FCC has the full responsibility of making available, so far as possible, to all the people of the United States a nationwide, efficient radio and television service...

"If the FCC is unable or is hampered in carrying out this objective because of the lack of authority," he continued, "then Congress must act accordingly."

He pointed out that 72 grants had been dropped -- including 60 uhf -- and he added: "We have reason to believe that many of these failures are due to the fact that the stations were denied programs by the various operating networks. It is that field which, through this bill, we seek to explore."

**FLINT Ch. 12 CP BREAKS DECISION LOGJAM:** With its decision-making processes in gear, at long last, FCC got one of the tough ones out of its system by granting Ch. 12 in Flint, Mich. to WJR, Detroit -- denying Bitner family's WFDF and application of the Butterfield Theatres and reversing an examiner's initial decision of more than year ago. Examiner Benito Gague, since resigned, had chosen WFDF.

FCC was on a granting spree for these days, issuing 4 other CPs, including uhf Ch. 31 to City of New York after its competitors dismissed. Other 3 CPs were: Ardmore, Okla., KVSO, Ch. 12; San Antonio, Tex., KCOR, Ch. 41; Wausau, Wis., Wisconsin Valley TV Corp., Ch. 7. Set up for Ch. 3 grant soon in Phoenix was ex-Sen. McFarland's Arizona TV Co., now that KTLR is dropping out, having purchased KTYL-TV in nearby Mesa (Vol. 10:18). A CP was returned -- WSCV, Spartanburg, S.C. (Ch.17).

* * *

It's everyone's hope that Flint decision, which in effect gives Detroit area its 4th station, indicates logjam is broken. The portents are that decisions will continue at fair rate from here on.

Commission's main reasons for preferring WJR (Hennock dissenting) were that it proposes more elaborate facilities, more local programs; that it has no other TV stations while Bitners already have WOOD-TV, Grand Rapids & WFBM-TV, Indianapolis; that it has broadcast experience while Butterfield has none; that its officials (John J. Patt, pres.) would take more active part in station's management.

Just how elaborate WJR's plans are is indicated by its proposed construction costs -- $1,852,000 vs. WFDF's $551,000, Butterfield's $838,000 -- which includes studios in Flint and Detroit, plus remote unit.

WJR is controlled by widow of G.A. Richards, now Mrs. Walton Parker. The station's earned surplus is $2,200,000, of which $2,000,000 is reserved for TV.

Commission dwelt at length on coverage question, reiterated its stand that as long as all applicants meet minimum signal standards none is superior.

New York City has $379,000 set aside for station construction, but fight is anticipated over appropriation for operations. Mayor Wagner was particularly happy about grant because he fought for applying when he was pres. of Manhattan Borough. The city now operates AM station WNYC, whose mgr. Seymour Seigel said engineers are now studying practicability of starting out in color.
COLORADO VHF GIVES UP THE GHOST: Another "economic casualty" -- this one a vhf -- again emphasizes the inescapable necessity of basic market conditions favorable to TV and the vital importance of network affiliation. In a week marked by no new station starters, the 14-month-old KDZA-TV, Pueblo, Colo. (Ch. 3) allowed its STA to expire without asking FCC for renewal. Owner Dee B. Crouch was negotiating to dispose of the equipment, even while hoping to find a way to resume perhaps as a satellite. Outlet had signed off May 7 ostensibly for equipment repairs, but it was an open secret he couldn't keep it going. He also owns independent AM local KDZA.

KDZA-TV was first in city, got network service at outset via 104-mi. relay from Denver's pioneer KEFL-TV, whose owner Gene O'Fallon had in fact contracted to buy it for $350,000 (Vol. 9:31). But he gave up deal (Vol. 9:47) after losing own major network affiliations when KLZ-TV (CBS) started in Oct. and KOA-TV (NBC) in Dec. and continued relays to Pueblo were found uneconomical. Pueblo's other station, KCSJ-TV (Ch. 5), which started late last June, has an NBC affiliation.

KDZA-TV is second mountain area station and the third vhf to quit the air for lack of economic support. Its condition reportedly was aggravated by fact that both Colorado Springs stations come into its area. KFXD-TV, Nampa, Ida. (Ch. 6) had to drop out last Aug. (Vol. 9:34) mainly due to underfinancing for it was contiguous to Boise where another CP holder quickly grabbed up its channel. Its former transmitter, incidentally, will soon go into operation for new KFXJ-TV, Grand Junction, Colo. (Ch. 6), first outlet in western part of state and midway between Denver and Salt Lake City. Except for last week's KOY-TV time-sharing merger into K00L-TV, Phoenix, the only other vhf to sign off permanently was KFOR-TV, Lincoln, Neb., which quit last March (Vol. 10:11) because of competition from nearby Omaha.

Note: Signoff of KDZA-TV brings count of stations now on air to 383.

TAX-EXEMPT UHF SETS? SENATE PROBE IS ON: So many witnesses have lined up to present their recipes for saving uhf that the Senate communications subcommittee has decided that 3 days of morning and afternoon hearings -- now definitely scheduled to begin next Wednesday, May 19 -- won't be enough. It now plans still more hearings in June.

Action on uhf problems erupted meanwhile on 2 other Congressional fronts. In addition to Sen. Bricker's network regulation bill (see p. 1), there's a new proposal by Sen. Johnson (D-Colo.), ex-chairman of the committee, to exempt from 10% excise tax all TV sets with built-in uhf tuners -- a move which could cut down or eliminate the price disadvantages of combination vhf-uhf sets.

Johnson's proposal is certain to get enthusiastic response in telecasting and manufacturing industries. It would help boost set sales, increase set circulation, hurt no one. In addition to being ranking minority member of Senate Commerce Committee, he's on Finance Committee, now pondering House-passed revision of internal revenue laws (HR-8300). He'll offer his amendment within next 10 days, he told us. It would exempt from the tax uhf converters as well as receivers.

Measure would make it possible to manufacture black-&-white vhf-uhf sets as cheaply as vhf-only, hasten the day when all new sets have uhf tuners. Color sets equipped for uhf would be cheaper than their vhf-only counterparts which would still be subject to manufacturers' tax. RETMA, which has spearheaded several unsuccessful drives to reduce the excises on black-&-white sets and eliminate them on color, will endorse Johnson amendment -- in fact, RETMA chairman Glen McDaniel had intended to make similar proposal in his appearance before subcommittee next week.

"It's now or never," Johnson warns. He told us he had postponed introducing his excise tax amendment in hopes Senators would become more impressed with uhf problems. Its fate, he said, depends on extent and speed with which industry and consumers buttonhole their Senators to dramatize necessity of helping uhf.

* * * *

Importance attached to uhf hearings by subcommittee Chairman Potter (R-Mich.) is indicated by his refusal to postpone them a third time, despite fact that he's still needed for McCarthy hearings -- and that even his temporary absence from the televised hearings will certainly be noticed by his constituents on their TV screens.

Hearings begin Wednesday at unusually early hour of 9 a.m., will run through May 21, then recess until early June -- after NARTB convention. Potter will attempt
to attend most of uhf hearings, though he also will have to put in some time at the McCarthy airings -- particularly if things get hot there.

More than 40 witnesses are tentatively slated to appear before subcommittee, and requests are continuing to pile up at subcommittee office daily. FCC chairman Rosel Hyde will be leadoff witness May 19, followed by UHF Industry Coordinating Committee, RETMA and transmitter manufacturers. (For unofficial list of those due to appear, see p. 16.) Networks won't be heard until June session. In addition to probing uhf problems, hearing also will consider Johnson multiple ownership bill.

Mass presentation for uhf operators and grantees -- although many will also appear individually -- will be made by new UHF Industry Coordinating Committee, now boasting more than 65 station-members. Headed by Harold Thomas, WISE-TV, Asheville, N.C., and with ex-FCC general counsel Ben Cottone as attorney, group will hold membership meeting May 19 at Washington's Statler Hotel.

Complete re-allocation to reduce or eliminate vhf-uhf intermixture is one of main planks of Coordinating Committee's platform. Though group was formed primarily to represent stations at hearing, it now plans to become permanent organization and will hold meetings and have suite at Chicago's Palmer House during NARTF convention.

The other uhf organization, Ultra High Frequency TV Assn., headed by Lou Poller of WCAN-TV, Milwaukee, appears to be on verge of dissolving, though it has announced meeting for May 17 in Washington. Virtually all of its members are also on Coordinating Committee, and on May 14 its general counsel and Washington representative Wm. A. Roberts tendered resignation, said to have been indirectly due to objections raised by some uhf operators because of his connection with DuMont.

* * * *

Defending FCC's intermixture of vhf & uhf allocations, Comr. Sterling this week told Washington IRE meeting that Commission felt: (1) It was only way to provide adequate number of stations. (2) It would assure availability of vhf-uhf sets, which would have been required even in a so-called "non-intermixed" allocation, because many people would reside in areas where vhf and uhf service overlap.

He also urged manufacturers to include uhf tuners in all color sets, and dashed cold water on hopes of those seeking to wangle more vhf channels by using the 72-76 mc and FM bands. The former frequencies will be needed by CAA at least until 1963, he said, and latter would require "hearing of some proportions," running into opposition from FM licensees, prospective storecasters, hi-fi fans, and the fixed and mobile services which also would like to grab off part of FM band.

Imminence of hearing has had impact on other fronts. For example: FCC for several weeks has passed up action on petitions to add vhf channels -- such as Monroe, La. and Princess Anne (Norfolk), Va. It has also deferred action on requests by Buffalo's WBEN-TV and Huntington's WSAZ-TV that Zone I power-height ceilings be lifted to same levels as in Zones II & III. Commission could have acted on these petitions by now if it had wanted to.

FCC DEFINES FEE-TV AS 'BROADCASTING': FCC's initial discussion of subscription TV -- the first of any official significance, at least -- was good news to proponents of pay-as-you-look TV. Giving its views to Congress on pending Hinshaw bill (HR-6451), Commission stated its opinion that fee-TV, if ever authorized commercially, should be classified as "broadcasting" rather than "common carrier".

Subscription TV proponents have been horrified at Hinshaw bill's provision that their systems be regulated as are telephone and telegraph -- meaning that FCC would control rates and limit operators to "fair return" on their investments rather than permitting them to charge what traffic will bear under competition. General opinion is that no one would start fee-TV if Hinshaw bill is adopted.

FCC made it clear it hasn't decided whether or not to authorize pay TV. It noted merely that it has pending several petitions requesting commercialization and that "the entire problem is now being actively studied."

Commission didn't commit itself flatly on matter of rate regulation, however. In one place it said: "Although it might be felt desirable to subject subscription services to regulations as a public utility, the Commission does not believe that
classification of these services as 'common carriers' would be appropriate." But in conclusion it stated:

"Any subscription service which might be authorized will be likely to be faced with the natural forces of competition from other subscription operations (including 'closed circuit' operations by wire of the type now utilized in 'theatre television'), and from conventional broadcasts received by the public without direct charge. In the absence of experience in this field, we cannot now foretell the effect of these natural competitive forces and whether additional regulatory authority would be required in the future."

Commission thus doesn't rule out the "public utility" classification, which could mean controls as stringent as those applied to common carrier, but it prefers leaving economics up to competition if at all possible.

FCC opined that it now has adequate authority to institute a pay-as-you-look service and determine "the number and type of hours during which subscription programs could be broadcast by any station, the number of stations in any community which could engage in subscription operations at any one time, or the approved transmission standards for such operations."

History of "broadcasting" definition occupied much of the FCC's comments and conclusion is this: "The reliance of the broadcasting industry upon advertising revenue, rather than upon direct charges to the public as its principal source of revenue, has not been the result of any action by either Congress or the Commission, but rather the result of the natural development of the industry."

Though FCC's comments shed more light on subject, neither the Commission nor Congress is likely to hold hearings soon. FCC considers its hands quite full of other matters, notably uhf problem (see p. 3) and House Commerce Committee is up to its ears in hearings on health legislation and on Bryson bill to restrict liquor ads (HR-1227). Hearing on latter is set for May 19-21.

No Congressman other than Hinshaw seems excited about matter, but Hinshaw vows he'll get hearing on it if he has to tack it on as a rider to some other bill.

NARTB CONVENTION AGAIN DOMINANTLY TV: Even the sideshows at annual NARTB convention -- in Chicago's Palmer House, May 23-27 -- will be dominantly TV with a record turnout expected from the 255 TV station and the 4 TV network members, to say nothing of the 1128 AMs, 329 FMs, 114 associates. Fact is, NARTB's total membership of 1838 is a growth of 8% over last year's roster at this time.

Most noteworthy of the peripheral activities, aside from the usual big array of exhibits (heavily TV) and the many individual company parleys, is the organization meeting Monday of the well-backed Television Advertising Bureau, projected as a non-NARTB business group, with headquarters in N.Y., for purpose of promoting spot sales and for closer liaison with sponsors and agencies (Vol.10:17-19). Unique, too, will be the Sunday evening reception and dinner (May 23) which Sponsor Magazine is tendering the 108 pre-freeze stations, presenting each with a commemorative plaque in recognition of its pioneering, with Harold Hough, WABP-TV, Ft. Worth, as m.c.

Monday is really leadoff day, devoted entirely to side meetings: NARTB's TV board meeting to elect 5 directors, including possibly one being sought by uhf folk; also, the BAB board luncheon and meetings of CBS affiliates, NARTB sports committee, Daytime Broadcasters Assn., Clear Channel Broadcasting Service, Council on Radio Journalism, presidents of the state broadcasting associations, et al.

Big meetings start Tuesday morning, with CBS chairman William S. Paley delivering the keynote address. Same day, the joint management-engineering conference & workshop has GE's W.J. Purcell discussing "Economy in Technical Operations Through Organization and Management"; Eastman Kodak's Ralph Evans, "Seeing Light and Color"; NBC's Robert E. Shelby, "Results of Experience to Date in Color TV Operations." Also panels on labor relations and film buying, latter headed by KRON-TV's Harold See.

These mainspots for conventioneers most interested in TV problems will be followed Wednesday by various other sessions and a luncheon address by FCC chairman Rosel Hyde. Thursday morning's piece de resistance will be a roundtable discussion with all FCC commissioners except E.M. Webster on hand.

New FCC asst. gen. counsel in charge of litigation is J. Smith Henley, attorney from Harrison, Ark. He succeeds J. Roger Wollenberg, who had resigned some months ago to join Haley, Doty & Schellenberg. Henley served as city attorney of Harrison 1944-47, was referee in bankruptcy for Federal district court 1944-45. He's 37, married, has 2 children.

John Meagher, KYSM, Mankato, Minn., elected NARTB v.p. for radio (AM-FM), new post created by board at Jan. meeting in Phoenix.

J. H. Whitney & Co.'s $4,000,000 purchase of KOTV, Tulsa (Ch. 6) was approved by FCC this week, the big N. Y. venture capital concern acquiring property (Vol. 10:14) whose total assets as of last Dec. 31 were listed as $788,678, liabilities $665,003, with surplus of $11,762. It's one of biggest station deals on record, leading Conr. Lee, without dissenting, to issue statement expressing "growing concern" and stating that "large transactions such as this give me cause for alarm." He said: "The Commission transfer processes do not provide for the possibility of competing applications or comparative consideration of applicants as in the case of requests for original use of a channel. I am aware that this may be due to statutory limitations, and I do not suggest that this is inappropriate. But I am concerned because the transfer processing does not answer for me the question as to how the prospective purchaser would have fared in a comparative hearing." Sellers are Mrs. Helen Maria Alvarez, who founded the station in 1949, owned 50%; Jack Wrather, Okla. oil heir, 25%, his mother Mrs. Mazie Wrather, 25%. It was stated at time of deal that no personnel changes are planned. Mrs. Alvarez and Mr. Wrather, who also own 38.89% each of KFMB-TV & KFMB, San Diego (along with Edward F. Petry & Co., 22.22%), remain on stations' board along with Whitney partners C. Wrede Petersmeyer, Wm. H. Jackson & Robert F. Ryan.

Arthur B. Church's Midland Broadcasting Co., Kansas City, which Cook Paint & Varnish Co. proposes to acquire in deal involving $1,750,000 cash, plus assumption of about $865,000 in obligations and other considerations (Vol. 10:17), shows these original costs of various properties as of March 31, 1954 in transfer papers filed recently with FCC: KMBC-TV, $372,652; KMBC, $351,194; KFMB, Concordia, Kan., $129,679. Though depreciated costs are given, papers say that in nearly every instance replacement cost would exceed original cost. Midland's assets on Feb. 28 totaled $1,502,693. Fixed liabilities total $671,011, current liabilities $139,743, capital stock & surplus $691,938 (earned surplus account $283,748 as of Jan. 31, 1953). Purchaser's WHB Broadcasting Inc. balance sheet shows $380,141 assets & liabilities, latter including earned surplus of $482,669. HIB-TV shares time and ownership of transmitter with KMBG-TV and it's proposed to merge them into one basic CBS-TV outlet.

Transfer of Ch. 12 facilities of old KOLN-TV, Lincoln, Neb. from Fetzer family to trustee Byron J. Dunn acting for U of Nebraska (Vol. 10:14) can't be approved without hearing, FCC told John Fetzer. Commission said it looks as if Fetzer "would be in position to exercise a substantial influence in two TV stations in the same community if we were to approve [the transfer]." FCC letter says that Fetzer would own transmitter, operate it and "has agreed to reimburse the Trustee for reasonable expenses necessarily incurred in carrying out the trust, if donated funds are not available for that purpose." Commission notes that there's no commitment from the university and that application wasn't signed by its representative. Fetzers first bought KOLN-TV (Vol. 9:30,34), then KFOR-TV (Vol. 10:13), swapping channels and silencing the latter.

At FCC and in court, uhf stations continue attempts to block vhf grants or participate in vhf hearings. This week, WAIM-TV, Anderson, S. C., said it would appeal FCC's latest action in venerable Spartanburg site grant—granting of regular modification to WSPA-TV to build at Paris Mt. WENS, Pittsburgh, petitioned to intervene in suburban Irwin Ch. 4 hearing. Grantee KSPG, Tulsa, joined KCEB in protesting vhf grant in Muskogee (Vol. 10:19); surprisingly, vhf KOTV is also protesting.
Network Accounts: Firestone and NBC came to parting of ways this week when latter announced its Voice of Firestone, carried on the radio network Mon. 8:30-9 p.m. for last 25 years and simulcast with TV for last 5 years, would quit the network June 7 and be heard on "another network" next season. Company withdrew after NBC decided to make period available for new Sid Caesar show next season. Strained relations weren't mollified, apparently, when NBC pointed out that it was never contemplated that radio show should be changed since it's held its high ratings but that TV show has suffered drastic drop in ratings as Mon. night TV audience showed preference for light entertainment and melodrama, pointing to "opposition" of Arthur Godfrey Talent Scouts on CBS-TV at 8:30, followed by I Love Lucy at 9. NBC offered unavailingly to move TV show to Sun. 5:30 p.m., between Hallmark's Hall of Fame and Meet the Press—"both of which bear a cultural and educational imprint" and thereby "capture an increased all-family audience and arrest the downward trend of its rating"... Texas Co. (Texaco) buys Sat. 9:30-10 p.m. time segment on NBC-TV 3 out of 4 weeks for new comedy show featuring Jimmy Durante, starting in fall, thru Cunningham & Walsh... Florida Citrus Commission to sponsor Twenty Questions, which shifts from DuMont to ABC-TV starting June 29, Tue. 8:30-9 p.m., thru J. Walter Thompson... Toni to sponsor Kay Kyser's Colleage of Musical Knowledge on CBS-TV starting July 11, Sun. 7-7:30 p.m., thru Weiss & Geller... Bristol-Myers Co. (Bufferin & Vitalis) sponsors 10-10:30 a.m. segment of Arthur Godfrey Time simulcast on CBS-TV on alt.-day basis, starting May 11, thru Young & Rubicam... Lucky Strikes to sponsor Jack Benny Show in fall on alt. Sun. 7:30-8 p.m. instead of every 3rd Sun. on CBS-TV, thru BBDO... Pall Mall renews alt.-week sponsorship (with Dodge) of Danny Thomas in Make Room for Daddy on ABC-TV, Tue. 9-9:30 p.m., thru Sullivan, Stauffer, Calwell & Bayles... Sherwin-Williams Co. shifts Ray Bolger Show from Thu. 8:30-9 p.m. to Fri. 8:30-9 p.m. on ABC-TV in place of Pepsi-Cola Playhouse, which moves to Sun. 7:30-8 p.m., effective July 9.

New TV camera, image orthicon and flying-spot scanner have been announced by British Marconi. Camera chain, known as Mark III, was specifically designed for new 4½-in. image orthicon, which is claimed to provide "far better picture than any existing TV system is capable of transmitting." The 16mm film scanner is built around new Marconi fast pull-down mechanism. All equipment is available for use on British, European or American standards.

Tremendous pulling power of kiddie programs is shown in new Advertiser survey of 6 popular children's show in N. Y. area, based on 750-family sample. About 75% of parents interviewed reported they had been asked by their children to buy at least one product advertised on the programs; more than 93% of this group said they actually purchased one or more products as result.

McCann-Erickson on June 1 merges Wilkinson, Schiweitz & Tips Inc., Houston agency handling Humble Oil, Texas Rice Promotion Ass'n, Anderson Clayton & Co., among 28 other accounts. Joseph Wilkinson, pres. of Houston agency, will be v.p. & mgr. of new Houston office of McCann-Erickson; Kern Tips, exec. v.p.

Britain's record mile runner Roger Bannister flew to U. S. this week to appear on CBS-TV's I've Got a Secret and other TV shows, but appearances were cancelled when British Information Office decided he shouldn't come within a mile of commercial TV—to safeguard his amateur status.

Dr. Melvin Brodshau named dean of School of Public Relations & Communications, Boston U, which includes TV, radio & motion picture depts.

First sponsor of Army-McCarthy hearings, so far as known up to press time, is St. Louis Post-Dispatch, which bought the live show in full, as carried on DuMont by uhf WTVI. Its own station KSD-TV is on NBC, which isn't carrying the daytime proceedings and, moreover, its daytime is entirely committed. Newspaper thus performs good public service, gets good advertising, helps build up uhf audience. In Chicago, the Sun-Times, not listed as a sponsor, has been defraying costs of the hearings as carried on ABC's WKBK. The day-long hearings were opened to commercial sponsorship this week after Senate subcommittee voted to permit sponsors "in recognition of the value and service of live coverage to these committee hearings, as we have observed the results." Chairman Mundt (R-S. D.) explained he had received several calls from networks and stations complaining about cost of carrying hearings in full. Subcommittee authorized commercial sponsorship of the live telecasts only if they're carried in full and not interrupted for commentary; names of sponsors would be permitted only at beginning & end of hearings and during recesses. It said it was hoped networks will use "good judgment in the types of sponsorship which they secure since these televised hearings will be going into homes and some school classrooms." ABC-TV & DuMont, which have been carrying full hearings live, said they're now negotiating with several prospective sponsors. CBS-TV & NBC-TV declared they won't alter their present coverage of late-evening filmed highlights only.

Dept. store use of TV can be made very profitable with minimum of money and maximum of ingenuity, says man who is both telecaster & dept. store owner. George Gable, pres. of Wm. Gable Co.'s WFBG-TV & WFBG, Altoona, Pa., told Washington conference of National Retail Dry Goods Assn. this week his store had achieved "great merchandising success" with 1-min. films made in store, showing sales techniques, and he offered to make them available at print cost to other stations & stores. Films are carried with live commentaries and slides which can be superimposed to show prices, store name & locations, other pertinent information. Other speakers supporting Gable's thesis that more dept. stores should use TV were Armand Grant, WAAM, Baltimore; Ted Nicholaf, WFBM-TV, Indianapolis, and TV consultant Sam Cuff. Gimbels, big Philadelphia dept. store, tests effectiveness of merchandising via TV week of May 17 in 2-way tie-in with WPTZ & NBC-TV's Home (11 a.m.-noon). Store is buying series of spots on WPTZ to boost promotion, will arrange window displays featuring "as advertised on Home." Nineteen minutes of Home will originate from Gimbels May 20 via WPTZ.

Canadian professional football will be televised by NBC this fall in direct competition with NCAA college "game of the week" on ABC-TV. NBC for last 3 years has carried NCAA games, now will telecast 13-game Sat. afternoon series Aug. 28-Nov. 20 featuring Eastern Big Four teams and East-West playoffs. Canadian football, a rugged game somewhat different from the American variety, has attracted many former U. S. college and professional stars. CBC will supply NBC with video pickups via Buffalo, NBC providing own sportscasters. Financial terms of deal and sponsor not yet announced.

Newspapers outrank TV & radio in importance as news media, Catholic Press Ass'n. convention was told this week by Samuel Cardinal Stritch, Roman Catholic Archbishop of Chicago. "The public square of today is the daily newspaper," he said. "We should also add the radio and TV, but however great the importance of radio and TV may be in our times, the printed word is more important." The Cardinal added, however, that prestige of press has fallen because "it has failed in the responsibility which its very freedom imposes."
Telecasting Notes: Walt Disney TV show Disneyland, which starts on ABC next Oct. as part of new modus operandi signed by the network and the film producer (Vol. 10:14), will probably be slotted Wed. 8-9 p.m., opposite Arthur Godfrey (CBS). Filmed programs will be introduced by Disney personally, will run for at least 8 years under the contract—and many of them will be slated as promotion for Disney theatrical films and other Disney properties. Exclusive of time charges, the hour-long films reportedly will cost sponsor (as yet unsigned) $65,000 each for first runs, $39,000 for re-runs ... "Disneyland" project near Anaheim, Cal. will be workshop and locale for TV films as well as tourist attraction, and is described as "combination world fair, playground, community center, museum of living facts and showplace of beauty & magic." To be completed by mid-1955 at cost of $9,000,000 on 150-acre tract, project will employ more than 500, will be built and operated by Walt Disney Productions "in association with" ABC and Western Printing & Lithographing Co., Racine, Wis., which prints all Disney publications ... Officers of Disneyland Inc., elected May 13: Walt Disney, pres. & board chairman; ABC v.p. Earl Hudson, vice chairman; Disneyland gen. mgr. C. V. Wood Jr. (ex-Stanford Research) & Sidney Markley, v.p.'s; Disney Productions' George D. Kilmer & O. V. Melton, secy. & asst. secy. Also on board are Wood, Markley, Western Printing's Robert S. Callendar, Disney Productions treas. Paul L. Pease and American Bar Assn. pres. Lloyd Wright ... Significant quote from income report of Charles S. Skouras, pres. of National Theatres Inc., for half year ended March 27 (net income: $1,307,050 vs. $1,458,529 in 1953 period): "In the cities in the Midwestern, Rocky Mountain, Pacific Northwest and Northern California areas where TV competition has recently developed, there has been a substantial decline in attendance. However, the continued satisfactory operations in localities where TV competition has been intense for a number of years is most encouraging" ... TV may hurt at first, said chairman Alfred Starr of Theatre Owners of America at Arkansas theatremen's convention last week, its adverse effect on the movie business is only temporary and "there's no basic conflict between TV and movies." But, reports Motion Picture Herald, his optimism wasn't shared by all of the 350 Arkansas theatre owners who blamed declining receipts on TV, which became an important factor in their state only during last year ... "When a family gets its TV set paid for," said Mr. Starr, "then they can spend a couple of dollars a week going to the movies—and they will" ... More blame: CIO Textile Workers Union, at recent Atlantic City convention, heard its researchers report that TV is contributing to the decline of the clothing industry because homebodies prefer to loll around home and avoid dressing up to go out. Wherefore Variety comments that "one man's meat is another man's poison" and notes that TV must be "upheaving the furniture, log, electric bulb, soft & hard drink—and even the virtual industries "since video viewers are the hungriest people at the oddest moments" and suggests, "If textiles can't beat TV, why not join it?" ... Nielsen reports Rodgers & Hammerstein 4-network show March 28 for General Foods' 25th anniversary (Vol. 10:11) was seen in 21,060,000 homes, or 91.7% of total sets in-use ... KOA-TV, Denver, which lost tower in raging windstorm Dec. 6 but went on air few days later with temporary pole, has started erecting new 300-ft. Emco tower on Lookout Mt., with 6-bay 84-ft. RCA antenna due to be hoisted June 1; new tower gives 1030-ft. height above average terrain ... Arthur Godfrey, who represents some $10,000,000 or more of CBS's TV-radio billings, announced on air this week he must undergo another hip operation, presumably will go into hospital during his summer vacation ... DuMont's WABD and Elroy McCaw group's radio WINS have made deal to cross-promote their programs and personalities, WABD getting plugs on the radio station for its night programs, WINS on the TV for its morning shows ... New rep: KXLY-TV, Spokane, to Avery-Knodel ... Rep appointments for upcoming stations: WLAC-TV, Nashville (Ch. 5), to Katz; WTVW, Bangor, Me. (Ch. 2), to Venard, Rountoul & McConnell; WOSA-TV, Wausau, Wis. (Ch. 16), to Rambeau; WUSN-TV, Charleston, S. C. (Ch. 2), to H-R Television.

Educational TV was to dedicate its 6 stations and formally open its program center at Ann Arbor, Mich., Sun. May 16, with hour-long filmed telecast, Vision, containing excerpts of sample programs to be available. All 6 stations will carry program: KUHT, Houston; KTHE, Los Angeles; WKAR-TV, E. Lansing; WHA-TV, Madison; WQED, Pittsburgh; KQED, San Francisco. Program includes excerpts from The Exceptional Child, produced by N. Y. City Board of Higher Education; Stuttering from the Horse's Mouth, film on stuttering produced by U of Iowa; Independent Mr. Jefferson, produced by National Assn. of Educational Broadcasters; Baby Knows Best, produced by N. Y. municipal radio WNYC; Dept. of Defense film on Communism, moderated by George Kennan, ex-U. S. Ambassador to Russia; film on anthropology, featuring American Indian. In addition, problems involved in preparation of an educational telecast will be illustrated by excerpts from Adventure in Art, produced by U of Iowa.

Experimental boosters for Hawaii are proposed in application filed by IRESCO Inc. (International Research Associates, 2221 Warwick Ave, Santa Monica, Cal.). Pres. Lewis E. Brown says that units with output of 15 watts could be built for $5000 per channel, plus $1500 for power supply, and re-radiate Honolulu's signals into areas now shadowed. Organization had grant for KM2XFA, Palm Springs, Cal., but said it didn't build there because of "public relations and financial difficulties."

Next to be interconnected by AT&T Long Lines Dept.: KGLO-TV, Mason City, Ia. and WBTM-TV, Danville, Va., scheduled May 15; WGAN-TV, Portland, Me., May 16; WKNY-TV, Kingston, N. Y., May 23.

A 213-mi. 12-hop microwave costing $250,000 is sought by KXJB-TV, Valley City, N. D., in application filed with FCC this week. AT&T is building microwave to Fargo for WDAY-TV but KXJB-TV chose to seek own link rather than share single channel half-time. AT&T plans call for second channel by June, 1955. KXJB-TV says that AT&T service would cost $104,796 yearly for 8 hours a day, whereas its own link would cost $5000 monthly to run after being amortized by 1960. AT&T will undoubtedly oppose grant because private link would parallel own facilities from Minneapolis.

First closed-circuit TV political rally may be undertaken by Democrats for national meeting in Sept., provided money can be raised by local party committees. Proposed by WSB-TV's J. Leonard Reinsch, TV-radio consultant to Democratic National Committee, plan is to use facilities of Nate Halpern's Theatre Network TV, envisioning 100 theatres in more than 60 cities, with potential seating capacity of at least 100,000. Entertainers would alternate with political speakers in 90-min. rally. Tickets are expected to sell for about $100.

Closed-circuit TV sales conference will be held by Chrysler Corp. May 27 in 20 theatres and 6 hotels in 26 cities. Ford Motor Co. last week had 39-city theatre telecast, following successful 33-theatre show in January. The 3 productions were handled by Box Office TV Inc. Chrysler's Dodge div. also had 15-city dealer presentation in January, produced by ABC-TV and viewed in TV station studios as well as theatres lined up by Theatre Network TV Inc.
DELAYS in construction, and in some cases an apparent lack of determination to go ahead, are more and more manifest in replies to our questionnaires to CP holders asking for information on station plans. This supports our report last week that fewer CP holders are now hurrying to get on the air (Vol. 10:19), particularly uhf who are awaiting upcoming Senate hearings before deciding whether to go ahead at all. Four of the latter reported to us this week, quite frankly, that they haven't yet ordered equipment, have no construction plans as yet, no target dates in view—albeit 3 of them have held their CPs since last Dec., one since July 1953.

Shipments continue slow. RCA reports 25-kw transmitters shipped May 11 to upcoming KHOF, Stockton, Cal. (Ch. 5), and May 14 to KKW-TV, St. Louis (Ch. 4). GE's only reported shipment for week was 12-kw amplifier to KEDD, Wichita (Ch. 16), but it also had order for 5-kw transmitter, with antenna and studio equipment, from Denver Public School's projected KRMA-TV (Ch. 6, educational), which has indicated Dec. 6 target.

In our continuing survey of upcoming stations, these were the reports received this week:

WUSN-TV, Charleston, S. C. (Ch. 2), plans Sept. 26 commercial start as NBC & DuMont affiliate, reports pres.-gen. mgr. J. Drayton Hastie. It will be second station there. WCSC-TV (Ch. 5), which began last June 16, has CBS & ABC. Philip D. Porterfield named gen. sales mgr. H-R Television will be rep.

WTWO, Bangor, Me. (Ch. 2), with tentative order for RCA equipment, is working on construction plans, but hasn't set target, reports pres. Murray Carpenter. Plans are to build own 50-ft. tower atop Riders Peak, Holden, Me. Rep will be Venard, Rintoul & McComb.

WBGH-TV, Boston, Mass. (Ch. 2, educational), is installing RCA 10-kw transmitter in building on Blue Hill and plans Aug. test patterns, Oct. programming, reports gen. mgr. Parker Wheatley. It has leased 11,000-sq. ft. for studios opposite M.I.T. in Cambridge. Make of 132-ft. tower not determined yet, but 101-ft. RCA 6-bay antenna will be used.

WMVT, Montpelier, Vt. (Ch. 3), planning September start, now is building half mile of mountain road to transmitter site, and within few weeks expects to begin work on transmitter house atop Mt. Mansfield, state's highest peak, reports sales mgr. John A. Dobson. Building will house 5-kw GE transmitter, two 50-kw power generators, and living quarters for 2 engineers. Its 4-bay General Electric antenna on fifty-foot Blaw-Knox tower will be 2720-ft. above average terrain, and signal is expected to reach as far north as Montreal as well as neighboring New York and New Hampshire. Montpelier studio facilities are being arranged with WSKJ; Burlington studios will be in new TV-radio building going up on eastern outskirts of city. Signed as primary CBS affiliate, but also expecting to use programs from other 3 networks, it hopes to get AT&T microwave connection with Albany. Weed will be rep.

WMBV-TV, Marinette, Wis. (Ch. 11), transmitter house scheduled to be ready May 20 for 10-kw RCA transmitter due this month, still plans July 14 test patterns and Aug. 1 programming as Marinette-Green Bay area's NBC affiliate, reports gen. mgr. Joseph D. Mackin. It will build 500-ft. tower with RCA 12-bay antenna at original CP site, plans to have it completed by end of June. Decision not to build at new location midway between Marinette and Green Bay was made after WFRV-TV, Green Bay (Ch. 5)—which got CP week before FCC approved site change for WMBV-TV—wrote that it intended to protest change to new location. George W. Clark will be rep.

WUNC-TV, Chapel Hill, N. C. (Ch. 4, educational), 25-kw RCA transmitter ordered for delivery in June or July and RCA 6-bay antenna due in Aug., plans Oct. 1 test patterns and Oct. 6 programming, writes TV director Robert F. Schenkkan. It's taking bids on construction of 800-ft. tower, wants it ready in Aug. Facilities will include mobile unit and studios at Chapel Hill, State College, Raleigh and N. C. Women's College, Greensboro—each with 2 cameras and film chain—linked by microwave to Chapel Hill transmitter.

WLAC-TV, Nashville, Tenn. (Ch. 5), now plans June 15 test patterns, July 1 programming, reports T. B. Baker Jr., who will be 25% owner, with Al Beaman owning 25% and Casualty Insurance Co. of Tennessee owning 50% (Vol. 10:19). Its RCA 10-kw transmitter is 90% installed, and 1000-ft. Idecu guyed tower with RCA 12-bay antenna is scheduled to be ready by June 15. It will be CBS affiliate. Rep will be Katz.

WBTW, Florence, S. C. (Ch. 8), has 50-kw RCA transmitter due in July, plans Sept. 15 test patterns, programming "on or before Sept. 26," reports gen. mgr. J. William Quinn. Its 750-ft. Kimco tower with RCA 12-bay superturnstile antenna are scheduled for completion in June. Owner Jefferson Standard Bstg. Co. also operates WBTV, Charlotte, and owns 16.5% of WFMV-TV, Greensboro, N. C. WBTW will be basic CBS, will also carry pro-WBTV origination. Rep will be CBS-TV Spot Sales.

WTHT-TV, Terre Haute, Ind. (Ch. 10), its 548-ft. Beasley tower and RCA antenna about ready, has reported June 15 test pattern target, July 1 programming, primary non-interconnected CBS affiliations. Joe Higgins is gen. mgr. of both TV & radio; Ben Falber Jr., WTHI-TV station mgr.; Pat Murphy, technical director; Louis Froeb, continuity director; Don Petit, chief engineer; Russ Arnold, asst. chief engineer. Base hour will be $400. Bolling will be rep.

WOSA-TV, Wausau, Wis. (Ch. 16), is still negotiating for transmitter & tower but hopes to get going next Sept., reports owner Congressman Alvin E. O'Konski. It has approval of CAA for tower on Rib Mt., but local planning board is delaying site approval. Rep will be Rambeau.

WQXI-TV, Atlanta, Ga. (Ch. 36), hopes to be on the air with test pattern in early Aug., reports owner Robert W. Rounasville, who also holds CPs for WQXL-TV, Louisville (Ch. 41) and WQXN-TV, Cincinnati (Ch. 54). Earlier in year, he ordered 3 complete uhf station packages, with Continental 1-kw transmitters, from GPL (Vol. 10:7) but deliveries have not been reported. WQXI-TV rep will be Hollingbery.

CHCH-TV, Hamilton, Ont. (Ch. 11) has completed installation of 10-kw RCA transmitter, tentatively plans June 5 test patterns, reports asst. mgr. S. J. Bibby. Dominion Bridge Co. has completed 300 ft. of 540-ft. tower which will have RCA-designed wavestack antenna. Joint owners are radio stations CKOC, CHML & CJSH-FM, with CHML's Ken Solee as gen. mgr. Base rate will be $300. Reps will be Adam Young (for U. S.) & All-Canada Television.

WIIR are new call letters for originally-licensed WBLB, Bloomingdale, N. Y. (Ch. 5), near Lake Placid, to be operated by owners of radio WIRY, Plattsburgh. Gen. mgr. Joel Scheier reports no equipment ordered yet, no target date, but request for modification of CP to locate transmitter to Terry Ml., near North Pole, N. Y., with higher power, was filed with FCC last week.

Tips to broadcasters on hiring staff are contained in NARTB's new 8-chapter Employment Handbook, mailed this week to all members.
'TUBE PRICES ARE ALL OVER THE MAP': Cheap or expensive, all TV sets require picture tubes -- and so the tube makers say their orders have held up quite nicely for this time of year. But, like set makers, they complain they would like to make some money.

As in the present receiver market, there seems to be no pattern to the price structure of the highly competitive picture tube business. Just when it seemed that prices might be ready to stabilize, Sylvania surprised the industry this week by cutting about 75c off the manufacturers' cost of the popular 21-in. types. This happened shortly after GE had increased prices of its aluminized tubes.

Most of the industry sat tight, although CBS-Hytron followed Sylvania with lower prices. As a large independent tubes maker put it, "Prices are all over the map. No two manufacturers have the same prices, and there isn't one that can't be bargained with. Sure, we're busy with orders, but we can't even break even on them."

One of the biggest OR tube manufacturers called the price picture "extremely confusing" and added: "Nobody is getting rich in this business now. We're just trying to live. And we're not going to cut prices any more if we can help it."

Firming up by fall, at latest, is generally expected in the industry, particularly if today's big swing to aluminized tubes continues. Aluminization process, which is supposed to produce brighter pictures, is so difficult and touchy that some tube makers think they'll have trouble keeping up with orders for aluminized tubes next fall, by which time the law of supply & demand should dictate stable levels.

Aluminized tubes sell for about 50c more than non-aluminized today, despite fact they cost some $2 more to make. Hence large portion of tube industry is hailing GE boost as step in right direction -- many complaining it didn't go far enough.

PHILCO STRIKE ACCENTS SEASONAL DIP: Effects of the Philco strike, on top of normal seasonal decline, are reflected in RETMA report for week ended May 7 -- which shows output of 103,563 TV units as against 120,687 week before. Oddly enough, radio output actually went up -- to 167,445 for week (including auto radios) from 163,289.

May 7 week's TV factory & distributor sales were about 75,000 each, down from 100,000 & 90,000 respectively for preceding week. The 75,000 totals were about same as in like week of 1953, when output was 126,905. Retail figures weren't available.

It's presumed factory output was down again in week ended May 14, for which RETMA will report May 21, because the Philco strike was still on. There was no sign of early settlement as it went into third week. A 4-hour session of company, union and Federal mediator this week proved fruitless -- although executive and salaried personnel finally got into their offices in struck Philadelphia plants with police escorts after union defied court injunction against mass picketing for 3 days. Rest of 10 TV-radio-electronics plants in Croyden, Pa. & Sandusky, O., where injunctions were not sought, remained completely shut down.

Other set makers said strike has had no noticeable effect on their business. One major Philco distributor told us sales were continuing as usual, but inventory is going down fast. He would not forecast what the weeks ahead would bring.

The industry's TV inventory position at all levels is still considered good, though it has been rising slowly at factory level during last 3 weeks. Most recent figure is said to be around 1,650,000 -- well below last year at this time and still regarded as "comfortable" -- even described by some as too low.

Radio inventories, on the other hand, have soared to about 3,500,000, not counting auto radios, up about 1,000,000 from this time year ago -- regarded as way too high for comfort and in some quarters as a cause of genuine alarm. Radio sales have been down at all levels this year from 2 preceding years. Radio output this year has shown increases over preceding weeks in only 4 of 18 weeks.
April TV sales held up better than the industry anticipated, indicating that second quarter may not be too bad if May & June don’t dip below seasonal expectation. April factory sales totaled about 450,000 (as against production of nearly 500,000) and ran about same as April 1953. April distributor sales were about 440,000 (also about same as April year ago). A preliminary tabulation on retail sales indicates around 400,000 TVs were sold, compared to some 320,000 a year ago.

TV production aggregated about 2,020,000 for 13 weeks through May 7, compared to about 2,950,000 same period 1953; radios, 3,480,000 vs. 5,000,000.

Price situation continues as uncertain as reported here last few weeks, with most set makers bidding against June-July marts and conventions. There was still inclination to believe prices would have to firm up against the lowering trend of recent months, especially in view of relatively poor first-quarter financial statements of most manufacturers. On the other hand, demand for cheaper items won’t down — and it’s learned that Hallcrafters, already out with 17-in. table at $150, will shortly introduce 21-in. table at $180, or $20 below its lowest current 21-in.

Color’s effect on market certainly isn’t discernible at this time. Actually, RCA and a few others are saying color sets are building store traffic, even accounting for some black & white sales. RCA spokesmen express themselves as “satisfied” with sales of the 4000 sets they put on market over last few weeks, but the company declines to estimate retail sales total, claims it doesn’t know yet.

Westinghouse recently conducted survey of N.Y. dealers with its color sets on their floors, came up with these findings: (1) Customers listed lack of sufficient color programming as biggest obstacle to purchase of color set now; second factor was small screen, third was high price. (2) More than half of dealers said they were trying hard to sell color but would switch to monochrome at first sign of consumer resistance. (3) Only half of dealers thought traffic was stimulated by color.

Sen. Russell Long (D-La.) said this week he’d offer amendment to general tax bill (HR-8300) to give excise tax relief to TV-radio manufacturers (Vol. 10:13,16) only if it appeared Senate was going to defeat amendment by Sen. George (D-Ga.) to raise personal income tax exemptions. If George amendment is adopted, he said he wouldn’t propose excise tax amendment.

Sylvania laid off 200 TV assembly workers and eliminated 2 production lines this week at Buffalo plant in anticipation of transfer of most TV production to new Batavia, N. Y. plant, expected to be in full operation by July. Quarterly report discloses that picture tube div. is concentrating on aluminized tubes to extent of about 70% of production, also on 21 & 24-in. sizes.

RCA and IUE-CIO reached agreement May 14 on wage increases for more than 12,000 workers in 4 plants, including 8800 in Camden and others in Moorestown, N. J., Cincinnati & Santa Monica, Cal. Terms weren’t divulged, though agreement was under wage-reopening clause in 2-year contract running to June 1, 1955.
**Topics & Trends of TV Trade:** Annual distributor conventions for introduction of fall TV lines get under way in June, continue through July. Most lines which have been introduced by then will be shown to dealers week of June 27 at American Furniture Mart and Merchandise Mart in Chicago. These manufacturers have thus far announced distributor conventions as follows:

Admiral, second week in June at unidentified Chicago hotel; Arvin, July 18 at Grove Park Inn, Asheville, N. C.; Capehart-Farnsworth, June 7 at Ft. Wayne’s Hotel Van Orman & June 28 at San Francisco’s Hotel St. Francis; DuMont, June 15 at New York’s Hotel Statler; Hoffman Radio, July 7 at Los Angeles’ Huntington Hotel; RCA, annual meeting of field reps June 7 at Atlantic City’s Haddon Hall Hotel; Raytheon, June 17 at Chicago’s Sheraton Hotel; Stromberg-Carlson, July 26 at Rochester plant; Sylvania, July 14 at Buffalo’s Hotel Statler & Erlanger Theatre; Zenith, July 15 at Chicago’s Drake Hotel.

Philco’s convention, scheduled originally for latter June, is an uncertainty as result of strike at TV-radio-electronics plants in Philadelphia, Croyden, Pa. & Sandusky, O.

Business failures among TV-radio-appliance retailers in first quarter of 1954 ran somewhat ahead of corresponding period year ago, while failures among distributors were about even with 1953, reports Dun & Bradstreet. Some 128 retail failures were recorded in first 3 months this year, compared to 82 last year. Thirteen distributors failed vs. 12 in 1953. Report didn’t indicate what percentage of the total these business failures represented. It defines a failed business as one that “ceased operations as a result of assignment to creditors, bankruptcy, or resulted in loss to creditors.”

DuMont may start production of radio sets by fall if present plans of marketing v.p. W. H. Kelley are approved by Dr. DuMont. Despite current softness of radio market, Kelley is anxious to round out DuMont line with a few home & portable radios. Final decision is expected within several weeks.

New RETMA brochure, TV & Radio Service Instruction in Your Community, outlining recommended course for training technicians, was mailed this week to industrial & trade schools. Prepared in cooperation with N. Y. Trade School, it’s available free from RETMA.

**Electronics** has attracted quite a few companies not even remotely connected with it originally—and Chicago financial consultant Edgar Greenebaum Jr., specialist in TV-radio-electronics fields, cites as prime example of this “swing” the 72-year-old Westinghouse Air Brake Co. in the study he has just completed for Television Digest (see p. 1). Its complex control equipment was improved with electronic applications, and a subsidiary Union Switch & Signal Co. manufactured electronic control equipment for guided missiles during World War II. Thereafter it acquired Melpar Inc., now its research & development subsidiary specializing in electronics.

American Machine & Metals Inc. was primarily a manufacturer of heavy industrial equipment, including laundry machinery, when in March 1944 it bought United States Gauge Co., designers & manufacturers of electronics instruments. Fairbanks, Morse & Co., known for scales, internal combustion engines and other heavy equipment, announced last month it was setting up an electronics division for various products. And Crane Co., which had acquired Hydro-Aire Inc. in 1951, is now working on transistors as well as electro-mechanical actuators and other aircraft equipment—a far cry from plumbing fixtures & valves.

First big record company to put its record on tape is RCA Victor, which has teamed up with Magnecord Inc., Chicago tape recorder manufacturer, to provide recorded music service for industry, hotels, etc. Music from RCA’s record library will be put on magnetic tape and delivered by Magnecord to subscribers on 8-hour reels designed to play automatically on special tape-player designed for the functional music system. Webster-Chicago this week entered recorded music business, shipping first 6 reels of high-fidelity music on magnetic tape.

**N. Y. Better Business Bureau,** strengthening its campaign for more ethical advertising by TV-radio-appliance retailers, last week issued new regulations requiring that prices listed in ads cover all charges a customer must pay and that tube sizes should be listed whenever size is mentioned. Also, ads claiming special sales or reductions should not be used unless claim applies to all items in ad. Major TV chains & dept. stores pledged compliance.

Radio shipments to dealers, excluding auto radios, totaled 565,770 in first 2 months (when production was 915,810), according to state-by-state & county-by-county breakdown available from RETMA. Shipments in February alone were 291,294, compared to 274,336 in Jan.

“Raytheon: Learning New Markets for Electronics” is cover story in May 15 Business Week, with particular emphasis on Radarange, electronic computer, which makes consumer debut next fall when it will be built into stove made by Tappan Stove Co.

The TV-radio patent situation is subject of series of 5 articles by TV-radio editor Martin Rosenblum starting in Retailing Daily, May 17.

Textron Inc. is a vivid example of “diversification into electronics.” Big textile firm last Jan. acquired Dalmo Victor Co., specializing in airborne antennas for the military. Another example might be in the making: Elgin National Watch Co. pres. J. G. Sherman recently announced: “In building an expanded and diversified future, it is natural that Elgin should select for exploitation certain frontier fields in which its technology can be applied most effectively. From among these we have chosen 2—miniature electronics and precision production instruments.” About 2 years ago, New Haven Clock Co. acquired Condenser Products Co., medium-sized maker of capacitors. Bulova Watch Co. makes quartz crystals, has other diverse activities in electronics.

Gabriel Co., maker of shock absorbers, went into the antenna field in 1946 by acquiring Ward Products Corp., and 5 years later added Workshop Associates Inc., antenna experts. General Mills Inc. a few years ago set up an electronics division to turn out involved radar and other gear, is keeping it going even though it’s selling out its appliance business. Goodyear Tire & Rubber Co. has done considerable work on electronic computers. General Motor’s AC Spark Plug Div. made electronic gear during the war, still is doing so. Willys Motors has set up an
electronic div., is making passes at the TV-radio-communications transmitter field, does military electronics work.

American Car & Foundry Co. (railway cars) also owns Avion Instrument Corp., recently set up ACF Electronics div. under Robert Henry, developer of "project tinkertoy" for Bureau of Standards, to manufacture printed-circuit & automatic-production components for military & civilian applications, including TV (Vol. 9:38 & 10:12). American Machine & Foundry Co., originally set up to make machinery for the tobacco industry, acquired Transducer Corp. in 1948, has been increasing its work in electronics ever since.

Daystrom Inc., once called American Type Founders Inc., has gone a long way from the manufacture of printing equipment since the war when it first produced electronic devices; its instrument division is still an important supplier of electronic gunfire control systems for the Navy, and its Daystrom Electric Corp. makes film, wire & magnetic tape recorders. And the Margenthaler Linotype Co., it's rumored, will shortly introduce an electronic photo-composition machine.

California Eastern Airways Inc. was primarily in air transportation until it acquired Wireway Corp of America and Land-Aire Inc., the former specializing in tape recorders, the latter in range instrumentation operations and electronic engine analyzers.

General Precision Equipment Corp. originally made items for the movie industry; 13 years ago it acquired Librascope Inc. (computers, etc.) and then it kept on diversifying until now it has the Kearfott Co., Ampco Corp. and Link Aviation Inc. Cleveland Graphite Bronze Co. changed its name to Clevite Corp. in 1962, shorty after acquiring Brush Development Co., now Brush Electronic Corp., and early last year it added Transistor Products Inc. Also in Cleveland, Thompson Products Inc. owns 49% of Ramo-Wooldridge Corp., specialist in advanced electronics research, and all of Bell Sound Systems Inc. and Dage Electronics (TV cameras).

Minnesota Mining & Mfg. Co., besides working on magnetic tapes, got further into the electronics field last year by buying American Lava Corp., component maker, and Irvington Varnish & Insulator Co. Bell & Gossett Co., specialist in hot water heating equipment, has developed a new electronic communications & control device. Carnation Co. was so successful in designing its own electronically-controlled automatic milk handling equipment that it's now selling it to others.

Dowser Inc., maker of equipment ranging from gas pumps to beverage filters, in 1951 took over National Scientific Laboratories Inc. (electronics engineering) and Gudeman Co. (capacitors). Carburation Co. makes resistors in its Globar Div. Thor Corp. (washing machines) last year bought Phillips Control Corp. (relays). Claude Neon Inc.'s primary activity today is electronics. Permutit Co., basically in the water softening business, makes electronic controls through subsidiary Simplex Valve & Meter Co.

* * *

Both Paramount Pictures Corp., which owns a TV station in Los Angeles, and its offshore American Broadcasting-Paramount Theatres Inc., which owns a TV network with 5 stations and a radio network with 5 stations, are up to their ears in electronics. The former owns about 75% of DuMont, half of Chromatic Television Laboratories (color tubes); 54% of International Telemeter Corp. Latter does research on electronic computers as well as experiments in pay-as-you-look TV. AB-PT owns 50% of Microwave Associates Inc., researchers. Storer Broadcasting Co. will take over Empire Coil Co. as part of big TV station deal (Vol. 10:2).

Electronics Reports: Electronic psychologists, factories and supermarkets—these may be products of the "electronic revolution" of the next 25 years, as foreseen by Hallicrafters pres. Wm. J. Halligan in May 12 address to National Conference on Airborne Electronics at Dayton. Some of the "new electronic applications which will reach into practically every phase of our living": Electronic retailing—the push-button supermarket—which already has made a beginning with self-answering telephones, revolving turntables and closed-circuit TV in some stores. Air conditioners, ranges, auto headlights and brakes, controlled electronically are already in stages of research & development. In the field of medicine, $1 billion worth of electronic equipment is already in use; GE is now testing "robot psychologist, which quickly computes problems in statistical psychology" for Army personnel placement; "scientists believe that it is not inconceivable that we will have electronic devices that act as substitutes for heart and lungs while these organs are being operated on."

World's most powerful electron microscope—with twice as great magnification as any now in use—was presented to Sweden's Karolinska Institute at ceremonies May 11 at United Nations. Built by RCA and purchased under Rockefeller Foundation grant, it permits study of particles smaller than 1/10,000,000-in. diameter. Automatic camera in instrument takes photographs which can be enlarged up to 200,000 times size of the specimen—scale at which a dime would measure more than 2 mi. across. Introduction of new microscope coincides with 15th anniversary of development of first electron microscope, produced by RCA in 1939, said RCA v.p. Theodore A. Smith at the UN ceremonies.

Symposium on Global Communications, sponsored by IRE in Washington, June 23-25, will feature addresses and papers by Haraden Pratt, former telecommunications advisor to the President; Brig. Gen. R. V. D. Corput Jr., director of communications-electronics for Joint Chiefs of Staff; Wm. D. Porter, asst. administrator for telecommunications, Office of Defense Mobilization; Francis Colt DeWolfe, telecommunications chief, State Dept.; Edward W. Allen Jr., FCC chief engineer; George W. Gilman, systems engineering director, Bell Labs.

Daystrom Inc., Elizabeth, N. J. manufacturers of printing equipment, furniture and electronic equipment, has offered to buy 50,000 shares of Weston Electrical Instrument Corp. stock at $25 a share, and has requested Weston holders to submit tenders to Chase National Bank by May 24. Only shares purchased before May 1 will be considered. Weston stock closed at 22 1/2 May 1, day of the Daystrom announcement.

Electronic clinical thermometer which takes temperatures in 5-7 seconds was demonstrated this week by Army Surgeon General's office in Washington. Invented by Army dentist Col. George T. Perkins, it's called "Swifterm" and is being manufactured under Army contract by Burlington Instrument Co., Burlington, Ia. Presently available models for doctors cost $60-$70, company spokesman said. Household model at $15-$25 is being developed.

Transistorized audio amplifier to provide practical plug-in emergency service in airborne communications in event of failure of aircraft intercom amplifier or power supply, has been developed by RCA, engineer D. E. Shumaker told National Conference on Airborne Electronics in Dayton May 11.

New supersonic guided missile, "The Sparrow," under development for 7 years, is now being produced for Navy by Sperry Rand Act Corp., Bristol, Tenn. Performance details of rocket-powered missile are secret, but reportedly it's launched from jet fighter planes while in flight, can be guided accurately to destroy target aircraft.
Color Trends & Briefs: Ad agencies look at color in hard terms of set circulation and little else, Advertising Age found in poll of top agencies, following up NBC pres. Pat Weaver’s adjuration to recent convention of American Assn. of Advertising Agencies (Vol. 10:18 and Special Report, May 1).

Magazine surveyed TV-radio heads of 10 major agencies, said it found only one “in the proper frame of mind to be sold on the idea of having the client spend extra money to sponsor color casts within the next few months.” Asking for reactions to NBC-TV’s projected “spectaculars” scheduled this fall (Vol. 10:13), Advertising Age noted that agencies “have been weighing them not so much for the color plus as for their potential effectiveness as monochrome TV vehicles.” It noted, however, that Chrysler is about to announce sponsorship of 13 Monday spect-aculars. Sample reactions:

C. Terence Clyne, Biow: “They tell us there’ll be a couple thousand color sets by fall. That’s not very important to an advertiser.” Has experimented with color film spots, working with NBC, but isn’t satisfied yet.

John U. Reber, J. Walter Thompson: Experimenting, but has had no demand from clients for color this fall.

Robert Foreman, BBDO: “Dickering on a lot of things for fall,” but no one rushing to order time on spectaculars. “It’s inevitable with the number of clients we’ve got that some of them will be in color this fall. But color per se doesn’t bulk large in our thinking. Whether or not we buy these programs will depend on the audience they reach for the money. I can’t conceive of anyone buying a show just because it’s in color.”

L. T. Steele, Benton & Bowles: “We hear that NBC plans to televise Home in color on a regular basis in the fall. We have participants on the show. If such is the case, we’ll be doing color in the fall, but we don’t expect to pay more for it.”

F. C. Barton Jr., Lennen & Newell: If spectaculars are sold, it will be because they are excellent black-&-white shows. “The color part will be inconsequential.”

Dan Seymour, Young & Rubicam: “We have several clients who want to get into TV. The color show will be in good time and this might be one way to get them into TV. But we need to know more about the shows.”

F. M. Gillham, Cunningham & Walsh: Present attitude is “wait-and-see.”

Two agencies asked not to be identified. One of them “may well be one of the first agencies to place an advertiser in the NBC-TV spectaculars for fall.” Other said it has tested all its clients’ products in color but isn’t yet ready to advise them to buy color.

NBC announced, meanwhile, that its first color spectacular is scheduled Sept. 12, starring Betty Hutton in a musical comedy with an original book commissioned by producer Max Liebman. Liebman will produce 20 of the 90-min. shows next season, the second on Sept. 25.

Complete color studios will be displayed by both GE and RCA at NARTB convention in Chicago’s Palmer House, May 23-27. GE will show CBS-developed field-sequential camera with its “Chromacoder,” continuous-motion 16mm film scanner, slide scanner. RCA will have its regular color camera, plus 3-vidicon film and slide camera. Both will demonstrate closed-circuit pictures. Both will also show 50-kw vhf and 12½-kw uhf transmitters, black-&-white cameras, control equipment, microphones, etc. RCA also announced this week that its image orthicon specially developed for color camera (type 6474/1854) is now commercially available.

DuMont tri-color tube was shown to set makers and DuMont’s tube licensees May 10-11, and viewers were generally impressed, as were network engineers, film producers, newsmen and others at earlier showings (Vol. 10:18). A typical reaction was that of west coast receiver manufacturer H. L. Hoffman who said, after attending demonstration: “It’s a step in the right direction. The larger picture and better convergence are quite desirable. This was a progress report, and I’d have to see it in production, but I was favorably impressed. Our objective is a 21-in. rectangular tube at about $100.” Samples were promised in 30-60 days, with regular production plans to be indicated later. Dr. Allen DuMont said production rate will be able to handle “a reasonable demand,” and tube sales mgr. Bill Scales said deliveries will come in time for pre-Christmas set sales. Dr. DuMont says he can’t visualize any type of color tube likely to be less costly to produce. “The blank and the gun cost about the same for all tubes,” he says. “The difference is in the mask and screen. RCA charges $100 for its assembly; Lawrence assembly costs $125. We pay $20 for ours, and I think it will go down to about $8. It looks as if the cost of color tubes will get down to about double that of black &-white or a little more.” FCC commissioners and top staff members attended demonstration in Passaic May 14. All commissioners except Webster attended, with these of staff: Curtis Plummer, Joseph Kittner, James Barr, Edward Chaplin.

Metropolitan Museum of Art colorcast May 8 by NBC-TV’s mobile unit prompted unanimous huzzahs by critics and led Museum director Francis Henry Taylor to state that he expects color TV to “revolutionize” appreciation of art just as radio did for music. As we viewed program, it epitomized what color TV can do and showed how color is opening completely new areas of programming. Variety’s Abel Green conjectured that program “may well have set the pattern for a new type of tinted TV showmanship.” New York Times’ Jack Gould wrote: “For the viewer, sitting in the familiar surroundings of his own home, the experience of looking across the room and seeing a masterpiece in color was almost uncannily exciting and absorbing.” Mr. Taylor conceded that art “purists” might consider color TV’s fidelity slightly lacking but he noted that early Caruso recordings had to precede today’s high fidelity reproduction. Scripps-Howard columnist Fred Othman, reporting experience viewing program at home with set on loan from GE, called it “downright gorgeous.” Shown on program were paintings by Pieter Breughel, El Greco, Rembrandt, Van Meer, Manet, Cezanne and Van Gogh, plus 4000-year-old Egyptian ceramic hippopotamus, 2500-year-old Arabian bronze bull, Greek bronze horse.

Leasing plan for color sets, started April 1 by Emerson (Vol. 10:10, 12), has produced little public acceptance, pres. Benjamin Abrams stated this week. Without disclosing number of sets leased, he said, “It cannot be denied that consumers have little desire for color TV with small screens and infrequent programming.” Plan was offered in New York, Philadelphia, Chicago, Los Angeles. Rates are $200 for first month, $75 monthly thereafter.

Further development of Lawrence color tube is reported by Chromatic TV Labs, pres. Richard Hodgson stating that grid is now “radiation-suppressed” and that picture area is true rectangle 14½x11-in. Tube is 25-in. long, uses glass envelope. Delivery of samples to set and tube makers is due in 60 days.

Color set census started by WSAZ-TV, Huntington, W. Va., shows 29 receivers in area as of May 1.
Financial & Trade Notes: Columbia Broadcasting System Inc. achieved remarkably good first quarter volume and earnings to large extent by reason of huge upsurge in TV network & station time sales and strong record business. CBS also had advantage of continued leading position in network radio time sales (for latest PIB figures for network TV and network radio, see Vol. 10:18) and, though its quarterly report isn’t broken down, presumably enjoyed good business at manufacturing subsidiaries, too.

Consolidated CBS gross income rose to $90,974,553 for quarter from $76,454,815 for corresponding 3 months of 1953. Earnings before taxes were $6,466,955, after taxes $2,566,955 ($1.22 a share), which compares with $5,758,149 & $2,393,148 ($1) for first 1953 period. It’s noteworthy that the CBS volume for first 1954 quarter alone approached the $98,377,258 for all of 1948, when it wasn’t in the set & tube manufacturing business and when net profit was $5,041,682 ($2.94 a share). Since 1948, the CBS rise has been impressive:

Admiral Corp.’s first quarter sales dropped 19% to $55,977,652, net earnings 51% to $1,504,044 (64¢ a share), according to May 11 report by exec. v.p. John B. Huarisa. These compared with $69,191,849 & $3,056,878 ($1.30) in same 1953 quarter. Bottom of current readjustment period has been reached, said Huarisa, and sales and earnings should improve during rest of year. During quarter, TV dealers sold as many receivers as in first 1953 quarter but large share moved from inventories, now at low level.

Appliance sales and international sales were at higher level, Huarisa reported, and company’s new 125,000-sq. ft. fiberglass div. plant in West Chicago is shortly going into production of a droppable fuel tank developed for the Air Force. Fiberglass div. also has developed new lightweight insulating freezer chest liner. Admiral had scheduled more than 3000 of the 15-in. color TV sets for first quarter but slashed this to a few hundred in favor of 19-in. schedule next fall.

Among officers’ and directors’ stock transactions reported by SEC for March: Frank H. Sparks sold 200 Arvin, holds 7050; Malcolm Ferguson bought 300 Bendix, holds 1263; Lloyd H. Coffin sold 700 CBS last Dec., 1000 in Feb., holds 9090; Louis Abrams trusts bought 500 Emerson, he personally holds 47,663, trusts hold 1050; Paul R. Doezl bought 1100 Indiana Steel Products, holds 1800 personally, 3080 through trusts; Harry A. Ehle sold 1000 International Resistance, holds 17,500; Bruce R. Tuttle bought 100 Olympic Radio, holds 100; Arthur L. Chapman bought 147 Sylvania, holds 503.

Fundamental Inventors Inc., big mutual investment company headquartered in Elizabeth, N. J., discloses in current prospectus that as of last Dec. 31 it held 17,000 shares of CBS “A” purchased at $903,050; 16,000 CBS “B,” $569,304; 39,000 GE, $2,059,249; 32,000 Motorola, $842,975; 70,000 RCA, $1,317,294; 45,000 Westinghouse, $1,396,720; 18,000 Zenith, $1,162,980. Total cost was $8,091,602, market value as of Dec. 31, $10,987,875.

Reeves-Ely Laboratories consolidated sales were $39,630,155 and net income $1,823,174 ($1.71 per share) in 1953 vs. $34,986,297 sales & $1,262,281 profit ($1.18) in 1952, with unfilled orders at year-end in excess of $62,000,000, reports pres. David T. Honner. Working capital at end of year was $12,244,152, up from $10,671,963 year before.

Paramount Pictures consolidated net income for 1953 was $6,779,563 ($3.06 a share), compared to 1952 net of $5,540,584 ($2.28) not including non-recurring profit of $559,287 from sale of real property, or $5,599,871 ($2.52) including this profit. Estimated net for first quarter ended April 3 is $1,404,000 (56¢) as against $1,374,000 (59¢) for 1953 quarter. Pres. Barney Balaban, in annual report, hailed progress of 50% subsidiary Chromatic TV Laboratories on Lawrence color tube, which he said has been “tremendously strengthened as the only practical and economical answer to the problem of getting popular-size color receivers to the public in the very near future.”

Trav-Ler Radio sales for first quarter 1954 were down about $20,000 from 1953 first quarter’s $4,800,000, pres. Joe Friedman told recent annual meeting. Profits were also down from same period, he said, because of the “highly competitive market.” In first quarter 1953, Trav-Ler reported profit of $270,000 (35¢ a share). Company’s TV sales were up about 15% from year ago, radio sales about the same, he added, with defense business accounting for 21-22% of first quarter sales compared with 35% year ago. By May, company will have completed its defense contracts.

Howard W. Sams & Co. reports $856,782 sales for quarter ending March 31, up 29% from $664,153 for same 1953 period. For first 3 quarters of present fiscal year, sales were $2,121,228, up 22% from $1,740,967 for same 1953 period. Firm reports 36 manufacturers of 49 products now participating in its services, is constructing new Indianapolis plant, has offered for sale 431 shares of its $100 par 5% preferred stock.

Gabriel Co. net income dropped to $63,348 (11¢ a share) in first quarter from $131,184 (22¢) same 1953 period. Sales were $5,002,087 vs. $5,578,960. Decline in Ward Products Div. antenna sales and profits was reported greater than decline in rest of Gabriel operations.

Cornell-Dubiller earned $847,953 ($1.59 a share) on sales of $21,564,445 in 6 months ended March 31, compared to $895,204 ($1.68) on $22,732,082 in corresponding period year ago.

Globe-Union Inc. net income for first 1954 quarter dropped to $118,740 (17¢ a share) from $150,997 (71¢) for same 1953 quarter.

Dividends: Television-Electronics Fund Inc., 7¢ payable May 29 to stockholders of record May 14; Standard Radio Ltd. “A,” 15¢ July 9 to holders June 18; National Co., 2% stock June 30 to holders June 25, also 2% stock Dec. 30 to holders Dec. 5; CBS “A” & “B,” 40¢ June 11 to holders May 28; Canadian GE, $1 July 1 to holders June 15.

Sentinel Radio Corp. for second consecutive quarter deferred action on common dividend; last payment was 7½¢ on Nov. 30, 1953.

Packard-Bell paid regular quarterly dividend of 25¢ April 25 to stockholders of record April 12; we erred in reporting that it had omitted the dividend (Vol. 10:18).

General Mills, world’s largest miller and big package food manufacturer, sold its small appliance business this week for undisclosed sum to Illinois McGraw Electric Co., Elgin, Ill. Since 1946 General Mills had been making irons, toasters, food mixers & other kitchen appliances. General Mills pres. C. H. Bell said purchase included capital equipment, tooling & inventory. It will continue to manufacture electronic instruments.

“U. S. Govt. Purchasing Directory,” first complete guide to govt.’s military and civilian purchasing activities, has just been published by Small Business Administration and is available for 50¢ from Supt. of Documents, Washington 25, D. C.
Telerama Advertising Bureau (Vol. 10:17-19) took a different form at preliminary organization meeting in Chicago May 14, where budget of $850,000 was tentatively approved, by-laws proposed, unanimous decision voted to devote organization to promotion of spot & local business at local station levels rather than to sell TV at large. Plan is to pattern Bureau after ANPA Bureau of Advertising, Magazine Advertising Bureau and, to lesser extent, BAB. Final organization meeting will be held during NARTB convention in Palmer House, Chicago, at 9 a.m., May 24.

In belief that networks have done splendid job of selling network TV, TAB will urge value of "local TV" and seek to develop more and new spot business. Networks can't join, though their owned stations are invited along with all other stations. Tentative budget for office in N.Y. has been fixed at $500,000, to be derived from monthly dues amounting to each member station's highest quarter hour rate. One-third of board's members will be selected from communities of 150,000 or less, one-third from 150,000-500,000, one-third from 500,000 and upward.

Temporary chairman is Richard A. Moore, KKTV, Los Angeles, who initiated the project with aid of Richard P. Doherty, ex-NARTB employee-employer relations v.p., now an independent consultant, who has made it clear he does not expect to join the TAB setup. At this week's Chicago meeting, it was decided to meet with NARTB committee that had been formed to set up similar agency and seek to avoid duplication of effort. TAB will function entirely apart from NARTB.

Attending this week's Chicago session with counsel Neville Miller, consultants Doherty and Robert Purcell and acting chairman Moore: Jules Herbeuvaux, WNBQ, Chicago; Sterling Quinlan & Elliott Henry, WBKB & ABC stations; Frank Schreiber, WGN-TV, Chicago; Toni Harker & Robert Wood, Storer stations; Frank Fogarty, WOW-TV & Meredith stations; Harold See, KRON-TV, San Francisco; Roger Clipp, WFIL-TV, Philadelphia; Norman Gittelsohn, WJAR-TV, Providence; John Bone, WNEM-TV, Bay City; Joe Higgins, WTHI-TV, Terre Haute (CP); Robert Covington, WBTW, Charlotte; Neil Cline, WHAS-TV, Louisville; W. B. Parmalee, WWJ-TV, Detroit; Wm. Quarton, WMT-TV, Cedar Rapids; Vernon Nolte, WHIZ-TV, Zanesville, O.; James C. Hanrahan, WEWS, Cleveland; Don Davis, WHB-TV, Kansas City; Dub Rogers, KDUB, Lubbock, Tex.; Wm. F. Kiley, WFMF-TV, Indianapolis; Lawrence Rogers, WSAZ-TV, Huntington, W. Va.

Long-awaited NARTB TV ownership audit (Vol. 10:4) moved small step closer this week with disclosure that 4-month "pre-testing of field methods" would begin immediately to determine measurement techniques to be used in census. This will be followed by pilot study in undefined markets. Though census was thought of set ownership & circulation is one of industry's crying needs, NARTB and networks have only recently gotten together on project. Members of organization-implementation committee supervising study: Robert D. Swezey, WDSU-TV, New Orleans, chairman; Hugh Bevile, NBC; Donald Coyle, ABC; Oscar Katz, CBS; Edward Eadeh, DuMont; Ward Quaal, Crosley Bscpt. Corp.; Paul Raibourn, KTLA, Los Angeles; Harold V. Hough, WBAP-TV, Ft. Worth; Clair R. McCollough, WGAL-TV, Lancaster, Pa.; J. Leonard Reinsch, WSB-TV, Atlanta; Donald Thornburgh, WCAU-TV, Philadelphia; Lee Wailes, Storer stations.

Paving way for Armed Forces TV stations overseas (Vol. 10:19), Senate Armed Services Committee May 13 approved enabling legislation (S-3401) introduced by Chairman Saltonstall (R-Mass.) for Defense Dept.

Australian Royal Commission has urged early inauguration of TV with first stations in Sydney and Melbourne.

Tentative schedule of order of appearances in first phase of Senate uhf probe, May 19-21, Room G-16, U. S. Capitol (see p. 3): FCC (Chairman Hyde); UHF Industry Coordinating Committee (7 witnesses); RETMA (pres. Glen McDaniel); DuMont (Dr. Allen B. DuMont, others); GE (Dr. W. R. G. Baker); RCA (W. W. Watts); General Precision Laboratory (Blair Foulds); Washington attorney Wm. A. Roberts; Lou Poller, WCAN-TV, Milwaukee; Ronald Woodward, WIFE, Dayton (now of air); Donald Burton & Wm. Craig, WLBC-TV, Muncie, Ind.; Comdr. Mortimer Loewi, WITV, Ft. Lauderdale, Fla.; N. Y. engineer Morris Berman; manufacturer-telecaster Sarkes Tarzian, WTTV, Bloomington, Ind.; Vincent Lutz, Assn. of TV Service Companies, St. Louis; Larry Israel, WENS, Pittsburgh; Thomas Martin, WEEU-TV, Reading, Pa.; J. P. Beacom, WPJB-TV, Fairmont, W. Va.; Philip Merryman, WICC-TV, Bridgeport; John Esau, KTVQ, Oklahoma City; Wm. J. Scripps, Detroit; Gordon Brown, WSAY, Rochester, N. Y.; Robert Mullin, National Citizens Committee for Educational TV; S. W. Townsend, WKST-TV, New Castle, Pa.; Eldred Beck, KCEB, Tulsa. At least 11 more individuals and groups will be heard when hearings resume in June.

"Territorial exclusivity" change in network rules, proposed by FCC (Vol. 10:14, 19) brought more comments and countercomments. WAKR-TV, Akron, charged that NBC is actually practicing duplication in adjoining cities except where its own stations (such as WNKB, Cleveland) are involved. WAKR-TV pointed to NBC affiliates in Boston & Providence, Detroit & Toledo, New Haven & Hartford. WICC-TV, Bridgeport, said it has had orders from network sponsors but couldn't get their programs from CBS because latter claimed WCBS-TV, New York, covered Bridgeport adequately. A vhf grantee, KQXI, San Jose, Cal. also favored FCC's proposal, stating that San Jose is 50 mi. from San Francisco and can hardly be called a "suburb." WTVR, Richmond, opposed rule, said it would weaken affiliates' bargaining power with networks.

Edward Lamb appealed to courts this week for temporary and permanent injunctions to stop FCC from going ahead with hearing on allegations that he lied when he said he had no past pro-Communist affiliations (Vol. 10:19). He charged that FCC is proceeding illegally and unconstitutionally in putting burden of proof on him and in continuing to bring up allegations it threw out 6 times previously. In addition, he said that 3 Commission investigators tried unsuccessfully to induce people of Toledo and Erie to give false testimony, and in at least one instance, offered a bribe. He claimed that investigators said: "We are going to get Lamb and take WICU away from him." FCC has 8 days in which to answer charges; court will hold hearing shortly thereafter.

Big night for freak reception was May 13: Scores of set owners in Providence, R. I. picked up good picture from KYTV, Springfield, Mo. (Ch. 3), 1400 mi. away. Some baseball fans in Washington, trying to tune in Baltimore Orioles game on WMAR-TV, Baltimore (Ch. 2), got WMT-TV, Cedar Rapids, IA. (800 mi.) instead.

FCC's 20th birthday is June 19 on which date in 1934 it succeeded old Federal Radio Commission. It started with 233 employees and $1,888,176 budget, now has staff of 1100 and $7,400,000 budget.

Television Digest's exhibit at NARTB convention in Chicago, May 23-27, will be Room 830, Palmer House. Visitors are welcome to come up and get copies of current Newsletter and our other published material.
WHERE THE SETS ARE—AS OF JAN. 1, 1954: J. Walter Thompson Co. has released to us, for industry distribution, its latest report on TV households in the United States -- and we're happy to make it available to our subscribers as a Special Report herewith. It's titled "Where the TV Sets Are" and provides estimates as of Jan. 1, 1954 for 340 top markets in alphabetical order, indicating (1) total households in the U.S., (2) TV households, (3) ratio of TV households to total households, (4) percent of U.S. total TV households in each market.

We've printed 2 of the preceding reports by this big advertising agency -- first in our January 1953 Factbook covering estimates as of Jan. 1, 1953, second as a Special Report of April 3, 1953 covering projections to April 1, 1953. Those had the markets arranged in order of size, but JWT researchers departed from that format this time, list them alphabetically, because rankings of many markets have changed and there's no Census Bureau rearrangement as yet. The new report does, however, identify each market as A, B, C, D' or D, according to population groupings.

It should be emphasized that these figures, only ones of their kind, do not purport to show any station's coverage but simply estimate the number of TV homes in market areas (usually metropolitan areas) delineated by U.S. Census Bureau. Local and nearby station coverage areas invariably embrace many more receivers. But these are "hard core" figures -- only ones of their kind from such a high-level source.

Last previous count was that of Nov. 1, 1953 (TV Ownership by Counties) prepared for CBS-TV by A.C. Nielsen Co. and published by us as Special Report of Feb. 27, 1954.

Note: It's interesting that the CBS-Nielsen report, dated Nov. 1, showed 27,506,500 TV families out of U.S. total of 47,191,500, or 58%. The JWT report of Jan. 1 showed 27,000,000 TV households out of 47,560,000, or 56.8% -- slightly less though dated 2 months later! And this week NBC research dept. reported that there were 29,495,000 TV sets-in-use as of April 1, 1954.

MANY LOST MONEY—YET 1953 INCOME WAY UP: What stands out in revenue-expense-income report on telecasting for 1953, submitted by FCC Chairman Hyde at Senate uhf hearing this week, is the continued remarkable climb over 1952 (Vol. 9:31) -- despite very substantial losses suffered by most post-freeze stations. Official 1953 figures:

Total revenues up 32.8% to $430,800,000, expenses up 34.8% to $362,400,000, income before taxes up 23.2% to $68,400,000. This for all stations and the networks -- and all this in the face of post-freeze stations' net losses of $10,100,000.

Matter of fact, though FCC figures don't provide that particular breakdown, it looks as though about half of the 323 stations covered in the report lost money during year. Tremendous gains of the networks and older stations accounted mainly for the enormous upsurge, which appears to be continuing into this year.

Because the statistics were prepared for the hearing, most of the report's 25 tables are devoted to non-financial data comparing vhf & uhf -- such as distribution
of stations, uhf set saturation, hours of network programs carried (by vhf & uhf and by city) and other data. There is, however, considerable information on post-freeze stations' financial behavior for first 3 months of this year (see story below).

Perhaps most remarkable figures on 1953 telecasting are those on pre-freeze stations, showing that revenues increased faster than expenses and produced whopping 40.8% increase in net income before taxes. Of that pre-freeze group, networks and their 16 owned stations almost doubled net -- rising 81.7%. High points of study:

1. Networks and their 16 stations had revenues of $231,700,000 vs. $180,200,000 in 1952, netted $18,000,000 vs. $9,900,000 in 1952. The other 92 pre-freeze stations' revenue was $174,500,000 vs. $143,400,000 in 1952 -- with net going up to $60,500,000 from $45,800,000 in 1952.

2. The 113 post-freeze vhf stations operating during 1953 had revenues of only $15,800,000, lost $4,200,000. The 102 uhf took in $8,800,000, lost $5,900,000. Both revenue and loss figures are somewhat misleading, however, because very few of the stations operated full year. Many got on air late in year.

3. Average pre-freeze station (other than the 16 network owned) enjoyed a revenue of $1,896,457 and a net income of $657,609 before taxes. These compare with 1952 figures of $1,541,825 and $492,357. Of revenues, average of $1,648,811 came from time sales, $492,357 from "sundry", $97,989 from talent sales.

4. Average pre-freeze station's revenues from time sales breaks down as follows: $49,130 network, $847,859 national & regional spot, $619,576 local. Commissions took $268,054 from average station.

5. Profits were achieved by 97 of the 108 pre-freeze stations. Of these, 26 had net of $1,500,000 or more each. Seven had less than $100,000. Of the 11 with losses (there were 14 the previous year), three lost less than $100,000, three lost $100-200,000, one lost $200-400,000, four lost $400-800,000.

6. "Tangible broadcast property" cost average uhf station $300,493, average vhf station $376,125. Two vhf's and one uhf reported spending under $100,000. One vhf reported over $1,000,000. Rest were between. Figures are for post-freeze only.

Report is skeleton of the full study to be released at future date. Tabulation of AM-FM, delayed by this study, is scheduled for late in summer. This week's report is identified from Mimeo. 6148, available from FCC -- or we'll get you copy.

DISPELLING THE TV 'GOLD MINE' MYTH: Only 25% of all post-freeze stations made money during first quarter of this year. While a good number were approaching break-even point, a substantial 45% continued to pile up heavy losses each month.

These figures, covering both vhf and uhf stations, highlight FCC's comprehensive second survey of post-freeze TV station economics, prepared by its economic div. and inserted by Chairman Hyde into record of Senate uhf probe. As anticipated, the study shows gloomy financial picture for most uhf stations -- but it also indicates that a vhf grant is far from the financial equivalent of striking a vein of uranium.

It must be borne in mind that these stations are all quite new -- and that the pioneer pre-freeze stations went through far longer period of tremendous losses before seeing even a glimmer of hope of a profit. But there's no gainsaying that post-freeze telecasters faced entirely different set of circumstances than those faced now by their newly-arrived brethren.

FCC study is based on data supplied by 175 of the 192 post-freeze stations on air as of November 1953 -- with 88 vhf and 87 uhf stations reporting. Using figures for first-quarter 1954 only, Commission economists found:

Only 46 of the 175 vhf & uhf stations made profit for the period. Just 33 vhf stations (37%) and 13 uhf outlets (15%) were in the black. The average monthly profit of money-making vhf and uhf stations was about same -- $10,735 for vhf and $10,214 for uhf. But monthly losses of unprofitable uhf stations averaged $10,614 as opposed to $6795 for vhf.

Breaking down stations which lost money, survey showed "continuing substantial monthly losses" by 53 uhf stations (60%), as opposed to 23 vhf (25%) -- includ-
ing 1 vhf and 8 uhf stations which have gone off air since period covered by study. Of the remaining red-ink stations, 20 vhf and 10 uhf reported profit during 1 or 2 months of the quarter, and another 12 vhf & 11 uhf were approaching break-even point.

The money-losers aren’t necessarily the newest stations. Unprofitable vhf and uhf stations were same average age as profitable vhf stations -- 9 months old -- and only one month younger than average profitable uhf station.

Importance of network programs is illustrated by table showing relationship between network hours and profits: Average profitable uhf station carried 30 hours weekly, average unprofitable uhf only half as many. The average profitable vhf had 32 hours, unprofitable vhf only 13 hours.

Perhaps most revealing tables in FCC’s 43-page study are those relating to network programming comparisons between vhf and uhf stations. Taking typical week, Commission found post-freeze vhf stations in cities of 250,000 population and over carried median of 37 hours of network programming, while uhf in same category had only 19. In cities under 250,000, however, post-freeze vhf appeared to be suffering under same handicap as uhf -- median figure being 15 hours for vhf, 14 for uhf.

Paucity of top-notch programs on uhf is graphically indicated by table showing distribution of "top ten" network shows between vhf and uhf stations in same cities. The "top ten" actually are 16 programs totaling 11 program hours -- the 10 most popular shows listed in March 1 Nielsen, Trendex and ARB reports. For the 34 cities listed, average vhf station carried nearly 5 hours of the most popular programs, while average uhf had less than one hour.

Other tables in the definitive study relate to profit & loss as a function of set saturation, city population, number of vhf signals received in uhf markets; and lists of communities with both vhf & uhf stations, number of network hours carried by vhf and uhf stations in intermixed cities (broken down by networks and stations), as well as regular annual financial data on all TV stations (see p. 1).

SENATORS LEAN TO DRASTIC UHF REMEDIES: So impressed were Senate communications subcommittee members by the pleas of uhf operators for urgent action to alleviate their economic plight, that as of now they seem inclined to use strong measures -- possibly drastic enough to cut across the whole fabric of the TV structure.

Three solid days of testimony went into the record this week, mostly reflecting virtual unanimity among uhf grantees that revolutionary changes must be made in the allocations and in TV regulation. The uhf group would appear to have reason for their assurance they have a majority of the Interstate Commerce Committee on their side -- albeit only that side has been heard and the hearings are in recess until June 3-4 when vhf & network spokesmen will be heard, along with more uhf operators.

Hanging over the entire proceeding, too, is the Bricker Bill (S-3456) to give FCC complete authority to regulate the networks (Vol. 10:20) -- also spurred by uhf representatives. Time militates against securing its passage in few months of the Congressional session remaining -- but the impressive presentation by uhf telecasters this week indicates it could win appreciable support. Networks will oppose it vigorously, but it could continue to plague them into the next session.

Network representatives and old-line station operators -- the few who had bothered to pay attention -- were taken aback at the way things were going. They looked at each other in disbelief, seemed to find it incredible that Senators -- Republican Senators, including the ultra-conservative Bricker, of all people -- could actually seriously consider such strong remedies for uhf's ills.

* * * * *

Uhf protagonists were inclined to convey impression that their case was in the proverbial bag after noting the sympathetic reaction of the Senators. They also seemed to labor under the misapprehension that a Senatorial dictum would be the end-all of their woes. But the networks have yet to bring up their guns, the well-heeled vhf operators will inevitably fight back -- and all of them muster strong lobbies and command Senatorial ears, too.

Sen. Potter (R-Mich.), chairman of the subcommittee, did say that his group may meet in executive session next week "to discuss testimony already heard" -- but
he also told a packed hearing room at the conclusion of this week's hearings when it was suggested that action should come immediately:

"I want you to know it is very unusual for a committee to take any action before all the testimony has been presented." In an interview afterward, he told us he hopes his committee will act "immediately after the June hearings are over." His own sympathy for the underdog uhf seemed pretty clear, and it should be remembered the subcommittee's 5 members are part of the all-powerful Committee on Interstate Commerce, which rules TV-radio and in past has put plenty of pressures on the FCC.

Sen. Bricker heads the main committee, with Colorado's Ed Johnson, ex-chairman -- the same who threw plenty of weight around during the color imbroglio -- as ranking minority member until he retires from the Senate at the end of this session. The Potter subcommittee includes Senators Schoeppel (R-Kan.), Bowring (R-Neb.), Hunt (D-Wyo.), Pastore (D-R.I.). Sen. Johnson sat in and spoke up occasionally, too.

**WHAT ACTION DO THE UHF SPOKESMEN WANT?**

Proposals at the 3-day Senate uhf hearings varied all over the lot -- but the 3-part plan having strongest endorsement of the overwhelming majority of those testifying was this:

1. Require FCC to move all stations into the uhf band, giving vhf stations an "adjustment period" of up to 5 years (or until equipment investments can be amortized) during which they could operate simultaneously on both vhf & uhf.

2. Declare an immediate freeze -- or "chill", as some put it -- suspending all new-station grants and existing-station modifications pending evolution of new all-uhf allocation plan.

3. Limit color broadcasting to uhf channels only -- immediately.

These weren't the only save-uhf ideas advanced, by any means -- but by Friday they had gathered the most adherents. Among other reallocations strongly espoused:

1. Move all TV into vhf band by adding channels from FM band and possibly from govt. vhf band, with directional transmitting antennas to permit closer separations;

2. Eliminate vhf-uhf intermixture by rearranging allocations -- either as permanent or interim measure -- until all-vhf or all-uhf allocation can be worked out.

Virtually everybody endorsed Sen. Johnson's proposal to remove excise tax from sets with uhf tuners (see p. 6). And majority favored forcing vhf stations to keep their transmitters in immediate area of principal cities served; cutting powers and antenna heights of vhf stations; extending govt. loans to uhf owners.

* * * *

There were plenty of proposals short of reallocation, too. Most uhf witnesses endorsed the Bricker Bill -- and Senators as well as spectators were absorbed by an impressive 2%-hour presentation of the DuMont plan (Vol. 10:19) by Dr. Allen B. DuMont, his research v.p. Dr. Thomas T. Goldsmith, his network director Ted Bergmann. The DuMont proposal actually comprises 3 alternative "plans":

**Plan A:** Parcel out affiliates so that all 4 networks end up with same number of vhf and uhf stations in top 100 markets.

**Plan B:** Parcel out network programs so that all stations are assured same amount of strong and weak network fare, and all networks have equal access to both vhf and uhf stations in top 100 markets.

**Plan C:** Allow networks to own up to 11 stations each, provided that they affiliate 7 uhf stations for each additional station they acquire above the present limit of 5. When plan is completely implemented, all networks would have same number of vhf and uhf affiliates in top 100 markets.

"Wouldn't rate regulation result from such plans?" Sen. Schoeppel asked Dr. DuMont. He replied, "Possibly, ultimately." Sen. Hunt then wondered whether TV "is approaching the status of telephone and other utilities." And Sen. Pastore questioned wisdom of Plan C, saying: "We'd create a new monopoly to break up an old one."

DuMont scored strongly when network director Ted Bergmann said that demise of DuMont and ABC would leave concentration of control in few hands. To illustrate, he pointed out that Army-McCarthy hearings are being carried live only by ABC and DuMont, and only in those states "where station facilities exist in numbers necessary to the existence of 4 networks."
Commission won't act drastically to help uhf -- not unless Congress says so. FCC chairman Rosel Hyde made that clear in his testimony at outset of the hearings. Reviewing history of TV allocations, he defended intermixture of vhf & uhf stations as only way to achieve nationwide competitive service. He presented no new plans to rescue uhf stations, but outlined all measures proposed to FCC to date.

He was questioned sharply by Sen. Pastore, who accused Commission of "building inequity on inequity" through heavy allocation of vhf stations to the biggest cities, particularly New York and Los Angeles. "Why can't the Govt. condemn some of them and put them where they're really needed?" he demanded.

Recriminations against FCC for its allocation plan were held to minimum by the witnesses. Most looked at intermixture as an "honest mistake." But they did sharply criticize Commission for "changing the rules in the middle of the game" by dropping new vhf channels into allocation plan, permitting vhf transmitter sites far from main city, making unexpectedly quick grants as result of mergers and dropouts.

The word "monopoly" came into frequent use to describe the major networks and high-powered vhf stations -- not only by witnesses but by Sens. Pastore & Johnson.

The really hot session came on final day of hearings Friday, when most uhf operators -- and ex-operators -- told their stories, dwelling on cold shoulders they got from major networks and from Madison Ave.; on "super-power" vhf stations nearby; on quick vhf grants; on high interconnection charges.

Senators listened with particular attention to 2 operators who told how they were forced to take their stations off the air -- Ronald Woodyard, WIFE, Dayton and Jack Garrison, KACY, Festus-St. Louis -- as they had listened 2 days before to similar story by Fred Weber, WFPG-TV, Atlantic City. And they were moved by Lou Poller of Milwaukee, who said his successful WCAN-TV is "threatened with extinction."

All FCC commissioners were present on final day, sitting on dais with the Senators. Hearing erupted dramatically just after attorney Wm. A. Roberts of UHF TV Assn. proposed reallocation of all TV into uhf band. Sen. Hunt (D-Wyo.) asked Hyde if 70 uhf channels could provide nationwide service without vhf. Hyde replied it would be difficult to provide "adequate coverage for congested areas" under such a plan, and denied that vhf stations enjoy a "monopoly."

Then Sen. Johnson boomed: "There's a very serious monopoly in vhf and I'm sure the chairman of the Commission knows there is...Uhf is about to be blanked out and completely eliminated and that's what this hearing is for." Sen. Pastore chimed in: "The 2 big networks have the programs sewed up on vhf."

To which Chairman Potter added, with apparent great feeling of urgency: "If all TV should be in uhf, we should start taking the first steps now."

Comrs. Sterling, Webster and Lee were questioned in turn -- all agreeing that the 70 uhf channels alone probably weren't enough for nationwide competitive service. Then came Comr. Hennock's hysterical outburst, widely reported in press:

"I'm going to take my hair down and blame the Senate as much as the Commission," she shouted, her voice strident, her face growing bright red. Bursting into sobs, she blurted: "I blame the Senate because of Senatorial pressure -- when you Senators call up and tell us 'hurry up and give us quick grants for our communities and do it by the most disreputable manner known to man.'"

Accusation went unanswered for the moment, but later Potter said he realized FCC "has been under great pressure from Congress and others to expedite grants," and this has contributed to plight of uhf stations. "The average member of Congress," he confided, "acts as the wind blows." Comr. Hennock, now calmer, hastened to say he appreciated Senators were merely acting on behalf of their constituents.

"Both the Congress and possibly the FCC are to blame," put in Sen. Hunt. "We have been very negligent in not knowing their [uhf stations'] problems."

"There's been a great deal of effort on the part of many to get quick action on applications," said Potter. "I hope that through these hearings some action can be taken which will save the uhf band as a medium for TV operation."

Keynoting the urgency which uhf operators attach to need for first aid were
the many pleas for the subcommittee to go into executive session before hearings are over and request immediate freeze pending further study -- and such statements as the one by Jack Garrison (KACY) that unless there's quick action by Govt. "within less than 150 days there will be no uhf TV in the St. Louis area." Some owners of operating stations told subcommittee they couldn't hold out much longer.

This set stage for mass presentation by combined UHF Industry Coordinating Committee (70 members) and Poller's UHF TV Assn. which had finally gotten together on a united program the night before hearing.

Program called for immediate freeze, followed by reallocation of all stations to uhf band. Presentation was made by attorney Benedict Cottone, ex-FCC gen. counsel, who said that uhf stations would be permitted to operate for several years while they also operate uhf. They should not be allowed to broadcast same programs on vhf and uhf, would gradually shift best programs to uhf and fold up vhf station.

The big uhf group also gave limited endorsement to the Bricker Bill, felt it should be passed only to provide "reserve power" for FCC. Cottone said he would have FCC "enforce the laws" with particular attention to "networks' understandings with stations." Networks should have to offer programs to all comers, letting the "give-and-take of the marketplace" replace current affiliation contracts, he said.

All but forgotten by uhf spokesmen was FCC's "5 & 2" multiple ownership idea and Sen. Johnson's substitute (Vol. 10:11) -- which was opposed by FCC in comments filed May 18; Sen. Johnson himself has dropped it.

* * * *

Week's hearings would have been solely a uhf presentation -- nothing from vhf or network side -- had it not been for merest happenstance. Sarkes Tarzian, electronic equipment maker who built and operates highly successful vhf WTTV, Bloomington, Ind. (Ch. 10), attended hearing to describe his new uhf tuner (see p. 8). As a vhf pioneer who started when there was little assurance TV would pay, he was ready to explode when he reached the stand.

He accused uhf operators of "trying to take something away from the people who were foresighted enough to go into TV in the first place," and added: "It's not the function of the Govt. to guarantee a profit to everyone; the pioneers didn't have anyone to guarantee their profits." Then he really warmed up:

"It's just like the Russians," he said. "Push everyone into uhf and make everybody poor and we'll all be better off."

Tarzian ventured that all stations would never be equal, even in an all-uhf allocation. "Uhf stations with 2000-ft. towers and 1000-kw transmitters will still be blanketing everybody else." Pointing to long losses of the pioneers, he told uhf operators to forget their "5-year-plan" to move everyone to uhf -- and instead work on a "5-year-plan to sell converters and sets and build up your audience."

That's a preview of testimony you can expect from others when the hearings resume June 3-4, though Tarzian is more outspoken than most. For list of this week's witnesses and those submitting written proposals, see p. 9.

SETS & TRANSMITTERS NOT BLAMED FOR UHF WOES: Few uhf telecasters claimed technical performance of uhf transmitters or receivers was primarily at fault -- nor did they generally put onus on manufacturers -- during testimony this week before Senate subcommittee investigating uhf problems.

There were scattered complaints that receivers weren't sufficiently sensitive or stable, or that higher-powered transmitters have been too slow in coming -- but general theme of testimony was that equipment is adequate if it only has the right kind of programs to deliver.

Senators seemed convinced by manufacturing witnesses' testimony that their stake in uhf is substantial; that there is a cost differential in making vhf-only and uhf-uhf sets; that uhf-uhf set production has been geared to demand and even beyond; that transmitter development has been pushed to the hilt by competition.

With Senators so conditioned, chances of Sen. Johnson's ingenious measure for encouraging uhf set production and sales by eliminating the excise tax on them (Vol. 10:20) are far brighter than they had been prior to hearing. Uhf witnesses
and manufacturers have endorsed it vigorously, pleading urgency. Rest of telecasting industry, including NARTB, is solidly behind it. Subcommittee Chairman Potter himself stated flatly: "As one member of this committee, I heartily endorse this effort to have the excise tax removed from uhf receivers."

Sen. Johnson is more optimistic, too, but he warns that there are merely 10 days left for everyone to get behind the proposal and urge Sen. Millikin's finance committee to approve the Johnson Amendment.

* * *

RETMA pres. Glen McDaniel offered convincing figures to show industry hasn't been lax in production of vhf-uhf sets. He reported production of 1,459,475 vhf-equipped sets in 1953, some 20% of the 7,214,787 total. For the first 1954 quarter, 412,913 uhf's have been produced, 21.6% of the 1,910,939 total. But, he stated --

"The present situation in a nutshell is that during the first 4 months of 1954 our factory inventories were 32% vhf-uhf sets but only 22% of our sales were vhf-uhf sets. We have been making more vhf-uhf sets than we can sell."

Since cost differential between vhf-uhf and vhf-only can never be eliminated at factory, McDaniel said, elimination of excise on vhf-uhf is the only answer. In medium and high-priced sets, he said, manufacturing differential would be eliminated entirely; in cheaper sets, most of the differential would be erased.

Turning to uhf in color sets, McDaniel predicted that set makers wouldn't arbitrarily include uhf in all color sets because competition would force them to use every means to cut costs. Removal of excise on uhf would do much, he stated, to insure inclusion of uhf in all color sets.

Transmitter makers' investment in uhf was made quite clear by GE and RCA witnesses. GE's Paul Chamberlain reported that GE has shipped $10,000,000 worth of uhf equipment, of which $7,000,000 is still owed to GE. He said that GE has invested 360,000 engineering man hours and $3,600,000 in uhf research and development.

GE has shipped 44 uhf transmitters, 34 of them 12-kw, Chamberlain stated. He said that 60-kw transmitter employing 75-kw klystron is expected early in 1956.

RCA's W.W. Watts stated that 1,800,000 engineering hours and $16,000,000 have been spent on uhf by RCA. He reported 75 RCA 1-kw transmitters in use, with orders for 29 more on the books. As for new 12-kw transmitters, he said that orders for 47 are on hand and that shipments will start soon. He also disclosed development of new 50-gain antenna which will give ERP of 400-600 kw with 12-kw transmitter.

General Precision Laboratory Inc. announced development of GPL-Continental 50-kw uhf transmitter, first model due for delivery in July 1955. It will use Eimac klystron. TV mgr. E.A. Hungerford Jr. indicated uhf development was outgrowth of Continental's work making transmitters up to 1000-kw for Voice of America.

* * *

On receiver end, GE's Dr. L.R. Fink reported improvement in uhf design, said that extra cost for uhf in GE's current line is as low as half what it was in early sets and that performance has been improved several-fold. He noted that 22% of GE's 1953 production was vhf-uhf, compared with whole industry's 20%.

Detailing uhf performance, Dr. Fink stated that GE sets had noise level of 16-20 db last year, now have 12-16 db -- compared with 6 db for good vhf sets. He concluded: "The result of our work has been that the customer has found continuously available a choice of uhf receivers capable of performance up to the limits of our known technology. The receiver is not a real limitation to the growth of uhf."

Watts reported that RCA has put uhf in 23% of its sets vs. 20% for industry. Furthermore, he said, uhf is included in all the 4000 color sets RCA has built. To sum up, he stated: "In our shipments of various types of receivers, we are and must be governed by what the public is willing to buy. Naturally, we hope that the public will continue to buy a substantial number of receivers uhf-equipped at the factory. The fact that we have shipped a greater proportion of factory equipped uhf receivers than the industry average shows that our promotion of this type of receiver has been hard hitting and successful."

Tuner maker Sarkes Tarzian came up with what he believes is an answer to the
price differential between vhf-uhf and vhf-only sets -- a new vhf-uhf 82-channel tuner which he says can be built for only $6.25 more than vhf-only. He offered it at cost, urged that set makers not mark up the $6.25, so that it will be possible for consumers to buy vhf-uhf sets for only $6.25 more than vhf-only.

Regarding performance, Tarzian claimed tuner has noise level of only 10 db. No other manufacturer claims such performance in its commercial uhf tuners.

Plumping for removal of excise on uhf sets, Tarzian took crack at manufacturers making turret tuners with strip uhf inserts. Tax removal should apply only to "full range" sets, he said, "not to makeshift strip arrangements which have been a delusion." He reported Westinghouse and Capehart are using his new tuner.

**VHF GRANTS SOON IN MILWAUKEE & MINNEAPOLIS:** FCC granted no CPs this week, but it issued 3 substantial initial decisions which will soon mature into final vhf grants, while another vhf grant was gestating as result of dropout. The initial decisions:

1. Milwaukee, KEYD, Ch. 9; Jefferson City, Mo., KWOS, Ch. 13; Milwaukee, Milwaukee Area Telecasting Corp., Ch. 12. The initial decision due shortly will go to WMFJ, Daytona Beach, Fla. for Ch. 2.

Six uhf CPs were cancelled this week, most in any single week -- one voluntarily and other 5 simply allowing their CPs to lapse. Turning in its CP was WDHN, New Brunswick, N.J. The 5 who didn't pursue grants: KMER, Merced, Cal. (Ch. 34); WTLK, Paducah, Ky. (Ch. 43); WTTM-TV, Trenton, N.J. (Ch. 41); KMSL, Marshall, Tex. (Ch. 16); WBEY, Beckley, W.Va. (Ch. 21) -- making 67 uhf CPs given up to date.

* * * *

Initial decision favoring KEYD in Minneapolis resulted when WLLOL and WDGO dismissed -- no merger, no payment for expenses. Notice to KWOS in Jefferson City came after dropouts of Capitol TV Corp., headed by ex-Gov. Forrest Smith, and L.H.P. Co., owned by Durwood Theatres -- former to get $14,472 for expenses, latter $7500.

Milwaukee deal was 4-way merger, designed to expedite first post-freeze vhf into that city. When Milwaukee Area Telecasting Corp. gets CP, new Televion Corp. will be formed, Milwaukee Area getting 30%, WEMP 30%, WFOX 30%, Kolero Telecasting Corp. 10% plus up to $30,000 expenses. WFOX will be sold. Milwaukee Area application is 50% owned by Gran theatre interests, part owners of WREX-TV, Rockford, Ill. (Ch. 13) and of CP for WFRV-TV, Green Bay, Wis. (Ch. 5).

[For further details about principals in all the aforementioned grantees and applicants, see TV application list in TV Factbook No. 18.]

**ODD OR UNUSUAL approaches to uhf problem were advanced by several witnesses at Senate subcommittee hearings this week (see pp. 3-6). There was owner S. H. Patterson of uhf KSAN-TV, San Francisco, for example, one of 2 objectors to Sen. Johnson's proposal to exempt uhf sets from excise taxes. He excoriated set makers for "asking for a handout," and suggested that excise taxes from tv sets be distributed as a subsidy "to the dying patient, the uhf telecaster."

Then there was Morris Berman, who lists himself as "pres., N. Y. Society of Engineers," whose panacea is construction of 75 mile-high towers across the U. S. He listed as the No. 1 "advantage" of his system "the elimination of all but 150 of the 2053 stations predicted for the near future by the FCC."

More seriously heeded was stirring statement of veteran broadcaster Ronald B. Woodyard, who was forced to abandon his uhf station WIFE, Dayton (Vol. 10:11). His proposals included complete ban on ownership of more than one TV and/or radio station by any entity, and on ownership of stations by networks and by newspapers. He opposed Johnson excise tax bill because “the tax reduction on theatre tickets didn’t reduce admission prices and there’s no reason to believe it will cut TV set prices.”

Two vhf station operators filed written comments. Ed Craney, KXLF-TV, Butte, Mont., said plighted of small-town vhf stations is as serious as uhf, urged subcommittee to do something about both. Gerald J. Morey, WNHC-TV, New Haven, indicated he’d welcome his uhf colleagues into vhf band, urged Congress to find more vhf channels through use of other vhf frequencies and directional antennas.

Uhf success story was related by Donald A. Burton & Wm. F. Craig of WLBC-TV, Munice, Ind., who told how they wooed and won local viewers as well as the 4 networks, and “found no prejudice against uhf on Madison Ave.”

Community antennas also underwent attack this week, during Senate uhf hearing, when J. P. Beacom, operator of uhf station WJPB-TV, Fairmont, W. Va., said stations’ "very existence" is threatened by the "accelerated expansion of the unregulated and uncontrollable community antenna systems." He said that J. H. Whitney-owned system in Fairmont misled public into not converting to uhf, promising system would feed WJPB-TV to homes—but station’s signals were carried only 2 days. Beacom also attacked FCC’s recent microwave grant for community system service (Vol. 10:19), and said: "The action of the FCC opens new towns and areas to community cable systems at the expense of the uhf ‘home town grass roots’ TV stations." He advised passing law to control community systems.

Quip overheard as Senate uhf probe, jam-packed, had to move from Capitol to larger Senate Caucus Room, which happens also to be place of recessed Army-McCarthy hearings: "Is this a scene change from The Cohn Munity to The UHF Scrutiny?"
PRESIDENTING ORAL testimony at uhf hearing before communications subcommittee of Senate Commerce Committee May 19-21 (see pp. 3-6) in order of appearance: FCC Chairman Rosel Hyde; Conr. Frieda Hennock; Glen McDaniel, RETMA; ex-Sen. Scott Lucas (D-Ill.); Harold Thoms, WISE-TV, Asheville, N.C.; Fred Weber, WFPG-TV, Atlantic City & Ben McKinnon, WVGL, Green- ville, S.C., for UHF Industry Coordination Committee; Dr. Allen B. DuMont, Thomas T. Goldsmith & Ted Berg- mann, DuMont; Paul Chamberlain, L. R. Fink & Allen P. Haase, GE; Wm. A. Roberts, UHF TV Assn.; Lou Poller, WCAN-TV, Milwaukee; Jack Garrison, KACY, Festus-St. Louis; Ronald Woodward, WIFE, Dayton; Robert J. Campbell, Dayton Education Foundation; Mortimer Loewi, WITV, Ft. Lauderdale, Fla.; Morris Berman, N.Y. Society of Engineers; Sarkes Tarzian, WTTV, Bloomington, Ind.; Vincent J. Lutz, Assn. of TV Service Companies, St. Louis; Philip Merryman, WICC-TV, Bridgeport, Conn.; S. W. Townsend, WKST-TV, Newcastle, Pa.; Benedict Cottone, UHF Industry Coordination Committee & UHF TV Assn.; Donald Burton & Wm. Craig, WLBC-TV, Muncie, Ind.; J. P. Beacon, WJJP-TV, Fairmont, W. Va.; Larry H. Israel, WENS, Pittsburgh; Rev. S. H. Patterson, KSAN- TV, San Francisco.

Why do so many uhf CP holders turn back their grants? Before this week's Senate subcommittee hearing, Chairman Potter wrote all grantees and stations which had given up the ghost to ask that question. Forty-seven re- pied and their answers were inserted in hearing record. We tabulated the reasons (most of them giving more than one) with this result: 20 couldn't get network affiliation, "good network" affiliation, permanent affiliation, or affiliation on good financial terms; 17 saw little chance of success because of uhf competition; 8 couldn't get national and/or local advertisers; 7 blamed set manufacturers or technical shortcomings of receivers; 7 said area couldn't support another TV station, even if it were uhf; 4 said transmitters were inadequate or too costly; 3 blamed lack of uhf ac- ceptance by public; 2 discounted "general economics" of uhf; 2 couldn't get good programming; 2 gave up uhf to apply for vhf; 5 gave no reasons or unrelated reasons.

Walter Reade Jr., theatre-operator of uhf WRTV, Ashbury Park, N.J., has suggested to ASCAP that it accept "token" license payments from uhf stations "to indicate ASCAP's confidence" until such time as they become eco- nomically successful.

Biggest theatre-TV hookup in history is in prospect for Maricano-Charles heavyweight title bout June 17. Theatre Network TV Inc. has signed 63 theatres, including 12 drive- ins, to carry closed-circuit telecast.

Personal Notes: Frank Stanton, CBS press, due back week of May 24 from quick flying trip to Europe . . . Nor- man Hawkins, recently mgr. of KXLY-TV, Spokane, one- time sales mgr. of WWJ-TV, Detroit, returns to Detroit area to join CKLW, Windsor, whose Ch. 5 tv adjunct is due on air in July . . . Bob Strube named sales mgr. of KXLY-TV, Spokane . . . Frank H. McIntosh elected pres. of Assn. of Federal Communications Consulting Engineers, succeeding Frank G. Kear; T. A. M. Craven elected v.p.; Everett L. Dillard, secy.; Robt. Kennedy, treas. . . . Cecil C. Bidlack, ex-NBC Cleveland, joins National Assn. of Educational Broadcasters as its first TV engineer, following grant for that purpose by Ford Foundation . . . Lester H. Bowman, technical director, takes new title of director of physical operations, CBS Hollywood, with James V. Melick now director of production administration . . . Howard F. Barnick, ex-Eagle-Lion Studios, named business mgr., KNXT, Los Angeles, replacing Harry Zipper, now CBS Hollywood . . . John R. Overall, eastern sales mgr., and Dorothy Kemble, director of continuity acceptance & education, have resigned from MBS staff . . . G. W. (Johnny) Johnstone, TV-radio director, National Assn. of Manufacturers, leaves immediately after NARTB con- vention on auto tour of Pacific Coast and Northwest, visiting NAM regional offices and TV stations on behalf of its weekly Industry on Parade film . . . Wm. E. Eckstein named program mgr. of WITS-K, Knoxville . . . Carl Tibbetts, ex-WSB-TV, Atlanta, named production mgr. of WATE, Knoxville . . . Ed Boghosian promoted to national sales mgr., WJR-TV, Providence . . . James E. Conley, ex-Bolling, Chicago, named regional sales mgr. and Steve Briggs to be program mgr. of upcoming WISH-TV, In- dianapolis (Ch. 8) . . . Bill Hickey, ex-WABT, Birmingham, joins WCBS-TV in charge of late-evening sports show, Sports of the Night . . . Gordon D. Walker, ex-KNXT, Los Angeles, joins Hollywood office of Kenyon & Eckhardt . . . Melvin L. Gold, ex-National Screen Service, has set up Mel Gold Productions, 1639 Broadway, N. Y., as producer of TV, industrial & other films . . . Reggie Schuebel has set up Reggie Schuebel Inc., 7 E. 47th St., N. Y., taking over Wyatt & Schuebel agency after partnership with John Wyatt was severed.

Roosevelt College Assn., Chicago, has selected CBS's Edward R. Murrow and ABC's Elmer Davis as co-winners of its annual award for "distinguished service to Ameri- can democracy." Oberlin College conference's honorary degree on Murrow June 14.
Teletcasting Notes: Charting growth of 95 of the 105 pre-free TV stations, Sponsor Magazine (which incidentally is playing host to these pioneer teletesters at a commemorative dinner in Chicago May 23), tabulates statistics in special layout in May 17 edition that pretty well epitomize the fantastic march of the teletesting industry:

(a) From serving average of 27,800 sets when they went on the air, the 95 last Jan. 1 served average of 617,500. (b) Average base hourly time rate of $250 has risen to $920.

(c) Average sources of business at outset were 57.5% local, 21.8% national spot, 17.5% network; now it’s 23.8% local, 40.8% national spot, 27.8% network. (d) Originally, they averaged 32.5% network shows, but now 24% live, 26.9% film; now it’s 50.8% network, 24% live, 26.9% film.

(e) Average of 5.8 hours on air per day has gone up to 16.2. (f) From average of 41 employees per station, it’s now 98... Re-runs of TV films are profitable not only to sponsors and stations—they may prove gold mine to actors.

New Screen Actors Guild contract, which provides for residual payments to actors for 3rd & 4th showings of films made since March 1952, is just beginning to pay off: 375 actors have shared $30,074 in re-run payments to date—$26,440 of it in last 3 months... "See Ya in TV, Say the Funny Papers" headlines May 22 Billboard story reporting more comic strips being converted to TV film shows for fall, among them Steve Canyon, Blondie, Dixie Dugan, Tailspin Tommy, Heart of Juliet Jones. Already on air: Dick Tracy, Fearless Fodwick, Terry & the Pirates, Superman, Flash Gordon... "Everybody scouts actors, but nobody scouts writers," says Cy Howard, producer of CBS-TV’s That’s My Boy. After returning from visit to his alma mater, U of Wisconsin, he told Hollywood Variety reporter: "We’re overlooking a great potential in these college kids. We should send scouts [and] bring to Hollywood their best writers. The networks should put them under contract, to write with the pros..." Seventh Video-town survey started by Cunningham & Walsh in New Brunswick, N. J. . . . WJHK-TV, Detroit (Storer) raises Class AA hour (10-10:30 p.m. daily) from $1700 to $2000, min. from $350 to $400. Other classes remaining unchanged—including Class AA’s to 7-7 p.m. & 10-11 p.m. at $1500 & $320. WNBW, Washington, raises Class AA hour from $900 to $1000, and 10-sec. from $95 to $135... Newly-merged KOY-TV, Phoenix (which absorbed time-sharing KOY-TV) hikes base hour rate from $250 to $355, min. from $50 to $70. New XEJ-TV, Juarez (Ch. 5, opposite El Paso) reports $120 hour, $22 min. KCJB-TV, Minot, N. D., with $150 hour rate, and upcoming KXJB-TV, Valley City, N. D., at $200, to offer combination hour at $300... More rate increases: WSM-TV, Nashville, hour from $500 to $600, min. $100 to $120; WENS, Pittsburgh, from $350 to $450 & $70 to $90; WKZO-TV, Kalamazoo, $700 to $800 & $135 to $150; KXYL-TV, Spokane, $300 to $400 & $60 to $80; KOLN-TV, Lincoln, Neb., $20 to $25 & $34 to $50; KJMJ-TV, Fresno, $300 to $350 & $60 to $70; KTSM-TV, El Paso, $200 to $250 & $40 to $50.

Network Accounts: Oldsmobile, in biggest single purchase of NBC-TV color “spectaculars” so far, this week bought full run of 13 shows every 4th Sat. 9-10:30 p.m., thru D. P. Brother & Co., Detroit. RCA bought alt. sponsorship of all 13 spectaculars every Mon. 8-9:30 p.m., thru Kenyon & Eckhardt; leading candidates for other sponsor are Ford & Nash. Hazel Bishop (cosmetics) has signed as one sponsor every 4th Sun. 7:30-9:9 p.m., with others likely to be Reynolds Metals & General Mills... Chrysler to sponsor series of dramas by “foremost authors” 3 out of 4 weeks, with 4th week devoted to top-level musical variety programs, on CBS-TV in fall, Thu. 8:30-9:30 p.m., thru McCann-Erickson... Elgin Watch Co. replaces Motorola as alt.-week sponsor with U. S. Steel, buying Elgin Hour on ABC-TV starting in Oct., Tue. 9:30-10:30 p.m., thru Young & Rubicam; U. S. Steel renews its sponsorship for coming year, thru BBDO ... RCA buys 20 min. of new Sid Caesar Show on NBC-TV in fall, Mon. 8-9 p.m., thru Kenyon & Eckhardt... Crosley-Bendix signing to sponsor 8 shows featuring Martha Raye on NBC-TV in fall Tue. 8-9 p.m.; Buick to sponsor Milton Berle in that time for 20 programs, General Foods backs Bob Hope in 6 programs... Campbell Soup Co. switches Abbott & Costello film series from NBC-TV to CBS-TV starting June 5, Sat. 11:30 a.m.-noon, thru BBDO; it replaces Red Brown of the Rocket Rangers... Continental Mfg. Corp., Los Angeles (motor oil) sponsors Indianapolis Thrills of a Lifetime, film recap of Indianapolis Speedway classics, on ABC-TV Mon. May 31, 8:30-9 p.m., thru W. H. Hunt Adv.

BMI has question-marked TV stations whether they want another series of TV clinics, proposed in N. Y. Aug. 2-3; Chicago, Aug. 6-7; Los Angeles, Aug. 9-10.

Clem Randau, onetime UP business mgr., has purchased Litchfield (Conn.) Times, state’s oldest weekly. He’s also co-publisher of New Middletown (Conn.) Times.

ABC & CBS both made overtures to Firestone this week following its break-up with NBC (Vol. 10:20), but no contracts were signed. ABC offered old Mon. 8-9 p.m. time segment for simulcast of Voice of Firestone; CBS offered another "choice" time segment, being unwilling to shift Arthur Godfrey’s Talent Scouts. Decision is expected in month or so.

Army-McCarthy hearings had local sponsors on at least 4 stations, as reported up to press time—possibly more. Besides St. Louis Post-Dispatch sponsorship of show piped to local uhf WTVI from DuMont (Vol. 10:20), unidentified local sponsors were reported on WENS, Pittsburgh; WTVP, Deatur, Ill.; WWLP, Springfield, Mass.—all 3 fed by ABC-TV. Only ABC-TV & DuMont are carrying program live in full, hence alone are affected by Senate subcommittee’s ruling permitting sponsorship (Vol. 10:20). Networks and stations say uncertainty of duration, limitations on commercials, high costs, etc. have made it tough to attract sponsors. But both networks say they’ll continue to carry hearings fully, ABC-TV with 51 stations linked, DuMont 16. NBC-TV & CBS-TV are continuing with late-evening filmed highlights only (30 or 45 minutes). Not everyone on Capitol Hill is happy about lifting of initial ban on sponsorship; this week, Sen. Bennett (R-Utah) proposed rule forbidding commercial sponsorship of any televised Senate hearings, asserting McCarthy example “opens the door to a whole new range of possible improper relationships and subtle means for influencing legislation.” Quip of the week: Newsweek quotes wag who suggests ideal sponsors for McCarthy hearings would be Army Reserve and Schine Hotels.

CBS-TV paid Sen. McCarthy this week for the $6336 it cost to film his April 6 reply to Ed Murrow’s attack on See It Now. Network said “policy of fairness and balance” required it to pay McCarthy, but only because expenses involved program it produced and controlled. CBS spokes- man previously had said payment was guaranteed by “someone outside the TV industry.” Sponsor Alcoa had refused to pay on grounds its contract with CBS covered all costs. McCarthy’s reply was filmed by Fox Movietone.

Bucking for food sponsors, NBC-TV originates segment of Home (11 a.m.-noon) May 26 from Cleveland’s Convention Hall during Supermarket Institute convention, with 4000 delegates to see it in big screen demonstration in auditorium.

The 300th station getting network service will be WKNY-TV, Kingston, N. Y. starting May 25. It’s 55th added by AT&T this year, and 60 more are expected by year’s end.
LOS ANGELES has a second uhf in irregular operation—but its formal test debut and its commercial debut are still undecided, and so it isn't listed as an on-the-air station as yet. It's John Poole Broadcasting Co.'s KBIC-TV (Ch. 22), originally having call letters KPIK, with GE 12-kw plant and antenna atop Mt. Wilson, from which test signals have been reported as far away as San Diego (110 mi.), according to engineering director Thornton Chew. For some weeks, it has transmitted "on loose schedule" at 3-4 p.m. each weekday. It has no plans yet for regularly scheduled tests and hasn't published any rate card. Other Los Angeles uhfs is KTHE (Ch. 28, educational) which began last Aug., operating non-commercially with backing of Allan Hancock Foundation from UCLa campus. John Poole's KBRD-TV, Fresno (Ch. 55), has been on air since last Feb. 13 with GE equipment (Vol. 10:7), and he holds CP for KBIE-TV, Sacramento (Ch. 46).

RCA shipped 10-kw transmitter May 19 to WMBV-TV, Marinette, Wis. (Ch. 11), due in July, and 2-kw to CFQF-TV, Saskatoon, Sask. (Ch. 2), due in Aug. or Sept. This week, it also shipped 50-kw amplifier to KLZ-TV, Denver (Ch. 7), and 25-kw amplifier to WIS-TV, Columbus, S. C. (Ch. 10).

GE ships 12-kw transmitter and 4-bay antenna week of May 24, to WGTH-TV, Hartford, Conn. (Ch. 18); this week, it shipped 6-bay antennas to KALB-TV, Alexandria, La. (Ch. 5), and KGVO-TV, Missoula, Mont. (Ch. 13), both of which got 8-kw transmitters in latter March and are now completing construction. This week, also, it shipped 3-bay to now-operating KIEM-TV, Eureka, Cal. (Ch. 3).

GPL delivered Continental 1-kw transmitter with studio equipment this week to WQXI-TV, Atlanta (Ch. 36).

In our continuing survey of upcoming new stations, these were reports received this week:

WGR-TV, Buffalo (Ch. 2), has 25-kw RCA transmitter & 6-bay antenna due June 1, now plans late July test patterns and commercial debut sometime in Aug. as basic NBC affiliate. Studios and offices will be at 184 Barton St., now being remodeled, and WGR radio moves in June to Hotel Lafayette penthouse where TV transmitter and 456-ft. Emsco TV tower will also be located. Last week, FCC approved name change to WGR Corp. under merger by which Niagara Frontier Amusement Corp. acquired radio WGR and Niagara Falls Gazette has option to buy 25% after disposing of interest in WHLD (Vol. 10:16). Headley-Reed will be rep.

KEGO-TV, Enid, Okla. (Ch. 5), now planning test patterns about June 15, expects to complete installation of 10-kw RCA transmitter and 12-bay antenna on 660-ft. Emsco tower by June 10, reports commercial mgr. Tom Belcher. Only 66 mi. from Oklahoma City, it plans to begin programming July 1 as ABC interconnected. Owner is local appliance dealer Streets Electronics Inc. Base rate will be $225. Pearson will be rep.

WKBT, La Crosse, Wis. (Ch. 8), with 10-kw RCA transmitter installed and 500-ft. Stainless tower & 12-bay RCA antenna ready, expects to meet June 21 test pattern target. reports pres-gen. mgr. Howard Dahl. It plans Aug. 1 commercial start as primary NBC affiliate, will also carry CBS & DuMont programs. La Crosse Tribune has sold its WKTY to Herbert H. Lee group (KDFH, Fairhout, Minn.) in order to buy 41% of WKBT. Base hour will be $200. Raymer will be rep.

WINT, Waterloo-Fl. Wayne, Ind. (Ch. 15), with 12-kw GE transmitter due for shipment as soon as transmitter house is ready, expected in about 2 weeks; now plans July tests, reports pres. R. Morris Pierce, who operates radio WDOK, Cleveland. With GE 5-bay antenna on hand

SHIFTS to new channels were required of 30 stations by FCC as part of its end-of-freeze decision in April 1952, and all have moved except WHAM-TV, Rochester, which is due to go soon from Ch. 6 to Ch. 5. Coming up soon is first uhf station to shift—WFMJ-TV, Youngstown, aiming to switch from Ch. 73 to Ch. 21 on or about May 29.

Owned by Youngstown Vindicator, this NBC station had troubles galore on Ch. 73, finally acquired CP for Ch. 21 from Polan Industries for $76,612 (Vol. 10:19) when that company decided not to build. Station was particularly bedevilled with poor performance of receivers at top of uhf band, blaming sensitivity, transmission-line losses, unstable oscillators, short-lived receiving tubes, etc. (Vol. 10:10).

WFMJ-TV chief engineer Frank Dieringer reports that one parts distributor has been selling certain oscillator tube at rate of about 700 weekly.

WFMJ-TV shift includes move from temporary 300-ft. tower to new 1000-ft. structure 200-ft. away. Present 1-kw RCA transmitter is being converted to new channel by employing new crystals, coils, capacitors, cavity parts, etc. A 12½-kw amplifier is due in latter June; ERP will then go to 175 kw.

Another interesting shift is that of WTTV, Bloomington, Ind., from Ch. 10 to Ch. 4. In doing so, it also moved nearer Indianapolis, raised power to 100 kw and height to 1000 ft. above average terrain.

Combination of changes produced trouble for some points in Indianapolis. WTTV thereupon set up own organization there to install simple outside vhf antenna at $125.95 complete, with money-back guarantee. As result, mgr. Bob Lemon writes:

"We are getting orders and putting up several hundred per day ... Of course, it may be a little unorthodox, but we figured other media have circulation departments, and we decided we'd help viewers and ourselves too."

WTTV's entry into installation didn't hurt other servicing organizations. Indianapolis News business editor Gerald Dreyer, reporting on small business activity in first quarter, wrote: "The TV and electric service firms, still enjoying the benefits of WTTV's switch to Ch. 4, topped the increases with 18.1%.

at site 16 mi. north of Ft. Wayne, its 800-ft. Stainless tower was nearly up this week. Other area outlet, WKJG-TV, got on air last Nov. WINT rep not yet chosen.

WGTH-TV, Hartford, Conn. (Ch. 18), last reporting spring target, now plans July 12 test patterns, July 15 programming, according to gen. mgr. Fred Wagenvoord. GE 12-kw transmitter is en route, buildings are ready, and 250-ft. of 400-ft. Leligh tower has been built. June 15 is completion date for tower with GE 4-bay helical antenna. Co-owners are General Teleradio and Hartford Times. It will be second in area, WKBN-TV having begun in Feb. 1953. Rep will be H-R Television.

NBC-Northern University Television Institute fulltime 6-week course in advanced training for TV management, directing & production starts June 18, will be conducted in Chicago Merchandise Mart studios. Co-directors are Donley F. Fedderson, chairman of school's dept. of radio & TV, and Miss Judith Waller, NBC Chicago.

Minimum of 5-kw uhf transmitter, proposed by FCC (Vol. 10:16), was opposed this week by NARTB, which reported poll of members showed them unanimously against idea. NARTB pointed out that 5-kw transmitter is unnecessary and uneconomical for many small communities.

DuMont's new 50-kw uhf transmitter for Ch. 7-13, introduced at NARTB convention, employs two water-cooled tetrodes in final amplifier, is claimed to occupy 40% less floor space than competitive high-power units.
PARTS PRICES DOWN, MAKERS SEE TV UPBEAT: Some clues to the future plans of TV set makers came to light this week from those in good position to know -- parts manufacturers who, by supplying components, frequently hold the key to their next moves.

Several important parts makers told us at Chicago Electronic Parts Show this week they looked for a sizeable increase in TV production in last 6 months of year, on basis of orders for parts now on their books. All noted increases in orders last 3 weeks or so -- a welcome reaction to fact that the set makers had reduced their huge inventory of parts, a condition which prevented parts manufacturers from sharing in high TV unit sales for first quarter (Vol. 10:15).

Decreases in parts prices appear to be in offering -- but there's no guarantee that they will. Nor is there any assurance that the set makers will take advantage of any cuts to bring down their prices, in face of their complaints of low profits.

Labor is giving set makers increasingly valid reason for raising prices, any parts reductions notwithstanding. Philco strike at 10 TV-radio-electronics plants in Philadelphia, Croydon, Pa. & Sandusky, 0. enters its 4th week as we go to press, with little sign of early settlement. Meeting of Federal mediator, management and union proved unproductive, with neither side budging from original positions.

RCA this week settled accounts with labor, granting average 9-10c hourly wage increases to 29,000 at plants in Bloomington & Marion, Ind., Canonsburg & Lancaster, Pa., Cambridge, 0., Camden & Moorestown, N.J., Hollywood & Santa Monica, Cal. Whole industry wonders whether RCA will pass along wage increases in form of higher prices on new TVs to be shown field reps at Atlantic City's Haddon Hall June 7. If so, it could inspire similar moves by others -- even those without labor problems.

Guessing game on the direction of prices continued this week, with everyone admittedly fishing for information, asking more questions than they're answering on the subject. Spokesman for one major manufacturer advanced theory this week that prices probably will not go up on industry-wide basis, but that greater promotional effort would be concentrated on higher end of lines. This was doubted by another major set maker, who said trade would continue advertising leaders, then trying to "sell up" more expensive models on which profit margins are greater. He said this was only practical way of merchandising.

Atmosphere at parts show was generally bearish. Harry Ehle, show president & International Resistance Co. sales v.p., estimated industry-wide electronic parts business at factory level about 30% below first quarter of 1953 -- most of it blamed on high TV inventories, which kept parts orders at a minimum. Parts makers in hotel rooms & booths were openly expressing their anxiety, shopping prices & special deals and hopefully looking to high-fidelity to take up some of the volume gone from TV. Some 279 exhibitors, 7 more than year ago, were on hand to demonstrate their items, many of them new products designed especially to capitalize on hi-fi upsurge.

Price-cutting was rampant on all types of components, judging from comments we heard from manufacturers & distributors alike. As a consequence of recent tube price cuts (Vol. 10:20) and fact that tube no longer represents as large an investment in proportion to other parts, it's even likely the one-year warranty on picture tubes will be replaced in about 6 months by 90-day warranty, as in other components. Inconsistency of tube prices was further emphasized this week by RCA's increase of $2.50-$3 on 8 CR tubes, shortly after cuts by Sylvania & CBS-Hytron, hikes by GE.

Parts makers are looking for lift from color -- but not this year. Thus far, nearly all the specialized components used exclusively in color receivers have been
made by set makers themselves. Consensus was that only when color prices come down to merchandisable level could parts makers expect to benefit. Ehle said parts makers could speed lower color prices by continuing to lower components costs, declaring:

"We're smart enough to realize we can make money only if the set makers are making money. We have to help them get down to the golden figure -- whatever that may be -- which customers will be willing and eager to pay for color. We have to do that even if it means contributing out of our profit."

* * * *

Further reflecting Philco strike was production of only 96,007 TVs week ended May 14 (second week of walkout), down from 103,563 preceding week and 120,687 units week ended April 30. It was year's 19th week, brought production for year to date to about 2,105,000, compared to about 3,100,000 in same period of 1953.

Radio production jumped to 211,161 (including 103,311 auto), highest for any week since Jan., prompting speculation that other manufacturers are boosting output considerably during Philco strike. Total compared to 167,445 week ended May 7 and 163,289 week before. Radio output in 19 weeks was 3,690,000 vs. 5,285,000 in 1953.

**TRADE SEeks 'WHY' OF RADIO SALES SLUMP:** The bleak 1954 radio market is as baffling as it is alarming to manufacturers, many of whom plan consumer research surveys this summer to determine why folks aren't buying radios -- despite average retail price of mere $42. Here's statistical evidence of radio decline in first 4 months, excluding auto radios which are dependent on auto production and are channeled into many distribution outlets other than those used for TV-radio:

Production, 1,887,132 vs. 2,917,536 in first 4 months of 1953 & 2,339,354 in 1952; factory sales, 1,674,370 vs. 2,897,392 in 1953 & 2,275,010 in 1952; distributor sales, 1,337,787 vs. 2,044,485 in 1953 & 1,962,970 in 1952; retail sales, 1,330,000 vs. 1,850,000 in 1953 & 2,150,000 in 1952.

**Inventories at all levels** at end of April totaled about 3,500,000 (864,221 at factory, 1,137,376 distributors, 1,500,000 retail) vs. 2,800,000 at end of April 1953 (430,489 factory, 972,327 distributors, 1,400,000 retail) and 2,364,000 in 1952 (344,000 at factory, 920,000 at distributors, 1,100,000 retail).

Manufacturers are unable to explain decline, though they agree something must be done about it -- and quickly. One manufacturer says radios are victims of fall in national economy, puts them in category of wrist watches & jewelry -- i.e., something people can get along without when times are a little tough. Another blamed lack of initiative by dealers in pushing radio. "They see a $200 TV set and visions of profit dance before their eyes," he declared. "When they look at a $30 radio, what do they see? Damned little -- and they show it."

There's hope radio sales will pick up last half of year for 2 reasons: (1) Following consumer surveys, several major manufacturers plan intensive ad campaigns to push radios. (2) Liquidation sales & special deals will be very common by fall. On this basis, despite bad start, radio industry leaders are hopeful home radio retail sales may be close to 6,500,000 this year, as against 7,100,000 sold last year.

**Note:** Auto radio production also has fallen off from last year -- totaling 1,417,620 in first 4 months, down from 2,076,188 in 1953 but slightly more than the 1,286,500 turned out in 1952 (when auto production was limited by wartime materials restrictions). There is virtually no factory inventory in auto radios. Statistics on distributor & retail movement of auto radios aren't available.

**Distributor Notes:** RCA establishes new subsidiary, RCA Victor Distributing Corp.-Southern California, 2027 S. Figueroa St., taking over Los Angeles distribution from Leo J. Meyberg Co., which continues as San Francisco outlet. Harold R. Maag, RCA v.p. & western mgr., will be in charge, reporting to Paul A. Barkmeier, RCA distribution v.p. L. E. Starkweather, mgr. of Leo Meyberg, keeps same job with RCA subsidiary. Last week Meyberg relinquished San Diego distribution to Jerry Achtenhagen & Sons... Sylvania appoints Mack Electric Co., Dothan, Ala... Olympic Radio appoints new MFS Distributing Co., Denver (Lewis Jesser, gen. mgr.)... Admiral appoints Leo Lisee, ex-Washington regional mgr. & gen. mgr. of former distributor Mid-Atlantic Appliances, as mgr. of new Washington factory branch... Maryland Wholesale Sales, Baltimore (Admiral) appoints Larry L. Malin, from Admiral Los Angeles factory branch, as gen. mgr. Zenith-New Jersey appointments Joel Calcutt, ex-Gross Distributors (Stromberg-Carlson), as district mgr., replacing L. M. Braun, now parts & service mgr. Stuart F. Louchein Co., Philadelphia (Zenith) appoints John F. Mehr as TV mgr.; he's ex-Zenith Washington regional mgr... Graybar appoints T. A. Huston asst. mgr. of national appliance sales.
Topics & Trends of TV Trade: RCA introduced 21 new "series string" electron tubes this week, designed to capitalize on growing use of new circuitry by TV manufacturers as means of reducing production costs, particularly of low-end models. New tubes operate with heaters connected in single "series string" circuit, permitting elimination of such components as heater transformers in TV receivers. In conventional tube arrangement, heaters are connected in parallel lines and require transformer for power supply.

Some TV manufacturers, notably Crosley, are already in production of "series string" system; others are expected to adopt this method in wake of RCA announcement. First of the new tubes will be available commercially next month, designed with tougher (600 milliamperes) filaments to withstand more powerful current surge tubes must take. According to Douglas Y. Smith, RCA tube marketing mgr., all heaters in tube string reach operating temperature uniformly, thereby minimizing heating burnouts.

"Series circuit" tubes contributed greatly to reductions in radio prices, making possible inexpensive AC-DC radios when industry started wiring tube filaments in series.

First reappearance of 14-in. models in 5-6 years is Majestic's "Starlet" plastic table model introduced this week to retail at $130 and intended to be competitive with recent Crosley "Super V" & Raytheon "Challenger," both 17-in. at $140-$160. Majestic's set is enclosed in luggage carrying case with handles, weighs 39 lbs. (compared to Crosleys 53, Raytheon's 46), has controls on top, measures 12½-in. high. 15-in. wide, 18½-in. deep; it's also available in mahogany wood finish at $140. Also introduced was standard-size 21-in. mahogany table at $170.

Zenith lost latest decision in patent suits involving its refusal to pay royalties to RCA, pending in Federal court in Wilmington since first filed by Zenith in 1946, when Judge Leahy May 20 denied its motion to dismiss counterclaim of infringements asserted in arguments last Jan. 21 on behalf of defendants RCA, GE & Western Electric, AT&T, Bell Labs & Westinghouse. While still tangled in legal procedures, final adjudication of long-drawn-out litigation is presumably nearer as result of this week's decision, which was marked by unusually strong language by the court—one part of decision asserting claim of absent defendants' (AT&T, Bell Labs & Westinghouse) ownership of counterclaim patents "is finally proved bogus" and another part stating: "Regard for the long-standing elements of patent properties and their application to the basic clauses of the cross-licensing agreements, coupled with realignment of several misconceptions, punctures Zenith's argument." Zenith had asked court for judgment of invalidity, non-infringement and unenforceability of certain patents and for an injunction. Only RCA, GE & WE were served, each counterclaiming and alleging Zenith infringement of particular patents. Zenith denied both validity and infringement of the patents and separate trial was ordered to precede trial on issues of enforceability. Zenith moved to dismiss counterclaims for defect, urging indispensability of absent parties alleging they held rights in counterclaimed patents tantamount to co-ownership.

Report on spurious radiation (Vol. 10:14, 16)—showing which manufacturers have promised to adhere to RETMA plan, etc.—is being prepared by radiation committee chairman Dr. W. R. G. Baker for submission during RETMA annual convention in Chicago June 17. Shortly thereafter, he'll supply FCC with list indicating which manufacturers will go along with plan, which won't, which haven't responded.

Crosley's 17-in. "Super V" table model (Vol. 10:7) now also out in ebony & white finishes at $160.

SHIPEMENTS of TVs to dealers totaled 1,655,839 in first 3 months of 1954, exceeding production of 1,447,110 in that period, according to RETMA's cumulative state & county tables released this week. They compared with 2,060,016 shipped in first quarter of 1953, when production was 2,259,943, and shipments of 1,777,512 in first quarter of 1952, when production was 1,924,581. New York led, with 145,161; Pennsylvania second, 109,965; California third, 105,084. In March alone, shipments totaled 522,839, compared with 460,378 in Feb. and 711,838 in March 1953. Here's state-by-state report (county-by-county & territorial tables available from RETMA upon request):

RCA's net income from patent royalties, usually kept secret, is revealed as "less than $2,500,000 in 1953" in final article of Martin P. Rosenberg's series of 5 on the TV-radio patent situation in May 21 Retailing Daily. From 1947-52, it averaged $3,500,000 a year.
WHERE THE TV SETS ARE
The J. Walter Thompson Company Report on TV Households in the U.S. as of Jan. 1, 1954
(Fourth Edition)

TV Household Figures for 340 Top Markets in Alphabetical Order
Including Data on All of the 215 Markets Having One or More TV Stations in Service Jan. 1, 1954

EDITOR'S NOTE: These figures expand and bring up-to-date 3 previous reports by the J. Walter Thompson Company, embracing more markets and the additional TV sets in use. Before utilizing these figures, it's urged that the following foreword by J. Walter Thompson Company should be read carefully. It should be noted that the figures do not purport to coincide with station coverage areas, which invariably are considerably larger than the markets here defined and for which additional data must be procured from individual stations. The market divisions are standard metropolitan areas as defined by the U.S. Census Bureau. The figures are designed to show where the sets are—not who reaches them.

TELEVISION HOUSEHOLDS in the United States reached 27,000,000 on Jan. 1, 1954, according to this latest J. Walter Thompson Company estimate showing their location in terms of 340 leading markets. These markets account for 84% of the total TV households in the U.S.; for every 10 households therein, nearly 7 possess a TV receiver.

A 6,000,000 increase in the number of TV households has taken place since the first in this series of reports was published in January, 1953 (Television Factbook No. 16 of Jan. 15, 1953). Now, 57% of the 47,500,000 households in the country have TV sets. On the overall, there is the remarkable average of slightly more than one TV household for every two households in the nation.

As important as the number of sets in use is the number of markets now on the air with one or more TV stations. There were 215 such markets as of Jan. 1, 1954, and each is covered in this report. Within these TV markets, there were 356 stations in operation—234 of them vhf stations (channels 2 through 13) and 122 uhf (channels 14 through 83).

Sources of Set and Market Data

These new TV household estimates are the result of J. Walter Thompson Company research, including information derived from a national study made by the Thompson Consumer Panel. The set totals, which rely heavily on industry sales information, take into account dealer inventories of new sets and of old, trade-in models, also "second" sets in a growing number of homes, and special conditions existing in many markets. No market is credited with greater than a 90% ratio of TV households.

Market totals of TV households used in this report are extracted from the confidential "J. Walter Thompson Company Coverage Report on All U.S. Counties." This analysis provides data on all counties within range of the TV signal from any source and indicates the most effective way of reaching any U.S. county with TV.

The markets named in this study are listed alphabetically and each is identified by its market category as it appears in Population and Its Distribution compiled by the J. Walter Thompson Company and published by McGraw-Hill. Market categories and their definition are as follows:

A Markets—Metropolitan Areas with population over 2,000,000
B Markets—Metropolitan Areas with population 450,000 to 2,000,000
C Markets—Metropolitan Areas with population 150,000 to 450,000
D' Markets—Metropolitan Areas with population 50,000 to 150,000
D Markets—Counties having one or more cities with population between 25,000 and 50,000
E Markets—Counties having no cities with populations over 25,000 but having populations of which more than 50% of the total is urban in character.
F' and F Markets—Rural Markets. F' are counties with average farm income. F markets are counties with below average farm income.

The summary table in this report shows the total of TV households classified by market groups. It shows, for example, that the 8 "A" markets account for more than one-third of the nation's TV sets. If the next 35 markets constituting group "B" are added, the incremental total is 61% of the U.S. sets. Nearly 21,000,000 households are located in groups "A" and "B" and there are nearly eight sets for every ten households.

Extra Copies of this Report are available at $1 each; 10 copies, $7.50; 25 copies, $12.50; more than 50 copies, 35c each.
**Purpose of This Report**

This report was prepared to make it easier to answer numerous questions related to the potential penetration of TV into specific markets, including those markets not having a TV station of their own. It provides information on markets in which other media should be given strongest emphasis and it helps planners to determine whether sales and merchandising follow-through that stems from TV advertising is being directed to those markets where it will do the most good.

**What This Report Is Not**

This report tells only where the TV sets are, market by market. It does NOT provide the total number of sets that can be reached by individual stations. A station’s signal transcends market boundaries and in many cases overlaps the signals of other stations, thus making duplicated coverage a factor to consider. The markets here delineated are the standard metropolitan areas and metropolitan markets as defined by The U. S. Bureau of The Census. Nor does this report attempt to show how many households have sets that are equipped to bring in the UHF channels (14 through 83). Only rarely do the number of sets equipped to receive these UHF channels approximate the total number of sets in a market.

The rate at which set owners are making the necessary changes in old sets to equip them to receive UHF channels is rapidly increasing. In part this is due to the large number of UHF stations on the air. Their number has been so fast growing that it now makes up nearly one-third of the total of all stations. Another factor improving audience potentials for UHF is the large proportion of all new sets sold that can be tuned to some or all UHF as well as the VHF signals reaching a market.

This is not a coverage report, and it is recommended that information on coverage should be sought from the stations themselves or from their representatives. Because the very nature of conversion of a VHF set for UHF sometimes puts limitations on the specific UHF channels that can be received, it is necessary to have accurate information on the number of sets in a market that can bring in, for example, UHF station “X”. This again is information within the area of “coverage” and is best obtained from the stations in question.

### Summary of TV Households by Market Groups

As defined in “Population and Its Distribution”, compiled by J. Walter Thompson Company and published by McGraw-Hill Book Co. Single and Cumulative Totals for Each Major Group are Shown

Color Trends & Briefs: NBC-TV color mobile unit should provide some of most exciting shows to date—in addition to supplying dealers with choice demonstration fare—as it feeds 15-min. daily inserts to 11 a.m.-noon home and 7-9 a.m. today shows from various eastern cities (Vol. 10:18-19). We can now report actual itinerary, with specific dates, as follows:

June 9-10, Chicago—Cleveirdale Farm. Cited as a model, typical modern midwestern farm operated by nifty young couple.
June 16-17, Silverwood—Whitehall Farm. Packed for flowers, lagoon, etc. Will include a special slide show.
June 18-24, St. Louis—Visit to fabulous estate of brewer August A. Busch Jr. It was once Gen. Grant's farm, is now one of nation's showplaces.
June 30 & July 2, Columbus, O.—Two different locales. Gov. Ludwig's manor and State Penitentiary, latter to be first time TV has invaded any penitentiary.
July 8-9, Cleveland and July 15-16, Washington, programs undecided.
July 22-27, Baltimore—Trip to Ft. McHenry, where Francis Scott Key wrote Star Spangled Banner.
July 22-29, Philadelphia—Two sites. Session at city's Fire school, where house will be burned and fire-fighting techniques demonstrated. Visit to Philadelphia Art Museum, which will include displays of such things as old Mummer's Parade costumes.
August 3-4, Boston, and Aug. 12-15, New York, programs for both to be selected.

NBC's color schedule, meanwhile, comprises 6 sessions of Bride & Groom, noon, May 24-26, May 31, June 1-2. Also in the works, to start in color at undisclosed date before fall, is new Tonight, 11:15-1 a.m., similar in concept to morning Today. NBC pres. Pat Weaver points out that Tonight alone would provide almost 10 hours of network color weekly, in addition to the 90-min. color spectaculars (Vol. 10:20).

Third station with live color camera is WTMJ-TV, Milwaukee—other 2 being WKY-TV, Oklahoma City and WBAP-TV, Ft. Worth—but gen. mgr. Walter Damm says he'll ease into local originations more gradually than others have. He has one camera, plus slide equipment, expects color film chain in late summer. Station has no plans for second camera, he says, "until we're sure it's economically justified." Target date is July 1, when station will start with the "NBC system," i.e., putting each sponsor's program on in color once without charge—if program is suited to color. By Jan. 1, this phase will be over and regular once-a-week cooking and women's shows are contemplated. Color commercials won't be "injected" into black-and-white programs. "We won't put on extravaganza," Damm adds. "We'll get those from the network. I'm not making a lot of promises. Some people forget it takes 3 hours to warm up and adjust a color camera. Furthermore, there has been too much color here for us to get away with poor stuff. We've had network color here for quite a while. About 15-20,000 people have seen color on the 4 sets we have in our auditorium." Rates will not be increased for color. Extra charge will be made for color whenever extra production costs are incurred. Otherwise, color and monochrome prices will be exactly same. Says Damm: "If an advertiser comes in here with a color film that can be run through a color film chain without any extra cost to us, he won't be charged extra for it. Same goes for slides."

Some 200 color set sales in Oklahoma City are reported by WKY-TV mgr. P. A. Sugg on basis of word from distributors. He says that Dallany's, RCA distributor, says it can't get enough sets. "They're a live outfit," Sugg says. "They don't just sell a dealer a color set. They give him a package, including theatre seats and the like—real promotion." Sugg takes great pride in his color schedule of an hour daily, attributing many set sales to amount of programming. He says station crews had been training for color about 8 months and that not a single minute of outages has occurred. Closed-circuit demonstrations are being conducted for clients, and Sugg reports that some of the biggest sponsors in area sit goggled-eyed, predicting a "revolution" in TV.

Financial & Trade Notes: ABC-TV's second and third quarters aren't expected to be profitable but outlook for fourth quarter, thanks to new programming, is very encouraging, said American Broadcasting-Paramount Theatres Inc. pres. Leonard Goldenson at annual stockholders meeting May 18. Beginning with third quarter, AB-PT also expects theatre business to improve, he stated. Second-quarter theatre earnings are following pattern of first quarter (Vol. 10:17), when they were off due to higher film rentals growing out of shortage of feature films, increased depreciation charges due to installation of stereophonic sound and widescreen equipment, and effects of TV for first time in many smaller cities, especially in South and Midwest. As for radio, he said: "Our confidence in radio is unshaken. It is going through a period of transition as a result of TV's growth. Nevertheless, there are indications of a reawakened interest in radio."

Philco earnings & sales declined in first quarter—earnings being $2,438,000 (62¢ a share) on sales of $113,770,000 vs. $3,401,000 (88¢) on $129,058,000 in same period last year and $2,341,000 (64¢) on $84,229,000 in first quarter 1952. Pres. Wm. Balderston declared: "As Philco anticipated, highly competitive conditions have prevailed in the TV industry and it has been necessary so far this year to produce a larger quantity of lower priced sets to meet the competitive situation. By following this policy, the company has increased its share of available business, strengthened its trade position and maintained employment at the highest level possible."

Magnavox earned $2,030,912 ($2.68 a share) on sales of $51,147,940 in 9 months ended March 31, compared to $2,051,578 ($2.70) on sales of $45,008,975 in corresponding period year ago. For 3 months ended March 31, earnings were $358,552 (43¢) on sales of $15,227,147, compared to $505,554 (67¢) on $18,882,725 in 1953 quarter.

General Instrument Corp. sales reached record $32,502,505 in fiscal year ended Feb. 28, up 7% over previous peak of $30,407,529 in preceding fiscal year—but earnings declined to $926,903 from $1,275,803. Pres. Monte Cohen attributed earnings decline to slump in TV sales last quarter of 1953 and failure of uhf to come up to expectations.

Hoffman Radio Corp. has filed SEC registration statement covering 150,000 shares of 50¢ par common, to be offered publicly through syndicate managed by Blyth & Co. and Wm. R. Staats.

Standard Coil Products Inc. sales for 3 months ended March 31 were $18,971,300, compared with $26,040,729 same 1953 quarter—reflecting lower volume in TV industry generally. Net income for quarter fell to $406,906 (28¢ a share) from $1,737,045 ($1.18).

Paramount Pictures Corp. now owns 750,000 shares or 64% of International Telemeter Corp., representing investment of $800,000.

Dividends: Storer Broadcasting Co., 37½¢ on common, 6¾¢ on Class B common, both payable June 14 to holders of record June 1; Hazeltime Corp., 25¢ June 15 to holders June 1; Sprague Electric Co., 40¢ June 14 to holders May 28; Oak Mfg. Co., 35¢ June 15 to holders June 1; Cleve Corp., 25¢ June 10 to holders May 28; Philco, 40¢ June 12 to holders June 1.

Oliver Irwin Lewis, 51, chief engineer for the Army Signal Corps engineering & technical div., widely known in the industry for his work in electronics, and a leading civilian advisor to the Chief Signal Officer on TV, radio, radar, etc., died May 18 in Philadelphia after an operation.

Brig. Gen. Carroll O. Bickelhart, 65, retired v.p. & secy. of AT&T and an authority in communications who was with the Army signal services in both wars, died in Rochester, N. Y., May 16.
Bryson Bill (H.R. 1227), which would ban advertising of all alcoholic beverages in all interstate media, looks no closer to passage than when similar measure was first introduced nearly a decade ago—though hearings this week before House Commerce Committee produced another verbal battle between "wets" and "drys," accompanied by reams of publicity.

All media presented solid opposition to bill. NARTE Ralph W. Hardy vigorously defended "right to advertise legal goods and services which are generally available to the public for purchase and use." He branded bill as "very discriminatory," declared broadcasters are well aware of "the sensitive nature of alcoholic beverage program sponsorship" and observed that complete absence of liquor advertising on TV & radio was result of self-regulation, not Federal control.

During Hardy's testimony, Chairman Wolverton (R-N. J.) demanded that radio networks answer charges of some temple witnesses that they were discriminated against in seeking public service time. He criticized networks for not volunteering to testify, then called TV & radio stations "monopolies" because they were licensed by FCC. He was particularly critical of radio. Rep. Rogers (D-Fla.) asked Hardy to compile report on amount of time radio stations allow for alcoholic beverage advertising. Networks had no comment.

Wolverton's comments were inspired by testimony of San Antonio temperance leader Dr. Sam Morris, who charged Chicago's WGN had refused to sell him time to discuss temperance and would not allow him to bring up subject on program sponsored by his insurance company. He said he had opposed renewal of AM licenses to Louisville's WHAS and Dallas' KRLD on grounds of discrimination against temperance movement.

Among others opposing bill: AAAA, ANPA, Magazine Advertising Bureau, National Editorial Assn. Hearings resume, and possibly conclude, Mon. May 24. Sen. Langer (R-N. D.) has also introduced companion bill (S. 3294), with same aim as Bryson measure, on which hearings start June 21.

Real Texas whinging was pitched by WBAP-TV, Ft. Worth, on May 15 when it inaugurated local color originations with 3-hour show using RCA color cameras (Vol. 10:19). In addition to local bigwigs, RCA-NBC officials on hand were RCA chairman David Sarnoff, NBC exec. v.p. Robert Sarnoff, stations relations v.p. Harry Bannister, station relations mgr. Sheldon Hickcox. Speaking at luncheon, before helping WBAP-TV chairman Amon Carter throw switch, Gen. Sarnoff predicted all TV will be color in 5-10 years; foresaw price of color sets in range of masses in 3-4 years; looked towards 3-D color and international TV. For radio, he predicted that in less than 10 years pocket-size personal radio "will be regarded as essential as a timepiece—and it will have a market equal to the number of persons in the world."

Color equipment of Wickes Engineering & Construction Co., Camden, N. J., will be distributed henceforth by General Precision Lab under agreement announced this week by Wickes v.p. John Million and GPL v.p. Blair Pouls. Color development programs of both will also be coordinated. Equipment includes subcarrier generators, bar generators, colorimeters, convergence dot & bar generators, multiburst generators, amplitude linearity testers, envelope delay curve tracers, video monitors, vector display equipment.

Telechrome Inc. claims that equipment enabling stations to rebroadcast network color costs much less than generally believed, and it offers the gear for $3950. Associated monitoring & test equipment is priced at $4600, and facilities for locally generated color signals, including color scanning equipment, is offered at $19,000.

Deal whereby KMO-TV, Tacoma, Wash. (Ch. 13), was to be sold by owner Carl Hammond to Jessica Longston group, owners of radio KAYO, Seattle (Vol. 10:5,15) was dropped last week when FCC indicated hearing would be necessary due to overlap of KAYO & KMO. Latter station was also included in deal, which involved $350,000 plus assumption of $150,000 debt owed on equipment. KMO-TV is an independent, having lost its original NBC affiliation to KOMO-TV, Seattle (Ch. 4). Owner Carl Raymond states negotiations for sale are still going on; though unprofitable, he said TV station could earn money if backed with ample capital to promote it. His view: "There are only 2 kinds of TV stations, namely, those making a lot of money and those losing money; nothing in between."

Attacking Ch. 31 CP to city-owned WNYC (Vol.10:20), N. Y. Commerce & Industry Assn. called operation of proposed station "utterly fantastic in the light of the city's current financial picture." Assn. exec. v.p. Thomas J. Miley wrote Mayor Wagner that the $379,000 set aside by city for construction was $200,000 short of minimum necessary for sufficient signal and that station operation would cost taxpayers minimum of $2,250,000 a year. Besides, he added, grant to city is of "questionable legality." Walter Reade Jr., pres. of Asbury Park's uhf WRTV, welcomed grant, declaring "another uhf channel will create just that much more interest for our growing market."

John L. Booth, scion of the Michigan chain publishing family who turned his attention entirely to radio and has no hand in management of the 8 newspapers, this week closed $150,000 deal to purchase Herman & Roy Radner's WIBM, Jackson, Mich. (250 watts on 1450 kc, ABC), subject to FCC approval. The Radners will dismiss their application for Ch. 10 in Parma, about 10 mi. west of Jackson, for which Booth and 2 others have filed. Booth suspended operation of WBKZ-TV, Battle Creek (Ch. 64), because of reported $10,000 a month losses (Vol. 10:17). He also holds CP for WSBM-TV, Saginaw (Ch. 51), owns radio stations WJLB, Detroit; WBBC, Flint; WSGW, Saginaw.

Stay of CP for Ch. 4 to KWK, St. Louis (Vol. 10:17), was denied to WTIV, Belleville-St. Louis, by Court of Appeals which said that although "substantial question" is raised, public interest dictated that grantee be permitted to build. WTIV then asked court to hasten its hearing on merits of case, move it up to June; it also filed protest against grant with FCC.

Senate voted FCC $7,291,400 for next year's budget, $750,000 more than House has approved. The extra $750,000, for spectrum monitoring, was approved over objection of Sen. Douglas (D-III) who couldn't see any connection with security even though President's National Security Council recommended it. Measure now goes to Senate-House conference to iron out difference.

Forty stations have already joined new Television Advertising Bureau (Vol. 10:20), which formally organizes at Chicago's Palmer House May 24—an advance enrollment which consultant Richard P. Doherty states assures success of the projected TV advertising-promotion counterpart of newspapers' Bureau of Advertising.

Armed forces overseas TV stations (Vol. 10:19) came step closer to reality May 17 when Senate passed enabling legislation (S-3401) backed by Defense Dept. Bill now goes to House.

Limited supply of copies of Where The TV Sets Are, report on TV households by markets by J. Walter Thompson Co. (see p. 1), is available to visitors at our NARTE exhibit in Room 830, Palmer House.
HIGHLIGHTS OF THE NARTB CONVENTION: William S. Paley's scholarly yet down-to-earth treatise on responsibility in the handling of news and opinion broadcasts is particularly timely in light of recent events, merits closest attention of everybody in the telecasting and broadcasting business -- and so we've published its full text as a Special Report herewith. It was, in our opinion, the high point of this year's NARTB convention, a clearcut statement of principles that might well be expounded again before Congress and the highest level thinkers in the land.

The Chicago convention otherwise was marked, from the TV point of view, by a universal acceptance of colorcasting as a fait accompli and imminent public service; by fantastic exhibitions of new telecasting equipment, notably color film scanners which will ease the stations' way into color (see story, p. 4); the mustering of 105 members for the new Television Advertising Bureau (p. 6); the problems of uhf, notably as expounded at the FCC's convention roundtable (p. 2); and, in closed meetings, network-station-rep moves to reduce radio night rates once again so as to hold their own in face of TV's admitted encroachment on their audience (p. 7).

VHF NETWORKS MOVE UP GUNS FOR HEARING: Furious counterattack against the drastic remedies proposed by uhf telecasters to Senate subcommittee (Vol. 10:21) was being prepared this week by hopping-mad vhf telecasters in a united, if tardy, effort to present strongest possible case when uhf hearings resume next Thu. & Fri., June 3-4. (For tentative list of witnesses, see p. 16.)

As scene shifted from Washington to Chicago NARTB convention, uhf operators -- who only last week were riding high on crest of impressive Senate presentation -- were bitter, too, about signs which made them believe the broadcasters' trade association intends to abandon policy of strict neutrality in the controversy.

The one aid-uhf measure favored by virtually everybody fell by the wayside, meanwhile, when Senate Finance Committee voted May 28 to take no action on any proposals to change excise taxes -- just one day after the communications subcommittee, under Sen. Potter (R-Mich.) had adopted resolution urging exemption of uhf-equipped sets from manufacturers' tax. The exemption proposal (Vol. 10:20-21), sponsored by Sen. Johnson (D-Colo.), appears to have virtually no chance now.

Terming defeat a "solar plexus blow," Sen. Johnson told us it would be useless to try to persuade Senate to overrule the committee. "I'm trying to figure out a way to bring relief other than by excise tax," he added, without elaboration.

* * * * * Networks and vhf telecasters, taken aback by uhf united-front proposals for reallocation, freeze and restrictions on vhf height and power -- and startled by the serious reception these suggestions got from the Senators -- lost no time in forming their own *organization* to give Senate subcommittee other side of picture. The
Chicago gathering was scene of strenuous activity as they forged emergency plans for defense of their frequencies. "There isn't a single vhf station that wasn't talked to or contacted by phone," one of most energetic vhf organizers told us.

Next phase in vhf plans is big meeting in Washington May 31-June 1, during which group will draw up testimony "to present whole story in the interest of fair play and cooperation with the subcommittee." A spokesman emphasized the unnamed behind-the-scenes group is not "anti-uhf," and expects to make several alternative proposals to assist hard-pressed operators. Washington law firm of Pierson & Ball has been retained to whip case into shape, with aid of battery of other lawyers due to attend Washington meeting with their station-owner clients.

While vhf-network strategy was being planned off the convention floor, some uhf telecasters were protesting that NARTB -- which represents both vhf and uhf stations -- was beginning to take an "anti-uhf" stand. Several even talked darkly of "walking out." They were particularly disturbed by May 25 address of NARTB pres. Harold Fellows, in which he pleaded for broadcaster unity, saying:

"We cannot solve our individual economic problems by the simple expedient of calling our Congressmen... It would seem to be expedient as well as prudent that we exhaust all possibilities of working out our industry problems together [before] we divide the army into warring tribes, and thus dissipate our strength... I am somewhat doubtful that we, as a group of businessmen have faced up to [the economic difficulties of some uhf and vhf stations] with the courage and honesty which should attend the conduct of our affairs."

Some also took offense at statement in Fellows' speech implying opposition to the Bricker Bill, which would give FCC authority to regulate networks, and at his endorsement of Rosel Hyde as FCC chairman.

Uhf members considered it a second blow when NARTB TV board held a special session next day and voted to appear at Senate hearings. Board wired subcommittee requesting permission for Mr. Fellows and engineering mgr. A. Prose Walker to present data. "It is believed that the NARTB can offer factual material of pertinence to a complete record," wire stated. "Inasmuch as the presentation would relate to factual and statistical information, it is suggested that if the appearance is accepted it precede any individual appearances anticipated by your subcommittee."

Pres Harold A. Thoms of UHF Industry Coordinating Committee (70 members) wired Fellows May 28 for meeting between representatives of the 2 organizations on eve of hearings June 2, for "general discussion" of uhf problems.

UHF TV Assn., which claims 13 members, issued this statement same day over the signature of general counsel Wm. A. Roberts: "There can be no doubt now of the intention of the 'fat cats' to use their enormous power and resources to prevent any salvation for uhf TV. Of course, NARTB is the national organization of all broadcasters and will continue to be, but for the present time the UHF TV Assn. is the single-purpose group which will persist in preserving uhf operation for the public, the advertisers and the uhf broadcasters. All who agree with that idea should act now to cooperate with them."

* * * *

Uhf controversy kept cropping up as NARTB convention proceeded, despite some efforts to keep it down. FCC Chairman Hyde gave it brief but significant mention in his address at May 26 luncheon:

"As you know, various types of regulatory actions are already being advocated in high places, including still another freeze, curtailment of present services, and regulation of the distribution of network programs. I shall not discuss the subject further except to call your attention to the current hearing before the Senate subcommittee on communications and suggest that the way to avoid restrictive regulatory action is constructive voluntary action... The vitality of the industry came from freedom from oppressive regulation."

Comr. Hennoek was in rare form again this week, and even more stridently outspoken (though less lachrymose) than at last week's Senate hearings. She precipitated a hot dispute with other commissioners at May 27 panel session. At outset, moderator
Harold Fellows said it had been agreed there would be no discussion of matters now before Senate subcommittee, but Miss Hennock insisted on reading prepared statement.

"I am now firmly convinced that only the eventual move of the TV service into the uhf band will save the patient," she said, endorsing proposal of the 2 organized uhf groups. A reasonable period of time -- "five or even 10 years" -- should be allowed for changeover, she added, and in meantime FCC should do everything it can "to bring network programming to the existing 127 uhf stations on an equitable and competitive basis." Reviving a dispute which brought one of most heated exchanges at last week's hearing, she said she hadn't slightest doubt that the 70 uhf channels alone would be enough for nationwide competitive service.

"I dissent from all of that except the part against sin," commented Comr. Doerfer. Bristling and angry, engineer Comr. Sterling also took issue.

"I consider that a direct attack against the engineers of the FCC staff and the industry," he said, drawing cheers. "I told the Senate subcommittee you can't generalize on such an important matter. You can't form an opinion overnight."

Chairman Hyde cautioned against drawing conclusions before all testimony is in. He was seconded by Comrs. Bartley and Lee, the latter commenting: "I'd like to learn how it will help the city of New York, with 7 channels -- 4 of them losing money -- to move them all to uhf."

[Note: It's not generally known that Commission once came within one vote of moving all TV into uhf. During 1943-52 allocation proceedings 3 commissioners -- Jones, Hennock, Walker -- reportedly favored the move. Wayne Coy, then chairman, often appeared to favor all-uhf allocation, and he could have swung the plan had he chosen to join the other 3.]

* * * *

Though most uhf telecasters seem to regard Senate proceedings necessary and desirable, some of their more fortunately situated uhf colleagues -- sitting on sidelines -- are viewing whole spectacle as setting up new obstacle they must surmount.

Regardless what the hearings may accomplish, it's unpleasant and undeniable fact that they've seriously damaged the prestige of uhf stations as a whole by tacit as well as expressed admissions of failures. With a few exceptions, the successful uhf operators have scrupulously avoided the hearings -- but several have remarked privately they're feeling the psychological impact where it hurts -- the pocketbook.

383 STATIONS NOW ON AIR; 10TH IN CANADA: Month of May was least prolific for new TV starters since freeze-end in mid-1952. New KFXJ-TV, Grand Junction, Colo. (Ch. 5) was only second starter of the month (other having been KGLO-TV, Mason City, Ia., on Ch. 3, and only the 42nd so far this year. It makes 383 now on air, 125 of them uhf.

More stations actually quit than started in May. Besides this week's dropout of WECT, Elmiria (see p. 4), uhf outlets went off the air in Atlantic City, Flint and Monroe, La.; and a vhf quit in Pueblo, Colo. (for details, see Vol. 10:19-20).

Canada's 10th station is now also on the air -- CBWT, Winnipeg (Ch. 4), sixth to be operated by govt.-owned Canadian Broadcasting Corp.; it began test patterns May 24, starts programming May 31, with 10-kw RCA transmitter, offered at $200 rate.

Veteran radioman Rex G. Howell's new station in Grand Junction is only outlet in the vast space between Denver & Salt Lake City; it uses the 500-watt Gates transmitter, first such for TV, originally used by the now-defunct KFXD-TV, Nampa, Ida. (Ch. 6), which quit air for economic reasons last Aug. (Vol. 9:34). It also has 3-bay GE antenna on 540-ft. Aerial tower. Non-interconnected, it's scheduled to get kines from ABC, DuMont & NBC, starts programming May 30 after week of tests. E. A. Thomas is exec. v.p.; Ruth Howell, program director. Base rate is $120. Rep is Hal Holman.

* * * *

June may bring a dozen or more new starters, if advance reports of principals and equipment makers can be believed. Listed for June starts -- though we again caution that delays: are the rule -- are these vhf: WLAC-TV, Nashville (Ch. 5); WISH-TV, Indianapolis (Ch. 8); KELP-TV, El Paso (Ch. 13); KGEQ-TV, Enid, Okla. (Ch. 5); WBHT, La Crosse, Wis. (Ch. 8); KGVO-TV, Missoula, Mont. (Ch. 13); WDBO-TV, Orlando, Flo-
rida (Ch. 6); KDOO-TV, Sedalia, Mo. (Ch. 6); WPBN-TV, Traverse City, Mich. (Ch. 7); WTHI-TV, Terre Haute, Ind. (Ch. 10).

In Canada CHCH-TV, Hamilton, Ont. (Ch. 11) and CFCM-TV, Quebec City (Ch. 4) are due on the air in June. In Mexico, XEFE-TV (Ch. 11) is reported building at Nuevo Laredo, opposite Laredo, Tex.

These uhf are also on books as June starters: WMSL-TV, Decatur, Ala. (Ch. 23); KVDO, Corpus Christi, Tex. (Ch. 22); WCET, Cincinnati (Ch. 48, educational); WBOC-TV, Salisbury, Md. (Ch. 16). There are several others, but their equipment situation is still obscure and it's doubtful whether they will start in June.

MORE VHF GRANTS NEAR, ANOTHER UHF SUSPENDS: No CPs were issued by FCC this week as members attended NARTB convention -- though 3 initial decisions were produced and another was lined up through dropout. One uhf station went silent, meanwhile, and 3 uhf CPs were surrendered to Commission. Initial decisions favored the following:

Dothen, Ala., Ala-Fla-Ga TV Inc., Ch. 9; Phoenix, Ariz., Arizona TV Co., Ch. 3; Petersburg, Va., WSSV, Ch. 8. Readied for an initial decision for Ch. 2 in Henderson, Nev., through dropout of KRAM, was Southwestern Publishing Co. Inc.

Station suspending was WECT, Elmira, N.Y. (Ch. 18), which asked permission to remain silent for 120 days "pending study of economic situation." It told FCC it has suffered losses every month since start in Oct. 1953. It's 17th station (14th uhf) to go off air, not counting those which went silent temporarily but resumed.

The CPs cancelled this week: WIP-TV, Philadelphia (Ch. 29), held by Gimbels since Nov. 1952; WTVX-TV, Goldsboro, N.C. (Ch. 34); WCRS-TV, Greenwood, S.C. (Ch. 21). Their defection brings total CP cancellations to 82 -- 70 uhf, 12 vhf.

Petersburg was the only one of the initial decisions resulting from hearing that went all the way. Examiner Claire Hardy chose WSSV over Southside Va. Telecasting Corp. because of local residence and community activity of former's principals and because it proposed programs more attuned to Petersburg than to nearby Richmond. Pres. of WSSV is Louis Peterson. Opponent is headed by Tom Tinsley, operator of WLEE, Richmond and WTH, Baltimore -- holder of CP for Ch. 72 in Baltimore.

(FOR DETAILS ABOUT PRINCIPALS IN ALL FOREGOING CASES, SEE TV FACTBOOK NO. 18.)

FILM SCANNERS KEY TO HEAVY COLOR SCHEDULES: Insistent cry for "more color shows," heard at all levels of the industry, looks as if it has produced results -- in form of intense development of color film scanners. Nothing at NARTB convention in Chicago this week was more apparent than feeling of telecasters that bulk color programming -- the kind of day-in-day-out fare that creates demand and sells sets -- must come from film. And substantial fruition is expected this fall.

Manufacturers' awareness of film's importance was even more obvious -- as 4 of them delivered some of the most vigorous sales pitches we've ever heard at a NARTB convention -- and we've heard a lot of them.

Not that live cameras aren't exciting plenty of interest, nor that the 2-way fight between RCA and GE isn't being waged fiercely -- but reaction of many telecasters is similar to that of Walter Damm, WMJ-TV, Milwaukee, who says he's going to rely on the networks for color "extravaganzas" for the foreseeable future even though he now has one RCA live camera (Vol. 10:21).

The 4 manufacturers who showed scanners were DuMont, GE, Philco, RCA. Technical comparisons are extremely difficult because some scanners are more fully developed than others and it's impossible to draw final conclusions as to the soundness of their basic principles. Some showed consistently good pictures hour after hour. Others were obviously rushed too soon from the labs. At their best, pictures produced were certainly superior to results achieved in black-&-white at comparable stage of development. Of course, there's always question of how nearly the average station can approach performance demonstrated on exhibition floor.

Even prices were extremely difficult to compare. The only way station engineers were able to draw conclusions was to sit down with sales engineers and ask how scanners can be integrated with their specific equipment and program plans. As a very rough guide, however, a station with no color equipment at all will have to lay out $50,000-100,000 to add color film, slide and network rebroadcast equipment.
Contemplating the new and difficult arts of producing live color, engineers nourished hopes of running color film as they do monochrome -- leaving up to the networks the tricky lighting, rehearsals, costume and make-up problems, etc.

Engineering judgment of highest order was demanded of station engineers as they attempted to distinguish between salesmanship and performance. Exhibit floor was where the men were separated from the boys.

* * * *

With choice of equipment so difficult, there's always possibility that stations will hesitate to buy anything. At same time, inter-station competition is such that no operator can afford to let his competitors get too great a head start.

Two basic kinds of scanners were shown -- RCA using conventional projector and 3-vidicon camera, the other 3 manufacturers employing continuous-motion projectors with single cathode ray tube used as flying-spot scanner.

Cross-claims of manufacturers are too numerous to mention. The continuous-motion proponents tout smoothness of operation and maintain that 3-vidicon approach has inherent registration problems. RCA asserts that "3-V" employs tried-&-true technique with which station engineers are familiar. RCA has support of General Precision Labs, which though it doesn't have color scanner, says it has tried continuous-motion cameras for years and would favor 3-vidicon approach.

All manufacturers report sales and great station interest. CBS and NBC are willing to try anything at least once, seem to be buying from all. DuMont reports it will deliver within a month to KTLA. Los Angeles, CBS and two others. Philco units are going directly from convention to NBC and CBS. GE has a "crash program" to produce 5 pre-production models for delivery in next few months. Regular production is slated for last quarter. RCA says it is writing business at a phenomenal rate; deliveries are due last quarter of this year.

Quietest of the bunch, until convention, was Philco, which first showed a 35mm color scanner at NARTB convention in Los Angeles last year. Now, it offers scanners in both 16mm and 35mm -- with camera mechanism made by Mitchell, slide equipment by Gray, both to Philco's specifications.

Among Philco innovations is 4000-ft. 16mm reel, giving 2 hours of programming. Company is only one making 35mm, reports it will be delivering first to NBC, CBS, Paramount, Technicolor, Air Force, Sylvania, and a few for export.

DuMont did some missionary work among ad agencies, seeking to change their minds from blase attitude expressed recently by some of top agencies (Vol. 10:20). Big agencies and advertisers were invited to submit their own film samples for tests at convention. DuMont claims that the demonstrations there are winning them over.

Among agencies participating: Gardner; Henri, Hurst & MacDonald; Beaumont & Hohman; Leo Burnett; BBDO; Campbell-Ewald.

* * * *

On live camera front, RCA was most impressive with its continuous demonstrations of exceptional quality -- fed from exhibition floor to 30 receivers 4 floors above. GE-CBS setup, employing field-sequential camera and coder (Vol. 10:8), has shown much improvement, attributed by GE engineers to use of Emitron in color in lieu of image orthicons. Emitron is British tube, made by E.M.I. Four of the units have already been sent to CBS. Regular production is due last quarter.

RCA camera shipments to date, in addition to the 5 already delivered to 3 stations (2 to WKY-TV, Oklahoma City; 2 to WBAP-TV, Ft. Worth; one to WTMJ-TV, Milwaukee), are as follows: 3 to NBC, one to CBS, one to WBEN-TV, Buffalo. CBS and NBC get one more each this month; KTLA, Los Angeles, is next.

Summing up live camera development, Philco's director of research for TV-radio-appliances Donald Pink (in speech read by Hazeltine v.p. Arthur Loughren) gave NARTB engineering session this evaluation:

"The present competition between NBC and CBS in the matter of color cameras can surely be counted on to accelerate the development of single-gun camera tubes. Perhaps we can leave the question of color cameras with the realization that only a handful of unfortunate engineers know enough about it to be confined to the problem until a completely satisfactory solution is found. We wish them luck, and soon."

Robert K. Richards, NARTB administrative v.p., resigned last week to become co-owner, with Walter Patterson, gen. mgr. of WKHM, Jackson, Mich., of local radio stations WIIAR, Clarksburg, W. Va., and WKJR, Keyser, W. Va., which they have purchased for $175,000 from G. L. II. Merrill. Patterson will run the stations. Richards will remain in Washington, may become a public relations counsel.

Alf M. Landon, pres. of KSCB, Independence, Kan., grantee of KTKA, Topeka (Ch. 42), elected v.p. of Daytime Broadcasters Assn.; he's the onetime GOP presidential candidate. Ray Livesay, WLBH, Mattoon, Ill., elected pres. of group.

John Schwartz, Belgian-born NBC-TV stage mgr. since 1951, on 3-month leave of absence this summer to serve as TV consultant to govt.-owned Belgian Institute of Broadcasting.

Arthur Pryor Jr., BBDO v.p. and head of its radio dept. since 1927, died in New York May 26 after week's illness. He was a son of the noted band leader, is survived by his widow, a married daughter and brother Roger Pryor, actor.

Paul Diamond, 38, eastern div. mgr. of Unity Television Corp., onetime Paramount TV executive, died of a heart attack in Chicago's Palmer House May 28. He had been attending NARTB convention.

Television Advertising Bureau, which has adopted symbol TvAB, had 105 stations signed, including many of the industry's leaders, by end of this week's NARTB convention—and it looks like it's definitely on the way to formation (Vol. 10:17, 19-20) despite rather lukewarm reception from NARTB hierarchy, the networks and some stations.

Ineligible for membership, networks aren't openly opposed, are taking a wait-&-see attitude, apparently none too pleased, skeptical about project for promotion of spot & local advertising a la ANPA's Bureau of Advertising. They frankly don't like the reps backing the project who they say promptly past attacks upon them, and they fear the bureau will devolve into a campaign headquarters against networks rather than for stations. Only one of the 16 owned-&-managed stations was among the signers—DuMont's WDTV, Pittsburgh—and that one on a "conditional" basis, subject to topside approval.

Skepticism among some independent stations was epitomized in this remark by one of the top managers, a pioneer both of radio and TV: "It's BAB all over again—accepted by a lot of fellows who don't know how to make money to have those who do show them how, and pay the bill." NARTB's position isn't clear yet, though it had a committee (director Robert Swezey, WDSU-TV, chairman) at work on a similar project, presumably to operate within the association's fold.

Basic idea—a station-supported bureau in New York, devoted to developing national and local advertising for stations—intrigued a large segment of the NARTB membership, who heard the TvAB presentation at crowded meeting, heard enthusiastic endorsements, then flocked to join up, willing to pay their highest July 1 quarter-hour time rate as monthly dues. The 105 signing represent some 40% of NARTB's TV membership, better than 25% of all stations on the air.

Next step: Nominating committee, around end of June, will send out ballots with 30 names for mail election of 15 board members, 5 each from respective markets of up to 150,000 population, 150-500,000, over 500,000. Then: Planning & organization, membership & staff personnel committees will be named for permanent setup, now temporarily headquarters in New Weston Hotel, N. Y.

Meanwhile, this executive committee of 12 is functioning with ex-NARTB employee-employer relations v.p. Richard P. Doherty as organizing consultant: Richard A. Moore, KTTV, Los Angeles, acting chairman; Frank Schreiber, WGN-TV, Chicago; Roger W. Clipp, WFIL-TV, Philadelphia; Charles Crutchfield, WBTV, Charlotte; Norman Gittleson, WJAR-TV, Providence; Jack Harris, KPRC-TV, Houston; Vernon Nolte, WHIZ-TV, Zanesville, O.; Wm. Quarton, WNTV, Cedar Rapids; L. H. Rogers, WSAZ-TV, Huntington; W. D. Rogers, K Dub-TV, Lubbock, Tex.; George B. Storer Jr., Storer stations; Harold P. See, KRON-TV, San Francisco.

TV membership of NARTB (257 stations, 4 networks) elected 2 new members of their board, reelected 4, so that there are now 11 members representing stations, 4 representing networks. Newly elected were John Esau, KTVQ, Oklahoma City, first from a uhf station, and Wm. O. Rogers, K Dub-TV, Lubbock, Tex. Reelected: Robert D. Swezey, WDSU-TV, New Orleans, present chairman; Clair R. McCollough, WGAL-TV, Lancaster, vice chairman; Harold Hough, WBAP-TV, Ft. Worth; Paul Rainborn, KTLL, Los Angeles; George B. Storer, Storer stations. Holdover members: Campbell Arnaux, WTAR-TV, Norfolk; Kenneth L. Carter, WAAM, Baltimore; Wm. Fay, WHAM-TV, Rochester; Ward L. Quail, Crosley stations; Alexander Stronach, ABC; Merle S. Jones, CBS; Ted Bergmann, DuMont; Frank M. Russell, NBC.
Station Accounts: Every major auto manufacturer is now using TV and/or radio, with TV network budgets reported up 67% for the auto industry as a whole, radio up more than 77%. This despite dropoff in auto sales and profits... Charles E. Hires Co. (beverages) had N. W. Ayer prepare 8-p. booklet, Hires TV & Radio TimeBuying Guide, which it is distributing to its franchised bottlers to give them tips on how to buy TV & radio time wisely... Standard Oil of Indiana, in new summer campaign for White Crown premium gas, using 11 TV, 34 radio stations, thru McCann-Erickson, Chicago... Tropicana Div., Pabst Brewing Co. (Tropicana non-fattening soft drink) buys 3 News of N.Y. weekly on WCBS-TV, thru Warwick & Legler... Alliance Mfg. Co. (antenna rotors) starts campaign in Aug. on 150-200 stations for all products, including "Lift-A-Dor" electronic device for opening overhead garage doors, thru Foster & Davies, Cleveland... Among other advertisers reported using or preparing to use TV: Superior Products Co., Dallas (Sil-O-See glass cleaner), thru J. D. Williams Adv., Dallas; Parker Pen Co., Janesville, Wis. (pens & pencils), thru J. Walter Thomas, Chicago; Eastco Inc., White Plains, N. Y. (Scratchex flea powder), thru Ruthrauff & Ryan, N. Y.; Polaroid Corp., Cambridge, Mass. (Polaroid Land camera), thru BBDO, Boston; Waterman Pen Co., Seymour, Conn. (pens & pencils), thru Fletcher D. Richards, N. Y.; So Good Potato Chip Co., St. Louis (So Good potato chips), thru Ruthrauff & Ryan, St. Louis; Artra Cosmetics Inc., Montclair, N. J. (Imra odorless deplatory), thru Grey Adv., N. Y.; Bon Bone Ice Cream Corp., N. Y. (chocolate-covered ice cream), thru Hilton & Riggio, N. Y.; National Selected Products Inc., N. Y. (7-Minit Fluffy Frosting), thru Duane Jones Co., N. Y.; Tree Sweet Products Co., Santa Ana, Cal. (Tree Sweet juices), thru BBDO, Los Angeles; Sockey-Vacuum Oil Co., N. Y. (gas & oil), thru Ted Bates Co., N. Y.; Eno-Scott & Bowne, Bloomfield, N. J. (Brylcreem hair dressing), thru Atherton & Currier, N. Y.

Network Accounts: Coast-to-coast routing of Dave Garroway's highly successful Today (7-9 a.m.) on NBC-TV is scheduled to start Sept. 27, when it's extended on the line off kine (8:9 a.m.) to KNBH, Los Angeles; KRON-TV, San Francisco; KFSBD-TV, San Diego... Speidel Co. (watch bands) buys last remaining 20 min. of Sid Caesar Show in fall on NBC-TV, Mon. 8-9 p.m., thru Sullivan, Stauffer, Colwell & Bayles; other sponsors are RCA & American Chicie Co. Lucky Strike to sponsor Your Playtime, summertime drama & comedy series, on CBS-TV starting June 13, Sun. 7:30-8 p.m., thru BBDO... Toni to sponsor Jack Paar Show on CBS-TV starting July 17, Sat. 9:30-10 p.m., thru Leo Burnett Co.... Geritol (drugs) buys Two in Love, new human interest program featuring Bert Parks, on CBS-TV starting in fall, Sat. 10:30-11 p.m., thru Edward Kletter Assoc.... Hazel Bishop (cosmetics) buys 10 programs on NBC-TV Tue. 8-9 p.m. in fall for Martha Raye, thru Raymond Specter Co.; Buick sponsors Milton Berle on 20 programs, General Foods backs Bob Hope on 6... R. J. Reynolds Tobacco Co. (Winston cigarettes) buys 2 parts, a week for rest of year on CBS-TV Morning Show, Mon.-thru-Fri. 7-9 a.m., thru Wm. Esty... Campana Sales Co. (cosmetics) to be all-day sponsor of 10-10:15 a.m. segment of Arthur Godfrey Time simulcast on CBS starting May 31, Mon.-thru-Fri. 10-11:30 a.m., thru Morey, Humm & Johnstone... Lemon Products Advisory Board, Los Angeles, buys 10 min. of Saturday Night Revue on NBC-TV starting June 12, Sat. 9-10:30 p.m., thru McCann-Erickson; sponsors previously signed: Dow Chemical, Armour & Co. (Dial soap), American Chicie Co. (Dentyne), Griffin Mfg. Co. (shoe polish), GE (major appliances), Cadbury Packing Co. (Old Dutch cleanser).

Arthur B. Church, KMBC-TV & KMBC, Kansas City, elected pres. of Radio Pioneers at 13th annual banquet during NARTB convention.

Highest Rate now for any TV station is that of NBC's New York key WNBT, which charges $6200 for Class AA hour (10:30-11 p.m., daily, 6-7:30 p.m. Sun.) in Rate Card No. 14 effective June 1. This is up from $5500, in effect since last Dec. 1. Class AA 20-sec. spot is $1975, up from $1095; 10-sec., $815, up from $565. Class A hour rate (7-7:30 p.m. Mon.-thru-Sat.) is raised to $4500 from $4250; 30-sec., to $1095 from $750; 10-sec., to $565 from $350. There are other changes in new rate card, to follow "as of" June 1. Rate卡 No. 14 effective May 15, which has hour rate of $6000 for certain Class A (7:30-10 p.m. Mon.-Sat.; 6-11 p.m. Sun.), having raised from $4800 (Vol. 10:18). Following is a digest of the new WNBT rates:

### Digest of Rate Card No. 14 (June 1, 1954)

* Rates are for Class AA only.

Final draft of standardized TV film contract is now ready to be submitted to film distributors for comments, and standard contract form should be ready by fall. Development of contract has been first big project of NARTB's TV film committee as directed by chairman Harold Sees, KRON-TV, San Francisco at May 25 TV Film Workshop at NARTB Chicago convention.

Spot and local radio time sales appear to be holding fairly firm by and large—but network radio is slipping (see latest PIB figures, p. 16) and CBS affiliates at Chicago NARTB convention closed meetings discussed downward adjustments in night time rates and possible upping of daytime rates. Other radio networks, too, face similar problem but only CBS held a formal affiliates meeting to sound out reaction; and, just as CBS led way in cutting rates 2 years ago, it won't be surprising to find it offering "revalued" time rates again soon. Meanwhile, tremendous drives are on to tell story of radio's cheaper costs and to hypo sales, with BAR urging more intensive selling effort and CBS Spot Sales out with new study titled Keeping Taps on 14 Markets which shows that radio homes therein increased 25% between 1947-53; that home sets went up 65%; that home-auto sets combined exceeded TV receivers by 14/16 in those markets in 1983.

Philadelphia Inquirer's WFIL (Roger Clipp, gen. mgr.), which in 1950 was one of first to change rate structure avowedly to meet TV inroads, announces "one-rate" card, effective June 1, whereby it does away with conventional time classifications. Single-rate base will be $350 an hour in lieu of old $315 rate for 7 a.m.-10 p.m. and $200 for 10 p.m.-7 a.m. There's differential, however, in discount structure, which cuts 7-10 p.m. by $140 an hour and after 10 p.m. by $175—so that in effect new rate card ups day rates, lowers night.

Changes in transcription rules, both radio and TV, will be sought by NARTB in petition to be filed with FCC. Objectives: relaxation and clarification. Also to be filed is petition asking permission to operate AM directional antennas by remote control.
ROUNDTABLE discussion by 6 FCC commissioners (Webster absent) at NARTB convention covered great variety of subjects in addition to the hottest one—uhf situation (pp. 1-3)—gave insight to individual commissioners' philosophies. Among topics covered and reactions presented:

(1) Why are hearing decisions so long in coming? Comr. Doerfer pointed out that length of hearing record frequently determines time required. He said situation can be helped by new procedures—stipulations, pre-hearing conferences, agreements on points of reliance, etc. More help is expected from further changes, now in the works. He also noted that examiners are independent, can't consult with FCC, and he looked for chief examiner, recently appointed, to assist in cutting down delays.

(2) Boosters and satellites. Comr. Sterling said FCC hopes to have answers before long, getting help from experimental operators such as Ben Adler, RCA and Sylvania. Among policy questions Commission must decide, he said, are whether to use the repeaters to fill holes or extend service to areas outside normal contours—and whether they should be permitted in communities that already have conventional stations. Comr. Hennock would permit only uhf operators to employ satellites, saying that vhf stations could "control entire states" with them. Comr. Doerfer observed: "The ultimate objective is to get service to the public, not who in the industry gets hurt."

(3) Subscription TV. Asked if decision on subject is up to Federal courts, Comr. Hyde said he didn't believe courts are involved. Commission is studying the subject, he said, and is "giving it consideration consistent with our other duties." He said he believes main job is still to get stations going.

(4) Community antenna systems. Comr. Doerfer said matter should be handled on local basis; it's up to local govs. to determine how they want their communities to get TV. He stated FCC intervention would be "almost akin to the Federal Govt. interfering with local educational systems." He also noted there's question whether systems are interstate or intrastate commerce; if latter they're definitely out of FCC's jurisdiction.

(5) Educational reservations. Comr. Hennock insisted reservations must be indefinite because it takes educators so long to act. She reiterated opinion that educational stations must not be permitted to go commercial. Comrs. Hyde and Bartley noted that FCC rules, including channel reservations, are always subject to change.

(6) Station sales. "Is FCC now more tolerant of quick purchases and sales of stations to improve one's position in the industry?" Comrs. Hyde and Doerfer expressed view that if Congress wants Commission to give prospective purchasers different scrutiny than it does original applicants it should pass law to require it. Comr. Bartley said he's concerned about investment houses entering TV—radio just for investment. The more local ownership the better, he stated. If licensees are abusing right of sale, he concluded, it's up to Congress to "take a new look." Comr. Lee said one criterion should be how long station is on air before sale. He reiterated doubts expressed in his opinion on sale of KOTV, Tulsa, to J. H. Whitney interests (Vol. 10:14-20).

Spectrum utilization is "shockingly low," FCC broadcast bureau chief Curtis Plummer told NARTB engineering conference, and he suggested great variety of means for improvement. In TV, he commended work that produced improvement through offset carrier and, in color, through introduction of subcarrier. He indicated that boosters and satellites offer promise of increased channel efficiency, which is now only about 20%. For AM, he seemed particularly hopeful about "wired wireless," the technique used in "campus radio"—induction of signal on RF cables, electrical power lines & telephone lines. Suggesting the system for stations otherwise limited by interference, he said: "Here would appear to be a means of serving a large number of people with a rather small expenditure of power, and, most importantly, with a comparatively minor potential for interference to other stations."

Remote control of TV stations, including boosters and satellites, was visualized by Thomas W. Forget, plant mgr. of Rust Industrial Co., in talk during NARTB engineering conference. "It scarcely requires a prophet," he said, "to predict that mountain-top stations, operated by remote control, will be a reality in the not too distant future. Many rural areas may find that their only hope of receiving good TV coverage will be through booster or satellite stations, possibly affiliated with some larger TV stations. The constant improvements in transmitting plant equipment is making it obvious that the time is approaching when remote control can take over the boring and unrewarding job of standing mountain-top TV transmitter watches."

"A little Empire State Bldg." in Minneapolis is Foshay tower, now supporting WCCO-TV (Ch. 4) and share-time WTCN-TV & WMJN-TV (Ch. 11) and due to get Ch. 9 when KEYD initial decision is made final (Vol. 10:21). Supervising job is WCCO-TV technical director John Sherman, who reports that 160-ft. tower atop building will have Ch. 4 at top, Ch. 11 in middle, Ch. 9 at bottom.

RETMA committee on boosters & satellites (Vol. 10:17) reported to May 27 Chicago meeting of technical products div. under GE's W. J. Morlock that it has held organizational meeting and assigned its members different phases of the issue for study before next meeting June 23. Committee under Ben Adler, Adler Communications Laboratories, hopes to gather information and operating experience, make recommendations and supply FCC with data. Other committee members: E. E. Overmier, Sylvania; L. A. Bondin, Prodelin; Neal McNaughten, RCA; J. P. O'Neill, DuMont; C. J. Simon, GE; J. R. McKenna, Philco; E. A. Hungerford, General Precision Lab; Leonard Rooney, Raytheon; Albert G. Veldhuis, Wind Turbine Corp.; Lester C. Smith, Spencer-Kennedy Labs; Aaron Shelton, WSM-TV, Nashville.

Joshing the intent of the Bryson bill (Vol. 10:21), which would ban advertising of all alcoholic beverages in interstate media, Reps Dingell (R-Mich.) and Eberharter (D-Pa.) this week introduced identical bills similarly to ban advertising of cigarettes, cigars, smoking tobacco & chewing tobacco. Speaker for House Commerce Committee, where bills were referred, called them "forms of subtle sarcasm" directed at Bryson measure. Latter, he said, undoubtedly will be killed in committee.

Channel shifts and power increases: KCMC-TV, Texarkana, Tex. (Ch. 6), May 27 boosted power to 100-kw ERP; WBNS-TV, Columbus (Ch. 10), May 22 went to 220-kw. WMJF-TV, Youngstown, June 4 becomes first uhf station to shift channel when it goes from Ch. 73 to 21 (Vol. 10:19;21); WTVAR-TV, Norfolk, June 10 moves from Ch. 4 to 3; WFBM-TV, Indianapolis (Ch. 6), June 4 begins 100-kw ERP from new 1019-ft. tower.

Sen. Edwin C. Johnson (D-Colo.) will be speaker at June 16 banquet winding up 2-day convention of National Community TV Assn. at New York's Park Sheraton Hotel.

New community TV system was authorized by Scottsbluff, Neb. city council under 10-year franchise granted L. L. Hilliard, owner of local radio KOLT.
Lottery Rules were amended by FCC this week to conform with last month’s Supreme Court decision reversing ban on “giveaway” shows (Vol. 10:15). Effective date of the rules, originally adopted in Aug. 1949, had been postponed pending court appeal by ABC, CBS & NBC, and they now go into effect 30 days after publication in Federal Register. Wording is same as rules originally proposed, except that portions pertaining to giveaway shows have been deleted. The identical amendments to AM, FM & TV rules (Sections 3.192, 3.292 & 3.656):

An application for construction permit, license, renewal of license, or any other authorization for the operation of a broadcast station will not be granted where the applicant proposes to follow or continue to follow a policy or practice of broadcasting or permitting the broadcasting of, any advertisement of or information concerning any lottery, gift lottery, gift enterprise, or similar lottery, gift enterprise, or scheme, whether said list contains any or all of such prizes.

The determination whether a particular program comes within the provisions of paragraph (a) of this section depends on the facts of each case. However, the Commission will in any event consider that a program comes within the provisions of paragraph (a) of this section if in connection with such program a prize consisting of money or thing of value is awarded to any person whose selection is dependent in whole or in part upon lot or chance, as is the case of the prizes drawn or awarded by means of a lottery, gift lottery, gift enterprise, or such scheme, whether said list contains any or all of such prizes.

Notre Dame and NCAA, at odds on controlled football telecasts, clashed anew at NARTB convention session. The university’s exec. vp. Rev. Edmund P. Joyce called game-of-the-week plan “reactionary, socialistic, artificial and of doubtful legality.” NCAA exec. secy. Walter Byers defended policy of controlled football telecasts on grounds research had proven that many smaller schools had been hurt by televising nearby games; he said NCAA would be willing to listen to reasonable modification of game-of-the-week plan. N. W. Ayer’s Jerry Jordan said 1953 had proven “sportcasting is not going to destroy sports,” citing record attendance at fights, Kentucky Derby, World Series and other major sports events. Two baseball executives, George Trautman, pres. of minor leagues, and Frank Lane, gen. mgr. of Chicago White Sox, agreed televising of major league baseball games in minor league territory had hurt attendance at minor league games. Trautman blamed TV for decline in minor league attendance from 41,000,000 in 1949 to 22,000,000 last year.

Headliners Awards for TV-radio, announced May 29 at Atlantic City: To Edward R. Murrow and CBS-TV for “general excellence in presentation of See It Now”; WBNS-TV, Columbus, for “general excellence in coverage, commentary and editing of local events”; ABC-radio for “consistently outstanding radio network news broadcasting”; CBS-radio & CBS public affairs director Stuart Novins for outstanding public service in documentary Feature Project series; WEIE, Cleveland, for outstanding reporting by radio station.

“UHF Success Story” titles article about WABF-TV, Baton Rouge (Ch. 28), in current issue of RCA’s Broadcast News, which reports station was operating in black less than 50 days after first broadcast in April 1953. In same issue is comprehensive description of Denver’s KBTB (Ch. 9) by station mgr. Joseph Herold and article on first week of WFTL-TV, Fort Lauderdale (Ch. 23), by chief engineer Richard Northey.

Commercial sponsorship of Congressional proceedings would be banned by bills S. Res. 249, introduced by Sen. Bennett (R-Utah) and HR-9152 by Rep. Cellar (D-N.Y.). Rep. Meader (R-Mich.) introduced bill (H. Res. 550) to govern House committee hearings, which would give each committee authority “upon such terms and conditions as it deems advisable, to permit the broadcasting and telecasting of its proceedings . . . .
CHICAGO convention of NARTB, whose exhibits featured an estimated aggregate of about $4,000,000 worth of TV-radio station equipment, heavily weighted on the side of TV and color, had practically all of the sales brass of the station equipment manufacturers tied up this week—so not much activity was reported from their home offices. Only new station order disclosed this week was GE’s—for 35-kw transmitter, 6-bay antenna and studio equipment for delivery on date as yet unspecified to KCKT, Great Bend, Kan. (Ch. 2).

RCA shipped 25-kw transmitters May 25 to WGR-TV, Buffalo (Ch. 2) and on May 26 to WMTW, Poland, Me. (Ch. 8), both due on air in July—latter to transmit from Mt. Washington. RCA also shipped 50-kw power supply units this week to WHO-TV, Des Moines (Ch. 13) and KOLN-TV, Lincoln, Neb. (Ch. 12), and 50-kw amplifiers to WJAR-TV, Providence (Ch. 10) and WAAM, Baltimore (Ch. 13). DuMont shipped 25-kw visual & aural amplifier to WCSC-TV, Charleston, S. C. (Ch. 5) and 25-kw visual amplifier to KFBC-TV, Cheyenne, Wyo. (Ch. 5), enabling both to increase from 5-kw.

In our continuing survey of upcoming new stations, these were the reports received this week:

KREM-TV, Spokane (Ch. 2), hoping to get on air early next fall, has 747-ft. Truseon tower slated for delivery within 2 weeks, reports chief engineer Ralph E. Meador for owner Louis Wasmuer. Order of transmitter and other equipment was being contemplated at NARTB convention. Rep not yet chosen.

KUTV, Salt Lake City (Ch. 2), expects June delivery of 20-kw composite transmitter being custom-built in own Salt Lake City workshops, plans Aug. 1 test patterns, reports gen. mgr. Frank Carman. Blaw-Knox 200-ft. tower with RCA 3-bay antenna is to be ready by June 18; programming as ABC affiliate starts between Aug. 15 & Sept. 15. It’s owned by Frank Carman & Grant Wrathall (25% each) and Salt Lake Tribune and Telegram (50%). Base hour will be $450. Rep will be Hollingbery, who will offer it under “group market plan” along with 4 other stations with interlocking ownership—KOPR-TV, Butte, Mont. (Ch. 4), which began last Aug.; KLIN-TV, Twin Falls, Ida. (Ch. 11), due in Aug.; and KIFT, Idaho Falls (Ch. 8), and KWIK-TV, Pocatello, Ida. (Ch. 10), both due next fall.

WUSN-TV, Charleston, S. C. (Ch. 2), has ordered 25-kw RCA for July 10 delivery, plans Sept. 1 test patterns, Sept. 25 programming, reports pres. J. Drayton Hastie. Its 850-ft. Kimco tower with 6-bay superturnstile RCA antenna is scheduled to be ready by July 10. It affiliates with NBC & DuMont, will be second station there, WCSC-TV (Ch. 5) having begun last June with CBS & ABC service. H-R Television will be rep.

WJNO-TV, West Palm Beach, Fla. (Ch. 5), now installing 10-kw RCA transmitter, plans test patterns in Aug. when 366-ft. Idecro tower with 183-ft. 12-bay RCA superturnstile antenna is due for completion, writes gen. mgr. Walter L. Dennis, ex-WLTS-TV, Lansing. It will be primary NBC. Theodore Granik (American Forum of the Air) owns 24%. It will be city’s second station, WIRK-TV (Ch. 21) having started last Aug. 31. Rep will be Meeker.

WISH-TV, Indianapolis (Ch. 8), has 12-bay RCA antenna installed on interim 473-ft. Idecro tower, expects to meet July 1 programming target, with test patterns starting about one week before, reports v-p. gen. mgr. Robert E. McConnell. Buildings are ready, but 50-kw RCA transmitter remains to be installed. It has signed as interconnected ABC and secondary CBS affiliate, will be first local competitor for pre-freeze WFBM-TV. Base hour will be $800. Bolling will be rep.

WPBN-TV, Traverse City, Mich. (Ch. 7), with some RCA equipment on hand and balance awaiting completion of transmitter house, plans test patterns last week of June or first week of July, reports pres.-gen. mgr. Les Biederman. It will have 6000-sq. ft. new studio building. Foundations for Stainless tower, to be shipped in 2 weeks, are being poured. Signed as NBC affiliate, it will be only TV station of Paul Dunyan Network, operator of 5 AM locals. Hal Holman will be rep.

WSPA-TV, Spartanburg, S. C. (Ch. 7), without target because of Paris Mt. transmitter site appeals by WAIM-TV, Anderson and WQVL, Greenville (Vol. 10:10, 11, 14, 18, 20) could get on the air within 90 days as it has acquired former WBFC-FM Paris Mt. transmitting plant, complete with 400-ft. tower, reports production director Dave Steele. TV studios, being remodeled from 3 stores adjacent to radio WSPA, will be ready within 90 days, according to pres.-gen. mgr. Walter J. Brown. It will be CBS affiliate. Rep not yet chosen.

WTIK-TV, Durham, N. C. (Ch. 11), changes call letters to WTVD (Vol. 10:14), has 5-kw DuMont transmitter ordered for July 1 delivery, to be followed by 50-kw later, writes pres. Harmon D. Duncan. Test patterns are scheduled for Aug. 20, with commercial operation to begin in Sept. as ABC affiliate. Durham is 20 mi. northwest of Raleigh, where WNAO-TV (Ch. 28) began last July. Its transmitter will be 9 mi. north of Durham, where Kimco 700-ft. tower with 12-bay RCA antenna is due to be ready by July 24. Headley-Reed will be rep.

KGVQ-TV, Missoula, Mont. (Ch. 13), 12-bay GE antenna on plans to complete 200-ft. Idecro tower June 7, shortly after 5-kw GE transmitter is installed. June 21 tests are now contemplated by owner-gen. mgr. A. J. Mosby. Coverage of all western Montana is expected from transmitter site on mountain 1905-ft. above av. terrain, near Evaro, 10 mi. north of Missoula. KGVO-TV proposes to carry programs from all 4 networks. Hour rate will be $200. Rep will be Gill-Perna.

WMSL-TV, Decatur, Ala. (Ch. 23) plans to begin programming June 14 after airing test patterns earlier in day, reports mgr. Bill Guy. Studios and 1-kw RCA transmitter are in downtown Mutual Savings Life Bldg., with 380-ft. RCA tower & antenna on roof. It will be first outlet in Muscle Shoals area; WDEF-TV, Chattanooga (Ch. 12) and WROM-TV, Rome, Ga. (Ch. 9) are more than 100 mi. away. Base hour has been upped from $100 to $150. Rep will be Walker.

Havana’s CMTV (Ch. 11), known as Television del Caribe, which was constructed by the George Storer interests but quit the air in April after heavy losses during less than year’s operation (Vol. 10:18), has been acquired by Telemundo S.A., operator of CMA-TV, Havana (Ch. 2), owned by El Mundo publisher Amadeo Barletta, who also is Cuban distributor for Cadillac, Oldsmobile, & Chevrolet. It’s being moved now into CMA-TV quarters, using same technical & studio facilities and staff. Reported purchase price of CMTV facilities: $200,000.

Counting on uhf booster approval by FCC, Lanibada-Pacifie Engineering Inc., 14757 Keswick St., Van Nuys, Cal. is offering unit to sell for $2500-$3500. Heart of device is travelling-wave tube, which chief engineer L. W. Mallach claims has such small time delay that problems of polarization etc. just don’t arise. Booster produces about 2-watts ERP, is claimed to cover 2 mi. with beam about 45 degrees wide.

How to get into TV is subject of Your Place in TV—
a Handy Guide for Young People, by Rev. Edwin B. Broderick, director of radio & TV communications for Archdiocese of N. Y. (McKay, 142 pp., $2.75).
HIGH STAKES IN BIG-SCREEN COLOR BATTLE: Even as set manufacturers received letter from CBS-Hytron v.p. John Q. Adams, in effect suggesting they hold everything for unveiling of new 205-sq. in. color tube in June, RCA this week abruptly called off production of its 19-in. tube in favor of "bigger, better and cheaper" 19-in. model to come later this year.

Long-awaited 19-in. CBS "Colortron 205" gets first press showing sometime in June -- but it's believed to be in limited production now, and those who have had a sneak preview are enthusiastic. CBS-Hytron topkicks are mum about details, saying only "you'll see it in a few weeks."

Like RCA's color tubes, it's believed to be 3-gun shadow-mask type, but with curved screen & mask like CBS's 15-in. developmental tube (which never really got into production) instead of flat assembly employed in RCA tubes to date. DuMont's enthusiastically received 19-in tube, with 185-sq. in. picture (Vol. 10:18,20), also has curved mask, is due for delivery by fall.

RCA's set-making plans remain unchanged -- at least on the surface -- with company sticking to previously announced plans to make 5000 15-in. and 5000 19-in. sets this year. Some 4000 of the 15-in. have already been delivered, and after the remaining 1000 are turned out, RCA intends to close down 15-in. production forever. The 5000 19-in. sets are to use RCA's new 19-in. tube in place of old 182-sq. in. model shown to engineers in January (Vol. 10:2) and recently in limited production.

RCA turned out a few hundred 19-in. tubes, found that the "shrinkage" -- or rejection rate -- ran as high as 3 out of every 4. And the bigger-screened CBS and DuMont tubes -- plus whatever Philco and others may soon announce -- loomed as formidable competitors in the big battle for color tube leadership.

No. 1 project at RCA today is getting the new bigger 19-in. tube in shape, with every resource of company behind round-the-clock effort to have the super-duper kinescope ready for symposia and sampling by July, production by fall.

New 19-in. RCA tube will have larger picture, and be "brighter, simpler, less expensive," in words of Chairman David Sarnoff, who gave us this description in response to query: "It's still a 3-gun RCA shadow-mask tube, with all the improvements that we have been able to make in the course of our development. It's a natural development of our continuing work on color tubes, and doesn't mark any change in our policy." Details are still top secret.

Letter from RCA to set makers this week gave no details of new tube -- not even size -- except to inform them that "we are completing development on a new tricolor kinescope incorporating important improvements in design and picture size." It added: "With the completion of present orders on our books for the RCA developmental [19-in. tube] we will accept no additional orders for this type." It was learned that one order for 7500 units had been returned.

There still could be plenty of surprises in the fiercely competitive picture tube field, as manufacturers jockey for position in color. One thing is plain -- they're all playing their cards close to the chest.

Will someone skip 19-in. entirely, go directly to 21? Could be. Tube makers now have sample 21-in. rectangular bulbs on hand for both shadow-mask and focus-mask (Lawrence) types, and glassmakers stand ready to turn on the production of any type. Though mock-up 24-in. "color tubes" were shown at IRE convention last March, there's no reason to believe anyone is seriously considering that size now. Most tube and receiver makers agree 21-in. will be ideal size for color, as it has proved to be for monochrome. This much is sure: Color TV's 15-in. stage is over.
PLenty of Life in TV Trade During May: Despite month-long Philco strike and normal seasonal downturn, TV trade showed lots of ginger in May -- tapering off from high April levels but standing well above the levels of May 1953.

May factory sales are estimated at 300,000-350,000 sets, down from 440,000 in April but above the 250,000 in May 1953. Distributor sales are estimated at between 275,000-325,000 vs. 410,000 in April and 250,000 in May 1953. Retail sales likewise are expected to be somewhat lower than the 400,000 sold in April, but well above the 244,191 sold in May 1953. Retail sales estimate couldn't be obtained.

Inventory figure isn't available yet -- but advance indications are that the inventories rose little during May -- nowhere near the 200,000 jump reported at the factory level in May 1953. End-of-April inventories were 1,650,000 at all levels.

However gratifying high unit sales may have been, low profit margins on TVs weren't increased -- and many manufacturers, preparing for June distributor parleys and marts, were intensively seeking ways and means of raising prices with a minimum impact on sales. Meanwhile, they're saying nothing, and only mere trickle of information flowed from cautious set makers, large and small.

* * * *

Crosley's Leonard Cramer, exultant over what he termed "excellent showing" of 17-in. "Super V" selling at $140-$160 (Vol.10:13), confirmed that 21-in. version of "Super V" would be included in line to be shown in N.Y. June 7. Prices are reported to be at $170, $180 & $190 in walnut, mahogany & blonde finishes. He also promised details on sales performance of "Super V" at press conference June 8.

Crosley will have full line, and it emphasizes lower-priced sets in keeping with expressed consumer preferences, Cramer said. To set makers who contend profit margins were too low, Cramer replies: "We're making a profit, which proves it can be done. Besides, the important question is not whether manufacturers can make as much profit as they would like, but what price the consumer will pay for a TV set."

Like Crosley, Raytheon will specialize in low-end models, its marketing mgr. Dick O. Klein revealing new Raytheon line of "vertical chassis" sets will heavily feature low-cost items not too far removed from its "Challenger" 17-in. table model at $140, $150 & $160 and 21-in. table at $170-$190 (Vol.10:18). Hallicrafters, now out with 17-in. at $150, will bring out companion 21-in. at about $170 in month or so. Sears-Roebuck's midsummer catalog came out this week with own "Silvertone" label 17-in. table in black leather at $140 for mail order only, $10 less than on floor. And last week Majestic revived 14-in. after lapse of 5 years, offering $150 table.

Such prices admittedly leave little room for profit, emphasizing as they do the leader models, with nothing said about step-ups. H. Leslie Hoffman puts the causes of current low-profit dilemma thusly:

"Lack of adequate and effective sales effort at the retail level; the battle for position on the part of certain manufacturers trying to lay a foundation for the sale of color sets; the increased percentage of business being done by the discount houses; the increased restrictions on the part of financial institutions on retail credit, and the excessive advertising and conversation on color."

Strike at Philco's 10 TV-radio-electronics plants remained status quo this week, entering 5th week as we went to press, with little outward evidence that the RCA agreement last week on 9-10¢ hourly wage increase would provide any basis for a settlement at Philco, as some had hoped and prophesied. Three meetings of union and management this week proved fruitless. Meanwhile, IUE rejected GE offer of 5¢ hour wage increase and talk of a strike there was widely reported.

Several parts makers were reported curtailing operations somewhat as result of Philco strike. Their shipments have been piling up at railroad freight warehouses because strike prevents deliveries. Big parts maker Leslie F. Mutel said that if strike lasts 2 more weeks, it will be "most serious" for many parts manufacturers. Clarostat Mfg. Co., Dover, N.H., was reported to have reduced its working force as result of Philco strike. It supplies about $1,000,000 a year in parts to Philco.
TV production totaled 97,936 week ended May 21, compared to 96,007 preceding week and 103,563 week ended May 7. All 3 weeks covered period of Philco walkout. It was year’s 20th week, brought production for year to date to about 2,200,000, compared to about 3,232,000 in corresponding period of 1953.

Radio production totaled 190,275 (including 78,629 auto), down from 211,161 week ended May 14 but up from 167,445 week before. It brought 20-week production to about 3,880,000, compared to 5,615,000 in corresponding 1953 period.

Official 4-month TV figure was 1,904,718, of which 450,262 receivers were uhf-equipped, according to RETMA's revised tabulation released this week. Output in April was 457,608. Radio production was 3,326,800, including 1,427,641 auto sets. April output was 745,235, including 330,989 auto.

**Topics & Trends of TV Trade:** Seventeen TV-radio manufacturers will exhibit at summer markets of American Furniture Mart & Merchandise Mart in Chicago June 20-July 3, with most showing new fall lines for first time to dealers. Lineup of exhibitors at Furniture Mart: Admiral, Arvin, Bendix Radio, DuMont, Hallicrafters, Motorola, Philco, RCA, Spartron, Zenith. At Merchandise Mart: CBS-Columbia, Capehart-Parnsworth, Crosley, GE, Magnavox, Raytheon, Westinghouse.

NARD, which usually holds midyear meeting in second week of marts, isn’t doing so this year, having agreed at its Jan. convention to hold series of regional meetings with dealers instead.

**TV set sales by Canadian factories totaled 137,267 at average price of $368 in first 4 months of 1954, when production was 152,256, reports Canadian RTMA. Projected production estimate is for 86,564 more sets in next 3 months. Inventory at end of April was 83,822, compared to 80,059 at start of month. Quebec led in sales with 50,176; Toronto second, 29,621; British Columbia, 13,619; other Ontario, 13,193; Ottawa & eastern Ontario, 10,334; Hamilton-Niagara, 7879; Windsor, 5242; Maritime Provinces, 4702; Prairies, 2501. In April alone, sales were 25,868, production 29,651.

New RCA manufacturing-sales divisions were set up this week at Camden—RCA Victor Television Div., headed by Henry G. Baker as v.p. & gen. mgr.; RCA Victor Radio & "Victrola" Div., headed by James M. Toney, ex-director of distribution, consumer products. Both of these product activities were previously in RCA Victor Home Instrument Div. under Joseph B. Elliott, exec. v.p., consumer products, now at parent company headquarters in N. Y.

Admiral takes on sponsorship of Admiral Weekend News, series of 5-min. newscasts on ABC Radio on weekend starts May 29, to promote 20th anniversary giveaway of $80 Apex vacuum cleaner with purchase of any Admiral product over $195. Total of 22 newscasts will be aired each weekend on the hour for indefinite period, costing estimated $50,000 a week.

State-by-state and county-by-county tabulations of the 984,767 radios (excluding auto sets) shipped to dealers in first 3 months of 1954 were released this week by RETMA. They compared with 1,599,327 shipped in first quarter of 1953 and 1,475,000 in 1952. March shipments this year were 418,997 vs. 291,234 in Feb.

Slanted-screen TV set, placed without legs on floor instead of table, will be introduced by GE at Chicago's Merchandise Mart in June and marketed as part of regular fall line. Spokesman said it can be viewed at approximately same angle used for reading book, wouldn't comment on size or price.

Canadian Westinghouse cuts two 17-in. & four 21-in. sets average 45%, eliminates only 24-in. receiver from line because of limited demand.

Tele-Census, 3259 Wilshire Blvd., Los Angeles, issues report on 11th semi-annual survey, conducted among 2500 set owners in 16 economic districts of Los Angeles by college students & instructors, revealing: (1) 17.8% own RCA sets, 11.3% Hoffman, 9% Admiral, 8.5% Packard-Bell, 6% Philco, 6% Motorola, 4% Zenith, 3.9% for all others. (2) 86.3% would replace set if destroyed beyond repair, 7.8% wouldn’t. (2) 85.6% couldn’t tune to uhf, 3.6% could, 10.8% didn’t know; 81.7% would not pay $25 to convert; 8.3% would, 10% had no answer. (4) 86.7% thought color purchase at price they could afford to be more than 2 years away, 11.7% thought next year, 1.6% this year. Among other findings, 92.5% had only one set in home; 61.7% read TV page of newspapers more often than movie page; 69.2% thought TV made national affairs clearer; 59.5% would pay $1 per program to see top-quality movies on TV (33% wouldn’t); 60.7% would prefer to pay for quality movies on home TV rather than at theatre (28.3% wouldn’t pay at either place).

Arcturus Electronics Inc. and its subsidiary General Electronics Inc., tube manufacturers, May 26 filed petition under Chapter XI of Bankruptcy Act, proposing to pay creditors 20% immediately on confirmation of plan, 20% annually thereafter. Federal Judge Meaney, Newark, granted Arcturus 10 days to file schedules of assets and liabilities. Delbert E. Replogle is pres. of Arcturus.

Transvision Inc., New Rochelle, N. Y., has secured agreement from its creditors for Chapter XI settlement of 15%, payments to be guaranteed by Sightmaster Corp., whose pres. Michael Kaplan is purchasing stock of Emanuel Cohen, principal Transvision stockholder.

Stromberg-Carlson’s first color sets came off assembly line this week as part of initial run of 50, to retail at $995. Deliveries will begin in about 10 days, said TV-radio mgr. C. J. Hunt.

**Distributor Notes:** Crosley-Bendix Atlanta factory branch sold to Thoben Elrod Co., which will serve as independent Crosley-Bendix distributor there... Hallicrafters appoints Graybar, 104 Wazee Market, Denver (H. G. Van Westenberg, sales mgr.), replacing Auto Equipment Co.; E. G. Hendrix Co., 321 S. Flores St., San Antonio (Henry Koplan, gen. mgr.), replacing Edwin Flato Co.; General Radio & Electronic Co., 396 S. Main St., Wilkes-Barre (Ben Gerstein, gen. mgr.), replacing Morris Distributing Co., Scranton ... RCA Victor Distributing Corp., Rochester, appoints George C. Tany sales mgr., replacing J. P. Valley, resigned ... Hamburg Bros., Pittsburgh (RCA) elects Lester Hamburg exec. v.p. ... Salisbury Distributors, Spokane (Admiral) appoints Herman S. Albert gen. mgr. ... Strong, Carlisle & Hammond Co., Cleveland (Philco) promotes James Kintli to TV sales mgr. ... Southern Appliances Inc., Charlotte (Raytheon) names James H. McClain district mgr.
Financial & Trade Notes: Television-Electronics Fund Inc., reporting total net assets of $38,656,139 as of April 30, 1954, with 4,817,243 shares outstanding, added these stocks to its portfolio during quarter ended that date: 10,600 shares of Allis Chalmers, market value based on closing bid quotation, $581,675; 5000 Arvin Industries, $112,500; 5000 Bell & Gossett, $171,250; 9500 Electro Data Corp., $38,000; 26,000 Gary (Theodore) & Co., $468,000; 13,100 Marchant Calculators Inc., $245,625; 6100 Reliance Electric & Engr. Co., $201,300; 8000 Square D Co., $287,000; 10,000 Union Carbide & Carbon Co., $750,000. Eliminated were holdings in San Diego Corp., reported Jan. 30 as 2000 shares at $21,000, and Servomechanisms Inc., reported Jan. 30 as 10,000 shares at $72,500. Biggest items in April 30 portfolio: 20,000 Westinghouse, $1,455,000; 48,000 RCA, $1,356,000; 10,000 GE, $1,222,500; 3500 IBM, $1,176,000; 30,000 Sylvania, $1,051,875; 80,600 Motorola, $1,051,875; 14,000 National Cash Register Co., $1,022,000; 14,200 Bendix Aviation, $1,017,075.

April 30 report shows Fund increased these holdings since Jan. 30: Admiral, from 22,500 to 37,000 shares; Aerovox, 17,500 to 20,000; Aircraft Radio, 9000 to 15,000; American Phundex, 21,000 to 23,500; George W. E. Corp., 7000 to 8050; Borg-Warner, 500 to 4600; Carborundum Co., 15,000 to 15,500; Clevite, 30,000 to 35,000; CBS “A,” 15,000 to 15,600; Bendix Aviation, 9000 to 9600; Douglas Aircraft, 6000 to 10,000; DuMont, 10,000 to 17,500; Eaton Mfg. Co., 5000 to 6000; Eitel-McCullough, 7500 to 10,000; Garrett Corp., 6500 to 7400; General Dynamics, 5000 to 7500; General Railway & Signal, 13,500 to 15,000; Indiana Steel Products, 13,100 to 13,300; IT&T, 20,000 to 25,000; Mallory, 4000 to 5000; Martin Co., 5000 to 18,300; Motorola, 30,000 to 30,600; Muter Co., 4120 to 4202; No. American Aviation, 5000 to 17,000; Oak Mfg. Co., 12,000 to 15,000; Sperry, 10,000 to 11,500; Technicolor Inc., 17,500 to 20,000; Tung-Sol, 16,000 to 20,000; United Aircraft, 4000 to 6300; Vitro Mfg. Co., 3030 to 5000; Western Union, 3000 to 5000; Westinghouse Air Brake, 21,000 to 21,500; Zenith, 14,000 to 15,000.

Decreased holdings during quarter: American Bosch, 15,000 to 10,000; Bendix Aviation, 14,300 to 14,200; Boeing, 12,400 to 7200; Consolidated Vultee, 18,000 to 15,000; Cutler-Hammer, 10,400 to 10,000; Eastman Kodak, 9000 to 6600; Erie Resistor, 8300 to 8200; Hazeltine, 25,000 to 24,600; Minnesota Mining, 15,000 to 12,500; Northrop Air

craft, 18,000 to 15,800; Otis Elevator, 15,300 to 14,600; Owens-Illinois, 2000 to 1400; Philco, 21,400 to 20,200; RCA, 50,600 to 48,000; Sylvania, 35,500 to 30,000; Telecomputing Corp., 15,000 to 10,000; Thompson Products, 15,000 to 14,400.

Noteworthy in list is holding of 4100 Storer Broadcasting Co., with market bid quotation of $68,675 on Jan. 30 and $94,812.50 April 30. Full list is available from Television-Electronics Fund Inc., 138 S. LaSalle St., Chicago.

Dividends: Sylvania, 50¢ payable July 1 to stockholders of record June 10; Hoffman Radio, 25¢ June 25 to holders June 4; Stromberg-Carlson, 37½¢ June 30 to holders June 15; Bendix Aviation, 75¢ June 30 to holders June 10; WJR, The Goodwill Station Inc., 10¢ June 11 to holders June 2; Wells-Gardner, 15¢ June 10 to holders June 1; Cornell-Dubilier, 30¢ June 25 to holders June 15; Clarostat, 10¢ June 25 to holders June 4; Aerovox, 15¢ June 15 to holders June 1; Gabriel Co., 15¢ June 15 to holders June 7; General Precision Equipment Corp., 40¢ June 15 to holders June 7; Famous Players (Canada), 37½¢ June 25 to holders June 10.

Hoffman Radio plans new $1,500,000 TV-radio plant at El Monte, Cal. within next year, will then sell present plant at 6200 S. Avalon Blvd., Los Angeles, according to SEC registration statement proposing public sale of 130,000 shares of 50¢ par stock through underwriting group headed by Blyth & Co. and Wm. R. Staats & Co. Proceeds from stock sale will help finance construction, along with $5,200,000 to be borrowed from Metropolitan Life. Loan will be used to retire $2,000,000 in unsecured current bank loans, replace working capital used to retire $194,455 worth of trust deed notes, with balance to be added to working capital.

Pyramid Electric Co., No. Bergen, N. J., maker of capacitors, offered 92,000 shares of common at $3.25 this week, thru S. D. Fuller & Co., proposing to use funds largely for equipment in plant it started last Feb. in Gastonia, N. C. It reported 1953 sales of $5,765,876, net profit $138,922; for first 4 months of 1954, sales were $2,701,715, net profit $204,050.

Reflecting booming record business, Capitol Records Inc. sales went to new peak of $17,740,985 for first 1954 quarter from $14,687,255 same 1953 quarter. Net income was $781,453 ($1.62 a share) compared to $548,929 ($1.12).

neer, Syntronic Instruments, Addison, Ill.

Gen. Wm. H. Harrison, pres. of IT&T since 1948 and onetime AT&T v.p., takes over day-to-day operations of IT&T under an arrangement whereby Col. Sosthenes Bahn, now 73, who founded IT&T in 1920, will continue as chairman but relinquish most of his routine duties. This was disclosed May 27 at directors meeting which followed annual stockholders meeting.

Charles Golenpaul, Aerovox v.p. in charge of distributor sales, elected pres. of Radio's Old Timers during recent Electronics Parts Show in Chicago. He succeeds Ray L. Triplet, who was tendered plaque celebrating his 50th anniversary as a maker of radio-electronic equipment. Sam Poncher, pres. of Newark Electric, became secy.

Sperry Corp. to lease $600,000 plant in Gainesville, Fla. for manufacture of klystron tubes, will employ 200-300.
**Color Trends & Briefs:** “Color kines might be available in a few months—if the costs are right. Magnetic tape for color is about 1-2 years off.” That’s how Robert Shelby, NBC-TV director of color TV systems development, summed up status of color transmissions for film session at NARTB convention. He emphasized that big question in color kines is almost solely cost, because, as he had demonstrated to joint management-engineering session, kines are now of acceptable quality—though undoubtedly below live pickups or good color film.

Among kines shown were those of Dinah Shore Show and Taming of the Shrew opera. We had seen them in original live transmission and found kine color less brilliant, and the color fidelity in skin tones, etc., less precise. It’s apparent, however, that kines will be satisfactory if stations can deliver kine telecasts of a quality comparable to that shown in Chicago through movie projector.

Shelby evaluated NBC-TV’s color experience to date, gave these conclusions: (1) Transition—Switchover from monochrome to color is much less difficult than move from radio to TV. (2) Maintenance—No final figures yet, but it looks as if problems are roughly proportional to number of tube sockets involved, which is a good black-&-white criterion. (2) Rehearsals—Extensive at first, constantly being reduced, with some producers now asserting that no extra time for color is required. (4) Costumes, lights, etc.—Current requirements 3 times greater than for black-&-white, but with “reductions in prospect.” (5) Camera tube life—Now compares favorably with monochrome. (6) Remotes—“No important limitations.”

“Color TV can be a failure in the immediate years ahead,” Philco’s Donald Fink warned NARTB engineers in talk delivered by Hazeltime’s Arthur Loughren. “Not because of inadequate standards,” he said. “The standards are fully adequate. Not because of unwillingness on the part of the industry to invest in research and test facilities, manpower, production tools and an all-out selling effort. The competitive situation, spurred by the public eagerness for color TV, leaves no option. But it can fail if the TV engineers do not meet the challenge of implementing the new service with equipment of such high performance and such low cost as to command public acceptance... This is the challenge these same engineers have met in monochrome TV during the past 8 years. But it cannot be met in color without an even greater effort, without profound understanding of the requirements imposed by the standards, without closer study of color vision than was ever given to monochrome vision. Not without a lot more hard work.”

Color TV tests of film made via 3 processes were conducted May 19 on closed-circuit at NBC studios by Screen Gems, Columbia Pictures subsidiary. M. Peter Keane, Screen Gems technical director, gave representatives of 27 ad agencies following evaluation: (1) 16mm Kodachrome advantages are lowest price for original film, excellent definition and color quality. Disadvantages are limitation of optical effects to dissolves and fades, more noticeable color loss in release prints, higher release print cost, less satisfactory sound track. (2) 35mm Eastman negatives reduced to 16mm positives have advantages of larger film, the values derived from making prints from negatives, ability to make optical effects, better resolution than most other processes. (3) 16mm Technicolor 3-stripe process reduced to 16mm dye transfer permits greatest control of color saturation and optical effects, better sound track, lowest release print cost.

Novel question of makeup for color TV was covered at NARTB convention by NBC-TV’s R. R. Davis, who said makeup for color is radically different than for monochrome. “Skin tones are often the only colors in a picture that the viewing public will recognize,” he said. “As most people have more red in their skins, especially in their ears, noses, and necks, than the eye detects, color makeup is used primarily to tone down red. Dark pigmentation around the eyes, the grayish tone of man’s 5-o’clock shadow, freckles, and blemishes must be made to produce a normal flesh tone.” Among his observations: Eye makeup is similar to monochrome, except that it should match color of eyebrows; corrective highlighting and shadowing requires great care; powders should have very little pink in them; special lipsticks must be used because normal lipsticks are too red; body makeup must be used or skin looks too red; very white or platinum hair should be darkened slightly; frequent retouching is required; outdoor makeup is different from studio.

Some 95% of TV homes will be in range of stations emanating color signals by end of this year, NBC research chief Hugh Beville told convention of Public Utilities Advertising Assn. in Boston May 13. He foresaw color TV dooming the “white” in “white goods,” stating: “Just as the solid black automobile is now largely confined to the dowager’s town car and the limousine, we can anticipate a future where the white kitchens may be confined to hospitals and similar institutions. The present tentative steps toward tinted ranges and refrigerators could receive vigorous stimulation from color TV.”

Claims for color scanners and cameras are so confusing (see p. 4), that Telechrome Inc., manufacturer of color generators, test equipment, etc., is feeling out stations on plan whereby Telechrome would lease them any desired equipment, of any make, giving station option to purchase equipment at end of lease.

FCC’s warning that stations not equipped to rebroadcast color must eliminate the color subcarrier (Vol. 10:11) has been followed up by RCA which offers filter kit and instructions at no charge to stations ordering color network equipment, $25 to others.

“Reovalization of FM,” through new multiplexing rules permitting transmission of background music, etc. simultaneously with regular programs, was visualized by FCC Comr. Sterling during FM roundtable at NARTB convention. Cost of adding single-channel multiplexing equipment to station will run $2500-$3500, according to Wm. S. Halstead, pres. of Multiplex Development Corp., N. Y. Multiplex adapter for good FM receiver will cost about $100, he said, while sets with multiplexing circuitry built in originally should run about $150.

First film about TV antennas aimed at general public is being offered to TV stations by Channel Master Corp., Ellenville, N. Y. Free 16mm prints of the non-technical 13-minute film are available from Association Films, N. Y. Channel-Master also has new booklet on antennas and antenna problems, Your TV Antenna Is Showing, written for the layman and offered in quantity for distribution by parts distributors and TV stations.

New industrial camera, employing either vidicon or image dissector tube, is now being offered at about $2000 by Diamond Power Specialty Co., Lancaster, O. seeking to broaden market beyond present concentration on electric power companies and organizations with similar operations.

New TV film-recording system, operating at standard 24-frames-per-second recording rate, is described in Naval Research Laboratory publication, Television Recording System (PB 111307), available for 75c from Office of Technical Services, Dept. of Commerce.
Network TV-Radio Billings
April 1954 and January-April 1954
(For March report see Television Digest, Vol. 10:18)
(For preceding years, see TV Factbook No. 18, p. 369)

Network TV billings for April, as reported by Publishers Information Bureau, were marked by fact that NBC for first time since last Oct. forged slightly ahead of CBS for top place, and all 4 networks were a shade under March. But their general upswing is manifest in fact that combined April billings of $25,528,953 compare with $17,774,866 in April 1953 while Jan.-thru-April figure of $99,928,035 compares with $69,413,044 for same 1953 months. NBC is still slightly under CBS for the 4 months, with ABC a poor third and DuMont fourth.

In radio, CBS dipped slightly in April but maintained its usual top position; all others dropped, too, but NBC fell from $4,196,009 in April 1953 to $2,962,839 in April 1954. For year to date, all save NBC are holding close to 1953 levels—with MBS actually about $170,000 ahead. NBC is down more than $3,500,000, accounting for most of the April drop to $51,643,527 for all networks from $55,420,376 in 1953. The PIB report:

*Revised as of May 26, 1954.

UHF hearings are scheduled to resume at 10 a.m. Thu., June 3, in Room G-16, Capitol—but may be pushed up an hour earlier—Chairman Potter “commuting” between McCarthy and uhf hearings. Final schedule of appearances hasn’t yet been worked out, but unofficial preliminary list at week’s end showed this order: June 2—George Storer, Storer Stations (vhf); Merrill Panitti, Triangle Publications (TV Guide); Hubert Taft, WKRC-TV, Cincinnati (vhf); Gordon Brown, WSAY, Rochester (AM); Leon Green, KNUZ-TV, Houston (uhf); Philip Merriman, WJIC-TV, Bridgeport, Conn. (uhf); Raymond F. Kohn, WFMZ-TV, Allentown, Pa. (uhf CP). June 4—Ernest L. Jahnke, ABC; Jack Van Volkenburg, CBS; Joseph Heffernan, NBC; attorney Joseph Brenner, Beverly Hills, Cal.; attorney Franklin C. Salisbury, Washington; engineer Raymond Wilmitote, Washington; attorney J. Howard McGrath, exec. v.p., Edward Lamb Enterprises (vhf WICU, Eerie & uhf CP WMAC-TV, Massillon, Ohio).

Report on FCC chairmanship, circulated at NARTB convention but unconfirmed, was that Chairman Hyde is due to be redesignated chairman for another one-year term.

George B. Storer’s KGBS-TV, San Antonio (Ch. 5), along with radio KGBS (50-kw day, 10-kw night on 680 kc, CBS), both highly profitable properties, were reliably reported being offered to other prospective purchasers this week after May 20 deadline for their announced $3,500,000 sale to San Antonio Express and News (Vol. 10:15) had passed. Though newspaper company has reported sale of its radio KTSA (5-495 on 550 kc, ABC) to O. R. Mitchell, local Dodge-Plymouth dealer, pres. Frank G. Huntress Jr. would make no comment despite repeated efforts to elicit a statement about his intentions. It’s understood Storer agreed to extend deadline, but that Mr. Huntress and his father, chairman of Express Publishing Co., have been unable to come to agreement on financing the all-cash deal. Storer also declined comment. Storer Broadcasting Co. must sell one of its 5 TV stations to pave way for recent $10,000,000 purchase of Empire Coil Co. (Vol. 10:2), which involves acquisition of another vhf in Cleveland and a uhf in Portland, Ore.; FCC now limits vhf holdings to 5 stations, proposes soon to permit 2 uhf in addition. Storer in 1950 bought KGBS-TV (then KEYL) for $1,250,000, including debt, has spent more than $1,000,000 on its development, last year added radio KGBS (then KABC) by buying it for $700,000 and taking CBS affiliation away from KTSA. Until recently son George Jr., now at Miami headquarters, was gen. mgr.

In order to exercise option to own 30% of upcoming WUSN-TV, Charleston, S. C. (Ch. 2), due in Sept., Evening Post Publishing Co. (Charleston News & Courier and Post) has sold its radio WTMA (5-kw on 1250 kc, NBC) for $153,000 to company headed by Charles E. Smith, pres., 40%, who also heads WTBQ, Cumberland, Md.; George H. Clinton, v.p., 40% gen. mgr. of WPAR, Parkersburg, W. Va. and part owner of WBLK-TV, Clarksburg, W. Va.; David W. Jeffries, secy., 10%, WTBQ chief engineer; Dorothy A. Marks, 10%. Newspaper firm does not participate with J. Drayton Hastie family in ownership of radio WUSN (250 watts on 1450 kc, MBS).

Latest maneuvers in Edward Lamb case (Vol. 10:20): On May 22, FCC filed opposition to Lamb’s motion in District of Columbia district court to enjoin Commission from going ahead with hearing. Commission’s ground is that Lamb is suffering no irreparable injury. On May 27, Commission filed motion to dismiss court case altogether, saying that Lamb hasn’t yet exhausted his administrative remedies and that Court of Appeals, not district court, has jurisdiction. Argument before district court is expected about June 11.

Applications for new TV stations on file with FCC now total 237, of which 34 are for uhf. Sole application this week was for Tulsa’s non-commercial Ch. 11, by State of Oklahoma, which has grant for KETA, Oklahoma City (Ch. 13). [For further details see TV Addenda 18-U herewith; for complete listings of all grants, new applications, dismissals, hearings, etc., see TV Factbook No. 18, with Addenda to date.]

Mrs. Hugh McClung has sold KYOS, Merced, Cal. (5-kw on 1480 kc, MBS) to Charles O. Chatterton, owner of KWLK, Longview, Wash., in association with Glen E. McCormick. Purchase price was $180,000. Mrs. McClung retains her KHSI-TV & KHSI, Chico, Cal., and KVCV, Redding, Cal.

TV Code now has 225 subscribers, up 22 since last report at Jan. board meeting, according to report to NARTB Chicago convention by code review chairman John E. Fetzer. Thirty NARTB members don’t subscribe.

Steel for 1572-ft. tower of KWTV, Oklahoma City, world’s tallest under construction (Vol. 10:15), will be shipped starting in June. Ideco engineers expect erection to take 3-4 months.
THE ROAD TO RESPONSIBILITY
Full Text of Address by William S. Paley, Chairman, Columbia Broadcasting System Inc.

EDITOR'S NOTE: This is a statement of principles and aims, cogently expressed and reflecting a maturity of knowledge and experience gained literally from the birth of today's great media of "audible" and "visual" journalism. It's a credo for management and a copy-book for the news & public affairs departments of TV-radio stations and networks, as well as for the schools training young newsmen for the profession. It was so intensely heeded and provoked such enthusiastic reaction at the convention, where Mr. Paley was presented the bronze plaque connoting NARTB's 1954 Keynote Award, that we commend a careful reading by everyone concerned directly or indirectly with this vital phase of broadcasting and telecasting.

IN OUR TURBULENT industry today I have no lack of problems to choose for the topic of my talk this morning. Broadcasting gets broader all the time. The problems we have before us are numerous and complex and touch almost every phase of the broadcaster's world: his business and economic preoccupations; the technological developments of the medium; his relationship with government; his responsibility to the public at large. But you will permit me, I am sure, after acknowledging their very great importance, to put all but one of these categories aside and direct your attention to one significant aspect of our responsibilities to the public at large. And so, I have chosen as my topic: the broadcaster's role and responsibilities in the field of news and public affairs. This problem is neither transitory nor peculiar to any other segment of the industry. On the contrary, the proper exercise of a broadcaster's functions in this field is a responsibility which every broadcaster must face and the problems relating to it are common to each of us.

Another reason I want to discuss news and public affairs is because this part of a broadcaster's operation has long been close to my heart and uppermost in my mind; also because I believe that discussion and exchange of ideas on this topic may well lead to newer and more significant plateaus for every segment of broadcasting.

Ideas, Issues and Controversies

It is my belief that if we know what we are doing in the world of news and public affairs, we are secure: if we do not know, we are in danger—in danger of encroachments from government, in danger of criticism, destructive and deserved from other powerful organs of opinion, in danger of criticism from the thinking and leading citizens of our Republic.

Let me say that when I talk about news and public affairs this morning, I mean more than just what we call, in this business "the hard news." I mean also all the related fields—the opinion broadcasts, the debates, the feature projects, the documentaries, the panel discussions—as well as the direct on-the-spot coverage of news and public events as these occur. So here I am concerned not just with the raw news, the current happenings, but with the ideas, issues and controversies that concern the public.

At no period in our history has the function of news and public affairs broadcasting been so critical and important to our national life. The movement of world events on both the national and international scenes takes on increasing significance each day in terms of the welfare and security of each citizen.

These events not only affect how he lives, but, in some instances, whether he will live at all. Issues have become extremely complicated giving rise to intense emotion, to a deep longing for answers, and hence demanding greater knowledge and—above all—understanding. It is part of our democratic tradition that facts and exposure to other people's views and opinions have a way of driving out emotional prejudice and of leading the way to answers which are more nearly correct.

These conditions and circumstances provide the broadcaster with an unprecedented opportunity to move ahead in this field of news and public affairs. We have today within our grasp the opportunity to provide an extraordinary public service in a troubled world and, at the same time, to increase our stature and strength as broadcasters. But I must point out that one does not receive positions of public trust and of strength on a silver tray. They must be won by resolution, courage and performance. In these areas, I think, we still have quite some distance to go.

Difference Between Broadcaster and Publisher

Let me give you my reason for thinking so. Consider for a moment some of the significant differences between a broadcaster and the publisher of a newspaper, or, more broadly, the difference between what a radio transmitter does and a printing press does. The printing press came into being in a rudimentary, slow-moving society, in an excessively limited world. Even so, it needed several centuries of struggle to become as free as it is today and to be placed at the service of all the people, not just at the service of scholars or priests or governors or public administrators. In the vast present-day diffusion of printing we have undesirable comic books—but we also have great newspapers, an incredible world of magazines, and big books for a quarter. Editors today come from a line of men that have centuries of experience behind them in getting news printed and diffused against the pressures of persons who thought it shouldn't be. The press may not be as free as it likes, but it's plenty free. Through the years it has learned how to keep a manageable degree of freedom against the pressures of readers, advertisers, and powerful critics in government and other high places.

Now, by contrast, consider broadcasting. Against the centuries of hard-bought experience of the press, what have we? Why, we have about a quarter part of one century. Considering this pitiful little span of time, I think we've done rather well. I think it's remarkable that we have been as successful as we have—that we have learned things that have taken other people centuries to get the
hang of: the subtleties, traps and pitfalls that lie in the path of the unwary.

Another thing we had to learn in our beginnings—the hardest possible thing to have to learn fast: we had to learn what our new broadcasting medium was for. Some people thought broadcasting would be for education. Some thought it would be to replace the phonograph. Some thought it would remake the world, which it hasn't. Some thought it would revolutionize politics, which it has. Some thought it would put newspapers and magazines out of business; instead, it joined them in an intense but friendly—well, sort of friendly—competition to carry the messages of editors and advertisers to greater areas than ever before.

But of course, broadcasting did not limit itself to any one of these. Instead it became almost all the things that were imagined for it. And when television added broad-
cast sight to broadcast sound, broadcasting then became, and I am sure will always remain, the broadest means of intertwining, communicating and diffusing ideas, moods, sights, emotions, facts, images (should I say color?)—and also confusion—in the history of man. We now, in this industry, partake of the newspaper, of the magazine, of the stage, the movies, the concert hall, the lecture platform, the museum, the medical center, the university and the battlefield. To say nothing of the town meeting, the Senate committee room, the whistle stops of political cam-
paigns and the auditoriums for great debate. Indeed, I think we can say, "Name it, and we are of it."

No wonder we are all a little confused. A grant of op-
portunities has been offered to us by this industry wholly unlike, in range and scope, any grant of opportunities to any other group of modern men. And it happened in a democracy! Which must make us eternally wary of abusing it.

"We Still Have a Lot to Learn"

Since by relative time we are newcomers to the field, we are short in tradition and we still have a lot to learn. The old-time newspaper editor, with his centuries of professional experience, was accustomed to letters saying "Dear Sir, you cur." He was accustomed to being horsewhipped by outraged ladies, and shot at, or indeed shot, by those who considered themselves libeled by some small, innocent item. He was also sued frequently, another painful form of the expression of displeasure.

I must say that I have no desire to stir up any additional public violence today. In this industry we should con-

continue, as in the past, merely to shoot one another and not encourage the public to think that this pistol range is open to them, too.

Old-time editors used to take such threats and action in their stride, as a part of their occupation. I think we broadcasters can afford a certain amount of the same stride in promoting one of our letter-writing, telegraph and telephone

historians, and it is the rights and privileges which have been maintained by the press of this country. We recognize the plain fact of our power for good or evil, through the enormous force of our media. Yet the ques-
tion remains whether we enjoy in the public mind the status which is a natural corollary of our rights and privi-
leges. I respectfully submit that we do not and that we will not until we have shown through clear performance that we have faced up to our opportunities and to our respon-
sibilities.

But it is one thing to resolve to expend greater effort and courage in the field of news and public affairs. It is quite another—and far more difficult thing—to determine how to do it, and do it well.

For one thing, we cannot just imitate the press. With all the similarities between the press and broadcasting,

there are still powerful differences between us. And so, with all due deference to the press and its long established traditions, it can only set us on the road. We will have to do our own driving and find our own right way.

Ground Rules: Steps That Can Be Taken

I would not be so presumptuous as to say that there is a single right way. Each broadcaster will have to find his own. But I would like to suggest certain steps which might be taken by the broadcaster who finds some truth in my words and who, having not yet done so, wants to build a responsible and respected place for himself in this field.

First and perhaps most obvious, the operation of news and public affairs in a broadcasting organization should be given great emphasis and attention by top management. Top management must itself be impressed with this area of the broadcaster's operation is at least as impor-
tant as any of the other areas coming under his jurisdic-
tion and supervision.

Second, a broadcaster must build a strong news organ-
ization—not in numbers, which is not in itself controlling, but in quality. Certainly he should choose the man to head his station's news operation or his public affairs op-
eration, or both, as carefully and as thoughtfully as he would choose the head of his most important departments.

Having been selected, this person must be invested with status and the proper authority.

Third, a broadcaster who wants to Exercise his respon-
sibilities in this field cannot go into it blindly if disaster is not to overtake him. For his own protection, as well as for the protection of his listeners, he must work out in advance well defined and clearly stated general policies that will govern his operations.

I make no pleas for uniformity in the ground rules which each broadcaster establishes in this field. Only one basic tenet must be observed: There must be fairness and bal-
ance. No matter what the station owner's personal predi-
ctions—and he is bound to have them—there must be fairness and balance among all viewpoints.

The Policies Evolved at CBS

Beyond this fundamental principle, each station will doubtless work out its own ground rules in the exercise of its vital functions in the area of news and public affairs.

The more different approaches there are—the more search-
ing and experimentation there is—the better off all of us will be, for good new ideas will stimulate the competitive forces in this field as they do in other fields.

Reminding you, then, that ours is only one possible ap-
proach to a set of ground rules, I would like to outline the policies in this area which we at CBS have worked out over the years. In an attempt to determine the thought pro-
ces that a broadcaster must go through in order to de-
termin how to exercise the responsibilities in this area of his activities. Our policies, briefly, are these:

In news programs there is to be no opinion or slanting.

The news reporting must be straight and objective.

In news analysis there is to be elucidation, illumination and explanation of the facts and situations, but without bias or editorializing.

In both news and news analysis, the goal of the news broadcaster or the news analyst must be objectivity. I think we all recognize that human nature is such that no

newsmen is entirely free from his own personal prej-
udices, experience, and opinions and that, accordingly, 100 percent objectivity may not always be possible. But the important factor is that the news broadcaster and the news analyst must have the will and the intent to be ob-
jective. That will and that intent, genuinely held and deeply instilled in him, is the best assurance of objectivity.

His aim should be to make it possible for the listener to know the facts and to weigh them carefully so that he can better make up his own mind. Our policies also pro-
vide that significant viewpoints on important controversial issues are afforded the opportunity of expression—largely through time periods which are allocated free of charge to outside people and organizations representing opposite
viewpoints. The programs in these periods take the form of straight talks, debates and panel discussions.

Keep Opinion Separate from News

Opinion broadcasts must be labeled for what they are. In particular, opinion must be separated from news. The listener is entitled to know what he is receiving, news or opinion, and if it be opinion, whose opinion.

In other types of information programs, such as the feature or documentary program, produced by us, the expression of opinion might properly take place. When it does take place, it should be by the decision of management or through the delegation of authority to a member of the staff producing a particular program. Such delegation, however, must be to one who is trained and responsible and in whose integrity and devotion to democratic principles we repose complete confidence.

When opinion is expressed in any type of information program—excluding news and news analysis where opinion is not allowed—opportunity for reply is given to the person with whom issue has been taken, or to a responsible spokesman representing an opposite viewpoint.

An advertiser who sponsors any type of information program produced by us does not thereby purchase, or in any way gain, any rights to control the contents of the program.

Programs presenting news, news analysis, discussion, debates, feature or documentary material, or on-the-spot pickups are under our direct control and supervision and we bear full responsibility for such broadcasts.

I have not as yet touched on the question of editorialization by the broadcaster—that is, opinion which he might express in his own name or in the name of the station or network.

The Broadcaster's Right to Editorialize

The broadcaster has the same right to editorialize and the same right to independent expression as the free press. I am not urging anyone to exercise this right. It is and should be a matter of personal preference. However, I would urge that we fight to preserve this right should it ever be threatened. In this connection, I would like to say that it is not the act of editorialization which puts the bite and the backbone into a news and public affairs operation. It is rather the fact of having a rounded and vital schedule which does the trick; of having a schedule of unbiased news which covers all categories, national, regional and local; of having a fair and objective analysis of that portion of the news which calls for background and interpretation; of having a schedule of controversy in which the issues of concern to the listeners will get full and responsible airing; of having public feature programs and documentaries which put the spotlight on conditions worthy of the listener's attention.

The principle of fairness and balance is the cornerstone of our news and public affairs policy, as it should be of any broadcaster. I want to point out, however, that this principle cannot be reduced to a mathematical formula or even to a set of rigid rules which are self-executing and will cover all the possible circumstances. In the free American broadcasting system, fairness and balance must be maintained through the exercise of fair and courageous judgment by the station or the network. And it must be recognized that there is a difference between men, ideas and institutions: some are good and some are bad, and it is up to us to know the difference—to know what will uphold democracy and what will undermine it—and then not to do the latter.

Some people may question the desirability of placing in the hands of the broadcaster this important element of control. To this point I would say that undoubtedly there may be abuses, as there are in other media. But I for one have enough faith in the vitality of the democratic process, in the intelligence of the American people and in the freshness of the competitive climate to believe that the good will and the determined intent of broadcasters to be fair, coupled with the powerful voice of the people, will provide far better protection against abuse than any other form of control. And let me remind you that those who would take this control away from the broadcaster are the ones who would put it in the hands of Government.

Here, then, are our thoughts and our ground rules, evolved through the years, on how best to exercise our responsibilities in the area of news and public affairs. You may disagree with some of them; you may have or develop better ones from which we at CBS may learn much.

"A Free and Autonomous Institution"

I would like to say, and perhaps you will agree with me, that too often public officials, legislators and other people in public life look upon the broadcasting organization primarily as an instrument created to serve their own purposes, whatever these may be. They do not sufficiently regard the broadcaster as a free and autonomous institution exercising to the best of his ability an influence and responsibility dedicated to the interests of all the people. The fact is—our own timidity in the vital areas of public information is self-perpetuating; it breeds pressures which in turn breed further timidity. Our excursions, by and large, into the responsible exercise of our functions in the field of news and public affairs are often too spasmodic, too tentative, or too sensitive to permit us to realize our own independence and stature. This, I say, must be corrected.

The important thing, whatever the ground rules you set for yourselves, is to consider carefully whether you should not increase your activities and your emphasis in the significant field of news and public affairs. If you do so—if you develop an active, responsible and eager organization—if you move vigorously into this area, you will, I am convinced, do the country and broadcasting an enormous service.

I have made these suggestions today because I am proud of broadcasting and I want to see the broadcaster seize the extra opportunities which are within his grasp and thereby raise his status among the people he serves. If he does so he will be putting himself into the stream of life which brings meaning, satisfaction and a sense of achievement which cannot be matched by any other kind of reward.
1954 TV TIME SALES TO TOP $600,000,000: We guesstimated 1953 TV time sales would be somewhere between $450,000,000 & $475,000,000 -- and FCC's figure, which is official, was $430,800,000 (Vol. 10:21). Again giving ourselves a 5%-plus-or-minus leeway, we venture out on the proverbial limb once more and estimate the figure for this year will surpass $600,000,000. That's based on increasing TV network time sales, which jumped 44% to reach $99,928,000 in first 4 months of this year alone (see latest PIB figures, Vol. 10:22); on progressive increases in national spot and local business; on more stations on the air; and on generally higher station & network time charges.

Bear in mind the $600,000,000 figure represents gross time sales alone. For all TV advertising expenditures, including talent & production, McCann-Erickson's 1953 estimate for Printers' Ink put the 1953 figure at $688,700,000 ($529,700,000 national, $159,000,000 local), which we think should go up this year to considerably more than $800,000,000 -- possibly as high as $900,000,000. On authority of CBS's Frank Stanton, the industry can look forward to "TV advertising expenditures of the order of $1.25 billion by 1957 or 1958" (Vol. 10:14).

How do TV's 1953 time sales of $430,800,000 compare with radio's? FCC audit won't be available until July or Aug., but the 1954 Broadcasting Yearbook in Jan. estimated radio's 1953 net time sales at $498,428,000, or about 5% ahead of all-time peak achieved in 1952. Without in the least disparaging radio, it's to be doubted whether 1954 radio figure will go up much -- what with network decline (lower rates due again soon) and relatively static number of stations. It will be disputed -- and we hope we're wrong -- but radio as a whole seems to have reached a "plateau."

But youthful TV, with only 384 stations on air now and probably no more than 435 by year's end, is still bursting its britches. Time sales were mere $500,000 in 1946, $1,900,000 in 1947, $8,700,000 in 1948; then shot up to $34,300,000 in 1949, $105,900,000 in 1950 -- all non-profit years. They were $235,700,000 in 1951, then $324,200,000 in 1952, $430,800,000 in 1953 -- profit years. (For FCC figures on 1946-1952 TV and radio revenues, expenses & earnings, see TV Factbook No. 18, p. 370.)

DOERFER RENAMED, CHAIRMANSHIP IN DOUBT: FCC Comr. John C. Doerfer, Wisconsin Republican, won reappointment this week to 7-year term from June 30 -- and, with no word yet on renaming of now acting chairman Rosel Hyde to Commission chairmanship, it's being assumed by many that Doerfer will be designated for that job following Senate confirmation. Senate hearing on confirmation is expected within week or 10 days, with all likelihood of approval, though Sen. Bricker's Interstate Commerce Committee may well seek to extract pledges from him regarding current uhf problem and effort may be made to pin "McCarthy" label on him because the embroiled Wisconsin Senator had approved him. Actually, he's a protege of Gov. Kohler, was first slated for the Federal Power Commission or the Securities & Exchange Commission, was endorsed by entire Wisconsin GOP delegation when appointed by President Eisenhower in March 1953. He joined FCC April 15, 1953 to fill out unexpired term of resigned Comr. Jones, who
had been succeeded by Democrat Comr. Eugene Merrill who failed to get reappointed. Doerfer is 49, a lawyer, ex-chairman of Wisconsin Public Service Commission. Possibility of his designation as chairman seems enhanced by fact White House, despite industry pressures (perhaps because of them), allowed the popular Chairman Hyde's chairmanship to expire April 30. It has indicated favor of one-year rotations on independent agencies, left it to fellow commissioners to elect Hyde acting chairman. Next FCC vacancy is due June 30, 1955 when Comr. Hennek's term expires. A New York Democrat, her reappointment is unlikely in light of the Senate Judiciary Committee's failure to confirm her nomination in 1952 to a Federal district judgeship.

**VHF FORCES MAP UHF HEARING STRATEGY:** Senate's hot uhf hearing is now due to resume June 15-18 -- and vhf leaders welcomed the extra time to marshal heavy support for their arguments that the Potter subcommittee shouldn't "help uhf by hurting vhf."

Vhf operators, too, working through their 2 organizations, held more strategy huddles during the week to determine the best way to demolish the arguments they anticipate the vhf and major network witnesses will use at the hearing.

And NARTB, caught in the middle, tried hard to pour oil on troubled waters.

As hearings developed into battle royal between TV's haves and have-nots, it became obvious the communications subcommittee couldn't wind up the hearings in the 2 days originally allotted for them this week -- hence the postponement until 1:30 p.m. Tue., June 15, when Senators begin 3½ more days of fact-finding.

So far, 23 witnesses are slated to appear -- and it's safe bet that at least half-dozen more will be added by June 15. Not only will the vhf stations and the networks get their innings, but the uhf stations get chance to reinforce their case which so impressed the Senators during first phase of hearings (Vol. 10:21) -- with about 10 more uhf spokesmen still due to appear. FCC members are expected to get another grilling before sessions conclude. (Tentative list of witnesses on p. 14.)

The informal "organization" of vhf telecasters, spawned in the corridors at last week's Chicago NARTB convention (Vol. 10:22), swung into high gear this week, directed by a high-powered "steering committee" of vhf old-timers and coordinated by Washington communications attorney Ted Pierson (Pierson & Ball).

Beating the drums for maximum industry support, the group May 28 telegraphed all vhf operators, grantees and applicants -- some 600 in all -- outlining its stand and urging them to join in presentation. Vhf group's platform, as outlined in wire:

Opposition to uhf-backed proposals to eliminate vhf-uhf intermixture, to re-impose freeze, to move all TV into uhf, to reduce or limit coverage of vhf stations. Support for "all reasonable and proper steps to encourage production and distribution of all-channel tuners," and use of booster stations to fill "holes" within uhf stations' coverage areas. Vhf committee pledged to "support constructive steps, but oppose all having adverse effect on the medium."

Wire was signed by informal steering committee consisting of Robert Swezey, WDSU-TV, New Orleans; Henry Slavick, WMGT, Memphis; P.A. Sugg, WKY-TV, Oklahoma City; Lawrence H. Rogers, WSAZ-TV, Huntington, W.Va.; J. Leonard Reinsch, Cox Stations; Jack Harris, KPAC-TV, Houston; Harold Hough, WBAP-TV, Fort Worth; Paul R. Bartlett, XPRE, Fresno, Cal. (vhf applicant).

Replies had come in from about 100 stations by week's end -- all but 2 of them endorsing the platform. Vhf organization intends to present 6 witnesses -- as yet unidentified -- to tell vhf's side of story.

Trying to soothe ruffled tempers of some uhf members who took offense at his convention remarks and at NARTB's belated request to participate in hearing, NARTB pres. Harold Fellows June 4 issued this "memo" to all NARTB members:

"In the backwash of the recent convention, there have been some indications of disturbance among TV members of the Association that my public remarks at the convention indicated a disposition to 'take sides' in the current uhf [hearings]."
Perhaps it is best to clarify this matter presently before the misunderstanding becomes magnified by further erroneous interpretation.

"By direction of the NARTB TV Board, I will appear before the [sub]committee when hearings resume June 15. I will not 'take sides' and, indeed, am not authorized to do so. In this, as in other so-called 'segmentized' problems within the industry, the Association's testimony will be directed to developing -- through statistics, research and similar reports -- a factual presentation for the benefit of the committee in its deliberations. This summary will be straightforward, historical, chronological; its objective will be to present TV developments in this country to date."

Earlier, Fellows accepted invitation by Harold Thoms, acting pres. of UHF Industry Coordinating Committee, to informal meeting with some uhf representatives on eve of resumption of hearings. Accompanied by TV v.p. Thad Brown, Fellows will confer June 14 in Washington with Thoms and other UHF Committee officials.

* * * *

Sen. Johnson (D-Colo.) refuses to admit defeat in his battle to remove excise tax from receivers with uhf tuners (Vol. 10:20-22). Though Senate Finance Committee voted last week not to incorporate any excuse tax changes into current tax revision bill, the Senator stated he'll try to add his amendment to another tax bill later. While odds are against Finance Committee approving such an amendment, Johnson feels it would be difficult for it to continue to ignore the Potter subcommittee's unanimous approval or the overwhelming industry support for his proposal.

MD. EASTERN SHORE'S FIRST, CANADA'S 11th: First new uhf to take air in last 6 weeks -- WBOC-TV, Salisbury, Md. (Ch. 16) -- begins regular test patterns June 7 (9 hours daily) in wake of this week's sporadic tests that brought reports of excellent signals over flat terrain that is ideally suited for uhf. In center of rich, populous Delmarva peninsula, it's 85 air miles from both Baltimore and Washington, will begin regular programming week of June 21 to deliver ABC & DuMont shows from Baltimore, along with Baltimore Orioles games, via own microwave relay at East Newark, Md. Gen. mgr. Charles J. Truitt claims station opens up brand new Grade A service area, with 75-80% of TVs already converted. It uses 1-kw RCA transmitter, 600-ft. Wind Turbine tower with 47-ft. RCA antenna. Base rate is $200, no rep yet named.

CHCH-TV, Hamilton, Ont. (Ch. 11) began test patterns June 4, starts regular programming June 7 -- Canada's 11th station, 5th privately owned. It will be first in Canada to carry Admiral-sponsored Bishop Sheen show. Located 36 mi. from Toronto, still exclusive CBC territory, and 56 mi. from Buffalo, it's jointly owned by radio stations CKOC, CHML and Hamilton Spectator's CJSH-FM. CHML's Ken Sobie is gen. mgr., S.J. Bibby asst. mgr. Base rate is $300. Reps are Adam Young (U.S.) and All-Canada.

* * * *

Note: Another manifestation of faith in uhf, which can boast quite a few successful operations despite adverse impression created at Senate hearings (see p. 2), is deal whereby Knoxville's WTSK-TV (Ch. 26) is being sold for $300,000 to radio operators of Evansville, Ind. (for details, see p. 14). Station is CBS-DuMont outlet which began operating last fall just about same time as did vhf (NBC), so that there's little or no conversion problem. It's operating in red, though close to the break-even point; buyers, having seen uhf work well in their own uhf-only territory, feel confident they can put the station over in intermixed area.

FCC GRANTS 4, Mergers & Dropouts Continue: This week's 4 CPs comprised 3 vhsfs, one of them educational, and one uhf -- all the commercial grants coming after dropouts of competitors. FCC thus demonstrated its intention of continuing normal granting procedure despite current uhf-vhf controversy (see p. 2).

The week's grants: Munford, Ala., Alabama Educational TV Commission, Ch. 7; Ft. Smith, Ark., American TV Co. (interlocking with KWHN), Ch. 5; Mansfield, O., Fergus Theatres, Ch. 36; Oak Hill, W.Va., WOAY, Ch. 4.

Ft. Smith CP came from final decision after George Hennock dismissed with agreement allowing him to obtain 50% of grant. Oak Hill grant was made possible by dropout of WJLS, Beckley, which has 4-year option to purchase 40%. Comr. Hennock
dissented from both, saying she feared monopoly. Fergum Theatres obtained the Mansfield grant after Mansfield Journal decided not to continue with hearing.

Arguments that come up during hearings continue to occupy much of the FCC's time. Among current crop of actions was turndown of latest protest of WGVJ, Greenville, S.C. (Ch. 23) against grant of transmitter site on nearby Paris Mt. to vhf WSPA-TV, Spartanburg, and rejection of Zenith Radio Co.'s assertion that CBS violated its STA for Ch. 2 in Chicago by buying Chicago Arena for new WBBM-TV studios.

Novel angle came up in Ch. 3 fight between WREC and WMPS, Memphis. WREC had urged that hearing delve into program WMPS had carried discussing Dr. Kinsey's book "Sexual Behavior of the Human Female." Examiner rejected WREC's argument and latter appealed to full Commission. FCC upheld the examiner, but Comrs. Doerfer and Lee dissented. In his statement, Doerfer said:

"No responsible person denies the necessity of parental supervision of their children in a discussion of sex problems and abnormalities. Here can be drawn a reasonable inference that an invited guest was 'present' in numerous playrooms, homes and recreation centers discussing sex when a maximum number of children would be listeners without supervision.

"Although this Commission may be powerless to censor program material or to time it, it certainly need not reward or encourage a lack of good judgment and callousness with a television grant." Lee merely said: "In the absence of further information concerning what this station did about the disputed program, I dissent."

**BOOSTER-SATELLITE APPROVALS PROBABLE:** Granting of small "repeater" TV stations -- in form of boosters and satellites -- seems more likely than ever. As we've pointed out before, if a vhf telecaster came to FCC with request for waiver of the rules to permit installation of repeaters to fill holes in his "normal" coverage area, he'd probably get approval pronto (Vol.10:7). There are now indications that Commission is willing to go even further -- if it will help uhf.

The real paradox is this: The vhf telecasters whom FCC is anxious to help aren't the ones prepared to spend money for the boosters or satellites, while the vhf telecasters who are ready, willing and able to build, have been getting a deaf ear. It now looks as if the vhf folk can get somewhere -- if they propose vhf satellites. Their chances of getting vhf boosters are something else.

Things should be coming to a focus soon. The FCC has before it 2 petitions: Sylvania, for approval of uhf satellites (Vol.9:38); WSM-TV, Nashville, for go-ahead on vhf boosters (Vol.9:45). In addition, 2 uhf experiments are going on: Ben Adler's uhf booster in New Rochelle, N.Y. and Bridgeport, Conn., and RCA's uhf booster in Vicksburg, Miss. (Vol.10:17). Related activity is Sarkes Tarzian's plan to deliver programs to three uhf near-satellites from his vhf WTTV, Bloomington, Ind. (Vol.10:7).

Sylvania's experiments in Emporium, Pa. and its subsequent petition were regarded by FCC as extremely complete. WSM-TV pioneered new techniques with its vhf booster in Lawrenceburg, Tenn., brought good signal to town; just this week, however, station informed FCC that it has nothing more to learn from experimenting and that commercialization is next step. Ben Adler says he's more convinced than ever about practicability of uhf boosters. RCA engineers seem to have no doubts at all that Vicksburg operation will be complete success.

* * * *

Comments by Comr. George Sterling and Broadcast Bureau chief Curt Plummer at NARTB convention (Vol.10:22) demonstrated receptivity of Commission to concept of satellites and boosters. Then why doesn't FCC act? Answer is simple: Whole uhf situation is so ticklish that Commission will do absolutely nothing affecting allocations until Potter hearings are over (see p. 2).

Discontinuance of WSM-TV's Lawrenceburg Ch. 4 booster will make a lot of folk unhappy. Residents have become accustomed to getting good signals for the 3-days-a-week booster which has operated under experimental requirements. Their Congressman Pat Sutton urged commercialization a year ago (Vol.9:17). Completely cut off now, constituents are likely to raise a new howl.
WSM-TV pres. Jack DeWitt, in letter to FCC June 2, stated that nothing can be
gained from further experiments, but added: "If the Commission wishes to authorize
WSM Inc. to continue operation of the booster station in order to bring an improved
service to the people of Lawrenceburg, we shall, of course, be glad to carry out such
an authorization on any basis not requiring adherence to an experimental proposal."

WSM-TV also reminded the FCC that it had once proposed to operate uhf satel-
lites but got turned down. Chances now are that the Commission may prefer uhf satel-
lites operated by uhf or vhf originating stations but that vhf boosters operated by
vhf stations are less likely to be approved.

Cost of boosters isn't great. Most talk is about 10-15 watt units to sell
for $2-3000, though one guess is $10-15,000. Satellites are considerably more com-
plex because they operate on a different channel from originating station. It's
expected they'll cost many times more than boosters.

Personal Notes: Benedict P. Cottone, ex-FCC gen. coun-
sel, severed his connection with law firm of Lucas & Thomas
June 21 and opens his own office at 1631 K St. NW, Washing-
ton (phone Republic 7-7795) . J. Glen Taylor, Gen-
eral Teleradio Inc. v.p., appointed exec. asst. to pres. Tom
O'Neill; he was originally with parent General Tire &Rub-
er Co. . . . Steven Krantz promoted to WNBQ program
director, Steve White to WNBC program director, both
jobs previously held by Dick Pack, resigned . . . Ralph
Colin, CBS director & gen. counsel, members of law firm
of Rosenman, Goldmark, Colin & Kaye, elected to board of
trustees, Museum of Modern Art . . . G. Richard Shaffer,
v.p. & gen. mgr. of WIS-TV & WIS, Columbia, S. C.,
elected to BMI board . . . Judge Justin Miller, retired
chairman of NARTB, now associated with Los Angeles law
firm of McClean, Salisbury, Petty & McClean, one of
whose partners is Don Petry, ex-gen. counsel of NARTB . . .
E. K. Hartenbower, gen. mgr. of KCMO-TV & KCMO,
Kansas City, reelected to NARTB radio board as District
10 director . . . Ben B. Baylor Jr., ex-WMAL-TV & WMLA,
Washington, recently with KEDD, Wichita, on June 1 be-
came v.p. & gen. mgr. of upcoming WINT-TV, Waterlo-
Oft, Wayne, Ind. (Ch. 15), due on about Sept. 1; head
of project is R. Morris Pierce, Cleveland, whose former as-
soiates at WGAR (John Patt, Worth Kramer, Sibley
Moore, Carl George) have acquired minority interests in
WINT-TV . . . Charles L. Kelly named TV mgr., Robert W.
Jonscher mgr. of radio, WMAL-TV & WMLA, Washing-
ton, in split operations effected this week by v.p. & gen.
mgr. Kenneth H. Berkeley; Neal J. Edwards continues as
WMAL-TV sales mgr., Charles D. Bishop program mgr.
. . . Charles W. Stone, ex-mgr. of WTVU, Scranton, joins
WCPO-TV, Cincinnati . . . Wm. Koster, WPJB, elected pre-
s. of Rhode Island Broadcasters Assn., acting pres. Norman
Gittleston, WJAR-TV, becoming v.p. . . . Richard Golden
named director of CBS Radio network sales presentations,
Frank Neskutt promoted to director of sales development
. . . Joe Thompson and Roy Neal will handle west coast oper-
ations of Dave Gardner's 7-9 a.m. Today when it's
extended to coast off line via kine Sept. 27 . . . Eugene Carr
replaces Roy D. Moore, deceased, as pres. of Ohio Bestg.
Co., subsidiary of Brush-Moor-Moore Newspapers, and operator
of Ohio radio stations WHBC, Canton, and WPAY, Port-
smouth, and Ch. 29 applicant for Canton; Gordon Strong
now pres. of Brush-Moor . . . John Boor, ex-KMO-TV,
Tacoma, named chief engineer of KCTS, Seattle (Ch. 9,
educational) due next fall; Milo Ryan, assoc. prof. of com-
munications at U of Washington, will be program direc-
tor . . . Paul Tiemer, ex-Raycom Co. New England mgr.,
named Boston office mgr. of upcoming WMTW, Poland, Me.
(Ch. 8), due in July . . . Norman A. Swetman, ex-WSON-
TV, St. Petersburg, named producer-director at WTRI,
Albany-Schenectady-Troy . . . Irving Welch named com-
mercial manager of WEAR-TV, Pensacola, Fla., succeeding
Tom Bloski . . . Harry C. Babb Jr. named station manager
of WJDM, Panama City, Fla., succeeding George C. Black-
well . . . Bob Myers has succeeded M. D. Hunicutt Jr., as
chief engineer of WCIA, Champaign, Ill. . . . Leo Howard
succeeds S. H. McGovern as gen. mgr. of KGTW, Des
Moines, with Thomas J. Kelly named program director,
Walter Harri chief engineer . . . V. E. Tinsley named
commercial mgr., Edw. F. Joslyn program director of
KVDQ, Corpus Christi (Ch. 22) due on air this month . .
Jay Scott, ex-program director, promoted to gen. mgr. of
WJTV, Jackson, Miss., replacing John Rossiter, now mgr.
of KBMT, Beaumont, Tex.; Frank Willis named commer-
cial mgr. . . . Elmer W. Lower, CBS-TV Washington direc-
tor of news & public affairs, appointed to newly created
post of mgr. of news & public affairs under director Sig
Mickelson at N. Y. headquarters.

Celebrated Edward Lamb "communist" case (Vol.
10:22) finally goes to hearing July 28, FCC having set that
date this week. Issues listed by FCC are: Did Lamb tes-
tify falsely when he stated he never advocated Commu-
nism? Did FCC investigators try to get false testimony
against Lamb and attempt to use bribery in the process?
Columnist Drew Pearson plunged into case this week, cit-
ing affidavit stating who is supposed to have offered bribe
to whom. FCC and Lamb attorneys (ex-U. S. Attorney
General J. Howard McGrath & Russell Brown) will argue
latter's motion to call whole FCC inquiry off—before Judge
Tamm in District of Columbia district court June 11.

H. L. Hunt's "Facts Forum" still is entitled to tax-
free status as an educational organization, Internal Rev-
ence Service ruled after study of the Texas multimillion-
naire's organization, which includes TV-radio Facts Forum
program as well as Reporters Roundup, State of the Na-
tion and Answers for Americans. Special House com-
mittee investigating tax-free foundations has announced it
is going over Facts Forum scripts as result of charge by
committee member Rep. Hays (D-Ohio) that the pro-
gram is a "propaganda machine" for political purposes.

New setup of stockholders in WTV, Ft. Lauderdale,
Fla. (Ch. 23), as result of transfers of stock approved by
FCC this week: Mortimer Loewi, pres., 21.1%; George W.
English Jr., scy., 21.1%; E. J. Richardson, v.p., 6.3%;
Don McCullaugh, Detroit auto dealer, 10.55% (acquired
by $25,000 purchase from L. Coleman Judd); James Kirk-
wood, of Fayetteville, Pa., 7.4% (acquired by purchase
from holdings of Mr. Richardson); Russell E. Lovell, 14.1%;
Robert W. Standart, sales mgr., 3%; Wm. Latham,
chief engineer, 2%.

Robert E. Chapman, 49, since 1926 with Oklahoma
Publishing Co., recently director of operations of its WKY
radio, died May 26 of cerebral hemorrhage.
Telecasting Notes: "TV film production is now concentrated largely in the hands of 11 or 12 major companies, with a light sprinkling of independents. It's settling down just as the movie and auto industries settled down." Thus Wall Street Journal reporter David Kenyon Webster quotes v.p. of one of nation's largest banks (unnamed) in June 1 article on the coming of stability to TV film industry. Comprehensive story relates that while many shoe-string organizations (one Boston producer's organization "started with about 90 members in 1949 and now has 4"), the remaining "majors" are enjoying good business. For example: Ziv-TV, whose junior force today "is larger than [its] whole organization 3½ years ago," expects to make 250 half-hour shows this year, double 1953's volume; Hal Roach Jr. reports 250% increase this year; Screen Gems (Columbia Pictures) 300%, with $5,000,000 gross sales for fiscal year ending in June; Gross-Krasne (Lone Wolf and Big Town) expect to gross $3-4,000,000 this year, double last... Profits are higher, too, Hal Roach reporting net of more than 5% above last year, 5 companies affiliated with Gene Autry reporting 20% boost. Wm. Broidy, who produces Wild Bill Hickok for Kellogg Co. says his new long-term contract "allows me to make $75,000-100,000 a year and own my own films"... Bankers are taking more sympathetic attitude toward financing TV films, Wall Street Journal also reports, quoting Bankers Trust Co. and others as anxious to further increase their activities in this field, which they now find an excellent risk and "highly satisfactory from business standpoint"... "The major studios, which less than 2 years ago barred all use of clips from their films (old or new) on TV, are now eager to accommodate video with footage," says June 2 Variety, adding that special 16mm clips are now being prepared especially for TV. "One studio, for example, has made it standard operating procedure, preparing a 16mm TV clip for every picture coming off the lot," making 100 prints of each clip available for free plugs on TV stations"... Praise of fee-TV by MPAA pres. Eric Johnston last week (Vol. 10:22) brought anguished protests from exhibitors—Theatre Owners of America pres. Walter Reade (who owns uhf WRTV, Asbury Park, N. J.) saying Johnston's remarks betrayed "a lack of understanding of the economics of the motion picture and TV industries"... Film Daily dispatch from Japan reports Barry, Enright & Friendly, 677 Madison Ave., N. Y. (Juvenile Jury, Life Begins at 20, Winky Dink) arranging for 52 TV shorts to be made in Manila. Hong Kong & Tokyo under title Cargoes East, budgeted at total of $300,000... Comic strip The Heart of Juliet Jones, syndicated by King Features to 251 daily, 37 Sun. newspapers, being shot as telefilm series by MPTV, directed by Charles Irving... New Class AA rates: KPIX, San Francisco, adds Class AA (7:30-10 p.m. daily) at $250 hour, $260 min., Class A (including 6:30-7:30 p.m.) remaining unchanged at $1100 & $220; WBZ-TV, Boston, July 1 raises Class AA (8-10:30 p.m. Mon.-Sat. & 7-10:30 Sun.) from $1800 to $2000, min. Class B from $360 to $400; WTVJ, Miami, July 1 raises Class AA (6:50-10:30 p.m.) from $800 to $900, 20-sec. $160 to $180; WDSU-TV, New Orleans, July 1 adds Class AA (7-10 p.m. daily) at $700 an hour, $150 per min., also new Class D... Other rate changes: WSJS-TV, Winston-Salem, July 1, Class A hour from $400 to $450, min. from $80 to $90; WIBW-TV, Topeka, Aug. 15, from $300 to $400 & $60 to $80; WNEX-TV, Macon, Ga., cuts hour from $200 to $150, min. $40 to $30... George W. Clark rep firm shifts headquarters from Chicago to New York offices at 11 W. 42nd St., where Mr. Clark takes charge; Robert L. Brockman, remaining in Chicago, promoted to midwest division mgr. . . . Bertha Bannan, longtime regional rep in New England, merges with Walker Representation Co., Inc., which opens Boston office at 80 Boylston St. with Wm. A. Creed as sales mgr. . . . New reps named: WLBR-TV, Lebanon, Pa. to Burn-Smith; upcoming RKVO, Corpus Christi, to Adam Young.

Experiments with pay-as-you-see system in Palm Springs, Cal., were suspended May 15 until Oct. 15, Paramount Pictures pres. Barney Balaban told stockholders this week that tests by subsidiary International Telemeter Corp. "clearly established the technical proficiency of the system and the willingness of the public to pay for quality TV entertainment in their homes." He didn't give reason for suspension of tests. Balaban also reported that Telemeter has developed electronic memory devices for electronic computers under research contracts with Office of Naval Research and Air Force, and is negotiating with other govt. agencies.

Publicist Edward L. Bernays' latest panaceas for improvement of TV commercials, as proposed in June 7 New Leader: (1) "Network and station policy-makers, advertising agencies as well as sponsors, should face the obvious fact that commercials are at least as important as any other aspect of the program . . . Creative craftsmen, skilled at producing the necessary auditory, visual and esthetic impacts, should replace the unskilled mediocrities who now function." (2) "A research foundation should be established by the industry before it is too late, and one of its tasks should be to explore the impact of the TV commercial." 

British Govt., long in the TV business through its BBC, this week found itself in the movie business as an indirect result of TV. Govt.-owned National Film Finance Corp. foreclosed on British Lion Film Corp., one of Britain's biggest producers, when it couldn't repay $8,400,000 loan, blaming TV competition. Govt. is expected to form production company and continue British Lion's film production.
Network Accounts:  Firestone simulcast Mon. 8:30-9 p.m. seems almost certain to go on ABC—but probably not until fall, since no decision has been reached with only one week to go before it leaves NBC June 14 (Vol. 10:20). In past years, Voice of Firestone continued without interruption through summer. ABC played trump card this week in offering to rent its 3664-seat Paramount Theatre in Times Square to Firestone as studio each Mon., with free admission to audience. If Firestone accepts, screen would be dark for several hours Mon. morning for rehearsals, reopen for matinee, close again for Firestone dress rehearsals and show, then reopen for midnight movie. Robert M. Weitman, ABC-TV program & talent v.p., who made offer, said approval of all unions involved had been granted. . . . Westinghouse to sponsor series of stage dramas, Best of Broadway, in color on CBS-TV every 4th Wed. 10-11 p.m. in fall, thru McCann-Erickson; will continue to sponsor Studio One . . . Campbell Soup Co. to sponsor Lassie, new series featuring famed movie dog, on CBS-TV starting Sept. 12, Sun. 7-7:30 p.m., thru BBDO . . . Chrysler buys It's a Great Life on NBC-TV starting in fall, Tue. 10:30-11 p.m., thru McCann-Erickson . . . Dow Chemical Co. buys Medic on NBC-TV starting in fall, 3 out of 4 Mon. 9-9:30 p.m., thru MacManus, John & Adams, Detroit . . . Kool Cigarettes to sponsor The Lineup on CBS-TV starting in fall, Fri. 10:10-10:30 p.m., thru Ted Bates & Co. . . . Maxwell House to sponsor Masquerade Party on CBS-TV starting June 21, Mon. 9:30-10 p.m., thru Benton & Bowles . . . U. S. Tobacco Co. (Sano cigars) buys 78 partic. on NBC-TV's Home, Mon.-thru-Fri. 11 a.m., thru Kudner . . . Grove Laboratories (cold tablets) buys 58 partic. on NBC-TV's Today, Mon.-thru-Fri. 7-9 p.m., thru Harry B. Cohen Adv. . . . Serutan (laxative) to sponsor The Stranger on DuMont starting June 25, Fri. 9-9:30 p.m., as summer substitute for Life Begins at 80, thru Edward Kletter & Assoc. . . . Mutual of Omaha buys period following Gillette-sponsored fights on NBC-TV Fri. 10 p.m. for new sports show, thru Bozell & Jacobs, Omaha . . . Toni switches Dollars a Second from DuMont to NBC-TV starting July 4, Sun. 10-10:30 p.m., thru Weiss & Geller . . . 4 new sponsors for Bob Crosby Show on CBS-TV, Mon.-thru-Fri. 3:30-4 p.m.: General Mills (Betty Crocker cake mix), thru BBDO; Toni, thru Weiss & Geller; S.O.S. Co. (cleanser), thru McCann-Erickson; C. A. Swanson & Sons (oleomargarine), thru Tatham-Laird . . . ABC-TV, for lack of sponsors and technical difficulties, to drop Open Hearing Thu. 9-9:30 p.m., and Sun. afternoon public affairs schedule comprising Martin Agronsky's At Issue, Elmer Davis commentary and Fact Forum's Answers for Americans . . . Aluminum Ltd. of Canada signs as partic. sponsor of Omnibus on CBS-TV in fall, Sun. 5-6:30 p.m., thru J. Walter Thompson.

Television Advertising Bureau's temporary headquarters in New York's Hotel Weston, opened this week, had as first staff member Robert Covington, promotion director of WBTB, Charlotte, on temporary loan to organize promotion dept. Executive committee (Vol. 10:22) is to meet shortly for membership campaign plans, following which permanent board will be elected by charter membership.

New copyright and program rights problems in transcriptions, community antenna systems, etc., is discussed briefly in Spring issue of Duke U's Law and Contemporary Problems by New York attorney Theodore R. Kupferman, writing on "Rights in New Media."

Sales Management's annual Survey of Buying Power edition, with its many tables of statistics on population, retail sales, effective buying income, etc., off the press this week—an invaluable reference for sales and promotion dept.

Station Accounts: Ballantine Beer gets free time (Wed. 10:30-11 p.m.) on New York's WABC-TV currently for 13 weeks for re-runs of Foreign Intrigue films week after they're shown on WNB'T, in frank effort of gen. mgr. John Mitchell to induce sponsor to continue it thereafter on pay basis after its time on WNB'T is preempted in Aug. by live Lux Video Hour. Liebman Breweries similarly has been offered 50% time discount for Henry Fonda films for 26 weeks, provided it continues them at regular rates for 52 weeks thereafter. Making of these and other "deals" to bring over high-rated film shows from NBC and keys is part of outspoken policy of the ABC key in intensely competitive situation . . . Auto industry's heavy use of TV-radio (Vol. 10:22) is detailed in May 31 Sponsor Magazine, listing expenditure of $6,700,000 by manufacturers for network TV alone, $2,600,000 for network radio in first 3 months of 1954 vs. $4,000,000 TV, $1,500,000 radio same period of 1953. At network level, outlay amounts to $65.53 per car vs. $3.67 year ago—to say nothing of saturation spot campaigns (Ford alone spent $1,200,000 in Jan. to introduce new models). Much national TV-radio advertising in auto field is dealer co-op (e.g., Lincoln-Mercury Dealers Assn. sponsorship of Toast of the Town), reports Sponsor, which lists 17 top auto makers and their TV-radio sponsorships . . . U. S. Rubber Co., for new Royal 8 tires, using local TV-radio spots, thru Fletcher D. Richards Inc. . . . 20th Century-Fox starts $250,000 TV-radio "saturation" campaign in 160 markets, using open-end 20 & 60-second trailers, to plug new CinemaScope Garden of Evil, to be released in July . . . Warner Bros. backing up Them! with $256,000 TV-radio-newspaper campaign . . . Among other advertisers reporting using or preparing to use TV: H. J. Heinz Co., Pittsburgh (baby foods), thru Maxon Inc., Detroit; Procter & Gamble, Cincinnati (Dash detergent and Gleem toothpaste), thru Compton Adv., N. Y.; Rockwood & Co., Brooklyn, N. Y. (Chocolate Bits), thru Paris & Peart, N. Y.; Penola Oil Co., subsidiary of Esso Standard Oil Co., Detroit (Flit insecticide), thru McCann-Erickson, N. Y.; Seeman Bros., N. Y. (White Rose Redi-Tea), thru Cecil & Presbrey, N. Y.; Dro Inc., N. Y. (Dro insecticides), thru Kenneth Rader Co., N. Y.; Vigorelli Sales Co., Brooklyn, N. Y. (sewing machines), thru Bachenheimer-Lewis Adv. Agency, N. Y.; Nedick's Inc., N. Y. (bottled orange drink), thru Weiss & Geller, N. Y.; Pez-Haas Co., N. Y. (Pez candy), thru Wesley Associates, N. Y.

Armour & Co., which spends some $10,000,000 a year on advertising, awards Henri, Hurst & McDonald Inc., Chicago, its canned meat & pet food accounts; Tatham-Laird Inc., Chicago & N. Y., sausage, ham, bacon, other smoked meats accounts; John W. Shaw Adv., Chicago, some detergents & shorteners and accounts of subsidiaries Jack E. Decker & Sons, Mason City, la., Drummond Packing Co., Eau Claire, Wis.; Columbus Packing Co., Columbus, O. Latter shift from Foote, Cone & Belding, which retains Dial soap & shampoo, 7 industrial divisions and Armour Labs accounts—amounting to about $4,000,000.

Procter & Gamble's TV-radio billings for next season may hit $40,000,000, reports Variety, all-time high for any company; its 7 weekly daytime serials on CBS Radio, all renewed, represent estimated $7,500,000 in billings, giving that network SRO sellout 10 a.m.-4:30 p.m.

Everything except network radio is up in Printers' Ink national advertising index for first 4 months of 1964. National advertising as whole is up 11¼%, with shows network TV ahead 44%, newspaper, magazine & outdoor up 4% each, business papers up 2¾%, network radio off 0½%.

It's Detroit Radio & TV Council now, instead of Detroit TV Council, with J. Walter Thompson's local TV-radio supervisor Win Holden as pres.
FIRST 3 RCA 12½-kw uhf amplifiers (Vol. 10:4,7) will be delivered in next 30-45 days to WBRE-TV, Wilkes-Barre, Pa. and to Youngstown’s 2 stations—WPMJ-TV & WKBN-TV. Thereafter RCA plans to ship about 4 a month, with WSBT-TV, South Bend, and WHP-TV, Harrisburg, Pa., next on the list. Wilkes-Barre station, which gets first 12½-kw amplifier, also is expected to get the first of RCA’s new super-gain uhf antennas, due for delivery this fall. New antenna provides gain of about 45 at low end of uhf spectrum, 60 at high end—about twice as high as standard RCA slotted antenna—will make possible ERP of 500-kw and more when used with 12½-kw transmitter.

RCA shipped 10-kw transmitter June 2 to WPBN, Traverse City, Mich. (Ch. 7), due on air in latter June or early July. On May 29, 50-kw RCA amplifier was shipped to WAGL-TV, Lancaster, Pa. (Ch. 8), and on June 4 a 50-kw amplifier went out to WHO-TV, Des Moines (Ch. 13).

In our continuing survey of upcoming new stations, these were reports received this week:

WSAU-TV, Wausau, Wis. (Ch. 7), now has FCC approval of purchase of radio WSAU, plans to order equipment in 2-3 weeks, hopes for fall start, reports v.p.-gen. mgr. George T. Freechette. Construction begins soon, with plans to adapt WSAU Blaw-Knox tower and studio & transmitter buildings for TV. Rep not yet chosen.

KETC, St. Louis (Ch. 9, educational) now plans test patterns during second week in Aug. and programming late that month, reports gen. mgr. Richard J. Goggin. It will use 5-kw RCA transmitter, has been delayed by move of Ideco tower to new site between St. Louis U High and Oakland Stadium.

WEOL-TV, Elyria, O. (Ch. 31, allocated to Lorain) is having zoning difficulties over transmitter site, so hasn’t set target date, reports gen. mgr. Alexander Buchan. It tentatively plans to order RCA equipment, 360-ft. tower. Rep not yet chosen.

Public hearings on adequacy of existing standards for marking and lighting of high towers will be held June 24-25 in Washington by special ad hoc study group of air coordinating committee. Largely pro forma, the hearings are concerned only with first phase of study—to determine adequacy of present standards—and not to determine ways and means of improving marking and lighting. Public hearings on possible changes in standards will be called if group determines present standards are unsatisfactory. Meanwhile, Navy invited ad hoc group to special flight June 10 around 1029-ft. tower of WATR-TV, Norfolk, for pilot’s-eye-view of tall guyed tower.

Libel suit for $150,000 by TV-radio actor Joe Julian against publishers of Red Channels was dismissed May 25 by N. Y. Supreme Court Justice Saypol on defense motion after publication’s counsel told court that introduction to the book cautioned readers that some innocents might have been included in its listings.

NARTB issues booklet, Television and Youth, based on 1951 survey of 1000 children in Ann Arbor, Mich., showing TV viewing didn’t interfere with homework, made little change in habits of reading and hobbies.

“Smallest dynamic microphone ever developed for broadcasting use,” the BK-6A, announced recently by RCA, weighs less than 6 oz., is small enough to be worn around performer’s neck, clipped to lapel or completely concealed in hand.

British Marconi has sold 4 camera chains and associated equipment to Radio Televisao Difusora, Sao Paulo, Brazil (PIF 3), owned by Assis Chateaubriand.

WNYC-TV, New York City (Ch. 31), granted recently to Municipality of City of N. Y., plans to have transmitter and antenna in Municipal Bldg., Manhattan, but hasn’t ordered equipment or set target, reports mgr. Seymour N. Siegel. With $379,000 set aside for TV construction, city expects to ask for equipment bids soon, although fight looms over appropriation for operating expenses (Vol. 10:21). It will be non-commercial, but consideration is being given to “experimental pay-as-you-go plan with Phonevision or Skiatron or some other group, in connection with special services for doctors, dentists, etc.” Studio at 500 Park Ave. is ready, has been used for last few years to produce TV films; additional space will be provided at Board of Education’s WNYE (FM).

WJDF, Boston (Ch. 44), is trying for fall opening, reports grantees Jack Wrather Jr. of Beverly Hills, Cal., who also is half owner of KFMB-TV & KFMB, San Diego. “I am going ahead on engineering plans for the station and in the very near future will have finished the preparation of studio plans,” he writes. Rep not yet chosen.

WOPT, Chicago (Ch. 44), which earlier reported Jan. 1, 1955 target (Vol. 10:8), now hasn’t any target date, writes pres. Egmont Sonderling. It plans to use same tower as WTTW (Ch. 11), Chicago educational grantees, can’t proceed until latter builds. WTTW had planned start next fall (Vol. 10:9), but recently pres. Edward L. Ryerson stated that lack of funds may delay start another year.

WCET, Cincinnati (Ch. 48, educational), with 1-kw RCA transmitter on hand, plans to begin test patterns in June, reports gen. mgr. Uberto T. Neely. It might begin 15-20 hours of weekly programming as early as July, definitely will do so by Oct. 1 at latest, he states. RCA antenna, mounted on WLWT’s tower, will be 350-ft. above ground.

WQCY, Allentown, Pa. (Ch. 39), plans to use new 12½-kw RCA transmitter, expects to be in operation “in the latter part of Nov., 1954,” writes mgr. Ogden R. Davies. Rep will be Weed.

TV receivers in 1953 accounted for about 10% of the total combined residential & rural consumption of electrical power in the U. S., according to NBC research director Hugh M. Beville, addressing recent convention of Public Utilities Advertising Assn. Because it’s used more, he said, the TV set consumes more current annually than any other household appliance—averaging 4½ hours per day. In 2 years between 1951 & 1953, electrical appliance advertisers more than doubled their network TV time expenditures, and in the first 2 months of this year the appliance field increased TV network outlays by 56% over same 1953 period.

Voice of America gets staunch support of famed journalist Eugene Lyons, expert on Russia, in June Reader’s Digest article titled “How Good Is the Voice of America?" So does Radio Free Europe. Case samples are cited of their “pulling power” in the way of responses and defections from the Soviet. That VOA is getting under their hide is also attested by fact that “Soviet Russia spends more on jamming the Voice of America than this whole global effort costs us.”

“Whoever controls your TV set is really the head of your house,” Rev. Edwin B. Broderick, TV-radio director for N. Y. Roman Catholic Archdiocese, advised parents in sermon at St. Patrick’s Cathedral. “Use TV as a worthwhile family experience and not as a chamber of horrors or a built-in baby sitter,” he said. “Ask yourself a simple question: ‘Does TV run my home or do I run TV?’ It is to the watchful credit of the TV industry that, thus far, no Pied Piper has arisen to lead our children astray.'

---

**ADIMARL LINE SHOWN, PRICES DOWN; RCA NEXT:** Admiral broke with lower-priced TV line this week, starting with 17-in. plastic table at $150 -- and big question now is whether this is first gun in new industry-wide round of price cuts. Bellwether RCA should go a long way toward answering that when it shows line to field reps week of June 7 at Atlantic City. Other manufacturers will be busy showing new lines during June and July -- only strike-bound Philco uncertain about distributors' convention.

RCA is saying little in advance of meeting, other than to reaffirm that line will start with 17-in. (Vol. 10:14). Conjecture is that 21-in. series in RCA line, said to contain a considerable number of high-price units, will start at $180. Best information from Motorola is that it probably won't raise prices in line to be shown its distributors July 8 at Chicago's Conrad Hilton Hotel.

Thus industry doesn't seem disposed to raise prices now, much as it would like to do so in face of low profit margins. Trend now appears to be to hold prices firm, reduce them where possible, hope for increased demand for step-up models.

* * *

Details of Admiral's line, shown to distributors at unpublicized convention in Chicago's Drake Hotel June 4, will be disclosed after dealers have had chance to see it at "open houses" week of June 7. But it's learned line has lower prices on just about all models, contains 17, 21 & 24-in. sizes, starts with 17-in. standard-tube plastic table at $150 ($10 under comparable current model). It also has 21-in. open console in mahogany at $200 (as against $250 in last line). As summer special only, it's also offering a 21-in. mahogany table for $160 (last list $200).

Majority of Admiral sets have 90-degree deflection tubes. The 21-in. series of these sets starts at $200. Cost of producing set with 90-degree tube is said to be about $3 more than standard-tube receiver, most of increase resulting from the cost of changing circuitry to accommodate higher voltage for driving power.

Admiral pres. Ross Siragusa told distributors the 21-in. 90-degree tube provides 270-sq. in. picture, 20% larger than standard 21-in. tubes and only 10% smaller than viewing area in 24-in. set. It also fits into cabinet 3 inches shorter than in present line, said Siragusa, and cabinets for 21-in. sets are 2 inches shallower from front to back than current 17-in. models.

Printed circuits in chassis are another feature. Siragusa revealed printed circuits cover one-third of all "normally-exposed wiring," predicted that "a 100% printed circuit TV chassis will be a reality within a year." He said it would result in better quality control, fewer service calls for faulty soldered connections.

Admiral also introduced 5-tube printed circuit table radio to list at $15 and moderately-priced high-fidelity unit (price undisclosed). Whether other radios were also introduced at same time could not be learned.

* * *

Strike at Philco's 10 TV-radio-electronics plants entered 6th week as we went to press, with no sign of settlement. Union rejected Philco's offer of 5¢ hourly wage increase as inadequate, obviously waiting for company to match RCA's grant of 9-10¢, which provided basis for contract with 29,000 workers (Vol. 10:21).

Philco isn't farming out its TV-radio production to other companies, as it did during radio strike in late '30s. Company spokesman acknowledged that TV inventories of some distributors were "dangerously low". But best company can do to alleviate situation is to trans-ship stocks from some distributors who are overloaded. Meanwhile, plans for Philco distributor parley, originally set for latter June, are being held in abeyance.

Other distributor conventions announced thus far: Capehart-Farnsworth, June 7 at Hotel Van Orman, Ft. Wayne, & June 28, Hotel St. Francis, San Francisco; Crosley, - 9 -
June 7, Hotel Savoy-Plaza, New York; DuMont, June 15, Statler, New York; Raytheon, June 17, Sheraton Hotel, Chicago; Emerson, June 22, Lido Beach, L.I.; Hoffman Radio, July 7, Huntington Hotel, Los Angeles; Motorola, July 8, Conrad Hilton, Chicago; Sylvania, July 14, Statler, Buffalo; Zenith, July 15, Drake Hotel, Chicago; Arvin, July 13, Grove Park Inn, Asheville, N.C.; Stromberg-Carlson, July 26, Rochester plant.

* * *

TV production totaled 91,443 week ended May 28, the lowest for any week this year. It compared with 97,937 preceding week and 96,007 week ended May 14 — all within period of Philco strike. It was year's 21st week, brought production for year to date to about 2,300,000 vs. 3,500,000 in corresponding period of 1953.

Radio production totaled 161,122 (including 68,427 auto), down from 190,275 week ended May 21 and 211,161 week before. It brought 21-week production to about 4,040,000, compared to approximately 5,890,000 in same period year ago.

Topics & Trends of TV Trade: Industry opposition seems likely to result from Federal Trade Commission's proposal this week to require merchandising ads to disclose fully how many channels a TV set can receive. FTC suggested this addition to its proposed code of fair practices for TV-radio merchandising (Vol. 8:19 & 9:41,50) in letter to all interested parties. Comments are due by June 15.

FTC attorney Paul Butz, who has conducted drawn-out hearings extending over last 3 years, proposed that ads carry such notations as: "Vhf television receiver"; "All vhf channels plus 4 uhf channels"; "Not for uhf reception"; "For vhf reception only." He emphasized these were merely suggestions and could be modified by industry comments.

Proposal stemmed from comment by DuMont attorney Wm. A. Roberts at last public hearing Dec. 7 that prospective set purchasers in uhf areas were being deceived by ads which weren't clear on uhf reception capabilities.

RETMA is said to be dubious on 2 facets of FTC proposal — whether lack of information on uhf in ads constitutes deception and whether FTC has authority to enforce such ruling if not necessary to prevent deception.

Butz cautioned that proposed rule does not necessarily bear approval of either FTC or staff, but is intended only as basis for consideration. No further public hearings are anticipated.

Picture tube sales in first 4 months totaled 2,690,519 units, valued at $88,989,887, down from 3,705,997 at $89,-353,731 sold in first 4 months of 1953, reports RETMA. Some 77% were 19-in. and larger. In April alone, 727,655 picture tubes worth $14,904,779 were sold, compared to 759,468 at $18,904,867 in March and 907,076 at $21,657,266 in April 1953.

Receiving tube sales in first 4 months totaled 106,026,920, worth $78,560,440, down from 163,401,- 355 at $110,676,003 in first 4 months year ago. April sales were 29,640,942 at $21,697,489, compared to 29,063,- 484 at $22,130,627 in March and 41,342,599 at $27,720,635 in April 1953.

RETMA convention June 15-17 at Chicago's Palmer House, celebrating 30th anniversary, will be host to several founders of old RMA, including H. H. Frost, first president. Three days of meetings of all divisions and committees will be climax at annual dinner final evening when 1954 Medal of Honor will be presented to chairman Robert C. Sprague. Convention chairman Leslie F. Mutet will also present certificate awards at dinner to members of NTSC for development of color standards. RETMA board meets final day of convention.

Sylvania radio tube div. plans 219,000-sq. ft. building in Williamsport, Pa. for central packaging area and finishing operations for radio & receiving tube production.

Monarch Radio & TV Corp. of New York, its former pres. Vincent S. Acunto and 7 other men were indicted June 4 by N. Y. Federal grand jury on 33 counts of mail fraud, conspiracy and violation of Securities Act. Govt. attorneys said indictment resulted from investigation by SEC into interstate sale of $500,000 in stock to more than 1,000 persons. Defendants were accused of causing company to issue false financial statements and to pay dividends out of proceeds from stock sale. Soon after stock sale, company was declared bankrupt and stockholders and creditors realized nothing from liquidation, Govt. declared. Among those indicted was Charles H. Greenhouse, whose stock manipulations nearly half century ago earned him the title of "boy wizard of Wall St." and several prison terms since that time.

Admiral's Ross Siragusa, describing 15-in. color tube as "dead," told his distributors convention June 4 to put no stock in predictions as to when "simple and relatively inexpensive color tube will be available." He said: "The 19-in. color tube, which gives a 17-in. picture, was supposed to go into production this fall. But just 10 days ago RCA withdrew it as impractical to build. While there have been announcements of several single-gun rectangular tubes giving a 20 to 21-in. picture, each has a specific drawback. With one the circuitry is so complex that as many as 60 tubes may be required to operate the set. Excessive radiation handicaps another."

Telefunken receiving tubes will be marketed in U. S. in about 2 months by American Elite Inc., 1775 Broadway, N. Y. (Michael Von Mandel, pres.), U. S. agent for big German electronics manufacturer. About 35 tube types will be available, all with American-type bases, and prices will be competitive with U. S. tube manufacturers, according to E. S. Klausner, in charge of tube sales. American Elite is also considering importing layer-type resistors manufactured by Germany's Resista Corp.

Distributor Notes: DuMont appoints Ray Distributors, Savannah (Fred A. Ray, owner) ... Capehart-Farnsworth names Cannon Distributing Co., Charleston, S. C. (Norman L. Cannon, pres.), ex-CBS-Columbia outlet ... Halli-crafters appoints Tubbs Electric Co., 165 S. Post St., Spokane (Clarence A. Tubbs, pres.) ... Admiral Distributors Inc., Boston, appoints Charles E. Cranston TV sales mgr. ... Philco Distributors Inc. Chicago appoints John Perry Jr. adv. & sales promotion mgr., succeeding Ira Breichta, now midwestern adv. mgr. of parent company ... Olympic of Southern California announces resignation of pres. John Tracy, his duties to be assumed by Olympic pres. Morris Sobin ... DuMont appoints Wholesale Equipment Corp., 1338 McGee St., Kansas City (Frank Dean Jr., pres.) ... Motorola-Chicago names Harold P. Murphy sales mgr., replacing S. R. Herkes, now v.p. of Chicago branch.
Color Trends & Briefs:

Excited by color film scanner demonstrations at NARTB convention (Vol. 10:22), Frederick W. Ziv, chairman of major TV film company bearing his name, is satisfied that his heavy investment in color film for last 5 years will begin to pay off this fall.

"I was probably the No. 1 color TV film enthusiast," he told us, "when the networks were saying that it wouldn't be satisfactory for TV. We now have a backlog of several hundred programs in color and I'm convinced that the public and the sponsors will want it. Other film makers apparently didn't want to tie up the dollars. It costs about 33 1/3% more to shoot in color, and the prints are considerably more than black & white."

Mr. Ziv said he has seen many tests of his film on scanners and that they are "100% satisfactory." He reported that Cisco Kid is in 5th year of color and that other programs being shot in color are Mr. District Attorney, I Led Three Lives, Boston Blackie, Favorite Story. He said that price structure for color hasn't been established.

Ziv TV Programs pres. John L. Sinn estimates company's investment in color at $4,000,000, said he's satisfied that scanners will produce excellent results and that many stations will have them this fall. He said that programs are shot on Eastman 35mm film, reduced to 16mm prints.

Engineering seminar on color is scheduled for June 21-July 2 by Pennsylvania State College, at State College, Pa., whose pres. is Milton Eisenhower. Sessions are designed for engineers from manufacturing organizations, stations, educational institutions. Registration fee is $60. Asst. Prof. Harold J. Nearhoof is in charge, with Dr. Donald C. Livingston, Sylvania, as coordinator. Lecturers are: Dr. R. M. Bowie, Sylvania; W. T. Wintringham, Bell Labs; B. D. Loughlin, Hazeltime; Dr. Livingston; John Wentworth, RCA; J. F. Fisher, Philco; P. W. Howells, GE; K. E. Farr, Westinghouse; R. A. Maher, Crosley; Frank Marx, ABC; Kurt Schlesinger, Motorola; J. R. Popkin-Clurman, Telechrome.

"Color Caravan"—NBC-TV's 10-city swing through East and Midwest with mobile unit (Vol. 10:21)—has undergone slight shift in schedule, as follows: June 9-10, St. Louis; June 16-17, Milwaukee; June 23, Chicago; June 29-30, Columbus, O.; July 8-9, Cleveland; July 15-16, Washington; July 22-23, Baltimore; July 28-29, Philadelphia; Aug. 5-6, Boston; Aug. 12-13, New York. Most sites and subjects are as previously reported, except that Nela Park is likely to be added for Cleveland and Ohio State Penitentiary deleted from Columbus.

AT&T's equipping of network facilities for color continues, as networks build up to substantial color programming schedules to start this fall. Hitherto moving slowly, CBS has been ordering color for its affiliates; latest to be reached by color-equipped microwave are those in Cleveland, Denver and San Francisco—as of June 1. NBC expansion goes on at steady rate: Lancaster, Pa., June 7; Norfolk, Seattle & Portland, Ore., Aug. 1; Binghamton, Sept. 1.

Foreseeing 21-in. $500 color set by end of 1955, Paramount Pictures pres. Barney Balaban this week told stockholders that "prices presently being quoted for color TV receivers have no relationship to the mass product in prospect for the very near future." Paramount has been developing 21-in. & 24-in. color tubes through subsidiary Chromatic TV Labs.

Network color schedules week of June 6-12: NBC-TV—June 7-9, Bride & Groom, 12 noon; June 9-10, inserts in Today (7-9 a.m.) and Home (11 noon) from mobile unit at Busch estate, St. Louis; CBS-TV—June 11, New Revue, 5:30-6 p.m.

Veteran technical editor Oliver Read, of Radio & TV News, recently obtained Westinghouse color set on loan, came up with interesting reactions in his June issue. After set was delivered, he didn't wait for serviceman, connected it himself, found all channels in good alignment, monochrome reception highly acceptable. First color show came 3 days later when he viewed CBS-TV's New Review, which he found disappointing. "Skin tones were yellowish," he said, "and lip makeup was excessive. A slight adjustment of the flesh control partly corrected the jaundiced appearance of the actors." Then, he went on: "Our impatience for more color programming mounted as the days slipped by. . . . It seems that we could enjoy about one hour per week of mediocre subjects, including the Scholz-Andrews fight. This editor doubts if any prospect for a color set could be sold from this example. Our enthusiasm for color reached a climax on March 28 when NBC set up their color cameras at New York's Botanical Gardens. This production was excellent from both color and production standpoints. It is a real thrill to enjoy the sparkle and life produced by various plants and flowers when seen in their true colors."

Read chalked up 125 hours and concluded: "Contrary to many opinions, a color receiver is far simpler to tune than several monochrome sets used in the past. Now that we have good quality color TV receivers, the need remains for more and better telecasts in color. Yes—color TV is here and it's terrific!"

British color TV is still 2 years away, in opinion of Sir Ian Jacobs, BBC director-general. After returning from New York this week, he's reported saying that even in U. S. "there is a long way to go before it is an economical proposition." Marconi recently demonstrated 2 kinds of color systems, both compatible. One is simply the NTSC standards, tailored to British 405-line system. Other is a "wide-band" system requiring some 50% more bandwidth. Marconi says latter is "similar in certain principles to the NTSC signal, but omits the band-sharing feature." It's claimed to produce better color and improved compatibility. Also demonstrated was a color-trace camera, in which "one camera tube produces a high definition monochrome picture of 3-mc bandwidth in a conventional manner; the other tube is arranged to give 2 low-definition colour signals." U. S. manufacturers have experimented with 2-tube color cameras but none has decided it is commercially practical. Brochure describing systems and demonstrations is available from Marconi's Wireless Telegraph Co. Ltd., Marconi House, Chelmsford, England.

Weak programs will be strengthened by color in early novelty period. That's opinion of Scherwin Research Corp. on basis of one study. It reports: "We audience-tested 2 editions of a program, in each case studying both a black-&-white and a color version. The first edition, which was well liked in black-&-white, gained no additional interest when tested in color. The second was poorly received in black-&-white; yet, when it was seen in color, the audience's liking score rose to almost the same level achieved by the strong first edition."

Ethiopian Emperor Haile Selassie was fascinated with color and TV generally when he saw color for first time at Rockefeller Center this week. After watching NBC-TV's Bride & Groom in color, he plied host Laurance S. Rockefeller with questions about number of TV sets in U. S., how much it's watched, etc.

Dr. E. W. Engstrom, executive v.p., RCA Laboratories, goes to parent company headquarters in N. Y. as executive v.p. in charge of all research and engineering, and Robert E. Shelby, director of NBC color TV systems development, was elected NBC v.p. & chief engineer, in major changes in the RCA-NBC executive structure announced June 4 by Chairman Saroff. Ewen C. Anderson, v.p., RCA commercial dept., was elected executive v.p., commercial dept., handling all patent & license matters; Dr. Irving Wolff, director of research, appointed v.p., research, RCA Princeton labs; Dr. D. H. Ewing, in charge of chemical research lab, named administrative director, RCA Princeton labs; O. B. Hanson, NBC v.p. & chief engineer, becomes RCA v.p., operations engineering, with responsibility for all engineering pertaining to broadcasting & communications and for direction of RCA Frequency Bureau, reporting to Dr. Engstrom, as does D. F. Schmit, v.p. product engineering at Camden, who continues in that capacity. The Engstrom and Anderson promotions place them on same executive level at parent company as recently promoted Joseph B. Elliott, now executive v.p. consumer products; C. M. Odorizzi, executive v.p., corporate affairs: W. W. Watts, executive v.p., electronic products.

R. G. Griffith, Radio Engineering Products Inc., on May 1 succeeded L. S. Payne as chief engineer, Canadian Overseas Telecommunications Corp.; Mr. Payne retired after 42 years, going to London as consultant to British Marconi.

British IRE holds 1954 convention at Oxford, July 8-12, devoted entirely to industrial electronics.

Electronics Reports: Forecasts for 1964 by GE's W. V. O'Brien, v.p. & gen. mgr. of apparatus sales div., speaking at National Federation of Financial Analysts Societies meeting in Chicago: 66,000,000 home TVs in use, of which 44,000,000 will be color sets, using almost twice as much electric power per receiver; TV screens that can be hung on the wall like pictures, connected to receiver by thin wires; electronic device for thawing frozen foods quickly; electronic device for cooking food in seconds; electronic incinerators for disposal of kitchen waste; 3 times as many home freezers as now, twice as many ranges and electric water heaters, 5 times as many electric clothes dryers, 11 times as many air conditioners.

Who invented transistors? The Russians, of course. At least, that's hinted in article on Russian electronic achievements in Soviet newspaper Izvestia. Crediting early solid-state research to Oleg V. Losev, who died in 1941, article cites advances in last 5 years by Soviet Army in substituting transistors for tubes and states, "Now there is no doubt that in radiotechnics, electronic crystals [transistors] are the masters." Article indicates Russian electronic developments may be paralleling those in U. S., describes giant computing machines containing thousands of electronic devices and "occupying tens of hundreds of square meters of space." It suggests that "century of radioelectronics" is more apt description for present age than "era of atomic energy" because without complex electronic devices nuclear achievements would be impossible.

Life-saving electronic assistant for the operating room is new "Physiological Monitor," developed by National Bureau of Standards for Veterans' Administration, which continually measures changes in patient's blood pressure, heartbeat and respiration as they occur during course of an operation. Recording device makes permanent record of patient's condition during operation. Because important data on patient's condition are available at a glance without intermediate calculation or manipulation, the instrument makes possible prompt emergency action. Preliminary tests in 2 Washington hospitals indicate "great potential usefulness to the surgical team," NBS reports. Detailed description is contained in Technical Report 1872, NBS, Technical Reports Section, Washington 25, D. C.

Pica for military electronics testing services on west coast was inserted in June 3 Congressional Record by Rep. Yorty (D-Cal.). Crediting West Coast Electronics Mfrs. Assn. with helping build California's electronics industry to current level of more than 150 companies employing more than 50,000, he said lack of testing facilities is hampering industry's further growth there. "Govt. procurement regulations require prior official testing before electronic parts are purchased," he said. "But the testing services are offered only in the east and midwest, although facilities are available on the west coast which could make the necessary tests at little additional costs to the Govt. and at savings of millions to the producers of electronics."

Sylvania this week disclosed new 21-in. 90-degree aluminized tube (21ATP4), to be available in limited quantities in July. New glass rectangular tube provides 263-sq. in. picture, measures 19½-in. high, 15½-in. wide. Price wasn't announced.

Jensen Mfg. Co., subsidiary of Muter Co., opens new 25,000-sq. ft. plant at Guttenberg, Ia. for production of 6-in. and smaller speakers, expands output of high-fidelity equipment at main plant in Chicago.

Francis W. Dunmore, retired Bureau of Standards scientist, who with late Harry Diamond originated the blind landing system and who pioneered many phases of air & marine navigation, wins Pioneer Award of annual Conference on Airborne Electronics.
Canadian Admiral, trying to head off recent wave of price-cutting and "dumping" of TVs, takes full-page ad in 15 leading Canadian newspapers to warn prospective set purchasers: "You can pay too much ... but you can also pay too little." Signed by Canadian Admiral pres. Vincent Barreca, ad urges customers to ask themselves: "Is this distress merchandise? Is it repossessed merchandise? Is this TV set one of a discontinued line? Was this TV set set made by a manufacturer now out of business? Is this a stripped down model? The price may seem low—but how about the 'extras' you may have to pay?"

"Electronic office" is closer to reality with the International Business Machines Corp. demonstration of its new computer, "702," designed especially for use by business and industry. Details of new "brain" were outlined for first time on closed-circuit telecast from IBM labs in Poughkeepsie, N. Y. to 1300 of company's salesmen in New York's Waldorf-Astoria Hotel. Although deliveries aren't scheduled until early next year, about 30 of the devices have already been ordered, at monthly rentals to average about $25,000. So far, insurance companies constitute biggest category of customers.

At last, a noiseless piano—through the magic of electronics! Rudolph Wurlitzer Co., Chicago, this week announced electronic piano, portable and weighing less than 80 lbs., due for production next fall. It never gets out of tune, say the Wurlitzer people, and normally sounds just like a regular piano—but it also is equipped with headphones, so loudspeaker can be switched off and the music heard only by person who is playing.

"WESCON"—Western Electronic Show & Convention—this year will be biggest ever, with more than 465 exhibitors and expected attendance of nearly 20,000. Show this year will be at Los Angeles Pan-Pacific Auditorium and Ambassador Hotel, Aug. 25-27. It's sponsored by West Coast Electronic Mfrs. Assn. and IRE Los Angeles & San Francisco sections.

Hartley Baird Ltd. is new name for amalgamated Baird Television Inc. (Baird brand TVs) and Hartley group of companies which includes Harley Electromotives Ltd., Shrewsbury, Shropshire (electronic instruments) and Duratube & Wire Ltd. Managing director of Baird's now is A. W. M. Hartley, with Sir Charles King continuing as chairman.

"Flyweight" power triode tube, designed for uhf airborne communications and weighing only 8 oz., but with high power output, was announced this week by RCA. Designated 6383, new tube has maximum plate dissipation of 600 watts and can operate at top power at frequencies up to 2000 mc.

Gramer Transformer Corp., Chicago, has purchased Halldorsson Transformer Co., also of Chicago. Gramer recently bought Johnson Electronics Inc., Orlando, Fla. No personnel changes are planned in Halldorsson organization.

Andrea Radio Corp. has dropped 15-in. color set plans, announces 19-in. for fall.

**Financial & Trade Notes:** Emerson Radio & Phonograph Corp.'s consolidated net sales for 26-week period ended May 1 totaled $404,445,690, compared with $39,925,745 for same period preceding year. Profits after taxes were $947,515 (49c a share on 1,958,187 shares outstanding) vs. $1,768,594 (91c). Fiscal year ends Oct. 1. Emerson has entered into loan agreement with group of institutional investors, arranged by F. Eberstadt & Co., covering sale of $7,500,000 in promissory notes due May 1, 1969.

Lamb Industries Inc., headed by Toledo broadcaster-telecaster Edward Lamb, has bought 65,000 shares of Air-Way Electric Appliance Corp. at $32 a share, bringing his holdings to more than 130,000 of the 360,000 share outstanding. Besides his TV-radio holdings and Erie Dispetch, Mr. Lamb also recently acquired control of C. L. Bryant Co., Cleveland (Sphinx furnaces) and White Products Corp., Middleville, Mich. (water heaters), merging the 2 (Vol. 10:2).

Twentieth Century-Fox profit was $2,048,000 (74c a share) in 13 weeks ended April 27, double the $1,024,000 (37c) earned in same period year ago—pres. Spyros Skouras telling annual meeting CinemaScope had turned back TV's threat to motion pictures. He predicted theatres equipped for CinemaScope would be increased by year's end from present 4600 to 10,000 in U. S. & Canada, and from 1500 to 4600 overseas. He said company had no immediate plans to sell old pictures to TV.

Famous Players Canada, which owns 50% of CKCO-TV, Kitchener, Ont. (Ch. 13) and 25% of CFCH-TV, Quebec City (Ch. 4), latter due on air later this month, is selling 285,000 common shares at $23.50 in current offering designed to give Canadian citizens larger percentage of ownership. Paramount International, however, with 880,000 shares, still holds about 51%. FPC also proposes to acquire more TV stations.

General Tire's success with its General Teleradio TV-radio subsidiary operation was reason given by B. F. Goodrich Co. for recent broadening of its charter to permit it to go into TV-radio and other fields. But Goodrich spokesman states move was merely "precautionary" for no immediate plans are in prospect.

Walt Disney Productions reports net income of $385,662 (43c a share) in 6 months ended April 3, double the $142,723 (22c) earned in corresponding period year ago.

Philo postponed annual stockholders meeting from June 4 to June 23, in Land Title Bldg., Philadelphia, because of current strike.

Dividends: Admiral, 25c payable June 30 to stockholders of record June 15; Arvin, 40c June 30 to holders June 14; Canadian Westinghouse, 50c July 2 to holders June 15; Capital Records, 15c July 1 to holders June 15; Decca Records, 17 1/2c June 30 to holders June 21.
HEARINGS ON UHF problems by communications subcommittee of Senate Commerce Committee are now scheduled to begin at 1:30 p.m., June 15, in Room G-16, Capitol, then continue 9:30 a.m.-5 p.m., June 16-18. Final schedule of appearances won't be announced until shortly before hearing, but this is tentative unofficial list, arranged in anticipated order of appearance:

Raymond F. Kohn, WFMMZ-TV, Allentown, Pa. (uhf grantee); Melvin Goldberg, UHF Industry Coordinating Committee; Noran E. Kursta, WFTL-TV, Ft. Lauderdale, Fla. (uhf); Farris Rahall, WFEA, Manchester, N. H. (AM); Thomas Chimason, WVED-TV, Hampton-Norfolk, Va. (uhf); Hubert Taft, WKRC-TV, Cincinnati (vhf); Gordon Brown, WSAY, Rochester, N. Y. (AM); attorney Joseph Brenner, Beverly Hills, Cal.; attorney Franklin C. Salisbury, Washington; engineer Raymond Wilmot, Washington: Leon Green, KNUZ-TV, Houston (uhf); Philip Merriman, WICC-TV, Bridgeport (uhf); attorney J. Howard McGrath, exec. v.p., Edward Lamb Enterprises (vhf WICU, Erie & uhf CP WMAC-TV, Massillon, Ohio); Harold Fellows & A. Prose Walker, NARTB; Irvin M. Kipnes, Beachview Broadcasting Corp., Norfolk (vhf applicant); George Storer, Storer Stations (vhf); attorney Ted Pierson, vhf organization; engineer A. Earl Cullum, Dallas; Ernest L. Jahnecke Jr., ABC; Jack Van Volkenburg, CBS; John Essau, KTVQ, Oklahoma City (uhf); Joseph Heffernan, NBC.

Note: In summarizing written statements inserted in hearing record May 19 (Vol. 10:21), we erroneously identified Gerald J. Morey with WNHC-TV, New Haven. The comments actually were submitted by Morey in behalf of grantee WNLC-TV, New London, Conn.

Knoxville's WTSK-TV (Ch. 26), which began operating last Oct., within 2 weeks of WATE (Ch. 6), originally known as WROL-TV, has been sold for $300,000 to South Central Broadcasting Co., operator of radio WIKY, Evansville, Ind. and onetime applicant for Ch. 7 there. Purchasers acquire plant that includes 1-kw Federal transmitter, operating with CBS & DuMont network shows on 3-11 p.m. schedule at $250 rate. It's managed by Harold E. Rothrock, onetime Washington consulting engineer, with Guy Smith as sales mgr. They will remain under ownership, headed by John A. Engelbrecht, pres. of Evansville firm; George P. Stolz, v.p. & chief engineer; Leifshman D. Groves, secy-treas. Evansville radio men are understood to have been considerably impressed with uhf in their own area, where WFIE, Evansville (Ch. 62) has been operating since last Nov. and WEHT (Ch. 50), across river in Henderson, Ky., has been on air since Sept. Knoxville station is 80% owned by oilman W. R. Tuley, 10% each by No. Carolina broadcasters Harold Thoms and J. Horton Doughton. It has been operating in the red, reportedly has lost about $100,000 to date, but Rothrock states it's just about at break-even point now. He says area's TV sets are about 95% vhf-uhf combinations or conversions since both uhf & vhf got started about same time.

Two new TV applications—for Ch. 10 in Parma, Mich. near Jackson—were filed with FCC this week, making total of 230 now pending (32 uhf). The applications were by uhf WILS-TV & WILS, Lansing, together with Lansing auto dealer Edward E. Wilson, and by WKHM, Jackson, Mich. (replacing earlier application by same interests). [For further details see TV Addenda 18-T herewith; for complete listings of all grants, new applications, dismissals, hearings, etc., see TV Factbook No. 18, with Addenda to date.]

Next stations due for interconnection to AT&T network circuits: WDBO-TV, Orlando, Fla., June 6; KTTS-TV & KTVF, Springfield, Mo., June 19.

Will the Govt. get authority to enter broadcasting business in competition with private TV-radio stations? A little-noted bill, which has already passed through Senate and is now pending House action, could have that effect—though that certainly isn’t its intent. S-3401, introduced by Sen. Saltonstall (R-Mass.) at request of Defense Dept., to permit construction of military-operated TV & radio stations overseas and at isolated military bases in U.S. (Vol. 10:19), is so worded that it doesn’t bar armed forces from operating TV-radio outlets in areas where private U.S. stations already exist. Though intent of bill is to provide information and entertainment for American troops, some observers point out the measure could be opening wedge for competitive govt.-operated outlets. They add that this loophole could easily be closed by amendment stipulating that Defense Dept. is not authorized to establish TV or radio services in U.S. areas where reception is already available and that govt. stations shall go off air when private stations begin in area. Hearings on bill by House Armed Services subcommittee will probably be held June 16-18. Pentagon spokesmen say they have tentative plans for 12 TV stations overseas, none in U. S.

Bill to ban transmission of gambling information (S-3542), introduced June 2 by Chairman Bricker (R-Ohio) of Senate Commerce Committee, is scheduled for committee hearing June 7-8. First to testify will be Justice Dept. and FCC. Measure would prohibit TV-radio stations from broadcasting "any gambling information related to horse racing before the start of any race on the day it is scheduled to be run, or during the one-hour period immediately following the finish of such race or before the start of the next race at that track, whichever period is longer." Bill wouldn't preclude station from carrying race as a special event, but would limit stations to one such race a day.

"Eurovision"—8-nation European TV network—is scheduled to begin Sun., June 6 with address from Rome by Pope Pius XII. Hookup will continue until July 4 with pickups of special events and shows from Britain, France, Belgium, Netherlands, Denmark, West Germany, Switzerland and Italy. Main event will be World Soccer Cup matches in Switzerland. The 4000-mi. network will utilize 41 TV transmitters and 80 relay stations, with specially designed converters to make possible interchange of programs between Britain's 405-line system, France's 819 & 441 lines and rest of Europe's 625.

FCC approved sale of radio WSAU, Wausau, Wis. (250 watts on 1450 kc, NBC), for $170,000 to Wisconsin Valley Television Corp., granted CP for Ch. 7 in Wausau last May 13. Sale was part of agreement whereby WSAU dropped application for Ch. 7, and Charles Lemke (49% owner) got option to buy up to 25% of Valley TV, with John R. Tomek (51%) to get $15,000 retainer as consultant. Other Ch. 7 applicant, Congressman Alvin E. O'Konski, earlier shifted to Ch. 16 and got CP for WOSA-TV last Feb.

La Crosse (Wis.) Tribune, having sold its radio WKTY in order to acquire interest in WKBH Television Inc., grantee of upcoming WKBH (Ch. 8), became 41% stockholder this week in transfer approved by FCC, Comar, Hennock (usually opposed to newspaper ownership) dissenting. WKBH Inc. holds 40%; Howard Dahl, who controls radio WKBH, 9% personally; Charles D. Gelatt, Allan Schilling, Albert Funk Jr., RUNGE Sletten, ORVAL Nelson, 2% each. Shares outstanding total 1000, sold at $100 per share.

NARTB's TV and radio boards meet week of June 21 at Washington's Mayflower Hotel to elect chairman, review recent Chicago convention, select site for 1955 convention, go over current budget, discuss pending legislation. Committees meet June 21 and 22, TV board June 23, radio board June 24, full board June 25.
CORPUS CHRISTI & ORLANDO OPENED UP: Two new TV markets -- one vhf, one uhf -- came into being this week with first tests of KVDO-TV, Corpus Christi, Tex., and WDBO-TV, Orlando, Fla. With imminent deletion of Kansas City's share-time WHB-TV, which is being amalgamated with KMBC-TV (see p. 12), that brings stations on the air to 385. There was also a report, not yet confirmable, that WTAC-TV, Flint, Mich. (Ch. 16), which quit April 20 for economic reasons and reverted to CP status (Vol. 10:19), may soon be sold and revived. This week's starters:

WDBO-TV, Orlando, Fla. (Ch. 6) starts programming June 15 as primary interconnected CBS outlet, having begun tests June 5. Nearest other station is WSUN-TV, St. Petersburg (Ch. 38), 94 mi. distant. Orlando is 124 mi. south of Jacksonville, 150 mi. north of Palm Beach, other nearest TV cities. Station uses 35-kw GE transmitter, 500-ft. Stainless tower, 6-bay GE antenna. Harold P. Danforth, pres. & gen. mgr., and James Yarborough, v.p. & chief engineer, are principal owners, each 18.4%. Walter Sickle is program and John Thorwald sales mgr. Base rate is $200, rep Blair.

KVDO-TV, Corpus Christi, Tex. (Ch. 22) began testing June 9, goes commercial June 20, possibly with ABC affiliation. Gen. mgr. L. W. Smith, stating city has been largest in U.S. still without own TV (pop. 139,000), claims coverage area embracing 295,000 with 19,000 TV sets already owned and 8000 already converted. Nearest cities with TV are San Antonio, 130 mi., and Harlingen, 111 mi. Transmitter is RCA, tower is 326-ft. Emsco. It has no AM adjunct, is owned by 10 local stockholders. Eugene Tinsley is commercial mgr., Edward F. Joslyn program director, Nestor Cuesta chief engineer. Base rate is $150. Rep is Adam Young.

AFTER THE SENATE UHF HEARINGS—WHAT? TV industry's most explosive issue comes to the fore again Tue., June 15 when the communications subcommittee under Sen. Potter (R-Mich.) convenes for 3½ more days of hearings on uhf problems.

The uhf stations already have outlined their case (Vol. 10:21), and more will come to the stand next week to reinforce previous testimony. In hearings' opening week, the Senators were impressed by uhf's "matter-of-life-or-death" presentation.

Uhf stations and networks found themselves on the defensive -- faced with unexpected proposals, made before U.S. Senators, for a new freeze, an all-uhf allocation, strict network regulation, and a share-the-networks program.

Against this background, what kind of action can be expected from Congress?

Legislatively, there's almost no chance of any action this session -- except possible passage of a measure to kill or reduce excise taxes on uhf-equipped TV sets. Sen. Johnson (D-Colo.) and the Senate Finance Committee breathed new life into the proposal this week after it had been written off as virtually dead (Vol. 10:22).

Swayed by pleas of Johnson and of Potter subcommittee -- which unanimously endorsed it -- Finance Committee agreed to consider excise tax removal proposal as an amendment to next tax bill it considers, which happens to be a bill relating to...
estate taxes. Johnson originally intended to tack his amendment onto general tax revision bill, but Committee then mixed all excise tax changes. Insiders now feel the amendment has good chance if industry keeps on its toes, makes wishes known to lawmakers. Finance Committee is expected to get to the bill in about 2 weeks.

As for drastic or controversial TV legislation, none seems to be in prospect. With Administration's "must" program lagging, and legislators raring to go home for politicking, it's hardly likely that any "uhf bills" could be pushed through in the month or two remaining -- or that Senate Interstate Commerce Committee will even try.

The Senators are much more likely to toss problem back to the FCC -- with or without specific recommendations. Actually, most of the proposals made by the uhf telecasters are within province of Commission, wouldn't require any new legislation.

But a recommendation, a resolution, even a "suggestion" from the Senators can have a powerfully persuasive influence on FCC. Only last March, for example, FCC called off its "filing fee" proposal at request of Commerce Committee (Vol. 10:13).

Most of the uhf people realize they don't have much chance of getting new laws passed soon. They're aiming for strong action by the Committee -- possibly a resolution by full Senate -- telling FCC to take specific action to help uhf pronto.

Before subcommittee deliberates on uhf problem, it will hear commissioners again -- either in closed or open session -- to get their views on all proposals advanced during hearings. Open hearings may continue after next week, if subcommittee doesn't get to hear all 26 witnesses on list (p. 12) or if many more ask to be heard.

*   *   *

About 150 vhf stations have now lined up behind united presentation for the hearing, coordinated by Washington attorney Ted Pierson. Though the only witness now signed up to represent the vhf group is Pierson himself, the "organization" expects to present 5 or more witnesses from broadcasting industry.

"To tell the whole story of TV," vhf group hopes to put on the stand representatives of pre-freeze telecasters, vhf grantees and applicants -- giving their own "case histories" (as uhf witnesses did). It will also introduce written statements from large number of vhf operators.

Outside of the vhf "organization" structure, there will be testimony by vhf owners George Storer, Hulbert Taft Jr. (WKRC-TV, Cincinnati) and 2 vhf applicants.

*   *   *

At least part of networks' rebuttal will be aimed at showing that the 127 uhf stations aren't being discriminated against, affiliation-wise. Without attempting to determine how much network programming is carried on uhf stations (FCC did that in its presentation to the subcommittee), we checked latest rate cards of the four networks, found that NBC lists 3 uhf stations in its "basic" affiliate group -- Norfolk's WVEC-TV, Portland's KPTV, Youngstown's WFMJ-TV -- and 43 in "optional" category; CBS lists no uhf outlets in "basic required" group, 13 in "optional" group and 12 as "supplementary" though network says it feeds programs to 51 uhf stations in 47 markets; ABC has 67 uhf, 42 of them "basic" or primary; DuMont has 73, broken down into 58 basic, 10 alternate, 5 "available on request."

Indicative of stepped-up behind-the-scenes lobbying by virtually all segments of TV industry was letter sent June 12 by Dr. Allen B. DuMont to every Senator and Congressman. Accompanying a brochure describing new DuMont Tele-centre in New York, to be dedicated June 14, Dr. DuMont's letter said, in part:

"We have invested $5,000,000 [in these studio facilities] with the expectation that we would have the opportunity to use them for the purposes to which they are being dedicated. Under present conditions, however, brought about by the ill-advised use of the radio spectrum, monopolies in TV broadcasting and the distribution of products of industry are being developed. The question of whether we shall be able to use these splendid facilities for their dedicated purpose depends on whether Congress shall take the action necessary this year to establishment of a fully competitive nationwide TV system..."
WEEK'S CPs ALL VHF, UHFs RARE NOWADAYS: Exceptionally active week at FCC produced 4 CPs and 5 initial decisions -- all vhf. For year to date, there have been 43 vhf grants, 15 uhf. There are now 192 vhf applications pending, merely 31 uhf.

All this week's grants were produced by merger-dropout process, but 2 of the initial decisions went the full route -- with hearing examiners actually forced to make a choice among contestants. This week's grants:

Phoenix, Ariz., Arizona TV Co., Ch. 3; Milwaukee, Wis., Milwaukee Area Telecasting Co., Ch. 12; Minneapolis, KEYD, Ch. 9; Jefferson City, Mo., KWOS, Ch. 13.

The initial decisions: Sacramento, Cal., KCRA, Ch. 3; Daytona Beach, Fla., WMFJ, Ch. 2; Shreveport, La., Shreveport TV Co., Ch. 12; Henderson, Nev., Southwest Publishing Co., Ch. 2; Tulsa, Okla., Central Plains Enterprises, Ch. 2. One uhf CP was returned to FCC -- by WJTN-TV, Jamestown, N.Y. (Ch. 58).

In picking KCRA over KXOA for Sacramento's Ch. 3, examiner Thomas Donahue concluded: "We believe that KCRA's showing of close and unbroken identity with the Sacramento community, plus its record of improvement of technical facilities, be-tokens an insurance of a stable, continuous and progressive service that [KXOA] does not match and that consideration outweighs [KXOA's] showing of superior management."

Shreveport case was 3-way fight between applicants who had joined together in novel Interim TV Corp. and got CP for KSLA, operating it jointly until FCC produces final decision picking one over other two.

Examiner Fanney Litvin chose Shreveport TV Co., headed by theatreman Don George, over KRMD and KCIJ. She favored Shreveport TV over KCIJ principally because of greater local ownership and community activities, over KRMD largely for its showing of "superiority in the matter of proposed effectuation of programming based on better planned facilities and more definite staff proposals." And she found Shreveport TV superior to other two because it has no TV-radio interests at all.

New Phoenix Ch. 3 grantee, 40% owned by ex-Sen. Ernest W. McFarland and 10% by Ed Cooper, ex-Senate aide, now TV director for Motion Picture Assn. of America, aims to be on air by winter's holiday season, according to Cooper.

That FCC will have to work to make its final decisions stick when big stakes are involved, was illustrated by lengthy petition for rehearing filed this week by Butterfield Theatres. It had been denied, along with WFDF, when Commission picked WJR, Detroit, for Ch. 12 in Flint, Mich. (Vol. 10:20).

Pleased with progress in issuing CPs, Commission was also happy to report granting of first TV licenses since end of freeze -- to WBZ-TV, Boston, and KCOP, Los Angeles. And with designation of San Francisco's Ch. 2 for hearing to start on July 9, it has mere 6 cities to be scheduled: Toledo, Orlando (both tied up in Lamb case, see p. 5), Washington, Los Angeles, Boston, Parma, Mich.

COMMUNITY TV HOLDS UP DESPITE NEW STATIONS: Up-to-date statistics on community TV antenna systems show more clearly than ever that pattern of U.S. telecasting would have to change radically to produce an appreciable effect on the systems.

Meeting for annual convention in New York's Park Sheraton next week, June 14-16, members of National Community TV Assn. assert that their industry-within-an-industry is in pink of health.

Returns on our questionnaires to operators, which we sent out in preparation for fall edition of our TV Factbook, support that attitude. Returns aren't yet complete, but it looks as if number of systems increased from 300 to 325-350. Equally significant, average system increased its subscribers from 535 to 728 -- a healthy 36% increase in mere 6 months. Year ago, average was 432; two years ago, 199.

Curiously, we get almost no reports of systems folding up. One went bankrupt in Astoria, Ore., was taken over by others, is still going. In Florence, S.C. and Dover, O., systems did close down -- but we know of no others.

Community operators had feared that end of freeze, bringing great increase in new stations and extending coverage of old through power-height increases, would provide almost everyone with plenitude of free signals -- dooming community systems.

New stations have produced trouble in some areas, no doubt of it, but at
same time they produced new fringe areas, creating need for new community systems.

Unless economics of station operation change, very few really small-town TV stations will be added in the foreseeable future. Most of the stations now being built will not bring service to brand new areas. Same goes for applications pending, when they're finally granted and stations are built.

FCC recently submitted figures during Senate hearing (Vol. 10:21), showing prospects for station growth. There are 237 communities with stations now; 89 more cities have CPs (78 vhf, 116 uhf), but many of these won't be built. Furthermore, among the 223 applications pending, only 25 additional cities are represented. Vast majority of pending applications are tied up in hearings for vhf in major cities.

Boosters and/or satellites, toward which FCC now appears favorably disposed (Vol. 10:23), could pose serious threat to community operators. Their economics remain to be explored, however, and it's possible that community systems would offer more than can be offered economically through the repeaters.

Community systems aren't necessarily hurt by presence of several free signals. For example, Port Jervis, N.Y. is reported to get 3 satisfactory free signals, yet a 7-channel system is being installed there and customers are reportedly signing up at a good clip. Another case is Harrisburg, Pa., where system was operating before stations got going. When 2 stations began, antenna operator offered to provide subscribers with their signals for $18 connection fee, and many accepted.

Prospect of new stations is often more harmful to systems than their existence. There are many instances where customers held off, waiting for stations to be built, then hooked on to system for the extra signals it offered.

ONE-FOURTH OF TV REVENUE FROM SUNDRIES: That $600,000,000 figure we gave you last week as our prediction of 1954 TV time sales, projected from FCC's report showing 1953 total network-station revenues of $430,800,000 (Vol. 10:30), should have been designated as prospective revenue from all sources -- not from time sales alone. We erred in our interpretation; instead of stating that $600,000,000 would be the time sales this year, we should have made clear the figure represents total revenues.

It will come as a surprise to most people, in and out of the industry, that more than one-fourth of TV's revenues derive from the sale of services other than time. There is no breakdown as yet of 1953's $430,800,000 because the FCC report was preliminary -- hurried along for the Senate uhf hearing. However, breakdowns for the preceding 4 years are available from FCC, and they show:

<table>
<thead>
<tr>
<th>Year</th>
<th>Total Broadcast Revenue</th>
<th>Net Revenues From Time Sales*</th>
<th>Incidental Revenues</th>
</tr>
</thead>
<tbody>
<tr>
<td>1952</td>
<td>$324,200,000</td>
<td>$236,500,000</td>
<td>$87,700,000</td>
</tr>
<tr>
<td>1951</td>
<td>235,700,000</td>
<td>175,300,000</td>
<td>60,400,000</td>
</tr>
<tr>
<td>1950</td>
<td>105,900,000</td>
<td>76,300,000</td>
<td>29,600,000</td>
</tr>
<tr>
<td>1949</td>
<td>34,300,000</td>
<td>23,400,000</td>
<td>10,900,000</td>
</tr>
</tbody>
</table>

* Amounts actually accruing to networks & stations after commissions, rebates, etc.

Thus between one-fourth and one-third of TV's revenues derive from sundries such as program, talent, production and other so-called "incidentals." This surprising ratio, say the FCC experts, is peculiar to TV. In radio, for example, it's only around 10%; in 1952, last year for which FCC radio figures are available, incidentals represented approximately $48,000,000 out of radio's gross revenues of $469,700,000.

Our guesstimate of $600,000,000 as the minimum 1954 take by TV stations and networks combined still stands, however -- for the same reasons stated last week.

So does figure of $800,000,000 or more representing gross 1954 expenditures by advertisers on the TV medium as a whole. This includes not only cost of time, but the amount of money remaining with advertising agencies, program producers, talent sources, etc. -- in a word, that which doesn't find its way into the TV operators' tills. For 1953, total advertisers' expenditures on TV were $688,700,000, according to the calculation by McCann-Erickson for Printers' Ink (TV Factbook No. 18, p. 370).
Personal Notes: Robert H. Hinckley, ABC Washington v.p., returned to his alma mater this week, Brigham Young U., Provo, Utah, to present "Edwin Smith Hinckley Scholarship Fund," named for his father who was once professor of geology there, providing income from $25,000 to students showing preference for communications ... Robert W. Sarnoff, NBC exec. v.p., left for Europe with Mrs. Sarnoff June 10 for month's business-vacation trip ... Howard J. Schellenberg Jr. resigned June 1 from law firm of Haley, Doty & Schellenberg, has joined with James P. O'Laughlin, recently legal officer with Marine Corps, to set up O'Laughlin & Schellenberg, 1025 Connecticut Ave., Washington (phone, Republic 7-1522) ... Art King becomes editor of Television Age July 1, succeeded as managing editor of Broadcasting-Telecasting by senior editor Edwin James; among other changes at latter, senior assoc. editor Bruce Robertson goes to Washington from N. Y., west coast mgr. David Glickman from Hollywood; asst. editor David Berlyn goes to N. Y. ... Nat Perrin, producer of My Friend Irma, named coordinator of all CBS-TV west coast color program plans ... Wm. R. McAndrew, NBC news & special events mgr., represents all networks at North Atlantic Treaty Organization information conference in Paris, June 15 ... Sidney F. Allen promoted to sales mg. MBS, eastern div. ... Bill Whiting, ex-sales mgr. of KTVV, Los Angeles, placed in charge of new offices of Official Films Inc. at 275 So. Beverly Dr., Beverly Hills, Cal. ... E. F. Detwiler will be commercial mgr. of upcoming WPBN-TV, Traverse City, Mich. (Ch. 7) as well as of radio WTCM, with Wm. H. Kiker, chief engineer for both TV & radio ... Mike Thompson named commercial mgr. of WTVD, Durham (Ch. 11) due by fall; Ernie Grupe will be program mgr. & Henry Cronin chief engineer ... J. A. Murphy named gen. mgr. of KMO-TV, Tacoma, Wash., succeeding Jerry Gheen ... Richard Wolfson, legal director of WTJY, Miami, married June 5 to Elaine Reinherz, of Providence, R. I. ... Robert H. Hill, ex-KABC-TV, Los Angeles, becomes gen. sales mgr., KVVG, Tulare, Cal. ... E. W. Dallier promoted to sales mgr. of KTVH, Hutchinson, Kan. ... Thomas J. Maloney, ex-WBUX-TV, Buffalo, named program mgr. of forthcoming WKBX, La Crosse, Wis. (Ch. 8) ... Jack Keasler now commercial mgr. at KRGV-TV, Weslaco, Tex., succeeding Allan Page ... Hal Dawson, ex-gen. sales mgr., Adler Communications Labs, onetime Paramount and Eagle-Lion adv. executive, replaces Mel Gold as director of TV, advertising & promotion, National Screen Service Corp. ... Bette Doolittle, asst. to NARTB director of code affairs Edward H. Bronson, guest of honor at cocktail party in National Press Club June 10 to celebrate her election as eastern regional v.p., American Women in Radio & TV ... Robert Wald named exec. director of Teleprograms Inc. and producer of American Inventory (NBC-TV), replacing Wm. Hodapp, resigned ... Bert Harkins, ex-MBS facilities mgr., joins Voice of America under new director Jack Poppele ... Harold C. Lang elected assistant treasurer of CBS Inc. ... Sander Heyman, ex-Schenley, to Los Angeles office of Roy S. Durstine Inc. to handle west coast TV-radio ... Lewis S. Wechsler, ex-Emil Mogul TV-radio director, joins Donoho & Co.; Barry Blaur, ex-Huber Hoge, joins Mogul as traveling TV-radio timebuyer ... Tom Slater has resigned as TV-radio v.p., Ruthrauff & Ryan ... George Wolf resigns as TV-radio director, Geyer Adv.

Robert H. Swintz, 59, business mgr. and public relations director of South Bend Tribune's WSBT-TV & WSBT, and for 20 years mgr. of WSBT, died June 5 after long siege of leukemia. His widow and 2 daughters survive.

Albert L. Warner, NBC newscaster recently residing in Tustin for his health, awarded honorary Master of Arts degree by his alma mater Amherst College June 10.

FCC's INQUIRY into alleged past communist affiliations of Edward Lamb, owner of WICU, Erie, Pa. and other stations (Vol. 10:23), became even more feverish this week. After some 4 hours of argument before District of Columbia district court Judge Edward Tamm June 11, the judge dismissed Lamb's motion to enjoin FCC from going ahead with hearing scheduled for July 28—after Lamb attorney Russell M. Brown had charged that FCC would give Lamb "no fair trial at all" and that original allegations against Lamb were pushed by Conn. Doerfer who was activated by "ill will" and "base motives." Lamb attorneys said they'd appeal.

Judge Tamm based his ruling on fact that FCC is giving Lamb a hearing, has set definite date for it, and that it's established procedure for parties to "exhaust administrative remedies" before going to court. He also said an injunction would do little good in stopping "irreparable injury" to Lamb because publicity is already widespread. Commission obviously saved itself rough time by acting last week in setting date for Lamb hearing, because judge said he would have been impressed by Lamb's argument if no hearing had been scheduled.

Allegations of "bias and prejudice" levied by Brown against FCC were ruled out by Judge Tamm after Brown redited following:

(1) That Lamb had gone to see Chairman Hyde who said he realized charges against Lamb were "unfair" but that FCC was "helpless" to do anything because Doerfer insisted on taking case up. Brown said Hyde told Lamb he should see Doerfer who was "key to the problem."

(2) That Lamb then went to Conn. Sterling who also advised him to see Doerfer.

(3) That he finally went to Doerfer who stated he wanted to know about Lamb's beliefs and opinions. "Lamb told him he was a Democrat and an Episcopalian," Brown said, "and that he had once been a Republican." They talked about the New Deal and its philosophies and the fact that Lamb, as an attorney, had represented unions, Brown stated. He added that, as Lamb left, Doerfer said: "It would be better if you were still a Republican."

Lamb took stand briefly to testify about injury he's suffering—how advertisers shy away from one accused of communist leanings; how he had bought land and equipment for Massillon TV station, which he said is unused and deprecating; how his family is suffering social injury, etc. He was stopped from testifying about his conversations with commissioners.

Hyde was subpoenaed by Lamb's counsel, sat in court most of argument, was never called to stand.

Brown's charges against Doerfer guarantee him some close questioning when he goes before Senate Commerce Committee in next week or two for hearing on last week's appointment to new 7-year term with FCC (Vol. 10:23).

The no-holds-barred defense conducted by Lamb counsel J. Howard McGrath, former Attorney General, and Brown, presages fierce contest at FCC July 28 hearing.

Frank Stanton, CBS pres., wins Art Directors Club Medal "for the inspiration and encouragement given to the art directors of CBS Radio and CBS Television resulting in high and consistent standard of excellence in the visual appearance of their advertising and TV commercials."

Jacob A. Evans, NBC adv. & promotion director, is author of Selling and Promoting Radio and Television (384 p.) to be published June 28 by Printers' Ink Books of N. Y., with foreword by ex-NBC pres. Niles Trammell. Honorary Doctor of Laws degrees bestowed by Seton Hall U., So. Orange, N. J., on ABC's Ed & Pegeen Fitzgerald, husband-&-wife team, for "fostering understanding among peoples and for their Christian virtues."
Telecasting Notes: Republic Pictures is preparing for release to TV 81 Roy Rogers and some 60 Gene Autry films produced between 1937-52 as result of San Francisco appeals court rulings last week end. Court overturned long-standing lower court injunction preventing Republic from releasing Rogers films and upheld denial of injunction in similar suit brought by Autry (Vol. 7:42-44 & 8:20). Films will be released by Republic subsidiary Hollywood TV Service. Republic pres. Herbert J. Yates told stockholders meeting April 9 that the Rogers and Autry films are worth $3-4,000,000 as TV material (Vol. 10:16). TV film production overseas by U. S. producers is expanding, despite warnings by AFL Hollywood Film Council, says June 9 Variety: "At last count, there were 6 series currently on the air that are still producing in Europe [and] another 16 shows in production overseas that are definitely scheduled for fall release, most of them through major distributors". Doing it the hard way: Earle Ludgin & Co. adv. agency's v.p. John Baxter and TV director Hooper White made special trek to Europe to film series of 1½-min. commercials for Helene Curtis Industries (Spray Net), with spots shot against famous backgrounds in London, Paris, Rome...Columbia Pictures, now devoting 2 of its Hollywood stages exclusively to TV production by its subsidiary Screen Gems, is drawing up plans for 2 or 3 more stages, has dropped negotiations to lease studios from Motion Picture Center...MCA, owner of TV film producing subsidiary Revue Productions, reported signing 5-year studio rental deal with Republic Pictures...COMPO (Council of Motion Picture Organizations) reported debating sponsorship of 4 TV shows a year to plug the movies, despite fact that MPAA's projected ABC-TV filmed show never got off the ground after more than a year's planning and negotiation...Famed playwrights Howard Lindsay and Russel Crouse signed by CBS-TV to create series of dramas and comedies by midwinter—first 3 expected to be auditioned within 90 days; CBS won't confirm that at least one will be in color...Margaret Truman's TV-radio contract with NBC has been renewed for another year...DuMont's $5,000,000 "Tele-centre" at 205 E. 67th St., N. Y. is to be dedicated June 14 by Mayor Wagner, event to be televised over network 12-12:30 p.m. Building has 5 major studios, one of them devoted to color, and 5 control rooms. Ceremonies will include demonstration of color film scanner and 19-in. color sets...WGN-TV, Chicago, with antenna now atop Tribune Tower, has contracted for new tower site on 41-story Prudential Insurance Bldg., due for completion next year; antenna will be 925 ft. above ground, transmitter quarters will occupy 3000 ft. of space...WJBK-TV, Detroit, with WJBR (Storer) contracts for own new 3-story studio building across from huge New Center Bldg., on which construction begins in few weeks.

Music Corp. of America enters theatre-TV field through deal with Box Office TV Inc., under which MCA acts as sales representative for BOTV in soliciting closed-circuit theatre-TV business meetings. BOTV in turn, has agreed to hire only MCA talent for its theatre-TV shows unless client specifically requests a performer not in MCA stable. Toeup is reminiscent of similar deal made last year between Wm. Morris Agency and Cappel, MacDonald & Co. for production of theatre-TV shows (Vol. 9:23)—but Cappel, MacDonald never became active in theatre-TV.

Subscription TV holds no charms for 20th Century-Fox, pres. Spyros Skouras told Variety this week. He said he's interested in theatres and they'd be hurt by pay-as-you-look which, he stated, is not attractive economically anyway. He also scotched rumor 20th Century is seeking to buy Matthew Fox's newly-acquired interest in Skiatron's fee-TV developments.

FEDERAL has delivered its first 12-kw uhf transmitter to WNAO-TV, Raleigh, N. C. (Ch. 28), which went on air last July with Federal 1-kw. New transmitter is now in test operation at Raleigh. Incorporating Eimac klystron tube, the 12-kw transmitters are now being promised by Federal for 30-day delivery.

Mere trickle of transmitter shipments is now being reported by the manufacturers, despite considerable number of orders for associated equipment (particularly film scanners) they say they signed at recent NARTB convention. RCA shipped 10-kw transmitter and associated equipment June 8 to upcoming WBRZ, Baton Rouge, La. (Ch. 2), due on air in Sept., or earlier. On June 9 it shipped 5-kw transmitter to WABI-TV, Bangor, Me. (Ch. 5) to replace original 500-watter. Only GE shipment reported this week was 12-kw transmitter June 9 to replace 1-kw of WFEF, Evansville, Ind. (Ch. 62).

In our continuing survey of upcoming new stations, these were the reports received this week:

KCKT, Great Bend, Kan. (Ch. 2), began construction, May 18, has GE equipment ordered for July 1 delivery, reports pres. E. C. Wedell. It plans test patterns about Sept. 15, programming Sept. 26. It's 80-mi. from Hutchison, 91 mi. from Wichita. Rep not yet chosen.

WLAC-TV, Nashville (Ch. 5), now plans July 1 test patterns, July 15 program tests, full commercial operation as basic CBS on Aug. 6, reports gen. mgr. T. B. Baker Jr. Under setup of new WLAC-TV Inc. recently approved by FCC, Baker owns 25%, Al Beaman 25%, Casualty Insurance Co. of Tennessee 50%. It will use RCA 10-kw transmitter and 1000-ft. Ideco guyed tower with RCA 12-bay antenna. Base rate will be $550. Rep will be Katz.

WCNY-TV, Carthage, N. Y. (Ch. 7), with construction already underway, this month starts work on 500-ft. guyed tower and 12-bay GE antenna, plans programming between Aug. 15 & Sept. 25, writes asst. mgr. James W. Higgins. It expects to ask for July 16 delivery of 20-kw GE transmitter. Owner Watertown Times gave up Ch. 48 CP in Watertown for proposed WWNY-TV (Vol. 10:10), is building WCNY-TV at Champion Rd. site, 6 mi. west of Carthage and 9 mi. east of Watertown. It will carry CBS & ABC. Base hour will be $150. Weed will be rep.

WBTW, Florence, S. C. (Ch. 8), with Sept. 15 test pattern target, has begun $500,000 construction job, which includes new studio-office building with 10,000-sq. ft. of floor space, reports exec. v.p. Charles H. Crutchfield. Kimco 750-ft. tower and RCA 12-bay superturnstile antenna are due for completion this month, and RCA 50-kw transmitter with associated equipment will be installed first week in Aug. Owner Jefferson Standard Bestg. Co. also operates WBTV, Charlotte, and owns 16.5% of WFMX-TV, Greensboro, N. C. WBTW plans Sept. 26 commercial start as basic CBS, will also carry WBTB derivations. Rep will be CBS-TV Spot Sales.

Fourteen newsmen went on strike June 12 at CBS's WBBM-TV-AM, Chicago, seeking raise in starting pay from $82.50 to $110 a week. The newsmen, members of Radio Writers Guild of America, also have a demand, rejected by CBS, that writers receive credit mention by newsmen at end of each news program.

CBS & IBEW have agreed on new 2-year contract from May 1 covering about 1100 TV-radio engineers at Network and owned stations; increases provide $162.50 weekly for journeymen (up from $150), $190 for technical directors and master control engineers (up from $166.50).
Network Accounts: Derby Foods (Peter Pan peanut butter) signs as first partic. sponsor of ABC-TV's widely-heralded Disneyland starting Oct. 27, Wed. 8:30-9:30 p.m., thru Needham, Louis & Brobr; purchase was for 30 min. alt. weeks on unique program of Disney characters, combining live and film segments... Firestone assured uninterrupted continuance of Voice of Firestone simulcasts Mon. 8:30-9 p.m. by accepting ABC's offer of 3664-seat Paramount Theatre (Vol. 10:23) only week before it was to leave NBC; it goes on ABC June 14, will originate from theatre starting June 21... Teni switches Art Linkletter's People Are Funny from CBS-TV to NBC-TV starting Sept. 19, Sun. 7-7:30 p.m., thru Leo Burnett Co., will alternate with Mars Co. (candy) in radio sponsorship on NBC starting Oct. 5, Tue. 8-8:30 p.m.... Wander Co. (Ovaltime) and General Mills buy Captain Midnight on CBS-TV starting Sept. 4, Sat. 11-11:30 a.m., former thru Grant Adv., latter thru Dancer-Fitzgerald-Sample... Lever Bros. to sponsor Uncle Johnny Coons on CBS-TV starting Sept. 4, Sat. 1:30-2 p.m., thru J. Walter Thompson... A. E. Staley Co., Chicago (Sta-Flo corn starch) to sponsor Tue. & Thu. simulcast of Don McNeill's Breakfast Club on ABC starting July 29, Mon.-thru-Fri. 9-10 a.m., thru Ruthrauff & Ryan... International Shoe Co., St. Louis (Poll Parrot shoes) buys seven 15-min. segments of Howdy Doody on NBC-TV starting Aug. 6, alt. Fri. 5:45-6 p.m., thru Henri, Hurst & McDonald, Chicago... Reardon Co., St. Louis (Draxem paint compound) buys 14 partic. on NBC-TV's 7-9 a.m. Today starting Sept. 8, thru Krupnick & Assoc.; John Oster Mfg. Co., Racine, Wis. (small appliances), 15 partic. starting Sept. 28, thru Henri, Hurst & McDonald, Chicago; Ladies Home Journal, one partic. June 30, thru BBDO... U. S. Shoe Corp. (Red Cross shoes) buys 9 partic. on NBC-TV's Home starting Sept. 20, Mon.-thru-Fri. 11 a.m.-noon, thru Stockton, West, Burkart Inc., Cincinnati... Schick, Nestle Co. & Shaeffer Pen Co., sponsors of Jackie Gleason Show, also sponsor Stage Show, its summer replacement, on CBS-TV starting July 3, Sat. 8-9 p.m.... Chesterfields sponsors TV's Top Tunes as summer replacement for Perry Como Show on CBS-TV starting June 28, Mon. 7:45-8 p.m., thru Cunningham & Walsh... Gillette, for 5th straight year, to sponsor All-Star baseball game on NBC-TV, Tue. July 13 starting at 1:15 p.m., thru Maxon Inc.

Hugh M. Rogers Jr., 37, TV production director of BBDO, one time CBS producer-director, died June 10 at Norwalk (Conn.) General Hospital. During the 1952 presidential campaign, he handled programs originating on network TV for Gen. Eisenhower. He leaves his wife, 2 sons and a daughter.

D AYTIME TV viewers "are consistently the best customers," according to elaborate NBC-TV presentation designed to hype daytime sponsorships. Titled Television's Daytime Profile: Buying Habits and Characteristics of the Audience, it was shown to N. Y. newsmen, advertisers and agency folk this week, will be shown in Chicago June 15, Cleveland June 16, Minneapolis June 17, Los Angeles June 22, San Francisco June 24.

Basis of findings is report on 3243 women living in 2871 households in 450 "clusters" or interviewing districts in 185 representative counties. W. R. Simmons & Associates conducted survey last Jan. It defines "daytime home" as one in which housewife personally watched TV during week before survey. Detailed statistics are cited to prove that 2 out of 3 TV homes are daytime homes; that daytime viewers are younger, daytime families larger, have more children, enjoy higher incomes, live in larger & better markets. Daytime viewers are also shown to be "better & bigger" customers for foods, household items, drug & toiletries, cigarettes, home improvements, cars; and they own more home appliances.

NBC-TV's night time, like CBS-TV's, is just about sold out—hence big drive to sell daytime. Despite its popular 7-9 a.m. Today, one of network TV's biggest income producers, NBC-TV still lags behind CBS-TV in daytime program sales. In fact, revised PIB figures this week show NBC's April TV network billings, first reported as surpassing CBS-TV's for first time in 6 months (Vol. 10:21), actually were beaten by its rival. New figures from PIB: CBS-TV, $10,921,640; NBC-TV, $10,798,978.

NBC charged "price cutting" by CBS in announcing June 7 that it has advised its affiliates it also will reprice evening time downward (Vol. 10:22) through a revision of discounts and proposing that the affiliates agree to a 20% reduction in compensation for night network business. Without naming CBS, NBC stated its action was "made unavoidable by a major competitor's act of desperation" and, asserting that competitor had initiated a third price cut in 4 years, referred to it as "deprecating the value of America's basic communications medium." No word yet from ABC & MBS, but it's regarded inevitable that they too will have to revise their rates at about same time—Aug. & Sept. Though neither CBS nor NBC is saying so, radio rate cuts basically are being forced by inroads of TV on night audience and diminution of number of network radio sponsors (for month-by-month PIB figures, see TV Factbook No. 18 and Vol. 10:22).

An operating executive head of projected Television Advertising Bureau (Vol. 10:22) is now being sought, selection committee headed by Roger Clipp, WPIL-TV, Philadelphia, comprising Charles Crutschfield, WBTB, Charlotte; Tom Harker, Storer stations; Wm. Quarton, WMRT-TV, Cedar Rapids; L. H. Rogers, WSAZ-TV, Huntington, W. Va. Meanwhile, 20-man membership committee headed by Norman Gittleson, WJAR-TV, Providence, was named this week. Temporary headquarters of TVAB have been set up in Hotel New Weston, N. Y.

TV is ranked third among media in reporting Army-McCarthy hearings to public in Gallup Poll reported June 11, which records some 65,000,000 persons have read about the inquiry in daily papers while 55,000,000 listened to radio, 45,000,000 watched TV.

Channel shifts & power boosts: WATR-TV, Norfolk, June 4 shifted from Ch. 4 to 3; WFMJ-TV, Youngstown, June 10 moved from Ch. 73 to 21; WFMF-TV, Indianapolis (Ch. 6) June 8 increased power to 100-kw ERP.

Picture Agency Council of America has been formed by 21 news & advertising photo agencies, with offices at 320 Fifth Ave., N. Y.
RCA OFFERS 20 MODELS, LOWERS LEADERS: RCA and Admiral made new TV lines public this week -- but only factor the 2 industry leaders had in common were lower prices on leader models (Admiral's 17-in. at $150, RCA's 17-in. at $160). But whereas Admiral reduced prices generally throughout line, RCA kept its 21-in. series firm at low end, added higher-priced step-ups at top. (For details of new lines, see pp. 9-10.)

While these 2 of the Big 4 often set the pace, it's apparent that industry-wide price pattern, subject of so much speculation in recent weeks, is yet to emerge in detail. Situation may be clarified when Phileco shows its stuff. That can be expected soon, since 6-week strike appeared close to settlement as we went to press.

Full union membership was to vote Sat. June 12 on company's latest proposal -- reportedly 5¢ an hour basic wage increase, plus extension of several fringe benefits sought by union. There was cautious hope strike would be settled over weekend.

Motorola's inclination is to keep prices as firm as possible in new line to be shown distributors July 8 at Chicago's Conrad Hilton Hotel. Spokesman foresaw good chance that discounts to distributors and dealers might be raised, however.

* * * *

RCA line was conscious effort to keep unit sales high, with tempting low-end models, and at the same time permit dealers to "sell up" into a plentiful mix of 20 basic models. Henry G. Baker, v.p. & gen. mgr. of RCA Victor Television Div., said 4 significant factors were involved in planning new line:

(1) New engineering, styling and design developments were accelerated beyond planning stage so as to be available for this line, in accord with its market analyses indicating "added values" and features were needed to maintain high sales volume.

(2) "Strongest merchandising program in history of the company" was adopted, spearheaded by creation of new RCA Victor Television Division (Vol. 10:22), which separates manufacture and sales of TVs from radios and phonographs.

(3) Increased activity in color anticipated this fall, when new 19-in. tube is promised (Vol. 10:22), necessitated "greater consumer values" in black-&-white.

(4) Pricing policy based on more drop-in models, to shorten price gaps from "model to model or from group to group", gives dealers more incentive to "sell up".

New line reflects RCA's optimistic outlook for healthy black-&-white business ahead, said Baker. Echoing such optimism was another RCA official, J.B. Elliott, exec. v.p. for consumer products, who told National Assn. of Electrical Distributors in Atlantic City, also site of RCA's TV showing to field reps, that 1954 TV sales should approximate the nearly 7,000,000 sets sold in 1953.

We gave you highlights of Admiral's new line of 10 basic models last week (Vol.10:23). Following showing to distributors in Chicago, the line got "excellent reception" this week at first of "open houses" for dealers, according to company spokesman. Quantity shipments will start next month, he said.

* * * *

Crosley came out with 21-in. "Super V" table model this week, at $170 list in walnut, $180 in mahogany, $190 in blonde. Like its $140-$160 17-in. precursor (Vol. 10:7), the "Super V 21 Plus" incorporates vertical chassis, 90-degree picture tube, dual-purpose receiving tubes. Leonard F. Cramer, Avco v.p. and TV-radio gen. mgr., said it also occupies 23% less cabinet space than comparable 21-in. table, with up to 60-sq. in. more viewing screen. Tube face is aluminized for more brightness. It contains 15 tubes (compared to 22 on other sets), is somewhat lighter in weight.

Cramer said additional models would be available in Crosley line in fall, indicated that first 21-in. console incorporating features of "Super V" would be introduced then. He promised details later.
Cramer was lavish in praise of 17-in. "Super V", said that in April, first full month of national distribution for "Super V", it accounted for 46% of industry's factory shipments of 17-in. table models. "Super V" sales volume was $8,000,000 in April at retail level, he said. Further, he declared market researchers called on several thousand "Super V" owners recently and reported: (1) In families with incomes of at least $5000 a year, 83% bought it as second set; (2) In families with incomes under $3000, 71% bought it as first set; (3) In 74% of homes where "Super V" was purchased as second set, original receiver was another brand — "shattering the long-accepted principle" that consumers traditionally repeat purchases of same brand.

Capshart-Farnsworth also introduced new TV line this week (details on p. 10).

Retail TV sales in first 4 months set record for such period, totaling some 2,152,515, compared to 2,100,620 in first 4 months of 1953, according to report by RETMA this week. April sales were also highest on record for that month, totaling 371,720, compared to 319,721 in April 1953. Retail sales of radios, excluding auto, totaled 1,487,247 in first 4 months, compared to 1,851,673 corresponding period of 1953. April radio sales were 427,911 vs. 412,802 in April 1953.

Philco strike and the normal seasonal decline in anticipation of new models pushed TV production down to 72,042 week ended June 4, lowest for any week this year and lowest for any full 5-day week since July 1953. It compared with 91,443 week ended May 28 and 97,936 week before. It was year's 22nd week, brought output for year to date to about 2,375,000 vs. 3,625,000 in corresponding period of 1953.

Radio production went down to 140,812 (59,741 auto) from 161,122 in preceding week and 190,275 week ended May 21. For 22 weeks, output was 4,180,000, compared to about 6,160,000 in first 22 weeks of 1953.

RCA's new line of 20 models, introduced to field reps this week at Atlantic City, starts with 17-in. ebony metal table at $160—$20 below list price of 17-in. leader before its production was halted about 3 months ago (Vol. 10:14). Top end of line is 24-in. full-door mahogany or walnut console at $500.

Engineering features include aluminized tubes in all except 4 low-end models, vertical control arrangements, illuminated station selector dial with extra-large channel numbers, and new "high-speed uhf continuously variable tuner." Variety of new furniture finishes—including birch, grained charcoal oak and blonde tropical hardwood—is also available.

Largest ad campaign in RCA Victor history will support TV-radio-phonograph line, including use of 21 national magazines, 210 newspapers, network TV & radio, film strips, etc. Campaign begins July 19, thru Kenyon & Eckhardt. Full RCA line:

- Table Models: Trent, 17-in. ebony metal $160; Newton, 17-in. maroon metal $170; Medallist, 21-in. ebony $200; Lambert, 21-in. maroon $210; Arlen, 21-in. ebony $220; Kent, 21-in. maroon $230; Ellis, 21-in. tawny gold $230; Rupert, 21-in. grained mahogany $240.

- Consoles: Consolette, 21-in. open-face blonde metal $250; Trafion, 21-in. open-face grained mahogany $280, grained oak $290; Radnor, 21-in. open-face grained mahogany $300; Felton, 21-in. open-face grained mahogany $330; Benson, 21-in. open-face blonde tropical hardwood $340; Pickford, 21-in. open-face grained mahogany $350, blonde tropical hardwood $360; Wister (with swivel base), 21-in. open-face grained limed oak $300, grained charcoal oak or walnut $325; Carrol (with swivel base), 21-in. open-face grained mahogany $360, limed oak $370; Ashland, 21-in. open-face mahogany de luxe $360, blonde tropical hardwood $370; Bromley, 21-in. full-door mahogany $390, blonde tropical hardwood $400; Brownwood, 24-in. open-face grained mahogany $370, limed oak $380; Bartram, 24-in. open-face mahogany $395, blonde tropical hardwood $405; Martel, 24-in. open-face birch $395; Chesterton, 24-in. full-door mahogany de luxe $500; Fremont, 24-in. full-door walnut or blonde tropical hardwood de luxe $500; Prettiss, 24-in. full-door mahogany or walnut de luxe $500.

Combinations: Gaynor, 21-in. mahogany $400, blonde tropical hardwood $410.

Also introduced were 3 table radios, each containing 5 tubes: Creighton, $30 in maroon, $33 in ivory, green, red, black; Driscoll, 2-tone, black, $40; Leighton, black plastic with A and C bands, $45. Also, 3 clock radios: Reveille, $30 in maroon, $33 in ivory, green, red, black; Slumberette, $40 in maroon, $43 in ivory, green, red, black and silver, white; Prompter, $50 in pearl gray, ivory, black & beige. A portable, single-play phonograph at $30 and a high-fidelity, 3-speed console at $200 in mahogany and walnut, $210 in tropical blonde hardwood, complete line.

Scott Radio introduced 22 new Mirror-Tone TVs at Chicago national sales conference this week. List prices are minimum of $20 higher on all sets, with $50 increase on 2 models. Pres. John Meck, once outspoken exponent of low-cost TVs, said: "These sets will cost more to make and we will have to believe in ourselves and our product sufficiently to get from 10 to 15% more than the prices of the 1954 models."

National Union Electric Corp. is new name voted for old National Union Radio Corp., pres.-chairman C. Russell Feldmann explaining to stockholders it's intended to reflect broadening of firm's activities beyond radio tube manufacture.

Excise tax collections on TV-radio-phonographs were $105,921,000 in 10 months ended April 30, compared to $132,272,000 in corresponding period year ago.

Westinghouse uses closed-circuit telecast (on CBS facilities) in 36 cities at 7 p.m. July 12 to introduce new line comprising 30 TVs, 29 radios, 3 high-fidelity.

Canadian RTMA moves headquarters July 1 from 159 Bay St. to 200 St. Clair Ave. West, Toronto.
Topics & Trends of TV Trade: New inventory finance plan, designed to help dealers finance stocking of its consumer products, particularly color receivers when they're ready for market, was instituted this week by RCA, in conjunction with Pennsylvania Co. for Banking & Trusts, Philadelphia. New plan supplements existing arrangements with Commercial Credit Corp. and Bank of America and will fill in gaps where such local services are not easily available, according to consumer products executive v.p. J. B. Elliott. He explained:

“Our problem has been minimized by the fact that most of RCA's distributors and dealers are well financed and have available substantial lines of credit from local sources. However, with the advent of color TV and with our projections in increased sales volume of color receivers and other consumer products, the decision was reached to make the additional credit facilities available. As much as anything else, it is an indication of RCA's faith in a continued period of business stability.”

Pennsylvania Co. will administer plan and furnish credit to finance it—differing from Philco and Westinghouse, both of which set up new subsidiaries earlier this year, to handle liberalized credit programs for dealers (Vol. 10:4,9). RCA plan covers inventories of TVs, radios, phonographs, tape recorders, air conditioners & kitchen ranges.

Elliott explained that program enables distributors to buy “maximum quantities” of merchandise during normally slow summer months and, in turn, extend liberal credit terms to dealers so latter can increase their inventories “ahead of the period of strongest consumer demand.”

TV-radio dealers got stern admonition to improve their business practices if they expect banks to continue to accept their credit paper. In speech to National Assn. of Electrical Distributors, W. F. Kelly, exec. v.p. of Pennsylvania Co. for Banking & Trusts, warned that banks will become more selective in handling dealer credit because quality of paper—and therefore the bank's profit—depends to great extent on dealer's selling techniques. “The bank is to blame if it permits its financing services to be used by dealers employing unethical or even high-pressure sales techniques,” he said, adding that manufacturer or distributor subsidies will not persuade the well-informed bank to take on sub-standard dealer accounts.

Snowballing industry opposition appears to doom Federal Trade Commission proposal requiring merchandising ads to disclose fully how many channels a TV set can receive (Vol. 10:23). Speaking for retailers, NARDA pres. Vergal Bourland protested plan this week in letter to FTC attorney Paul Butz, declaring mandatory labeling would merely add another item to cost of production. RETMA, reaffirming its opposition to proposal as unnecessary to prevent deception, received extended comment-filing deadline beyond June 15 so membership could discuss it at convention June 15-17 at Chicago's Palmer House.

About 1,000,000 plastic TV sets were produced last year, out of industry total of 7,214,787, Society of Plastics Industry convention was told this week by Wyman Goss, mgr. of GE chemical materials div., who predicted that majority of TV cabinets would contain some form of plastics in several years. He said new GE line might include several models in new, cheaper, less abrasive plastic substance developed partly by use of atomic tracers.

Passaic (N. J.) Junior Chamber of Commerce, at national junior chambers' convention in Colorado Springs June 12-20, has display calling Passaic the “Birthplace of Television” because first DuMont manufacturing plant started there in 1937. DuMont is providing a TV set which will be raffled as feature of convention.

A Midrail's new line, shown to distributors at Chicago convention last week (Vol. 10:20) and to dealers June 7, takes in 10 basic models—all with built-in antenna, automatic gain control and inclined dial to permit tuning from standing position. Top end of 21-in. consoles, combinations and 27-in. console have Alnicro 10 & 12-in. speakers mounted at angle to improve sound. All 21-in. table models feature new 270-sq. in. tube and tinted optic filter. Full line:

Table Models: T1831, 17-in. ebony plastic $150; T1832, mahogany plastic $160; T1842, mahogany finish $170; T2311Z, 21-in. ebony plastic $200; T2312Z, mahogany plastic $220; T2316Z, 21-in. mahogany wood finish $250; T2317Z, blonde finish $260; T2318Z, maple finish $260.

Consol es: C2256, 21-in. open-face mahogany finish $200; C2316Z, 21-in. open-face mahogany $280; C2317Z, blonde $290; C2326Z, 21-in. open-face mahogany $320; C2327Z, blonde $330; F2326Z, 21-in. full-door mahogany $350; F2327Z, blonde $370; F2328Z, maple $370; C2826Z, 27-in. open-face mahogany $400; C2827Z, blonde $425.

Combinations: K2256, 21-in. open-face mahogany $300; K2257, blonde $320; L2326Z, 21-in. full-door mahogany $490; L2327Z, blonde $515.

Also introduced were a printed circuit 5-tube AC-DC table radio with full-size speaker and built-in antenna and available for $15 in mahogany, ivory, cherry, sungold yellow, beige or green, and a 5-tube printed circuit clock radio at $25 in mahogany or $28 in ivory, kitchen white, cherry or green. Also shown were 4 high-fidelity phonographs with 3-speed changer and dual speaker system, ranging from $70 to $160.

Capehart-Farnsworth's new line, introduced to distributors June 7 at Ft. Wayne, comprises 16 basic models, with prices generally lower than comparable models in old line. Features include “Tri-Fi” 3-speaker sound system mounted in angular plane, and aluminized picture tubes. Polaroid picture filter system, feature of 1954 line, is repeated in current series. Full line:

Consols: Charlestown, 21-in. open-face mahogany $200; Potomac, 21-in. open-face blonde $310; Bennington, 21-in. open-face mahogany $330, blonde $350; Cortland, 21-in. open-face mahogany $370; Chicagoan, 21-in. open-face blonde $370; Ticonderoga, 21-in. full-door mahogany $330 & $370, blonde $350 & $390; William Penn, 21-in. full-door mahogany $390 & $430; Atlantic, 21-in. blonde wood $410 & $450.

Combinations: Saratoga II, 21-in. mahogany $895, blonde $945; Montreal, 21-in. fruitwood $995.

Also introduced were 9 high-fidelity units ranging from $75 to $550, 4 table radios at $20, $22, $25 & $30 (short-wave $35), 2 portables at $30 & $40, two clock radios at $45 & $50.

Licensing arrangement for community antenna systems and master distribution systems is proposed by Jerrold Electronics Corp., which claims patent covering the systems. "Our plan is quite ambitious," Jerrold pres. Milton Shapp stated, "yet we are only attempting to do for the master antenna business what RCA has successfully accomplished for the entire TV industry." Jerrold proposes to charge fee to sellers & installers of building systems and to operators of community systems—both based on number of outlets. It would inaugurate advertising campaign and establish school for training licensees.

Harry Montague, 57, partner in Trilling & Montague, Philadelphia Capehart distributor, died June 6 after an illness of several weeks. Only a few hours after receiving news, Jacob A. Cohen, controller of same company and one of the owners of Seacoast, Miami distributor, also died in his Philadelphia home.

Color Trends & Briefs: CBS's disclosure of ambitious color program plans for fall, after long silence, looks like more of just what the doctor ordered for color TV's obvious doldrums. Nothing is clearer than fact that mass-produced color sets at mass-produced prices await public demand and that public demand awaits color programs.

Up to now, NBC has been staking out the color field virtually alone. This week, with appropriate fanfare, CBS announced that new $1,500,000 color studios at 81st & Broadway would be inaugurated with Toast of the Town Aug. 22 and followed by monthly hour-long plays, Best of Broadway, sponsored by Westinghouse, Wed. 10-11 p.m., starting Sept. 15. Program is in addition to Westinghouse's regular monochrome Studio One.

CBS will also give its regular black-&-white shows "premieres" in color as did NBC—and CBS's total color schedule will add up to some 3 hours weekly, going to more than 40 stations.

NBC has already planned 90-min. weekly "spectaculars" to start Sept. 12 (Vol. 10:20) plus new Tonight, 11:15 p.m.-1 a.m. (Vol. 10:21)—latter alone providing almost 10 hours of color each week.

In color or monochrome, Best of Broadway should click, including as it does: Eugene O'Neill's Ah Wilderness, Ferenc Molnar's The Guardsman, Robert Sherwood's Idiot's Delight, Joseph Kesserling's Arsenic & Old Lace, Rudolph Besier's The Barretts of Wimpole Street, Wm. Saroyan's The Time of Your Life, Philip Barry's The Philadelphia Story, George Kaufman's & Edna Ferber's The Royal Family, Moss Hart's & George Kaufman's The Man Who Came to Dinner.

Financial & Trade Notes: Motorola sales this year will be second only to 1953's record $217,964,000, though year's defense billings will be "of record proportions," exec. v.p. Robert W. Galvin told St. Louis Society of Financial Analysts this week. Earnings and sales for first 6 months also will be lower than the $4,640,679 ($2.40 a share) earned on sales of $109,522,968 in first half of 1953—but he didn't estimate by how much. First-quarter profit this year was $1,644,084 (85¢) on sales of $4,069,800, down from $3,174,208 ($1.64) on $6,850,867 first 3 months of 1953. Galvin said auto, table & clock radio sales were down this year but predicted that sales of 2-way communication radios would increase by 10% this year and should continue good for next 5 years.

Muter Co. directors omitted quarterly dividend this week, pres. Leslie F. Muter explaining it was to conserve cash "to take advantage of any opportunity that may develop in this competitive market." Negotiations have been under way for acquisition of another company, unnamed. Mr. Muter said company earned about 20¢ a share in first 4 months of this year. Last 2 quarterly dividends were 2% stock in March, 3% in Dec., so that cash position has been considerably improved since the year-end.

Standard Coil Products Corp.'s sales in second quarter should show substantial improvement over first quarter's $18,971,300 but will still be below the $23,410,000 in second quarter of 1953, stockholders were informed this week by pres. Glen E. Swanson, who said "realistic approach towards color" has helped TV industry to stage "an encouraging recovery."

Indiana Steel Products Co. reports net earnings of $203,019 ($1.43 per share) for first quarter vs. $98,639 (59¢) same period last year. Pres. Robert F. Smith stated 54¢ of the increase was due to lapse of EPT, the other 20¢ due to improved operations and in spite of slight drop in quarter's sales.

IT&T consolidated income for first quarter was $4,855,103 (68¢ a share) compared with $4,832,540 (67¢) same period last year. Consolidated net sales for quarter declined to $78,705,955 from $88,087,669. Cost of sales & operations fell to $73,340,745 from $82,044,122.

Collins Radio declared 50% stock dividend this week, payable Aug. 2 to holders July 15; also 50¢ cash dividend payable July 31 to holders July 15.
MERGER of Kansas City's time-sharing KMBC-TV & WHB-TV (Ch. 9) should be concluded next week when final sale papers are signed (Vol. 10:17)—FCC on June 9 having approved Cook Paint & Varnish Co. acquisition of Arthur B. Church's KMBC-TV, KMBC (5-kw on 980 kc, CBS) and satellite KFRM, Concordia, Kan. (5-kw daytime on 550 kc, CBS) for $1,750,000 cash plus assumption of approximately $865,000 obligations, plus 10-year consulting contract at $25,000 a year. FCC also approved Cook's $400,000 sale of its WHB (10-kw day, 5-kw night on 710 kc, MBS) to Robert H. Storz and his son Todd Storz, who own radios KOWH, Omaha, and WTIX, New Orleans.

Cook's WHB Broadcasting Co. changes name to KMBC Broadcasting Co. with Robert B. Caldwell as chairman; Lathrop G. Buckstrom, pres.; Don Davis, first v.p. & chairman of programming board in charge of sales, advertising & promotion; John T. Schilling, who built original WHB in 1922, v.p. & gen. mgr.; George Higgins, TV-radio sales mgr.; Mori Creiner Jr., director of TV; Dick Smith, director of radio; Ken Greenwood, asst. director of TV; Henry Goldenberg, TV-radio chief engineer. Free & Peters continues as rep.

All activities will be centered in big KMBC building, which houses 2600-seat theatre. Old WHB-TV & WHB quarters in Power & Light Bldg. are being abandoned. New 50-kw RCA transmitter, to be equipped for color, is due for delivery July 15, to be installed before completion of new KMBC-TV 1079-ft. tower at 23rd & Topping Sts.

Aimed at tightening security, FCC this week initiated proposed rule-making which would deny commercial operator or amateur licenses to members of Communist Party, any group required to register as Communist-action or Communist-front organization under Internal Security Act, or any group advocating overthrow of Gov't by violence. It also proposed to limit licenses to persons of "good moral character," factors determining such character to include past Communist affiliations and convictions for felonies. Proposal would amend application forms to include questions on membership in Communist Party, etc., and require fingerprints. Comments may be filed by July 19.

Storer Broadcasting Co.'s challenge of FCC's authority to set limit on number of stations an entity can own (Vol. 10:4), supported by brief filed in Court of Appeals last week, is due to be answered by FCC June 26 but Commission is likely to ask for extension. Application before Court won't come before fall, because current court session is almost over. Storer owns 5 TV stations, the limit now permitted by Commission, and is seeking to acquire another vhf in Cleveland and a uhf in Portland, Ore., through acquisition of Empire Coli Co. for $10,000,000 (Vol. 10:22). FCC has proposed to permit owners of 5 vhf to acquire 2 uhf, but this is held up pending Senate vhf-uhf hearings (see p. 1).

Complying with FCC multiple ownership rule, John B. Poor, director and gen. counsel of General Teleradio Inc., General Tire subsidiary operating MBS and various TV-radio stations, has sold his WARE, Mass. (1-kw, 1250 kc). FCC on June 9 approved $43,666 sale to H. Scott Killgore, now a sales executive of Emerson Radio, who owns WWXL, Concord, N. H. (26-kw, 1450 kc, CBS), and is applicant for new AMs in Plymouth, Mass. (1-kw, 990 kc) and Dover, N. H. (1-kw, 1270 kc).

Type & TV tieup: To speed coverage of Army-McCarthy hearings, New York Times installed in communications room 2 TV sets with automatic recording discs attached, thus gets full text via playback and into type long before it's transmitted on wires.

Future of educational KTHE, Los Angeles (Ch. 28), was thrown into doubt this week when millionaire oilman G. Allan Hancock, station's underwriter and one of educational TV's most affluent backers, abruptly resigned as director of Allan Hancock Foundation and chairman of trustees of U of So. California, to which he had donated more than $7,000,000 in last 15 years. He ascribed his action to "business considerations and personal plans" but New York Times reported crucial of issue was his disagreement with university officials on operation of station. Foundation is licensee; university provides most of programming. He left $2,000,000 in negotiable assets to Foundation. Educational TV was also reported in financial trouble in Denver, where school board, participant in grant for KRMA-TV (Ch. 6), voted unanimously to hold up further work on project until there was further evidence of public support. Fund-raising drive for $250,000 reportedly produced only $52,000 thus far.

TV's future role in law enforcement, as outlined by RCA chairman David Sarnoff in June 11 address at graduation exercises of FBI National Academy, Washington: Superhighways such as Pa. and N. J. Turnpikes, which now use microwave radio for communications, will eventually use TV to connect toll gates, service facilities, patrol headquarters, etc. "It is only a matter of time, moreover, before a coast-to-coast radio-TV network will transmit teletype messages, weather reports, photographs, fingerprints and other documents, [and] police cars without doubt will eventually include TV as an indispensable adjunct of their operations." TV tape recordings, too, will be used by police, "to catalog photographs, fingerprints and other pertinent data."

Resolution to ban televising of Congressional hearings (H.Con. Res. 239) was introduced June 10 by Rep. Rogers (D-Fla.). Referring to Army-McCarthy hearings, he said: "For the past 7 weeks the gladiators of politics have been putting on a show . . . I feel, and very strongly, that it is not a healthy situation for our people to daily look upon the present 'show' and conclude that all such workings of the committees of Congress are carried on in such a manner." His speech evoked burst of applause from Democratic side of House. Similar bill was introduced in Senate by Sen. Olin Johnston (D-S. C.).

Sen. Lester C. Hunt (D-Wyo.), member of Senate Commerce Committee and communications subcommittee, announced this week he won't seek re-election for second term in Senate because of ill health. He's second Demo- 
cratic member of Senate Commerce Committee to announce retirement in recent weeks, Sen. Johnson (D-Colo.) having also decided not to run again, though he may seek nomination for governorship. Ranking minority member of House Commerce Committee, Rep. Crosser (D-Ohio), won't return next term, having lost Democratic primary.

Allen Woodall interests propose to sell half their 50% ownership of WDAK-TV, Columbus, Ga. (Ch. 28), to co-owner Martin Theatres Inc., and to devote more attention to their radio WDAK (250 watts on 1340 kc, NBC). Selling price is $53,000. FCC application this week explains that Woodall proposes to boost WDAK power to 5-kw and shift to 540 kc, project costing about $50,000. Martin Theatres also owns 55% of WJBP-TV, Augusta (Ch. 6), Woodall 25% of WRDW-TV, Augusta (Ch. 12).

Senate uhf hearings are scheduled to begin at 1:30 p.m. Tue., June 15 in Room G-15, U. S. Capitol. These names have been added to end of unofficial witness list printed in last week's issue (Vol. 10:25): Rep. Moss (D-Cal.); Paul Bartlett, KFRE, Fresno, Cal. (vhf applicant); Harry Tenenbaum, WTVI, Belleville-St. Louis, Mo. (uhf); Dr. Armand Hunter, TV director, Michigan State College, East Lansing (uhf WFKAR-TV).
WINDUP OF SENATE HEARINGS ON UHF CRISIS: All sides put forth mightiest efforts as uhf-vhf controversy went through second week of Senatorial inquiry that already has built up an imposing record -- 60 witnesses heard, some 300 letters and written statements received. Hotly fought probe concludes public hearings Tuesday, June 22, having heard uhf & vhf protagonists capped by testimony of all networks save NBC by time of Friday adjournment. June 22 is postponement from June 21, first announced, due to sudden death of Senator Hunt Saturday (see p. 20). Session is expected to wind up everything -- first hearing the NBC testimony, then rebuttals by uhf & vhf groups, then FCC Chairman Hyde (for Commission majority), finally Commr. Hennock.

Best bet now is that the Senate communications subcommittee, headed by Sen. Potter (R-Mich.), and its parent Interstate Commerce Committee, whose chairman is Sen. Bricker (R-Ohio), will keep the FCC hopping with some specific recommendations. There's no time left this session for legislation covering such a complex technical and controversial problem, but it would indeed be surprising if a non-committal or namby-pamby report came out of the subcommittee.

With political pressures probably as strong as they've ever been on any radio issue, with this week's prodigious effort by vhf interests to overcome the Senators' initial favorable reaction to strong uhf case, with CBS and ABC both suggesting that Congress and FCC look into the possibilities of a reallocation -- it's apparent that the issue isn't going to die any quick or easy death. Having attended all the sessions, having read most of the documents filed, we give you our summaries and estimates of the proceedings and probable results in the 3 articles on pp. 3-7.

RADIO RATE CUTS—WHAT THEY COULD MEAN: The chain reaction -- literally -- evolving from the latest radio rate reductions projected by CBS and NBC and likely to become effective in August, may well be an economic squeeze on smaller-time radio stations -- particularly those in cities with a superabundance of local & suburban outlets.

It's another example of the revolution being wrought in AM ever since TV hit its stride, especially since TV's admitted capture of much of the night audience.

Nobody really thinks radio is on the way out -- but a lot of radio folk are plenty worried about its future economic base. They're asking how 4 radio networks can survive an apparently shrinking reservoir of radio sponsors. They're wondering how the "marginal" stations, which usually mean the smaller independents in the big metropolitan areas, can compete not only against a fast-expanding TV's inroads on advertising budgets but against intensified local competition.
